
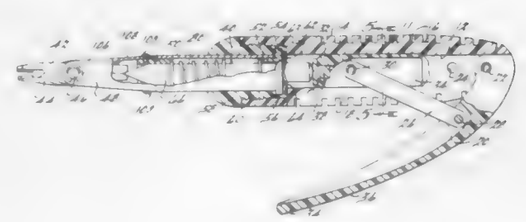
1. A cutting jaw head unit for a nipping tool, comprising a forked member, a pair of cutting levers arranged in the fork in substantially parallel relation to the longitudinal axis of the fork, each lever having a cutting jaw at one end in opposed relation to a cutting jaw of the other and having at its opposite end a tail finger provided with a cam surface in opposed relation to a cam surface of the other tail finger, a separate pin pivotally supporting each lever near its jaw end in the fork, spring means between the levers biasing the tail fingers toward one another so as to urge the jaw ends of the levers apart, each pin having an eccentric surface upon which the related lever bears as it pivots, each pin being angularly adjustable independently of the other so as to adjust the angle at which the lever is pivotable about the eccentric surface relative to the other lever, and reciprocable camming means cooperable with the opposed cam surfaces to pivot the levers about the eccentric surfaces.

3,372,480
CAM ACTUATED PIVOTED JAW TOOL
Walter J. Rozmus, Hubbardsville, N.Y., assignor to Kelsey-Hayes Company, Romulus, Mich., a corporation of Delaware
Filed June 15, 1966, Ser. No. 557,686
13 Claims. (Cl. 30—193)



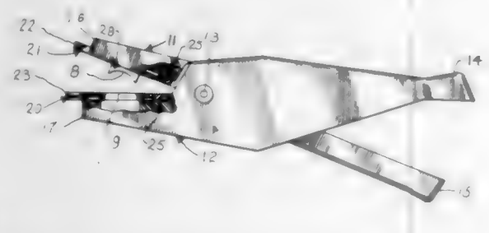
A pivoting jaw tool which is especially suited for use as a wire nipper. The jaws are formed separately from the remaining portion of the tool and are fitted together in such a manner as to insure their proper alignment. Accordingly, the jaws may be installed on the tool by a removable pivot pin without having to carefully fit them to the tool. The jaws are wedge-actuated and the actuating

wedge, together with the jaws and the jaw holder, form a separable subassembly which can be readily interchanged on the tool. The wedge is actuated through operation of a handle pivoted to the tool body.

3,372,481
ELECTRIC HAIR CUTTING SHEAR
Quillard R. Skinner, Cape Girardeau, Mo., assignor of twenty percent to Marshall H. Chatfield, Cape Girardeau, Mo.
Filed Oct. 14, 1965, Ser. No. 495,821
11 Claims. (Cl. 30—210)

A power operated hair cutter having an elongated housing on which a finger grip and finger rests are formed intermediate the ends. The housing encloses an electric drive for a movable blade in sliding contact with a fixed, tapered blade projecting from one end of the housing. A removable blade shield secured to the fixed blade outside of the housing yieldably holds the movable blade in sliding contact with the fixed blade.

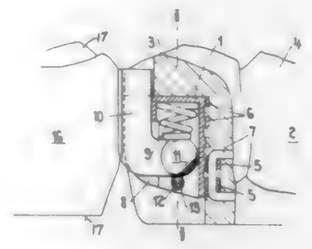
3,372,482
CUTTER FOR EXCISING SHAPES FROM SHEET MATERIAL
Pasquale A. Mercorelli, 441 Summer Ave., Newark, N.J. 07112
Filed May 13, 1966, Ser. No. 550,044
3 Claims. (Cl. 30—229)



A cutter for excising shapes from sheet material wherein the parts of the male die engaging the female die are sharp, generally arcuate, and have at least one sharp point for initial penetration of the material to be cut.

3,372,483
DENTAL PROSTHESIS
Hans Dalla Bona, 419 Hohenweg, 2563 Ipsach, Switzerland
Filed Mar. 12, 1965, Ser. No. 439,231
Claims priority, application Switzerland, Apr. 22, 1964, 5,243/64
5 Claims. (Cl. 32—5)

A dental prothesis having a first joint portion comprising a sleeve and pressure spring assembled with a second joint portion comprising a ball, held in the sleeve by a removable pin, and having a shank attached to a natural

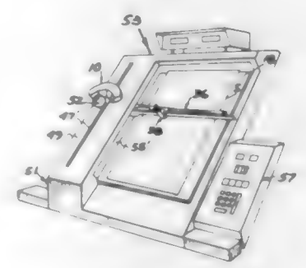


tooth, such joint portions being adapted for limited relative translatory and angular displacement.

3,372,484
ORTHODONTIC METHOD
Everett D. Mumaw, 2717 Edgehill Road, Cleveland Heights, Ohio 44106
No Drawing. Filed Aug. 28, 1964, Ser. No. 392,923
8 Claims. (Cl. 32—14)

A method of applying a flowable medical grade siloxane rubber, which is curable at body temperature, to the teeth and to appliances on said teeth and allowing the rubber to cure to form a protective non-toxic coating for providing temporary cosmetic effects to protect oral tissues of the user against injury.

3,372,485
SCANNING INSTRUMENT
George Mangus and Charles R. Sandlin, Miami, Fla., assignors to The Miami Herald Publishing Co., Inc., Miami, Fla., a corporation of Florida
Filed May 10, 1965, Ser. No. 454,495
15 Claims. (Cl. 33—1)



1. A scanning instrument for measuring and recording the locations of selected points in a copy layout in terms of their rectangular coordinate distances from an assumed origin, said instrument comprising

a layout board having an origin of rectangular coordinates thereon and mutually perpendicular X and Y coordinate axis directions thereon intersecting at and proceeding from said origin,

a supporting structure disposed adjacent said layout board and having an elongated rectilinear guideway at one side of the board disposed parallel to said Y-axis direction,

a carriage mounted on said supporting structure and movable along said guideway parallel to said Y-axis direction,

said carriage having an elongated guide member secured at one end to said carriage and projecting from said carriage over said layout board,

said guide member having thereon an elongated rectilinear guideway disposed longitudinally thereof and parallel to said X-axis direction,

a cross-slide mounted on said guide member in guided sliding engagement with said longitudinal guideway,

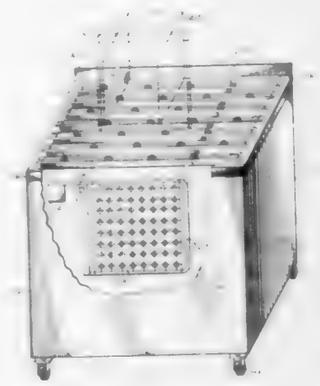
an indicating pointer mounted on said cross-slide with its axis directed downwardly therefrom toward said layout board,

an operating handle rotatably mounted on said carriage and adapted when pushed and pulled to move said carriage and guide member bodily back and forth respectively along the first-named guideway,

mechanism operatively connecting said handle to said cross-slide and responsive to the rotation of said handle for moving said cross slide and pointer to and fro along said longitudinal guideway,

an encoder means responsive to the movements of said carriage and cross slide along their respective guideways for measuring and recording the distances along said X and Y axes from said origin to said pointer when moved into registry with selected points on said layout board brought into registry with said pointer by said movements of said carriage and cross slide respectively.

3,372,486
VOLUME MEASURING DEVICES
Wei Teh Chow, 605 Water St., New York, N.Y. 10002
Continuation-in-part of application Ser. No. 493,642, Oct. 7, 1965. This application May 15, 1967, Ser. No. 650,559
10 Claims. (Cl. 33—1)



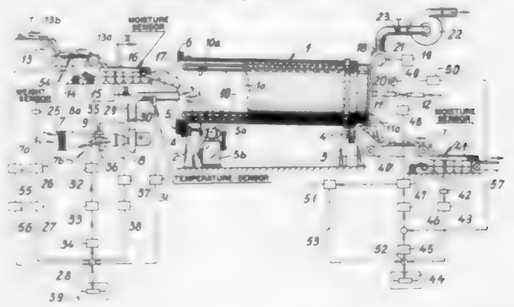
A volume-measuring device for orthogonal objects comprising linear-measurement means and area-measurement means. Both are arranged to be operable from a single, substantially flat, working surface. Utilization of one means leads to the selection of the proper one of a set of the other measurement means to measure the second component and to provide a direct reading of the volume of the measured object in a single operation after the object to be measured is properly aligned with respect to the measurement means.

3,372,487
METHOD OF DRYING BY ELECTICAL MEANS
Paul Eisler, 57 Exeter Road, London NW. 2, England
Continuation-in-part of application Ser. No. 783,609, Dec. 29, 1958. This application July 10, 1963, Ser. No. 293,953
Claims priority, application Great Britain, Jan. 7, 1958, 582/58
1 Claim. (Cl. 34—1)

1. A method of accelerating by heat solidification of a porous material produced by chemical reaction in a layer of liquid material comprising incorporating in the liquid material a substance which when heated below the temperature of sudden transition under the ambient conditions of the liquid into the solid state evolves a gas, bringing into good heat conductive contact with the liquid layer a heating film the major part of which is occupied by an electrically conductive surface pattern uniformly distributed, passing an electric current through the surface pattern of an intensity which is controlled so that by the time

the temperature is reached at which gas is evolved, the liquid layer has attained a viscosity which allows the evolved gas to form pores in it without substantial escape, and continuing the heating at an appropriate temperature below that of sudden transition under ambient conditions of the liquid into the solid state until the solid state is attained.

3,372,488
APPARATUS FOR CONDITIONING TOBACCO
Hans Koch, Hamburg-Rahlstedt, and Waldemar Wochnowski, Hamburg, Germany, assignors to Hauni-Werke Korber & Co. K.G., Hamburg-Bergedorf, Germany
Filed Nov. 17, 1964, Ser. No. 411,788
Claims priority, application Great Britain, Nov. 18, 1963, 45,434/63
10 Claims. (Cl. 34—46)

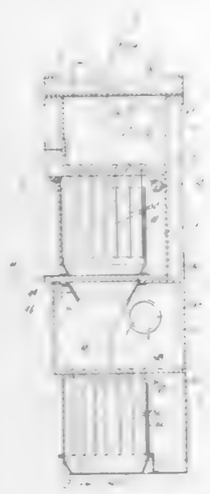


Moist tobacco is advanced through a conditioning chamber receiving two heated fluids one of which expels some and the other of which expels the remainder of surplus moisture from tobacco. A detector measures the moisture content upstream of the conditioning chamber and regulates the operation of an adjuster which controls the admission of the one heated fluid. A weighing device measures the weight of tobacco ahead of the conditioning chamber and regulates the operation of a second adjuster which also controls admission of the one heated fluid.

3,372,489
HEAT TRANSFER APPARATUS USING FLUIDIZATION IN BOTH SINGLE BED AND PLURAL BED FORMS
Ernest Charles Brown, 19 Ledgewood Drive, Danvers, Mass. 01923
Continuation of application Ser. No. 450,428, Apr. 23, 1965. This application Dec. 29, 1966, Ser. No. 613,701
10 Claims. (Cl. 34—57)

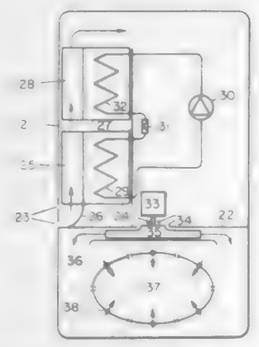
Heat transfer apparatus using fluidization comprising top and side walls defining an enclosure and a series of

spaced horizontal partitions forming with the side and top walls, in vertically upward succession, a lower chamber, an upper treating chamber, and a superposed plenum. The partition forming the floor of the upper treating chamber



is movable to form an opening leading downwardly into the lower chamber. A plurality of parallel tubes are provided for introducing air at high velocity from the plenum in a downward direction into the upper chamber.

3,372,490
APPLIANCE FOR DRYING HANDS BY MEANS OF HOT AIR
Hugo Ledermann, Eichstrasse, Uerikon, Zurich, Switzerland
Filed June 27, 1966, Ser. No. 560,749
3 Claims. (Cl. 34—76)



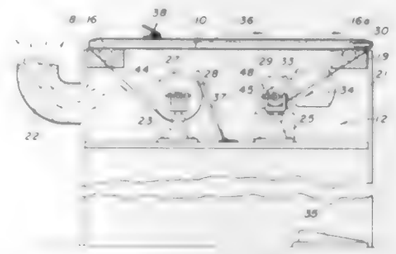
An appliance for drying hands by means of hot air in which an airflow for ultimate introduction into an outwardly open space for the hands is subjected to an initial dehumidification for reducing the water vapor pressure to less than that existing on the hands to be dried and thereafter heated and directed into the outwardly open space. The storage of the cold energy and heat energy permits the appliance to become directly effective without loss of time for the preliminary cooling or heating of the exchange surfaces in use.

3,372,491
NAP BAND ATTACHMENT FOR HAIR DRYERS
Willa C. Morrison, 65 Santa Maria St., Palm Springs, Calif. 92262
Filed Aug. 11, 1965, Ser. No. 478,808
2 Claims. (Cl. 34—99)

A head rest attachment for a hair dryer, consisting of a strap extending chordwise across the circular opening in the bottom of the dryer hood, and positioned to lie across the forehead of the person using the dryer so as to provide support for the head while the person naps. One end of the strap is connected to a spring-powered re-

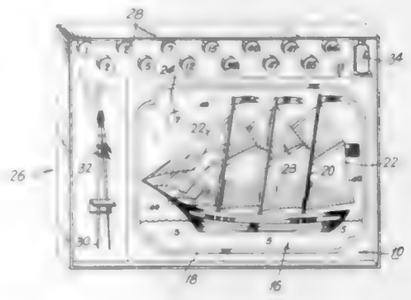
tractor mounted on one side of the hood, and the other end thereof is provided with an elongated loop ring that is engageable over a hook on the other side of the hood.

3,372,492
WORK TABLE FOR HAND PRINTING
William Walter Cousins, 26 Thatcher Ave., Scarborough, Ontario, Canada
Filed Sept. 23, 1965, Ser. No. 489,541
Claims priority, application Canada, Apr. 13, 1965, 928,103
9 Claims. (Cl. 34—151)



This specification discloses a work table comprising a flat rectangular, padded working surface with spaces on the sides thereof and a chamber therebelow. An exhaust fan in the chamber draws air and fumes from the space above the working surface and delivers it to an exhaust conduit. A roll of paper is mounted in the chamber and the strip therefrom is passed over the working surface and back to a motor driven take up roll. Clamps are provided for securing stock in position on the working surface.

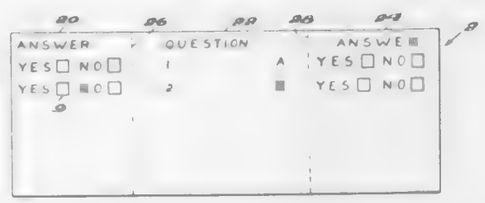
3,372,493
ANTIQUED PAINTING ON WOOD AND BY-THE-NUMBER SYSTEM OF MAKING THE SAME
Lawrence Birch, Rego Park, N.Y., assignor to Avalon Manufacturing Corporation, Brooklyn, N.Y., a corporation of New York
Filed Sept. 15, 1967, Ser. No. 667,933
7 Claims. (Cl. 35—26)



A system of making an antique painting by smoothing a broad face of a wood panel, applying an impermeable clear sizing coat to said face, forming a paint-by-number

design with a dark oleophobic material on the face, supplying the panel to a user along with matched number-identified oil paints and a transparent tinted antiquing lacquer, scoring and punching the face of the panel according to artistic taste to simulate an old piece of wood with cracks and wormholes, filling in the paint-by-number areas with the oil paints while leaving unpainted the paint-by-number lines that form the design, allowing the paints to dry, and finally applying the antiquing lacquer over the painted face of the panel.

3,372,494
METHOD AND ARTICLE FOR OBTAINING INFORMATION
Alan S. Marcus, Allston, Mass. (611 W. 111th St., Apt. 6, New York, N.Y. 10025)
Filed Mar. 31, 1965, Ser. No. 444,295
4 Claims. (Cl. 35—48)

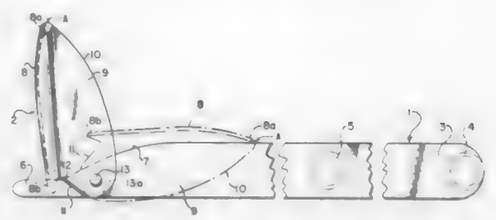


1. A poll questionnaire form for taking a plurality of of polls simultaneously comprising a body portion, at least one pair of perforations dividing the body portion into a question portion and a pair of answer portions, selected questions being printed on the question portion adjacent the perforations and being pertinent to answers on the answer portion adjacent thereto, and means designating the places on the answer portions for recording the answers on the answer portion.

3,372,495
BOOT WITH FIT ADJUSTMENT MEANS
John J. Finn, 60 E. 32nd St., Chicago, Ill. 60616
Filed June 27, 1966, Ser. No. 560,615
3 Claims. (Cl. 36—2.5)

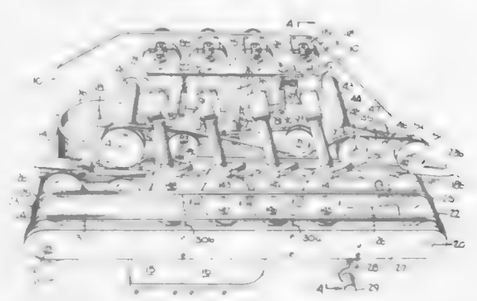
1. In a boot having a sole and an upper, means for preventing the wearer's heel from rising from the sole of said boot comprising an inflatable bladder disposed between the instep of said upper and the instep of said wearer's foot, said bladder covering completely all space under the vent area and being an integral part of said upper and wherein the instep of said boot includes a laced closure and a tongue under said lacing and wherein said bladder is secured to the underside of said tongue and is substantially coextensive therewith, said bladder including a valve means for inflation and deflation.

3,372,496
CLAM GUN
Donald E. Lawlis, Buckley, Wash., assignor to Del-Guy Dispensers Inc., Buckley, Wash., a corporation of Washington
Filed Nov. 23, 1964, Ser. No. 413,139
2 Claims. (Cl. 37—119)



A clam digging shovel having two parallel handles or shafts with a blade pivotally mounted between the handles on an axis spaced a short distance from adjacent ends of the handles. The blade has a longitudinally and transversely curved surface with parallel side plates which are pivoted to the respective handes so as to limit the pivotal movement of the blade between position generally parallel to the handles and extending upwardly when the handles are inserted into the ground. The forces acting on the blade when the shovel is retracted cause the blade to pivot to a position generally at right angles to the handles thereby lifting a quantity of sand or dirt by merely inserting the handles into the ground and then retracting them in the reverse direction.

3,372,497
SEAM IRONING MECHANISM
Victor J. Sigoda, Great Neck, N.Y., assignor to Man-Sew Corporation, New York, N.Y., a corporation of New York
Filed Aug. 23, 1965, Ser. No. 481,522
23 Claims. (Cl. 38—2)

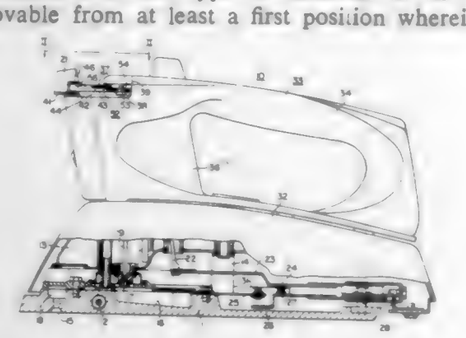


Ironing mechanism has drive arrangement with variable speed transmission for conveying garment section through ironing elements; transmission may be driven from sewing machine to actuate conveying members only during sewing; ironing members consist of floating buck, thin heat transfer belt, and transversely retractable heat pod(s) to apply heat to belt.

3,372,498
IRON
Earl W. McCluerey, Mansfield, Ohio, assignor to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Filed Oct. 28, 1966, Ser. No. 590,317
5 Claims. (Cl. 38—77)

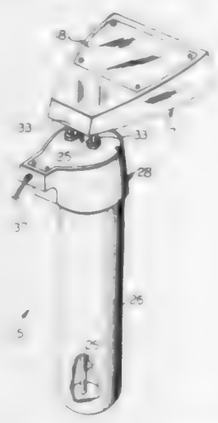
1. An iron comprising, housing structure including a handle, a soleplate, means for heating said soleplate, means for automatically controlling the energization of said heating means to thereby control the operating temperature of said soleplate, said automatic control means being adjustable to various settings, means for varying the setting of said control means, indicia bearing struc-

ture adjacent the path of movement of said means for varying the setting of said control means, said indicia bearing structure including a member provided with indicia indicative of the type of material to be ironed and movable from at least a first position wherein said



varying means and said member cooperate to calibrate said iron for operation through a first range of temperatures, and a second position wherein said varying means and said member cooperate to calibrate said iron for operation through a second range of temperatures.

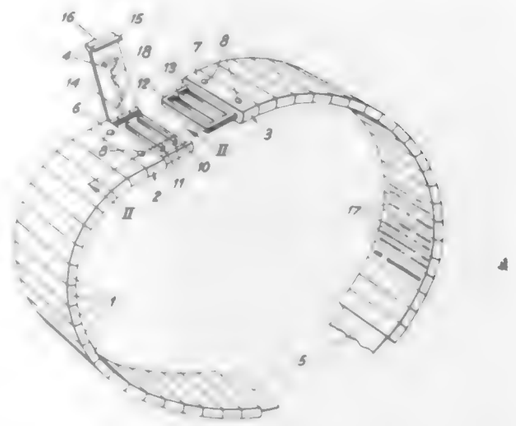
3,372,499
PRESSING IRONS
Jack J. Gilbert, Spring Valley, N.Y., assignor to Bernard Frank, Shamokin, Pa.
Filed Dec. 15, 1966, Ser. No. 601,928
9 Claims. (Cl. 38—77)



1. In an ironing device of the character described, a casing having a metal front wall whose outer surface serves as the ironing surface, an electric heater element behind said front wall and carried by the casing, a resilient squeeze bottle behind said front wall, serving as a water tank and as the handle of said device, a cap closing said bottle and carrying said casing, a water-delivery tube extending from within the lower part of said bottle, then outwardly thereof in water-tight relation therewith, and terminating within said casing wherein it is adapted to discharge, whereupon squeezing said bottle, water therefrom will be forced through said tube and into the casing; the heat generated by the heater element when actuated, being for heating said casing and for vaporizing the water entered into said casing; said front wall having perforations through which the steam made will pass out of the casing.

3,372,500
IDENTIFICATION PIECE
Georges Bernard Claude, Rue du Progres 59, La Chaux-de-Fonds, Neuchatel, Switzerland
Filed Oct. 21, 1965, Ser. No. 499,679
Claims priority, application Switzerland, Apr. 8, 1965, 4,918/65, 4,919/65
3 Claims. (Cl. 40—21)

The disclosure relates to a wrist-band comprising a thin flexible support having a plurality of flat links slidably mounted thereon. The flat links carry suitable indicia. End



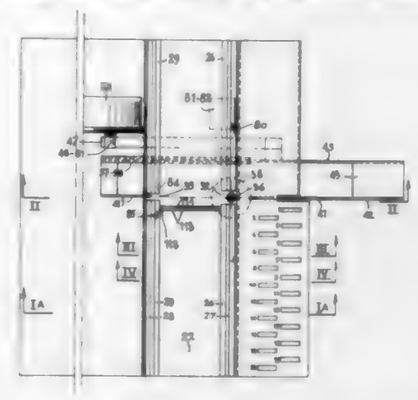
links retain the flat links and provide for coupling to form a closed band.

3,372,501
PNEUMATIC DISPLAY SIGN
George B. Greene, Lafayette, Calif. (2501 Anniversary Lane, Newport Beach Calif. 92660)
Filed Feb. 23, 1966, Ser. No. 529,417
6 Claims. (Cl. 40—28)

1. A display comprising:
a casing having a translucent window;
a diaphragm mounted to divide said casing into opposed chambers and so arranged as to be movable to lie adjacent said window or remote therefrom;
an indicia carried by said diaphragm; and
means for applying a fluid pressure to said diaphragm to move the same, said means for applying a fluid pressure comprising first and second fluid conduits each of which communicates with one of said opposed chambers.

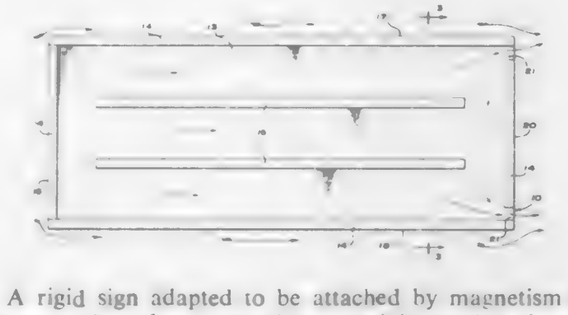
3,372,502
SYSTEM FOR MOVING THE TRANSPARENCY MAGAZINE IN TRANSPARENCY PROJECTORS
Marcel Jules Helene Staar, Rhode-Saint-Genese, Belgium, assignor to Usines Gustave Staar S.A., Brussels, Belgium
Filed July 12, 1965, Ser. No. 471,217
Claims priority, application Belgium, July 13, 1964, 650,463
25 Claims. (Cl. 40—36)

Transparency projection apparatus including separate motors for indexing a magazine which houses the transparencies and for driving a slide which moves the transparencies from the magazine to a projection position and



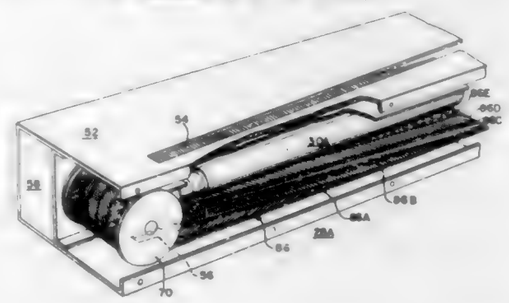
back again, the magazine being provided elements cooperating with a circuit to control the operation of the magazine and slide.

3,372,503
MAGNETIC SIGN
Murnie E. Weeks, 16660 NE. 12th St., Bellevue, Wash. 98004
Filed May 24, 1965, Ser. No. 458,090
3 Claims. (Cl. 40—125)



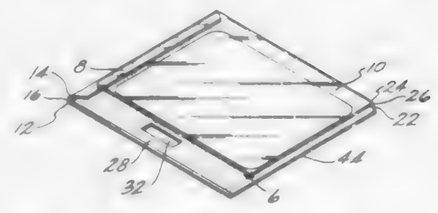
A rigid sign adapted to be attached by magnetism to any smooth surface exposed to a rapidly moving air current and supplementing the magnetism by creating a low-pressure condition upon the underside of the sign, the magnetism being obtained from strips of a magnetic material extending continuously along the peripheral margin of the sign excepting for a break which is provided in said strip along the rear edge.

3,372,504
ILLUMINATING APPARATUS
George K. C. Hardesty, P.O. Box 155, Mayo, Md. 21106
Continuation-in-part of application Ser. No. 245,720, Dec. 19, 1962. This application July 12, 1965, Ser. No. 471,019
15 Claims. (Cl. 40—130)



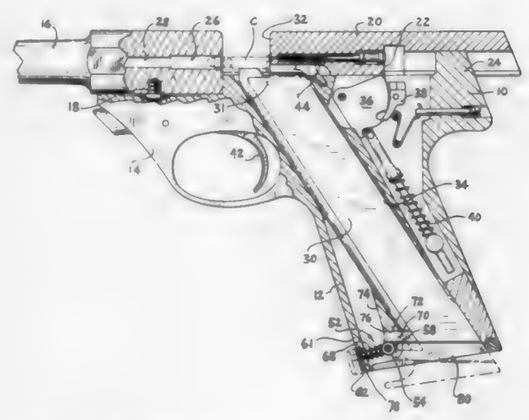
An illuminated display device is provided in which the obverse surface comprises a light conducting panel overlying the obverse side of a first reflector plate; and in which there is included a second reflector plate in spaced opposition with the first reflector plate; third reflector plates overlying either one edge or opposing edges of the light conducting panel and bridging the space between the first and second reflector plates; a light source between the first and second reflector elements, light from the source being injected into the light conducting panel by the third reflector plates; and radiant means such as indicia at the obverse side of the first reflector plate, receiving the light transmitted through the light conducting panel from the edge or edges thereof and directing the light outwardly through the obverse surface of the display device; and in which the light source is completely enclosed between the reflector plates to provide complete concealment of the light source. A changeable transmittance band light source is also provided in cooperation with selectively photoresponsive indicia at the obverse face of the first reflector plate in another embodiment of the invention.

3,372,505
HOLDER AND REGISTRATION DEVICE FOR TRANSPARENCIES FOR OVERHEAD PROJECTION
John S. Wright, 627 E. Birch Ave., Milwaukee, Wis. 53217
Filed Oct. 24, 1965, Ser. No. 504,700
5 Claims. (Cl. 40—158)



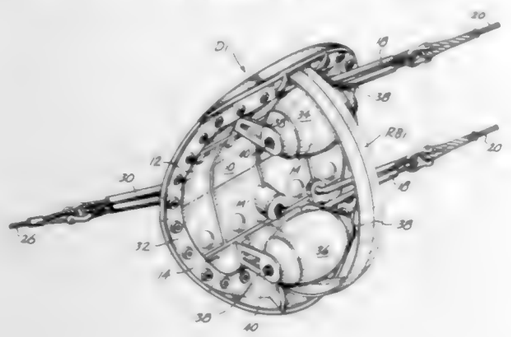
To register transparencies on the stage of an overhead projector, the holder integrally comprises a base sheet with upstanding flanges on contiguous margins, there being a narrow strip on one of said flanges and a cover sheet on another, the base sheet having framing opaque coating means and a slot spanned by pressure sensitive tape deformable through the slot for engagement with a projection stage for positioning the holder.

3,372,506
MAGAZINE CATCH FOR FIREARMS
Gary Wilhelm, Hamden, Conn., assignor to The High Standard Manufacturing Corporation, Hamden, Conn., a corporation of Connecticut
Filed May 13, 1966, Ser. No. 549,931
8 Claims. (Cl. 42—7)



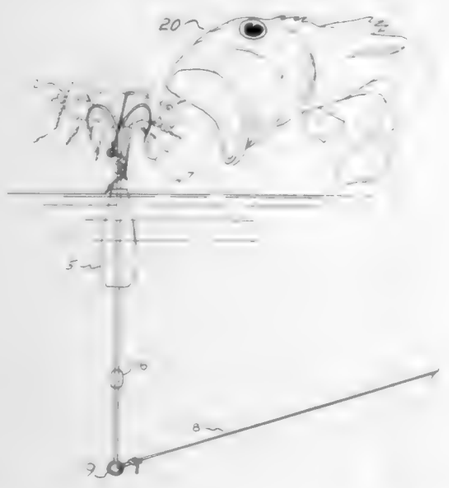
A catch for detachably securing a magazine in the grip of a hand gun or pistol. The catch, which is spring-urged, wedges the magazine against a positioning stop in the gun.

3,372,507
SELF-UPRIGHTING TRAWL DOORS
Frank J. Luketa, 5567 Greenwood Ave. N., Seattle, Wash. 98103
Continuation of application Ser. No. 393,139, Aug. 31, 1964. This application Jan. 30, 1967, Ser. No. 644,413
11 Claims. (Cl. 43—9)



A water reaction panel for trawl nets having ballast and buoyancy attachments and a roll bar mounted on the posterior side. The anterior side of the panel has a towing bridle and in some cases guiding vanes.

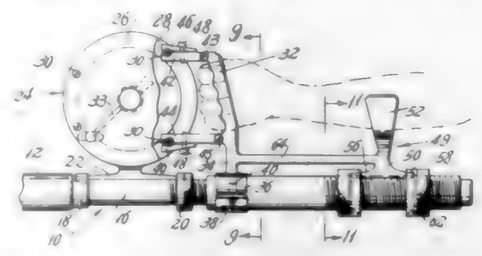
3,372,508
OUT-OF-THE-WATER FISHING LURE
Calvin C. Maglinger, 1430 St. Marys Ave., Owensboro, Ky. 42301
Filed June 28, 1965, Ser. No. 467,515
3 Claims. (Cl. 43—43.15)



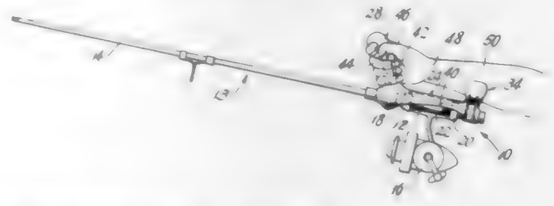
An out-of-the-water fishing lure for game fish uses undamaged live bait tied to a hook supported upon a float extension completely out of the water. The line is tied on a float extension under water to permit manipulation of the bait and use as a hand line without poles. Loss of bait by whip lash effect is eliminated by attachment of the hook to a stiff float extension.

3,372,509
FISHING ROD HANDLING DEVICE
Albert J. Arsenault, 430 Albert Ave., Stratford, Conn. 06497
Filed Oct. 19, 1965, Ser. No. 497,759
15 Claims. (Cl. 43—21.2)

A handling device for a fishing rod having conventional or suitable means for removably mounting a reel on the rod, in which an upwardly and slightly forwardly extending hand grip is mounted on the rod, the device having one or more arms directly and removably mounting and securing the hand grip to the reel. The hand grip may also be removably connected and secured directly to the handle of the rod and the connection may include an arm support mounted on and secured to the butt end portion of the rod.

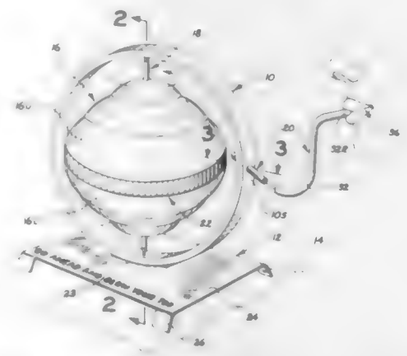


3,372,510
FISHING ROD HANDLING DEVICE
Albert J. Arsenault, 430 Albert Ave., Stratford, Conn. 06497
Filed Aug. 13, 1965, Ser. No. 479,583
3 Claims. (Cl. 43—21.2)



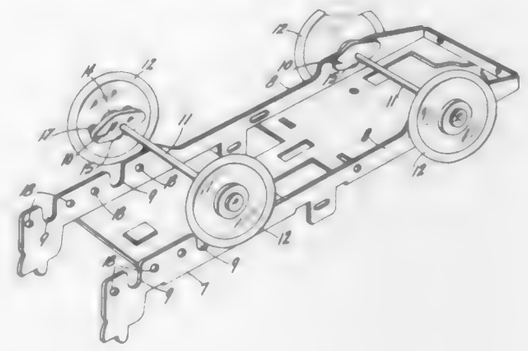
A handling device for fishing rods comprising a split sleeve which embraces and is releasably clamped to the handle of the rod and carries at opposite ends respectively upstanding hand grip and arm support portions and has a downwardly opening recess to expose therethrough, for manual access, conventional means on the rod handle for securing a reel to the underside of the rod handle, the hand grip and arm support portions each being formed of half sections integrally connected to corresponding half sections of the split sleeve.

3,372,511
AIR-JET-OPERATED TOY SPINNING TOP
Richard L. Smith and Frances L. Smith, both of 44037 N. Fig Ave., Lancaster, Calif. 93534
Filed June 7, 1965, Ser. No. 461,823
1 Claim. (Cl. 46—56)



The specification discloses a toy spinning top which is provided with a peripheral turbine means and an air-jet-producing means tangentially aligned with the turbine means so that an air jet produced by either blowing through the air-jet-producing means or by operating a collapsible bulb type of hand pump, or the like, will strike the turbine in a tangential manner and impart rotation to the toy top and cause it to spin in a mounting ring which carries a vertical pivot pin upon which the toy is mounted.

3,372,512
PLASTIC AXLE BEARINGS FOR USE ON TOY VEHICLES
Robert L. Cremer, Freeport, Ill., assignor to King-Seeley Thermos Co., Ann Arbor, Mich., a corporation of Michigan
Filed Dec. 28, 1965, Ser. No. 526,655
6 Claims. (Cl. 46—221)



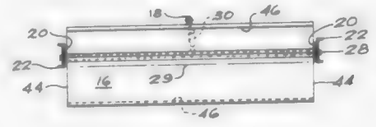
This plastic bearing is of flexible, resilient, material, circular in form, and open peripherally on one side a width less than the diameter of the axle to be entered from that side by spreading the bearing, the bearing member with the axle entered therein fitting closely in an opening of generally rectangular form provided in the bearing support with its entrance at one edge of the support to allow entry of an axle therein with the bearing member in place on the axle. The bearing member has lateral integral extensions in diametrically opposed relation on each of which is a stud integral therewith and extending at right angles thereto to be pressed into holes provided in the support with a tight friction fit to secure the bearing member in place, the studs each having a head on the outer end of larger diameter than the studs which when pressed through the holes in the support are compressed and upon emergence from the holes expand to their normal diameter to better secure the bearing member in place.

3,372,513
PROCESS FOR CONTROLLING PLANT GROWTH BY THE COMBINATION OF DIRECT SUNLIGHT AND REFLECTED COLORED LIGHT
Bernard Edward Shlesinger, Jr., Robert Edward Shlesinger, and Mary Kathleen Shlesinger, all of 3906 Bruce Lane, Annandale, Va. 22003
No Drawing. Filed Apr. 20, 1966, Ser. No. 543,781
1 Claim. (Cl. 47—58)

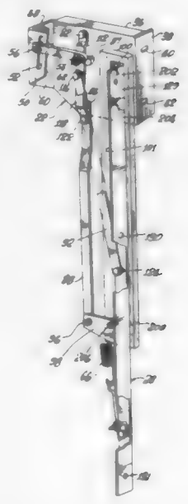
A method for controlling the speed of stem elongation of growing plants shortly after germination including the steps of exposing the germinated plants and the area about the plants to direct solar light and placing in the area about the plants deflecting material so as to produce at least a visually noticeable amount of reflected color light on the plants and controlling the total amount of light on the plants by varying the amount and proximity of the reflecting material.

3,372,514
SIDE SEALING MEMBERS FOR OPERATING LOUVER ASSEMBLIES
William E. Adams, Wexford, Pa., assignor to H. H. Robertson Company, Pittsburgh, Pa., a corporation of Pennsylvania
Filed Oct. 6, 1965, Ser. No. 493,366
5 Claims. (Cl. 49—91)

An operating louver assembly of the type having a plurality of louver blades pivotally supported in a frame and having means for moving the louver blades between open and closed positions. Infill plates formed from a flexible material such as Phosphor bronze, are interposed between the end edges of the louver blades and the frame for sealing the spaces between the frame and the blade end edges to minimize light leaks and to further minimize the ingress of wind, rain, snow and debris into the interior of the building.

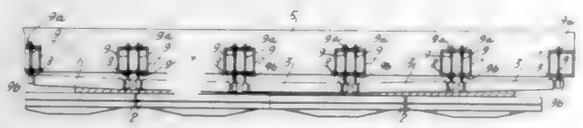


3,372,515
OVERHEAD DOOR HINGED SUSPENSION
Donald D. Andresen, 24900 Santa Clara St., Hayward, Calif. 94544
Filed July 29, 1966, Ser. No. 568,822
13 Claims. (Cl. 49—205)



2. In an overhead swinging door suspension, apparatus comprising:
- a door jamb attachment body for attachment to a substantially vertical door jamb intermediate the top and bottom ends thereof;
- a door attachment bracket for attachment to a door intermediate the top edge and bottom edge thereof;
- a first elongated hinge arm pivotally attached at one end to said body at a first pivot point and pivotally attached at the opposite end to a second pivot point carried by said attachment bracket;
- a pair of scissor links pivotally interconnected at adjacent ends thereof by a common, floating pivot means and having one opposite end of one of said links pivotally connected to said body at a third pivot point, upwardly spaced from said first pivot point, and having the other, opposite end of the other of said links pivotally connected to said first hinge arm at a fourth pivot point adjacent to but spaced a distance longitudinally of said first hinge arm from said first pivot point toward said second pivot point; and
- a second elongated hinge arm pivotally attached at one end thereof to said common, floating pivot means of said pair of scissor links, and pivotally connected at the opposite end thereof to said bracket at a fifth pivot point, said second pivot point and said fifth pivot point being spaced-apart longitudinally of the axis of said attachment bracket.

3,372,516
PRESSURE ROLLERS FOR GLASS RIBBON POLISHING MACHINE
George Alfred Dickinson and Thomas Stanley Cook, St. Helens, England, assignors to Pilkington Brothers Limited, Liverpool, England, a corporation of Great Britain
Filed Aug. 21, 1964, Ser. No. 391,183
Claims priority, application Great Britain, Aug. 29, 1963, 34,259/63
9 Claims. (Cl. 51—110)

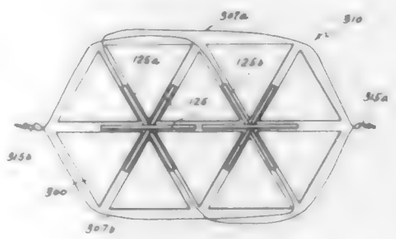


1. Apparatus for imparting a substantially uniform surface to flat glass comprising power-driven surfacing tools disposed to operate on one face of the glass, and oppositely disposed pressure means comprising a plurality of transverse series of rollers, and an adjustable mounting for at least one roller in each transverse series of rollers, said mounting including individually adjustable means at each end of that roller permitting adjustment of each end of that roller relative to at least one other roller in the same series in a plane perpendicular to the plane of the glass.

3,372,517
CONTROL SYSTEM FOR THE COMPARATIVE REGULATION OF THE DIAMETERS OF A PAIR OF WHEELS
Mitsugu Sakabe, Suita-shi, Hajime Shiomi, Osaka-fu, and Seiuemon Inaba, Kawasaki-shi, Japan, assignors of one-third each to Nippon Kokuyu Tetsudo (known in English as Japanese National Railways), Tokyo-to, Kaisha Seizo Kaisha, Ltd., Tokyo-to, a corporation of Japan, and Fujitsu Limited, Kawasaki, Japan, a corporation of Japan
Filed Dec. 29, 1965, Ser. No. 517,266
10 Claims. (Cl. 51—165)

1. A control system for the comparatively regulation of the diameters of a pair of wheels, comprising
mounting means rotatably mounting first and second wheels, each of said wheels having a peripheral surface and a diameter;
first pulse producing means positioned in operative proximity with said first wheel for producing a first number of pulses corresponding to the diameter of said first wheel;
second pulse producing means positioned in operative proximity with said second wheel for producing a second number of pulses corresponding to the diameter of said second wheel;
comparator means connected to said first and second pulse producing means for producing an output corresponding to the difference between said first and second number of pulses, said output having a polarity determined by which of said first and second wheels has the larger diameter and comprising a number of pulses;
first grinding means for grinding the peripheral surface of said first wheel;
second grinding means for grinding the peripheral surface of said second wheel;
pulse generating means for producing pulses for energizing said grinding means; and
control means connected to said comparator means, said first and second grinding means and said pulse generating means for supplying pulses corresponding in number to the output of said comparator and produced by said pulse generating means to one of said first and second grinding means selected in accordance with the polarity of the output of said comparator.

3,372,518
STRUCTURAL UNIT AND STRUCTURE INCORPORATING SAME
Eberhard G. Rensch, Lerchesbergring 12, Frankfurt am Main, Germany
Filed Sept. 18, 1963, Ser. No. 309,777
Claims priority, application Germany, Sept. 22, 1962, R 33,553; Nov. 2, 1962, R 33,801, R 33,802; Dec. 22, 1962, R 34,134; May 2, 1963, R 35,073; May 9, 1963, R 35,135
7 Claims. (Cl. 52—227)

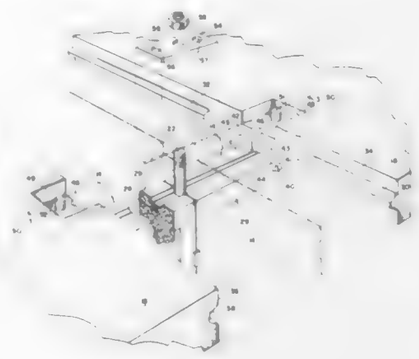


5. A structural unit comprising a substantially horizontal slab with a coherent major portion of polygonal outline composed of a plurality of edgewise adjoining coplanar plates in the shape of isosceles triangles, a multiplicity of said coplanar plates having corners at a common connection point, said plates constituting a coherent major portion of the slab and being provided with peripheral recesses forming channels within the slab at their junctions; flexible tie means securing said plates with adjoining edges in shear-resisting load-bearing relationship, said tie means peripherally surrounding said plates for holding them in contact with one another, said tie means including a plurality of loops overlappingly extending through different ones of said channels and along complementary portions of said outline; a column supporting said slab at said common connection point; and coupling means securing said column to each of said corners of said plates at said common connection point, thereby fastening said column to said slab.

3,372,519
INTERSECTING, MODULAR BARRIER CLAMP JOINT
Gordon C. Russell, Studio City, Calif., assignor to Lockheed Aircraft Corporation, Burbank, Calif.
Filed Oct. 23, 1965, Ser. No. 503,096
2 Claims. (Cl. 52—274)

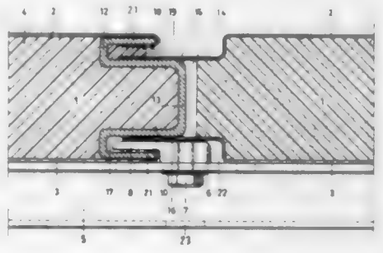
A building construction having a plurality of abutting vertical wall panels and a series of horizontal roof panels

with a plurality of locking plates being secured to reinforcing rods, extending through the roof panels, and



tie rods, extending through the wall panels, to tie the adjacent roof panels together and to secure the roof panels to the wall panels.

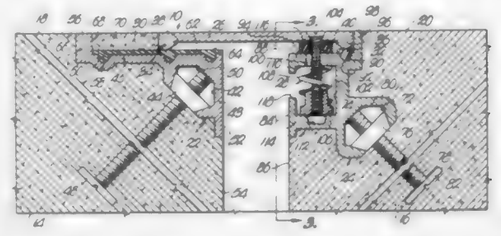
3,372,520
TONGUE AND GROOVE INSULATED PANELS AND DEMOUNTABLE BARRIER CONSTRUCTION THEREOF
Erich E. Hensel, The Hague, Netherlands, assignor to Hunter Douglas International Ltd., Montreal, Quebec, Canada, a corporation of Canada
Filed July 19, 1965, Ser. No. 473,067
Claims priority, application Netherlands, July 24, 1964, 64—8,540
8 Claims. (Cl. 52—483)



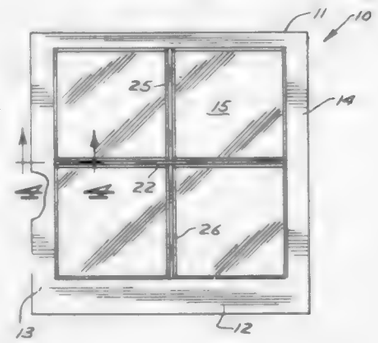
Building elements which are assemblable with each other to form walls, ceilings, etc., comprising spaced apart skins having a filling therebetween, one longitudinal end of each element having a double U-shaped insert gripped between said skins and said skins at the other longitudinal end of each element being formed as longitudinally extending tongues which are engageably receivable within groove portions of said double U-shaped insert in an adjoining one of said elements, said assemblage being effected by the use of carriers having fastening members which rotate to engage said grooves thereby clamping said building elements to said carriers.

3,372,521
FLOOR JOINT COVER ASSEMBLY
Wenzel W. Thom, Wichita, Kans., assignor of one-half to Cecil D. Jones, Wichita, Kans.
Filed June 2, 1965, Ser. No. 460,654
12 Claims. (Cl. 52—395)

A floor joint cover assembly having a cover plate resiliently mounted on one anchor member with a bolt and spring so as to bias the cover plate against the other anchor member closing the joint and allowing the cover plate to pivot or move vertically on the anchor member. The cover plate presses against a resilient material providing a flat surface regardless of the relative positions on the structural sections.

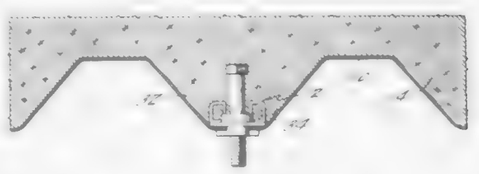


3,372,522
DETACHABLE GRILL ASSEMBLY FOR WINDOW SASH
John P. Engstrom, Minneapolis, Minn., assignor to J.J.J. Specialty Co., Minneapolis, Minn., a corporation of Minnesota
Filed Aug. 11, 1966, Ser. No. 571,875
1 Claim. (Cl. 52—456)



A detachable sash grill assembly comprising a spring-like angled clip having a self holding portion inserted into an end of a grill bar and a toothed portion biting into an adjacent sash portion.

3,372,523
STRUCTURAL FASTENERS
William H. Hall, Jr., West Hartford, Conn., assignor to Structural Fasteners, Inc., West Hartford, Conn., a corporation of Connecticut
Filed June 13, 1966, Ser. No. 557,309
11 Claims. (Cl. 52—699)



1. A structural fastener insert for use with a corrugated building form having holes through the floors of the valleys between sloping walls of the corrugations, such holes being adapted for the insertion of the insert therethrough, the insert comprising:
a load supporting member, said load supporting member having a head section and a fastening section, at least part of said head section being other than circular in cross section, said fastening section extending from said head section;
attachment means in said fastening section for enabling an article to be supported from said fastening section;

a washer element having a major and a minor axis mounted on said load supporting element, said major axis being greater in length than the width of the floors of the valleys between the sloping walls of the corrugations;

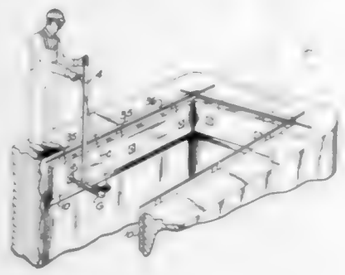
said fastening section passing through one of said holes in a valley floor in said corrugated building form and extending from said building form on one side thereof in an installed position of said load supporting element; said washer element and said head section extending from the other side of said building form in said installed position, and

locking means on said load supporting member, said locking means being on said one side of said building form in said installed position and preventing withdrawal of said load supporting member, and said major axis of said washer extending across said valley and engaging the sloping walls of a corrugation in said installed position of said load supporting element.

3,372,524
INSULATION PANEL AND FASTENER ASSEMBLY AND METHOD

Walter M. Charman, Jr., Shaker Heights, and John Eugene Jackson, Beachwood, Ohio, assignors to Oglebay Norton Company, Cleveland, Ohio, a corporation of Delaware

Filed Oct. 31, 1966, Ser. No. 590,808
1 Claim. (Cl. 52—747)



1. A method of attaching a heat insulation panel to the inside of an upstanding wall of an ingot mold which comprises the steps of:

positioning against the inside of said wall a heat insulation panel having fastener pins pre-set therein with their head ends projecting from the face of the panel away from said wall;

telescoping over the head end of each pin the muzzle of an explosive-powder-actuated impact tool having a trigger for firing an explosive charge and a trigger-control element extending away from the trigger outside of the ingot mold;

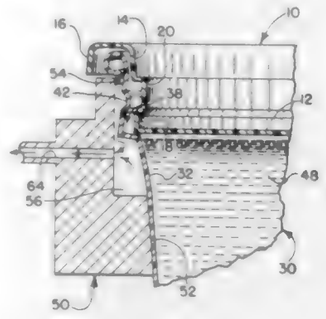
and actuating said trigger-control element outside of the ingot mold to fire the tool to drive said fastener pin into said wall of the ingot mold.

3,372,525
METHOD OF APPLYING A CLOSURE TO A FILLED CONTAINER

Bryant Edwards, Clarendon Hills, Ill., assignor to Illinois Tool Works Inc., Chicago, Ill., a corporation of Delaware

Filed Dec. 29, 1965, Ser. No. 517,286
6 Claims. (Cl. 53—40)

1. The method of assembling a lid member having a radially outwardly projecting locking bead within an open upper end of a flexible container body provided with a radially inwardly extending locking projection of smaller minimum diameter than the maximum diameter of the lid locking bead, comprising the steps of radially enlarging the locking projection of said flexible container body a predetermined amount greater than the maximum diameter of the lid locking bead, relatively assembling the lid member and container body to each other and positioning the lid locking bead axially beneath the locking



projection of said container body, and thereafter causing the flexible container body in the vicinity of its locking projection to return to its unstressed state and thereby enable said locking projection to overlie and engage the lid locking bead for retaining said lid member assembled to said container body.

3,372,526
WRAPPING MECHANISM

Andrew W. Anderson, Caldwell, N.J., assignor to Scandia Packaging Machinery Company, North Arlington, N.J., a corporation of New Jersey

Filed Jan. 22, 1965, Ser. No. 427,383
6 Claims. (Cl. 53—230)

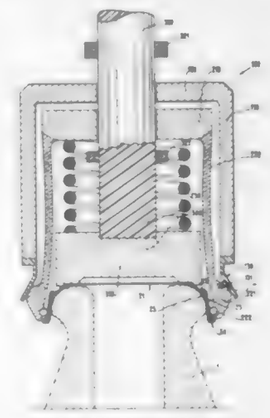
A machine is provided for applying a wrapper around an article to have wrapper flaps protruding from the article. Spring-loaded discs then engage an upper or outer one of the flaps at each end and tighten the flaps and wrapper about the article.

3,372,527
CAP CRIMPING TOOL

Armando Podesta and Carlo Vignati, Milan, Italy, and Andre Bereziat, Lyon, France, assignors to L'Aluminium Francais, Paris, France

Filed Nov. 23, 1965, Ser. No. 509,376
Claims priority, application France, Nov. 24, 1964, 996,102, Patent 1,423,880
8 Claims. (Cl. 53—358)

1. A tool for crimping a cap onto the beaded or grooved mouth of a container in which the cap is a sheet member having a central body portion, an intermediate expandable portion extending outwardly from the body portion, a skirt portion depending from the outer edge of the intermediate portion and a bead on the end of the skirt, said crimping tool comprising the combination of a stationary outer sleeve section, a pusher assembly and an annular punch mounted intermediate the sleeve section and the pusher assembly, said sleeve section comprising a cylindrical section having a crosswise dimension greater than the crosswise dimension of the cap and having a frusto-conical section adapted to be in crosswise alignment with the cap but spaced outwardly therefrom in position of use, said pusher assembly comprising a pusher plate located within the cylindrical section of the sleeve section and contoured at its bottom side to engage the cap and a rod connected to the top side of the pusher plate and mounted for axial displacement relative the sleeve section, said annular punch comprising a supporting ring and a plurality of resilient blades depending from the periphery of said ring in side by side relationship between said cylindrical section and said pusher plate with each of the blades having an outwardly extending bulbous portion forming a collar in crosswise alignment with the frusto-conical section of the cylindrical section when in position of use and a seat on the inner surface and a resili-



ent coil spring mounted in said seat in crosswise alignment with said collar and in which the annular punch is mounted on the rod for axial sliding movement thereon relative to the sleeve section and the pusher assembly, means on the rod for engagement with said annular punch when in raised position and for engagement with the sleeve section when in lowered position thereby to define the limits of movement of said pusher assembly and punch relative to the sleeve section, and means constantly urging said punch in the direction away from the pusher plate towards raised position.

3,372,528
METHOD OF AND APPARATUS FOR THE REMOVAL OF DUST FROM CONVERTER AND OTHER EXHAUST GASES

Hans Hoff, Essen, Germany, assignor to Firma Gottfried Bischoff KG. Bau Kompletter Gasreinigungs- und Wasserruckkuhlanlagen, Essen, Germany, a corporation of Germany

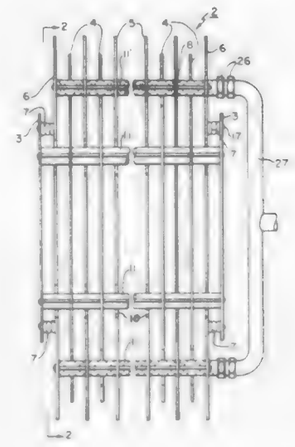
Filed July 13, 1966, Ser. No. 564,983
Claims priority, application Germany, July 15, 1965, H 56,593
2 Claims. (Cl. 55—106)

A dust-removal system for eliminating dust from the hot gases emerging from the steel-making converter wherein a stack delivers partially cool exhaust gas to a gas-washing column which may be bypassed by a conduit opening upwardly in this column into the downwardly turned end of a pipe carrying the washed gases to an electrostatic filter. A temperature-responsive control system detects the gas temperature at the entrance to the electrostatic filter and operates a valve member cooperating with the upwardly turned end of the bypass conduit to regulate the amount of hot exhaust gas mixed with the washed gas to maintain the gas temperature at the entrance to the electrostatic filter substantially constant.

3,372,529
PLATE ELECTRODE ASSEMBLY FOR ELECTROSTATIC PRECIPITATOR

John D. Harms, Milwaukee, Wis., assignor to American Air Filter Company, Inc., Louisville, Ky., a corporation of Kentucky

Filed Sept. 8, 1966, Ser. No. 578,052
3 Claims. (Cl. 55—118)

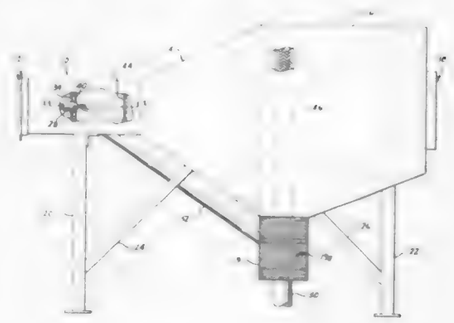


A plate electrode assembly for electrostatic precipitators wherein the precipitator plates are spaced from each other by inwardly positioned spacer bars having hollow passage means extending along the longitudinal axis thereof in communication with fluid supply means to permit fluid treatment of the plates.

3,372,530
AIR CLEANER

Walter H. Zimmer, Galesburg, Ill., assignor to Antipol Corporation, Galesburg, Ill., a corporation of Illinois

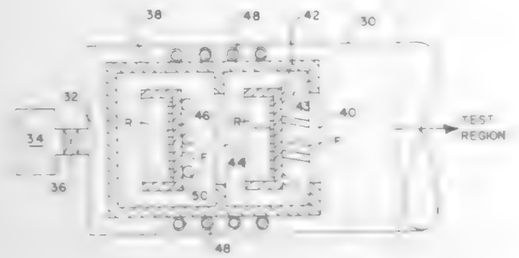
Filed Mar. 21, 1966, Ser. No. 536,018
3 Claims. (Cl. 55—257)



A water spray diverges downstream from a spray nozzle located at the longitudinal centerline of a duct to wet a stream of air carrying particles in the duct. A rectangular frame having knife edges at its inner periphery surrounds the spray nozzle and the inner walls of the duct downstream from the rectangular frame are washed by another water spray from a circular conduit located immediately downstream from the frame. The wetted air is cleaned by a precipitator panel and dried

upon expansion in a settling chamber and by passing through a demister panel. The water and particles are collected by a bin adjacent the settling chamber.

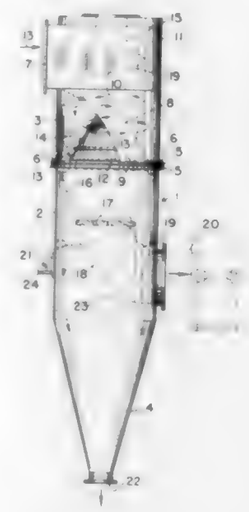
3,372,531
VACUUM DEVICE
Mitchell O. Hoenig, Wayland, Mass., assignor to National Research Corporation, Cambridge, Mass., a corporation of Massachusetts
Filed Sept. 8, 1964, Ser. No. 394,752
6 Claims. (Cl. 55—269)



1. A structure for use as a cryosorption vacuum pumping element, or the like, comprising a solid metal supporting member and a thin layer of individual particles of a porous substance disposed along the surface of said member, the individual particles having metal coatings thereon and being secured to the member by an intermetallic bond through said coating, the individual particles being abraded and bare of coating along portions thereof facing away from the supporting member, whereby gas or vapor can diffuse into said particles through said bare portions, and means for cooling said supporting member to cryogenic temperature and thereby cooling the particles to cryogenic temperature by heat transfer via said intermetallic bond.

3,372,532
DRY SEPARATOR
Charles Langdon Campbell, Houston, Tex., assignor to Centrifix Corporation, Houston, Tex., a corporation of Ohio
Filed Aug. 17, 1965, Ser. No. 480,382
1 Claim. (Cl. 55—394)

1. A vertical downflow dry centrifugal separator comprising an upper cylindrical chamber receiving a particulate laden carrier fluid, a carrier fluid inlet passage in the side wall of said upper chamber and tangential to the cylindrical wall of said upper chamber and imparting an initial whirling movement to the laden fluid passing through said inlet and into said upper chamber, said chamber being closed at its top end, a spool depending into said upper chamber from said closed top end and coaxial with said upper chamber, a bladed generally conical tuyere having whirl-inducing louvres, each inclined with respect to the generally conical surface of said tuyere and supported in said upper chamber below said spool and spaced apart from the walls of the upper chamber with its apex portion adjacent and below said inlet for imparting a whirling movement to the laden fluid entering the chamber from the inlet and passing through the bladed tuyere, the base portion of the tuyere being disposed below the tuyere apex, an annular outwardly and laterally extending flange on the lower end of said upper chamber, and a cylindrical intermediate chamber having the same diameter as said upper chamber and having an annular outwardly and laterally extending flange formed on the upper end thereof, support means supporting the base of said tuyere within and at the lower end of said upper chamber, means securing said flanges together, said intermediate chamber being in communication with the upper chamber through said tuyere, a lower discharge hopper sealingly connected at all points of its upper periphery to the lower periphery of said intermediate chamber and having downwardly converging walls substantially throughout its length and in communication at its upper end with said intermediate chamber and receiving and discharging particulate matter separated from the carrier fluid and terminating at its lower end in a discharge opening, said upper and intermediate chambers, said tuyere, said hopper, said discharge opening and said spool all being arranged in vertical axial alignment, a cylinder supported coaxial with and within said intermediate chamber having its upper end spaced vertically below the base of said tuyere and spacrd throughout its length from the interior surface of the wall of the intermediate chamber and providing an annular passage between the outer surface of said cylinder and the inner wall



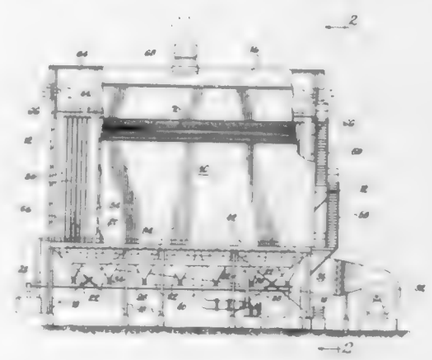
of said intermediate chamber which receives and directs particulate matter separated from the carrier fluid in passing through said tuyere to said discharge hopper, a substantially right angle elbow outlet conduit in the intermediate chamber receiving the unladen carrier fluid passing from the base of the tuyere into the last named chamber, the upper inlet portion of said conduit being in vertical axial alignment with and spaced below the base of the tuyere and above the lower end of said cylinder with the conduit outlet portion extending through a side wall of the said intermediate chamber, an annular series of vortex breaking whirl blades on the exterior surface of said outlet conduit adjacent the said inlet portion thereof and extending outwardly and toward said cylinder, said blades terminating short of the side walls of the cylinder and encompassed therewithin, and means operatively connected to said separator for imparting movement to the carrier fluid through said separator.

3,372,533
SELF-SUPPORTING HIGH DENSITY FILTER
Raymond W. Rummel, Long Beach, Calif., assignor to Farr Company, El Segundo, Calif., a corporation of California
Filed July 11, 1966, Ser. No. 564,174
8 Claims. (Cl. 55—499)

A high density air filter where the sheet type filter media is spaced and supported upon itself in a housing by employing a multiplicity of longitudinally pleated sheets of media stacked in zig-zag relationship with the opposite longitudinal ends of each sheet in nesting abutment with and sealed to one longitudinal end of each of the adjacent sheets on either side and with the other ends of the adjacent sheets supported in spaced relation by attached spacer strips to form longitudinally converging

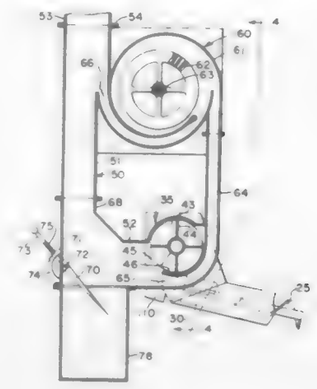
and diverging passageways between pairs of sheets for the air to flow longitudinally into converging passageways, through one or the other of the sheets, and then out through the diverging passageways.

3,372,534
BAGHOUSE CONSTRUCTION
David M. Hysinger, Paris, France, and Fredrick A. Lindahl, Novelty, Ohio, assignors to The Wheelabrator Corporation, Mishawaka, Ind., a corporation of Delaware
Filed Sept. 14, 1965, Ser. No. 487,129
4 Claims. (Cl. 55—341)



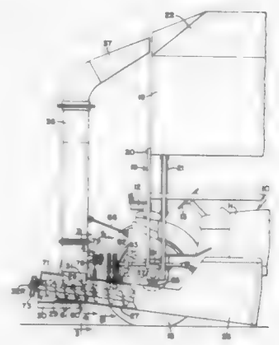
1. In a baghouse construction comprising a housing having upwardly extending walls, a lower cell plate floor and an upper tube suspension floor extending between said walls, a plurality of flexible filter tubes closed at the top and vertically supported between said floors in operative position and means for directing particle containing gases through the walls of said tubes for removal of said particles by means of a filtering process, the improvement comprising an attic located above said suspension floor, said suspension floor being substantially imperforate whereby the atmosphere in the attic is separated in substantially sealed relation from the atmosphere in the tube section between the floors, inlet and outlet means in communication with the space between the floors for the passage of gases to and from the filter tubes, separate inlet and outlet means connected with the attic for the passage of amospheric air therethrough, fans for circulating said atmospheric air from the separate inlet to the outlet through the attic, means extending into the attic releasably suspending the upper end portions of the filter tubes for raising and lowering the filter tubes to and from operative position, and including walkways located on said cell plate floor and on said suspension floor between rows of tubes whereby workmen can stand on said floors, and means for securing a cable to the upper end of a tube whereby the tube can be lowered to said cell plate floor for maintenance and replacement.

3,372,535
COTTON HARVESTER
Myron L. McCunn, Dallas Center, and Ronald K. Leonard, Madrid, Iowa, assignors to Deere & Company, Moline, Ill., a corporation of Delaware
Filed Mar. 15, 1965, Ser. No. 439,542
14 Claims. (Cl. 56—12)



A cotton harvester comprising a tractor portion; harvesting mechanism on opposite sides of the tractor portion for harvesting cotton; a pair of augers for each harvesting mechanism for moving the harvested cotton rearwardly; flipper blades on the rear ends of the augers for elevating cotton; a transverse auger housing extending across the tractor portion having material inlets for receiving cotton from the flippers and a central outlet; auger flight means within the housing for moving the cotton from the inlets to the outlet; conduit means having an intake end at the outlet and a remote discharge end; and blower means having a blower outlet at the intake end of the conduit means and a blower outlet opening into the conduit means at a distance from the inlet and directed toward the discharge end.

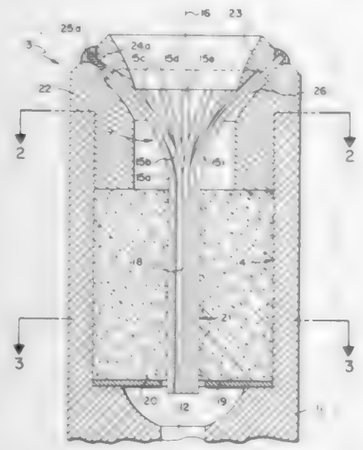
3,372,536
COTTON HARVESTER
Myron L. McCunn, Dallas Center, Iowa, assignor to Deere & Company, Moline, Ill., a corporation of Delaware
Filed Mar. 11, 1965, Ser. No. 438,848
14 Claims. (Cl. 56—12)



A discharge means for a cotton harvester comprising an elongated housing mounted adjacent the harvesting mechanism so as to receive cotton bolls removed by the mechanism from cotton plants, the housing having a ripe boll outlet and a green boll outlet, a conveyor within the housing moving bolls first by the ripe boll outlet and from thence to the green boll outlet; a duct extending from the housing and in communicating relation with the

ripe boll outlet; a blower having an outlet opening into the duct in offset relation to the ripe boll outlet and directed away from the latter to effect suction of the ripe bolls through the ripe boll outlet; and a green boll container for receiving the greener bolls gravitating from the green boll outlet.

3,372,537
RADIALLY CLAMPING GRIPS
Maurice Poull, 41 Ave. de Vaudagne, Meyrin, Geneva, Switzerland, and Erwin Zurcher, 10 Rue Liotard, Geneva, Switzerland
Filed Dec. 21, 1966, Ser. No. 603,627
5 Claims. (Cl. 57—59)

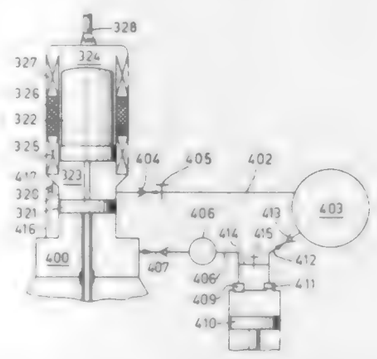


This invention concerns a gripping device that includes a body having a central bore and a plurality of flexible filaments secured in the central bore. The flexible filaments form a bow-net and the narrow end of the bow-net is extended to form a bundle of filaments. The gripped object enters the gripping device through the bow-net and a uniform radial clamping force is exerted over the periphery of the gripped object as it is allowed to move axially. Provision is also made for damping out any vibratory effects generated by any irregularities in the diameter of gripped object as it moves through the filament bundle. Preferably the gripping device is adapted to rotate and is especially useful in spinning textile fibers into threads.

3,372,538
EXPANSIBLE LINK BRACELET
Cheng Chow, Flat 1002, E. Terrace, Sai Wan Chuen, Hong Kong, and Mak Fan, 369 Ki Lung St., 5th Floor, Kowloon, Hong Kong
Filed Oct. 20, 1965, Ser. No. 498,776
Claims priority, application Great Britain, Mar. 12, 1965, 10,681/65
6 Claims. (Cl. 59—79)

1. An expansible link bracelet comprising at least two links, and a connecting member joining said links, mountings for a pair of torsion springs in one of the links, a pair of torsion springs mounted thereon with one end secured and the other free, tongues on sides of said connecting member, one of which is engaged with the free ends of the torsion springs and the other with an adjacent link, said torsion spring mountings being located laterally offset from the path of the tongue of said connecting member engaging the free ends of the torsion springs, there being one mounting on each side of the tongue, whereby the torsion springs and mountings do not reduce the effective expansion of the bracelet.

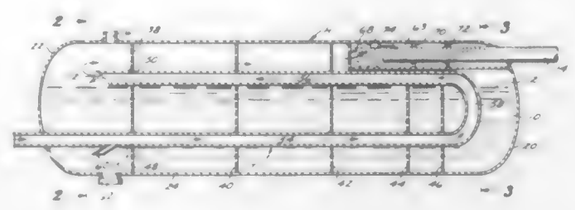
3,372,539
HOT-GAS RECIPROCATING ENGINE
Jacobus Pieter Reinhoudt, Emmasingel, Eindhoven, Netherlands, assignor to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware
Filed June 27, 1966, Ser. No. 560,673
Claims priority, application Netherlands, July 19, 1965, 65—9,299
5 Claims. (Cl. 60—24)



1. An apparatus including a hot-gas reciprocating engine provided with a working space and a working medium therein, comprising a compressor, a storage container for said working medium communicating with the working space of said engine, said communication being an inlet duct provided with a first check valve, a medium outlet duct provided with a second check valve communicating at one end with said working space and at the other end with an inlet aperture of said compressor, a first duct between said storage container and the outlet aperture of said compressor including a third check valve, a second duct communicating with said first duct and with said medium outlet duct between said inlet aperture of said compressor and said second check valve, a controllable valve arranged in said second duct, said controllable valve being closed when the quantity by weight of said medium in said working space decreases and otherwise being open, the medium outlet duct having such a volume that when said controllable valve is open substantially no pressure variations occur therein.

3,372,540
APPARATUS FOR PREVENTING DISCHARGE OF CONTAMINANTS FROM THE ENGINE OF AN AUTOMOTIVE VEHICLE
Jess H. Birdwell, 5476 Linden Ave., Apt. 7, Long Beach, Calif. 90805
Filed June 27, 1966, Ser. No. 560,496
7 Claims. (Cl. 60—30)

1. Apparatus for preventing discharge of exhaust gas contaminants from an internal combustion engine, comprising:
- a housing;
- a body of water in said housing;
- an exhaust gas tube extending through said housing, the discharge end of said exhaust gas tube normally being arranged above the level of said body of water;
- an induction tube positioned on a submerged portion of said exhaust gas tube whereby flow of exhaust gas through said exhaust gas tube will induce the flow of water into said exhaust gas tube; and



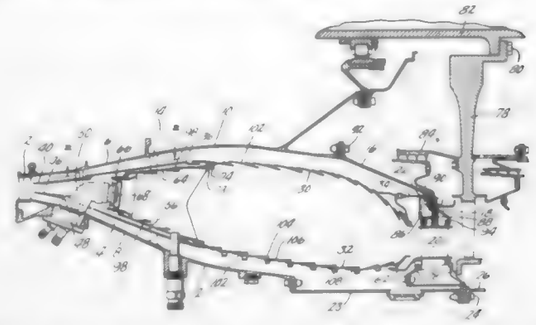
- a tailpipe extending from said housing above the level of said body of water.

3,372,541
GAS TURBINE ENGINE COMBUSTION CHAMBER
Herbert Frank Smith, Derby, England, assignor to Rolls-Royce Limited, Derby, England, a British company
Filed June 9, 1966, Ser. No. 556,420
Claims priority, application Great Britain, June 21, 1965, 26,207/65
12 Claims. (Cl. 60—39.65)

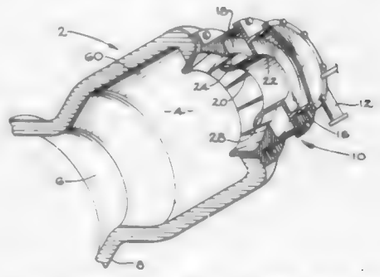
A gas turbine engine has an annular combustion chamber and flame tube which is disposed outwardly of the compressor outlet and turbine inlet, the combustion chamber being inclined in a downstream direction so that it is disposed radially outwardly of the turbine. Part of the air leaving the compressor is directed into the combustion chamber, while the remainder, constituting dilution air, passes directly across the radially inner part of the combustion chamber without substantial change of flow.

3,372,542
ANNULAR BURNER FOR A GAS TURBINE
Edward B. Sevetz, West Hartford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Filed Nov. 25, 1966, Ser. No. 596,978
11 Claims. (Cl. 60—39.69)

An annular burner construction for a gas turbine engine in which the burner inlet extends forwardly into the diffuser and includes a pair of diverging walls between which the fuel nozzle is located. Each nozzle is surrounded by a burner cup and the several cups are attached together to form an annulus positioned in and spaced from the diverging walls. Extending downstream from the ends of the diverging walls are the inner and outer walls of the flame annulus and these are held against axial movement within the outer combustion chamber walls.



3,372,543
THROTTLING INJECTOR
Dwight I. Baker, Woodland Hills, Calif., assignor to North American Aviation, Inc.
Continuation of application Ser. No. 402,064, Oct. 5, 1964. This application June 17, 1966, Ser. No. 558,549
6 Claims. (Cl. 60—39.74)



1. A device for supplying fluid to a gas producing chamber comprising:
- an injector,
- means forming a first annular chamber in the injector, said chamber having a fluid inlet,
- first lip means connected to and extending radially inward of said first chamber,
- a first fluid line terminating in a section connected to and aligned tangentially with said first chamber,
- first throttling means including a flapper valve positioned between said first chamber and said first fluid line section for varying the size of the opening of said chamber fluid inlet,
- a second annular chamber formed with a fluid inlet, said second chamber being concentric with and adjacent to said first annular chamber,
- second lip means connected to and extending radially inwardly of said second chamber,
- a second fluid line terminating in a section connected to and aligned tangentially with said second chamber,
- second throttling means including a flapper valve positioned between said second chamber and said second fluid line section for varying the size of the opening of said second chamber fluid inlet,
- interconnecting means for interconnecting said flapper valves,
- actuator means linked to said interconnecting means for simultaneously varying the sizes of the openings of the fluid inlets,
- means for passing fluid through said first throttling means into said first chamber where under swirling action the fluid flows over said first lip means and,
- means for passing fluid through said second throttling means into said second chamber where under swirling action the fluid flows over said second lip means

and mixes and combusts with the fluid flowing over said first lip means in said gas producing chamber.

3,372,544
MEANS FOR PRESETTING AND TESTING A DESIRED PRESSURE LIMIT FOR HYDRAULICALLY REGULATED REFINER

Robert B. Kirkwood, Portland, Oreg., assignor to Morden Machines Company, Portland, Oreg., a corporation of Oregon

Filed Aug. 15, 1966, Ser. No. 572,343
2 Claims. (Cl. 60—52)

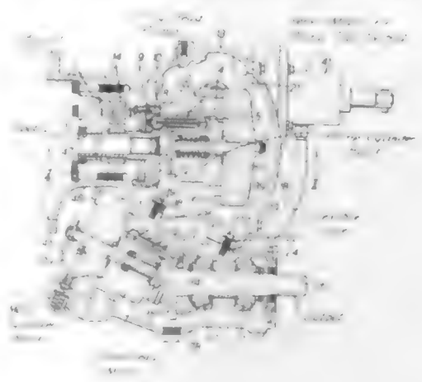
1. In a hydraulic system for positioning an axially-adjustable element in a fibrous material refining machine by the maintenance of a desired constant pressure, a double-acting hydraulic cylinder, a hydraulic pump and pump motor, a flow control valve in the hydraulic lines for said cylinder, a pressure relief valve and a pressure gauge in the delivery line between said pump and said flow control valve, a control element for setting said pressure relief valve, electric means for selectively moving said flow control valve from neutral closing-off position, switch means controlling the operation of said electric means and controlling a main circuit to said pump motor so arranged as to close said circuit to said pump motor whenever said control valve is moved from neutral closing-off position by said electric means, and associated testing switch means for closing a circuit to said motor while said electric means is inactive and said control valve is in neutral closing-off position, whereby the utilization of said testing switch means will cause said pump temporarily to be operated while said flow control valve is maintained in said neutral closing-off position, thereby enabling the pressure in the hydraulic fluid delivery line between said pump and said flow control valve to build up quickly for the setting of said pressure relief valve and the establishing of maximum pressure for the entire system in advance of activating the system.

3,372,545
HYDRAULIC APPARATUS

David J. Hyde, Cheltenham, England, assignor to Dowty Technical Developments Limited, Brockhampton, Cheltenham, England, a British company

Filed Feb. 7, 1966, Ser. No. 525,662
Claims priority, application Great Britain, Feb. 10, 1965, 5,716/65
6 Claims. (Cl. 60—53)

A hydrostatic power transmission is disclosed which comprises a pair of relatively movable pump and motor casings having mutually adjacent machined surfaces on the exteriors thereof which are adapted to be abutted in surface-to-surface engagement with one another, fastening means applied between the surfaces and detachably interconnecting the casings with one another, to secure them against relative movement while the transmission is in use, and positive displacement hydraulic pump and



motor means mounted within the interiors of the pump and motor casings, respectively, in hydraulic connection with one another to transmit power between the input and output thereof.

3,372,546
METHOD OF OPERATING A ROCKET ENGINE USING HEAT EXCHANGE WITH HYDROCARBON FUELS

George B. Arnold, Fishkill, and Robert Y. Heisler, Herbert E. Vermillion, and Alfred Arkell, Wappingers Falls, N.Y., assignors to Texaco Inc., New York, N.Y., a corporation of Delaware

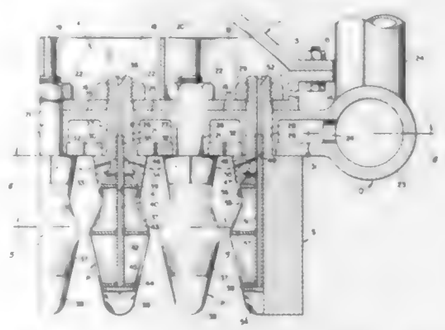
No Drawing. Filed Dec. 21, 1964, Ser. No. 420,488
3 Claims. (Cl. 60—206)

1. A method of operating a rocket engine on a high energy hydrocarbon-oxidizer propellant, said rocket engine having a combustion zone and a heat exchanger in heat exchanging relationship to the walls of said combustion zone, the improvement which comprises employing a hydrocarbon, from the class consisting of tetraisobutylene, triisobutylene and diisobutylene, and a fluorine-oxygen-containing oxidizer containing at least one atom of oxygen for every carbon atom in said hydrocarbon, and passing at least a portion of said hydrocarbon through said heat exchanger under conditions causing substantial depolymerization of said hydrocarbon to isobutylene effective to remove at least 900 B.t.u.'s for each pound of said hydrocarbon that is depolymerized and thereafter burning said depolymerized hydrocarbon with said oxidizer in said combustion zone.

3,372,547
MULTIPLUG ROCKET ENGINE

Donald A. Eberwine, Aurora, Colo., assignor to Martin-Marietta Corporation, New York, N.Y., a corporation of Maryland

Filed Oct. 21, 1965, Ser. No. 499,713
14 Claims. (Cl. 60—258)



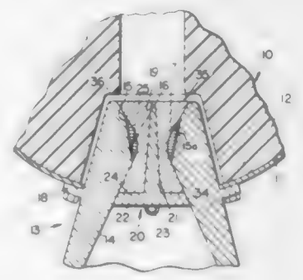
This is an extremely short rocket engine formed basically of a number of spaced plugs geometrically arranged

to provide a number of interconnected rocket nozzle areas. Each plug supplies either oxidizer or fuel to the combustion chamber and a manifold supplies the other of the oxidizer or fuel.

3,372,548
ROCKET NOZZLE

John R. Mathis, Tremonton, Utah, and George E. Bush, Upland, Calif., assignors to Thiokol Chemical Corporation, Bristol, Pa., a corporation of Delaware

Filed June 17, 1965, Ser. No. 464,767
6 Claims. (Cl. 60—271)

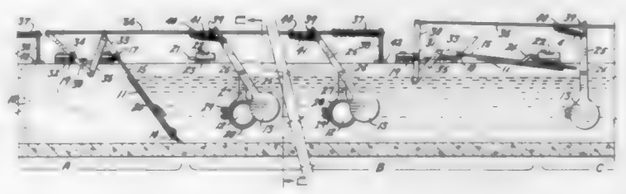


1. A rocket motor comprising a propellant containing casing, a converging-diverging nozzle attached to said casing, said nozzle comprising a base substantially including the converging-diverging portions thereof, a seat in said base, an annular member engaging said seat intermediate said nozzle converging-diverging portions in said base including a throat, said annular member and said seat defining a substantially annular hot gas fillable space therebetween, a removable, annular member retaining means comprising a reinforcing member having a substantially circular base portion positioned in said nozzle against the diverging section thereof and a vertical rod portion extending from said base portion interiorly of said annular member, and a foamed plastic plug supported on said base portion and said rod portion contacting said nozzle base in at least the diverging section thereof for retaining said annular member in said seat prior to ignition of said motor.

3,372,549
REMOTE-CONTROLLED AUTOMATICALLY OPERATING IRRIGATION GATES

Lawrence L. French, Star Rte., Box 248, Powell, Wyo. 82435

Filed July 18, 1966, Ser. No. 565,926
6 Claims. (Cl. 61—24)

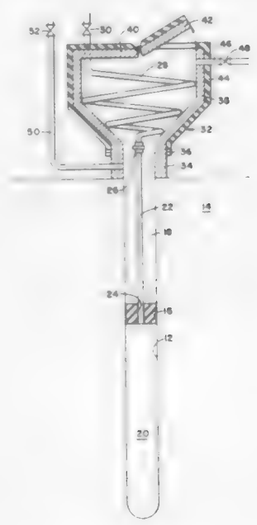


A plurality of main gates positioned at spaced intervals along a main ditch, dividing the latter into sections; a plurality of lateral gates in each section discharging water from their respective section; the main gate of each section being connected with the lateral gates of that section so that the latter will be moved in correspondence with the main gate of that section.

3,372,550
METHOD OF AND APPARATUS FOR FREEZING WATER-BEARING MATERIALS

Carl E. Schroeder, 715 E. Liberty, Ponca City, Okla. 74601

Filed May 3, 1966, Ser. No. 547,296
10 Claims. (Cl. 61—36)

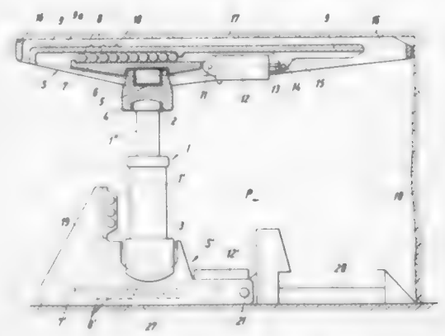


Method and means are provided for freezing water-bearing material, such as earth, in zones such that the temperature decreases with depth. The lower temperature freezing at greater depth provides additional structural strength at the point of need.

3,372,551
MINE ROOF SUPPORT

Hans-Joachim von Hippel, Muehlenkamp 12, Lunen, Westphalia, Germany

Filed Aug. 30, 1966, Ser. No. 575,995
Claims priority, application Germany, Sept. 1, 1965, H 57,042; Sept. 7, 1965, H 57,101; Jan. 7, 1966, H 58,168
22 Claims. (Cl. 61—45)



1. Apparatus for supporting roofs in mining galleries and other underground excavations, comprising at least one prop having upper and lower end portions; and upper and lower advancing units each including first and second caps mounted on the respective end portions of the prop and each movable substantially vertically into engagement with the adjoining material surrounding the excavation, said first and second caps being reciprocable with reference to each other in a substantially horizontal direction and said prop being coupled for such horizontal movement with one of said caps, friction reducing means interposed between said first and second caps, operating means for moving said caps vertically with reference to each other, and shifting means for moving said first cap horizontally when the second cap is in engagement with said material, and vice versa.

3,372,552
WOODEN FENDER PILE PROTECTING APPARATUS

Orval E. Liddell, P.O. Box 1533, Avalon, Calif. 90704
Substituted for abandoned application Ser. No. 348,569, Mar. 2, 1964. This application Feb. 23, 1967, Ser. No. 642,258

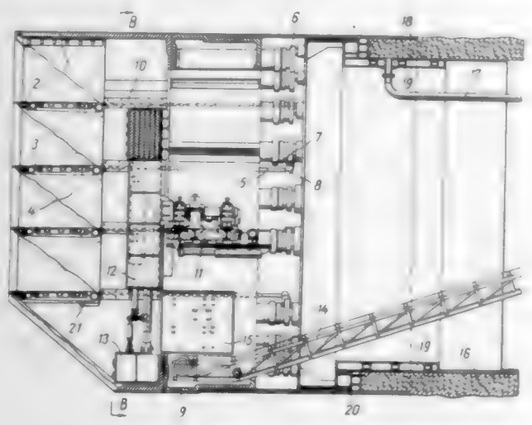
2 Claims. (Cl. 61—54)

Apparatus usable with a floating bumper to protect wooden fender piling against marine borer attack and also against mechanical destruction utilizing a sheet of substantially waterproof material wrapped about the pile to define a generally circumferential water-filled space between the pile and the sheet, with circulation between such space and the ambient water being restricted to thereby maintain the water in the space stagnant and prevent marine borer attack on the submerged portion of the pile encased by the sheet. A rigid shoe of arcuate shape is disposed on the side of the fender pile facing a floating bumper exterior of the sheet. A resilient cushion membrane is interposed between the concave side of the shoe and the sheet. The shoe is held in place by lag bolts that extend through the shoe and cushion membrane into the fender pile with the cushion membrane providing a water seal between the lag bolts and the sheet and also absorbing mechanical impacts when a ship engages the floating bumper.

3,372,553
UNIT FOR DRIVING TUNNELS IN LOOSE GROUND

Vladimir Pavlovich Samoilov, Moscow, U.S.S.R., assignor to Nauchno-Issledovatelsky Institute Osnovany i Padzemnykh Sooruzheny

Filed May 12, 1964, Ser. No. 366,804
5 Claims. (Cl. 61—85)

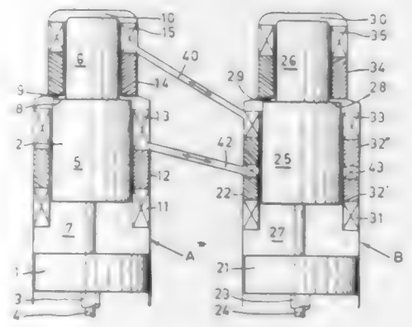


1. An apparatus for driving tunnels in loose soil and ground including a shield having a face end, a cutting ring for the face end, at least one horizontally disposed front rigid sharp-edged member and a conveyor extending across the width of, abutting and operably related to said member and constituting therewith a horizontal component, said conveyor including driving and driven drums and a belt trained about said drums, a drive member extending axially of the shield remaining stationary during advance of the shield, a gearbox attached to the shield for adjusting the speed of the conveyor, means drivingly connecting the gearbox to the drive member, a shaft driven by the gearbox, a shaft for said driving drum, coupling means between said shafts permitting rotation only in one direction for coordinating the rate of advance of the shield and of the conveyor belt, a clutch for the driving drum shaft adapted to transmit a drive between the driven shaft of the gearbox and the driving drum shaft, a longitudinally movable transfer conveyor within the shield behind the horizontal component and means for selectively loading muck behind the component onto the transfer conveyor.

3,372,554
ARRANGEMENT FOR PRODUCING COLD AT VERY LOW TEMPERATURES

Gijsbert Prast, Emmasingel, Eindhoven, Netherlands, assignor to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware

Filed Mar. 21, 1966, Ser. No. 536,131
Claims priority, application Netherlands, Apr. 6, 1965, 65—4,350
7 Claims. (Cl. 62—6)



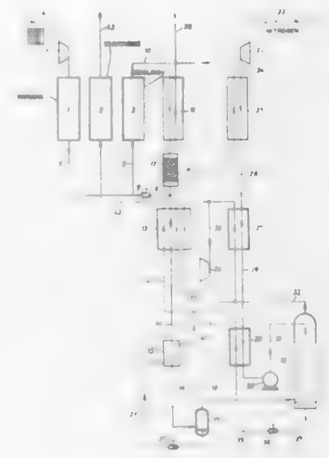
A system incorporating two cold gas refrigerators in which the first refrigerator operates at a high pressure and produces cold at a higher mean temperature. The second refrigerator operates at a lower mean temperature and is connected to the first refrigerator whereby the latter makes up for the regenerator losses of the second refrigerator and permits the second refrigerator to achieve low temperatures.

3,372,555
PROCESS AND APPARATUS FOR IMPURITY REMOVAL FROM HYDROGEN-CONTAINING GASES

Rudolf Becker, Munich-Solln, Germany, assignor to Linde Aktiengesellschaft, Wiesbaden, Germany

Filed Aug. 14, 1964, Ser. No. 389,708
Claims priority, application Germany, Aug. 21, 1963, G 38,515
10 Claims. (Cl. 62—13)

1. A low temperature process for the fractionation of hydrogen-containing gases comprising substantial quantities of hydrogen, methane, and high boiling gases having melting points higher than the boiling point of methane, in an installation containing at least three cyclically reversible regenerators each of which passes successively through a warming, a scavenging and a cooling period whereby the hydrogen-containing gas in the warming period of the regenerator is fractionated into two fractions, one of which, the gaseous fraction, is divided into two partial currents, one of which is passed through a regenerator in the cooling period and is then recombined with the other partial current, which comprises cooling the hydrogen-

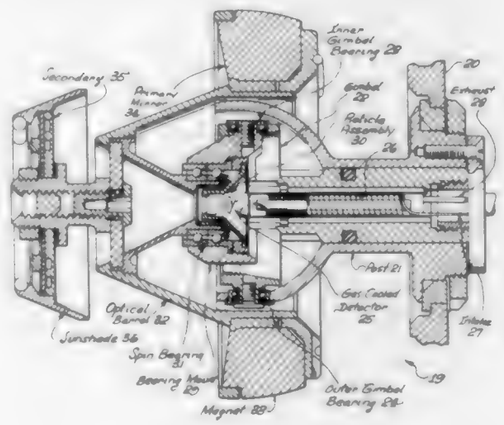


containing gas in the regenerator in the warming period to a temperature higher than the dew point of methane but sufficiently low to congeal completely the high boiling components in their solid states, then warming the one partial current of the remaining gaseous fraction in the regenerator in the cooling period, recombining and further cooling the partial currents to liquefy and separate methane from the remaining gaseous components.

3,372,556
RETRACTABLE CRYOGENIC ASSEMBLY

Marvin Waldman, Ontario, Calif., assignor to General Dynamics Corporation, a corporation of Delaware

Filed Mar. 25, 1966, Ser. No. 537,535
9 Claims. (Cl. 62—45)

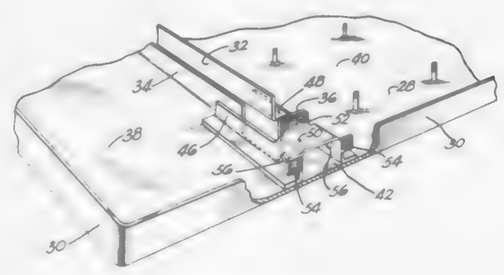


Broadly, the disclosure relates to an infrared tracking or seeking head provided with a cryostat cooling means, this being such that the cryostat is detachable from the seeker head so as to permit the detector section to be gimbaled. The cryostat unit extends into the detector cooling chamber through an O-ring seal and is provided with a solenoid control unit which operates to withdraw the cryostat from the cooling chamber. The chamber is provided with an internal spring loaded door which seals the chamber when the cryostat is removed.

3,372,557
AIR CONDITIONING UNIT

Robert E. Dyas, Manitau Beach, and Richard F. Sharp, Hillsdale, Mich., assignors to Addison Products Company, Addison, Mich., a corporation of Michigan

Filed Sept. 12, 1966, Ser. No. 578,702
7 Claims. (Cl. 62—262)

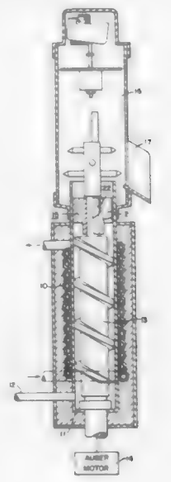


The invention resides in an air conditioning unit for installation in both sliding and double-hung windows in which a common base is provided for evaporator and compressor cabinet structures located on opposite sides of the window. A slot in the common base terminates at a narrow, reinforced corner common to the sections spaced by the slot. The evaporator and compressor cabinet structures are carried upon the two sections and functionally connected to each other across the common reinforced corner by conduit structure.

3,372,558
AUGER TYPE ICEMAKERS

Gilbert M. Guard, Chicopee Falls, Mass., assignor to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania

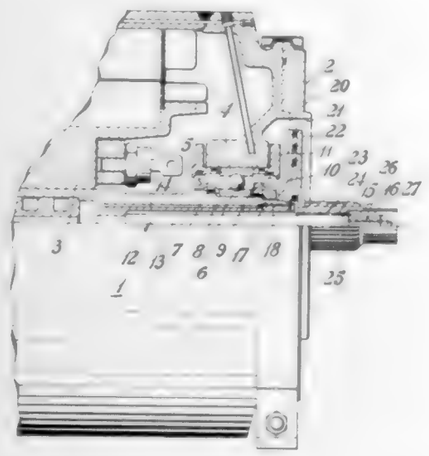
Filed May 24, 1967, Ser. No. 641,010
3 Claims. (Cl. 62—320)



The present invention relates to auger type icemakers.

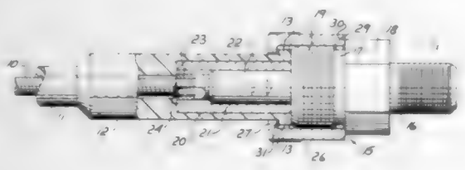
To make random different size chunks of ice, an auger icemaker is provided with an extrusion head having extrusion openings formed by radially spaced apart bosses with alternate adjacent bosses of different length extending axially toward the discharge end of the auger and with wedge shaped compressing and shearing surfaces on the ends of the bosses facing the auger discharge end.

3,372,559
FLEXIBLE DRIVE SHAFT
Frederick Milton Potter, Little Silver, N.J., assignor to The Bendix Corporation, a corporation of Delaware
Filed Feb. 17, 1966, Ser. No. 528,171
5 Claims. (Cl. 64—1)



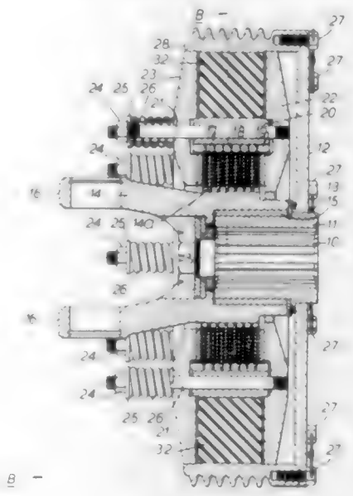
An accessory drive control in which a flexible drive shaft has the characteristics of a shaft twice the length by the provision of outer and inner telescoping members having substantially the same torsional strength.

3,372,560
FLEXIBLE DRIVE SHAFT COUPLING ASSEMBLY
John F. Dalton, Worcester, Pa., assignor to N. W. Controls, Inc., North Wales, Pa., a corporation of Pennsylvania
Filed Aug. 25, 1966, Ser. No. 574,960
5 Claims. (Cl. 64—4)



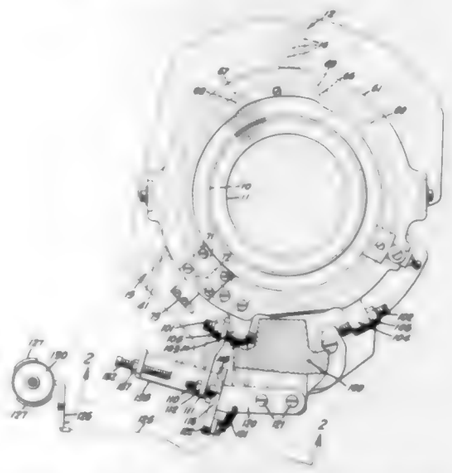
1. In a flexible shaft including an inner rotatable flexible core and an outer sheath covering said core; an assembly for coupling said shaft to a rotatable drive member comprising a sleeve bonded at one end to the end of said sheath, the other end of the sleeve having an external radial flange, a bearing fitted within said sleeve, an adapter for connecting said core to said rotatable drive member including a central threaded body portion, connector means integral with said body and extending from one end thereof for securing the adapter to the drive member, a shaft of reduced diameter extending from the other end of the body portion, said shaft fitting within said sleeve and being journalled for rotation in said bearing, an axially extending coupling recess in the end of said shaft, said core being adapted to fit within said recess for rotational movement therewith, a retainer nut slideably mounted on said sleeve, said nut having an internally threaded portion, the threads on said nut being adapted to interfit with the threads on the body of said adapter for rotation therewith, said nut further having an inwardly extending flange, said flange being axially spaced from the sleeve flange and being adapted to prevent separation of said shaft assembly from said adapter, said nut being dimensioned to provide for axial clearance of said flanges when said threads are interfitted.

3,372,561
MEANS FOR LIMITING TORQUE TRANSMISSION
John Arthur Howard and Eric Leonard Myers, West Horndon, England, assignors to Rotary Hoes Limited, West Horndon, England
Filed Mar. 1, 1966, Ser. No. 530,871
Claims priority, application Great Britain, Mar. 3, 1965, 8,985/65
10 Claims. (Cl. 64—28)



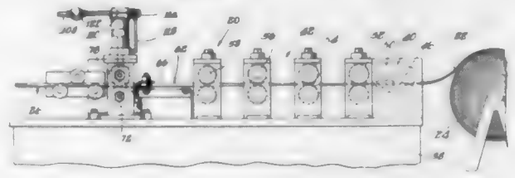
A torque-limiting clutch has coaxial power input and power output members, two pressure plates biased together to clamp friction drive elements. Torque is transmitted through torque responsive means having circumferentially spaced opposing end abutments associated with axially spaced side abutments facing the pressure plates such that torque in excess of a predetermined value will move the end abutments toward each other and the side abutments apart to move the pressure plates apart in opposition to the biasing means for reducing the friction drive engagement between said elements.

3,372,562
SINKER OPERATING CONTROL FOR CIRCULAR KNITTING MACHINES
Walter H. Imboden, Midvale Manor, Reading, Richard M. Janda, Crestwood, Reading, and James H. Boyer, Jr., Mount Penn, Reading, Pa., assignors to Textile Machine Works, Wyomissing, Pa., a corporation of Pennsylvania
Continuation-in-part of application Ser. No. 418,460, Dec. 15, 1964. This application May 14, 1965, Ser. No. 455,776
6 Claims. (Cl. 66—108)



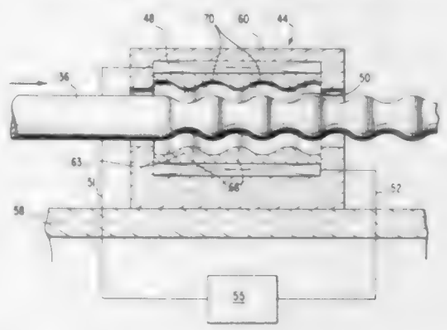
This machine will knit alternating courses of long and short stitches of a tuck pattern in the heel and/or toe of a stocking and can also form consecutive courses of the same length in such reciprocatorily knit areas. A pivoted means when in one position stops sinker cap rotation during each forward stroke to yield normal length stitches and when in a second position stops sinker cap rotation during each reverse stroke to cause behind the neb knitting and thus long stitches. When the pivoted means is in the second position the usual bumper screw and post meet during each forward stroke to yield short stitches.

3,372,563
APPARATUS FOR PRODUCING TUBING
Richard B. Walsh, Round Lake, Ill., assignor to Quaker Industries, Inc., Antioch, Ill., a corporation of Wisconsin
Filed Jan. 27, 1964, Ser. No. 340,275
7 Claims. (Cl. 72—52)



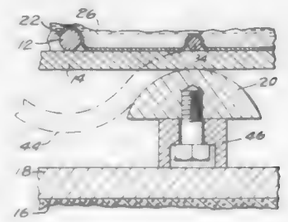
1. An apparatus for forming tubing from a strip of material continuously advancing along a predetermined path of travel comprising a series of means adjacent said path of travel for forming hook portions along opposite margins of the strip and for curling the strip toward a generally tubular condition and interengaging said hook portions, means adjacent said path of travel for crimping said interengaged hook portions together for forming a tubing side seam, said last named means comprising first and second rollers mounted at a fixed location for engaging opposite outer sides of the tubing, a shaft supporting said first roller and extending laterally from opposite sides thereof, a pair of shiftably disposed members respectively supporting said shaft at opposite sides of said first roller, a mandrel anchored for extending within the tubing between said rollers, and pneumatic means resiliently yieldably urging said first roller toward the other with a predetermined substantially constant force for enabling said first roller to accommodate any variations in material thickness of the strip, said pneumatic means comprising a pair of cylinder and piston means respectively connected with said shaft at opposite sides of said first roller.

3,372,564
METHOD FOR SHAPING METAL TUBES
George J. Crowdes, West Dennis, Mass., assignor to Simplex Wire and Cable Company, Cambridge, Mass., a corporation of Massachusetts
Filed Apr. 19, 1965, Ser. No. 448,987
5 Claims. (Cl. 72—56)



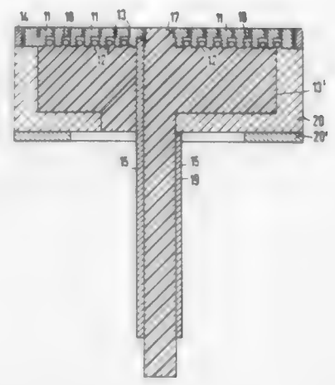
A method for shaping a metal tube by means of forces created by magnetic flux is shown. A tube is passed continuously through a zone defined by an annular, electrically conductive coil of a material having high magnetic permeability and periodic surges of electrical current are passed through the coil to create a force on the moving tube to corrugate or swage it. By shaping the coil it is possible to produce a like shape in the moving tube and by synchronizing the rate of travel of the tube with the periodic surges of electrical current a regular corrugation can be produced in the tube.

3,372,565
CORRUGATION FORMING BY EXPLOSIVES
Laszlo Kunsagi, New York, N.Y., William R. Apblett, Metuchen, N.J., Irwin Berman, Bronx, N.Y and Joseph H. Heifetz, Fort Lee, and Byram J. Mago Convent, N.J., assignors to Foster Wheeler Corporation, New York, N.Y., a corporation of New York
Filed Apr. 13, 1965, Ser. No. 447,709
15 Claims. (Cl. 72—56)



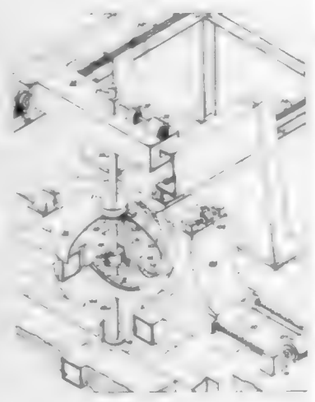
A method and apparatus for corrugating panels by the use of explosive wherein the explosive is limited in amount so that grooves in the panel are substantially free-formed.

3,372,566
DEVICE FOR FORMING METALLIC WORKPIECES BY PULSED MAGNETIC FIELDS
Horst Schenk, Erlangen, and Helmut Seiffert, Nuremberg, Germany, assignors to Siemens Aktiengesellschaft, a corporation of Germany
Filed July 2, 1965, Ser. No. 469,184
Claims priority, application Germany, July 8, 1964, S 91,933
2 Claims. (Cl. 72—56)



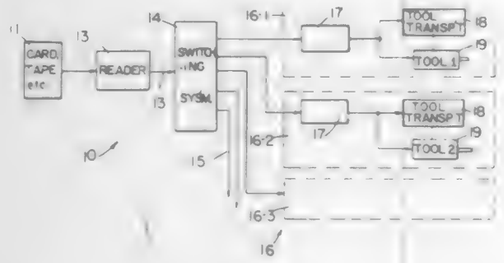
Device for deep-drawing metallic workpieces by pulsed magnetic fields includes a plurality of coaxially disposed rings of relatively good electrically conductive materials, said rings being radially slotted and being electrically insulated from one another, a magnetic coil winding disposed beneath the rings and electrically insulated therefrom, the rings having an upper surface corresponding to the geometric shape of a workpiece to be deep-drawn.

3,372,567
SPINNING MACHINE AND METHOD
Niels H. Jensen, Glenmoore, and Leonard Pompa, Ardmore, Pa., assignors to Lukens Steel Company, Coatesville, Pa., a corporation of Pennsylvania
Continuation-in-part of application Ser. No. 374,567, June 12, 1964. This application Sept. 16, 1965, Ser. No. 490,164
11 Claims. (Cl. 72—80)



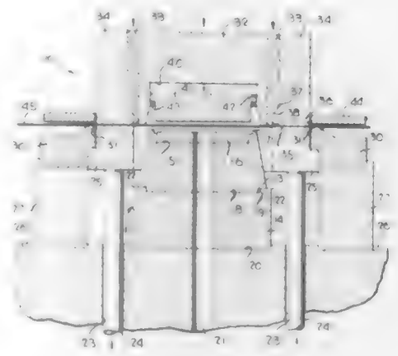
A spinning machine for forming heads from heated steel plates where opposed rollers are carried by a yoke which is movable in an arcuate path on a member which, in turn, is movable both parallel and perpendicularly relative to the axis of rotation of the spinning machine, the rollers having parallel axes of rotation and being selectively offset from each other in the direction of their axes of rotation and/or normally thereto.

3,372,568
AUTOMATIC PRODUCTION APPARATUS AND METHOD
Jerome H. Lemelson, 85 Rector St., Metuchen, N.J. 08840
Continuation-in-part of applications Ser. No. 219,357, Aug. 13, 1962, and Ser. No. 449,874, July 28, 1954. This application Aug. 6, 1964, Ser. No. 387,954
13 Claims. (Cl. 72—218)



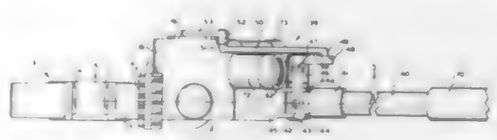
A machine tool head assembly is mounted for transport by means of a mast which is electrically movable on horizontal tracks, after which the machine tool head assembly is electrically moved vertically on the mast to a position to work on a work piece. A work support, independent of the transport means and the tool head assembly, holds a work piece in operative relationship with the tool head assembly as manipulated by the transport means. The machine tool head assembly carries its own motors for manipulating the working tool, and remote control program means is provided for causing a flexible combination of all of these motions.

3,372,569
DIE TO FORM AND TRIM A ROUND TAPERED CONTAINER IN ONE OPERATION
John S. Bozek, Chicago, Ill., assignor to Continental Can Company, Inc., New York, N.Y., a corporation of New York
Filed Aug. 1, 1963, Ser. No. 299,313
10 Claims. (Cl. 72—334)



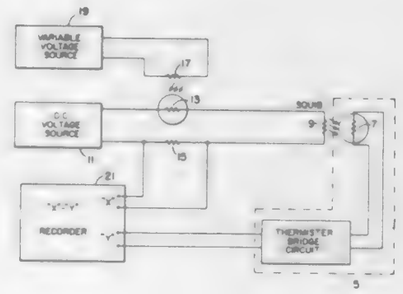
1. In a die for forming a container, a center die element and a plurality of die parts opposed to said center die element; said die parts including a draw ring disposed in cooperative alignment with said center die element for shaping said container, an outer draw ring disposed about said first mentioned draw ring and slidable thereon, and a blanking punch disposed about and slidable on said outer draw ring; said center die element including a stationary trim punch having a cutting edge thereon, said blanking punch and said cutting edge cooperating to trim a container.

3,372,570
HYDRAULIC TOOL
Henry J. Mansell, 225½ Main St., Davison, Mich. 48423
Filed May 31, 1963, Ser. No. 284,674
26 Claims. (Cl. 72—416)



1. A hydraulically actuated tool comprising a body; a movable member supported on said body; hydraulic force generating means supported by said body; force transmitting means interposed between said movable member and said force generating means operable to transmit force from the latter to said movable member for moving the latter; rotary operating means acting on said force generating means for operating the latter; and disabling means reacting between said operating means and said force generating means for disabling generation of hydraulic force by the latter in response to a predetermined rotation of said operating means.

3,372,571
INFINITE RESOLUTION, AUTOMATIC, CALIBRATION, CURVE PLOTTER
David R. Dreitzler and Roy E. Yell, Huntsville, Ala., assignors to the United States of America as represented by the Secretary of the Army
Filed June 28, 1966, Ser. No. 561,299
5 Claims. (Cl. 73—1)

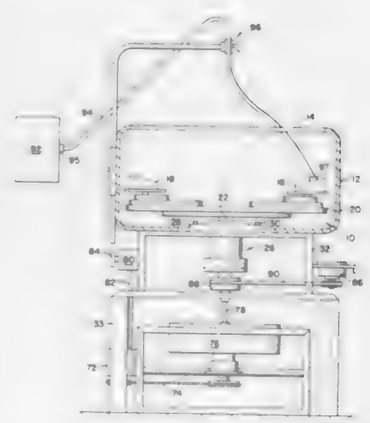


1. An infinite resolution, automatic, calibration, curve plotter comprising:

a first voltage source having first and second output connections; a thermistor connected to said first output connection of said first voltage source; a resistor connected to said second output connection of said first voltage source; a thermoelectric device having first and second input connections, said first input connection being connected to said thermistor, and said second input connection being connected to said resistor; a variable heat source means thermally coupled to said thermistor for smoothly increasing the temperature to the thermistor at a steady rate; an X and Y axis input recorder, said X axis input being connected across said resistor; and a heat sensing circuit, which is to be calibrated, connected to said Y axis input of said recorder, said heat sensing circuit being thermally coupled to said thermoelectric device whereby a calibration curve of said heat sensing circuit is obtained as the heat intensity applied to said thermistor is increased.

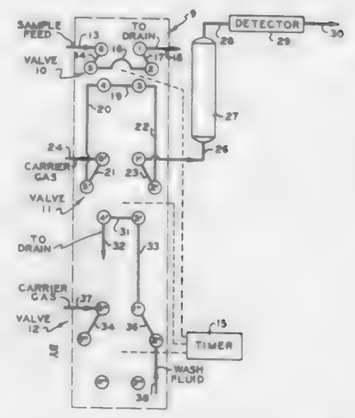
3,372,572
DOUBLE-TURNTABLE TYPE DYNAMIC TEST APPARATUS
Albert S. Campbell and Glenn C. Wright, Las Cruces, N. Mex., assignors to the United States of America as represented by the Secretary of the Army
Filed Aug. 22, 1966, Ser. No. 574,508
6 Claims. (Cl. 73—1)

1. Dynamic test apparatus including: a support frame; a bearing assembly secured within the upper portion of said frame; an annular, fixed gear having teeth on its outer periphery and having a radial flange secured to the upper side of said bearing assembly; a primary turntable having an axial shaft rotatably journaled within said bearing assembly, said turntable being thereby disposed for rotation about a vertical axis, said turntable having a pair of diametrically opposed bores extending vertically therethrough equidistantly spaced from the axis thereof; an annular, centrally disposed, primary gear housing carried by the lower side of said primary turntable; a first pair of gears disposed within said primary gear housing and engaged with said annular gear on diametrically opposite sides thereof, a second pair of gears disposed within said primary gear housing each engaging a respective one of said first pair of gears; a pair of secondary gear housings detachably secured on the upper side of said primary turntable in diametrically opposed positions, each said secondary gear housing having a vertical bore extending therethrough; a third gear disposed in each secondary gear housing; a drive shaft extending through each of said bores in the primary turntable and interconnecting the respective second and third gears; a fourth gear disposed



in each said secondary gear housing and engaging one of said third gears; a fifth gear disposed in each said secondary gear housing and engaging one of said fourth gears; a pair of secondary turntables mounted on said primary turntable for rotation relative thereto and adapted for supporting a test specimen thereon, each said secondary turntable having an axial shaft rotatably journaled in said bore in each said secondary gear housing and drivingly connected with a respective one of said fifth gears; and drive means operatively connected with said primary turntable for rotating said turntables.

3,372,573
CHROMATOGRAPHIC ANALYSIS METHOD AND APPARATUS THEREFOR
Richard A. Sanford and James S. Calhoun, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware
Filed Feb. 24, 1964, Ser. No. 346,783
6 Claims. (Cl. 73—23.1)



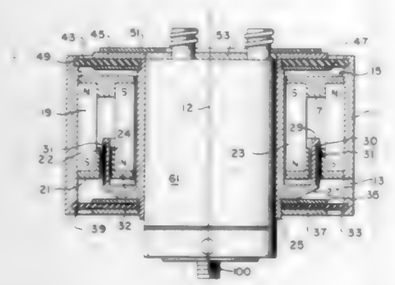
A valving system having three control units which, for example, operate sequentially to entrap a sample of a liquid containing non-volatile materials in a sample loop; flush vaporized components of the liquid sample from the sample loop; flush solvent through the sample loop to ex-

tract non-volatile components therefrom; and pass drying gas through the sample loop to thereby yield a dry sample loop containing no clogging deposits therein.

3,372,574
FRICTIONAL SENSITIVITY TESTING APPARATUS
Carl E. Armour, Bloomfield, Carroll C. Morrison, Bedford, Paul E. Scott, Lyons, and Lloyd A. Smith, Bedford, Ind., and Garry Weingarten, Morris Plains, N.J., assignors to the United States of America as represented by the Secretary of the Navy
Filed Jan. 12, 1966, Ser. No. 520,193
3 Claims. (Cl. 73—35)

A device for determining the relative frictional sensitivity of a pyrotechnic material by counter-balancing, with a weight, a rotational force applied by a rotating shaft to a quantity of pyrotechnic material held in a container which is mounted on a cam, said weight being attached to one end of a cord with the other end of said cord being attached to said cam whereby a variable torque arm is provided and whereby the amount of rotation of said cam and the time required for ignition of said pyrotechnic material determines the relative frictional sensitivity of said pyrotechnic material.

3,372,575
WRAPAROUND VIBRATION GENERATOR IN A MECHANICAL IMPEDANCE MEASURING DEVICE
Fred Schloss, Arlington, Va., assignor to the United States of America as represented by the Secretary of the Navy
Filed Mar. 31, 1965, Ser. No. 444,475
9 Claims. (Cl. 73—67.1)

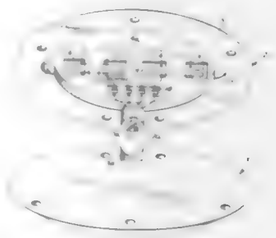


An apparatus for measuring the mechanical impedance of a specimen wherein the vibration generator for the "impedance head" encloses the "impedance head," and the "impedance head" is supported by a vibratable sleeve, which is supported for linear vibratory motion by flexible rings.

3,372,576
DIGITAL ULTRASONIC THICKNESS GAUGE
Jacques Dory, Paris, France, assignor to Corporation Realisations Ultrasoniques, Paris, France, a limited company
Filed July 14, 1966, Ser. No. 565,277
Claims priority, application France, July 17, 1965, 25,031, Patent 1,458,245
4 Claims. (Cl. 73—67.9)

A gated ultrasonic echo thickness measuring system having a plurality of trigger circuits and a counter for measuring the travel time of the echo signals and including a gain control circuit for progressively increasing the gain of the echo receiver during a succession of transmitting and receiving cycles.

3,372,577
PRESSURE MEASURING DEVICE EMPLOYING A DIAPHRAGM AND STRAIN GAGES
Robert C. Bates and Ernest L. Corp, Spokane, Wash., assignors to the United States of America as represented by the Secretary of the Interior
Filed Jan. 12, 1967, Ser. No. 608,943
10 Claims. (Cl. 73—88.5)

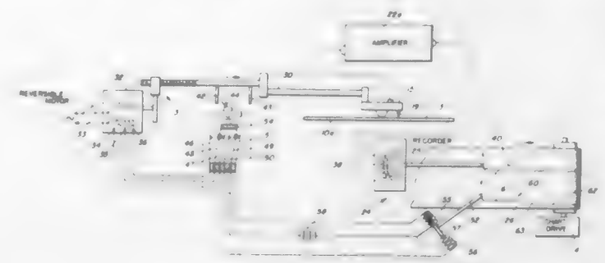


A pressure measuring device with an outer pressure sensitive diaphragm having four strain gages bonded to its inner face. The arrangement and Wheatstone bridge circuitry of the gages are such that temperature and lateral forces against the diaphragm have substantially no effect on bridge output. A collar surrounding the diaphragm has notches adjacent those gages in the peripheral area of the diaphragm so that stress concentrations are prevented in this area.

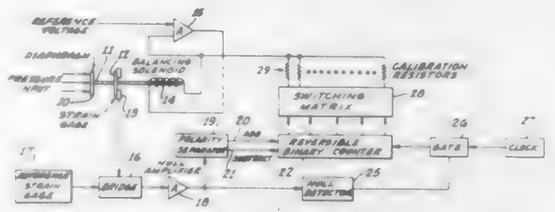
3,372,578
APPARATUS FOR MEASURING THE SURFACE FINISH OF ROLLED METAL
William C. Harmon, Chagrin Falls, Ohio, assignor to Republic Steel Corporation, Cleveland, Ohio, a corporation of New Jersey
Continuation-in-part of application Ser. No. 25,329, Apr. 28, 1960. This application Dec. 2, 1963, Ser. No. 328,779
3 Claims. (Cl. 73—105)

1. In apparatus for examining and indicating surface roughness characteristics of steel strip or the like, in combination, a sensing device movable along the surface to be examined, for producing electrical signals representing the contour of said surface, means controlled by said

sensing device and having an indicating area, for producing in said area a visible response to said signals for determination of a contour property of said surface, reversible driving means including control means for effecting reversal thereof, for displacing the sensing device selectively in opposite directions along the said surface, and means controlled by said control means and including supplemental visible signal means adjacent said area for producing a visible indication of the direction in which the sensing device is moving.



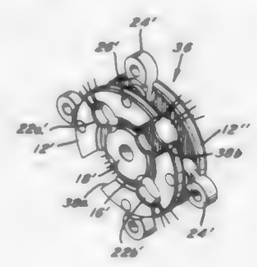
3,372,579
DIGITAL OUTPUT TRANSDUCER
Daniel Hobel and Marvin Sleven, Los Angeles, Calif., assignors to Whittaker Corporation, Los Angeles, Calif., a corporation of California
Filed Dec. 18, 1964, Ser. No. 419,479
11 Claims. (Cl. 73—141)



11. A circuit for providing a digital indication of the magnitude of an unknown force comprising means for producing an electrical signal representative of the difference between the value of said unknown source and a reference value, a reversible counter, means coupling said counter to the output of said signal producing means, said coupling means including means for causing said counter to add if said electrical signal is greater than said reference value and subtract if said electrical signal is less than said reference value, a source of pulses, means coupled to said pulse source and operable in response to said electrical signal to pass pulses to be counted to said counter, an amplifier having an output and first and second inputs, means for developing a force in opposition to said unknown force, a reference source coupled to said first input of said amplifier, feedback circuit means coupling said force developing means between said output and said second input of said amplifier, and means coupling said feedback circuit means to said counter and operable to vary the signal fed back to said second input by said feedback circuit means.

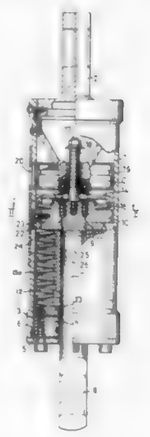
3,372,580
FORCE TRANSDUCER
Jacob Chass, Philadelphia, Pa., assignor, by mesne assignments, to Robinson-Halpern Company, West Conshohocken, Pa., a corporation of Pennsylvania
Filed May 27, 1965, Ser. No. 459,163
14 Claims. (Cl. 73—141)

1. A transducer comprising a pair of discs of a magnetical material the permeability of which varies when the material is stressed, each of said discs having a central portion, an outer portion surrounding and spaced from said central portion and a web portion connecting the central portion and the outer portion, said web portion being thinner than the central portion and the outer portion, the outer portion of each of said discs having a hole therethrough, the edge of the hole extending at least to the web portion of the disc, a separate primary coil wound through the hole and around the outer portion of each of said discs, a separate secondary coil wound through the hole and around the outer portion of each of said discs, and means securing the discs together in spaced parallel relation only at the outer portion of the discs including means for rigidly supporting the discs at the outer edges



thereof, and means for applying a force to be measured to the central portion of only one of said discs, the primary coils of said discs being electrically connected together, the secondary coils of said discs being electrically connected together, the connection between said coils being such that, when the primary coils are connected to an A.C. current, the voltages induced across the secondary coil of one of said discs is in bucking relation to the voltage induced across the secondary coil of the other disc, whereby the application of said force causes a stressing and change in the permeability of the web portion of said one disc which, by altering the flux of the flux path around the hole produces a change in the voltage induced in the secondary coil of said one disc.

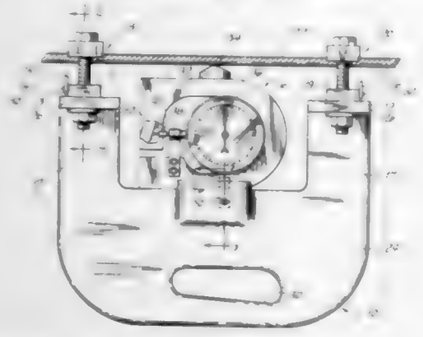
3,372,581
DYNAMOMETER
Sven Axel Tell, Vikingavagen 3, Danderyd, Sweden
Filed Apr. 22, 1966, Ser. No. 544,452
Claims priority, application Sweden, Apr. 27, 1965, 5,503/65
6 Claims. (Cl. 73—141)



1. A dynamometer comprising a casing, a drawrod longitudinally displaceable in the casing, spring elements against the action of which the drawrod is longitudinally displaceable, means for indicating the force with which the drawrod acts against the spring elements, the spring elements surrounding the drawrod, stop means on the

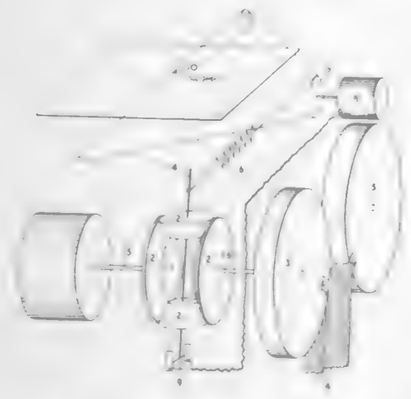
drawrod against which the spring elements bear in one direction, means on the casing against which the spring elements bear in the opposite direction, said stop means comprising a piston screw-threadedly carried by the rod, means for locking the piston on the rod in fixed position, and a ring screw-threadedly carried by the rod and disposed between the locked piston and the spring elements in contact with the piston, said ring permitting the piston to be screwed into said position without being tightened and without wear on the threads between the piston and the rod.

3,372,582
CABLE TENSION INDICATOR
Joseph Weiss, 630 Stanley Ave., Brooklyn, N.Y. 11207, and John G. Macco, 375 1st Ave., Massapequa Park, N.Y. 11758
Filed June 25, 1965, Ser. No. 467,154
5 Claims. (Cl. 73—144)



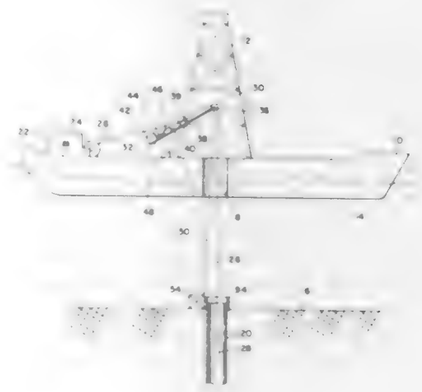
A portable clamp type cable tension indicator which includes a frame structure having a pair of spaced apart clamps and a force type fulcrum gauge intermediate thereof. When the clamps are tightened on the cable, the fulcrum deflects the cable and the deflection of the cable and the force indicated by the gauge are a measure of the cable tension.

3,372,583
DEVICE FOR MEASURING TACK
Waldemar V. C. Van Beek, Bussum, Netherlands, assignor to Ketjen Carbon Naamloze Venootschap, Amsterdam, Netherlands
Filed Sept. 9, 1964, Ser. No. 395,334
Claims priority, application Netherlands, Sept. 18, 1963, 297,734
6 Claims. (Cl. 73—150)



1. A device for testing adhesion between two materials, comprising two disks mounted in coplanar relationship with each other, the circumference of each disk being provided with clamping means for one end of each of two plies of the material compressed together, a motor and gear assembly for driving the disks at equal speed in opposite directions to cause separation of the plies, a pair of guiding rollers around which the plies are pulled apart and defining the point of separation, said pair of rollers being movable, means for measuring the separation force, recording means, means for compressing the plies together with an adjustable force during an adjustable time, means for exactly defining the test surface, said measuring means comprising differential gearing means inserted into the driving shaft system between the motor and the disks, said differential gearing means acting as a fixed gear train, the motor driving one end gear and the other end gear driving the disks, means for applying a variable force to the spider of said gear train to keep the spider stationary, a detecting system for detecting the displacement of said spider from a neutral position, means for varying the force applied thereto to return said spider to its neutral position upon displacement thereof, the recording device cooperating with the variable force applying means and recording said variable force as a function of time, the separation force being a function of the force required to maintain the spider shaft stationary as the motor drives the disks.

3,372,584
OFFSHORE LOGGING
Alfred H. Jageler, Tulsa, Okla., assignor to Pan American Petroleum Corporation, Tulsa, Okla., a corporation of Delaware
Filed July 19, 1965, Ser. No. 473,147
8 Claims. (Cl. 73—152)

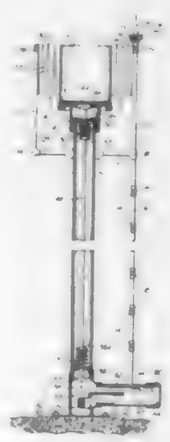


This concerns an apparatus for compensating for vertical movement of a ship in logging a borehole therefrom. A flexible logging line goes from a conventional recorder over a logging line pulley for supporting a logging device in a borehole beneath the floating vessel. An arm is pivotally connected to the vessel and supports the logging line pulley a fixed distance from the pivotal connection. Sensing means for detecting the vertical movement of the vessel is provided and includes means for moving the arm about its pivot thus raising or lowering the pulley to compensate for such vertical movement. In one embodiment, the sensing means includes a sonar detector attached to the floating vessel for continuously detecting the distance between the vessel and the bottom of the body of water.

3,372,585
DEVICE FOR RECORDING CURRENT VELOCITY AND DIRECTION IN BODIES OF WATER
Shale J. Niskin, 9400 SW. 63 Court, Miami, Fla. 33156
Filed Feb. 17, 1966, Ser. No. 528,222
11 Claims. (Cl. 73—170)

A device for the automatic measurement and recording of water currents at various predetermined depths comprising a frame carrying a freely rotatable sphere which is submerged to the test depth. The rotatable sphere assumes a given vertical and azimuthal position. After a predetermined time the sphere is locked in position with respect to the frame and the device is retrieved.

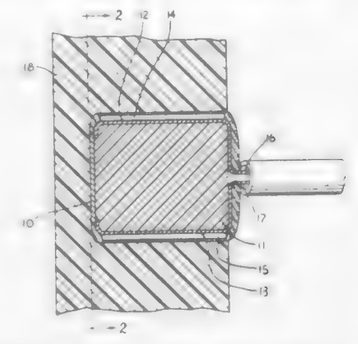
3,372,586
PRECIPITATION MEASUREMENT GAUGE
Duane G. Chadwick, Logan, Utah, assignor to Thiokol Chemical Corporation, Bristol, Pa., a corporation of Delaware
Filed June 23, 1965, Ser. No. 466,404
8 Claims. (Cl. 73—171)



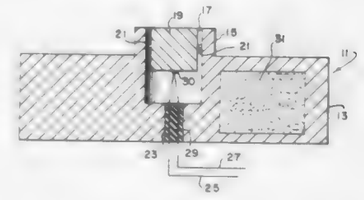
A precipitation gauge for telemetering water level information. A receiving vessel is supported by oppositely acting springs within a housing and a core is carried by the housing and is movable within an electrical coil such that temperature changes and friction do not significantly affect a transmitted signal indicative of the weight of the receiving vessel and varied in accordance with the position of the core.

3,372,587
HEAT FLOW DETECTOR HEAD
Jacob Nanigian, Needham, Mass., assignor to Nanmac Corporation, Needham Heights, Mass., a corporation of Maryland
Filed Nov. 3, 1964, Ser. No. 408,595
4 Claims. (Cl. 73—190)

A detector head for measuring the heat flow through the wall of a chamber of a given material and surrounding a heat source, having a flat plate at right angles to the heat flow abutting a detector head body of the same material as the wall, and a plurality of dissimilar thermocouple conductors attached to the plate in the plane thereof. The head is provided with means for mounting it in the wall and with means for connecting measuring instruments to the thermocouple conductors to measure temperature with respect to time.

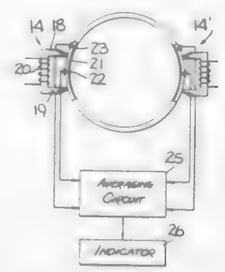


3,372,588
CONSTANT TEMPERATURE HEAT SINK FOR CALORIMETERS
Myron C. Ziemke, Huntsville, Ala., and Rex S. Zerger, Houston, Tex., assignors to the United States of America as represented by the Administrator of the National Aeronautics and Space Administration
Filed Jan. 28, 1965, Ser. No. 428,887
4 Claims. (Cl. 73—190)



A calorimeter having a heat sink with a cavity filled with a material, such as Glauber's salts, that absorbs heat by transformation so as to maintain the temperature of the heat sink substantially constant.

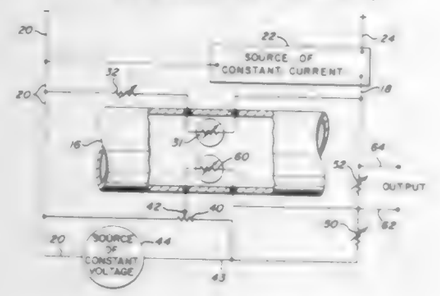
3,372,589
SIDE-SADDLE MAGNETIC FLOWMETER
Elmer D. Mannherz, Southampton, Pa., assignor to Fischer & Porter Co., Warminster, Pa., a corporation of Pennsylvania
Filed June 14, 1965, Ser. No. 463,641
9 Claims. (Cl. 73—194)



A magnetic flowmeter for measuring the rate of flow of a fluid passing through a pipe having a relatively large cross-sectional area, a magnetic field being created within the pipe in a region which represents only a portion of the total cross-sectional area thereof, the voltage induced in said region by the fluid passing therethrough being detected to produce a signal which is then multiplied by a factor depending on the dimensional relationship of

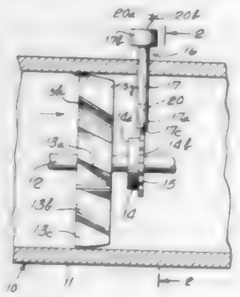
the region to the total cross-sectional area of the pipe to provide an accurate reading of the flow rate through the pipe.

3,372,590
THERMAL FLOWMETER
John Jerome Sterling, Yellow Springs, Ohio, assignor to Technology Incorporated, Dayton, Ohio, a corporation of Ohio
Filed Oct. 1, 1965, Ser. No. 492,180
14 Claims. (Cl. 73—204)



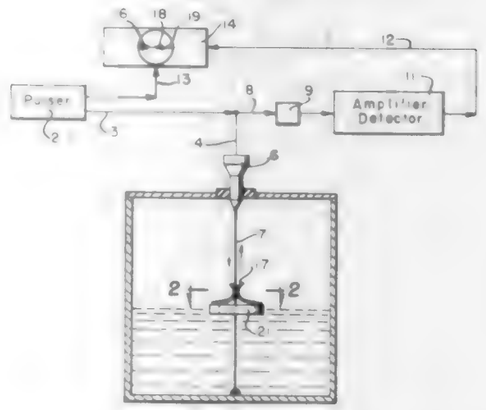
This invention relates to a mass flowmeter. The invention relates more particularly to an instrument for indicating and/or measuring mass flow rate of a fluid. A flowmeter having a thermally responsive element which provides a signal in accordance with the mass rate of flow. The thermally responsive element is connected to a constant current source which raises the temperature of the element above the temperature of the fluid so that changes in the rate of flow will change the impedance of the element as a function of mass rate of flow. The output circuit of the thermal element is connected to a temperature compensating circuit. The compensation circuit means include a constant voltage source and one or more additional temperature sensitive impedance means imposed in the fluid.

3,372,591
FLOWMETER
William D. Clinton, Guilford, Conn., and William P. Somers, Prospect Heights, Ill., assignors to Neptune Meter Company, New York, N.Y., a corporation of New Jersey
Filed Sept. 28, 1965, Ser. No. 490,991
1 Claim. (Cl. 73—231)



A flowmeter of the type wherein a housing forms a fluid conduit for fluid flow therethrough in a fluid zone therewithin, and a bladed shaft is mounted within the fluid zone in the housing including a plurality of vanes responsive to fluid flow parallel to the shaft by causing rotation thereof, further characterized by a pole-piece carried coaxially on the shaft within the fluid zone for rotation therewith and including a plurality of circumferentially spaced teeth disposed outwardly relative to the shaft, a magnetized body carried coaxially on the shaft within the fluid zone for rotation therewith and including a first pole in communication with the pole-piece and a second pole spaced along the shaft therefrom, a magnetically permeable core supported from the housing and directed into the fluid zone toward the shaft at a position therealong occupied by the teeth, the inward end of the core being closely spaced relative to the annulus of the radial extreme of the teeth, and a coil of wire coaxially disposed on the core. In one form the coil of wire is located immediately adjacent to the inward end of the core, while in another form it is located outside of the fluid zone. The hub portion of the shaft to which the vanes are connected has a greater outer diameter than the outer diameter of the pole-piece, and the outer diameter of the magnetized body is smaller than the outer diameter of the pole-piece at the base of the teeth. Since the pole-piece is the rotating body while the magnetically permeable core is the stationary body, the field of flux surrounding the coil opens and closes completely as individual pole-piece teeth, into and out of alignment with the core, thereby giving great sensitivity to the apparatus.

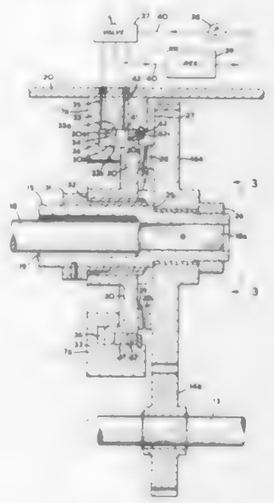
3,372,592
SINGLE-WIRE MECHANICAL WAVE DEPTH GAUGE
William H. Gravert, Port Washington, N.Y., assignor to Marine Moisture Control Company, Inc., Inwood, N.Y., a corporation of New York
Filed Aug. 22, 1966, Ser. No. 573,994
8 Claims. (Cl. 73—313)



1. Means for measuring the distance of the surface of the liquid from a reference point above the liquid surface comprising
(a) transducer means for producing mechanical pulses,
(b) smooth single filament elongated sonic conductor means supplied with pulses by said transducer means for transmitting said pulses from the reference point to the surface of the liquid without producing significant reflections in said conductor means,
(c) sonic reflection means at the liquid surface for reflecting an appreciable portion of the pulse energy back along said sonic conductor means,
(d) and means for measuring the time of travel of said pulses from said reference point to said surface and back to said reference point as an indication of the distance of said surface from the reference point.

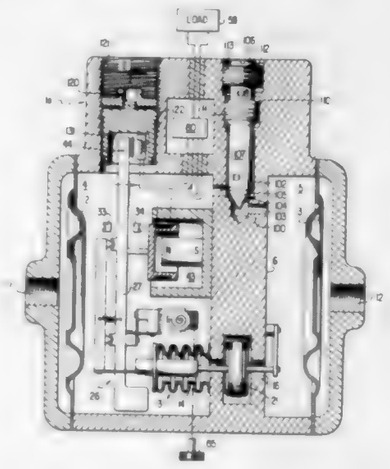
3,372,593
TRANSMISSION WITH FLUID OPERATED CLUTCHES AND TORSION BAR
John E. Becker, Bowmanville, Ontario, Canada, assignor to Eclipse Consultants Limited, Oshawa, Ontario, Canada
Filed Oct. 22, 1965, Ser. No. 500,878
Claims priority, application Great Britain, Oct. 27, 1964, 43,470/64
1 Claim. (Cl. 74—374)

In a speed changing device including at least one clutch device, relative movement between the clutch members is produced by a piston and cylinder coaxial with the clutch members and rotatable relative to one another about their longitudinal axis; the relatively movable cylindrical surfaces parallel to the axis are sealless and fluid is pumped



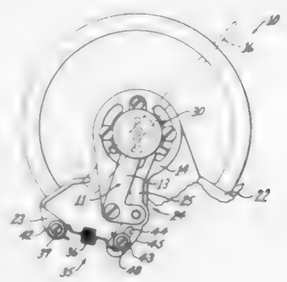
in sufficient quantity to maintain operating pressure despite leakage between the surfaces; the transmission path through the speed changing device includes a torsion bar which is disposed in a hollow shaft carrying respective gearwheels of the device.

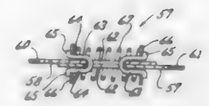
3,372,594
COMPENSATION SYSTEM FOR DIFFERENTIAL PRESSURE MEASURING DEVICE
David A. Bristol, Lynnfield, Mass., assignor to General Electric Company, a corporation of New York
Filed Apr. 11, 1966, Ser. No. 541,774
4 Claims. (Cl. 73—398)



1. In a pressure sensitive device comprising a hollow casing, a pair of flexible isolating diaphragms mounted in the casing and defining therewith a space adapted to contain a liquid, a rigid partition in the casing dividing the space into two chambers, a flexible pressure-sensitive device having a first side exposed to liquid pressure in one chamber and a second side exposed to liquid in the other chamber and means for converting a pressure differential on the pressure-sensitive device to an electrical output signal, the improvement of a compensation system for the pressure sensitive device for correcting errors caused by ambient temperature and static pressure changes including:
(A) valve means having an open and closed position located in the casing,
(B) first conduit means in the casing from one of the chambers to said valve means,
(C) second conduit means in the casing extending from the other chamber to said valve means, said valve means connecting said first and second conduit means whereby liquid in said chambers can be transferred from one chamber to the other when the valve is open.

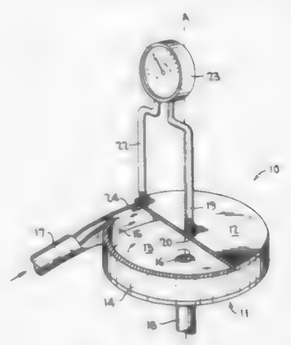
3,372,595
GAGE CONSTRUCTION AND PARTS THEREFOR OR THE LIKE
Charles H. Perkins, Knoxville, Tenn., assignor to Robertshaw-Fulton Controls Company, Richmond, Va., a corporation of Delaware
Original application Feb. 11, 1963, Ser. No. 257,423, now Patent No. 3,257,852, dated June 28, 1966. Divided and this application Oct. 21, 1965, Ser. No. 499,717
3 Claims. (Cl. 73—414)





This disclosure relates to means for interconnecting an actuating end of a condition responsive element to a gear train means of an indicating pointer arrangement to dampen abrupt movements therebetween to prevent adverse effects of such abrupt movement on the gear train elements, the interconnecting means comprising spring linkage means that absorb the abrupt movement of the actuating end of the condition responsive device while subsequently returning to its normal position to properly indicate the change in the sensed condition.

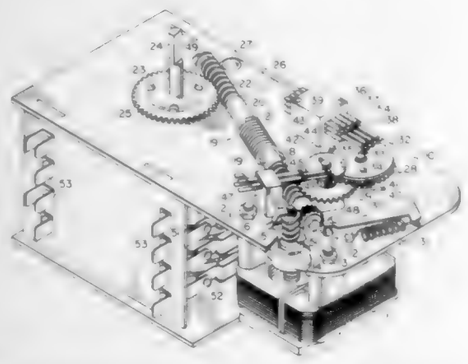
3,372,596
METHOD AND DEVICE FOR MEASURING THE ROTATION OF A BODY
Charles L. Keller, Silver Spring, Md., assignor to the United States of America as represented by the Secretary of the Army
Filed Oct. 27, 1964, Ser. No. 406,940
8 Claims. (Cl. 73—505)



An improved pure fluid rotation sensor utilizing a fluid vortex amplifier to measure the rate and direction of rotation. The fluid in a vortex chamber has a rotational mo-

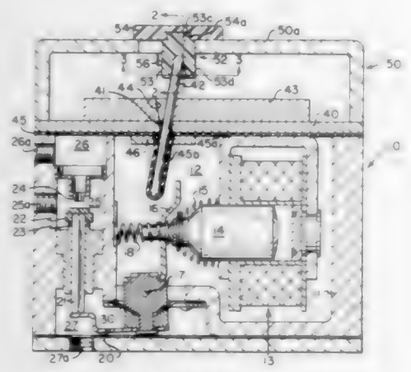
tion imparted to it and a static pressure sensor is used to measure the tangential component of the fluid motion. Rotation of the chamber changes the tangential velocity of the fluid and the magnitude and direction of the rotation can be measured by observing the changes in pressure at the sensor. A pair of stacked fluid vortex amplifiers can be used for increased sensitivity.

3,372,597
TIMER HAVING AN ADJUSTABLE TIME INTERVAL AND A RAPID ADVANCE
Gianni A. Dotto, Dayton, Ohio, assignor to P. R. Mallory & Co. Inc., Indianapolis, Ind., a corporation of Delaware
Filed Feb. 16, 1966, Ser. No. 527,899
10 Claims. (Cl. 74—3.52)



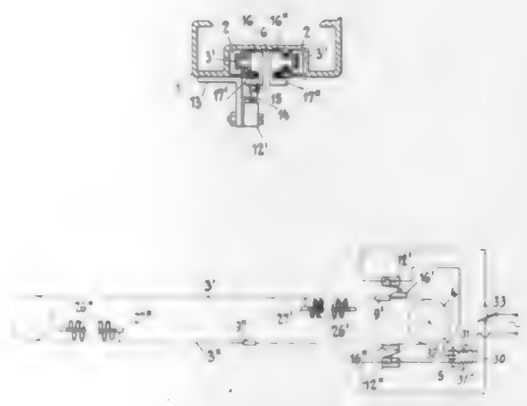
A timer having an intermittent driving mechanism consisting of a subinterval switching means with an adjustable time interval and a rapid advance. The timer has a single drive mechanism for step advancing the timer through the programmed timing cycle at predetermined time intervals and for rapidly advancing the timer through certain cycles or to a particular cycle.

3,372,598
MOTION TRANSMITTING APPARATUS
Lamar J. Wall, Seal Beach, Calif., assignor to Honeywell Inc., Minneapolis, Minn., a corporation of Delaware
Filed Feb. 1, 1966, Ser. No. 524,122
9 Claims. (Cl. 74—18.1)



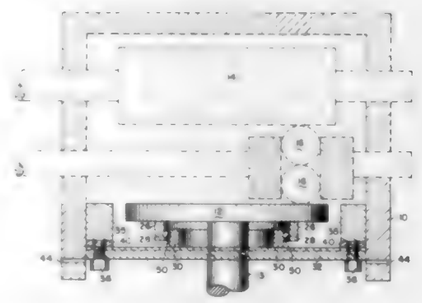
A three-way pilot valve with a solenoid operator disposed in a sealed chamber and with a manual actuator for manually operating the solenoid and thereby the valve. This manual actuator including a lever which extends through a wall of the chamber, is pivotable about an axis parallel to the wall, and is axially movable in a direction generally normal to the wall, an operator which engages the outer end of the lever for pivoting the lever and is movable only in a plane parallel to the wall and between two end positions on opposite sides of a position wherein the lever is normal to the wall, and a flexible diaphragm member including a portion surrounding the inner end of the lever and sealing the chamber therearound and, in addition, biasing the lever outwardly from the chamber to provide over-center action as the operator is moved from one end position to the other.

3,372,599
ELECTRICALLY DRIVEN DISPLACING MECHANISM
Konrad Bratschi, Talgutweg 2, Ittigen, near Bern, Switzerland
Filed Jan. 10, 1966, Ser. No. 519,547
Claims priority, application Switzerland, Jan. 13, 1965, 424/65
8 Claims. (Cl. 74—89.2)



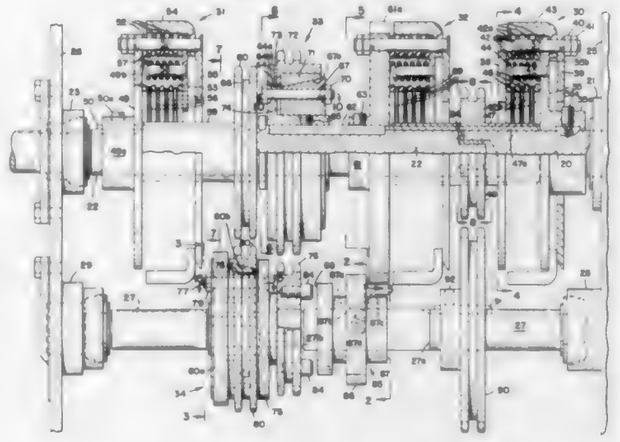
An electrically driven displacing mechanism, for example for curtains, accordian-folded partitions, drawers, or display of advertising aids, which are guided along at least one rail by means of carrying elements, which mechanism comprises an endless conveying band or web in two sections extending along the rail, and entraining elements guided on the rail for conveying action back and forth, as well as two electrical terminal switches in the circuit of the electrical drive, which are actuated automatically corresponding to the two predetermined final conveying positions.

3,372,600
COMPUTING INTEGRATOR
Willard J. Opocensky, Glendale, Calif., assignor to General Precision, Inc., a corporation of Delaware
Filed Sept. 28, 1965, Ser. No. 490,885
4 Claims. (Cl. 74—194)



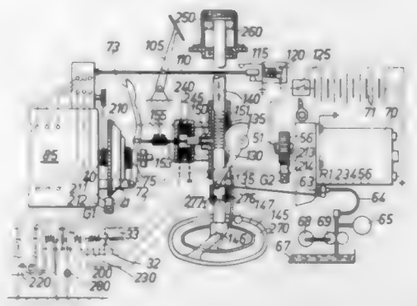
A compact construction for a ball-and-disc computing integrator. A housing plate supporting the disc thrust bearing is thinned adjacent one edge to provide a flexure section, and the opposite edge is urged toward the disc by a leaf spring, causing the plate to exert loading pressure on the disc through the thrust bearing.

3,372,601
AUTOMATIC TRANSMISSION
Dale C. Orcutt and Claud J. Dry, Athens, Ohio, assignors to Joart Capital Corporation, New York, N.Y., a corporation of New York
Filed Sept. 29, 1965, Ser. No. 491,296
14 Claims. (Cl. 74—336)



An automatic transmission having an input and an output shaft, a first centrifugally actuated clutch having its driving plate rotatable with the input shaft, a second centrifugally actuated clutch having its driving plate rotatable with the output shaft, rotatable means for preventing relative rotation of the driven clutch plates of the first and second centrifugally actuated clutches, an overriding clutch having a driven plate rotatable with the output shaft, and means for transmitting rotation of the rotatable means to the driving clutch plate of the overriding clutch and reducing the rate of the rotation.

3,372,602
CLUTCH CONTROL APPARATUS
Hermann Papst, 7742 Black Forest, St. Georgen, Germany
Continuation-in-part of application Ser. No. 308,622, Sept. 11, 1963. This application May 26, 1966, Ser. No. 553,204
20 Claims. (Cl. 74—339)

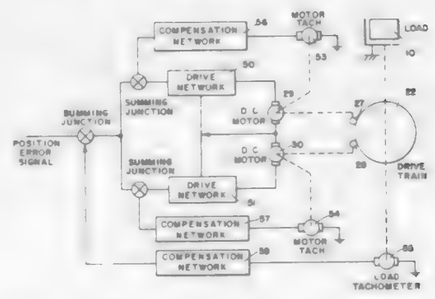


1. Clutch control apparatus for a transmission, comprising, in combination, an engine shaft means; a transmission shaft means adapted to be connected with a transmission; clutch means connecting said engine shaft means and transmission shaft means; electromagnetic operating means for operating said clutch means; first and second generator means driven from said engine shaft means and said transmission shaft means, respectively, to produce first and second voltages respectively proportional to the rotary speeds of said shaft means; differential control means receiving said first and second voltages and including control switch means having open and closed switching positions and being responsive to a difference between, and to equality of said first and second voltages to assume one or the other of said switching positions, said control switch means being connected into the circuit of said electromagnetic operating means to energize and de-energize the same in said switching positions, respectively, so as to cause engagement or disengagement of said clutch means; and a manually operable means connected with said control means for actuating said control switch means and thereby said electromagnetic operating means to disengage said clutch means so that said engine shaft means and said transmission shaft means rotate at different speeds and said control means receive different voltages so that said control switch means cause said clutch means to remain disengaged until said engine shaft means and said transmission shaft means rotate at substantially the same speed and said voltages are substantially equal whereupon said control switch means causes engagement of said clutch means.

ERRATUM

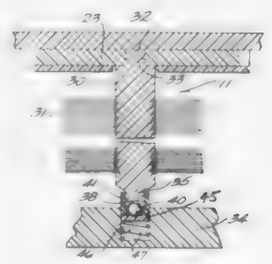
For Class 74—376 see:
Patent No. 3,372,593

3,372,603
ANTENNA DRIVE SYSTEM
Menahem Suliteanu, Palo Alto, and Frederick M. Fonda, Jr., San Jose, Calif., assignors to Sylvania Electric Products Inc., a corporation of Delaware
Filed Aug. 2, 1965, Ser. No. 476,555
9 Claims. (Cl. 74—388)



A cylindrical drum of a rotatable antenna is driven by engagement of the drum by a pair of opposed reversible endless belt drive assemblies which form part of a closed loop servo system. The periphery of the drum comprises a thin layer of elastic material which is bonded to a hard cylindrical surface and viscously damps resonance effects between driving and driven structures.

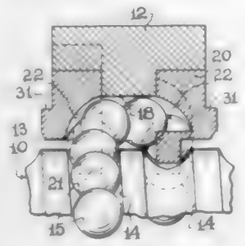
3,372,604
ROTARY SHAFT MOUNTING
Walter J. Perry, Brookfield, Wis. (1315 S. 124th St., West Allis, Wis. 53214)
Filed June 28, 1966, Ser. No. 561,169
9 Claims. (Cl. 74—421)



1. In a mounting for rotatably supporting a shaft in a frame; actuating means coupled to a first end of the shaft for actuating the shaft in its rotary movement, the shaft being slidable relative to said actuating means for shifting the shaft out of engagement therewith; a bearing rotatably

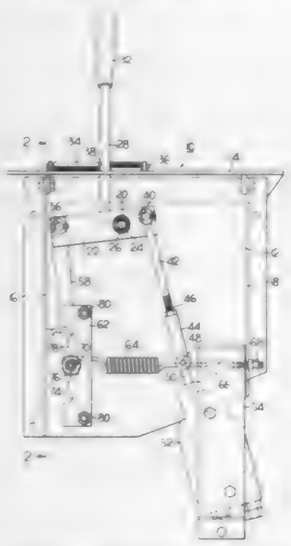
supporting the second end of said shaft; and yieldable means urging the shaft axially to retain the first end of the shaft in engagement with said actuating means, said shaft being movable axially against the force of said yieldable means to move the first end of the shaft out of engagement with said actuating means and render its second end disengageable from said bearing for removing the shaft from the frame.

3,372,605
BALL-BEARING SCREW AND NUT MECHANISM
Harry Orner, 2479 Glen Canyon Road, Altadena, Calif. 91001
Filed Oct. 19, 1965, Ser. No. 497,834
9 Claims. (Cl. 74—459)



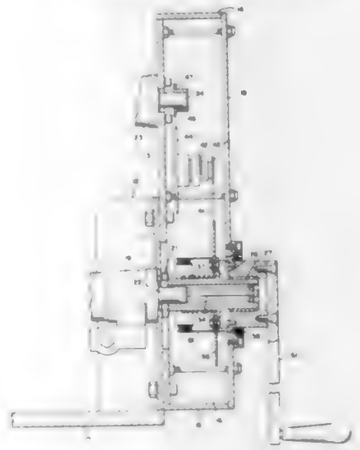
A ball-bearing screw and thin nut mechanism with a simple recirculating passage in the nut for the balls to recirculate from one end of the ball race load groove to the other end. The recirculating passage is formed as a channel through the nut at the internal helical groove. Pick-up structures located on both sides of the nut at the junction of the recirculating passage and the load groove to transfer the balls to and from the load groove include an inclined finger extending into the load groove of the screw and have a curved surface normal to the inclined surface to guide the balls on the inclined surface from the load groove to the channel, and from the channel to the load groove at the opposite end.

3,372,606
HYDRAULIC VALVE CONTROL LEVER
Laurence R. McGrath, Milwaukee, and Robert A. Moore, Waukesha, Wis., assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis.
Filed Sept. 13, 1966, Ser. No. 578,624
9 Claims. (Cl. 74—491)



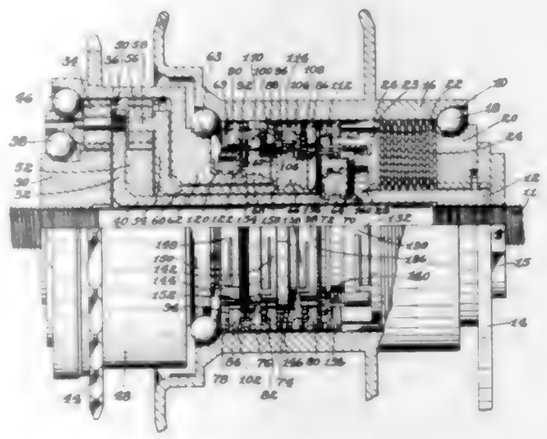
1. A control device comprising a support, a pivot on said support, a rockable lever assembly journaled on said pivot, a detent link pivotally connected to said lever assembly at a point spaced from said pivot and extending transversely thereof, a detent cam element and a detent cam follower element, one of said elements being fixed on said support and the other of said elements being carried by said detent link, resilient means connected with said link, extending transversely thereof, and anchored to said support in position to continuously urge said cam element and said cam follower element into yielding contact with each other, and means connected to said lever assembly and to a controlled element for actuating said element by reason of rocking of said lever assembly.

3,372,607
SELECTIVE DRIVE MECHANISM
Francis M. Lathrop II, and Lyle R. Van Arsdale, Houston, Tex., assignors to M & J Valve Company, Houston, Tex., a corporation of Delaware
Filed Nov. 8, 1965, Ser. No. 506,672
7 Claims. (Cl. 74—625)



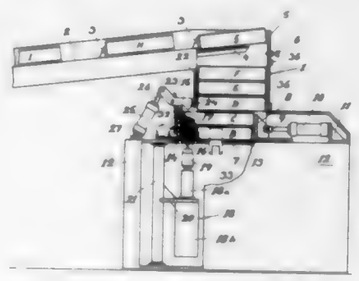
Selective drive means for either manual or motor operation of a hydraulic pump or like device. Has clutch parts including magnetic means for insuring disengagement of the motor during manual operation, the magnetic means being automatically released when the motor is energized.

3,372,608
THREE-SPEED HUB GEARING FOR VELOCIPEDES
Hollis K. Gleasman, Elmira, N.Y., assignor to The Bendix Corporation, a corporation of Delaware
Filed June 13, 1966, Ser. No. 556,961
10 Claims. (Cl. 74—750)



8. In a semi-automatic three-speed hub and brake for velocipedes and the like the combination of:
an axle means;
sprocket means rotatable relative to said axle;
gear means rotatable by said sprocket means;
first, second, and third threaded shaft means rotatable at different speeds by said sprocket and gear means;
first, second and third clutch members threaded on their respective shaft means;
first, second and third hub driving means adapted to be engaged by their respective clutch members;
annular indexing means having a three-step selectively-variable axial extent disposed within the hub;
retarder means for causing the axial movement of the clutch members on their respective screwshaft means;
spring means for biasing said first and second hub driving means relative to their respective clutch members;
said indexing means and said retarder means operative to selectively position said driving clutch members and said first and second hub driving relative to each other for driving the hub at three different gear ratios; and
brake means interconnecting the hub and axle for stopping the rotation of the hub relative to the axle.

3,372,609
METHOD FOR DRILLING HOLES IN ARTICLES, ESPECIALLY IN BOOKS, AND APPARATUS FOR UTILIZING THE METHOD
Gösta E. Wingne, Sigtunagatan 8, Goteborg, Sweden
Filed Mar. 22, 1965, Ser. No. 441,739
10 Claims. (Cl. 77—5)



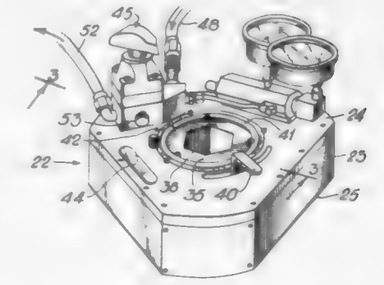
Apparatus for drilling holes in uniform articles such as thick books in which a number of books are stacked in a collecting zone or hopper and allowed to fall downwardly by gravity with further books being fed to the zone as the lowermost book, after drilling, is discharged from the zone or hopper. The drill is introduced into the lowermost book from below in a position diagonally inwards from one corner of the bottom of the zone or hopper and when drilling is initiated into the bottom of the lowermost book that one and the immediately superposed book are locked in stepped or offset relation relative to the corner so as to compensate for any drill deflection during drilling, whereby when the drill issues through the upper side of the lowermost book and penetrates initially into the bottom side of the superposed book and is then withdrawn from the zone and the superposed book then falls into the bottom of the zone so that during a subsequent drilling operation through said book the drill will enter the hole initially formed therein.

3,372,610
ROTARY CUTTING TOOL
Ture Axel Johansson, Inagogatan 12, Goteborg, Sweden
Filed Oct. 22, 1965, Ser. No. 502,089
4 Claims. (Cl. 77—58)

A rotary cutting tool in which a cutter is arranged swingable about a pivot eccentrically located in relation to the axis of rotation of the tool in such a manner that the cutter will be swung out to a working position due to centrifugal action. The cutter is located in a transverse recess in a spindle constituting the main part of the tool and to make possible an easy exchange of the cutter, the recess is longer in the axial direction of the spindle than the thickness of the cutter. One part of the spindle is integral with the cutter and the combined length of this

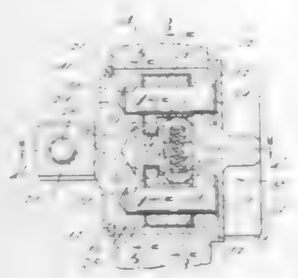
pivot part and the thickness of the cutter is less than the axial length of the recess. The remaining part of the spindle includes a pin insertable through a bore in the spindle and retained therein in any suitable manner.

3,372,611
TORQUE WRENCHES AND TEST STANDS
Anthony E. Amanti, Westfield, and Ernst Krokenberger, Springfield, Mass., assignors to Advance Hydraulics, Inc., Westfield, Mass.
Filed July 11, 1966, Ser. No. 564,367
11 Claims. (Cl. 81—60)



1. A torque wrench comprising, in combination:
a casing having a central aperture and a plurality of symmetrically spaced cavities extending radially therefrom,
a torque ring rotatably supported in the central aperture and having an internal work-piece engaging aperture incorporating torque-transmitting means,
reversible force-producing actuator means adjacent to each cavity,
a spider
rotatably and concentrically supported in the central aperture,
having a corresponding plurality of radial arms each extending into one of the spaced cavities in the casing for rotary driving engagement by the actuator means,
and with reversible, toggle-shifted torque-transmitting pawl means for connecting the spider and the torque ring in rotary driving engagement selectively in a clockwise or counterclockwise direction,
and confining means radially outwardly of the arms restricting the lines of action of the forces transmitted by the actuator means to the spider arms to substantially tangential, non-radial directions.

3,372,612
PAWL TYPE RATCHET WRENCH
Matt T. Rozmus, Barneveld, N.Y., assignor to Kelsey-Hayes Company, Romulus, Mich., a corporation of Delaware
Filed Apr. 4, 1966, Ser. No. 540,024
4 Claims. (Cl. 81—62)



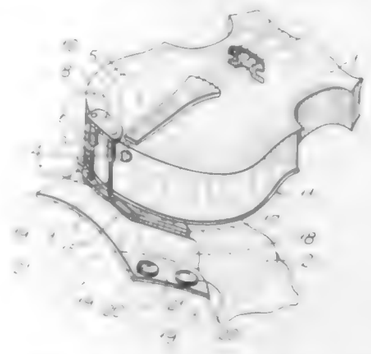
A ratchet wrench of the pawl type in which a driver is positioned within the head of a wrench body and carries a plurality of pawls to transmit torque between the driver and the wrench body. A selector is mounted on the driver and is angularly shiftable between two different positions to bias the pawls to a selected operating position. The selector is held in assembly with the driver by the engagement of the pawls with a shoulder on the selector. The driver is held in the wrench head by a shoulder on the selector and a retaining ring.

3,372,613
LATHE
Heinrich Feld, Kirchen (Sieg), Germany, assignor to H. A. Waldrich G.m.b.H., Siegen, Westph: lia, Germany, a German concern
Filed Aug. 23, 1965, Ser. No. 481,586
Claims priority, application Germany, Aug. 25, 1964, W 37,438
1 Claim. (Cl. 82—24)

A support for large lathes used for turning workpieces with large differences in diameter, wherein one or more cross slides are located between the lathe carriage and the compound slide carrying the rotary tool supporting member, the cross slide having guides upon its upper and lower surfaces which extend tangentially to the workpiece being treated.

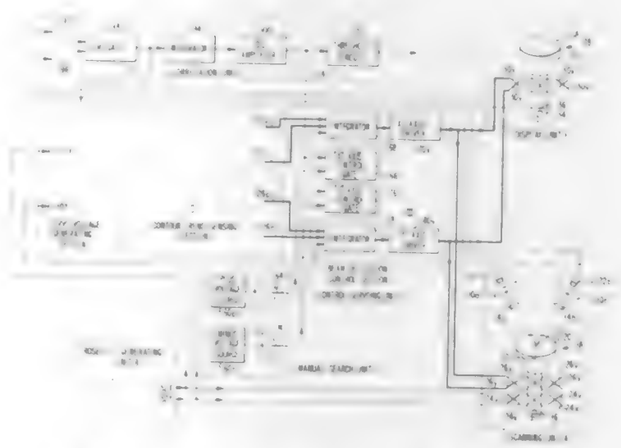
3,372,614
VIOLIN SUPPORT
Jon Galster, Solnavej 33, Copenhagen, Soborg, Denmark
Filed Nov. 28, 1966, Ser. No. 597,448
Claims priority, application Denmark, Nov. 30, 1965, 6,144/65
5 Claims. (Cl. 84—280)

1. A violin support for supporting a violin against the humeral region of a player and of the kind retained during the use by clamping means engaging the lower part of the violin body, characterised in that an adjustable leaf hinge is attached to the underplate of the clamping means, which underplate is resting against the bottom edge of the violin, one leaf of the said hinge being



screwed, soldered or welded to the said underplate, its other leaf being adapted to be retained detachably to a cushion which is attached to the humeral region of the player or to a piece of clothing surrounding the said humeral region.

3,372,615
APPARATUS FOR PLOTTING CONTOUR MAPS AUTOMATICALLY EMPLOYING A CATHODE RAY TUBE
Morris M. Birnbaum, Pasadena, Le Roy J. Ridenour, Burbank, and Phil M. Salomon, Sunland, Calif., assignors to General Precision Systems Inc., a corporation of Delaware
Filed Mar. 28, 1963, Ser. No. 268,802
10 Claims. (Cl. 88—14)

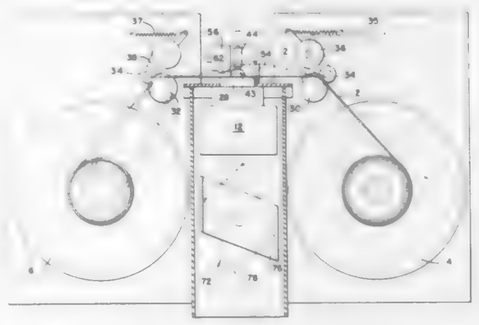


1. In an automatic contour plotter an arrangement comprising a cathode ray tube having a phosphor screen, means for projecting a beam of electrons onto said screen to produce a luminous point thereon, and means operable by the application of electric currents for deflecting said beam to shift the luminous point on said screen; means for scanning two stereoscopically related diapositives of a terrain including a pair of lenses placed to focus light rays from the luminous point in a predetermined relation upon said diapositives, and photosensitive devices exposed to the light rays focused upon said diapositives to produce output signals fluctuating in proportion to the transparency of the spots encountered by the light rays on said diapositives; first means for supplying such currents to said beam deflection means to shift said beam across said screen; means operative in response to correlation between the output signals of said photosensitive devices for generating signals indicative of the discovery of a spot of the desired contour on the diapositives; means operative in response to signals generated by said correlation signal generating means for disabling said first deflection current supply means; second means for supplying currents to said beam deflection means for deflecting said beam in a repetitive search pattern about a center point thereof to cause the light rays focused upon the diapositives to scan the areas around discovered contour spots; means utilizing said second deflection currents and the output of said correlation signal generating means for generating servo currents effective upon application to said beam deflection means to confine said beam to a position of deflection wherein the light rays focused upon the diapositives impinge upon corresponding spots of the desired contour; means for applying said servo currents to said beam deflection means; and means utilizing said second deflection currents and the outputs of said correlation signal generating means for sensing the direction of the desired contour and for curtailing the application of said servo currents to said beam deflection means so that the remaining servo currents shift the light point on the screen of said tube in such a manner that the light rays focused upon the diapositives follow corresponding contours of said diapositives.

3,372,616
OPTICAL REPRODUCTION APPARATUS
William E. Morrison, 3 Sleepy Oaks Lane, Houston, Tex. 77024
Filed Oct. 2, 1963, Ser. No. 313,237
16 Claims. (Cl. 88—24)

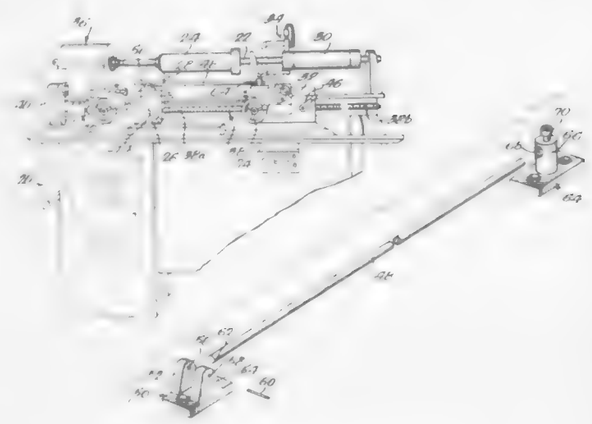
An optical apparatus for illuminating a selected area and for viewing and/or recording the area illuminated along the same line of sight.

3,372,617
PHOTOGRAPHING AND DEVELOPING APPARATUS
William A. Pfaff, 12 Mary's Lane, Centerport, N.Y. 11721
Filed July 15, 1965, Ser. No. 472,275
10 Claims. (Cl. 88—24)



7. Apparatus for microfilming documents, comprising in combination, a camera lens system, film feed and take-up reels, film developing means, a document support platform in alignment with said lens system, a radiant energy-emitting source, and mechanical convection means for directing a flow of air over said radiant energy-emitting source and downwardly upon said document support platform, photosensitive film being movable from said feed to said take-up reel, said film being arranged to pass behind said lens system for exposure and thereafter to pass spacedly beneath said film developing means, and lift means adapted to raise a portion of said film into contact with said film developing means subsequent to exposure of said portion of the film.

3,372,618
LEAD SCREW DRIVE MECHANISM
William J. Barron, Peru, Ill., assignor to Graphic Electronics, Inc., La Salle, Ill., a corporation of Delaware
Filed Jan. 18, 1966, Ser. No. 521,309
5 Claims. (Cl. 90—13.3)

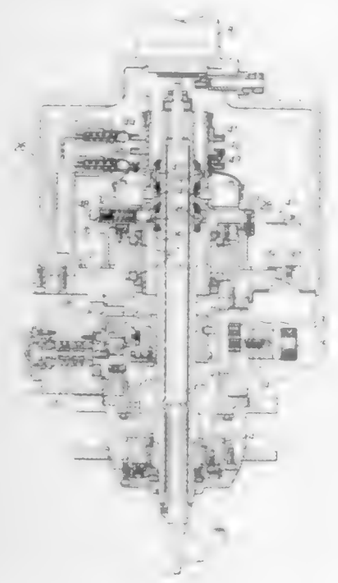


1. In an engraving machine of the type having a cutter carriage and a scanner carriage mounted on a common lead screw which is oppositely threaded at its two ends for advancing said carriages in opposite directions upon rotation of said screw, and manual control means on each carriage for selectively engaging and disengaging the same with said lead screw, the improvement comprising, in combination, first mounting means on one of said carriages, second mounting means on the other of said carriages, and a rigid connecting member extending between said first and second mounting means, one end of said connecting member being secured to said first mounting means, and the other end of said connecting member being releasably secured to said second mounting means, whereby upon engagement of a selected one and disengagement of the other of said manual control means and rotation of said lead screw the engaged one of said carriages will be advanced by said lead screw and will act through said rigid connecting member to advance the other of said carriages in the same direction.

3,372,619
TRACER VALVE CONTROL UNITS
Brian M. Clegg, Leeds, England, assignor to Hayes Engineers (Leeds) Limited, Leeds, England, a British company
Filed Apr. 29, 1966, Ser. No. 546,390
Claims priority, application Great Britain, May 11, 1965, 19,794/65
10 Claims. (Cl. 90—62)

1. Tracer valve control unit including a housing, a valve operating element mounted in bearing means in the housing, fluid flow control valve units operable by lateral deflections of said element, a stylus associated with one

end of the element to be engaged with a master profile and deflect the element, a hollow carrier member disposed about said element and rotatable about a constant axis, at least one electric motor for driving said member, electrical switches radially disposed about said carrier member and connected into a control circuit for said motor, bias applying means on said carrier member for constantly urging said valve operating element towards

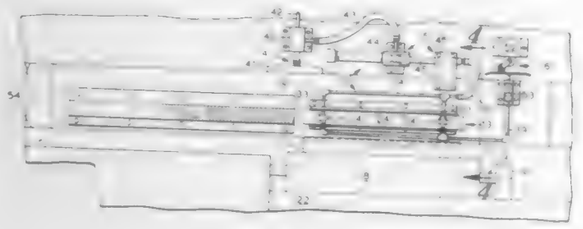


at least one of said switches, electrical supply means in said motor control circuit for said switches, said switches being adapted to co-act in controlling the supply of electrical power to the driving motor and thus rotation of the carrier member which varies the radial position of said bias applying means to control the lateral movements of the valve operating element in conjunction with the master profile.

3,372,620
INTERFERENCE DETECTION MECHANISM FOR MACHINE TOOLS

Charles F. Stuemer, Cincinnati, Ohio, assignor to The Cincinnati Milling Machine Co., a corporation of Ohio

Filed Mar. 25, 1966, Ser. No. 537,505
4 Claims. (Cl. 90—66)



1. In a machine having a pair of relatively movable members defining a base member and a slide member, one of said pair of members having apparatus for mounting a workpiece thereon for engagement with a tool fixed on the other member thereof, a mechanism for signalling excessive workpiece to tool interference before contact therebetween comprising:

(a) a probe mechanism attached to one member of said pair having a deflectable sensor adapted to engage the workpiece when said members are in a predetermined relative position,

(b) a power supply included in the other of said pair of members,

(c) a coupling unit having elements received on each member of said pair, said elements adapted to mate when the members of said pair are in said predetermined relative position,

(d) transmission means for connecting the elements of said coupling unit on the one and other of said pair, respectively, to the probe mechanism and power supply for transmission of power to said probe mechanism when the members of said pair are in the predetermined relative position,

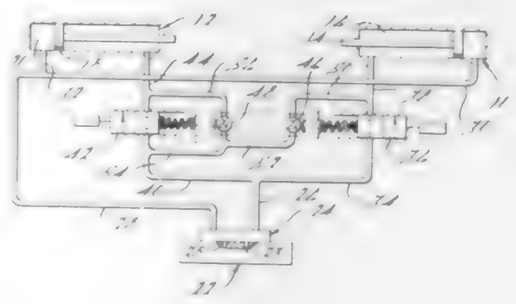
(e) control means for producing an interference signal when power is connected thereto, and

(f) circuit means for connecting power to said control means from said probe mechanism when said sensor is held in a predetermined range of positions by the workpiece.

3,372,621
PORTABLE POWER SUPPLY WITH SELECTOR VALVE

Louis E. Colosimo, Macomb, Mich., assignor to Huck Manufacturing Company, Detroit, Mich., a corporation of Michigan

Filed Apr. 5, 1966, Ser. No. 540,392
10 Claims. (Cl. 91—36)

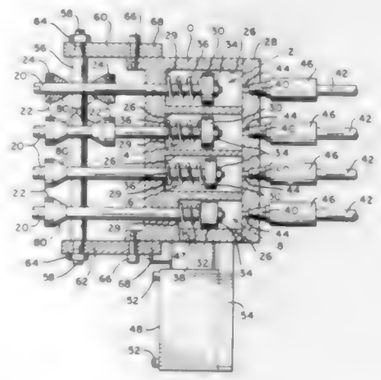


Apparatus for use with tools actuated from a common source of fluid pressure permitting actuation of only one tool at a time.

3,372,622
MULTIPLE PRESSURE RESPONSIVE CONTROL APPARATUS

Edward P. Bullard III, Fairfield, Conn., assignor to The Bullard Company, Bridgeport, Conn., a corporation of Connecticut

Filed May 18, 1966, Ser. No. 551,026
10 Claims. (Cl. 92—5)



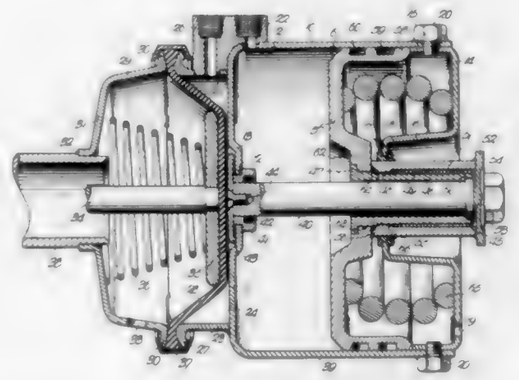
1. Multiple pressure responsive control apparatus comprising a plurality of fluid pressure-sensing devices, each

having a reciprocably mounted shaft; means for fixedly mounting said sensing devices with the axes of reciprocation of said shafts disposed in substantially parallel relation in a single plane; an actuator rod disposed in a first position adjacent to the plane of movement of, but spaced from, said shafts; means mounting said rod for limited movement from said first position to a second position in a direction away from the plane of movement of said shafts; a control device; means connected to said rod for actuating said control device when said rod is moved in said direction from said first to said second position; means for connecting each of said sensing devices to a separate source of pressurized fluid; pressure responsive means in each sensing device for moving the shaft thereof in response to changes in, and maintaining the linear position of said shaft in accordance with the magnitude of, the fluid pressure of the source to which the sensing device is connected; and at least one actuating member mounted on each of said shafts and having a surface engageable with said rod when its respective shaft is reciprocated to a predetermined position relative to said rod, said actuating member surfaces of said sensing devices being located on their respective shafts so as to be out of contact with said rod when said shafts are reciprocated between positions corresponding to predetermined magnitudes of the fluid pressure of their respective sources, an actuating member surface of any one of said sensing devices being adapted to engage said rod independently of the positions of the shafts and actuating member surfaces of the other of said sensing devices, and to independently move the rod in said direction from said first to said second position to actuate said control device when the shaft of said one sensing device is reciprocated to a position corresponding to a fluid pressure of its respective source which deviates from a predetermined magnitude irrespective of whether any of said actuating member surfaces of said other of said sensing devices is in contact with said rod.

3,372,623
BRAKE OPERATOR MECHANICAL RELEASE

Charles G. Wearden, Prairie Village, Kans., and Robert H. Kline, Cherry Hill, N.J., assignors, by mesne assignments, to Certain-Teed Products Corporation, Ardmore, Pa., a corporation of Maryland

Filed Jan. 19, 1966, Ser. No. 521,671
6 Claims. (Cl. 92—63)

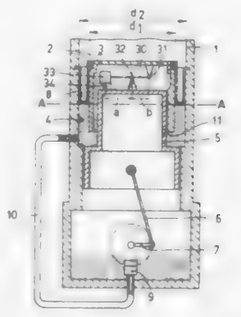


A spring emergency and parking brake of the "add-on" or "piggy-back" type—that is, the power spring chamber outboard of the service chamber with respect to the brake, per se, and a mechanical release for said brake comprising means for decoupling the brake from the expanded power spring, said means also providing fluid recompression of the power spring until the same is restored to its original condition.

3,372,624
ROLLING DIAPHRAGM DEVICE WITH INERTIA FORCE COMPENSATING MEANS

Johan Adriaan Rietdijk, Emmasingel, Eindhoven, Netherlands, assignor to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware

Filed Nov. 30, 1965, Ser. No. 510,499
Claims priority, application Netherlands, Dec. 10, 1964, 64—14,339
7 Claims. (Cl. 92—84)



A cylinder with two out-of-phase pistons reciprocating therein having a rolling diaphragm seal between one piston and the cylinder and an inertia force compensating means connected to both pistons and being either a mass and a pivoting lever, or a cable-pulley system.

3,372,625
EXTERNAL GUSSETING PROCESS

Thomas E. Simecek and Ronald G. Simecek, Cleveland, Ohio, assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

Filed May 24, 1965, Ser. No. 458,214
3 Claims. (Cl. 93—35)

A method and apparatus for continuously producing one or two gusset folds in each of one or more flattened, continuous, tubular films wherein the film is internally inflated as it passes through a zone between two pinching seals and subjected to a gusset fold producing means while in that inflated zone.

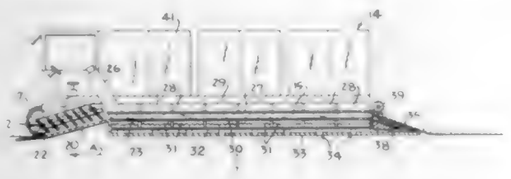
3,372,626
ROAD LAYER AND ITS MANUFACTURE

Richard Z. Smarzak, New York, N.Y., assignor of one-half to Jack Borgos, New York, N.Y.

Filed Aug. 5, 1965, Ser. No. 477,470
3 Claims. (Cl. 94—40)

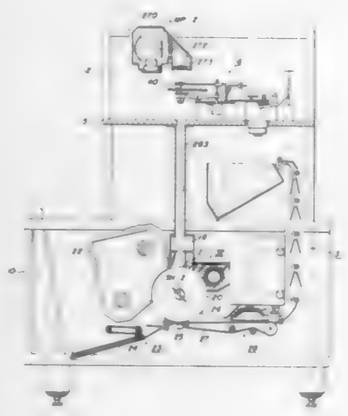
A machine for producing a hardening road layer includes a vehicle that scoops up sand placed in front, heats

and melts the sand and deposits the molten sand at the rear. The method provides for the scooping, melting of



the sand and the deposit of the molten sand as the top road surface.

3,372,627
MICROFICHE REPRODUCTION MACHINE
Thomas C. Murray, Rochester, and Russell R. Roberts, Ontario, N.Y., assignors to Xerox Corporation, Rochester, N.Y., a corporation of New York
Filed June 30, 1965, Ser. No. 468,325
4 Claims. (Cl. 95—1.7)



1. In an electrostatographic machine for producing enlarged reproductions of the microimages arranged in columns and rows on a microfiche card onto sheets of copy paper the combination of

an electrostatographic surface,

means for moving the surface at a predetermined rate,

holding means for supporting the microfiche card in a scanning plane,

first indexing means for moving said holding means in equal incremental steps each the width of a microimage along each row of the card,

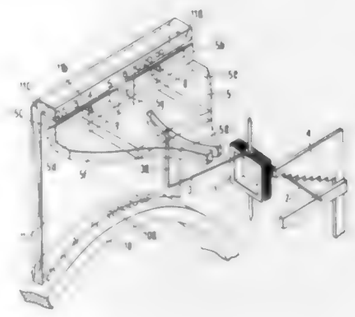
second indexing means for moving said holding means in equal incremental steps each the length of a microimage along each column of the card,

a projection system having an optical axis extending through the microfiche card adapted for projecting the illuminated images thereof onto the electrostatographic surface during movement thereof,

drive means arranged for producing relative movement between the optical axis and said holding means in said scanning plane for producing scanning of each of the microimages,

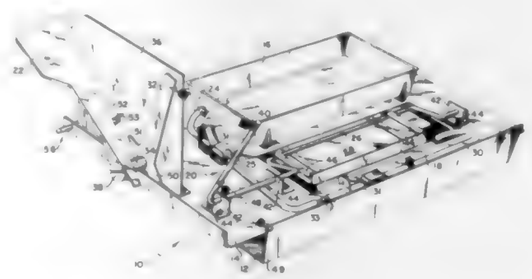
and control means connected to said indexing means and said drive means and adapted to activate the same automatically in a predetermined sequence of indexing movements coupled with scanning movements thereby effecting programmed reproduction of a preselected number of microimages.

3,372,628
OPTICAL APPARATUS
Franz W. R. Starp, Calmbach, Black Forest, Germany, assignor to Prontor-Werk Alfred Gauthier G.m.b.H.
Filed Jan. 19, 1966, Ser. No. 521,610
Claims priority, application Germany, Jan. 21, 1965, G 42,621
11 Claims. (Cl. 95—44)



5. Optical apparatus for indicating the depth of focus of a photographic lens for a given aperture with respect to a focussing scale, comprising a pointer moving in accordance with the lens aperture, optical means for producing two virtual images of said pointer in a viewing field, a range scale moved by the focussing action of said lens, and means for viewing said scale simultaneously with said virtual images in said viewing field.

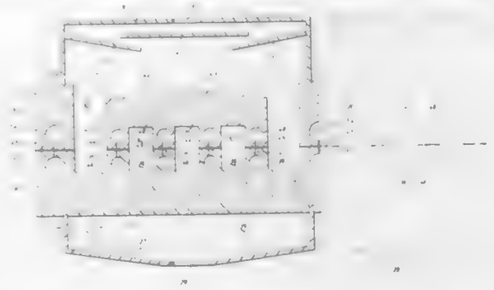
3,372,629
PHOTOCOPY DEVICE
Edson G. Moshier, Jamesville, N.Y., assignor to SCM Corporation, New York, N.Y., a corporation of New York
Filed Apr. 15, 1965, Ser. No. 448,486
2 Claims. (Cl. 95—89)



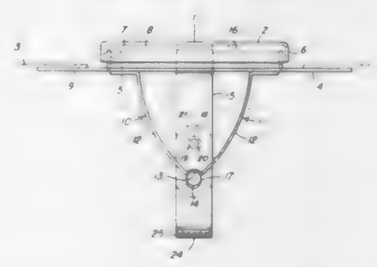
A photocopy machine having a chemical solution handling device for transferring the solution from a storage container to a processing tray and returning the solution back to the container. The device includes a handle operated spring system for biasing a pressure plate against a flexible container to force the solution into the tray at a predetermined rate.

3,372,630
APPARATUS FOR PROCESSING LIGHT SENSITIVE FILM
Gunther Schmidt, Scarborough, Ontario, Canada, assignor to Houston Schmidt Limited, Toronto, Ontario, Canada
Filed June 4, 1965, Ser. No. 461,463
15 Claims. (Cl. 95—94)

A strip of light sensitive film having two major surfaces and two side edges is processed in apparatus including a housing having walls that define at least one treating chamber. The strip is passed into the treating chamber through a slit in one wall and out of the treating chamber through a slit in another wall. A processing liquid is kept in the treating chamber. A gas is blown through the slits into the treating chamber and prevents the processing liquid from escaping via the slits, the gas being vented from the treating chamber. A dryer is positioned to receive the wet strip processed in the treating chamber. The dryer includes a number of spaced apart members having slits extending therethrough through which the strip passes. A strip drying gas is blown into the slits and is directed against the two major surfaces of the strip and causes the strip to float within the slits extending through the aforementioned members.



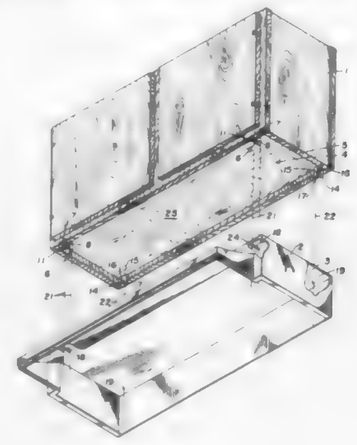
3,372,631
HINGELESS VENTILATOR
Daniel Allcott Kelly, Salem, Va., assignor to Graham-White Sales Corporation, Salem, Va., a corporation of Virginia
Filed Apr. 19, 1966, Ser. No. 543,737
7 Claims. (Cl. 98—2)



1. In a hingeless ventilator for ventilating a compartment through an opening in a wall thereof, the ventilator having a closure member swingable against a side of said wall for opening and closing said opening, spaced guide means fixed to and instanding from a side of said wall opposite said first-named side, guide rod means riding on said guide means, and spaced arm means fixed to said closure member and extending through said opening connecting said guide rod means to said closure member, the improvement comprising means spaced from said guide rod means and closure member and bridging said arm means therebetween, and means connecting said guide rod means and bridging means intermediate said arm means for producing a tensile force for urging said guide rod means and closure member respectively against said guide means and said wall and thereby holding said closure member in a selected position.

3,372,632
CABINET MOUNTED HOOD ASSEMBLY
James E. Stalker, Richardson, Tex., assignor to Home Metal Products Company, Plano, Tex., a corporation of Texas
Filed June 6, 1966, Ser. No. 555,447
6 Claims. (Cl. 98—115)

A kitchen hood which is attached underneath a cabinet by a bracket secured to the front of the cabinet bottom and by a malleable tab secured to the back of the cabinet bottom. Slots in the hood are received by a diverging recess in the bracket and receive a portion of the tab which is then bent to provide a secure attachment.



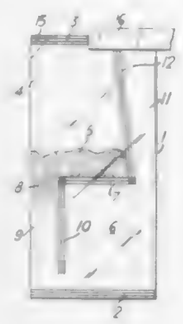
3,372,633
WHISKEY BARREL
Leo A. Horlander, Jr., Louisville, Ky., assignor to Brown-Forman Distillers Corporation, Louisville, Ky., a corporation of Delaware
Filed Aug. 19, 1966, Ser. No. 573,613
14 Claims. (Cl. 99—277.1)

This invention is directed to improved whiskey barrels capable of naturally acceleating the aging of whiskey by providing at least a portion of the internal surfaces with contours defining a multiplicity of spaced mounds, ridges, corrugations, lands or grooves prior to being charred to create greatly increased areas of char and of the underlying layer of red caramel in order to enhance the breathing of whiskey through the walls of the barrels.

3,372,634
COFFEE MAKERS
Georges Frank Brinkman, Tadworth, and Abram Games, London, England, assignors of one-half to Cona, Limited, London, England
Filed Apr. 6, 1964, Ser. No. 357,671
Claims priority, application Great Britain, Apr. 10, 1963, 14,375/63
15 Claims. (Cl. 99—292)

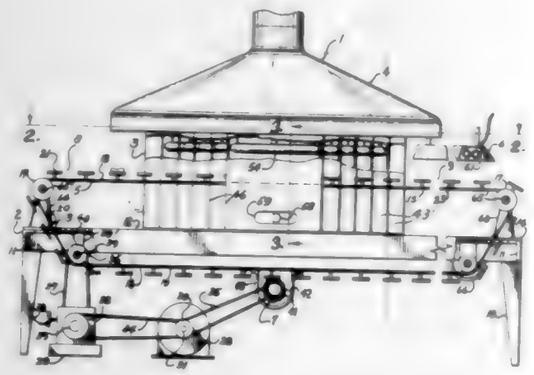
A device for the preparation of vacuum infused or percolated liquid coffee from ground coffee in the form of a pack having walls of flexible heat-resisting material and divided into an upper and lower compartment. Filter means separate the compartments and conduit means extend from the lower part of the lower compartment into the upper compartment. In one arrangement the device is self-contained and a quantity of ground coffee is packed into the upper compartment and an appropriate quantity

of water is inserted into the lower compartment. The pack is subsequently placed adjacent a heat source to heat the water which eventually moves up the conduit means into the upper compartment. Depending on the arrangement of the filter means and the conduit means, either vacuum in-



fused or percolated coffee flows into the lower compartment from which it is subsequently removed. In another arrangement the lower compartment forms a tube connecting the upper compartment to water in a separate container.

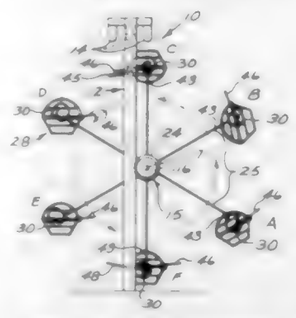
3,372,635
FOOD PREPARATION APPARATUS
Alvin Carroll Meyer, Parkville, Mo., assignor to The Gold Buffet Franchise, Inc., North Kansas City, Mo., a corporation of Missouri
Filed Feb. 28, 1966, Ser. No. 530,685
8 Claims. (Cl. 99—339)



Apparatus for cooking of foodstuffs, and particularly steaks, in a commercial eating place, wherein there are a plurality of parallel running conveyors having individual longitudinally spaced grill portions for the steaks and means for operating the conveyors past cooking burners in a housing and for operating the conveyors at different speeds so that when a party orders a plurality of steaks cooked rare, medium or well done, by starting the steaks through the cooking apparatus at the same time they will be deposited from the cooking apparatus cooked in the manner desired. There is also a holding space where the steaks may be kept warm or hot after they have gone through the cooking operation.

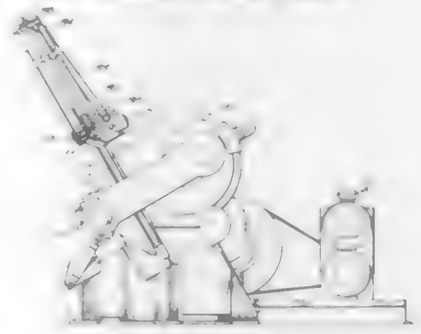
3,372,636
ROTISSERIE
Vincent Marasco, 1364 N. Western Ave., Los Angeles, Calif. 90027
Filed Oct. 20, 1965, Ser. No. 498,269
6 Claims. (Cl. 99—427)

A rotisserie of the Ferris wheel type has several rotatable baskets with hinged lids for holding food to be cooked. Pivot pins mounting each basket are split longitudinally, one half being on the hinged lid. A journal



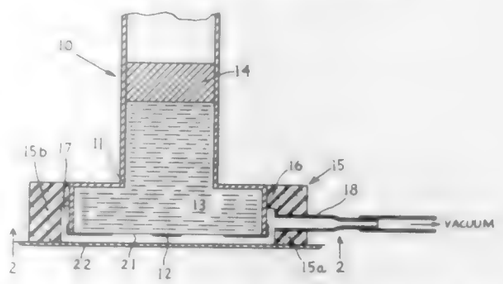
bearing receiving the pin endwise holds the pin together and the lid closed.

3,372,637
DELIVERY MECHANISM
Zeffro V. Gianetti, Franklin, Mass., assignor to Thomson National Press Company, Inc., Franklin, Mass., a corporation of Massachusetts
Filed June 27, 1966, Ser. No. 560,611
10 Claims. (Cl. 100—218)



A delivery mechanism for removing die-cut cardboard sheets from a platen press having a fixed platen extending upwardly and a movable platen adapted to be moved in pressing relation with the fixed platen. Impaling elements carried by a frame project between the platens when they are closed. When the platens open, the sheet is moved upwardly by the impaling means to a position in which the lower edge of the sheet is engaged by a laterally moving conveyor. This laterally moving conveyor moves the processed sheet from the press to a chute-like arrangement which permits the processed sheet to slide downwardly for further handling.

3,372,638
STENCIL PRINTER
Kenneth F. Tripp, Hancock, N.H., assignor to Markem Machine Company, Keene, N.H., a corporation of New Hampshire
Filed May 22, 1967, Ser. No. 640,049
6 Claims. (Cl. 101—114)



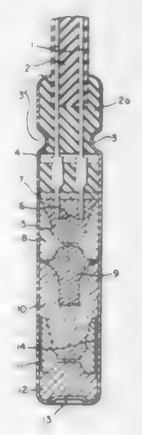
This invention relates to a stencil printing device in which a stencil member surrounded by a flexible wall is

brought into intimate contact with the surface being decorated by creating a vacuum in the space between the stencil and the surface, and simultaneously utilizing atmospheric pressure to transfer an inked image through the stencil, to the surface.

3,372,639
METHOD OF MAKING CURVED ELECTROSTATIC PRINTING SCREENS
James W. Edwards, Creve Coeur, Mo., assignor to Monsanto Company, St. Louis, Mo., a corporation of Delaware
Filed June 11, 1965, Ser. No. 463,251
4 Claims. (Cl. 101—128.3)

1. The method of making electrostatic printing screens, said method comprising applying a photosensitive emulsion to the surface of an electrically non-conductive fabric, applying a mask of a desired print image to the surface having the photosensitive emulsion, exposing the emulsion to a source of light so that the portion not covered by masked areas receives light, removing the mask, removing the unexposed emulsion, metalizing the open areas of the fabric to render the fabric electrically conductive, metalizing the fabric in a second metalizing operation so that the metal is filled in the interstices of the open mesh portions of the fabric to provide a fairly rigid screen member, treating the screen member with an emulsion remover to convert the positive image to a negative image, and forming the screen member to a desired shape.

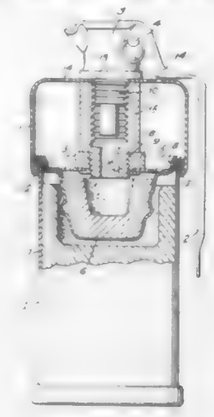
3,372,640
WATER-DESENSITIZED BLASTING CAPS
Richard Dow, Bloomingdale, and Carl R. Hutter, Pompton Lakes, N.J., assignors to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
Filed Aug. 3, 1966, Ser. No. 569,741
3 Claims. (Cl. 102—28)



A blasting cap for underwater use adapted to be desensitized after a predetermined period of exposure to water by the ingress of water through at least one hole in the casing after dissolution of a water-soluble granular material.

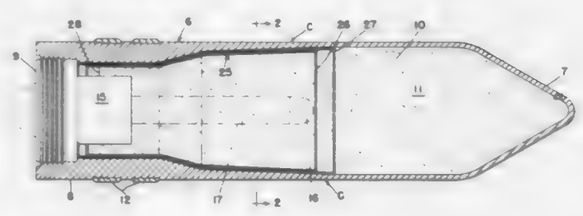
3,372,641
PRESSURE RETENTION CHAMBER FOR SMOKE MARKER GRENADE
John Edward Foster, Timonium, Md., assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Army
Filed Oct. 19, 1966, Ser. No. 588,676
3 Claims. (Cl. 102—65)

A pressure retention chamber fixed to the top of a smoke marker grenade which provides a larger volume with the canister of the grenade when the cover is ruptured due to impact and thereby reduces the pressure, yet re-



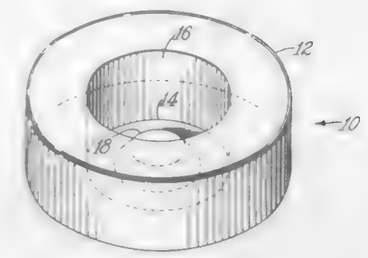
taining sufficient pressure to enable normal burning of the smoke mix in the canister.

3,372,642
INTERNAL FIRING SWITCH MEANS FOR ELECTRICALLY FUZED PROJECTILES
Jack Brothers, Succasunna, N.J., assignor to the United States of America as represented by the Secretary of the Army
Filed Aug. 6, 1964, Ser. No. 388,352
2 Claims. (Cl. 102—70.2)



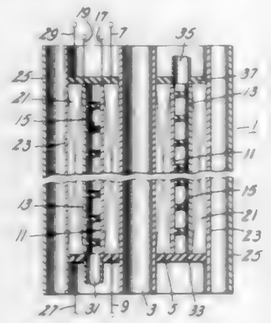
Crush-closable firing-switch means for electrically fuzed projectiles of the cylindrical casing or shell type provided as a relatively-thin tubular liner along and tightly fitting the inner casing wall rearwardly from an intermediate crush point or area on the shell to which it must penetrate to effect firing delay after impact through delayed rupture and closing of said switch means.

3,372,643
LOW EXPLOSIVE PRIMERLESS FORMED CHARGES
Robert C. Kvavle, Hillsboro, Oreg., assignor to United Shoe Machinery Corporation, Boston, Mass., a corporation of New Jersey
Filed Feb. 1, 1966, Ser. No. 524,168
16 Claims. (Cl. 102—99)



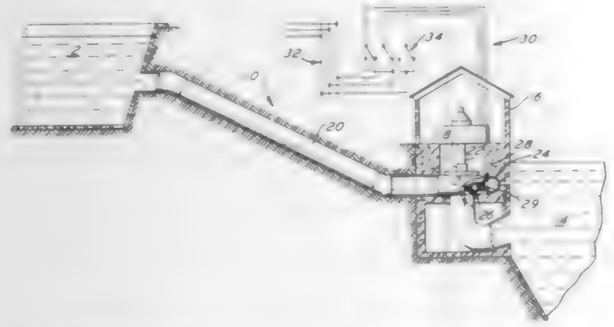
A primerless, low explosive nitrocellulose charge is adapted by its apparent density and preferably also by configuration, to be easily ignited in a substantially closed chamber by friction due to direct impact and without reliance upon diesel type ignition.

3,372,644
ELECTROMAGNETIC PUMP HAVING CONCENTRIC ELECTRODES
Ronald R. Nilson, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Filed Mar. 21, 1966, Ser. No. 536,130
4 Claims. (Cl. 103—1)



An electromagnetic pump has a pair of cylindrical electrodes defining a cylindrical space therebetween, an insulative spiral deflector mounted in the cylindrical space, a pair of induction coils mounted interiorly and exteriorly of the electrodes, and means connecting the electrodes and the induction coils to an alternating current source.

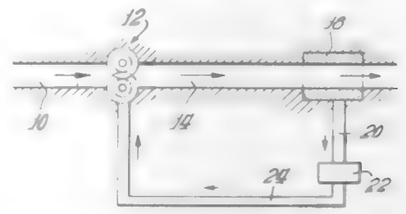
3,372,645
POWER-ACCUMULATION SYSTEM
Richard B. Willi, Norristown, Pa., assignor to Baldwin-Lima-Hamilton Corporation, Philadelphia, Pa., a corporation of Delaware
Filed Mar. 16, 1966, Ser. No. 534,909
5 Claims. (Cl. 103—87)



A power-accumulation system utilizing a pump-turbine which can be operated as a pump wherein water can be delivered up to full pumping head when being operated with a motor-generator turning in a direction as for the generating mode. To accomplish pumping while the pump-turbine shaft is rotated in the generating mode, the wicket gates must be set at an opening less than that required to drive the unit as a turbine at rated speed under no load for a corresponding generating head. Smoothness of operation is greatly enhanced by filling the conduit interconnecting a high and low reservoir in a power-accumulation system in the described manner.

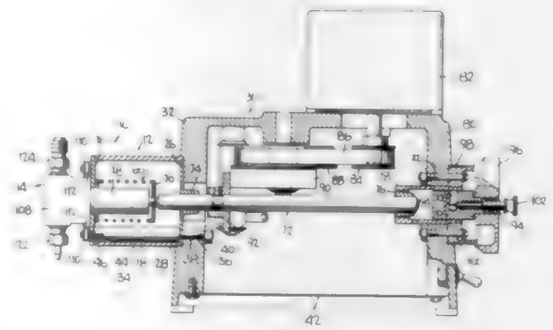
3,372,646
CONTAMINANT RESISTANT FLUID SUPPLY SYSTEM
Peter F. Pinkas, Cleveland, and Chester J. Brian, Jr., Chagrin Falls, Ohio, assignors to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Continuation-in-part of application Ser. No. 385,206, July 27, 1964. This application Mar. 20, 1967, Ser. No. 641,080
8 Claims. (Cl. 103—126)

A pressure loaded gear pump including a contaminant resistant fluid supply system. The contaminant resistant arrangement includes means for cleaning a portion of the pumped fluid which is in turn utilized to pressure load the pump bearings and cleanse the relatively slidable surfaces of the bearings and pumping gears. Passages are formed



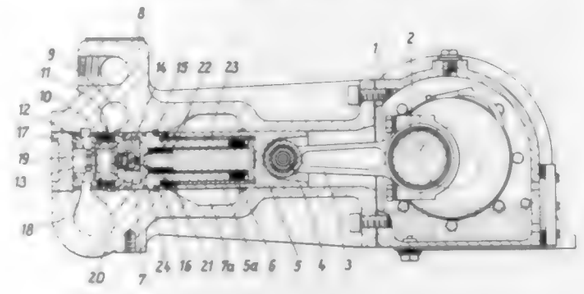
in the pump bearings to deliver the fluid to the relatively slidable surfaces, and slots, communicating with the passages are provided in the pumping gear side walls to distribute the cleansing fluid.

3,372,647
PUMP
Nelson G. Kling, Ringwood, N.J., assignor to Technicon Corporation, a corporation of New York
Filed July 8, 1966, Ser. No. 563,872
2 Claims. (Cl. 103—153)



A positive displacement, piston pump, has an eccentric driven operating rod which drives a spring loaded plunger and piston in a passageway in a pump head. The pump head is releasable from the body of the pump by externally accessible hold down means to expose the piston and its annular seal.

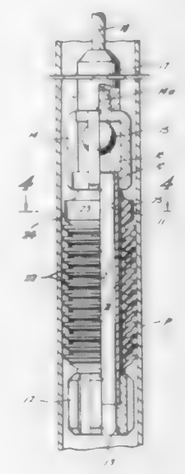
3,372,648
PUMP
Paul Hammelmann, 17 Zum Sundern, 474 Oelde, Westphalia, Germany
Filed July 6, 1966, Ser. No. 563,253
Claims priority, application Germany, July 7, 1965, H 56,510
15 Claims. (Cl. 103—153)



A pump including a reciprocatable crosshead having a front portion in form of a cylinder, a stationary hollow piston extending into the cylinder of the crosshead coaxially arranged therewith, and a pair of valves respectively arranged in a pair of passage means communicating

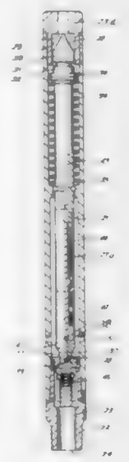
with the interior of said hollow piston and respectively opening and closing during movement of said crosshead along a suction stroke and a compression stroke.

3,372,649
WELL SWABS
Jack C. Webber, 353 Dolphin, Corpus Christi, Tex. 78411
Filed Apr. 25, 1966, Ser. No. 545,072
16 Claims. (Cl. 103—225)



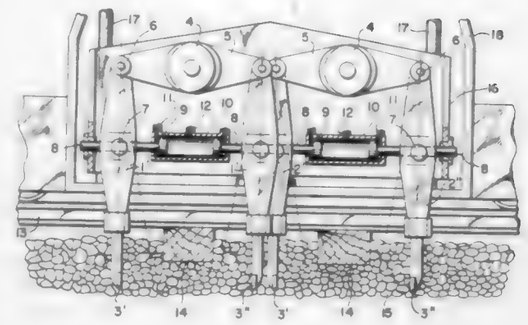
This patent discloses a well swab in which the swab element has a plurality of flexible lips which turn down from an upwardly and outwardly extending configuration to support a load and extend further down to bypass or dump an overload. The swab element includes a choke which limits the rate of flow past the swab element and protects the lifting ribs from excessive overload conditions.

3,372,650
GAS LIFT APPARATUS AND SYSTEM
Henry U. Garrett, Longview, Tex. (2205 Lee St., Houston, Tex. 77026)
Filed Apr. 6, 1966, Ser. No. 540,707
6 Claims. (Cl. 103—233)



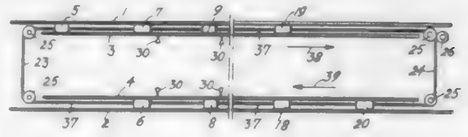
This patent discloses a gas lift method and system using casing pressure-responsive valves for loading tubing pressure-responsive valves to unload a well, and using the tubing pressure-responsive valves to thereafter lift liquid from the well.

3,372,651
TRACK TAMPING MACHINE
Franz Plasser and Josef Theurer, both of Johannesgasse 3, Vienna, Austria
Filed Mar. 19, 1965, Ser. No. 441,229
4 Claims. (Cl. 104—12)



A ballast tamping tool assembly comprising two adjacent pairs of tamping tools so spaced in the direction of track elongation that the adjacent tools of the adjacent pairs fit into the interspace between two adjacent ties. Preferably, the adjacent pairs of tools are staggered in the direction of the tie elongation.

3,372,652
RAILWAY CAR MOVING DEVICE
Ernst Garbers, 10 Dammannweg, Hamburg-Hochkamp, Germany
Filed Aug. 17, 1965, Ser. No. 480,390
Claims priority, application Germany, Aug. 22, 1964, G 41,373
9 Claims. (Cl. 104—26)

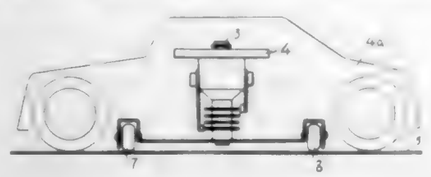


A pushing-off and braking arrangement for marshalling yards, including four-wheeled trolleys guided between the feet and heads of the rails of tracks and associated guide rails, the trolleys being movable by means of a fixedly connected endless transport means which is lead around the pulley of a driving engine, with raisable arms for engaging parts of a railroad car, e.g. a wheel set or axle bearing casing or the like, the transport means carrying out a to-and-fro motion the length of which corresponds at least to the maximum wheel base of a railroad car, the four wheeled trolleys being carried by the endless transport means in a closed path including a driving portion in which the raisable arm of each trolley engages and drives a railroad car and a return portion in which the raisable arm is disengaged while the trolley is returned to the driving portion of the closed path.

3,372,653
ELECTRIC CURRENT TRANSMISSION DEVICE, PARTICULARLY FOR ENTERTAINMENT ELECTRIC VEHICLES
Marino Montagna, Via Ludovico Pavoni 23, Brescia, Italy
Filed Apr. 22, 1966, Ser. No. 544,604
Claims priority, application Italy, Apr. 26, 1965, 9,406/65, Patent 761,383
11 Claims. (Cl. 104—148)

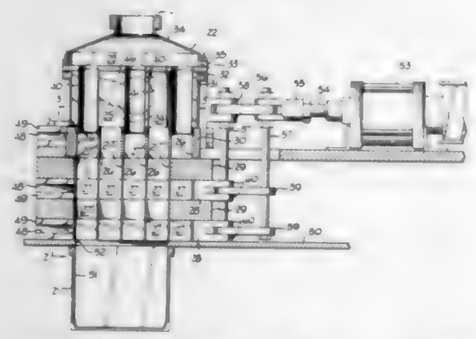
1. Electric current transmission device for electric vehicles, comprising in combination a plurality of strips consisting of an electrically conducting material and con-

nected to an electric current source, the strips being arranged juxtaposed to one another, mutually insulated and defining the vehicle runway, there being successively provided between a number of these strips respective grooves running parallel to the strips, and a contact device including a frame secured beneath the vehicle and swingable within a plane vertical to the runway plane and rotatable



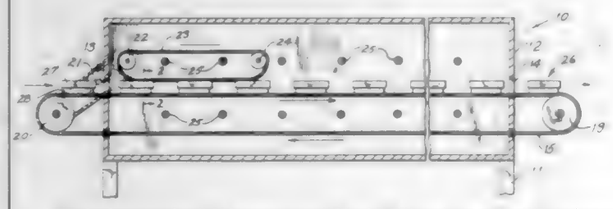
about a vertical axis with respect to the runway plane, said frame having an elongated extension carrying at the extremities thereof rolling members and a plurality of contact elements, said contact elements being arranged near the rolling members and adapted to come into contact with the strips when the corresponding rolling member is in one of said grooves.

3,372,654
METHOD OF AND APPARATUS FOR FORMING AN EDIBLE PRODUCT
Kenneth Bell, Marengo, Ill., assignor to National Dairy Products Corporation, New York, N.Y., a corporation of Delaware
Filed Sept. 1, 1965, Ser. No. 484,352
7 Claims. (Cl. 107—1)



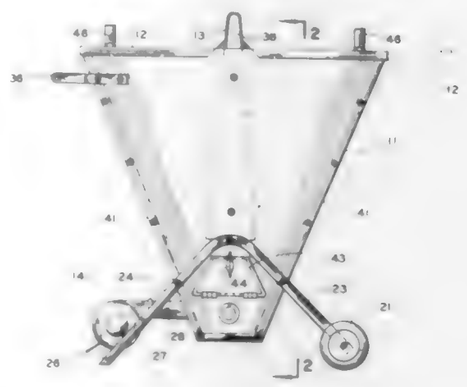
A method and apparatus for forming an edible product of different materials with similar sections of the materials arranged in contacting layers and with the sections in each layer arranged in parallel contacting rows, each section in each row in each layer contacting at least one section of a different material in the same row, at least one section of different material in at least one adjacent row, and at least one section of different material in at least one adjacent layer.

3,372,655
BAKING APPARATUS
Robert W. Williams, Brookville Road, Brookville, N.Y.
Filed July 22, 1966, Ser. No. 567,287
6 Claims. (Cl. 107—57)



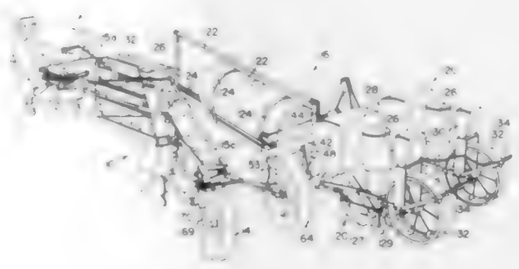
This invention is concerned with the use of a continuous hold down conveyor having a slack bottom portion within a baking chamber to use the force of gravity to produce a continuous downward force on the lids of the baking pans during an initial period of the baking cycle.

3,372,656
SMOKELESS YARD BURNER
Morris E. Lager, Box 114, Winnetka, Ill. 60093, and Raymond J. Miller, 6098 N. Newburg, Chicago, Ill. 60631
Filed Oct. 23, 1965, Ser. No. 504,019
4 Claims. (Cl. 110—18)



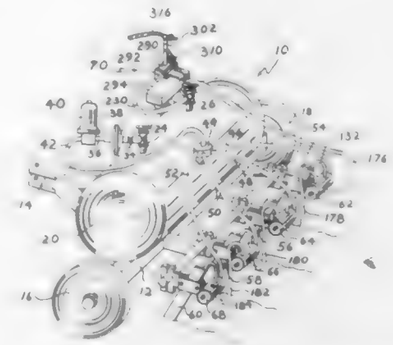
A burner for leaves and trash, which is designed to be wheeled about a yard, is provided with an electric blower for discharging air along a line extending the full width of a narrow-bottom hopperlike burning container. Spaced above the line of air liberation, and extending higher than the sides of the hopper, is a duct memebr of expanded metal which ensures free passage of the air and products of combustion while fully exposing the contents at opposite sides of the duct to the burning action. Covers can be closed to confine the exhaust to passing up through the duct. Wet leaves can be burned substantially without smoke.

3,372,657
MINIMUM TILLAGE APPARATUS
Harold V. Hansen, Hillsdale, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Delaware
Filed Apr. 6, 1964, Ser. No. 357,522
12 Claims. (Cl. 111—1)



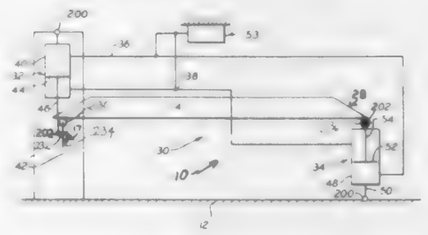
8. A method of planting comprising: forming a ridge in freshly worked soil at least the central portion of the ridge being at an elevation above the normal surface of the freshly worked soil, compacting the soil in the central portion of the ridge until it is no longer above the normal surface of the freshly worked soil, opening a furrow within the compacted soil, placing seed within said furrow, covering the furrow with soil, and pressing the soil over the furrow to form a good seed bed.

3,372,658
SOIL TREATING APPARATUS
William L. Ammann, Argonia, Kans. 67004
Filed July 21, 1966, Ser. No. 566,996
9 Claims. (Cl. 111—7)



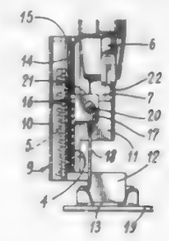
Apparatus for and a method of subsurface injection of anhydrous ammonia fertilizer wherein liquid is conducted from a source of liquid ammonia traversed over a field to a subsurface injection unit from which the ammonia is discharged, with the ammonia being maintained under a sufficient pressure throughout substantially its entire travel to the injector unit to hold the same substantially entirely in its liquid state during such travel. The apparatus includes a plurality of spaced injector units connected by individual conduits to a manifold, such manifold having communication with the liquid contents of a supply vessel by way of a single conduit provided with a pressure regulator, filter and shut-off valve. Each of the individual conduits is provided immediately adjacent its respective injector unit with a control valve which is normally closed, the arrangement being such that ammonia is supplied to the individual control valves as a liquid under a regulated pressure that is sufficient to maintain the same in a liquid state. Each of the control valves is provided with fluid pressure actuated means for opening such valves, and all of such means are connected by a common conduit to a master control valve, and the latter is such that the common conduit can be selectively vented and placed in communication with a source of fluid pressure, which can be the vapor space at the top of the ammonia storage vessel.

3,372,659
STABILIZING MEANS FOR SCHIFFLI EMBROIDERY MACHINES
Paul F. Bowman, Ridgewood, N.J., assignor to Joseph L. Schlesinger Incorporated, Ridgefield, N.J., a corporation of New Jersey
Filed Feb. 15, 1966, Ser. No. 527,564
9 Claims. (Cl. 112—91)



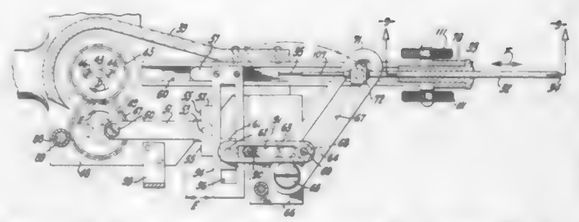
1. In combination with a Schiffli embroidery machine including a base, an elongated frame for supporting a work piece, embroidery tools, and means for moving said frame relative to said base; means providing for concurrent movement of both ends of said frame comprising a first piston and cylinder, means for connecting one of said first piston and cylinder to one end of said frame and the other of said first piston and cylinder to said base for relatively moving said piston and cylinder in accordance with the movement of said frame, a second piston and cylinder of substantially the same dimensions as said first piston and cylinder, means for connecting one of said second piston and cylinder to the other end of said frame and for connecting the other of said second piston and cylinder to said base for moving said other end of said frame in response to relative movement between said second piston and cylinder, an incompressible fluid filling the unoccupied space in said first and second cylinder, a first pipe line connected to said first cylinder on the side of said first piston containing fluid which resists movement of said one end of said frame in a given direction and connected to said second cylinder on the side of said second piston containing fluid adapted to exert a pressure on said second piston in a direction resulting in movement of said other end of said frame in said given direction, a second pipe line connected to said first and second cylinder on the sides of said first and second pistons opposite the sides thereof to which said first pipe line is connected, and incompressible fluid filling said first and second pipe lines.

3,372,660
DEVICE FOR BASTING APPLIED TO SEWING MACHINES OF THE ZIGZAG TYPE
Luigi Bono, Pavia, Italy, assignor to Necchi Società per Azioni, Pavia, Italy
Filed Oct. 5, 1965, Ser. No. 493,084
Claims priority, application Italy, June 3, 1965, 12,428/65, Patent 772,518
5 Claims. (Cl. 112—158)



An accessory device for selective mounting on a zigzag type sewing machine for adapting same to sew basting type stitches. The device requires that the machine needle be removed from the machine needle bar and remounted in a needle holder which forms part of the device, said needle holder being reciprocably mounted and traversing one of the two axes along which the needle bar reciprocates whereby said bar abuts against the holder while said bar is along only one of said axes but slides past the holder when the bar is along the other of said axes.

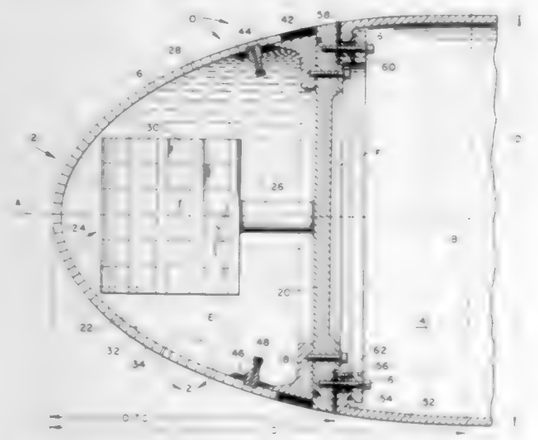
3,372,661
PORTABLE PILE-DEPOSITING MACHINE
Glenn Looper, Box 76, Dalton, Ga. 30720
Filed June 7, 1965, Ser. No. 461,948
17 Claims. (Cl. 112—80)



A portable pile-depositing machine is described in which the yarn is pulled forward by the forward end of the reciprocating needle on the forward stroke but is prevented from regressing on the rearward stroke by frictional engagement with a stationary yarn guide inside the

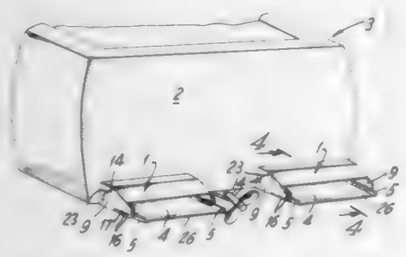
needle. Also described is an arrangement by which the stroke length of the needle can be remotely changed between two limit positions while the machine is running.

3,372,662
TORPEDO NOSE AND SONAR DOME CONSTRUCTION
Carrol R. Nisewanger, Arcadia, Calif., assignor to the United States of America as represented by the Secretary of the Navy
Continuation of application Ser. No. 446,749, Apr. 8, 1965. This application Jan. 27, 1967, Ser. No. 613,069
2 Claims. (Cl. 114—20)



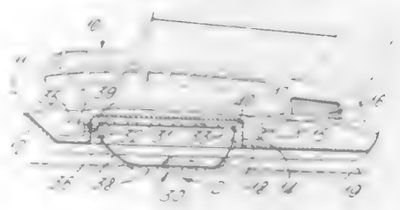
A wall construction for a sonar dome or a torpedo nose is of a bonded sandwich type consisting of inner and outer face sheets of impervious impregnated fiberglass laminae, and a honeycomb core therebetween. The walls of the honeycomb are made of pervious woven fiberglass, which is partially impregnated for stiffness. Several nipples extend through the inner face sheet of the bonded sandwich construction. A vacuum is drawn throughout the honeycomb core zone through the nipples. A liquid medium for providing an acoustic match is then introduced into the honeycomb core zone under influence of the vacuum, through the nipples.

3,372,663
BOAT STABILIZING UNITS
Louis Lo Bue, Paterson, N.J., assignor to Aqua Stables, Inc., Paterson, N.J., a corporation of New Jersey
Filed Oct. 5, 1966, Ser. No. 584,416
13 Claims. (Cl. 114—66.5)



1. A self adjusting trim tab adapted to be mounted on a water craft comprising, one portion adapted to be mounted on said craft, a stabilizing tab, a first stabilizing tab mounting means, a second stabilizing tab mounting means, said first and second stabilizing tab mounting means extending longitudinally with respect to said craft, a lower stabilizing tab stop, an upper stabilizing tab stop, means maintaining said first and second stabilizing tab mounting means in fixed relationship, and pivot means intermediate the length of said stabilizing tab mounting means adapted to allow said stabilizing tab to pivot between said lower and upper stops.

3,372,664
PROPULSION SYSTEM FOR A VEHICLE FOR TRAVELLING OVER FLUID AND OTHER SURFACES
David William Nicholas, Totton, Southampton, Rowland Delville Hunt, Hythe, and Edward Gunston Tattersall, Hythe, Southampton, England, assignors to Hovercraft Development Limited, London, England, a British company
Filed May 31, 1966, Ser. No. 554,144
Claims priority, application Great Britain, June 3, 1965, 23,826/65
15 Claims. (Cl. 114—67)

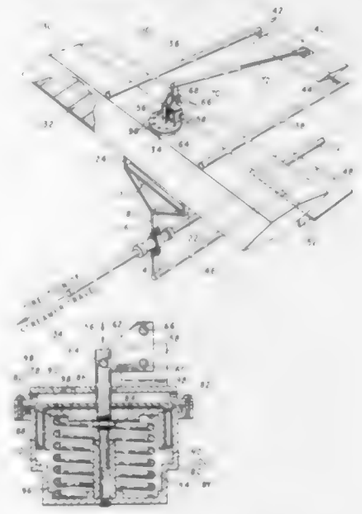


A propulsion system for propelling a vehicle, such as an air cushion vehicle, over water comprises a belt arranged in an endless loop and carrying a series of cleats adapted to thrust against the water. Each of the cleats incorporates a thrust surface which slopes outwardly from the loop in the direction of the leading edge of the cleat whereby, when the cleat enters the water, forces are produced which urge the cleat downwardly.

3,372,665
CABLE DISPENSING AND SECURING DEVICE
Lilburn L. Mesler, Palmyra, Mich., assignor to American Chain & Cable Company, Inc., New York, N.Y., a corporation of New York
Continuation-in-part of application Ser. No. 392,560, Aug. 27, 1964. This application Sept. 20, 1966, Ser. No. 593,251
15 Claims. (Cl. 114—206)

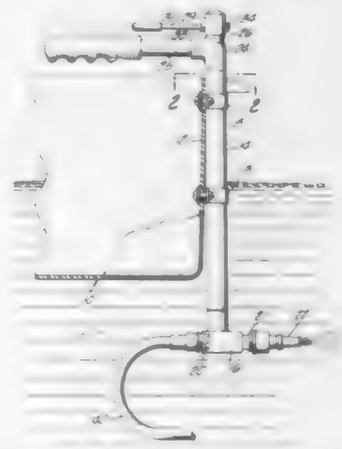
1. A device for dispensing and securing a cable comprising
(a) a main body portion;
(b) a flyer rotatable on the body portion;
(c) a reel fixed to the body portion coaxial with the flyer;
(d) a length of cable wrapped about the reel to be paid out from the end of the reel through the flyer to impart rotation to the flyer;
(e) locking means for preventing rotation of the flyer and pay out of the cable comprising
(i) positively engageable first and second locking elements mounted on the flyer and body portion respectively and biased toward locked position,
(ii) restraining means releasably holding said locking elements out of locked position, and
(iii) triggering means for disabling said restraining means to release said locking elements into locked position and prevent rotation of the flyer.

3,372,666
DEPTH CONTROLLER
Buford M. Baker, Dallas, Tex., assignor to Texas Instruments Incorporated, Dallas, Tex., a corporation of Delaware
Filed Oct. 24, 1965, Ser. No. 504,724
5 Claims. (Cl. 114—235)



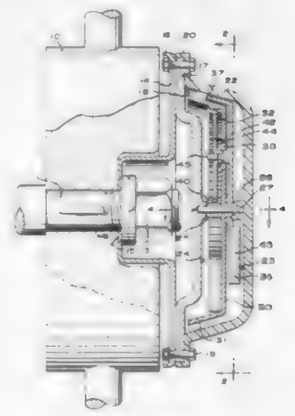
Apparatus for controlling the depth of a device such as a towed streamer in a fluid medium. A pressure responsive sensor is connected to a wing for controlling the variance of the deflection angle of an elevator and the wing in a linear manner related to the depth of the sensor within a predetermined range of depths and in a constant manner at all depths above and below the predetermined range.

3,372,667
JET PROPELLED BOAT
Theodore E. Sweet, 18026 Benbow, Covina, Calif. 91722
Filed Jan. 5, 1967, Ser. No. 607,436
4 Claims. (Cl. 115—12)



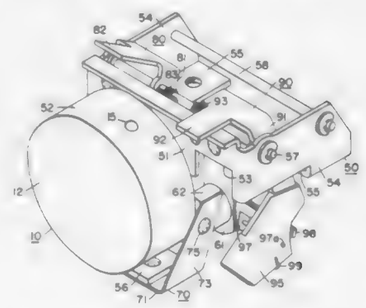
1. A device for use with a floating vehicle such as a boat or the like comprising: a tubular member for attachment to said vehicle; a sleeve rotatably mounted in said tubular member; an elongated horizontally extending body carried by said sleeve member at its lower end; means for attaching a hose to one end of said body and a jet nozzle at the other end of said body; and a handle attached to said sleeve for controlling the direction in which said nozzle is pointed.

3,372,668
RUDDER INDICATOR
Ralph F. Chambers, Seattle, Wash., assignor to Chambers & Chambers, Seattle, Wash., a partnership composed of Ralph F. Chambers and Jack E. Chambers
Filed Aug. 5, 1965, Ser. No. 477,418
5 Claims. (Cl. 116—31)



A device to indicate to the helmsman of a marine vessel the position occupied by the rudder, employing as a pointer a radial arm which carries the planet gear of an epicyclic train and with the directional bearing visible upon a floating disc weighted so as not to turn with the wheel, the planet gear being in mesh with internal teeth formed upon the disc and a sun gear rotating with the wheel. The entire working assembly is housed in an annular case so attached to the wheel that it can be applied to, adjusted on, or removed from the wheel bodily so as not to expose the working parts.

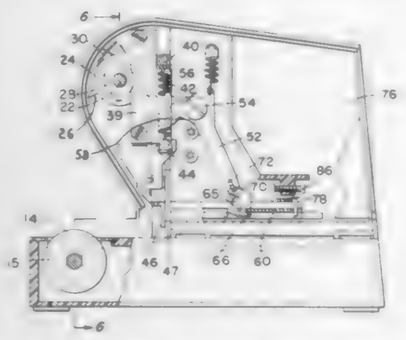
3,372,669
ULTRASONIC TRANSMITTER
Leon J. Sienkiewicz, Metuchen, and Harry T. Goldstein, Teaneck, N.J., assignors to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Filed Mar. 23, 1964, Ser. No. 353,668
5 Claims. (Cl. 116—137)



1. An ultrasonic transmitter comprising, a housing, mounting means supported within said housing, a flexural mode vibrator supported by said mounting means and resonant to vibrate at a first frequency about a first nodal diameter and at a second frequency about a second nodal diameter, striker means supported by said mounting means adjacent said vibrator, actuating means operatively associated with said striker means to actuate said vibrator

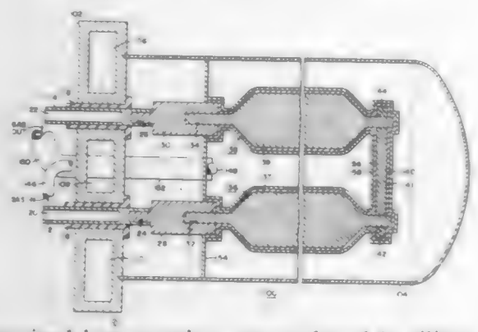
into vibration about said first nodal diameter, damping means supported by said mounting means to effect damping of vibrations of said second frequency of said vibrator about said second nodal diameter during said vibrations about said first nodal diameter, and means operatively associated with said actuating means for effecting operation of said damping means.

3,372,670
POSTAGE STAMP DISPENSER
Kenneth O. Frawley, 78 Sweetgum Road, Levittown, Pa. 19056
Filed Oct. 18, 1965, Ser. No. 497,293
4 Claims. (Cl. 118—42)



A compact manually operated stamp dispenser which includes scissor cutting means and a stamp feeding means, synchronized with respect to each other. Stamp wetting apparatus also is included.

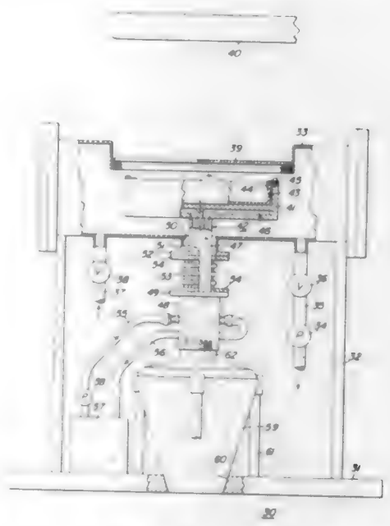
3,372,671
APPARATUS FOR PRODUCING VAPOR GROWTH OF SILICON CRYSTALS
Ting Li Chu, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Filed May 26, 1965, Ser. No. 458,937
2 Claims. (Cl. 118—49.5)



Siliconized heater strips are employed in silicon vapor growth apparatus. Silicon is deposited on a heater strip heated to a temperature higher than the melting point of silicon to form an impervious coating of a silicide of the material comprising the heater. A layer of silicon is then grown on the silicide coating.

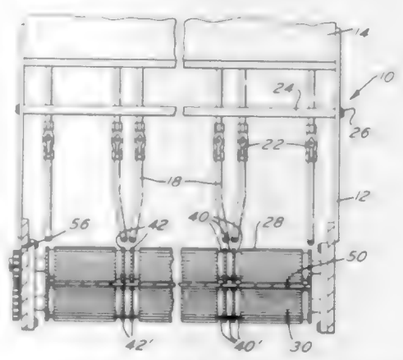
3,372,672
PHOTOPOLYMERIZATION MEANS IN A VAPOR DEPOSITION COATING APPARATUS
Archibald Nelson Wright, Schenectady, N.Y., and Wilfred F. Mathewson, Jr., Franklin, Mich., assignors to General Electric Company, a corporation of New York
Filed Mar. 21, 1966, Ser. No. 536,125
2 Claims. (Cl. 118—49.5)

1. Apparatus comprising an enclosure, a vacuum pump connected to said enclosure to evacuate said enclosure, an inlet line connected to said enclosure for supplying a photopolymerizable gaseous material to said enclosure, a control valve for said inlet line, a driver shaft comprising a driver portion and a driven portion, said driven portion with a narrower diameter than the driver portion, the end of the driven portion of said driver shaft located within said enclosure, a substrate support member within said enclosure connected to the driven end of said driver shaft, an ultraviolet light source having an effective wave length of 2,000 to 3,500 angstroms positioned within said enclosure in operative relationship to said substrate support member, the driven portion of said driver shaft extending outwardly from said enclosure through an aperture in the wall of said enclosure, a closure with a flange



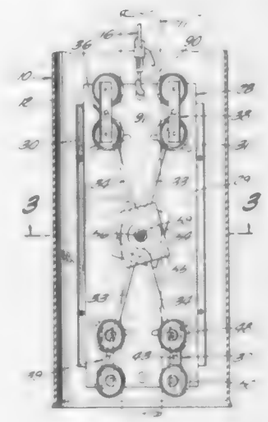
positioned around the shaft aperture in said enclosure, a vibratory device connected to the driver end of said driver shaft, a flange on said driver shaft at the junction of the driver portion and the driven portion, a diaphragm with a flange at each opposite end thereof, one of said diaphragm flanges connected to said driver shaft flange, the other of said flanges connected to said closure flange, a cooling tube imbedded in said substrate support member and extending through said driver shaft to a point outside said enclosure, a cooling unit positioned outside said enclosure and connected to said cooling tube, and a circulating pump connected to said cooling unit for circulating a coolant through said cooling tube.

3,372,673
COATING APPARATUS
Alfred DiMattia, Williamstown, N.J., assignor to Edward Stern Majestic Press, Inc., Philadelphia, Pa., a corporation of Pennsylvania
Filed Nov. 2, 1966, Ser. No. 591,485
10 Claims. (Cl. 118—221)



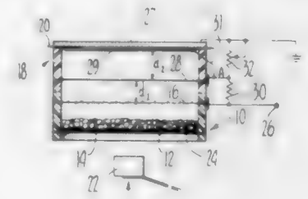
This disclosure is directed to a coating apparatus having a grooved roller which transfers coating material from a trough to a surface. The grooved roller receives the coating material directly from the trough, thus eliminating transfer rollers, and applies a consistent width thin strip of coating material to a surface.

3,372,674
FLAGPOLE PAINTING DEVICE
Keith R. Dickau, 1430 Emory Drive, Whittier, Calif. 90605, and Robert W. Miner, 1430 Hathaway Ave., Long Beach, Calif. 90800
Filed Aug. 15, 1966, Ser. No. 572,499
14 Claims. (Cl. 118—307)



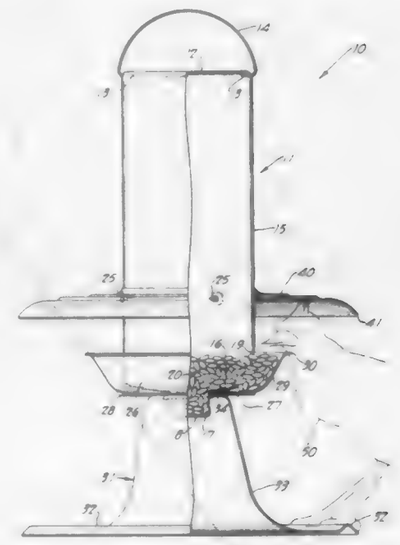
1. A painting device for painting an elongated member such as a flagpole or the like comprising
carrier means for encircling said elongated member and for supporting a plurality of paint sprayers,
supporting bracket means mounted within said carrier means for maintaining alignment of said painting device about the periphery of said elongated member, said assembly including plate means affixed to said carrier means and a plurality of rod members having wheel means mounted on said rod members for engaging the periphery of said elongated member, said rod members being arranged substantially in the form of a cross and pivoted substantially at the center thereof on said plate means, biasing means coupled between said plate means and said rod means for selectively biasing said wheel means toward the periphery of said elongated member, and
handle means coupled with said biasing means for selectively operating said biasing means.

3,372,675
ELECTROSTATIC IMAGE PROCESSOR
Willard J. Tressel, Berkeley, Calif., assignor to Friden, Inc., a corporation of Delaware
Filed Aug. 1, 1966, Ser. No. 569,433
10 Claims. (Cl. 118—637)



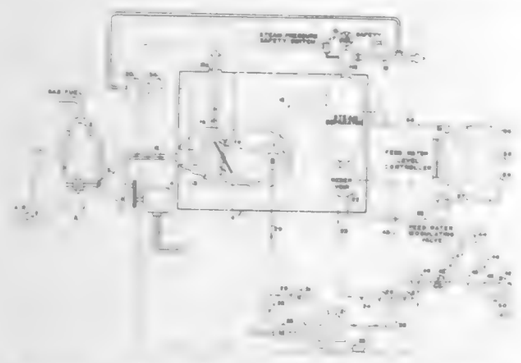
A toner applying apparatus for use in developing electrostatic images on a record medium wherein mechanical actuation is initially used to both charge the toner particles, due to friction with a carrier material, and to elevate the charged toner particles toward the record medium. The elevated toner particles enter a first electric field which accelerates them toward the record medium. Before reaching the record medium the accelerated charged particles enter a second electrical field which maintains the charged particles in an air slurry or cloud closely adjacent to the record medium, whereby the electrical fields associated with the latent image in combination with the uniform field of the drift region cause the toner particles to be gently deposited on desired portion of the record medium.

3,372,676
CARDINAL BIRD FEEDER
Robert H. Williams, Rte. 2, Bandera, Tex. 78003
Filed June 6, 1966, Ser. No. 555,520
2 Claims. (Cl. 119—52)



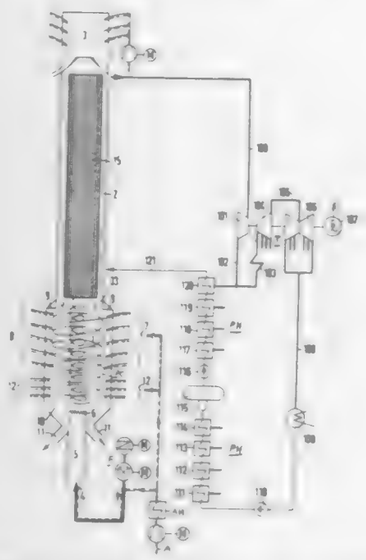
1. In a bird feeder for dispensing bird seed, the combination of:
(A) a thin walled seed containing bottle having an axial, externally threaded neck extending downwardly therefrom;
(B) a screw cap applied to said neck to close the latter,
(C) there being opening means in the wall of said bottle near the lower end thereof to allow bird seed to gravitate downwardly and outwardly through said opening means;
(D) a shallow circular feeding bowl having an axial hole in the bottom thereof fitting over said neck between said cap and said bottle;
(E) a feeder support formed of sheet plastic to include integrally an annular peripheral bird perch, and a hollow frusto-conical standard rising upwardly and having a horizontal wall at its upper end, said wall being axially apertured to receive said bottle neck,
(F) said cap rigidly clamping said feeding bowl and feeder support to said bottle when said cap is tightly screwed onto said bottle neck, and thus assembling said bird feeder,
(G) said bottle being adapted to receive bird seed by inverting the feeder and unscrewing said cap, said frusto-conical standard then providing a suitable hopper for funnelling grain through said neck and into said bottle, the cap then being reapplied to said neck and the feeder turned right end up for use.

3,372,677
TOTAL ENERGY CONSERVATION SYSTEM
John L. Boyen, Orinda, Calif., assignor, by mesne assignments, to Vapor Corporation, Chicago, Ill., a corporation of Delaware
Continuation of application Ser. No. 419,615, Dec. 18, 1964. This application Dec. 27, 1966, Ser. No. 604,945
5 Claims. (Cl. 122—7)



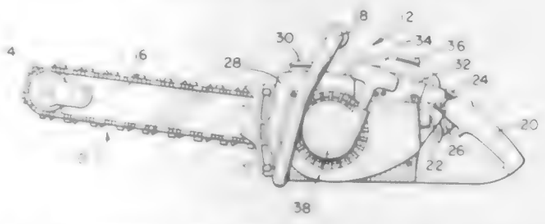
A system for recovering the energy in exhaust gases from a turbine or like heat generating apparatus by forcing such gases through a heat exchanger. A system for automatically controlling or bypassing exhaust gases into apparatus so that creation of excessive back pressure is avoided and so that temperatures in the heat exchanger are controlled. A heat exchanger having spirally formed water tubes in which water is directed from the inner end of the spiral to the outer end thereof and provisions for forcing the hot exhaust gases from the outer periphery of the spiral water tube radially inwardly toward the center of the spiral.

3,372,678
STEAM GENERATOR WITH HEAT EXCHANGE ON THE TORNADO-FLOW PRINCIPLE
Karl Rudolf Schmidt, Erlangen, Germany, assignor to Siemens Aktiengesellschaft, Munich, Germany, a corporation of Germany
Filed Aug. 5, 1966, Ser. No. 570,490
Claims priority, application Germany, Aug. 11, 1965, S 98,770
11 Claims. (Cl. 122—235)



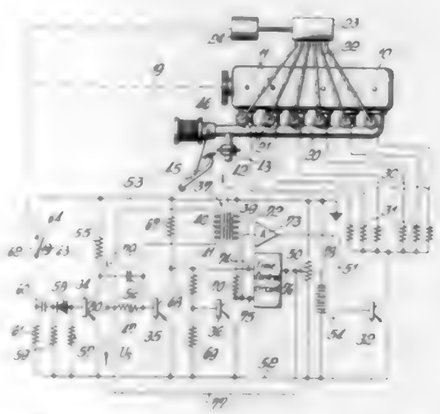
With a steam generator having a substantially rotationally symmetrical firing chamber with fuel supply means and combustion air supply means, a smoke-gas conduit structure forming a substantially rotationally symmetrical conduit path communicating with the chamber to receive hot combustion gases therefrom, and heating surfaces extending inside and along the conduit and forming longitudinal interspaces for the passage of the gases, tornado-flow excitation means joined with the chamber and including at least one of the supply means for producing and maintaining in the firing chamber a tornado flow of gas-entrained fuel particles to issue a twisting rotational flow of smoke gases from the chamber into and through the interspaces along the heating surfaces, the fuel supply means being located relative to the firing chamber so as to supply fuel thereto in a direction coaxial with the tornado flow.

3,372,679
FUEL TANK VENTING SYSTEM
William H. Aitken, Park Forest, Ill., assignor to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware
Filed Apr. 27, 1966, Ser. No. 545,729
8 Claims. (Cl. 123—136)



1. In a portable tool driven by an engine utilizing a volatile fuel, a fuel tank having an opening therein to provide access to the interior of said tank, removable cap means closing off said opening, an expansion chamber located outside of and adjacent to said tank, valve means through which said fuel and air can pass between said fuel tank and said expansion chamber, said valve means being actuated by predetermined pressure conditions within said fuel tank, air vent means having a first portion thereof in communication with said expansion chamber and having a second portion connected to a second chamber which is open to atmospheric pressure.

3,372,680
TIME CONTROL CIRCUIT FOR FUEL INJECTION SYSTEM
Hermann Scholl, Stuttgart, Germany, assignor to Robert Bosch, G.m.b.H., Stuttgart, Germany
Filed Feb. 8, 1966, Ser. No. 525,986
Claims priority, application Germany, Feb. 11, 1965, B 80,465
15 Claims. (Cl. 123—139)



An electronic control arrangement for controlling the injection of fuel in internal combustion engines. A monostable multivibrator circuit actuated by a switching mechanism operated by the crankshaft of the engine provides a train of pulses transmitted to electromagnetic valves

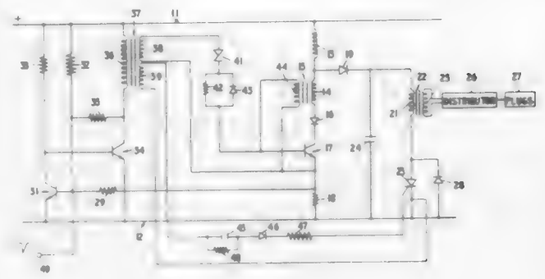
used to control the amount of fuel injected into the cylinders of the engine. The duration of the pulses, and hence the duration of the opening of the electromagnetic valves, is regulated through a variable core displacement transformer. The core of the displacement is positioned as a function of the pressure within the intake manifold. A time control circuit further modifies the duration of the pulses for actuating the electromagnetic fuel injection valve, so as to obtain the desired pulse duration versus core displacement characteristic. The time control circuit includes a transistor and a resistor connected in series with the emitter-collector path of the transistor. A capacitor is connected in parallel with the series combination of the resistor and transistor path. The output pulses of the monostable multivibrator circuit are applied to the base of the transistor. The output of the time control circuit is, in turn, fed back to the input circuit of the monostable multivibrator circuit to modify the duration of the pulses in the desired manner.

3,372,681
SPARK IGNITION SYSTEMS
Brian Leslie Phillips and Derek Stanley Adams, Birmingham, England, assignors to Joseph Lucas (Industries) Limited, Birmingham, England, a British company
Filed Mar. 8, 1966, Ser. No. 532,629
Claims priority, application Great Britain, Mar. 10, 1965, 10,109/65
15 Claims. (Cl. 123—148)

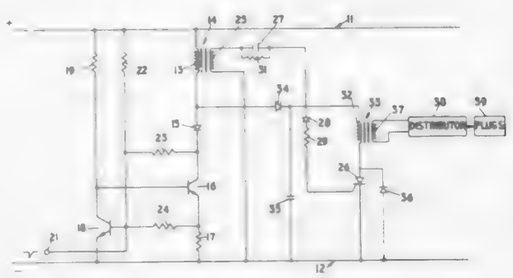
In a spark ignition system for an internal combustion engine, an inductor is connected in series with a switch across a battery. The switch is closed at periodic intervals by the engine, and when it closes energy is stored in the inductor, this energy later being used to produce a spark at a plug of the engine in timed relationship thereto. Associated with the series circuit a switch and inductor is a saturable transformer in the primary winding of which current flows at the same time as current flows through the series circuit. When the saturable transformer saturates, the switch is turned off, and so the current flowing in the series circuit is always turned off at a predetermined value, so that the energy stored in the inductor each time the switch closes is constant.

3,372,682
SPARK IGNITION SYSTEMS FOR INTERNAL COMBUSTION ENGINES
Brian Leslie Phillips and Derek Stanley Adams, Birmingham, England, assignors to Joseph Lucas (Industries) Limited, Birmingham, England, a British company
Filed Mar. 8, 1966, Ser. No. 532,639
Claims priority, application Great Britain, Mar. 10, 1965, 10,329/65
1 Claim. (Cl. 123—148)

In a spark ignition system, a transistor is turned on by means driven by the engine, and when it is turned on energy is stored in an inductor in series with the transistor. The transistor is turned off when the current flowing in the inductor reaches a predetermined value, and the energy is then transferred to a capacitor, which when the transistor is turned on again is discharged to produce the spark. In series with the transistor is a transformer, and the arrangement is such that as the current through the transistor increases, the transformer applies an increasing base drive to the transistor so as to ensure adequate base current in the transistor as the current in the inductor increases.



3,372,683
SPARK IGNITION SYSTEMS
Brian Leslie Phillips, Handsworth, and Derek Stanley Adams, Acocks Green, England, assignors to Joseph Lucas (Industries) Limited, Birmingham, England, a British company
Filed Mar. 8, 1966, Ser. No. 532,694
Claims priority, application Great Britain, Mar. 10, 1965, 10,112/65
12 Claims. (Cl. 123—148)

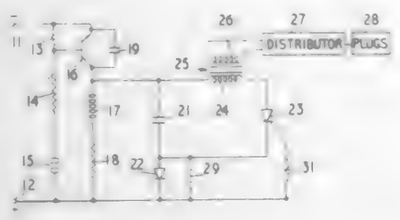


In a spark ignition circuit, means driven by the engine turns a switch on so that current flows through the switch to an inductor and is stored in the inductor. When the current flowing in the inductor reaches a predetermined value, the switch is turned off, and at this stage the energy in the inductor is transferred to a capacitor, where it is stored. The next time the switch is turned on again to store energy in the inductor, the controlled rectifier is turned on at the same time, the capacitor then discharging through an ignition transformer and the controlled rectifier to produce a spark.

3,372,684
SPARK IGNITION SYSTEMS
Brian Gilbert, Sutton Coldfield, England, assignor to Joseph Lucas (Industries) Limited, Birmingham, England
Filed Mar. 9, 1966, Ser. No. 532,971
Claims priority, application Great Britain, Mar. 11, 1965, 10,331/65
1 Claim. (Cl. 123—148)

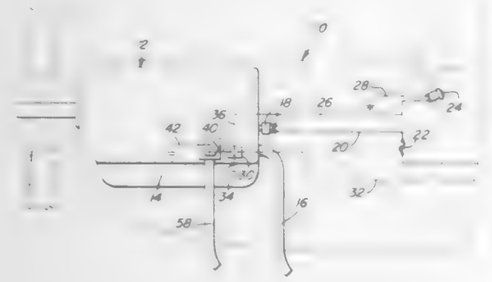
In a spark ignition system, switch means is driven by the engine and when closed permits energy to be stored in an inductor. When the switch means is open, the energy

is transferred from the inductor to a capacitor, and then a controlled rectifier is turned on to permit discharge of the capacitor through the controlled rectifier, this discharge producing a spark. The spark is produced while



the switch means is still open, and the circuit is so arranged that when the switch means closes again, the anode of the controlled rectifier will be connected to the negative terminal of a D.C. source, so ensuring that the controlled rectifier is reverse biased and turned off.

3,372,685
EXCESSIVE CRANKCASE PRESSURE WARNING SYSTEM AND RELIEF VALVE
Ardell T. Bestland, 1230 S. 9th St., and Thomas M. Breton, 1906 S. 19th St., both of Grand Forks, N. Dak. 58201
Filed Dec. 5, 1966, Ser. No. 599,072
8 Claims. (Cl. 123—198)

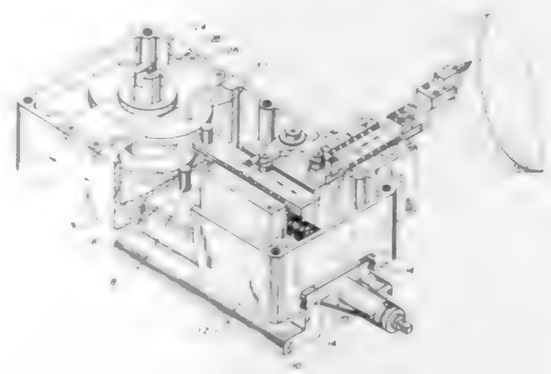


1. In combination with an internal combustion engine crankcase including a crankcase breather outlet pipe subject to blockage, pressure sensing means communicated with the interior of said crankcase and operative to render a signal at a remote location in response to a rise in pressure within said crankcase above a predetermined pressure.

3,372,686
ARCHERY BOW HANDLE WITH RESILIENTLY BIASED ARROW REST
Earl J. Losh, 437 E. 3rd St., Boyertown, Pa. 19512
Filed Sept. 30, 1965, Ser. No. 491,743
3 Claims. (Cl. 124—24)

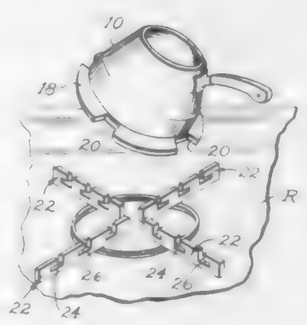
1. In an archery arrow rest, a bow handle having a permanent arrow shelf and a cutout window section, said rest being arranged in the cutout window section of the bow handle, said rest having a generally triangular formation and including upper and lower tapered edges, said rest further including a straight surface, and angularly arranged inclined surfaces, there being an aperture in said rest, and said aperture being arranged off center in the rest, a securing element extending through said aperture and into engagement with said bow handle to provide a pivot mounting for the rest, the lower portion of said rest having a horizontally disposed opening therein, a resilient member having a portion thereof extending through said opening and being affixed to the rest adjacent the straight surface thereof, and a retaining member for securing the other end portion of said resilient member to said bow handle.

3,372,687
WHEEL DRESSER
Jerzy Grabowski, 17 St. Charles Ave., West Caldwell, N.J. 07006
Filed Apr. 19, 1966, Ser. No. 543,581
10 Claims. (Cl. 125—11)



1. A wheel dresser adapted to move a diamond dresser point and the like along both X and Y axes and to and into the face of a rotary grinding wheel to precisely form the face of the wheel, the dresser comprising: (a) a base; (b) a body carried by and movable on the base and in the direction of the X-axis; (c) a cam shaft carried by and rotatable in the body; (d) means to rotate the cam shaft at a determined rate and direction; (e) a pair of cams removably mounted on the cam shaft and having their contours formed to a calculated and selected shape said cams having means for positioning the cams in a selected orientation on the cam shaft; (f) a cam follower carried by a member slidably retained in the base, the follower member movable in the direction of the X axis and to a selected position in response to a means for moving the member, the follower disposed so as to engage the outer contour of one of the cams as it is rotated and in response thereto to thereby move the body in the direction of the X-axis; (g) a first slide block movable in a guideway in the body and in the direction of the X-axis, said slide block having a cam follower on one end, said cam follower being adapted to engage the outer surface of the other cam as it is rotated so as to move the slide block; (h) a stop block carried by said slide block; (i) a bell crank arm pivotally mounted on and carried by the body, one portion of the arm extending to the first slide block and said end of the arm having means adapted to engage the stop block and to be moved by the stop block as it is moved on the X-axis; (j) a second slide block movable in a guideway in the body and in the direction of the Y-axis, said second block having an engaging face formed at one end and on the other end a dresser point holding means; (k) a second portion of the pivotally mounted arm extending to the second guide block, the outward end of said second portion having means adapted to engage and move the second slide block; and (l) means for maintaining the cam followers in engagement with their respective cam contours so that as the cams are rotated the cam follower carried by the base causes the body to move along the X-axis and the cam follower on the first slide block moves the arm to cause the second slide block to move along the Y-axis and as the cams are rotated the resultant movement provides a path of the dresser point along a combined X and Y axis in response to the contour of the rotating cams.

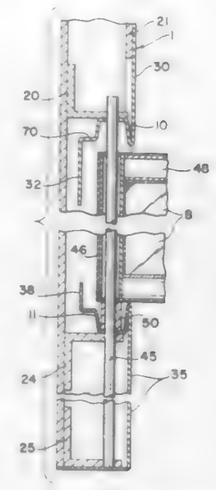
3,372,688
LOCKABLE COMBINATION OF COOKING GRATE AND VESSEL
Roland J. Moore, 104—23 113th St., Richmond Hill, N.Y. 11418
Filed July 5, 1966, Ser. No. 562,844
18 Claims. (Cl. 126—24)



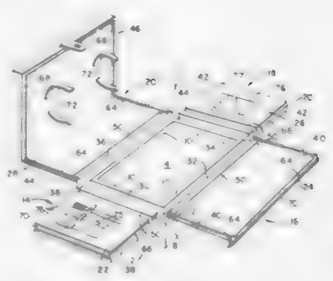
An interlocking cooking utensil and grate for use on stoves.

3,372,689
FIREPLACE DOOR
James A. Goudy, Akron, Ohio, assignor to Heritage Fireplace Equipment Co., Tallmadge, Ohio, a corporation of Ohio
Filed Aug. 6, 1965, Ser. No. 477,702
1 Claim. (Cl. 126—140)

1. In a fireplace with a front opening and doors each comprising a plurality of foldable panels hinged at their respective outer edges to opposite edges of the opening, and a track at the top and bottom of the opening, with projectable means in the top and bottom of the inside edge of each innermost door panel engageable in and disengageable from the respective tracks, the improvement in which each track is a portion of a one-piece shroud-and-track-forming trim which includes opposed channel-shaped track means, each of which is spaced vertically from the nearest horizontal edge of the doors when closed over the opening so as to provide a slit opening between the doors and the trim, with cams near the respective ends of at least one of said track means to move the projectable means when projected into the track outwardly as it approaches an end of the track, each of said shroud-and-track-forming trims being formed of a single sheet of metal and comprising as integral parts thereof: (1) trim means bent back vertically from the front edge of the track and covering a face of the fireplace adjacent said opening, and (2) a shroud which is horizontally offset inward from the inside edge of each of said tracks and prevents the interior of the fireplace from being visible from the front of the fireplace through either of said slit openings.



3,372,690
INSULATED LUNCH BOX
Noelia Ruiz, 477 Hicks St., Brooklyn, N.Y. 11231
Filed June 6, 1966, Ser. No. 555,462
7 Claims. (Cl. 126—261)



A portable lunch box for carrying a preheated prepared food tray having an insulated base portion, an insulated top and four sides, said sides having grooves which coact with the edge of the food tray to thereby secure the tray upon said base when the lunch box is closed.

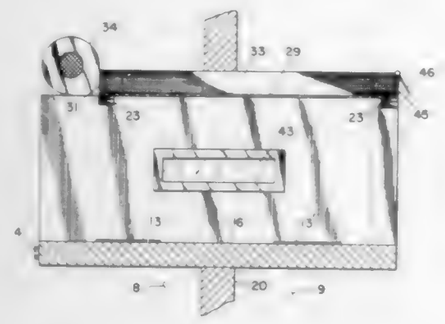
3,372,691
METHOD AND SYSTEM FOR MAINTAINING A VERTICALLY VARYING CONCENTRATION IN A LIQUID SOLUTION AND FOR CONVERTING BODIES OF WATER INTO EFFICIENT SOLAR COLLECTORS
Spraya Shachar, 15 Sderot Ben-Zion, Tel Aviv, Israel
Filed Aug. 2, 1965, Ser. No. 476,416
18 Claims. (Cl. 126—271)

A method and system are described for maintaining an inverse temperature gradient between an upper and a lower level in a liquid column, for example, a solar pond of saline water in which the pond has a dark layer to absorb radiations from the sun applied through the upper layer. A vertically varying concentration of the salt in the

solar pond sufficient to support the inverse temperature gradient is maintained by inducing a downward flow of the saline water counter to the diffusion flux of the salt. This counter flow is induced by extracting, from the lower

level, water having a smaller concentration of salt then at the upper level, both being regulated at rates so as to maintain the vertically varying concentration while avoiding excessive mixing.

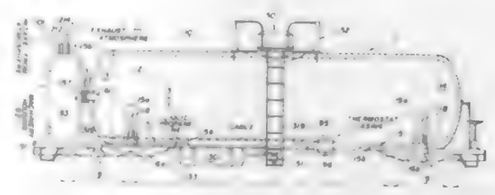
3,372,692
COOKING RANGE VENTILATING SYSTEM
Robert McGirr, Orwigsburg, Pa., assignor to Atlas Chemical Industries, Inc., Wilmington, Del., a corporation of Delaware
Filed May 31, 1966, Ser. No. 554,040
6 Claims. (Cl. 126—299)



A ventilating system is disclosed which includes a plenum chamber having a perforated portion with perforations between about 1/16 inch and 1/4 inch in diameter spaced from about 2/16 to about 5/16 inch apart center to center, opening or closing means at one end of the plenum chamber, and an air blowing unit operatively connected at the end opposite said opening or closing means. The ventilating system is desirably included as a component of a cooking range.

3,372,693
HEATING SYSTEMS AND RAILWAY TANK CARS INCORPORATING SUCH HEATING SYSTEMS
Gregoire Gutzeit, Highland, Ind., assignor to General American Transportation Corporation, Chicago, Ill., a corporation of New York
Continuation-in-part of application Ser. No. 311,457, Sept. 25, 1963. This application Jan. 22, 1965, Ser. No. 427,223
The portion of the term of the patent subsequent to May 31, 1983, has been disclaimed
16 Claims. (Cl. 126—343.5)

1. A railway tank car comprising a mobile frame, heat-insulated tank structure carried by said frame and adapted to contain a liquid lading that is to be maintained in a hot condition, a heating conduit carried by said tank structure and arranged to be in good heat-exchange reaction with the lading contained therein, a flameless combustion heater carried by said frame and including a porous catalytic bed, means carried by said frame for supplying a combustible mixture in the gas phase into the catalytic bed of said heater, the catalytic bed of said heater being characterized by producing flameless catalytic combustion therein of the combustible mixture supplied thereto and the consequent production and discharge therefrom of hot flue gases, and means carried by said frame for



conducting through said heating conduit the hot flue gases discharged from the catalytic bed of said heater, thereby to maintain the hot condition of the liquid lading contained in said tank structure.

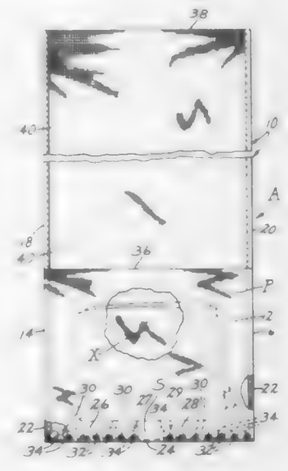
3,372,694
FOOD COOKING AND HEATING UTENSIL
Helmuth Vehse, 28 Oenekinger Weg, 588 Ludenscheid, Westphalia, Germany
Filed May 11, 1966, Ser. No. 549,404
Claims priority, application Germany, May 12, 1965, L 50,680; June 9, 1965, L 50,876; Aug. 12, 1965, L 51,360
10 Claims. (Cl. 126—369)

A cooking utensil comprising at least two separate containers, which are arranged and shaped with respect to each other so that, when both containers are at least partially filled with a cooking liquid, a pocket of air will form, which is at least partially enclosed by the inner container of said two separate containers. When the cooking utensil is heated, the air in the pocket of air expands and pushes the cooking liquid towards food, temporarily placed in the cooking utensil, where it may be cooked in the cooking utensil. When the cooking utensil is thereafter cooled, a partial vacuum forms in said pocket of air, which causes an evacuation of the cooking liquid from the area where the food is being cooked into said pocket of air.

3,372,695
METHOD OF OVERCOMING INCONTINENCE
Maurice Beliveau, Poughkeepsie, and Ferdinand A. Rocchi, Wappingers Falls, N.Y., assignors to Prosit Service Corporation, Wappingers Falls, N.Y.
Filed Apr. 27, 1965, Ser. No. 451,230
1 Claim. (Cl. 128—1)

A plug for insertion in the urethra to overcome incontinence of urination comprising an elongated stem of a length substantially greater than its thickness and width having a retainer member fixedly secured to the stem at one end thereof and projecting beyond said end of the stem. The retainer member has portions which are flexible and which extend away from each other from the stem. The plug is adapted to be inserted within the urethra with the retainer member extending into and engaging the walls of the bladder to retain the stem in position in the urethra. A fine cord may be attached to the other end of the stem and extend to the outer end of the urethra. The cord serves to properly position the stem in the urethra and to remove the plug from the urethra.

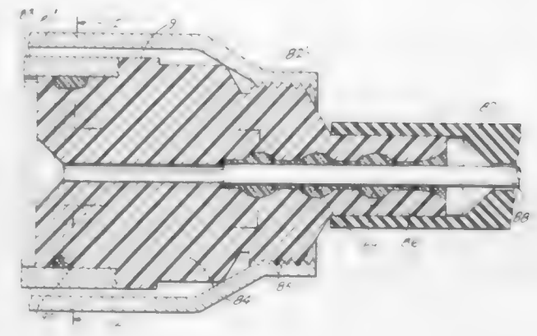
3,372,696
ABDOMINAL PAD USED IN SURGERY
Peter S. Rudie, 2002 E. 4th St., Duluth, Minn. 55812
Filed Jan. 22, 1965, Ser. No. 427,315
5 Claims. (Cl. 128—132)



The disclosure is an abdominal pad used in surgery and includes a flat thin flexible body member having a pocket formed on the lower end thereof, the remaining portion of the flat body member forming an apron. The lower edge of the body member has weight means secured thereto for maintaining the lower portion of the body member in the cavity of the abdomen to control the intestines therein.

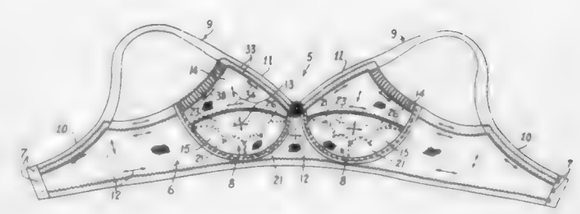
3,372.697
SYRINGE CARTRIDGE AND ASSEMBLY
George H. Keller, Ridgewood, N.J., assignor to Becton, Dickinson and Company, East Rutherford, N.J., a corporation of New Jersey
Filed Dec. 31, 1962, Ser. No. 248,370
1 Claim. (Cl. 128—221)

1. A medicament cartridge assembly including in combination an elongated hollow cylindrical barrel formed of glass, a hub of plastic material mounted upon an end of the barrel and having a part thereof extending into the barrel at said end, said hub having a bored tip extending outwardly of said barrel and having a substantially coaxially disposed bore, a cannula extending into said bore, a layer of bonding material interposed between the bore surface and the cannula with the bore surface of the tip defining a recess such that said bonding material keys into said recess, the part of said hub extending into the barrel being formed with a number of recesses in its surface with an encircling channel communicating with said number of recesses, and a bonding agent keying into said number of recesses and said channel and engaging with the barrel to prevent movement of the hub relative to the



barrel, said hub presenting upon its face a retaining surface to be engaged by a corresponding surface of a cartridge holder for securing the latter against movement with respect to the hub and said barrel, said retaining surface embracing screw threads encircling said hub.

3,372,698
BRASSIERE
Marcel Gingras, St. Foy, Quebec, Canada, assignor to Dominion Corset Company Limited, Quebec, Canada
Filed Oct. 14, 1965, Ser. No. 495,985
5 Claims. (Cl. 128—489)

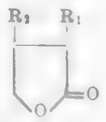


A brassiere in which the body encircling band and the cups are made of material stretchable in all directions. The cups are formed of upper and lower sections joined together by a ladder stitch and a zig-zag seam for maximum expansion and contraction and the straps are stretchably joined to inwardly facing upper edge portions of the cups, and the seams between the cups and adjacent portions of the body-encircling band are stabilized by an arcuate insert. The lower portion of each cup is reinforced by a reinforcing member made in two sections to provide flexibility in the horizontal plane and have their upper edges deeply scalloped and is covered in the inwardly facing side by a layer of material stretchable in all directions.

3,372,699
TOBACCO
Joseph N. Schumacher, Winston-Salem, N.C., assignor to R. J. Reynolds Tobacco Company, Winston-Salem, N.C., a corporation of New Jersey
No Drawing. Filed Aug. 2, 1965, Ser. No. 476,672
15 Claims. (Cl. 131—17)

1. A tobacco product having added thereto an amount sufficient to alter the flavor or aroma of the tobacco

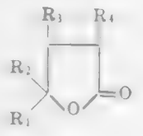
product of a compound selected from the group of compounds having the formula



wherein R_1 and R_2 are selected from the group consisting of hydrogen and alkyl groups with at least one of such substituents being alkyl.

3,372,700
TOBACCO
Joseph N. Schumacher, Donald L. Roberts, and Wilmer A. Rohde, Winston-Salem, N.C., assignors to R. J. Reynolds Tobacco Company, Winston-Salem, N.C., a corporation of New Jersey
No Drawing. Filed Aug. 2, 1965, Ser. No. 476,709
15 Claims. (Cl. 131—17)

1. A tobacco product having added thereto an amount sufficient to alter the flavor or aroma of the tobacco product of a compound selected from the group of compounds having the formula

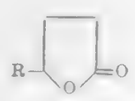


Formula

wherein R_1, R_2, R_3 and R_4 are selected from the group consisting of hydrogen, alkyl and alkenyl groups with at least two of such substituents being other than hydrogen and at least one of the latter groups being present in the gamma ring position.

3,372,701
TOBACCO
Claude E. Teague, Jr., Joseph N. Schumacher, and Wilmer A. Rohde, Winston-Salem, N.C., assignors to R. J. Reynolds Tobacco Company, Winston-Salem, N.C., a corporation of New Jersey
No Drawing. Filed Aug. 2, 1965, Ser. No. 476,710
21 Claims. (Cl. 131—17)

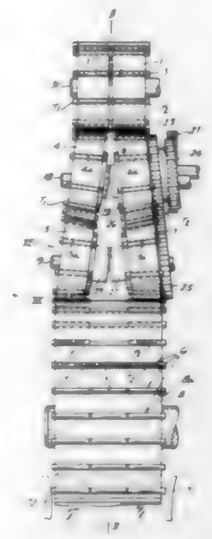
1. A tobacco product having added thereto an amount sufficient to alter the flavor or aroma of a tobacco product of a compound selected from the group of compounds having the formula:



where R is a straight-chain alkyl group of from 1 to 10 carbon atoms.

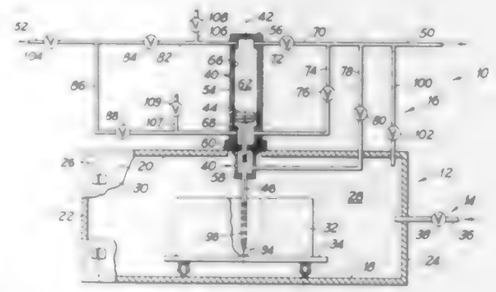
3,372,702
METHOD AND APPARATUS FOR MAKING AND MANIPULATING CIGARETTES AND SIMILAR ROD-SHAPED ARTICLES
Horst Bohn, Hamburg, and Karl-Heinz Schlüter, Hamburg-Bergedorf, Germany, assignors to Hauni-Werke Korber & Co. K.G., Hamburg-Bergedorf, Germany
Continuation-in-part of application Ser. No. 822,510, June 24, 1959. This application Mar. 26, 1964, Ser. No. 354,900
Claims priority, application Germany, June 28, 1958, H 33,677; Aug. 25, 1958, H 34,162
12 Claims. (Cl. 131—94)

An apparatus and method for making cigarettes wherein a continuous cigarette rod is severed into double lengths, moved sideways and severed into unit lengths, separated without touching the severed ends and has double filter mouthpieces inserted and attached between the ends,



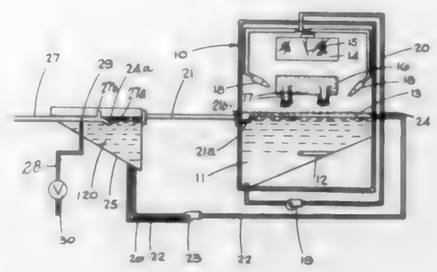
after which the newly joined double cigarette is severed into unit cigarette lengths at the mouthpiece.

3,372,703
TOBACCO MOISTENER
Arthur Bayard Conard, Jr., Shreveport, La., assignor to American Machine & Foundry Company, a corporation of New Jersey
Filed June 13, 1966, Ser. No. 557,051
9 Claims. (Cl. 131—133)



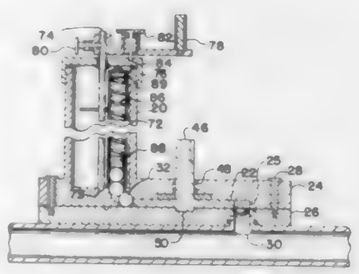
1. A tobacco moistening apparatus comprising:
a housing with a compartment for enclosing a tobacco body;
a steam supply system connecting to said compartment for moistening the tobacco body therein; and
a steam exhaust system connecting to said tobacco body for removing steam from the interior thereof, said exhaust system including:
a cylinder with a longitudinal axis mounted on said housing,
a piston disposed in said cylinder coaxially therewith and displaceable relative thereto,
a probe fixedly connected to said piston adapted to be retracted therewith into said cylinder and extended into said tobacco body, said probe having an axial passage,
a pressure header and an exhaust header connecting to said cylinder for actuating said piston and means coupled to said probe passage for evacuating said tobacco body when said probe is extended therein and for evacuating steam through said probe from said pressure header when in said retracted position.

3,372,704
DEGREASING
Norman Ives Ashworth, St. Martins, Guernsey, Channel Islands, assignor to Abrasive Developments Limited, Solihull, England, a British company
Filed Aug. 31, 1964, Ser. No. 393,031
Claims priority, application Great Britain, Sept. 14, 1963, 36,280/63
1 Claim. (Cl. 134—109)



A degreasing apparatus having a tank containing the degreasing liquid and nozzles arranged above the tank to direct the liquid on the contaminated object and return same to the tank. Means for skimming liquid and grease from the surface of the liquid in the tank, separating grease from the withdrawn liquid and returning the clarified liquid to the tank.

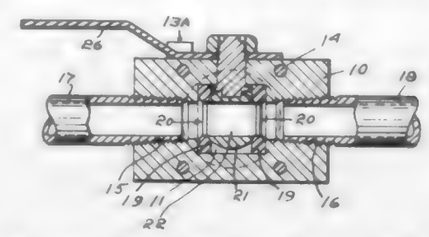
3,372,705
BALL SEALER INJECTOR
James A. Bodhaine, 1521 Pecos, Hobbs, N. Mex. 88240
Filed Dec. 13, 1966, Ser. No. 601,461
12 Claims. (Cl. 137—268)



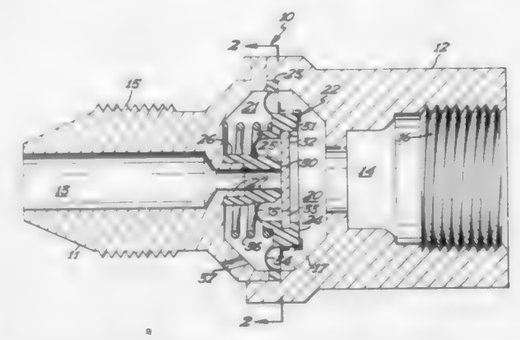
A ball sealing device having a reservoir containing a multiplicity of balls located in individual tubes above a main body that houses a rotating plate. The main body includes a ball inlet, a ball outlet, and a toroidal passageway that extends 180° and cooperates with the circular plate to positively feed balls from the inlet, through the toroidal passageway located in the body, to the outlet, and into a pipe line to thereby meter balls from the reservoir into the pipe line, where the balls then flow along inside the pipe line and into a casing located in a bore hole to thereby close off perforations located in the wall of the casing.

3,372,706
SIDE ENTRY VALVES
William A. Brice, South Portland, Maine, assignor, by mesne assignments, to Ametek, Inc., New York, N.Y., a corporation of Delaware
Filed Oct. 23, 1965, Ser. No. 503,841
14 Claims. (Cl. 137—329.03)

1. In a side entry valve, a body having a chamber opening through one of its sides and aligned ports in opposite ends in communication with said chamber, a side cover for said chamber detachably attached to said body, a pair of members each including concave seats that are resiliently yieldable, a spherical valve member between said seat members and having a passage extending therethrough, valve operating means including a valve stem rotatably supported by said body, said seats and said valve member being insertable as an assembly into said chamber through said side opening but requiring the yielding of said seats to enable such insertion to be effected, an annular portion of each seat close to its opening conforming to the engaged portions of said valve member when the assembly is inserted, and a connection between said valve member and said stem operable when said assembly is in place within said chamber.

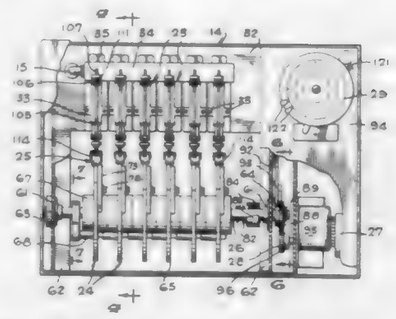


3,372,707
PRESSURE REGULATOR VALVE
William R. Dunn, Los Angeles, Calif., assignor to Honeywell Inc., Minneapolis, Minn., a corporation of Delaware
Filed Apr. 12, 1965, Ser. No. 447,410
7 Claims. (Cl. 137—505.25)



A pressure regulator valve wherein the pressure responsive flexible wall, the valve carrying portion and the valve seat are all parts of a single or unitary member mounted within the valve body.

3,372,708
AUTOMATIC CAM OPERATED PLURAL VALVE CONTROL SYSTEM
Paul M. Hotchkin, 20448 Quedo Drive, Woodland Hills, Calif. 91364
Filed Apr. 25, 1966, Ser. No. 544,981
10 Claims. (Cl. 137—624.2)



1. An automatic control system comprising:
a plurality of three-way valves having a pressure inlet, an outlet communicating with a remote pressure operated valve, and a relief, and valve means

selectively movable between a first position wherein said outlet is connected with said inlet and a second position wherein said outlet is connected with said relief;

a cam shaft;

a first cam mounted on said cam shaft, secured thereto and driven thereby;

a plurality of second cams mounted to rotate freely on said cam shaft adjacent said first cam;

a dog and a lug formed on each of said second cams, each of said dogs being adapted to engage the lug on the next adjacent cam;

a dog formed on said first cam adapted to engage the lug on the one of said second cams next adjacent it;

a cleft in the profile of each of said cams;

means for selectively varying the length of each of said clefts;

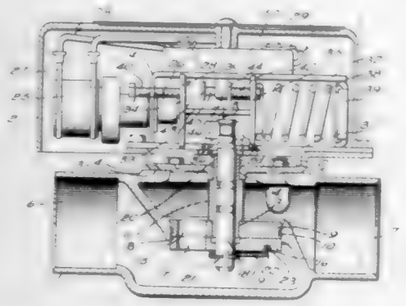
a cam follower associated with each of said cams and controlling the movement of one of said valve means between said first position and said second position in accordance with the profile of said cam;

means for rotating said cam shaft;

first switch means activating said rotating means; and

second switch means deactivating said rotating means after predetermined angular rotation of said cam shaft.

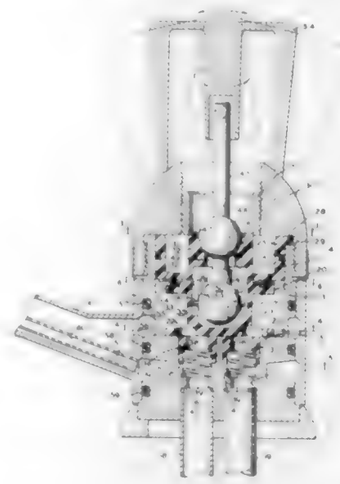
3,372,709
ZONE VALVE
Paul A. Dolter, Roselle, Ill., assignor to The Dole Valve Company, Morton Grove, Ill., a corporation of Illinois
Filed Sept. 13, 1965, Ser. No. 486,668
4 Claims. (Cl. 137—625.31)



A fluid control valve having a pair of rotary valve members which move relative to each other to cover and uncover flow ports therein to control the flow of fluid from an inlet to an outlet. The rotary action of the valve members is accomplished by means of a thermal power unit which operates on a torque arm to generate the rotary motion required. The valve members have flow ports which may be either aligned to open the valve or misaligned to close the valve. Raised lands are formed about each of the flow ports on one of the valve members, and a constant biasing means is exerted between the valve members to maintain a fluid seal at the raised lands.

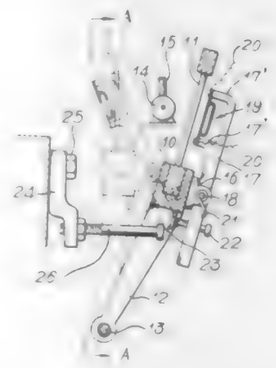
3,372,710
SINGLE HANDLE FAUCET VALVE
Larry J. Miller, 3810 Shoals, Drayton Plains, Mich. 48020
Continuation-in-part of application Ser. No. 456,311, May 17, 1965. This application Mar. 17, 1966, Ser. No. 537,257
29 Claims. (Cl. 137—636.3)

The single handle faucet valve disclosed herein comprises a body defining a chamber having a flat wall surface with hot and cold water inlets extending through the surface. A control disc with a complementary flat surface is provided in contact with the flat wall surface of the chamber and has spaced openings therein movable into and out of registry with the inlet openings. A sealing member is provided adjacent the control member and sealing means on the control member are interposed between the sealing member and control member. A lever is jour-



nalled for rotation in the sealing member and has an end thereof interconnected with the control member. Means are provided for limiting the movement of the lever to a reciprocating motion in a single plane at an angle to the flat surface of the chamber.

3,372,711
WEFT THREAD CUTTING DEVICE FOR USE IN SHUTTLELESS LOOMS
Toemon Sakamoto, 299 Hirosawa-cho, Shizuoka-ken, Hamamatsu-shi, Japan
Filed May 18, 1966, Ser. No. 551,107
Claims priority, application Japan, Aug. 4, 1965, 40/47,666
3 Claims. (Cl. 139—122)

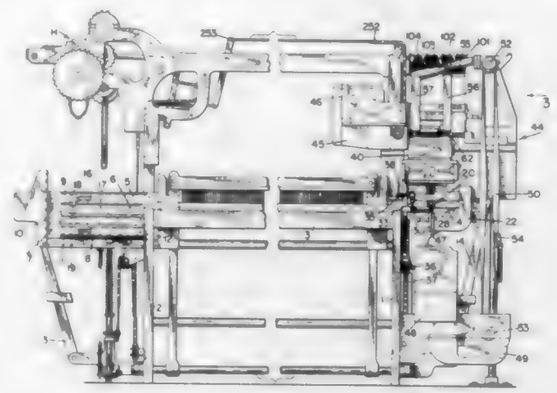


The invention relates to an electrically heated weft thread cutting device having a first sharp edge for sharply severing a rearmost end of a weft thread from a succeeding length of th ead, and a second curved edge for producing a spherical configuration on the forward end of the weft thread.

3,372,712
MEANS AND METHOD FOR WINDING DIVERSE WEFT BOBBINS ON A LOOM
Robert S. Schedin, East Brookfield, Mass., assignor, by mesne assignments, to Leesona Corporation, Warwick, R.I., a corporation of Massachusetts
Filed July 22, 1963, Ser. No. 296,783
54 Claims. (Cl. 139—224)

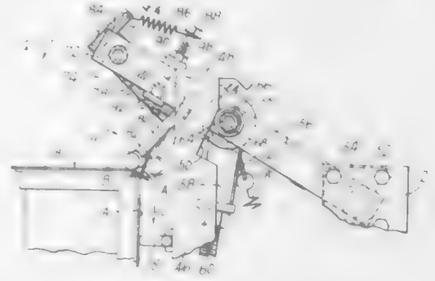
Automatic mechanism for use especially with multi-weft replenishing looms having a plurality of shuttles each of which normally carries a yarn differing from the others.

A winder is provided for winding on signal a selected one of the differing yarns on a bobbin for transfer to a selected magazine compartment for eventual use by the related shuttle. Memory means are included to provide indica-



tions signalling the depletion of the bobbins having the differing yarns wound thereon. Weft control means are included to present to the winder, for winding, yarn of the type which is wound on those bobbins having the greatest degree of depletion in the magazine.

3,372,713
WIREBOUND BOX ASSEMBLING MACHINE
Robert B. Fitch, Lake Valhalla, Montville, N.J., assignor to Stapling Machines Co., Rockaway, N.J.
Filed June 3, 1965, Ser. No. 460,976
6 Claims. (Cl. 140—113)



A self-adjusting machine for closing wirebound boxes with interengaged loop fasteners, having movable actuator assemblies with loop bending members resiliently mounted thereon on pivotal axes located so that said loop bending members move first downwardly to engage the top of the box, then forwardly to the closing corner of the box, then downwardly along the front of the box to bend the outer loop downwardly around said corner and the inner loop around the outer loop and downwardly against the side of the box.

3,372,714
METHOD OF CONTROLLING THE FLOW OF MOLTEN SLAG FROM A BLAST FURNACE
Merle H. Schmidt, Johnstown, Pa., assignor to Bethlehem Steel Corporation, a corporation of Delaware
Filed Feb. 25, 1966, Ser. No. 530,015
1 Claim. (Cl. 141—1)

1. A method of controlling the continuous flow of molten slag from a blast furnace to slag receiving vessels comprising:

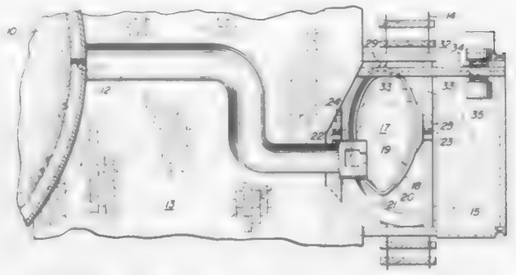
(a) tapping molten slag from a furnace,

(b) flowing said slag into a refractory-lined runner,

(c) flowing said slag from said runner to a first slag receiving vessel positioned directly beneath the discharge end thereof,

(d) positioning a pivotally tiltable vessel adjacent the discharge end of said slag runner,

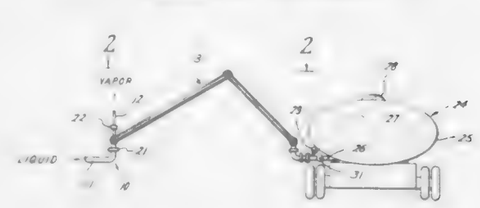
(e) tilting said pivotally tiltable vessel into a horizontal position in the path of flow of the slag to receive said slag from said slag runner when said first slag receiving vessel has received its load of slag,



(f) removing said first slag receiving vessel and replacing said first slag receiving vessel with an empty second slag receiving vessel,

(g) tilting said pivotally tiltable vessel out of the path of flow of the slag to allow the slag in the said pivotally tiltable vessel to flow into the said second slag receiving vessel and to allow the slag in the said slag runner to flow into the second slag receiving vessel.

3,372,715
BOTTOM LOADING ARM
Albert A. Ashton, Dallas, Tex., assignor to The Youngstown Sheet and Tube Company, Youngstown, Ohio, a corporation Ohio
Filed Oct. 25, 1963, Ser. No. 319,021
3 Claims. (Cl. 141—59)



1. A system for transferring liquid comprising,

a vehicular tank,

a liquid conduit attached to and in fluid communication with the lower section of the tank,

a vapor conduit having its inlet end in the top of said tank and its outlet end concentric with said liquid conduit,

a loading arm having a pair of inner conduits and a pair of outer conduits,

means for conducting liquids to and vapors from said loading arm,

a first elbow having two pipes with one pipe extending through the wall of the other pipe,

the ends of said one pipe having common central axes with the respective ends of said other pipe,

the ends of said pipes being concentric at one end of said first elbow,

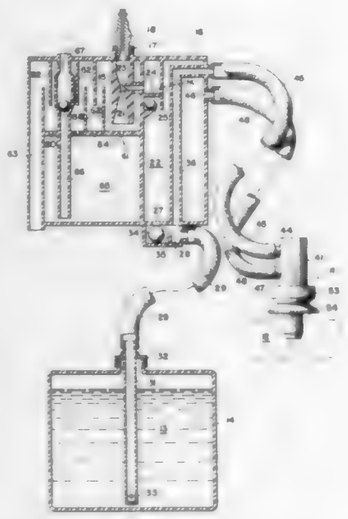
fittings sealingly and rotatably connecting the non-concentric end of said elbow pipes, respectively, to said pair of outer conduits,

a second elbow having an inner and an outer pipe with the ends of the pipes at each end of the elbow having common central axes,

means sealingly and rotatably connecting the pipes at one end of the second elbow to the concentric ends of the pipes of the first elbow,

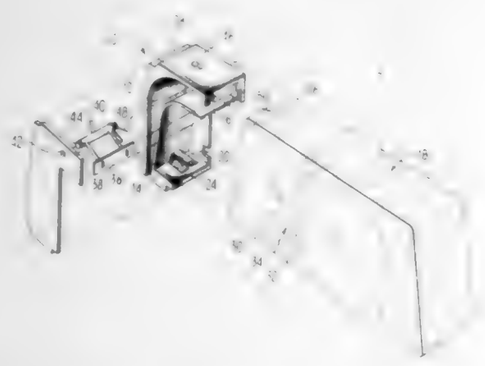
and means sealingly connecting the pipes of the other end of the second elbow to the said vapor and liquid conduit.

3,372,716
BATTERY FILLER DEVICE
Frederick H. Hommel, Mentor, and Howard T. Havlick, Willoughby, Ohio, assignors to The Electric Storage Battery Company, a corporation of New Jersey
Filed Sept. 15, 1965, Ser. No. 487,440
7 Claims. (Cl. 141—59)



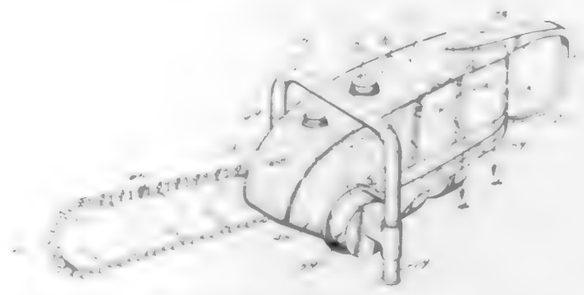
A compact battery filling device comprising a Venturi tube as vacuum source, multiple chambers and baffles to muffle and exhaust said Venturi, chamber hermetically connected to filler head and operating as overflow and vacuum chamber, and suitable pathway for electrolyte to be drawn from reservoir to filler head and battery and to be returned to reservoir upon removal of vacuum.

3,372,717
CHAD COLLECTION APPARATUS
Fenton M. Fisher, Oakland, Calif., assignor to Friden, Inc., a corporation of Delaware
Filed Jan. 26, 1966, Ser. No. 523,055
8 Claims. (Cl. 141—325)



A chad collection container having an overflow chamber is removably mounted to the outlet end of a chad chute such that the chute normally covers the overflow chamber. Removal of the chad container from the chad chute uncovers the overflow chamber to enable chad backed up against the outlet end of the chad chute to be deposited in the overflow chamber. Also, a door located at the outlet end of the chute is opened by attaching the chad collection container to the outlet end of the chad chute and is closed by removal of the chad container from the chute.

3,372,718
CHAIN SAW
Finn T. Irgens, Milwaukee, Wis., assignor to Outboard Marine Corporation, Waukegan, Ill., a corporation of Delaware
Filed Sept. 3, 1965, Ser. No. 484,905
8 Claims. (Cl. 143—32)

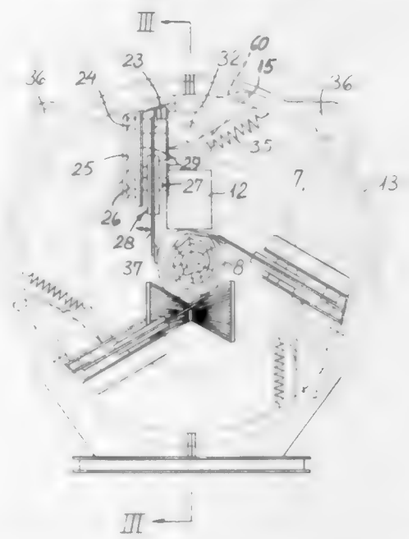


Disclosed herein is a chain saw having a frame, a cutter bar carried on the frame and an internal combustion engine mounted on the frame, together with elastomeric means interposed between the frame and the engine for vibrationally isolating the engine from the frame and from the cutter bar. Rotatably mounted on the frame is a chain sprocket which is connected to the engine crank shaft by elastomeric means also adapted for vibrationally isolating the engine from the sprocket.

3,372,719
CIRCULAR SAW AND INSERT TOOTH THEREFOR
August K. Shone, 2115 Cypress St., Vancouver, British Columbia, Canada
Continuation-in-part of application Ser. No. 476,983, Aug. 3, 1965. This application July 7, 1966, Ser. No. 565,050
10 Claims. (Cl. 143—141)

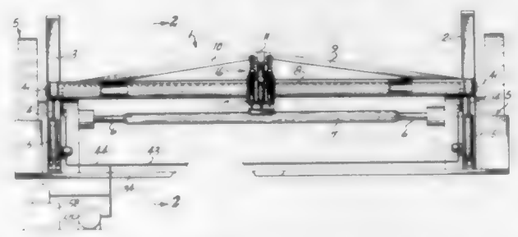
1. A tooth for a circular saw, comprising an elongated body adapted to be substantially in the plane of a saw blade and having an inner end to be secured to the blade and an outer end to project from an edge of the blade, said body having forward and rear edges with reference to the direction of movement of the tooth when in operation, and a solid cutting element integral with and on said outer end of the body and projecting forwardly from said outer end to form therewith a gullet, said cutting element projecting generally forwardly beyond the forward edge of the body and spreading laterally in a forward direction from one side of the body beyond the opposite side thereof, wherein the said portion of the element which projects laterally stabilizes the saw as the teeth cut a path for an object which path is greater in width than the body of the saw blade, said cutting element having a forward end perpendicular to the plane of the body and inclined rearwardly and inwardly towards said body, and a flat outer surface inclined inwardly transversely of the cutting element forming with said perpendicular forward end at the junction therewith a transverse cutting edge extending from said one side of the body angularly in a forward direction across the plane of the body to a side cutting edge beyond said opposite side, said side cutting edge extending rearwardly from and beneath said transverse cutting edge.

3,372,720
MACHINE INTENDED FOR BARKING AND PRUNING
Carl Gustaf Hard af Segerstad, Sandviken, Sweden, assignor to Transventor Aktiebolag, Sandviken, Sweden, a joint-stock company of Sweden
Filed Apr. 27, 1965, Ser. No. 451,140
Claims priority, application Sweden, Apr. 27, 1964, 5,211/64
10 Claims. (Cl. 144—208)



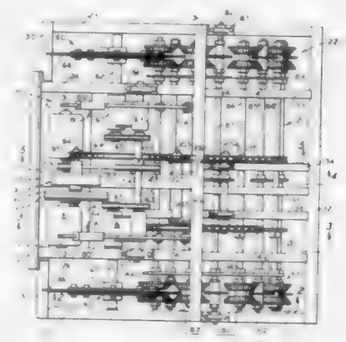
This disclosure relates to providing a novel machine for removing the bark from logs and the like, by providing a hollow rotatably driven rotor, with means defining an axial path of travel of a log through the rotor and with spring-biased bark-scraping members. The bark-scraping members are pivotally mounted on the rotor and are generally disposed equidistantly thereabout. The members each have a plurality of striking or cutting portions, mounted for rotation about a common axis and in a common plane. The cutting portions of each member thus have a common plane which is generally parallel to a longitudinal axis of a log being conveyed along its path of travel. The rotating cutting portions of each of the members are adapted for movement whereby their planes of rotation are biased generally toward the longitudinal axis of a workpiece, for tangentially engaging the periphery of a workpiece. The striking portions of each of the members may take on various configurations.

3,372,721
HYDRAULIC BACKUP ROLLS FOR ROTARY VENEER LATHE
Howard E. James and Jack A. Schikofsky, Marie, Ontario, Canada, assignors to Weyerhaeuser Company, Tacoma, Wash., a corporation of Washington
Filed Apr. 1, 1966, Ser. No. 539,484
7 Claims. (Cl. 144—209)



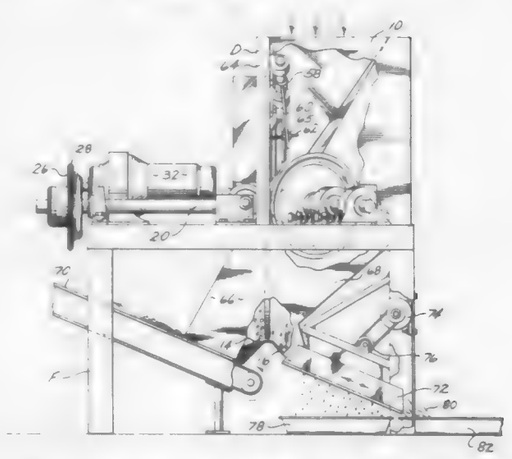
1. An apparatus for stabilizing a log core in a rotating veneer lathe, said lathe being provided with a knife mounted in a carriage that is moved relative to the log at a controlled rate per revolution of the log comprising: spaced-apart end stanchions; a cross support member; said cross support member being mounted between said end stanchions and movable toward and away from said log; at least one backup roll mounted on said cross support member engageable with said log only when the log tends to deflect; said backup roll comprising a hydraulic means associated therewith to move said backup roll toward and away from the center of said log; another hydraulic means responsive to the movement of said carriage; said hydraulic means being responsive to said another hydraulic means so that backup roll moves relative to said log at the same rate as said carriage moves relative to said log.

3,372,722
APPARATUS FOR DRUPE HALVING AND PITTING
Joseph A. Amori, 1596 Davis St., San Jose, Calif. 95100
Original application May 25, 1964, Ser. No. 369,707. Divided and this application Dec. 12, 1966, Ser. No. 607,349
16 Claims. (Cl. 146—28)



Apparatus for halving and pitting drupes characterized by a pair of annular members having parallel axes of rotation, one of said members being in the form of a disc having a peripheral edge adapted to impale the meat of a drupe and grippingly engage the pit thereof, the other of said members having a wedge-shaped channel into which the disc-like member extends, the upper peripheral portions of said members defining therebetween a drupe receiving and supporting pocket, and means for rotating said pair of members to rotate the meat of a received and supported drupe relative to the pit thereof.

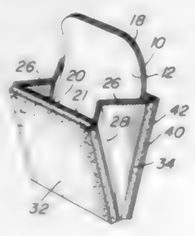
3,372,723
APPARATUS FOR SEPARATING FISH MEAT FROM BONES
Nick F. Elich, San Pedro, Calif., assignor to Star-Kist Foods, Inc., Terminal Island, Calif., a corporation of California
Filed Sept. 13, 1965, Ser. No. 486,605
8 Claims. (Cl. 146—76)



Apparatus for separating fish meat from bones utilizing a frame whereon is mounted a disc formed with a plurality of apertures smaller in width than the length

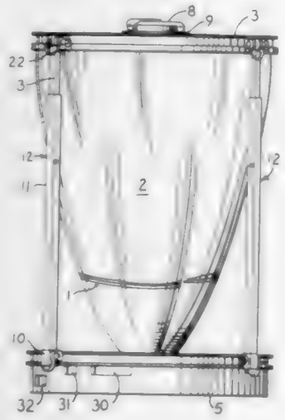
of the bones. The disc is power-operated. A pair of frusto-conical pressing rollers are rotatably supported on the frame, with the sides of the rollers abutting the front of the disc. Rotation of the disc effects concurrent rotation of the rollers. The angular relationship between the rollers and the disc is so selected that during rotation of the disc and the rollers the contacting surfaces of the disc and the rollers will move at substantially the same speed. A pair of back-up rollers are supported on the frame behind the pressing rollers in abutment with the rear surface of the disc to be rotated by the disc. A scraper is supported by the frame in engagement with the front surface of the disc to remove the bones from the front of the disc, with the fish meat being forced through the disc apertures. Preferably, a shaker table is disposed below the front of the disc to effect removal of any meat remaining on the bones scraped off the front of the disc.

3,372,724
PORTABLE SMOKER'S REFUSE RECEIVER
William R. Rouse, 5420 Rambler Way, Sacramento, Calif. 95841
Filed Feb. 2, 1967, Ser. No. 613,617
6 Claims. (Cl. 150—30)



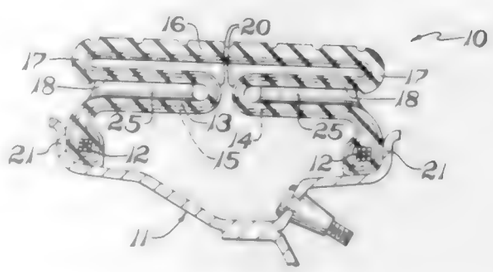
A portable smoker's refuse receiver. While suitable for repetitional use, it is made of lightweight optional throw-away components. It is pocket-size. Can be collapsed and carried in purse or pocket. Lined with fireproof foil. The walls are exteriorly covered with insulating plastic foam and expedite snuffing lighted butts in seconds. Optionally attachable to pack, match folder or other support surface.

3,372,725
COLLAPSIBLE CONTAINER MODIFIED
Frederick T. Voorhees, New York, N.Y., assignor to Barlow Manufacturing Company, Amsterdam, N.Y., a corporation of New York
Filed July 1, 1965, Ser. No. 468,882
20 Claims. (Cl. 150—49)



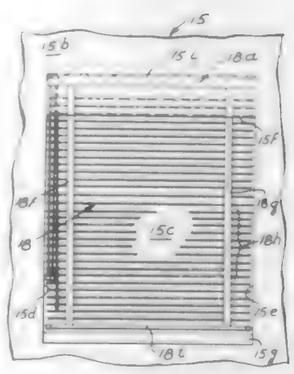
The present inventon comprises a collapsible container having a rigid base pan, a flexible tubular wall attached to the pan, a top cover attached to the wall and movable therewith toward and from the pan, and bracing means between the pan and the top cover for maintaing the container in an erect attitude, and for facilitating emptying the container when folded.

3,372,726
EXPANSIBLE PNEUMATIC TIRE WITH IMPROVED RUN-FLAT OPERATIONAL CHARACTERISTICS
James Sidles, Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N.Y., a corporation of New York
Filed Apr. 1, 1966, Ser. No. 546,112
4 Claims. (Cl. 152—330)



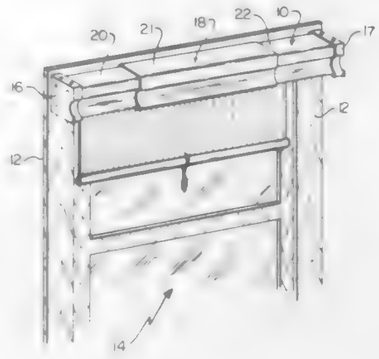
This application discloses an improvement in an expansible tire of the class in which the tire sidewalls are folded on themselves inside the tread so that they extend generally axially of the tire in its deflated condition and in which the tread is contracted when the tire is deflated so that it is only slightly greater in diameter than the diameter of the beads. To augment the "run-flat" capability of the tire (that is to say the ability of the tire to roll under load when it is deflated), a series of ribs are molded on areas of the folded sidewall portions to more firmly and stably support the tread margins against the underlying beads. The ribs further provide for cushioning the tread to minimize cutting of it and other portions of the tire on the beads or rim flanges when the tire is operated in deflated condition.

3,372,727
BUILDING-WALL-AND-WINDOW CONSTRUCTION
Hans K. Lorentzen, Montclair, N.J., assignor to Levolor Lorentzen, Inc., Hoboken, N.J., a corporation of New Jersey
Filed Feb. 8, 1966, Ser. No. 525,977
9 Claims. (Cl. 160—33)



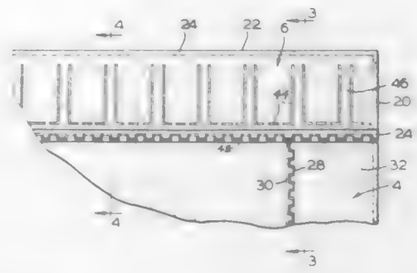
A Venetian blind and a window opening having a recess in the upper portion for receiving the blind in collapsed position. An operator for the blind communicating with the recess and separated therefrom by a partitioning structure.

3,372,728
SHADE CORNICE
Edward E. Schaefer, Winnetka, Ill., assignor to Central Specialties Co., Chicago, Ill., a corporation of Illinois
Filed Dec. 23, 1965, Ser. No. 515,969
3 Claims. (Cl. 160—39)



A window shade cornice which generally includes a pair of brackets and a cornice body portion which is formed of two end sections that are slidably retained within a center section so as to be adjustable in width. Preferably the cornice body portion is fabricated of a plastic which is flexible, to some degree, however, it also may be fabricated of wood or metal. The window shade cornice is easily installed by first mounting the two brackets and then assembling the cornice body portion and adjusting the width of it to fit between the brackets. In packaging the window shade cornices, the sections of the cornice body portion are disassembled and the complete cornice can therefore be packaged in a relatively small package which may be easily shipped and stored.

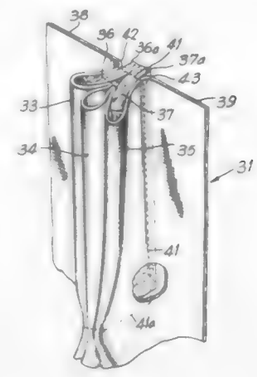
3,372,729
DRAPERIES AND DRAPERY MATERIAL
Carl E. Lindenmayer, 1501 Jennie Scher Road, P.O. Box 7677, Richmond, Va. 23231
Filed Sept. 22, 1965, Ser. No. 489,297
7 Claims. (Cl. 160—330)



Decorative draperies having high insulation properties so they may serve as efficient heat barriers for windows and other building openings are formed of a sandwich of a pair of outer flexible plastic films and an intermediate layer of resilient flexible foam having a thickness about 2.5 to 500 times the thickness of the front plastic film of the drapery.

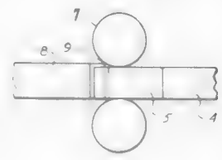
3,372,730
PLEATED CURTAIN CONSTRUCTION
Milton Kalder, 1333 51st St., Brooklyn, N.Y. 11219
Filed June 7, 1965, Ser. No. 461,613
2 Claims. (Cl. 160—348)

A curtain construction with a plurality of multi-pleated sections containing a short insert member simulating a pleat. The pleated sections are in the heading portion, there being an intermediate folded portion between two



flanking pleats and proportioned substantially like the other pleats but extending vertically only the height of the heading, thereby saving material.

3,372,731
METHOD OF WITHDRAWING THE STRAND FROM A CONTINUOUS CASTING MACHINE
Heinrich Pauels, Dusseldorf-Lohausen, Germany, and Walter Meier, Winterthur, Switzerland, assignors to Schloemann Aktiengesellschaft, Dusseldorf, Germany, and Concast A.G., Zurich, Switzerland
Filed Aug. 30, 1965, Ser. No. 483,525
Claims priority, application Germany, Aug. 29, 1964, Sch 35,703
5 Claims. (Cl. 164—82)



During withdrawal of the dummy bar head and the strand attached thereto from a continuous casting mold, an abrupt dimensional discontinuity interrupts smooth withdrawal when the discontinuity enters a withdrawal roll. To prevent this, the applicant reduces the abrupt discontinuity by shaping of the dummy bar head and allowing the discontinuity to enter a smoothing roller in such manner as to make the transition from head to strand smooth.

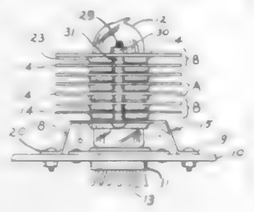
3,372,732
METHOD FOR BONDING ALUMINUM TO BORIDES
Alan C. Cocks, Surbiton, Surrey, and Anthony A. R. Wood, North Holmwood Dorking, Surrey, England, assignors to United States Borax & Chemical Corporation, Los Angeles, Calif.
No Drawing. Filed Sept. 30, 1963, Ser. No. 312,275
Claims priority, application Great Britain, Oct. 15, 1962, 39,010/62
3 Claims. (Cl. 164—102)

A method is provided for bonding aluminum to abrasion-resistant borides, such as titanium diboride. The method comprises heating molten aluminum in contact with the boride to a temperature of at least 1100° C. and then cooling the aluminum to below its melting point. Preferably a flux which dissolves any oxide layer present on the aluminum or boride is employed.

3,372,733
METHOD OF MAINTAINING ELECTRICAL CHARACTERISTICS OF ELECTRON TUBES AND TRANSISTORS AND STRUCTURE THEREFOR

Russell J. Callender, 115 Wildwood Beach Road, Mahtomedi, Minn. 55115

Filed Feb. 11, 1964, Ser. No. 344,019
6 Claims. (Cl. 165—1)

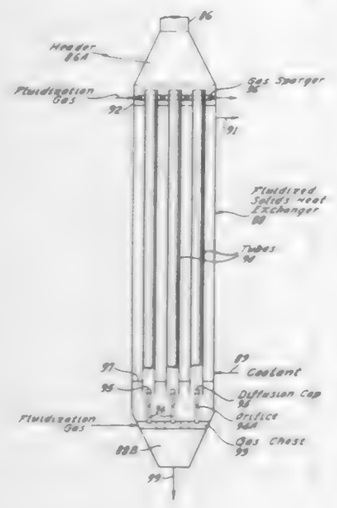


1. A method for controlling and maintaining the output power and electrical characteristics of an enclosed group of internal conductor elements operating at different temperature gradients within an enclosed electronic structure as described, consisting of the steps of positioning the independent rims of a plurality of gradient heat conducting fin means in relatively separate close spaced relationship to each other about the enclosure for said enclosed group of said internal elements, thereby separately and independently effecting the absorption, conduction, and radiation of the internally created heat of each of said internal conductor elements by independently conducting the accumulated heat away from each of the said internal elements, and thereby reducing and maintaining the internal heat pattern of said elements while uniformly maintaining the electrical characteristics and power output of said elements.

3,372,734
FLUID PROCESS USEFUL IN THE RECOVERY OF HYDROCARBONS FROM TAR SANDS

George C. Grubb, Little Silver, N.J., and Marvin F. Nathan, Westport, Conn., assignors to Pullman Incorporated, Chicago, Ill., a corporation of Delaware

Original application June 1, 1965, Ser. No. 460,367. Divided and this application Sept. 14, 1966, Ser. No. 601,243
2 Claims. (Cl. 165—1)

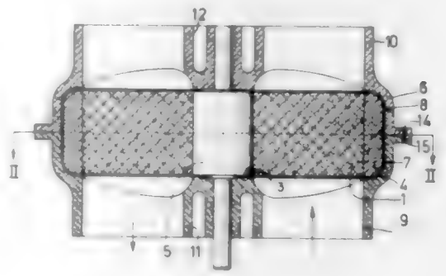


1. A method of extracting heat from fluidizable solid material in substantially vertically disposed multitubular heat exchange zone having an essentially unobstructed header zone situated immediately above the upper apertures of the tubes which comprises: introducing into an upper portion of said header zone fluidizable solid material, introducing fluidization gas into a lower portion of said header zone adjacent said tube apertures to maintain the solids in a fluidized condition and to evenly distribute the solids flowing into the tubes, introducing fluidization gas into the bottom aperture of each tube at substantially the same rate for each tube and flowing solid material downwardly as a plurality of confined streams of fluidized solids in the tubes, passing relatively cool fluid in external contact with the tubes to extract heat from the fluidized solids.

3,372,735
ROTARY HEAT-EXCHANGERS AND HOT-GAS ENGINES

Roelf Jan Meijer, Emmasingel, Eindhoven, Netherlands, assignor to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware

Filed Mar. 7, 1966, Ser. No. 532,279
Claims priority, application Netherlands, Mar. 11, 1965, 65—3,087
6 Claims. (Cl. 165—9)

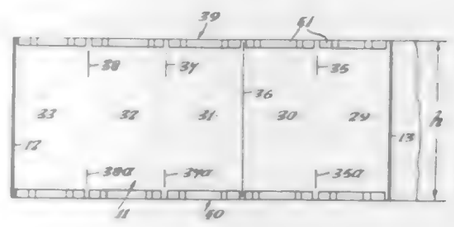


1. A rotary regenerator comprising a rotor having a glass ceramic material of a low coefficient of expansion adapted for the passage of gas therethrough, said ceramic rotor being provided with inlet and outlet passages for the heat exchanging media, a housing spaced from said ceramic rotor and constituted of a glass ceramic material having a coefficient of expansion which is substantially equal to the coefficient of expansion of said ceramic rotor and a seal between said housing and said ceramic rotor being a gap seal.

3,372,736
ROTARY REGENERATIVE HEAT EXCHANGERS

Herbert Brandt, Rothemuhle uber Olpe, 5961 Westphalia, Germany, and Gerhard Kritzler, 25 Fliessenhardtstrasse, 5905 Freudenberg, Kreis Siegen, Westphalia, Germany

Filed Sept. 29, 1965, Ser. No. 491,250
Claims priority, application Germany, Oct. 2, 1964, A 22,510
6 Claims. (Cl. 165—10)

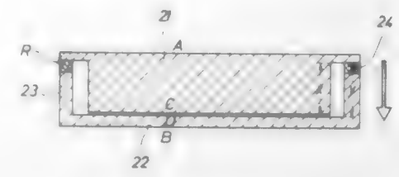


The number of gas-tight joints between the walls and plates in each sector of the regenerator of rotary regenerative heat exchangers is reduced by constructing at least some of the arcuately disposed partitions of smaller axial length than the regenerator. The structure also reduces the total length of sealing edges at the ends of the regenerator.

3,372,737
UNIDIRECTIONAL HEAT TRANSMITTER

Joachim Schnell, Haaren, Germany, assignor to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware

Filed Sept. 27, 1965, Ser. No. 490,499
Claims priority, application Germany, Oct. 7, 1964, P 35,236
13 Claims. (Cl. 165—32)

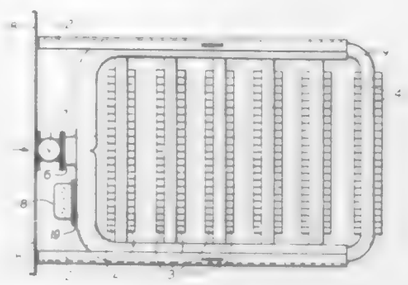


Apparatus for transferring heat between two external surfaces in one direction only. An external surface of a first member is connected to a body having a high heat conductivity and a body having a high coefficient of expansion. An external surface of a second member is similarly connected. Each of the members have confronting internal surfaces. The coefficients of expansion and the positioning of the members are related so that heat is transmitted from the first external surface to the second external surface only.

3,372,738
COOLING ARRANGEMENT FOR OIL-FILLED ELECTRIC TRANSFORMERS OR REACTORS

Wilhelm Jan, Graz, Styria, and Johannes Reitbauer, Weiz, Styria, Austria, assignors to Elin-Union Aktiengesellschaft fur Elektrische Industrie, Vienna, Austria

Filed May 17, 1965, Ser. No. 456,196
Claims priority, application Austria, May 20, 1964, 4,377/64
7 Claims. (Cl. 165—47)

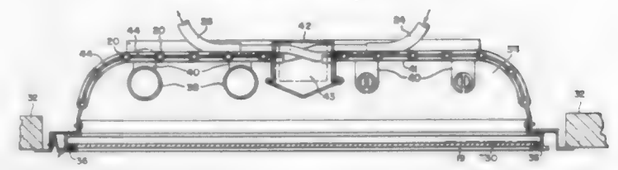


1. A cooling arrangement for dissipating the heat produced by losses in an oil-filled electric transformer or reactor, the latter including an oil tank, the arrangement comprising at least two groups of a plurality of substantially vertical riser sections to and from which the oil to be cooled is supplied from said tank in parallel connection, by way of at least two pairs of substantially horizontal, U-shaped upper distributing and lower collecting header members having each a base of the U and two flanking legs between which said riser sections are connected, upper distributing and lower collecting main header pipes in series communication between said tank and said header members, the latter being connected on opposite sides of said main header pipes, substantially at the middle of their bases, and facing in opposite directions, alternately laterally slanting pipe connections between said header members and at least one of said main header pipes, and means for supporting said header members from the wall of said tank.

3,372,739
LIQUID-COOLED LUMINAIRE

John C. Kastovich, Franklin Township, Delmont, and Jack D. Meess, Franklin Township, Export, Pa., assignors to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania

Filed Jan. 12, 1966, Ser. No. 520,110
10 Claims. (Cl. 165—47)

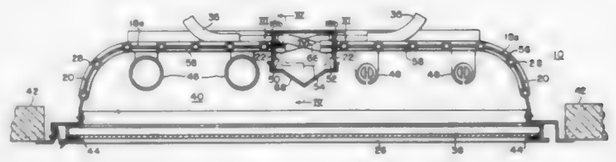


A liquid-cooled luminaire having a troffer body including a top member and downwardly extending side walls which are formed by a plurality of parallel conduits joined at their ends to form a continuous flow path and separated by intervening web portions. The continuous flow path including at one end a liquid inlet and at the other end a liquid outlet which may be connected to a closed heat exchanger and liquid reservoir system. The cooling liquid is maintained in a state of turbulent flow through the parallel conduits and the troffer body is dimensioned in a manner such that the maximum temperature differential between the hottest area of the web portion and the conduits is from about 2° to 4° F.

3,372,740
LIGHTING LUMINAIRE WHICH IS LIQUID COOLED

John C. Kastovich, Franklin Township, Delmont, and Jack D. Meess, Franklin Township, Export, Pa., assignors to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania

Filed Jan. 12, 1966, Ser. No. 520,121
8 Claims. (Cl. 165—47)



1. A luminaire adapted to be liquid-cooled to remove heat generated by light-sources adapted to be supported therein, said luminaire comprising:

a generally horizontal and elongated housing longitudinally disposed along said luminaire, said housing having spaced longitudinal side walls;

a pair of generally similar cooling members each having a reflecting lower surface, each of said cooling members comprising: a top cover having two longitudinal edges, a depending side wall affixed to one longitudinal edge of said top cover, and a securing flange affixed to the other longitudinal edge of said top cover;

said securing flanges affixed to the longitudinal side walls of said housing with said top covers projecting generally horizontally away from said housing on the opposite sides thereof, and a portion of each longitudinal side wall of said housing extending above said top covers;

end walls affixed to the ends of said cooling members, a bottom light opening defined by said end walls and said depending side walls;

a solid light-transmitting closure member substantially covering said light opening;

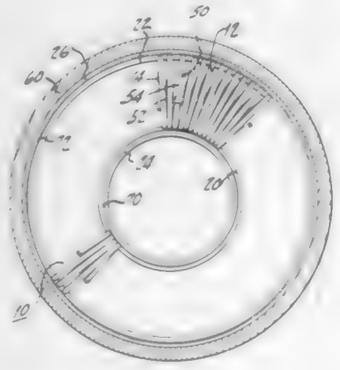
spaced conduit means and interconnecting web members forming substantially all of said top cover and

said depending side wall of each of said cooling members, an inlet conduit extension formed on each of said top covers and extending into said housing through the proximate one of the longitudinal side walls of said housing, said inlet conduit extension having a conduit inlet opening formed therein within said housing for the ingress of cooling liquid into said cooling members, an outlet conduit extension formed on each of said top covers and extending into said housing through the proximate one of the longitudinal side walls of said housing, said outlet conduit extension having a conduit outlet opening formed therein within said housing for the egress of cooling liquid from said cooling members;

a cooling liquid supply conduit means connected within said housing to at least one of said conduit inlet openings, said supply conduit means entering into said housing from the opposite side thereof as the said inlet conduit extension to which said supply conduit means connects; and

a liquid return conduit means connected within said housing to at least one of said conduit outlet openings, said return conduit means entering into said housing from the opposite side thereof as the said outlet conduit extension to which said return conduit means connects, and said supply conduit means and said return conduit means entering into said housing at locations higher than said top cover.

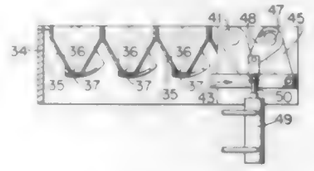
3,372,741
HEAT DISSIPATOR
Donald B. Kaiser and Robert Roth, Lancaster, Pa., assignors to Radio Corporation of America, a corporation of Delaware
Filed Apr. 29, 1966, Ser. No. 546,254
5 Claims. (Cl. 165—80)



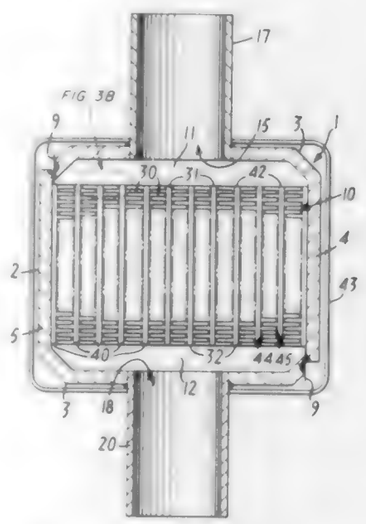
Heat dissipator comprising helices of wire formed into stacked closed loops and confined in an annular space defined by outer and inner concentric metal sleeves. The turns of each helix adjacent to the inner sleeve are in substantially mutual contact relation.

3,372,742
APPARATUS FOR HEAT EXCHANGE OF GRANULAR SOLIDS
James M. Forner, Springfield Township, Hamilton County, Ohio, assignor to The Procter & Gamble Company, Cincinnati, Ohio, a corporation of Ohio
Filed Dec. 8, 1965, Ser. No. 512,367
2 Claims. (Cl. 165—96)

An apparatus for heating or cooling granular material in which a plurality of finned tubes are mounted transversely in a heat transfer chamber. Flow control means are provided at the bottom outlet of the heat transfer chamber to restrict and control flow of granules through the apparatus as desired in order to maintain the heat exchange chamber in full or choked condition. Continuous flow of granules is maintained in order to achieve the desired degree of heat exchange.



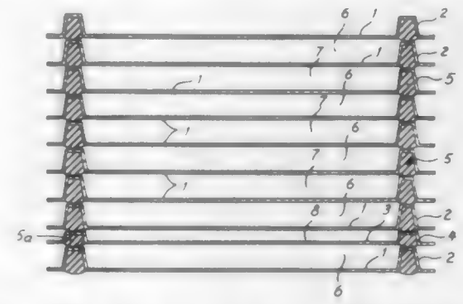
3,372,743
HEAT EXCHANGER
David B. Pall, Roslyn Estates, and Robert I. Gross, Roslyn Heights, N.Y., assignors to Pall Corporation, Glen Cove, N.Y., a corporation of New York
Continuation-in-part of application Ser. No. 434,519, Feb. 2, 1965. This application Jan. 25, 1967, Ser. No. 614,521
21 Claims. (Cl. 165—166)



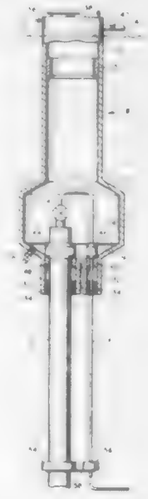
1. A counterflow or parallel flow heat exchanger of the plate type, comprising, in combination, a housing; openings in the houhing for inflow and outflow of fluides between which heat is to be exchanged; a heat exchanger plate formed in a plurality of convolutions arranged in juxtaposed spaced-apart relationship, and having a corrugated surface, the corrugations of said surface being small relative to the convolutions of the plate and being disposed across said convolutions, the heat exchanger plate being disposed in the housing such that the ends of the convolutions define separate flow paths for the fluids between which heat is to be exchanged; and a plurality of separators disposed between the convolutions of the heat exchanger plate, and holding the convolutions in such spaced-apart relationship, the separators, convolutions and corrugations together being shaped to define a plurality of passages which are interconnected at a plurality of points along their length.

3,372,744
PLATE TYPE HEAT EXCHANGER
Malte Anker Skoog, Lund, Sweden, assignor to Alfa-Laval AB, Tumba, Sweden, a corporation of Sweden
Filed May 11, 1965, Ser. No. 454,885
Claims priority, application Sweden, June 18, 1964, 7,489/64
2 Claims. (Cl. 165—167)

1. In a heat exchange effected by flowing a first medium in a plurality of first parallel layers and flowing a second medium in a plurality of second layers parallel to and alternating with said first layers, said layers being substantially coextensive in area and each layer being separated from but in heat exchange relation to each adjacent layer over substantially its entire area, and directing the layers of each medium to a separate outlet for such medium, the method of controlling the outlet temperature of said first medium which comprises maintaining said second layers and a plurality of said first layers substantially alike and constant in thickness, and maintaining at least one of said first layers at a substantially different constant thickness, said first layers being directed to flow in parallel to said outlet for the first medium.



3,372,745
SUBMERSIBLE CAISSON FOR SUBSURFACE WELL COMPLETION
Billy G. Holmes, Dallas, Tex., assignor to Mobil Oil Corporation, a corporation of New York
Filed Apr. 28, 1966, Ser. No. 545,905
8 Claims. (Cl. 166—.5)

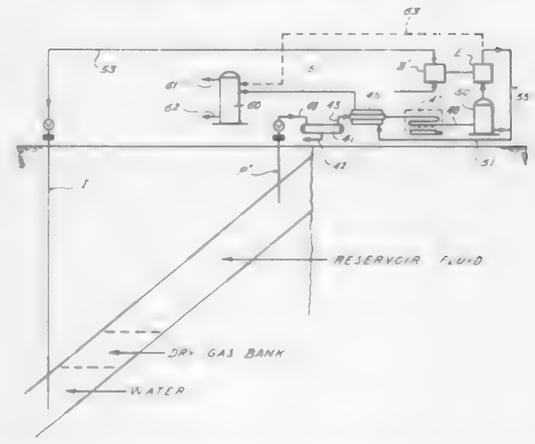


1. A submersible access caisson for providing a breathable atmosphere surrounding a wellhead of a subaqueous well, said wellhead being located beneath the surface of a body of water, and fixed on a conductor pipe protruding a substantial distance above the marine bottom, said access caisson consisting of: an upper tubular section adapted to slide over said conductor pipe and said wellhead; a sealable hatch means in the upper end of said upper tubular section; an enlarged working chamber operatively connected at its upper end to the lower end of said upper tubular section, said enlarged working chamber being adapted to permit a workman to move around said wellhead when said enlarged working chamber surrounds said wellhead; and a sealing means operatively connected to the lower end of said enlarged working chamber, said sealing means being designed to permit sliding movement between said caisson and at least a conductor pipe while maintaining a substantially watertight seal therebetween.

3,372,746
METHOD OF DETERMINING THE EXTENT OF RETURN TO THE SURFACE OF AN OIL WELL TREATMENT FLUID
Wilson I. Sanderson, Dallas, Tex., and Reginald M. Lasater, Duncan, Okla., assignors to Halliburton Company, Duncan, Okla., a corporation of Delaware
No Drawing. Filed Feb. 19, 1965, Ser. No. 434,133
9 Claims. (Cl. 166—4)

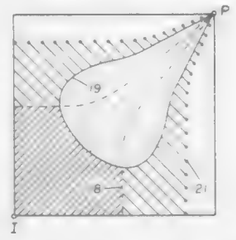
1. A method of determining the extent to which an aqueous oil well treatment fluid has returned to the surface, which comprises, first incorporating a predetermined proportion of a non-absorbed, oil-insoluble indicator into the aqueous oil well treatment fluid, injecting a known amount of the fluid into the well, removing the injected fluid together with any accompanying formation liquids from the well, and determining the proportion of indicator present in the fluid removed.

3,372,747
RESERVOIR PRESSURE MAINTENANCE PROCESS
William M. Reid, 4747 W. Alabama, Houston, Tex. 77027
Filed May 17, 1965, Ser. No. 456,344
2 Claims. (Cl. 166—7)



A method of controlling or maintaining reservoir pressure wherein pressurized gas recovered from the reservoir is expanded to drive a pump to pump water into the reservoir.

3,372,748
POLYMER REDEPOSITION PROCESS FOR WATERFLOOD
Evin L. Cook, Dallas, Tex., assignor to Mobil Oil Corporation, a corporation of New York
Filed Apr. 14, 1966, Ser. No. 542,610
17 Claims. (Cl. 166—9)

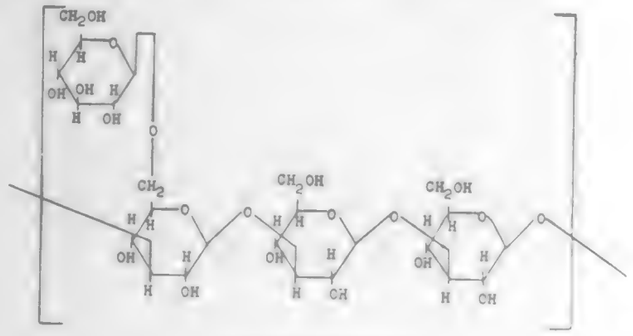


This specification discloses an oil recovery process in which a slug of a dilute aqueous polymer solution is injected into a subterranean oil-containing formation and then followed by a slug of a dilute aqueous caustic solu-

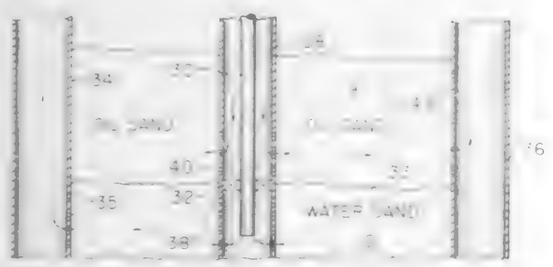
tion. Thereafter, water is injected to drive the polymer and caustic solutions through the formation and oil is recovered from the formation through suitable production means.

3,372,749
WATERFLOOD PROCESS EMPLOYING THICKENED WATER
Sherrod A. Williams, Dallas, Tex., assignor to Mobil Oil Corporation, a corporation of New York
No Drawing. Filed Apr. 18, 1966, Ser. No. 543,012
15 Claims. (Cl. 166—9)

1. A method of recovering oil from an oil-containing subterranean formation penetrated by an injection means and a production means which comprises injecting through said injection means and into said formation flooding water containing a poly(glucosylglucan), the glucosyl-glucan having the following structural formula:



3,372,750
RECOVERY OF HEAVY OIL BY STEAM INJECTION
Abdus Satter and Lloyd E. Elkins, Tulsa, Okla., assignors to Pan American Petroleum Corporation, Tulsa, Okla., a corporation of Delaware
Filed Nov. 19, 1965, Ser. No. 508,791
5 Claims. (Cl. 166—11)



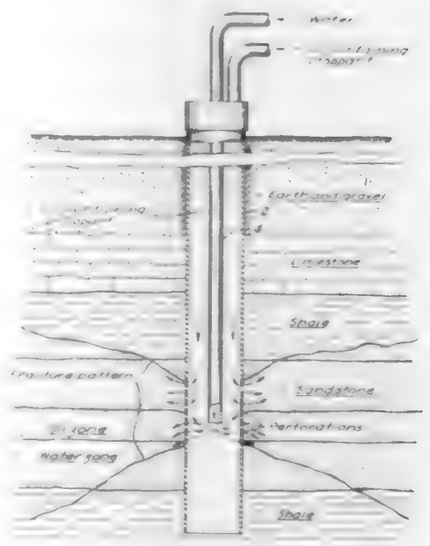
Steam is injected into an aquifer underlying a heavy oil reservoir to heat the reservoir and increase production, primarily by decreasing viscosity. A single steam injection-oil production well may be used along with a number of surrounding water-producing wells, or there may be a well-to-well displacement with one steam injection well, a set of surrounding water-producing wells, and another set of surrounding oil-producing wells, the two sets being respectively at the corners of the five-spot and at the mid-point of the border lines.

3,372,751
WELL CEMENTING METHOD
Augustin Louis Canut, 3947 Marshall Way, Long Beach, Calif. 90807
Filed Aug. 16, 1965, Ser. No. 479,790
1 Claim. (Cl. 166—27)

A method of cementing casing within the annulus of a portion of a well bore by first lowering the casing at the bottom of a pipe string. Cement is then forced down the pipe string and casing until it rises upwardly within the annulus above the casing. Openings are then unblocked between the lower portion of the pipe string and the annulus above the casing while flow through the pipe string below the openings is blocked. Liquid is

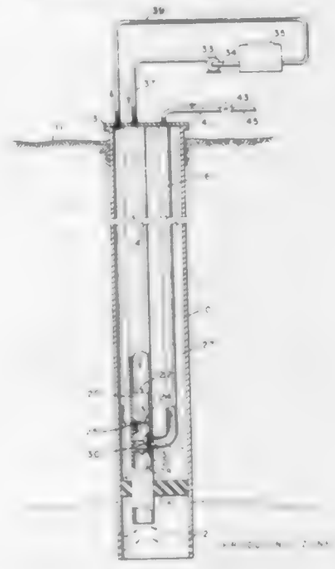
pumped under pressure through the pipe string and out the openings to break-up the unhardened cement and lift it to the surface. Finally, the upper end of the casing is disconnected from the pipe string below the point where it was blocked and the pipe string is lifted to the surface leaving the well bore unobstructed.

3,372,752
HYDRAULIC FRACTURING
Ronald R. Prater, Great Bend, Kans., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
Filed Apr. 22, 1966, Ser. No. 544,570
7 Claims. (Cl. 166—42)



A method of fracturing a well employing at least two piping systems or injection means which provide independent injection of different fluids simultaneously down the wellbore penetrating a formation being treated. Down one of such means is injected a fluid of a density which corresponds closely to that of the fluid in the formation desired to be produced and carries suspended therein a propping agent of about the same density as that of the fluid and down each of said other injection means is injected a fluid of a density which is either greater or less than that of the fluid sought to be produced and which contains substantially no propping agent in suspension.

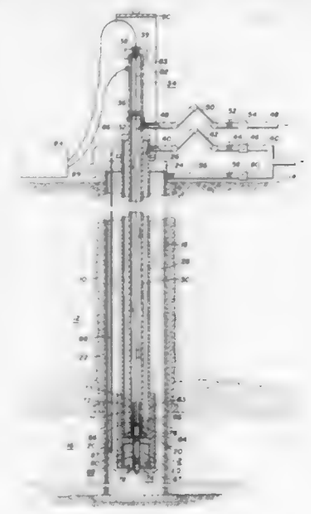
3,372,753
METHOD OF PREVENTING HYDRATE FORMATION IN PETROLEUM WELL PRODUCTION STRINGS
Robert N. Tuttle, Houston, Tex., assignor to Shell Oil Company, New York, N.Y., a corporation of Delaware
Filed July 16, 1965, Ser. No. 472,598
3 Claims. (Cl. 166—45)



The formation of hydrates and deposition of solids in a production tubing string carrying petroleum well fluids having a high hydrogen sulfide, dissolved sulfur and water content may be prevented by maintaining the fluid pressure within the production tubing throughout the length thereof above the bubble point of said well fluids.

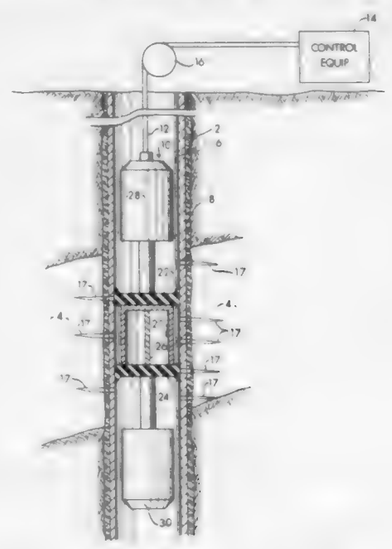
3,372,754
WELL ASSEMBLY FOR HEATING A SUBTERRANEAN FORMATION
Everette E. McDonald, Eagle Pass, Tex., assignor to Mobil Oil Corporation, a corporation of New York
Filed May 31, 1966, Ser. No. 554,078
8 Claims. (Cl. 166—59)

1. A well assembly for effecting heating over portions of a subterranean formation penetrated by a well comprising:
(a) a casing within said well extending substantially the entire length of said well from a point in the vicinity of the surface of the earth to within the vicinity of said formation and communicating with said formation,
(b) cementing means bonding said casing to the wall of said well, allowing communication between the interior of said casing and said formation but preventing communication between said interior of said casing and other formations,
(c) a casinghead attached to said casing at the upper end thereof,
(d) an aperture having sealing means in said casinghead,
(e) a primary air conduit slidably positioned within said sealing means and said aperture in said casinghead,
(f) a fuel string concentrically located within said primary air conduit and extending substantially the entire length thereof,
(g) means preventing leakage of air from the upper end of said primary air conduit,
(h) means preventing leakage of fuel gas from the upper end of said fuel string,
(i) means for supplying primary air to said primary air conduit,
(j) means for supplying fuel gas to said fuel string,
(k) means for supplying secondary air to said casing,
(l) a heat shield positioned on said primary air conduit at the bottom thereof adjacent said formation,



(m) means for mixing said primary air and said fuel gas to form a combustible mixture only after reaching the vicinity of said heat shield,
(n) an electrical igniter located within said heat shield and positioned for flow thereover of fuel gas from said fuel string and of air from said primary air conduit, and
(o) electrical conductor means extending from the surface of the earth through said fuel string to provide electrical energy to said electrical igniter.

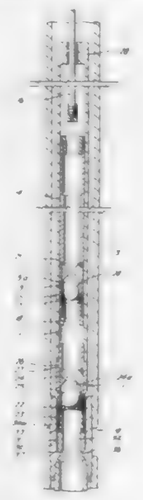
3,372,755
APPARATUS FOR WELL FLOW STIMULATION
Alexis A. Venghiattis, Houston, Tex., assignor to Dresser Industries, Inc., Dallas, Tex., a corporation of Delaware
Filed June 29, 1965, Ser. No. 467,942
7 Claims. (Cl. 166—63)



This apparatus for improving the flow of fluid from an earth formation tapped by a perforated cased borehole includes a chamber defining an air space. One end of the

chamber is closed, and the other end of the chamber is sealed with a detachable closure member. A propelling charge is provided for moving the two plugs in opposite directions for developing an implosion zone to open plugged perforations in the borehole.

3,372,756
HOLDDOWN FOR WELL TOOLS
Louis K. Muckleroy, Longview, Tex., assignor to U.S. Industries, Inc., a corporation of New York
Filed Apr. 21, 1966, Ser. No. 544,204
4 Claims. (Cl. 166—206)



1. A holddown for well tools comprising, a seating nipple having a longitudinal bore with a section thereof having a uniform diameter throughout its length, a hollow holddown body for connecting to a well tool for insertion into the bore of the seating nipple, means limiting the distance the holddown body can be inserted into the seating nipple bore, a friction ring comprising a continuous annular body of resilient material encircling a section of the holddown body, said ring having a length longer than its wall thickness with a flat outer surface to engage said section of uniform diameter of the bore of the seating nipple, said ring having an outside diameter greater than the diameter of said section and made of a material having non-galling compatibility with the material of the seating nipple and sufficient ductility and yield strength to be compressed into said section of the seating nipple without suffering permanent deformation whereby said ring is radially compressed in the bore of the seating nipple to form a metal-to-metal fluid tight seal between the ring and the bore of the seating nipple and create a frictional force therebetween, said section of the holddown body upon which the ring is located having a diameter sufficiently less than the inside diameter of the ring to allow the desired compression thereof, means holding the ring on the body for limited longitudinal movement relative to the body, and a seal ring positioned between the friction ring and the body to provide a seal therebetween when the ring is compressed by the bore of the seating nipple whereby said seal ring and the metal-to-metal seal between the friction ring and the seating nipple combine to provide a fluid seal between the seating nipple and the body.

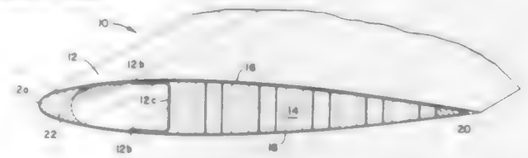
3,372,757
ROTOR BLADE AND METHOD OF FABRICATING THE SAME
Kenneth Krohncke, 919 S. 7th St., San Jose, Calif. 95112
Filed July 13, 1965, Ser. No. 471,545
1 Claim. (Cl. 170—159)

1. The method of fabricating a rotor blade which comprises the steps of:

squeezing an initially circular tube into a flattened generally elliptical cross section,

supporting the elliptical tube in a mold having surfaces corresponding to a desired bullet-shaped configuration of the rotor blade spar,

exploding interiorly of the tube to expand the same into contact with the mold to form the spar of the blade, and

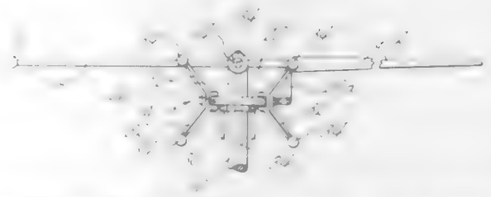


attaching rearwardly converging skins to the spar to form the trailing edge of the blade,

the ends of the elliptical tube being open and the tube being supported under water during the explosion step,

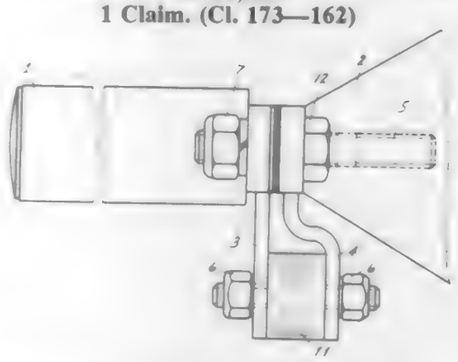
and finally securing a tapered balance weight to the wall surfaces of the formed spar.

3,372,758
VIBRATION ABSORBER
David S. Jenney, Stratford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Filed Feb. 15, 1967, Ser. No. 616,308
8 Claims. (Cl. 170—159)



A centrifugally tuned vibration absorbing apparatus is provided for a helicopter rotor having pendulum type absorber weights mounted to rotate with the rotor. The absorber weights are mounted for pendulous movement about coincident vertical and horizontal axes and are tuned to absorb both vertical and horizontal vibrations.

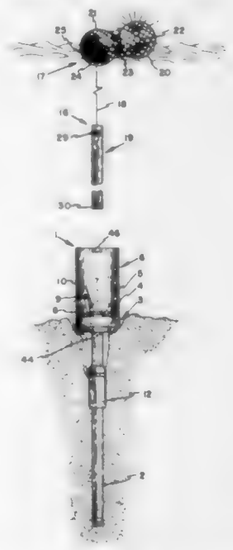
3,372,759
MEANS FOR SUPPRESSING BLOWS, SHOCKS OR VIBRATIONS IN THE OPERATION OF AN APPARATUS SUCH AS A POWER DRIVEN HAMMER OR TAMPER
Philipp Uebel, Munich, Germany, assignor to Hermann Wacker and Peter Wacker, Munich, Germany
Filed Oct. 21, 1965, Ser. No. 499,940
Claims priority, application Germany, Oct. 28, 1964, W 37,859
1 Claim. (Cl. 173—162)



Shock suppressing means for manually guided power driven hammers or tampers having a housing and a handle, where the handle is disposed at the center of

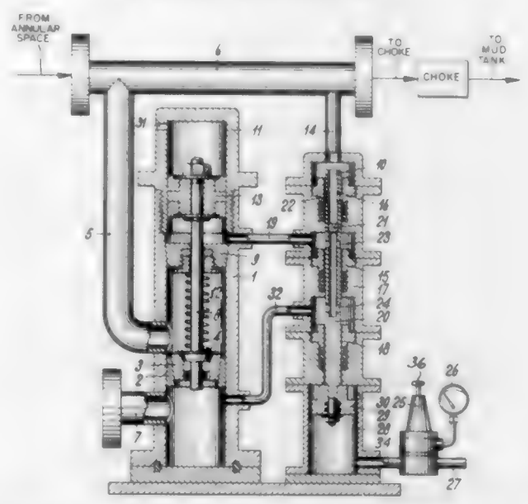
gravity at the end of one of two angular levers which are connected with one another at the other end by an oscillating element or shock mount.

3,372,760
FREE-FALL CORE SAMPLER
Samuel O. Raymond, North Falmouth, and Peter L. Sachs, Reading, Mass., assignors to the United States of America as represented by the Secretary of the Navy
Filed Mar. 30, 1965, Ser. No. 444,094
13 Claims. (Cl. 175—5)



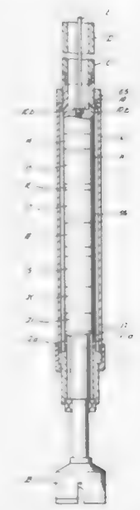
The free-fall corer apparatus of the present invention consists of an expendable, elongated casing having an annular-shaped ballast member secured thereto. A cylindrical housing surmounts this ballast member and accommodates a float which is tied to the core liner. During descent of the apparatus, the float is latched to the ballast element, but when the apparatus strikes bottom, a pilot weight suspended from the float latching means moves upwardly and allows the float to freely ascend within the ocean. This ascent unlatches the core liner from the expendable casing and the former is thereafter raised to the surface.

3,372,761
MAXIMUM ALLOWABLE BACK PRESSURE CONTROLLER FOR A DRILLED HOLE
Adrianus Wilhelmus van Gils, Seria, Brunei
Filed June 30, 1965, Ser. No. 468,475
8 Claims. (Cl. 175—25)



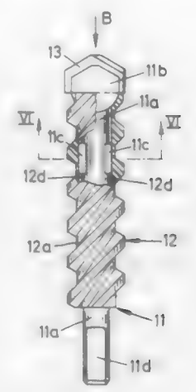
This invention relates to a relief device to be used with a well and drill pipe where there is a mud return pipe communicating with the annular space around the drill pipe with a choke in the pipe. The pipe has a relief port between the well and the choke and a relief valve controls the port by being responsive to the pressure of the mud in the mud return pipe.

3,372,762
DRILLING APPARATUS LOCKING ASSEMBLY
Roy H. Cullen, Charles H. Elliott, and Jimmie R. Aker, Houston, Tex., assignors, by direct and mesne assignments, to The Youngstown Sheet and Tube Company, a corporation of Ohio
Filed Apr. 26, 1965, Ser. No. 450,889
8 Claims. (Cl. 175—104)



Drilling apparatus wherein a housing having a plurality of rotatably releasable housing sections is surrounded by a locking sleeve having means for locking to the upper and lower ends of the housing to thereby prevent relative rotation and inadvertent release of the housing sections. In one form, the apparatus has means for placing the outer sleeve under compression and the housing under tension.

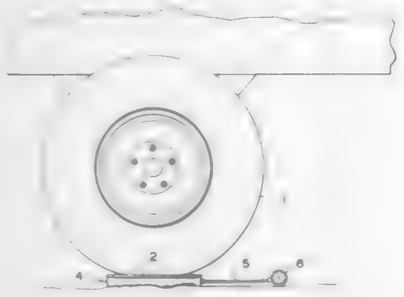
3,372,763
DRILL
Artur Fischer, 133 Grunmettstetterstr., 7241 Tumlingen, Germany
Filed June 14, 1966, Ser. No. 558,211
Claims priority, application Germany, June 14, 1965, F 46,325
10 Claims. (Cl. 175—323)



1. A drill, comprising a shank having a front end portion and a rear end portion; a drill bit carried by said front end portion; and an elongated jacket of synthetic plastic material extending between said front end portion

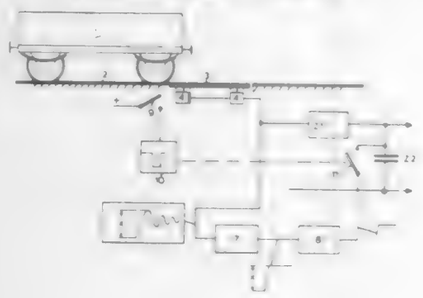
and said rear end portion, said jacket having an external face provided with at least one groove extending over the entire length of said jacket so that comminuted material resulting from drilling of a bore hole with said drill can escape from such bore hole along said groove.

3,372,764
HYDRAULIC LOAD SCALE
Howard D. Crotts, Cuyahoga Falls, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Filed Dec. 16, 1966, Ser. No. 602,229
6 Claims. (Cl. 177—208)



A portable hydraulic load scale for placement directly on irregular ground surfaces, and adapted to indicate the weight of very heavy loads placed upon its top-plate. The scale has a flexible non-extensible bladder filled with a liquid, a top-plate, and a pressure gauge.

3,372,765
APPARATUS FOR WEIGHING VEHICLES IN MOTION
John Samuel Hatton, 28 Ebrington, West Bromwich, Staffordshire, Eng'and
Filed Nov. 9, 1965, Ser. No. 507,017
Claims priority, application Great Britain, Nov. 21, 1964, 47,486/64
8 Claims. (Cl. 177—211)



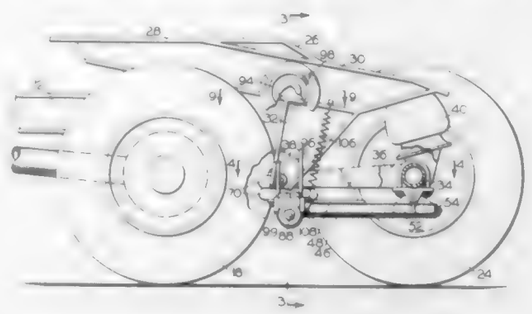
Apparatus for weighing vehicles in motion comprises an electrical transducer responsive to dynamic weight of a vehicle, and preferably including at least one strain gauge bridge responsive to weight imposed on a railtrack section, an inductance-capacitance filter connected to the output of the transducer, circuit means responsive to the peak value of the output of the transducer to effect rapid charging of a capacitance element of the filter circuit to a voltage proportional to the peak value, and switching means operative both to connect said circuit means between the transducer output and the filter circuit to receive the peak value of the transducer output, and to break this connection substantially immediately following receipt of the peak value. The switching means is preferably a switch actuated by the moving vehicle and it further comprises a single pulse generator controlled by the switch to give a pulse whose commencement and cessation respectively initiate and terminate rapid charging of the condenser from said circuit means. The circuit means preferably includes a variable attenuator to provide adjustment of the proportionality of the rapid charging voltage to the peak response. A time delay circuit is operative to switch the capacitance from the transducer output to a voltage responsive indicator and/or recorder.

3,372,766
COMBINATION TRACTIVELY AND THRUST PROPELLED VEHICLE FOR OFF-HIGHWAY AND ON-HIGHWAY USE AND TRACTIVE RUNNING GEAR THEREFOR
Henry R. Lifferth, Fortine, Mont., assignor to Lifferth International Corporation, Fortine, Mont., a corporation of Utah
Continuation-in-part of application Ser. No. 356,549, Apr. 1, 1964. This application May 23, 1966, Ser. No. 551,970
25 Claims. (Cl. 180—7)

An off-highway vehicle, employing both tractive and thrust propulsion for traveling over soft and slippery terrain ash well as on surfaced highways, comprises a series of cam members mounted as propulsive running gear on respective eccentric axes of rotation extending transversely of the direction of travel. The axes may be longitudinally aligned, so the cam members form one or more series extending transversely across the vehicle, with the cam members of each series being arranged side-by-side on a common axis and with the several series being arranged in succession longitudinally of the vehicle, or the axes themselves may be arranged in succession longitudinally of the vehicle, so the cam members are arranged in series longitudinally of the vehicle. The individual cam members are each formed to have a protrusive portion at one side of the mounting axis and a recessive portion at the opposite side. The protrusive portions of the several cam members have arcuate tractive surfaces at substantially equal distances along a radius from the respective axes, and the cam members are so arranged that a plurality of the tractive surfaces are bottomed at all times for vehicle support and tractive propulsion. By making the center of arc of each cam member coincident with the axis of rotation, the vehicle will ride smoothly on hard-surfaced roads. The cam members may be ordinary wheels with offset axes, but are preferably eccentric off-circular wheels having rims mounting eccentric off-circular annular pneumatic tires.

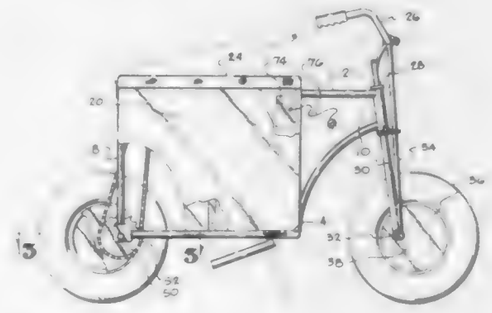
3,372,767
FRICTION MEANS FOR CONNECTING DRIVE AND SECONDARY WHEELS OF VEHICLES
Larry D. Keegan, Rte. 2, Box 66, Clackamas, Oreg. 97015
Filed May 31, 1966, Ser. No. 554,000
8 Claims. (Cl. 180—22)

The invention includes friction wheels adapted to be engaged between a pair of vehicle wheels for transferring driving power from one of the wheels in the pair to the other. To accomplish such purpose, a supporting arm supports one friction wheel in edge alignment with a pair of the vehicle wheels and also supports air bags which



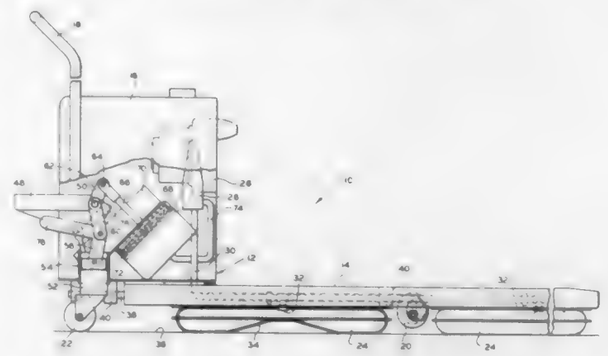
when inflated bear against the vehicle frame and force the support arm down to engage the friction wheels with the vehicle wheels.

3,372,768
BUCKING CYCLE
Richard C. Wresch, San Bernardino, Calif. (Box 842, Loma Linda, Calif. 92354)
Filed Oct. 24, 1965, Ser. No. 504,387
1 Claim. (Cl. 180—34)



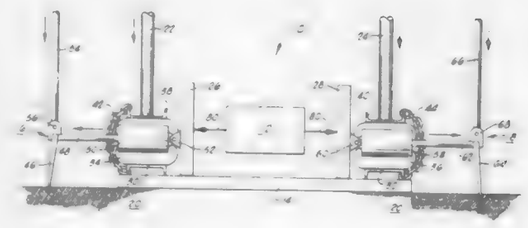
Motor-driven cycle with eccentric wheels and particularly a type that is compact in arrangement but still simulates the bucking antics of a broncho so close to the ground as to be safe.

3,372,769
MATERIAL HANDLING VEHICLE
Richard R. Jung, Robert R. Rabbitt, and Johnny T. Watters, Battle Creek, Mich., assignors to Clark Equipment Company, a corporation of Michigan
Filed Apr. 29, 1966, Ser. No. 546,395
3 Claims. (Cl. 180—119)



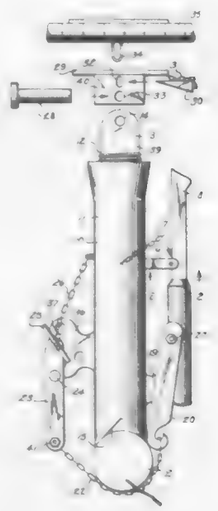
A material handling machine having at least one fluid inflatable load supporting and friction reducing pad connected thereto, a first retractable wheel and a pair of retractable wheels. Toggle linkage is connected to the first wheel and is operable to extend the first wheel. Other toggle linkage is connected to the pair of wheels and is operable to extend the pair of wheels. A lost motion connection is provided between the linkages so that extension of the first wheel also causes extension of the pair of wheels, but the pair of wheels can be extended without extending the first wheel. A fluid actuator is connected to the source of pressurized fluid for the pad and also connected to the linkage for the pair of wheels so that whenever the pad is inflated the actuator is energized to cause the pair of wheels to extend.

3,372,770
SHEAR WAVE TRANSDUCING APPARATUS
Frank Clynch, Ponca City, Okla., assignor to Continental Oil Company, Ponca City, Okla., a corporation of Delaware
Filed Jan. 21, 1966, Ser. No. 522,099
14 Claims. (Cl. 181—.5)



A shear wave vibrator coupled to the surface of the earth by applying weight to a base plate and further coupled by earth engaging members attached to the base plate and hydraulically depressing into the ground.

3,372,771
SCAFFOLD HOLDER
Joseph Capozzi, 129 Montvale Road, and Antonio Gatta, 12 Poole St., both of Woburn, Mass. 01801
Filed June 20, 1966, Ser. No. 558,856
4 Claims. (Cl. 182—229)



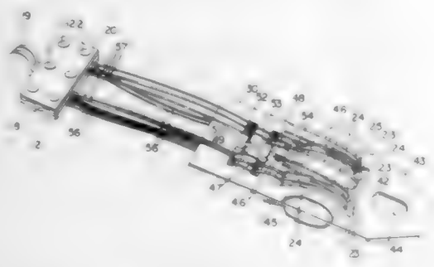
A scaffold holder comprising a cylindrical housing having a threaded hollow opening therein, an adjustable support having a threaded portion on one end thereof and being adapted to longitudinally travel within the housing,

means on the other end of the housing for securing the housing to a column of a scaffold, a holder insert adapted to be mounted in the wall of a structure and provided with means for attaching same to the adjustable threaded support member.

3,372,772
SAFETY GUARD
Murray Singer, 307 Hickory St., Massapequa, N.Y. 11762
Filed May 9, 1966, Ser. No. 548,489
1 Claim. (Cl. 182—230)

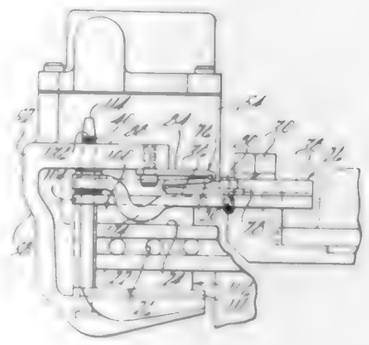
This invention relates to a self-locking guard for a swimming pool ladder wherein the self-locking feature is a spring loaded tongue adapted to engage the underside of a swimming pool ladder step.

3,372,773
LOAD LIMITER DEVICE
Albert Russo, Drexel Hill, and Robert H. Greeley, Kennett Square, Pa., assignors to All American Engineering Company, Wilmington, Del., a corporation of Delaware
Filed July 29, 1966, Ser. No. 568,906
14 Claims. (Cl. 188—1)



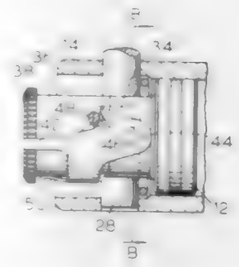
A plurality of wire strands are looped in and out of longitudinal apertures in a platen. One connector is attached to the strands and another to the platen. These connections provide means for connecting the device between a load and a support to cause the force required to pull the looped strands through the apertures to limit the dynamic force that can be applied to the load. The strands may be prebent and inserted into the apertures through a longitudinal slot. A bar is inserted into the slot to lock the strands into the apertures. The strands may be looped around a curved guide upon the platen to provide a substantial length and working stroke in a compact form. The ends of the strands remote from their connection may be substantially free of projection to cause them to freely pass through the apertures to positively limit the load transmitted through the device.

3,372,774
FLEXIBLE SUPPORT MEANS FOR A BRAKE CALIPER
Harvey C. Swift, Birmingham, Mich., assignor to Kelsey-Hayes Company, Romulus, Mich., a corporation of Delaware
Filed Dec. 19, 1966, Ser. No. 602,794
15 Claims. (Cl. 188—73)



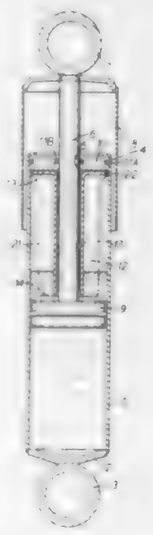
This invention relates to a disk brake and mort particularly to a disk brake having novel means for supporting a slidable caliper upon a stationary torque plate. This invention relates generally to a disk brake of the sliding caliper type in which a caliper having a fluid motor portion and a reaction portion is mounted on a stationary torque plate by yieldable means in the form of flex straps. A piston is mounted in the fluid motor portion of the caliper for moving a brake shoe having a brake lining thereon into engagement with a braking face of a rotary disk that is attached to a wheel to be braked. When this happens, the reaction portion of the caliper moves the other brake shoe so that the lining positioned thereon moves into engagement with the other face of the disk to be braked. Relative movement between a stationary torque plate and the caliper in a direction perpendicular to the plane of rotation of the disk is permitted by the use of the flex straps that not only permit such movement but also support the caliper upon the stationary torque plate.

3,372,775
DISC BRAKES
Hans Albert Beller, Koblenz-Asterstein, and Heinrich Bernhard Rath, Koblenz-Luetzel, Germany, assignors to Girling Limited, Birmingham, England, a British company
Filed July 20, 1966, Ser. No. 566,632
Claims priority, application Great Britain, July 30, 1965, 32,601/65
5 Claims. (Cl. 188—73)



A caliper type disc brake which includes an automatic adjuster for compensating for wear of the frictional elements of the brake wherein the automatic adjuster comprises an axially extendible member whose length is altered by relative rotation of two constituent members brought about by a ratchet and pawl mechanism, the pawl member of which is generally U-shaped to straddle the forward end of a hydraulic piston and includes a resilient biasing finger which serves to retain the pawl in an operative position.

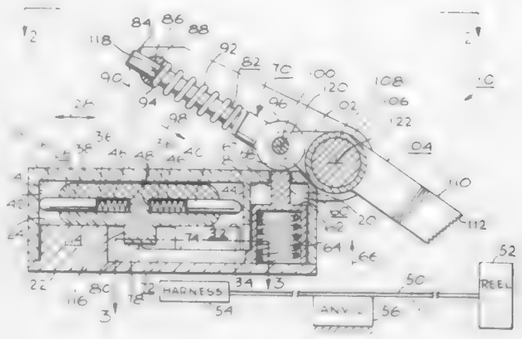
3,372,776
LUBRICATING MEANS FOR PISTON ROD SEAL
David Alan Avner and Douglas Bryan Wilkins, Tyseley, Birmingham, England, assignors to Girling Limited
Filed Mar. 2, 1966, Ser. No. 531,154
Claims priority, application Great Britain, Mar. 2, 1965, 8,859/65
5 Claims. (Cl. 188—100)



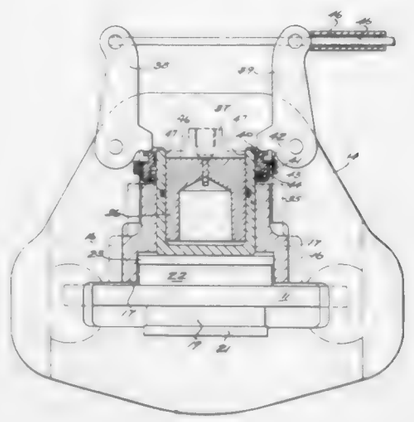
The invention is concerned with the lubrication of a piston rod seal in a telescopic damper in which the working space within a cylinder contains both damper fluid and gas under pressure, and the piston rod extends through the end of the cylinder which is normally uppermost in use, so that the cushion of pressurized gas is disposed adjacent the piston rod seal. This is achieved by the provision of means defining a passage which extends from below the general level of damper fluid, upwardly to the vicinity of the piston rod seal, the passage being of such narrow dimensions that damper fluid can rise upwardly in the passage and remain therein due to a form of capillary action. In the specific embodiments, this is achieved by the provision of a tubular body which in one case, is closely spaced from the piston rod itself leaving a narrow clearance which forms the passage, and in the other embodiment the tubular body is closely spaced from the internal surface of the cylinder. In each case, a transverse flange at the upper end of the body is narrowly spaced from a piston rod guide to provide a horizontal portion of the said passage.

3,372,777
INERTIA-OPERATED STRAP LOCK
Ernest A. Filippi, Northbridge, and Donald H. Herbert, Rolling Hills Estates, Calif.; said Filippi assignor to Special Devices, Inc., a corporation of California
Filed Mar. 28, 1966, Ser. No. 549,737
(Filed under Rule 47(a) and 35 U.S.C. 116)
9 Claims. (Cl. 188—136)

There is disclosed herein a strap locking arrangement that automatically locks a strap or belt upon subjection to certain forces acting in pre-selected directions, when the forces have at least a predetermined magnitude. This is achieved by having a normally restrained belt snubbing means rotatably mounted on a housing and the belt snubbing means includes an over-centered spring actuated shaft in which an over-centered compression spring exerts a force to restrain the belt snubbing means in a normally restrained or open position. The belt snubbing means is movable from the normally restrained position through the center position, which is the position of maximum force, to a belt locking position by an actuator means. An inertia mass means is slidably mounted adjacent to the actuator means and, when the inertia mass means is subjected to the pre-selected forces there is relative movement between the inertia mass means and the actuator means so that the inertia mass means slides free of the actuator means to allow movement of the actuator means under the influence of a spring. The movement of the actuator means by the spring moves the belt snubbing means from the restrained position through the center position and into the belt locking position when the inertia mass means has been subjected to the pre-selected forces.

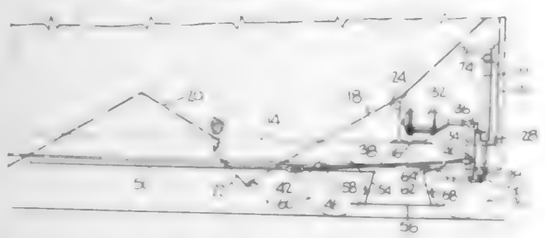


3,372,778
ACTUATING MEANS FOR SPOT-TYPE DISC BRAKES
Stewart K. Hambling, Tamworth, England, assignor to Girling Limited, Tyseley, England, a British company
Filed Apr. 13, 1966, Ser. No. 542,356
Claims priority, application Great Britain, Apr. 13, 1965, 15,592/65
7 Claims. (Cl. 188—152)



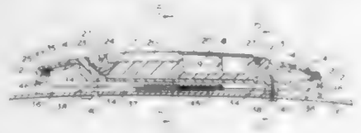
In a disc brake of the sliding yoke reaction type provided with an hydraulic actuator, the actuator comprises a hollow piston working in a bore in a stationary member and a second piston working in the first piston, one piston applies one friction pad directly to the disc and the other piston acts on the yoke to move it axially and bring a second friction pad carried by the one into engagement with the opposite face of the disc when fluid under pressure is supplied by the pistons.

3,372,779
BRAKE REGULATOR INSTALLATION
Charles F. Roselius, Bethpage, N.Y., and George A. Pelikan, Closter, N.J., assignors, by mesne assignments, to Robert M. Holloway and Robert L. Ludington, Michigan City, Ind.
Filed Aug. 31, 1966, Ser. No. 576,336
31 Claims. (Cl. 188—198)



A braking system for a railway car including a brake cylinder which is mounted on a railway car frame adjacent one end of the car, a double acting automatic brake regulator disposed adjacent thereto and connected therewith, triggering means for the regulator, and brake rigging for applying brake shoes to the wheels of the railway car.

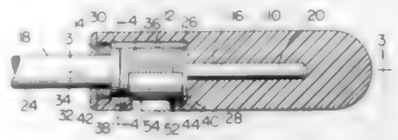
3,372,780
LUGGAGE HANDLE ASSEMBLY
Robert K. Fujioka, Los Angeles, and Tim M. Uyeda, South San Gabriel, Calif., assignors to Samsonite Corporation, Denver, Colo., a corporation of Colorado
Filed Aug. 22, 1966, Ser. No. 574,206
11 Claims. (Cl. 190—57)



1. In a handle assembly for a luggage case and the like, having a handle and a base:
means at each end of the handle movably connecting the end of the handle with the base and permitting at least the central portion of the handle to be lifted above the base for gripping and also permitting the handle to be lowered upon the base to a retracted position, at least a portion of each said means moving outwardly from the central portion of the base whenever the handle is lowered upon the base;
a pair of overlapping members, each connected at its outer end to said movable portion of one of said connecting means and extending past the inner end of the other member; and
resilient means extending between said inner ends of said members for moving said members outwardly and thereby urging said handle to said retracted position.

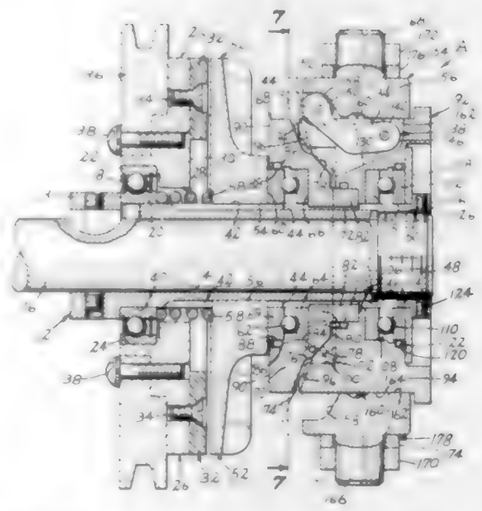
3,372,781
REVERSIBLE FRICTION DRIVE DEVICE
Robert T. Fulton, deceased, late of Logansport, Ind., by Alberta M. Fulton, executor, Logansport, Ind., assignor of one-third to Standard Fiscal, Inc., and one-third to Carolyn S. Fulton, Logansport, Ind.
Filed Jan. 6, 1966, Ser. No. 519,180
8 Claims. (Cl. 192—43)

A reversible friction drive device having a support and a drive member mounted for rotation therein. A helical spring is positioned between the support and the drive member, and is coaxial of the drive member. The spring is slidable with respect to both the support and the drive member. The support and the spring have detent means thereon adjacent to the opposite ends of the spring for urging the spring into frictional engagement with the drive member upon rotational movement therebetween. The spring fits the drive member in a manner such that when one end of the spring is held against relative rotational movement with respect to the support, the spring holds the drive member against rotation in one direction



but permits rotation in the other direction. The support has reversing means mounted thereon for selectively holding the opposite ends of the spring against movement therebetween whereby the direction in which the spring holds the drive member against rotation relative to the support can be selected as desired.

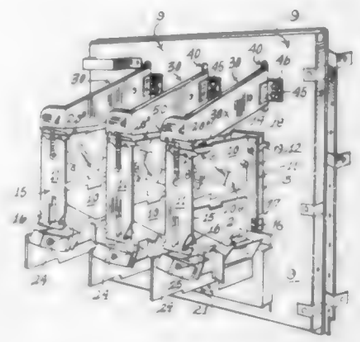
3,372,782
CLUTCH WITH NON-ROTATABLE CAM ACTUATOR
Paul J. Nieland, South St. Paul, Minn., assignor to Horton Manufacturing Co., Inc., Minneapolis, Minn.
Filed Jan. 3, 1966, Ser. No. 518,455
1 Claim. (Cl. 192—93)



This disclosure relates to a mechanical clutch which includes a hub mountable on a shaft with an annular driving member rotatably mounted on the hub together with a friction disc member slidably mounted on the hub. Further included is a pressure ring slidable axially on the hub for pressure engagement with the friction member together with an annular carrier member carried by the hub which mounts a plurality of pivoted spaced finger pressure members for pressure engagement with the pressure ring, and a cam ring carried by the carrier member and slidable thereon for pressing the finger members which move the pressure ring to move the friction member into engagement with the driving member to cause rotation of a shaft secured to the hub.

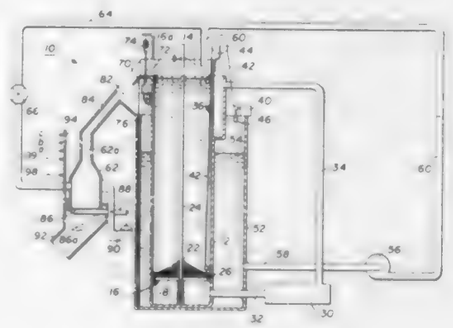
3,372,783
COIN CHUTE STRUCTURE
Terrence A. Reedy, Jr., Skokie, Ill., assignor to Lion Manufacturing Corporation, Chicago, Ill., a corporation of Illinois
Filed Aug. 26, 1966, Ser. No. 575,404
11 Claims. (Cl. 194—1)

The coin drop or guide comprises assembled plates of a particular configuration defining a coin passage having an exit to overlie the coin entrance to a removable type of coin testing chute, with formations adjacent such exit for separable interfit with a part of the testing chute



whereby to stabilize the coin drop or guide and maintain the exit thereof in alignment with the coin entrance while permitting ready removal of the testing chute.

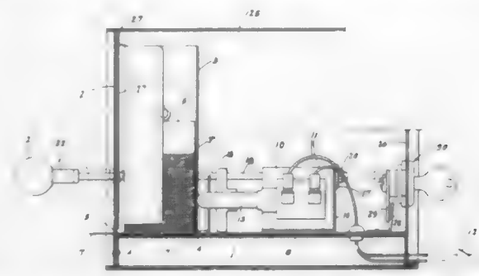
3,372,784
MINNOW VENDING METHOD AND MACHINE
Billy H. Ross, Corsicana, and Jerry D. McMahon, Tennessee Colony, Tex., assignors of one-half to said Ross and one-half to said McMahon, Tennessee Colony, Tex.
Filed Dec. 2, 1965, Ser. No. 511,029
19 Claims. (Cl. 194—2)



A machine for vending a predetermined quantity of minnows from a bulk container having a primary receptacle for the minnows and having a restricted outlet. The minnows are concentrated adjacent the outlet and additional water supplied to the primary receptacle from a secondary receptacle to cause the water to overflow through the outlet and carry the minnows, essentially one at a time, through the outlet. The quantity of minnows passing through the outlet is measured, either by counting or by volume, and passed into a delivery receptacle which also contains a predetermined measure of water. After the predetermined quantity of minnows has passed into the delivery container, the measured quantity of minnows plus the measured quantity of water are delivered to the customer.

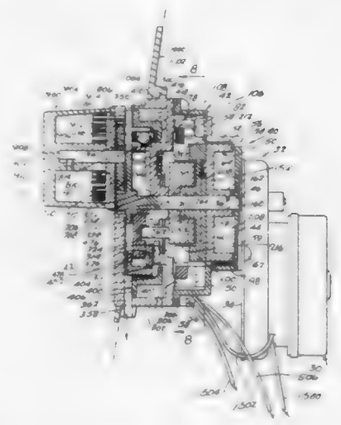
3,372,785
COIN SWITCH CONTROLLED TICKET DISPENSER
Norman L. Bei, 156 Hagemann Ave., Santa Cruz, Calif. 95060, and T. J. Scott, 537 Cathedral Drive, Aptos, Calif. 95003
Filed Oct. 10, 1966, Ser. No. 585,378
8 Claims. (Cl. 194—10)

A ticket dispenser embodying a magazine for a stack of tickets, and a manually operated slide arranged to dispense the tickets one at a time from the bottom of the



stack; a coin-controlled electrical device being employed to reset such slide.

3,372,786
COIN-CONTROLLED APPARATUS WITH CONCENTRIC, COIN-CONNECTED, TURNING PARTS
Jiri J. Hovorka, Miami, Fla., assignor to U.S. Coin Controls, Inc., Miami, Fla., a corporation of Florida
Filed Mar. 9, 1966, Ser. No. 532,982
24 Claims. (Cl. 194—84)

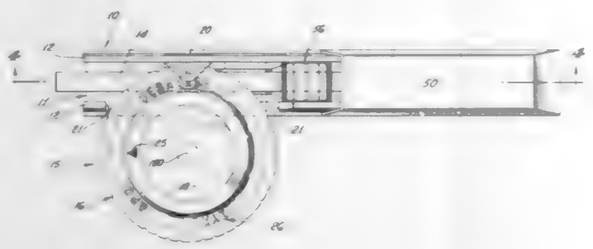


Coin-control apparatus for accepting one coin or a plurality of coins of the same aggregate value as said one coin in which one or more rotors propel one or more coins around the periphery of a stator; radially movable locking means carried by the stator and one or more peripherally spaced means carried by the rotor whereby to disable the locking means of the stator if the coin (or such plurality of coins) subtend an arc on said stator within predetermined tolerances for acceptance of the coins, or for rejection of the coins if such tolerances be not met. Rejection of such coins is accomplished by the reversal of the rotor to expel the coins through the same channel by which they entered. Said mechanism optionally includes means preventing rejection of any of the coins once they have been found acceptable. In short, once the coins are found to be acceptable, the operation *must* be completed and the coins delivered to their proper depository.

3,372,787
TAPE EMBOSSING APPARATUS WITH TAPE VISIBLE PROXIMATE THE EMBOSSING MEANS
John H. Humphrey, Los Angeles, and Harry F. Scheirer and Leonard W. Cheslak, Garden Grove, Calif., assignors to Apsco Products, Los Angeles, Calif., a corporation of Illinois
Filed Dec. 22, 1966, Ser. No. 603,859
15 Claims. (Cl. 197—6.7)

This invention concerns a hand operated tape embossing apparatus incorporating several improvements. The latter

include the provision of: a finger or thumb adjustable roller to controllably advance and retract the tape along

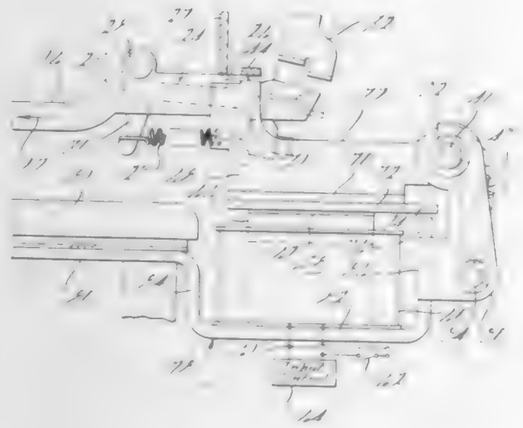


a feed channel: a pivoted actuator forming a tape supply roll magazine; and simplifications in tape feeding, guiding and embossing structure.

3,372,788
PRINTER FUNCTIONAL OPERATION CONTROL MEANS

Martin Siegel, Oak Park, and Roy G. Mason, Detroit, Mich., assignors to Dura Corporation, Oak Park, Mich., a corporation of Michigan

Filed July 22, 1966, Ser. No. 567,259
5 Claims. (Cl. 197—19)



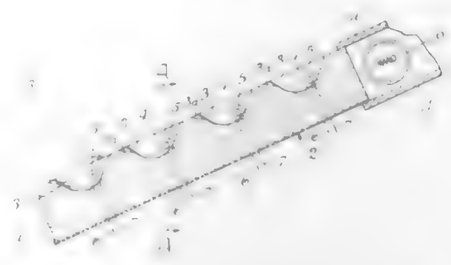
There is herein disclosed an operational control system for a printer having manually operable selection means for selecting various operations and comprising electrically operable control means for selecting the various operations, switch means operable by the manually operable selection means to actuate the electrically operable control means, and input signal means operable by an associated input device to selectively actuate the electrically operable control means.

3,372,789
KEYBOARD WITH IMMOBILE TOUCH SWITCHES

Heinz Thiele, Leinfelden, near Stuttgart, and Gerhard Borner, Musberg, near Stuttgart, Germany, assignors to Zeiss Ikon Aktiengesellschaft, Stuttgart, Germany, a corporation of Germany

Filed Dec. 15, 1966, Ser. No. 602,008
Claims priority, application Germany, Jan. 29, 1966, Z 12,007
6 Claims. (Cl. 197—98)

A keyboard comprising a transparent plate is provided with immobile touch switches consisting of concave touch cavities, each of which is associated with a light barrier means including a photoelectric transducer embedded in the plate which is adapted to be energized by a light beam transmitted by the plate across said cavity. This light beam is interrupted by a finger of the operator when it enters

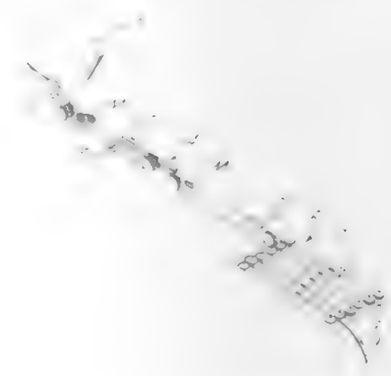


and touches the concave surface of the cavity, thereby producing an electric control impulse which is used in known manner to operate a control device or the like.

3,372,790
APPARATUS FOR FEEDING MOUTHPIECES FOR CIGARS, CIGARETTES AND THE LIKE

George Frederick Pembroke, James George Edward Hillman, and John Elliott New, Deptford, London, England, assignors to Molins Machine Company Limited, London, England, a corporation of Great Britain

Filed Sept. 12, 1966, Ser. No. 578,800
Claims priority, application Great Britain, Sept. 16, 1965, 39,623/65
5 Claims. (Cl. 198—33)



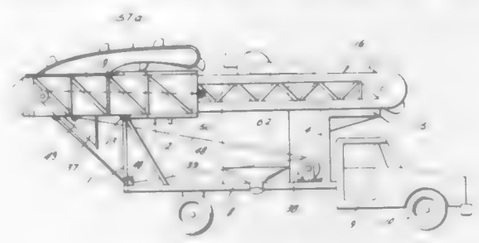
1. Apparatus for feeding and orientating mouthpieces having flattened end portions, which comprises means for extracting a succession of randomly oriented mouthpieces from a bulk supply and delivering them in succession onto at least one pair of elongated generally parallel elements which support said mouthpieces as a column and which are spaced apart sufficiently to permit the flattened end portions of said mouthpieces to pass between them, the mouthpieces being supported by said elements engaging the larger portions of the mouthpieces, said apparatus further comprising a reservoir to receive from said elements mouthpieces which have been orientated in the same direction, said reservoir comprising a plurality of parallel conveyors operatively associated in end-to-end relationship on which the mouthpieces are moved in a sinuous path towards an outlet.

3,372,791
MOBILE ELEVATOR TOWER

Alvin B. Kennedy, Jr., 1802 Meadowview, Alvin, Tex. 77511

Filed July 25, 1966, Ser. No. 567,771
1 Claim. (Cl. 198—121)

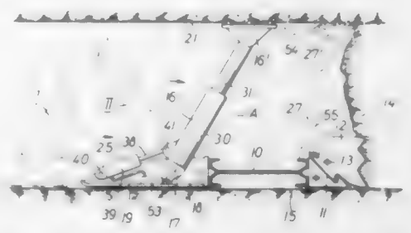
An elevator for particulate material including a powered, continuous belt conveyor mounted in sealingly telescoping, enclosed casing parts pivotally mounted on a truck chassis and which can be collapsed for compact carriage on the chassis, and means to cause a gaseous flow through the casing parts to separate dust from material being elevated.



3,372,792
APPARATUS FOR BRACING A LONGITUDINAL MINING CONVEYOR

Armin Löbbe, Oberaden Post Kamen, Germany, assignor to Gewerkschaft Eisenhutte Westfalia, Wethmar, near Lunen, Westphalia, Germany, a corporation

Filed Mar. 1, 1965, Ser. No. 436,397
Claims priority, application Germany, Feb. 28, 1964, G 39,974
12 Claims. (Cl. 198—126)

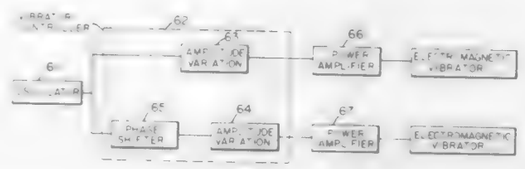


This specification discloses a novel prop means adapted to brace a mining conveyor against the floor and roof of a mine, so constructed that the mining conveyor is capable of moving toward and away from the mine seam plane without disturbing the propping action. This apparatus consists of a mining conveyor having an elastically extensible prop member pivotally connected to the side thereof away from the mine face, which prop member has a cap pivotally connected therewith which impinges upon the mine roof as the mining conveyor proceeds towards or away from the mine face, the prop member extends or retracts elastically without altering the contact thereof with the roof.

3,372,793
VIBRATORY CONVEYOR SYSTEMS

Alan Harry Redford, Whitefield, Manchester, and Geoffrey Boothroyd, Prestwich, Manchester, England, assignors to National Research Development Corporation, London, England, a British corporation

Filed Sept. 14, 1966, Ser. No. 579,272
Claims priority, application Great Britain, Sept. 16, 1965, 39,601/65
2 Claims. (Cl. 198—220)

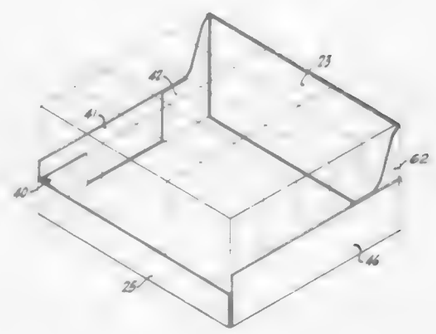


Vibratory conveyors for conveying elements along a rectilinear or curvilinear path and including two independently controllable suspension means, one for producing substantially vertical agitating vibrations and the other for producing substantially horizontal conveying vibrations.

3,372,794
END-LOADING DISPLAY TRAY FORMING SHIPPING CARTON

Frank A. Kohlhaas, Minneapolis, Minn., assignor to Crown Zellerbach Corporation, San Francisco, Calif., a corporation of Nevada

Filed Jan. 16, 1967, Ser. No. 609,555
9 Claims. (Cl. 206—44)

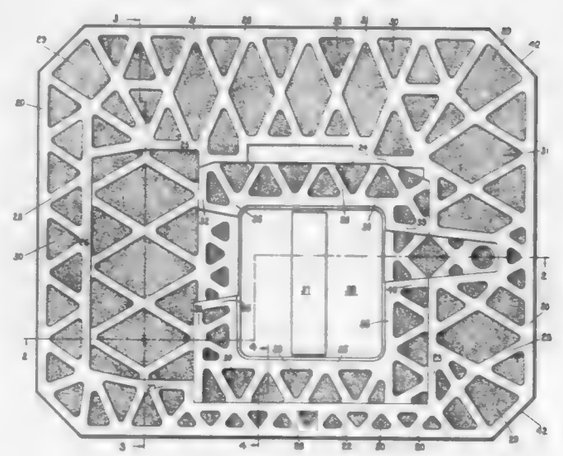


A regular slotted shipping carton having a conventional flap-type end closure modified to be convertible into a display tray. The front wall panel overlaps a front tray-wall panel and is secured thereto with a tear-string tape. The two rear-wall flaps are provided with a perforated score and a particular glue pattern for cooperation with the top and bottom wall flaps which results in the tearing away of a portion of the rear wall flaps with the cover portion as it is removed during the conversion of the carton to a display tray.

3,372,795
PACKAGING PAD

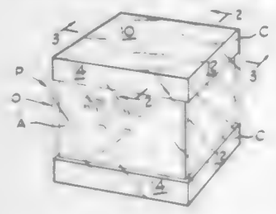
Frank G. Logan II, Framingham, and Harry William Thatcher, Mendon, Mass., assignors to Worcester Moulded Plastics Company, Worcester, Mass.

Filed Nov. 23, 1966, Ser. No. 596,610
9 Claims. (Cl. 206—46)



The invention provides positioning and protective cushioning means for suspending and supporting a fragile product within a common shipping container. The pad may be molded of expanded thermoplastic material to form a centrally positioned receiving enclosure matching the external contours of one end of a proposed product. The receiving enclosure is framed on all four sides by a truss suspension framework and backing plate.

3,372,796
INTERCHANGEABLE CAP FOR PACKAGE
Allan E. Foote, Naperville, Ill., and Arthur W. Tower, Wayne, Pa., assignors to Container Corporation of America, Chicago, Ill., a corporation of Delaware
Filed Jan. 13, 1967, Ser. No. 609,119
11 Claims. (Cl. 206—46)



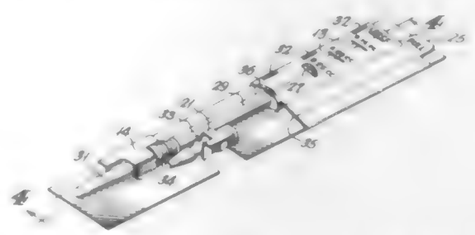
A composite package for an article having end portions with dissimilar contours, including a pair of caps formed from identical, unitary blanks of foldable paperboard each having at least one auxiliary section adapted to be folded in different ways to provide different contours for enclosing respective end portions of the packaged article.

3,372,797
PERFORATED STRIP PACKAGE AND METHOD OF MAKING THE PACKAGE
John J. Grevich, Star Prairie, Wis., assignor to Doughboy Industries, Inc., New Richmond, Wis., a corporation of Wisconsin
Filed May 17, 1965, Ser. No. 456,123
4 Claims. (Cl. 206—56)

A strip package with articles contained in compartments separated by rows of closely spaced apertures separated from each other by small rupturable unsealed panels and formed by piercing the laminae with rods moving endwise through the laminae to also heat seal the laminae together at the peripheries of the apertures, and periodically moving the strip to a new location by tension applied along the strip and through the rows.

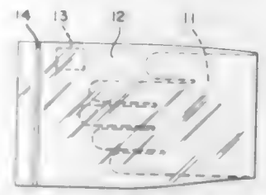
3,372,798
CARD MOUNT PACKAGE FOR HYPODERMIC SYRINGE ASSEMBLY
John Warrick Thomas, % The Thomas Clinic, 2031 Monument Ave., Richmond, Va. 23220
Filed Oct. 31, 1966, Ser. No. 590,920
6 Claims. (Cl. 206—63.2)

1. A card mount package for a hypodermic syringe assembly, said assembly comprising in combination a flange-headed plunger, a syringe barrel, a hypodermic needle and a needle cover, which card mount comprises an elongated flat main body for supporting said assembly, a retaining flap extending from the main body and foldable inwardly over said plunger and said main body and sufficiently beyond said plunger as to permit fastening of the flap when in folded position at a point beyond said plunger to the main body, a plurality of parallel, aligned



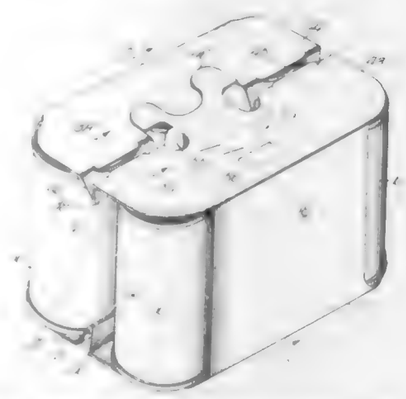
slots in at least one of said main body and said retaining flap disposed transversely to the main body for insertion therein of said plunger head, and retaining means on the main body for holding said syringe barrel immovable relative to said plunger resulting in a fixed measured volume of drug.

3,372,799
SELF-PACKAGED STERILIZED GLOVE AND METHOD
William H. Abildgaard, Los Altos Hills, Calif., assignor to Becton, Dickinson of California, Inc., Los Gatos, Calif., a corporation of California
Filed Jan. 30, 1967, Ser. No. 612,415
4 Claims. (Cl. 206—63.2)



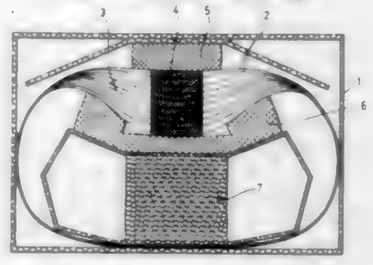
A self-packaging glove for use by surgeons, physicians, and the like, and the method of making thereof. The glove has its exterior surface sterilized and the wrist and arm portion of the glove is folded back over the hand and finger portion to encompass and extend beyond the hand and finger portion. A closure forms a closed package at the wrist and arm portion of the glove so that the exterior sterils surface of the glove is completely enclosed against contamination.

3,372,800
ARTICLE CARRIER
Edwin L. Arneson, Morris, Ill., assignor to Federal Paper Board Company, Inc., Bogota, N.J., a corporation of New York
Filed Sept. 13, 1961, Ser. No. 137,892
11 Claims. (Cl. 206—65)



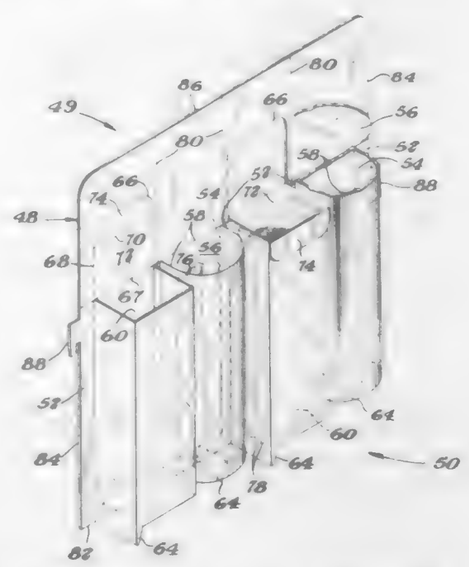
1. A can package comprising two rows of cans having chines at opposite ends thereof and a paperboard carton tightly enclosing the cans so as to form an open ended tubular carrier with portions of the carton walls at the ends of the cans being folded inwardly between the ends of the cans so as to form longitudinal partitions each having an outwardly opening V-shaped cross section and said partitions having apertures cut therein which receive portions of the chines of the cans in each row thereof whereby to firmly anchor the cans against movement in both vertical and longitudinal directions and to restrain the cans against movement out of the open ends of the carrier.

3,372,801
PACKING FOR CYLINDRICAL FOILS AND A METHOD FOR PACKING THESE CYLINDERS
Hendrik Wagter, Mook, Netherlands, assignors to Gebr. Stork & Co's Apparatenfabriek N.V., Amsterdam, Netherlands
Filed Feb. 23, 1967, Ser. No. 618,210
Claims priority, application Netherlands, Mar. 31, 1966, 66—4,317
4 Claims. (Cl. 206—65)



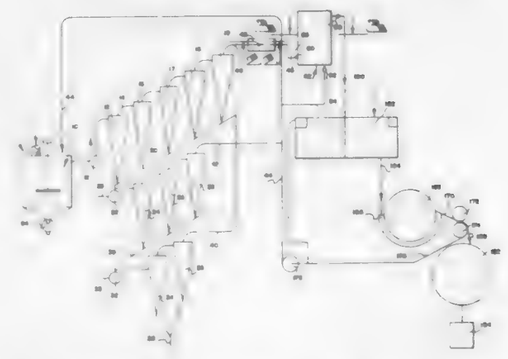
A number of cylindrical metal stencils slid into each other and packed in a box, said stencils contacting each adjacent stencil over at least one half of their circumference, the remaining part being spaced by means of soft resilient material.

3,372,802
DISPENSING CONTAINER FOR DISPLAYING ARTICLES ON A SURFACE
John P. Repko, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
Filed Sept. 12, 1966, Ser. No. 578,556
3 Claims. (Cl. 206—78)



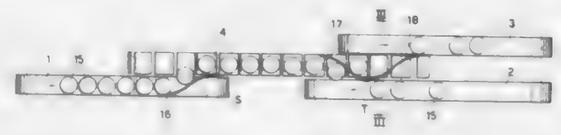
A disposable dispensing container comprising a backing having one or more pockets secured thereto for display of unit packages. Several types of covers for the pockets are disclosed.

3,372,803
MEANS AND METHOD FOR REMOVING IRON FROM ASBESTOS ORE
Auguste Louis de Lisle, Scottsdale, Ariz.; Frances S. de Lisle, executrix of said Auguste Louis de Lisle, deceased, and William Courtland Kinnon, Phoenix, Ariz., assignors to Chembestos Corporation, Phoenix, Ariz., a corporation of Arizona
Filed July 30, 1964, Ser. No. 386,226
15 Claims. (Cl. 209—5)



15. A process for removing iron from asbestos ore comprising the steps of mechanically reducing asbestos ore to a pulp state in a liquid having dispersing reagents therein which chemically loosens iron and minerals from the fibers of the asbestos thereby forming a slurry of relatively free asbestos fibers; said asbestos fibers and said liquid in said slurry ranging in proportions by weight from 1 to 40 asbestos fibers and liquid, respectively, to 1 to 100; then forcing said slurry at high velocity through a separator means and moving said slurry in a manner to cause separation of iron particles from the fibers of said pulp due to a difference in specific gravity between the iron and the fibers, whereby a substantial portion of the heavier iron particles are separated from said fibers; then passing said slurry with the fibers from which said portion of the heavier iron particles have been separated through an intense magnetic field to thereby magnetize unseparated particles of iron, to thereby force iron particles in the slurry magnetically to coalesce, thereby forming relatively large magnetic particles in said slurry; then passing said slurry carrying said relatively larger particles into contact with collector magnets and thereby collecting said coalesced particles thereon and thus removing coalesced particles from said fibers; then filtering said asbestos fibers from said slurry and then drying said fibers; and gravitationally removing iron from said first mentioned separator means.

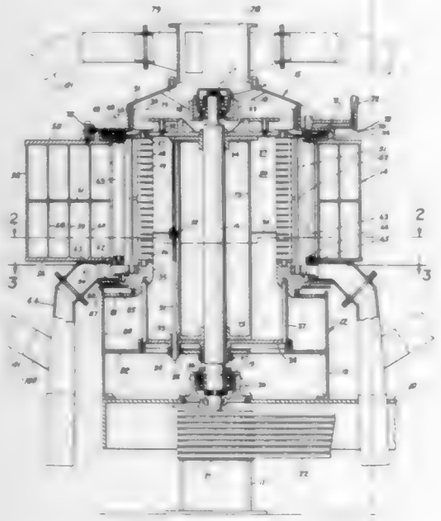
3,372,804
AUTOMATIC MACHINE FOR CHECKING THE WEIGHT OF OPEN CANS CONTAINING LIQUID OR SEMILIQUID SUBSTANCES
Lionello Puoti, Via Confalone 7, Naples, Italy
Filed Nov. 19, 1965, Ser. No. 508,777
Claims priority, application Italy, Sept. 30, 1965, 21,533/65
6 Claims. (Cl. 209—74)



A machine for checking the weight of open filled cans includes scales for individual cans mounted upon a movable conveyor, the cans being transferred from another movable conveyor individually upon the scales by a deviator. Another deviator shifts cans having the proper

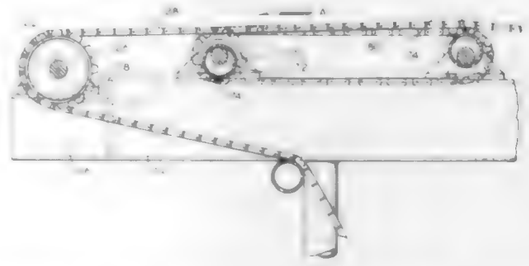
weight from the scales to a third conveyor, while cans of insufficient weight are moved by a third deviator to a fourth conveyor.

3,372,805
FINE PARTICLE CLASSIFIER
William H. Lykken and James W. Bercaw, Springfield, Ohio, assignors to The Microcyclomat Co., Minneapolis, Minn., a corporation of Delaware
Filed Dec. 29, 1965, Ser. No. 517,387
7 Claims. (Cl. 209—144)



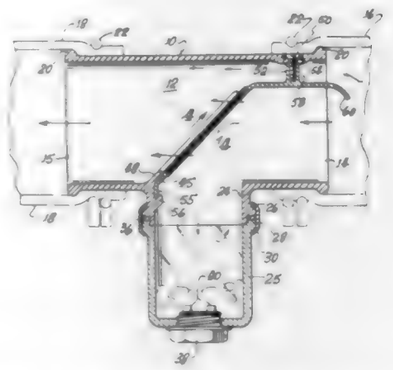
1. A vertical classifier apparatus for dry pulverulent material which comprises:
(A) a peripheral inlet-axial outlet centripetal extraction classifier rotor journaled for rotation on a vertical axis within a rotor housing, said rotor comprising a plurality of spaced apart horizontal annular discs and a plurality of vertical blades between the discs,
(B) an annular axial discharge duct extending through said rotor,
(C) a material feed inlet at the top of said housing,
(D) means for distribution of feed for gravitational flow about the cylindrical periphery of said rotor,
(E) an air inlet to said rotor housing,
(F) a fan housing and fine product discharge in communication with the axial discharge duct of said rotor,
(G) fan means on said rotor within said fan housing,
(H) an annular coarse particles discharge chamber disposed about said rotor between the bottommost of said annular discs and said fan housing and in direct communication with the annular space surrounding the cylindrical periphery of the rotor,
(I) a vertically bladed horizontal ring extending from said rotor for rotation in said coarse discharge chamber,
(J) at least one coarse particle discharge duct in communication with said chamber,
(K) an annular pneumatic seal chamber disposed around said rotor between said coarse particle discharge chamber and said fan housing,
(L) an air inlet to said pneumatic seal chamber, and
(M) a horizontal barrier disc extending from said rotor for rotation in said pneumatic seal chamber, said disc dividing said chamber into a top portion in communication with said last named air inlet and said coarse particle discharge chamber and a bottom portion in communication with said air inlet and said fan housing, whereby passage of particles from said coarse particle discharge chamber to said fan housing is effectively prevented.

3,372,806
HARVEST SHAKER
Wellington W. Porter, R.D. 2, Waterloo, N.Y. 13165
Filed Apr. 27, 1966, Ser. No. 545,623
11 Claims. (Cl. 209—247)



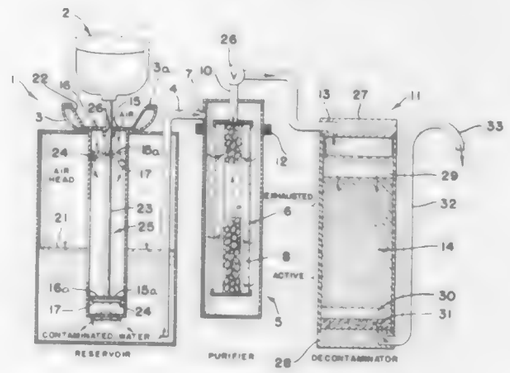
Harvest apparatus comprising an elevating conveyor having a counter rotating drum with tines disposed thereabove to limit the thickness of harvest conveyed, and a shaker apparatus comprising an endless conveyor of course mesh, providing a flexible bed grid disposed to receive harvest from the elevating conveyor, the shaker apparatus including means to advance the bed grid in a direction away from the elevating conveyor, at a selected speed, and shaker rolls disposed beneath the bed mounted eccentrically on axes uniformly spaced and lying in a common plane beneath the bed grid, each roll having a shaker cam rod affixed thereto on the most eccentric side, and means for driving all of the rolls in the same direction, and at a speed independent of the conveyor bed grid movement.

3,372,807
FILTER
Charles A. Barnard, 813 W. J St.,
Ontario, Calif. 91762
Continuation-in-part of application Ser. No. 409,776, Nov. 9, 1964. This application Dec. 19, 1966, Ser. No. 602,779
7 Claims. (Cl. 210—94)



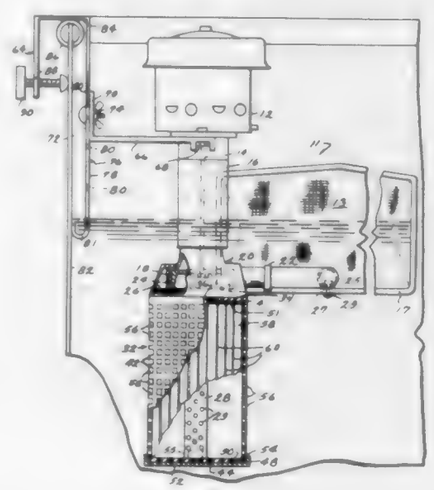
An accessory for installation in the engine cooling system of an automotive vehicle to trap foreign material entrained in the engine coolant, the accessory having a main coolant conduit removably mounting a filter bowl, and an inclined filter within the conduit for separating out foreign material from the coolant and diverting the foreign material into the filter bowl, the filter being removable for cleaning and spanning a portion only of the coolant passage in the conduit, whereby sufficient coolant is permitted to flow through the engine to prevent overheating even though the filter is clogged.

3,372,808
APPARATUS FOR REMOVING RADIOACTIVE MATERIALS FROM WATER
Joseph F. Sabo, 8680 Lewis Road,
Olmsted Falls, Ohio 44138
Continuation of application Ser. No. 157,750, Dec. 7, 1961. This application June 9, 1966, Ser. No. 556,521
4 Claims. (Cl. 210—95)



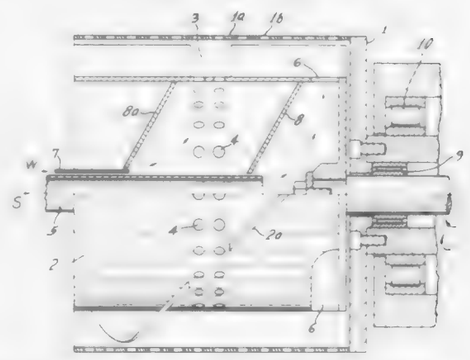
A physically integrated filter unit for purifying and removing radioactive materials from water which includes a closable reservoir having an inlet port and an outlet port. A pump is provided in the reservoir for creating a pressure head in said reservoir. A silver impregnated ceramic filter having an outlet port and an inlet port is in fluid communication with the outlet port of said reservoir means and ion-exchange means is likewise in fluid communication with the outlet port of said ceramic filter through which water to be purified is passed. The water to be purified is passed from the reservoir to the ceramic filter and then into and through the ion-exchange means. A variable fluid flow control valve is provided at the outlet of the filter unit to regulate the output flow of filtered water under pressure from said unit.

3,372,809
SWIMMING POOL SURFACE SKIMMER
Carroll F. Spitzer, Rte. 3, Hagerstown, Md. 21740
Filed Apr. 29, 1965, Ser. No. 451,808
3 Claims. (Cl. 210—169)



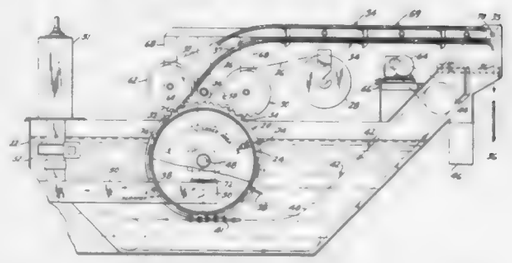
Apparatus for bringing water up from the lower region of a swimming pool, filtering this water to remove submerged debris therefrom, jetting the filtered water tangentially to the pool water surface and into a reticulated structure only partly submerged below the pool water surface in order to establish and maintain water circulation in the pool and to catch floating debris in the reticulated structure.

3,372,810
SIEVE CENTRIFUGE
Hans Kletschke, Wiesbaden-Biebrich, Germany, assignor to Kalle Aktiengesellschaft, Wiesbaden-Biebrich, Germany
Filed Sept. 1, 1964, Ser. No. 393,533
Claims priority, application Germany, Sept. 3, 1963, K 50,717
1 Claim. (Cl. 210—210)



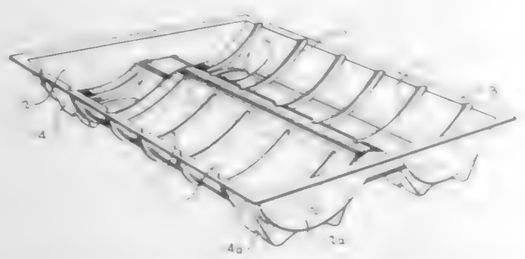
The present invention relates to a sieve centrifuge, for washing solid flowable material, including a rotatable cylindrical drum having sieve apertures in the curved periphery thereof and a relatively rotatable generally cylindrical feed screw mounted coaxially within the drum, the thread or threads of the feed screw being interrupted to provide at least one free annular space between the circumference of the feed screw and the drum, the feed screw having peripheral apertures through which wash liquid can be supplied from a passage within the screw to the annular space, and the arrangement being such that by relative rotation of the feed screw and the drum during operation of the centrifuge, material supplied at one end of the drum can be fed between the feed screw and the drum in a direction parallel to their common rotational axis, passing across the annular space and out of the the other end of the drum.

3,372,811
ROTATING DRUM FILTER APPARATUS
Orlan M. Arnold, Grosse Pointe Park, Frederick W. Koepke, Jr., Detroit, Sark Pashaian, Monroe, James M. Stewart, Dearborn, Emil Umbricht, Northville, and Henry Joseph Laslo, Detroit, Mich., assignors to Ajem Laboratories, Inc., Livonia, Mich.
Filed Apr. 16, 1964, Ser. No. 364,352
4 Claims. (Cl. 210—387)



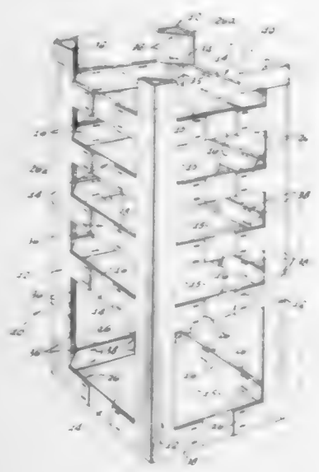
A rotatable filter drum having a pervious filter face and a hollow hub. Suction is applied to the interior of the drum through the hub and liquid is filtered through the filter face. An arcuate wall, stationary relative to rotations of the filter drum, is positioned to seal off that portion of the pervious face which at any time is exposed above the level of the liquid being filtered.

3,372,812
DISPLAY RACK
Clarence W. Parcels, Racine, Wis., assignor to S. C. Johnson & Son, Inc., Racine, Wis.
Filed Aug. 2, 1965, Ser. No. 476,580
4 Claims. (Cl. 211—49)



A unitary merchandise display tray for displaying flat, circular articles is described. The tray comprises a body having a plurality of semi-circular troughs extending from end to end thereof for receiving articles to be displayed, end portions at each end of the body and front and rear feet. The body and ends are of shallow depth to permit the viewing of the articles without necessitating their removal from the tray. The feet are concave to complement the curvature of the articles being displayed.

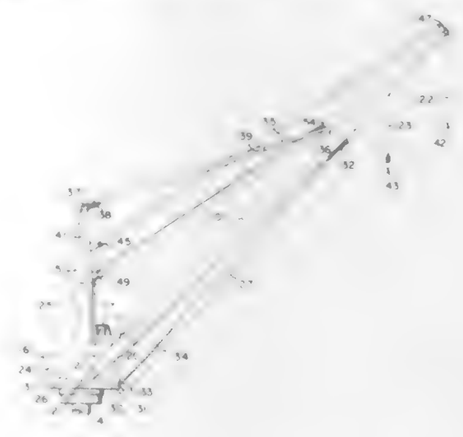
3,372,813
COMBINED SHIPPING AND DISPLAY RACK
Henry J. Ishida, 16420 S. Avalon Blvd., Gardena, Calif. 90247
Filed Apr. 5, 1966, Ser. No. 540,341
10 Claims. (Cl. 211—135)



A rack that is made of cardboard can be erected to provide a combined shipping and display rack for merchandise and is especially suited to shipping and displaying plants. Several trays are provided at different levels, and the spacing between these can be adapted to the merchandise. After use, the rack may be disposed of by burning.

3,372,814
CRANE WITH BOOM-STABILIZING HOLD-DOWN
Arthur J. Muhlbeier, Sedro Woolley, and Donald J. Wudtke, Burlington, Wash., assignors to Skagit Corporation, Sedro Woolley, Wash., a corporation of Washington
Filed Nov. 4, 1966, Ser. No. 592,182
10 Claims. (Cl. 212—39)

This invention relates to a crane, and particularly a crane of the character—a derrick crane for example—in which a boom is pivoted for vertical swing movement and is governed in said swing movement by either taking in or letting out a topping line. The boom in a crane of this character can become unstable, i.e., evidence an overturning moment in the direction of the topping line, when the crane is worked under adverse conditions, say in a high wind. Wind-created instability is of course most apt to occur when the boom has been raised to an angle of 45° or more. The problem of instability is one to which ship-carried cranes are especially prone. An overturning moment may occur from a ship's roll where the ship is called upon to load or unload cargo in open water.



As heretofore known, cranes with vertically swingable booms have relied upon the weight of the boom to resist overturning forces, augmented at times by the weight of a suspended load. However, such augmentation obtains only if the crane is not level-luffing. The problem of instability is of moment to any crane having a vertically swingable boom but is of even greater concern with level-luffing cranes.

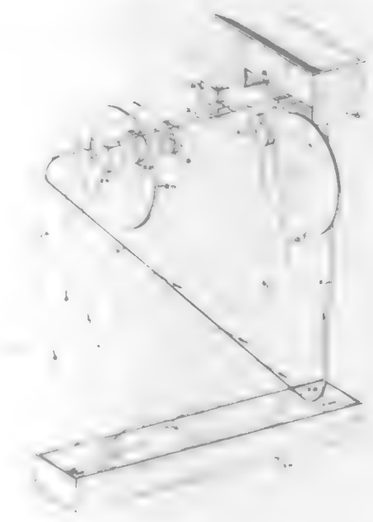
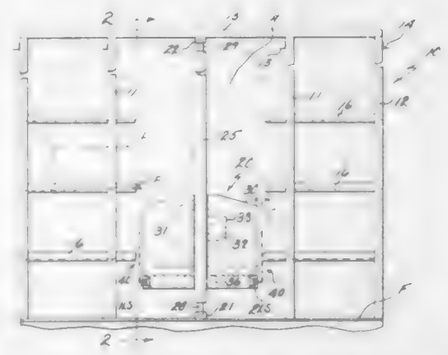
CONVEYER FOR FLEXIBLE MATERIAL
Charles Michael Lovendusky, Enola, Pa., assignor to AMP Incorporated, Harrisburg, Pa.
Continuation of application Ser. No. 248,111, Dec. 28, 1962. This application Feb. 23, 1965, Ser. No. 434,534
4 Claims. (Cl. 214—6)



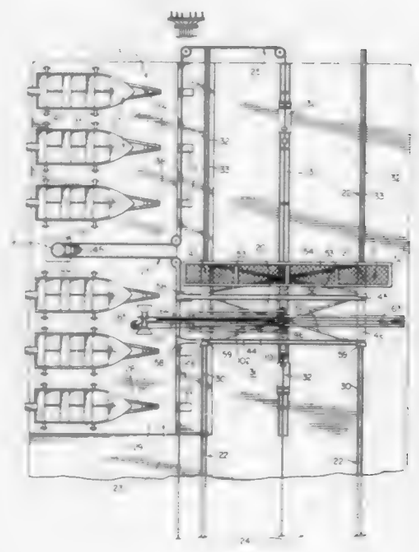
1. A conveyer for relatively elongated lengths of limp material such as wire, the width of said conveyer being an insignificant fraction of the lengths of said material whereby said lengths dangle from the sides of said conveyer, said conveyer being movable along a predetermined path in a substantially vertical plane, a loading station and a release station, said release station being disposed adjacent to a horizontal datum plane and said loading station being above and remote from said datum plane, means for moving said conveyer along said path from said loading station to said release station, stationary retaining means extending parallel and adjacent to said conveyer from said loading station to said release station for holding said individual lengths of material on said conveyer during movement of said lengths from said loading station to said release station, said path being obliquely descending towards said datum plane from said loading station to said release station whereby said individual lengths dangle towards said datum plane and are laid out in a bundle substantially parallel to said conveyer plane on said datum plane beneath said obliquely descending conveyer path.

3,372,816
DETECTING DEVICE FOR IMPROPERLY POSITIONED LOADS IN AN AUTOMATIC WAREHOUSING SYSTEM
Wayne G. Atwater, Willoughby, Ohio, assignor to The Triax Company, Cleveland, Ohio, a corporation of Ohio
Filed Jan. 20, 1966, Ser. No. 521,893
22 Claims. (Cl. 214—16.4)



A detector device for detecting out-of-position loads or obstacles in the running clearance between a powered load carrier and a storage frame of an automatic warehousing system, with the detecting device including sensing means, which sensing means may comprise either a pivotal arm or feeler which is adapted to be moved or swept through the running clearance, to mechanically probe the running clearance, to determine if there is an obstacle or out-of-position load therein, or the sensing means may comprise photoelectric means which probes the running clearance with an energy beam to determine if there is an obstacle or out-of-position load in the path of the energy beam. The sensing means has means coupled therewith and coupled in circuit with the control means for the warehousing system, for preventing operation of the power means which drives the load carrier of the system when the sensing means detects an obstacle or out-of-position load in the running clearance. Also, an arrangement is provided operatively coupled to the control means for the system, for providing for the detecting device to be operative for detecting obstacles or loads projecting into the running clearance and preventing further operation of the load carrier when the detecting device does detect an out-of-position load or other obstacle, only when the extractor is in a generally centered position with respect to the load carrier. The mechanical arrangement of feeler can sweep or probe in a vertical plane parallel to the vertical loading face of the storage rack in certain embodiments, and in other mechanical embodiments illustrated, the sensing arm or feeler sweeps horizontally in a plane generally perpendicular to the vertical loading face of the storage rack. So far as the photoelectric cell arrangement is concerned, certain embodiments illustrate the photoelectric sensing mechanism as mounted on the elevator of the load carrier for movement therewith, and in other embodiments the photoelectric sensor is mounted on the horizontally movable conveyor frame of the load carrier. In one embodiment of the invention, the photoelectric sensor mechanism is movably mounted on the load carrier so that it can be extended and retracted into and from the running clearance.

3,372,817
BOAT MOVING AND STORAGE APPARATUS
Homer E. Conklin, Spirit Lake, Idaho 83869
Filed Feb. 10, 1966, Ser. No. 526,576
6 Claims. (Cl. 214—16.4)

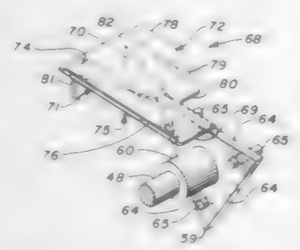


4. In a boat moving and storage apparatus of the type having a carriage with extensible boom carrying an extensible boom cart, said carriage being moveable over tracks extending between a storage area and a spaced launching area, and associated small craft with carts adapted for locomotion over said storage area and said carriage, means of moving said carts comprising:
an endless cable communicating between said storage and launching areas and with said boom, boom cart and carriage;
first means to determine motion of said carriage in response to cable motion;
second means to move said boom and boom cart in response to cable motion upon predetermined position of said carriage; and
third means of supplying directional motion to said cable.

3,372,818
SILO UNLOADER IMPELLER
Shaun A. Seymour, Ephrata, Pa., William E. James, Dijon, France, and William W. Mann, Talmage, Pa., assignors to Sperry Rand Corporation, New Holland, Pa., a corporation of Delaware
Filed Aug. 24, 1966, Ser. No. 574,626
6 Claims. (Cl. 214—17)

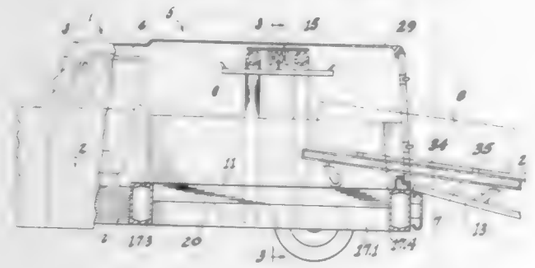
1. In a silo unloader having a frame, a discharge spout and silage gathering means on said frame, means to receive silage from said gathering means and impel said silage through said spout comprising, a housing on said frame having an arcuate wall defining a discharge opening communicating with said spout, said housing having first and second end walls the first of which defines an in-

let opening spaced from said discharge opening and disposed to receive silage from said gathering means, rotary impeller means disposed in said housing and having a central axis of rotation, means journalling said impeller means in said housing end walls for rotation about said axis, drive means rotating said impeller means in a predetermined direction about said axis, said impeller means comprising a plurality of paddle blades each having proximate and distal ends relative to said axis of rotation, said blades each having first and second sides disposed respectively adjacent said first and second housing end walls and extending between said proximate and distal ends, said blades each having leading and trailing surfaces relative to said predetermined direction of rotation, said first



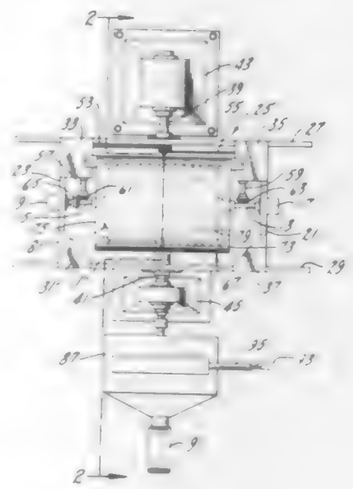
sides of said blades lying in a plane parallel to said first end wall of said housing, each of said blades having a flange thereon extending along said first side of the blade generally parallel to said first end wall of said housing gaging said trailing surfaces of said blades and attach- and perpendicular to said leading surface of the blade, said flange on each of the blades projecting ahead of said leading surface relative to said direction of rotation, said second sides of said blades having first portions adjacent said distal ends and second portions extending from said first portions to said proximate ends, said first portions extending parallel to said first sides and said second portion converging generally toward said first sides between said first portions and said proximate ends, and means ening the blades to said journallin means.

3,372,819
VEHICLE FOR HANDLING BURIAL OBJECTS
Lester W. Kellogg, 4160 Jackson Blvd., Davisburg, Mich. 48019
Filed Oct. 14, 1965, Ser. No. 496,067
4 Claims. (Cl. 214—396)



A vehicle for handling burial objects, such as caskets, vaults, and vault lids, has a conventional front portion with front-wheel drive and a driver's compartment and a rear load-carrying portion for the burial object. The rear portion has a rear opening, and a bottom opening through which the burial object may be passed in horizontal position by means of an overhead means and slings. In one embodiment the rear portion has tracks and a removable ramp leading to the ground, and the burial object is loaded by means of a dolly. In another embodiment, the rear and bottom openings are continuous and the burial object is loaded by backing the vehicle thereover.

3,372,820
HEATING ARRANGEMENT FOR MOLDING MACHINES
Louis H. Barnett, Fort Worth, Tex., assignor, by mesne assignments, to Loma Industries, Inc., Cleveland, Ohio, a corporation of Ohio
Filed Oct. 22, 1965, Ser. No. 501,915
10 Claims. (Cl. 264—310)



1. A mold heating apparatus for use in a thermofusion rotational molding machine in which a mold is supported by a frame for rotation about a first axis and the frame and mold are mounted for rotation about an axis perpendicuir to said first axis including:
means for heating a heat transfer fluid with said means located remotely from said mold,
a housing attached to said frame and defining an enclosure to receive at least part of said mold,
said housing having outer and inner walls defining a plenum,
a plurality of openings extending through said inner walls from said plenum and into said mold enclosure,
at least one opening exhausting from said mold enclosure,
a conduit connected to said plenum to conduct said heat transfer fluid from said heating means into said plenum,
said conduit being formed and adapted to maintain communication between said heating means and said plenum during rotation of said housing with said frame and mold, and
means to move said heat transfer fluid from said heating means through said conduit, plenum and inner wall openings, against said mold and out said mold enclosure exhaust opening.

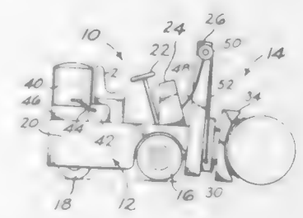
6. A method for heating a mold that is rotated about mutually perpendicular axes comprising the steps of:
enclosing a substantial part of said mold,
rotating said enclosure and said mold around one of said axes,
increasing the temperature of a heat transfer fluid at a location remote from said mold, and
conducting said heated transfer fluid to said enclosure to heat said mold.

3,372,821
SPARE TIRE HOLDER
William R. Podhajsky, Rte. 2, Toledo, Iowa 52342
Filed Feb. 21, 1966, Ser. No. 528,974
10 Claims. (Cl. 214—451)

A winch type spare tire holder for mounting under a pickup truck frame and having winch controls accessible at the rear of the vehicle. A lock system is provided for the controls and the winch attachment to the spare tire

is sealed against tampering. It has a brake device to control attaching and releasing the spare tire relative to the holder.

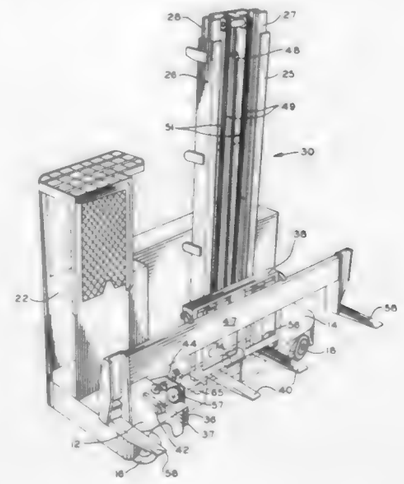
3,372,822
LOAD HANDLING APPARATUS WITH VACUUM ATTACHING MEANS
Harry F. Weinert, Portland, Oreg., assignor to Cascade Corporation, Portland, Oreg., a corporation of Oregon
Continuation-in-part of application Ser. No. 285,015, Feb. 12, 1963. This application May 27, 1965, Ser. No. 462,785
8 Claims. (Cl. 214—650)



4. In load-handling apparatus including vacuum-attaching means,
a motor-driven vacuum producer,
vacuum conduit means connecting the vacuum producer and the vacuum-attaching means whereby a vacuum to operate said attaching means is supplied by said vacuum producer, said conduit means including valve means for controlling operating periods of said vacuum-attaching means, and
means for operating said vacuum-attaching means responsive to a loss of vacuum in said vacuum conduit means,
said means comprising a reservoir for holding gas under pressure, an ejector operated by the flow of gas therethrough including an inlet connected to said reservoir to enable the supply of gas to the ejector from said reservoir and a vacuum supply connection wherein a vacuum is produced on operation of the ejector, and conduit means connecting said vacuum-supply connection with said vacuum-attaching means.

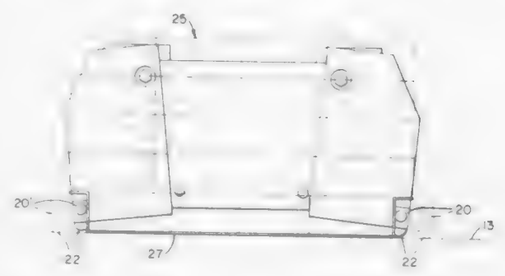
3,372,823
LIFT TRUCK MAST TILTING ARRANGEMENT
Christian D. Gibson and Robert R. Clark, Greene, N.Y., assignors to The Raymond Corporation, Greene, N.Y., a corporation of New York
Filed Oct. 4, 1965, Ser. No. 492,634
8 Claims. (Cl. 214—674)

A tilting mechanism for a translatable lift truck mast in which the mast is supported at its base both by rollers seated upon horizontally-extending trackways and by plate means, and in which a non-rotatable assembly which is



horizontally translatable with the mast carries rotatable cam means, so that rotation of the cam means tilts the mast about the axis of the mentioned rollers.

3,372,824
SELF-ADJUSTING FORK ATTACHMENT FOR A LIFT TRUCK
Richard L. Callahan, Rochester, N.Y., assignor to Gerber Products Company, Fremont, Mich.
Filed June 27, 1966, Ser. No. 560,700
3 Claims. (Cl. 214—731)

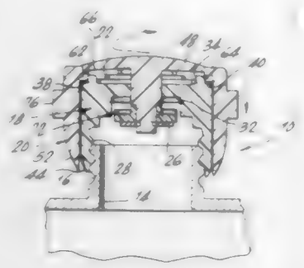


1. In a lift truck, a fork attachment for raising a Walsh-type self-palletized load from a supporting surface, comprising: an upright support adapted to be raised and lowered; a pair of upright tine-holding arms; means for pivotally mounting said tine-holding arms on said upright support for rotation about respective horizontal axes; a pair of tines, each of said tines being rigidly attached to and projecting outwardly from a respective arm at a location below the corresponding pivot point; each of said arms and tines defining a unit having a lower edge adapted to engage said supporting surface to dispose said unit with its center of gravity displaced laterally and outwardly of its pivotal mounting means at least when said support is at its lowermost position whereby said units are movable inwardly toward each other when said support is raised, to locate said pair of tines under said self-palletized load.

3,372,825
SAFETY CAP
Don Laviano, 119 Washington Place, New York, N.Y. 10014
Filed Aug. 25, 1966, Ser. No. 575,109
8 Claims. (Cl. 215—9)

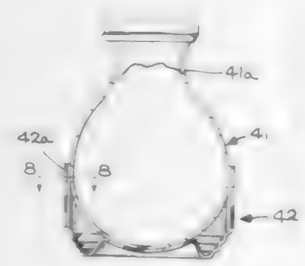
1. A safety cap comprising a cylindrical body having a transverse web at the upper portion thereof, the lower portion of said body being internally threaded for

threaded engagement with a container, said web having a bore there through, the undersurface of said web being provided with teeth, the upper surface of said web being provided with notch means therein, a housing for receiving said body, said housing having a top provided with a depending stem extending through said bore, detent,



means depending from said top and complementary with and engageable in said notch means, spring means biasing said web and said top normally urging said housing to a raised position with said detent means out of engagement with said notch means, and toothed means mounted on said stem of greater diameter than said bore for engagement with said teeth.

3,372,826
COMPOSITE CONTAINER
Richard A. Heaton, Toledo, Ohio, assignor to Owens-Illinois, Inc., a corporation of Ohio
Filed Mar. 30, 1966, Ser. No. 538,735
18 Claims. (Cl. 215—12)



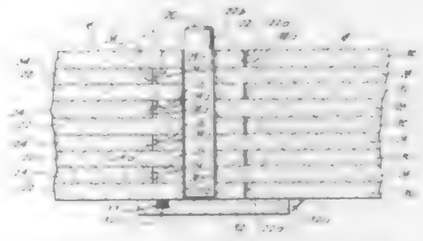
This invention relates to a composite container for packaging a product, the container being comprised of a paste molded glass envelope of substantially thin, uniform wall thickness and distribution. The glass envelope is seamless and has a lower bulbous portion that is substantially spherically contoured which defines the major diameter of the envelope. The upper portion of the envelope terminates in an orifice defining a mouth or finish of the container which receives a closure. A fitment made of a yieldable, less frangible material comprises a cup-shaped bottom or base that is adhesively or otherwise secured to the lower bulbular portion of the glass envelope to support the latter in its upright position and protect it from sidewise impact with other adjacent containers or the like.

3,372,827
SAFETY VENTS FOR PLASTIC COVERED GLASS AEROSOL CONTAINERS
George Altschuler, 2325 Nantell St., Montreal, Quebec, Canada
Filed Feb. 27, 1967, Ser. No. 618,821
5 Claims. (Cl. 215—12)

A glass aerosol pressure bottle covered with a coating of plastic material in which the plastic coating is provided with one or more short slits disposed lengthwise of the bottle to form vents for relief of the pressure within the bottle in the event the bottle is accidentally broken.

The plastic coating remains substantially intact during the escape of gas from the broken bottle.

3,372,828
VESSEL ASSEMBLY
Raymond E. Pechacek and Eugene J. Clay, Houston, Tex., assignors to Hahn & Clay, a corporation of Texas
Filed May 24, 1965, Ser. No. 458,333
6 Claims. (Cl. 220—5)

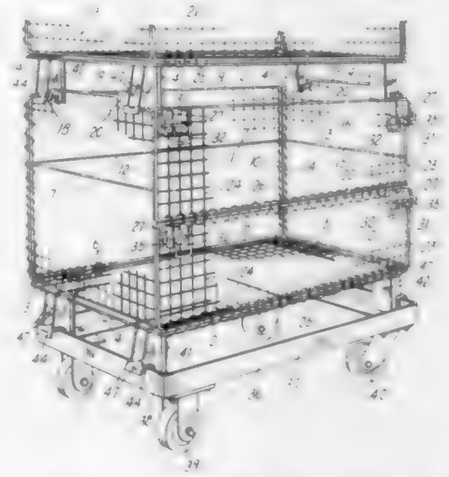


A releasable coupling for a vessel adapted to withstand relatively high internal pressure, wherein the coupling has substantially the same wall thickness as the wall of the vessel, and wherein the coupling may be quickly released when desired.

3,372,829
PORTABLE AND COLLAPSIBLE STACKING BINS OR CRATES
Charles C. Averill, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich.
Filed May 18, 1964, Ser. No. 368,139
14 Claims. (Cl. 220—6)

1. In a crate or container, the combination of a bottom unit comprising a rectangular frame of rod-like stock having integral front, rear and end members, a rear wall unit comprising a rectangular frame of rod-like stock and having integral bottom, end and top members, the bottom member of said rear wall unit being hingedly connected to the rear member of said bottom frame, end walls, each comprising a rectangular frame of rod-like stock and having integral bottom, side and top members, the top members having intermediate portions thereof of substantial length upwardly offset thereby providing the top members with laterally spaced laterally facing shoulders, the rear side members of said end wall frames being hingedly connected to the end uprights of said rear wall frame, the said connections permitting the collapsing of the end walls on said rear wall, the hinge connection for said rear wall to said bottom unit permitting the collapsing thereof with the end wall collapsed relative thereto upon said bottom unit, a front wall unit comprising

sections, each section including rectangular frame members of rod-like stock including unitary bottom, top and end members, the bottom member of the lower of said front wall sections being hingedly connected to the front frame member of the bottom, adjacent longitudinal frame members of said front wall sections being hingedly connected to each other, the connections for the bottom front wall member to the bottom being such as to permit collapsing of the front wall unit upon the bottom, the said rear and end walls when the end walls are in collapsed position being collapsible upon the front wall unit when

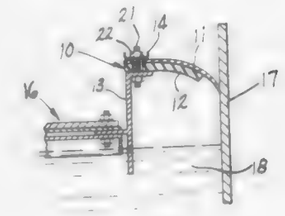


it is in collapsed position upon the bottom, and legs disposed at the ends of and fixedly mounted on said bottom unit and having downwardly facing recesses supportedly engageable with the top members of the end walls when they are in erected position, said legs being spaced to laterally engage said upwardly projecting portions of said end wall frames, said front wall sections and said end walls having coacting bolts and keepers for holding the front wall sections in erected position while permitting the sections being successively opened to afford access to the contents of the crate with like crates in stacked position.

3,372,830
INSULATED DOUBLE CUP
Bryant Edwards, Clarendon Hills, Ill., assignor to Illinois Tool Works Inc., Chicago, Ill., a corporation of Delaware
Filed June 23, 1964, Ser. No. 377,212
14 Claims. (Cl. 220—9)

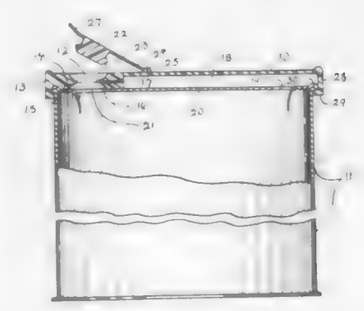
A double-walled container having interfitting inner and outer receptacles or wall portions which cooperate to provide an insulated and reinforced finger-gripping section for the container as well as a novel stacking construction for a double-walled container.

3,372,831
SEAL FOR FLOATING DECK
Frank J. Daniels, Baldwin, N.Y., and Lou C. Creith, Allentown, Pa., assignors to Olin Mathieson Chemical Corporation, a corporation of Virginia
Filed Apr. 13, 1965, Ser. No. 447,804
7 Claims. (Cl. 220—26)



This invention relates in general to an improvement in floating decks for use within a liquid storage tank, and more particularly to an improved seal for such floating decks.

3,372,832
REMOVABLE COVER FOR CONTAINERS
Thomas Yeater and Doris J. Smith, both of 4021 W. Fay Circle, Santa Ana, Calif. 92703
Filed June 17, 1966, Ser. No. 558,303
7 Claims. (Cl. 220—29)

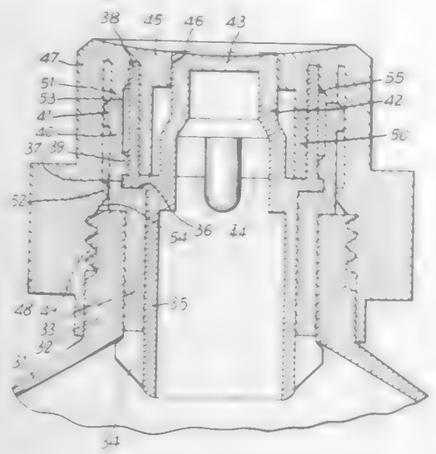


1. A removable closure cap adapted to be secured on a food or beverage tin-can container, comprising a pliable discal means with peripheral skirt terminating in an inwardly projecting means for hermetically sealing said discal means on said container after the top thereof is opened, liquid-dispensing means incorporated in said discal means for disposal of the contents of said container, and means formed in said liquid-dispensing means and disposed between said container and said discal means for venting said container during dispensing of the contents thereof through said liquid-dispensing means.

3,372,833
STOPPERS FOR RECEPTACLES HAVING SCREW-THREADED NECKS
Daniel Baranne, 3 Ave. de la Princesse Mathilde, 95 Saint-Gratien, Seine-et-Oise, France
Filed Dec. 3, 1965, Ser. No. 511,891
Claims priority, application France, Aug. 4, 1965, 27,218
3 Claims. (Cl. 220—39)

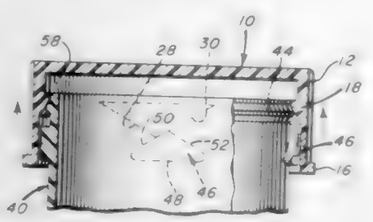
The present stopper is for attachment to containers having a neck with external threads and which stopper when assembled to said neck cannot be readily detached

therefrom. The stopper includes a tubular body insertable in the container neck, a hollow plug member insertable in said tubular body, an internally threaded cap for threaded engagement with said neck and having a central opening in which the top of said plug member mates and



having a skirt and annular rib for cooperating with said inner plug and tubular body to provide three points of lateral sealing around said inner plug to prevent the undesired escape of material from said container other than through said cap center opening.

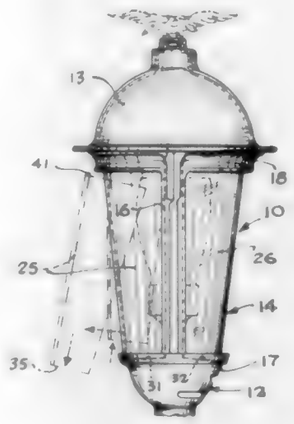
3,372,834
CONTAINER AND CLOSURE ASSEMBLY
Robert A. Ayotte, 1 Central Ave., Mays Landing, N.J. 08330, and Arthur J. Douglas, 4 Allen Ave., Rockport, Mass. 01966
Filed Jan. 24, 1966, Ser. No. 522,494
10 Claims. (Cl. 220—60)



A container and closure assembly comprising an open ended container member, a closure member for sealingly closing said open end, complementary formed interlocking rib means on said container and closure members for holding said closure member in a sealed closing relation to said open end of the container, first and second lug means carried by a surface of said closure and container members respectively, said lug means each having a camming surface interengageable with the other and inclined with respect to the vertical axis of the container member and said camming surfaces being selectively interengageable responsive to relative rotation thereof to effect positive axial disengagement of the aforesaid interlocking means.

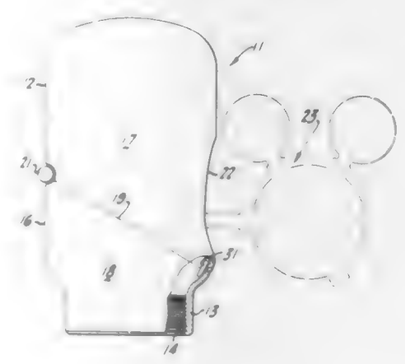
3,372,835
CURVED PANEL LAMP ASSEMBLY
Walter Koziol, Russell, Ill., assignor to Charmglow Manufacturing Co., Antioch, Ill., a corporation of Illinois
Filed Nov. 14, 1966, Ser. No. 593,892
10 Claims. (Cl. 220—82)

Basically, the novel lamp assembly of the present invention comprises one or more curved panel members freely carried by accommodating frame members with curved portions. A curved surface is disposed in the upper portion of the frame for receiving a top portion of the curved panel while a curved base portion of the frame is provided for supporting the base of the curved panel. Stop means are disposed in the base portion of the frame to prevent the base of the curved panel from moving off the base portion of the frame. The upper portion of the curved frame is adapted to allow a portion of the panel



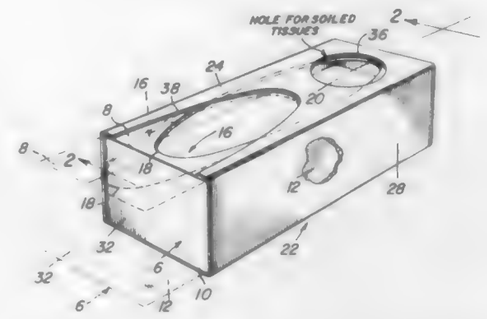
to pass therein sufficient to permit the curved base of the panel to clear the means in the base of the frame. The curved panel is designed and constructed to contact the upper frame portion when it rests by its own weight on the base. Laterally extending flanges and ribs are provided on the frame to arrest inward movement of the curved panel and form a windproof enclosure, respectively.

3,372,836
GAS CYLINDER CAP AND HINGE THEREFOR
Troy E. Smith, 2018 Bishop Road, Belmont, Calif. 94002
Filed Apr. 18, 1966, Ser. No. 543,381
2 Claims. (Cl. 220—85)



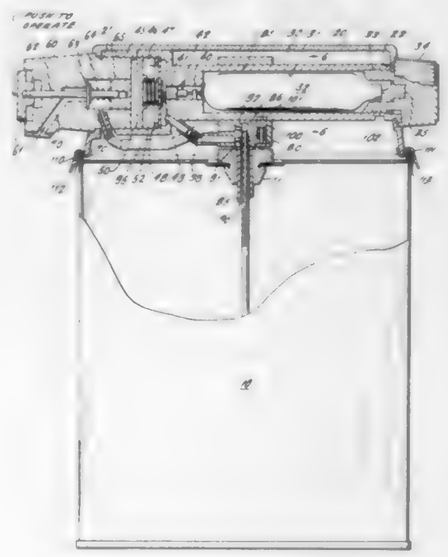
This invention provides a protective cap for attachment to the top of a high-pressure gas cylinder, or the like, and is embodied as upper and lower members with a substantial opening adjacent the bottom of the upper member, and two members mating along an inclined edge extending upwardly from the bottom of this opening to a hinge at the top of the inclination so that the top, or upper member, is pivotally mounted upon the lower member. The lower member is adapted to be attached, as by threaded engagement, onto the top of a gas cylinder, and a latch is provided for holding the two members of the cap together.

3,372,837
COMMERCIAL FACIAL TISSUE DISPENSING BOX WITH AUXILIARY DISPOSAL COVER THEREFOR
Edward C. Neumann, Jersey City, N.J., assignor of fifty percent to Thomas P. Brown, Millville, N.J.
Filed Oct. 3, 1966, Ser. No. 583,768
3 Claims. (Cl. 221—34)



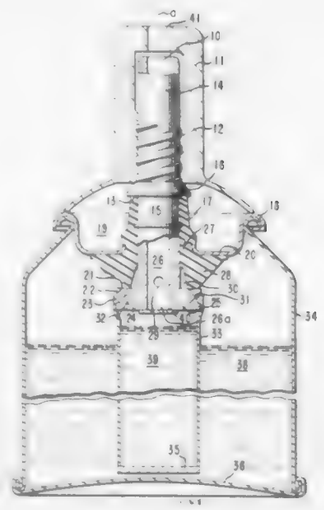
The package above referred to is characterized by a conventional type rectangular cardboard or equivalent box containing facial tissues and wherein the top wall is provided with an elongated dispensing slot affording access to one or more tissues. The improvement has to do with a box-like sheet material cover which is slidingly sleeved over the box. This cover has interconnected top, bottom and side walls as well as one closed end wall. The other or opposite end is open and the closed end wall is manually capable of movement toward and from a corresponding end wall of the box when the cover is shifted relative to the box in a manner to provide a variable depository for soiled tissues and similar litter, the top wall of said cover having a litter hole coacting with an open-mouth notch conjointly capable of orientation and alignment with (1) said dispensing slot (2) said soiled tissue depository.

3,372,838
CARBONATED BEVERAGE DISPENSER
Joseph W. Smith, Trumbull, and Charles P. Mottram, Stratford, Conn., assignors to National Distillers and Chemicals Corporation, New York, N.Y., a corporation of Virginia
Filed May 27, 1966, Ser. No. 553,387
3 Claims. (Cl. 222—52)



A carbonated beverage dispenser has an elongated regulator body containing a cylindrical chamber which completely receives a carbon-dioxide cartridge. The open end of the chamber is closed by a threaded plug containing a piercing member which pierces the cartridge. The opposite end of the regulator body receives a threaded spigot with the threaded spigot and regulator plug passing through openings in a plastic housing including the regulator body. A concentric pair of tubes extend from the regulator body and can puncture a can so that the central and long tube extends into the can content and is connected to the spigot to be dispensed therefrom. The volume between the two concentric tubes is connected through a regulating valve to the gas of the carbon-dioxide cartridge. The concentric tubes can be adjustably located on the cartridge body to pierce either centrally located bungs or off-center located bungs in the can.

3,372,839
DISPENSER WITH MEANS TO PREVENT BURSTING OF THE CONTAINER
John A. Hayes, Philadelphia, Pa., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
Filed Oct. 31, 1966, Ser. No. 590,572
2 Claims. (Cl. 222—94)

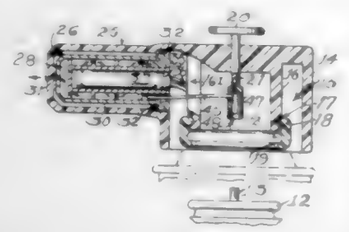


An aerosol dispenser is provided which is substantially free of exposion hazards and which has one or more storage chambers; this dispenser has a rupturable wall in the valve head at the bottom of the valve stem passage adapted to rupture and prevent the container from bursting if the dispenser is inadvertently subjected to conditions which cause an undue rise of pressure within the container.

3,372,840
HEATED AEROSOL DISPENSING ADAPTER
Jerry O. Kelley, Chicago, Ill., assignor to Cart-Trac, Inc., Chicago, Ill., a corporation of Illinois
Filed Jan. 3, 1967, Ser. No. 606,997
2 Claims. (Cl. 222—146)

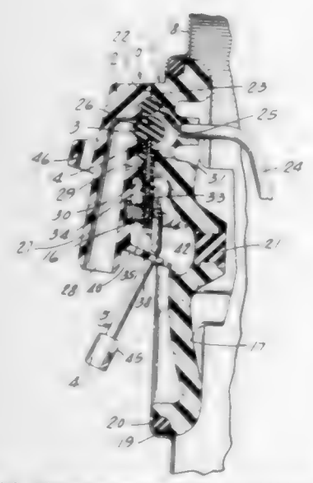
The dispensing attachment is characterized in that it comprises a one-piece head and hollow nozzle structure fitting onto an aerosol canister with a multi-chambered heat-exchanging cartridge means divided into an effluent compartment and a heater compartment, and fitting into the nozzle in a condition of abutment which aligns an escape orifice from the effluent compartment with a discharge opening in the nozzle, there being the further provision wherein a heat-exchanging wall defining the multiple com-

partments affords with the jacket of the cartridge an endwise chamber in which the escape orifice is located for



central alignment with the discharge opening of the nozzle.

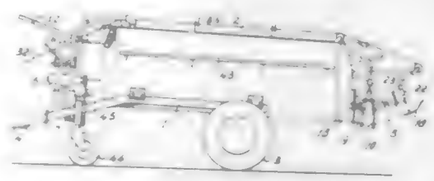
3,372,841
DISPENSING VALVE AND SPOUT STRUCTURE
Richard F. Olson, Golden Valley, Minn., assignor to The Cornelius Company, Anoka, Minn., a corporation of Minnesota
Filed July 13, 1966, Ser. No. 564,832
11 Claims. (Cl. 222—153)



1. A liquid dispensing valve comprising in combination:
(a) an inlet housing having a face;
(b) a spout housing having a face secured to said inlet housing face;
(c) a flow passage arranged to be connected to a supply of liquid and extending through said housings at said faces;
(d) a valve disposed in said flow passage;
(e) a lever supporting said valve, said lever being pivotally supported by said housings at said faces, and having an outer portion projecting outwardly beyond said faces;
(f) confronting means on said housings remote from said faces jointly defining split bearing means; and
(g) a manual actuator pivotably supported by said split bearing means and engageable with said outer portion of said lever.

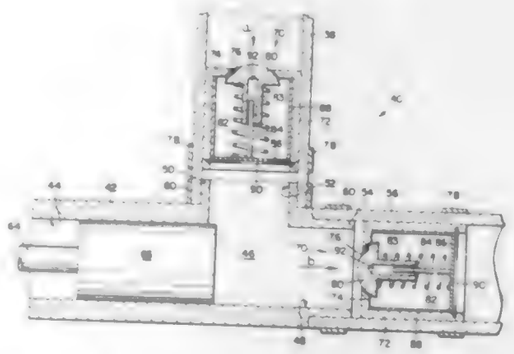
3,372,842
DEVICES FOR SPREADING LIQUIDS
Ary van der Lely, 10 Weverskade, Maasland, Netherlands
Filed Feb. 15, 1966, Ser. No. 527,555
Claims priority, application Netherlands, Mar. 5, 1965, 65—2,788
41 Claims. (Cl. 222—156)

The invention relates to a device for distributing liquids, particularly thick liquids, comprising a liquid container and a distributor which is connected with the container and to which the liquid is fed out of the container. An outlet on the container has a closing member which can be opened more or less by an adjusting mechanism. A quick action control member is connected to the closing



member so that the opening can be completely opened to prevent clogging. A suction hose can be connected to the outlet and a pump on the container is used to vary the pressure in the container. A float arrangement can be used to shut off suction if clogging occurs.

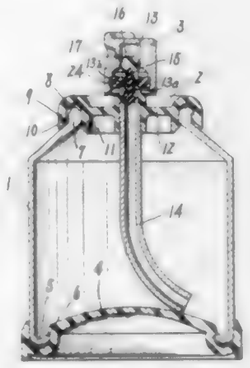
3,372,843
FOOD DISPENSING APPARATUS
Arnold Soodalter, 134 Tanglewood Drive, Longmeadow, Mass. 01106
Continuation-in-part of application Ser. No. 612,928, Jan. 31, 1967. This application Sept. 27, 1967, Ser. No. 670,964
2 Claims. (Cl. 222—309)



Apparatus for forcibly dispensing a first food substance with respect to a second food substance, the first substance being contained in a pressurized container and periodically charged therefrom and through a transfer chamber for dispensing in measured incremental amounts onto or into the second food substance, the apparatus comprising: spring-loaded valve means in each of an outlet of the pressurized container and an outlet of the transfer chamber, an air-actuated transfer cylinder having a piston reciprocable within the transfer chamber for sequentially opening one valve for drawing a charge of the first food substance from the pressurized container and into the transfer chamber and opening the other valve for expelling the charge from the transfer chamber to a nozzle, an air-actuated gate cylinder for closing the nozzle, and a photoelectric signal means for controlling and synchronizing the movements of the transfer cylinder and gate cylinder according to the positioning of the second substance relative to the nozzle.

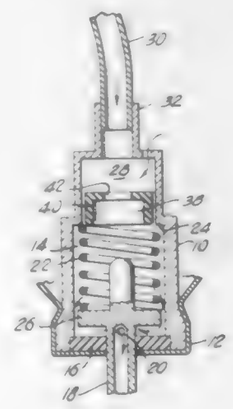
3,372,844
AEROSOL DISPENSERS HAVING AN ALUMINUM IMPACT EXTRUSION CONTAINER
Seiichi Kitabayashi, 2-2246 Nishisugamo, Toshima-ku, Tokyo, Japan
Filed Dec. 1, 1965, Ser. No. 510,829
Claims priority, application Japan, Dec. 2, 1964, 39/92,735
1 Claim. (Cl. 222—402.1)

The present application is concerned with an improvement in aerosol dispensers and particularly such a dispenser having an aluminium body with an open annular end which curves inwardly and upwardly and an annular mouth with at least one side step therein facing downwardly, a plastic bottom having an annular recess



with a side step in which is positioned the bottom end of said body and a plastic top supporting valve means and having coaxial walls with at least one side step therein engaging the side step of the body mouth for providing an aerosol dispenser container.

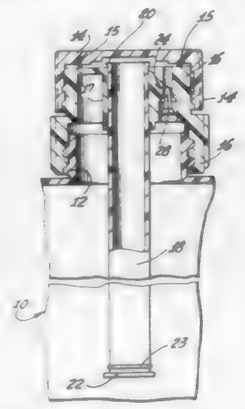
3,372,845
VALVE FOR UPRIGHT OR INVERTED USE
John Frangos, Brooklyn, N.Y., assignor to Revlon, Inc., New York, N.Y., a corporation of Delaware
Filed June 15, 1966, Ser. No. 557,835
2 Claims. (Cl. 222—402.18)



A valve for an aerosol container, said valve including a chambered portion having a perforated disc therein to seal a vapor tap located in peripheral portions of the chamber and communicating between the chamber and container. The disc, responding to gravity, seals the vapor tap only when the container is upright.

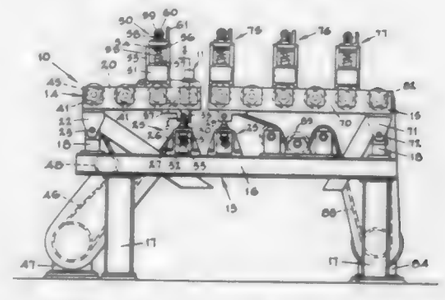
3,372,846
POURING SPOUT
Clyde C. Berkus, 8560 Tujunga Blvd., Sun Valley, Calif. 91352
Filed Aug. 29, 1966, Ser. No. 575,602
4 Claims. (Cl. 222—479)

An improved spout assembly for a plastic container, or the like, is described herein. The spout assembly of the invention is of the retractable type, and it provides a convenient combination which, in the retracted position of the spout may provide a sealing enclosure for the container, and which can be easily opened and the spout extended to facilitate pouring. A vent valve is provided in the assembly so that the liquid from the container may



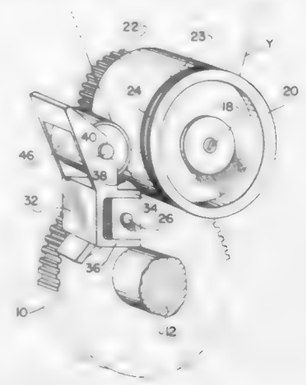
be poured smoothly and evenly through the extended spout.

3,372,847
GLASS BREAKING APPARATUS
Emmett L. Walters and William E. McCown, Toledo, Ohio, assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Filed June 3, 1965, Ser. No. 460,969
12 Claims. (Cl. 225—2)



12. A method of dividing glass sheets along a desired line which comprises: scoring one surface of a sheet along said line, applying forces to said sheet to place the scored surface in tension and the opposed surface in compression, and vibrating said sheet adjacent said score line to assist in dividing the sheet.

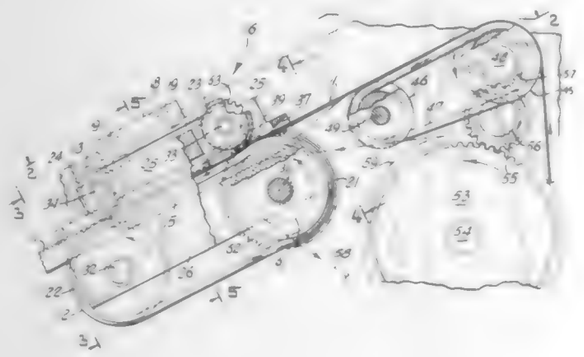
3,372,848
FEED ROLL ASSEMBLY SEPARABLE IN RESPONSE TO THREAD DEPLETION
Warren E. Macdonald, Seekonk, Mass., and Richard G. Hilbert, Smithfield, R.I., assignors to Leesona Corporation, Warwick, R.I., a corporation of Massachusetts
Filed Oct. 24, 1965, Ser. No. 504,810
16 Claims. (Cl. 226—11)



Yarn feeding apparatus in which a pinch roll engages a feed roll to define a nip zone for engaging and advanc-

ing a strand of yarn. The pinch roll mount is pivoted about a pair of axes, one parallel to the rotational axes of the rolls and the other normal thereto and passing through the nip zone, so that the tension and pressure applied to the strand of yarn remain essentially constant.

3,372,849
STRIP FEEDER FOR ADHESIVE TAPE
Joseph J. Hall, Somerville, and Jack A. Kummerow, Englishtown, N.J., assignors to Johnson & Johnson, a corporation of New Jersey
Filed Apr. 19, 1966, Ser. No. 543,718
25 Claims. (Cl. 226—25)



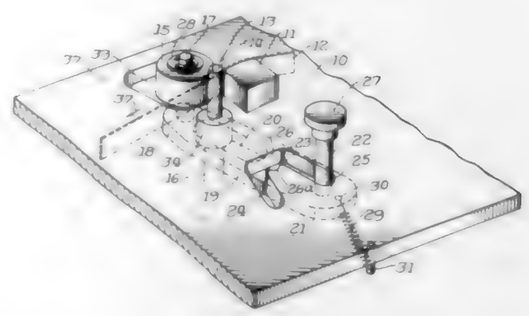
1. A feeding device for a pressure-sensitive adhesive strip which comprises inner and outer continuous feeding surfaces each driven longitudinally in a closed path, said feeding surfaces being adapted to sandwich the strip between them and move forward together in adjacent portions of their respective paths with said inner feeding surface progressively adhering lightly to a narrow longitudinal contact area of the adhesive side of the strip and said outer feeding surface progressively contacting a corresponding longitudinal area of the other side of said strip, whereby said strip is progressively advanced with said feeding surfaces as they move forward together in said adjacent portions of their paths, the said longitudinal contact areas being centrally located transversely of the strip, and a guide track extending longitudinally of said strip for guiding the strip as it is being advanced by said feeding surfaces, said inner feeding surface running within said track and said track comprising opposed side guide portions located transversely outwardly of said feeding surfaces for guiding the strip on each side of said feeding surfaces, said side guide portions being displaced inwardly away from the normal plane of contact between the strip and said feeding surfaces for causing the strip to assume a three dimensional transverse cross-section while said strip is sandwiched between said feeding surfaces; whereby said strip is caused to assume a three dimensional transverse cross-section as it is progressively advanced with said feeding surfaces, and then fed forward and away from the feeding surfaces while retaining its three dimensional cross-section.

3,372,850
TAPE DRIVING ASSEMBLY HAVING SHIFTABLE PINCH ROLLER
John W. Hipelius, Skokie, and George B. Shields, Morton Grove, Ill., assignors to Bell & Howell Company, Chicago, Ill., a corporation of Illinois
Filed Feb. 15, 1966, Ser. No. 527,542
7 Claims. (Cl. 226—180)

1. In a mechanism for moving magnetic record tape and the like in a stream across an operative head,

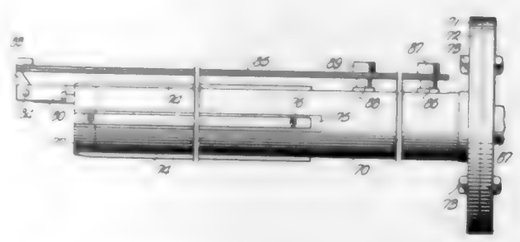
a driven assembly comprising a pair of roller members mounted to impinge therebetween the tape for continuous tractional motivation thereof,

said roller members arranged in a manner such that the position of tape impingement is disposed downstream of the position of first tangency with said assembly of thereto traveling tape, and



roller adjusting means for relatively angularly shifting said roller members to change the position of motivating tape impingement downstream of the position of first tangency with said assembly of traveling tape regardless of the direction of tape movement.

3,372,851
APPARATUS FOR ADHERING AND SEALING FOIL TO GLASS FIBER DUCT
Howard G. Wands and Sydney L. Williams, Kansas City, Mo., assignors, by mesne assignments, to Certain-Teed Saint Gobain Insulation Corporation, Ardmore, Pa., a corporation of Maryland
Original application May 4, 1962, Ser. No. 192,455, now Patent No. 3,256,122, dated June 14, 1966. Divided and this application Jan. 24, 1966, Ser. No. 544,321
10 Claims. (Cl. 228—1)

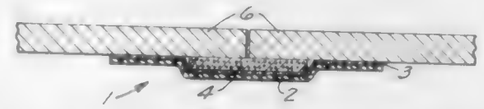


1. Apparatus for handling an insulating duct for application of a metallic foil or sheet to the external surface thereof comprising an elongate mandrel adapted to receive said insulating duct thereon, a hollow elongate insulating duct positioned on said mandrel, and an elongate flat anvil member mounted on said mandrel and extending substantially parallel to the axis thereof and spaced therefrom in such manner as to overlie a portion of the outer surface of said duct in substantial contact therewith and also form an ultrasonic welding surface for metallic foil covering the outside of said duct and said anvil.

3,372,852
TAPE
Lew Wallace Cornell, Mound, Minn., assignor to Minnesota Mining and Manufacturing Company, St. Paul, Minn., a corporation of Delaware
Filed May 26, 1965, Ser. No. 458,908
8 Claims. (Cl. 228—50)

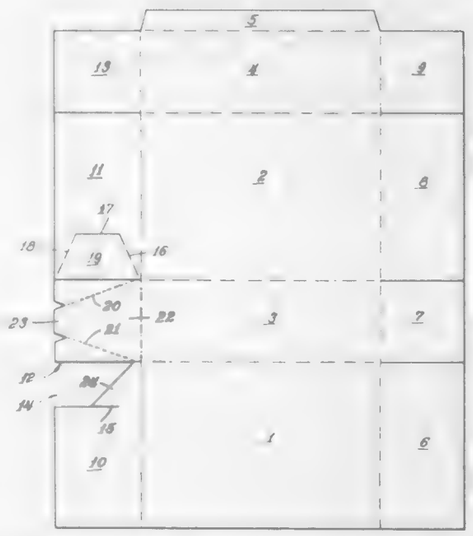
1. A unitary tape material useful as a backing means in metal welding comprising a flexible backing coated with adhesive, a strip of flexible refractory material ad-

hered to a central portion of the coated side of said backing, said refractory material comprising inorganic particles within the size range of 50 to 4,000 microns bound together with a minor amount, less than 10 percent, of the bulk volume of said refractory material of a



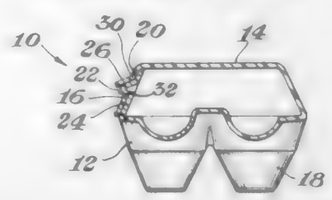
flexible organic binder, said unitary tape material being continuously flexible throughout the length thereof whereby the unitary tape material is capable of being wound into roll form for shipment and storage and subsequently unwound and adhesively applied to metal substrates of varying contours.

3,372,853
DISPENSING CARTON HAVING RECLOSEABLE POUR OPENING
George G. Rumberger, Kalamazoo, Mich., assignor to Brown Company, New York, N.Y., a corporation of Delaware
Filed May 31, 1966, Ser. No. 553,950
10 Claims. (Cl. 229—17)



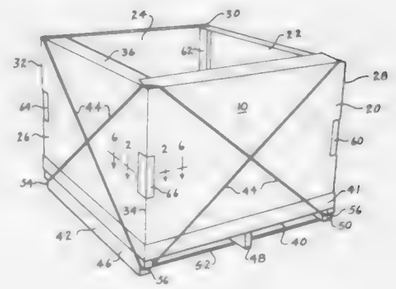
Dispensing carton having means providing a dispensing opening and a detachable reclosure flap hingedly connected at its base to a side panel of the carton.

3,372,854
LATCH ARRANGEMENT FOR EGG CARTONS
Stanley A. Marcus, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
Filed July 27, 1967, Ser. No. 656,584
8 Claims. (Cl. 229—44)



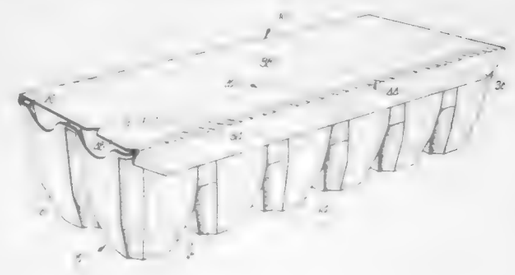
This invention concerns a latch arrangement for an egg carton having a tray, a lid, and a front flap, the front flap and lid preferably being hingedly connected to opposite sides of the tray. The latch arrangement includes lugs protruding from the outer surface of the front flap, and pivotal window panels cut within the front wall of the lid to provide apertures closed or partially closed by the window panels and matable with the lugs. The carton is secured shut by closing the lid over the tray and front flap and inserting the lugs on the front flap through the apertures in the lid.

3,372,855
REINFORCED CONTAINER
Richard Keith Smith, Benton Harbor, Mich., assignor to Twin Cities Container Corporation, Coloma, Mich., a corporation of Delaware
Filed Oct. 4, 1965, Ser. No. 492,810
5 Claims. (Cl. 229—49)



A foldable reinforced container constructed of four side panels joined integrally to one another, forming a rectangularly shaped container, having a reinforcing post disposed on the internal side of the panels at each corner thereof and a strap-like member cut from adjoining panels extending around the internal side to hold the post in the respective corner. The strap is formed by two spaced horizontal cuts, and three or four vertical score lines permit the strap to fold inwardly on the panels after the container has been formed into its final rectangular shape.

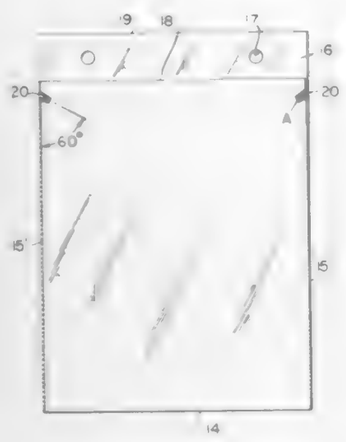
3,372,856
LID FOR EGG CARTON
Andrew Paul Erhart, Ponca City, Okla., and John A. Young, Jr., Shawnee Mission, Kans., assignors to Burd & Fletcher Company, Kansas City, Mo., a corporation of Missouri
Continuation-in-part of application Ser. No. 492,442, Oct. 4, 1965. This application May 23, 1967, Ser. No. 649,774
4 Claims. (Cl. 229—51)



The rim of a generally rectangular carton bottom provides a seat for a sheet of cardboard material having spaced, parallel fold lines therein overlying the rim and defining a marginal flap between each fold line and the adjacent edge of the sheet. The grain of the cardboard material extends at a right angle to the fold lines. Upon application of the sheet to the carton bottom to form a lid therefor, the flaps are folded downwardly into engagement with the sidewalls of the carton bottom and are attached thereto. A tear strip in the central stretch of the

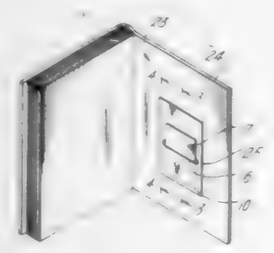
sheet between the flaps is defined by a pair of spaced series of cuts, each of the cuts being angularly disposed with respect to the grain and the fold lines.

3,372,857
SIDE SEAL BAG CONSTRUCTION WITH STRESS RELIEF NOTCH
Ralph A. Brayla, Canandaigua, N.Y., assignor to Mobil Oil Corporation, a corporation of New York
Filed Apr. 7, 1967, Ser. No. 629,164
6 Claims. (Cl. 229—53)



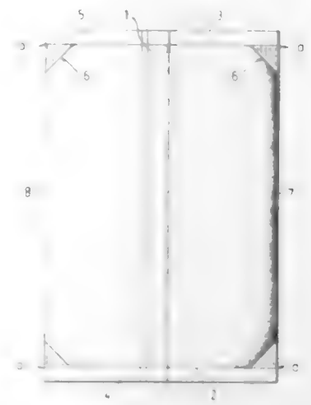
Thermoplastic bag constructions adapted for employment on automatic loading equipment which comprise a front wall and a rear wall said walls being heat seamed together along the opposite longitudinal edges thereof and said bag being opened at one end for the introduction of product therein; rupture of said heat seams during loading operations is inhibited by a stress relief notch located adjacent the upper ends of said heat seams.

3,372,858
POCKET FORMING DEVICE FOR LIBRARY CARDS
Arthur Brody, 465 Melrose Place, South Orange, N.J. 07079
Filed Mar. 31, 1965, Ser. No. 444,201
6 Claims. (Cl. 229—74)



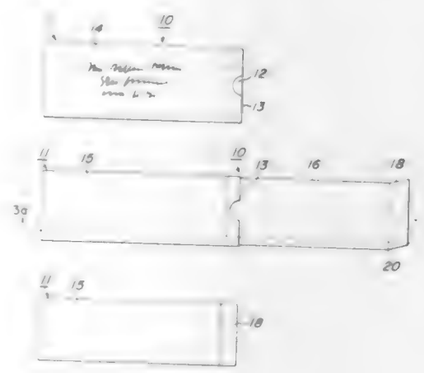
1. A device for adhesive application to a flat book surface to form a pocket for a library card, comprising a sheet bearing on its rear face a pressure-sensitive adhesive and a readily peelable covering, said sheet and covering being cut through to define an opening through which said card can pass, said covering alone being cut along lines enclosing an area having the dimensions of the desired pocket and lying directly alongside said opening, said area being thus adapted to remain covered when the rest of said covering is peeled away to expose adhesive, whereby said covered area can serve as the front wall of the pocket when said sheet is applied to said book surface.

3,372,859
PACKAGE WITH A CORNER SEAL
Carl-Axel Bjorkengren, Akarp, and Frans Wilhelm Johansson, Sandby, Sweden, assignors to AB Akerlund & Rausing, Lund, Sweden, a Swedish joint-stock company
Filed Nov. 9, 1966, Ser. No. 593,066
Claims priority, application Sweden, Dec. 9, 1965, 15,941/65
6 Claims. (Cl. 229—62)



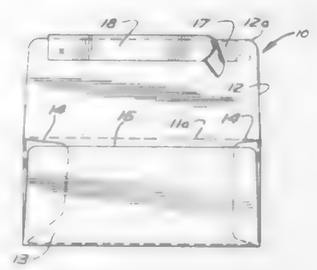
A pillow-shaped package made from a tube of thermoplastic material which is somewhat flattened when filled and transversely sealed with narrow transverse sealing zones at opposite ends of the package. The four corners of the package at the junction of the transverse sealing zones with the longitudinal edges, and which would normally be subject to fracture due to repeated bending along the line of the transverse sealing zones are strengthened by establishing an additional seal zone at each corner portion and which extends across the corner between the longitudinal edge of the package and the adjacent transverse sealing zone.

3,372,860
CORRESPONDENCE PIECE
Richard A. Giurlando, Fairport, N.Y., assignor to Xerox Corporation, Rochester, N.Y., a corporation of New York
Filed June 21, 1966, Ser. No. 559,142
6 Claims. (Cl. 229—68)



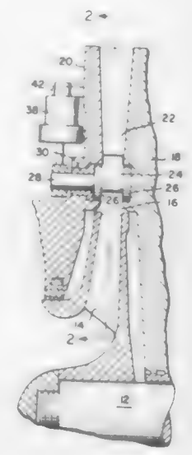
A correspondence piece comprising a markable insert slidable within its own envelope, in a preferred embodiment with a closure flap at one end of the insert to be sealed to the outside of the envelope and with a retarding flap at the other end of the markable insert to engage an envelope retarding flap to prevent complete disengagement of the insert from the envelope.

3,372,861
SELF-SEALING ENVELOPE
Edward P. Johnson and Clark A. Abrahamson, St. Paul, Minn., assignors to Quality Park Envelope Company, St. Paul, Minn., a corporation of Minnesota
Filed May 26, 1966, Ser. No. 553,185
3 Claims. (Cl. 229—80)



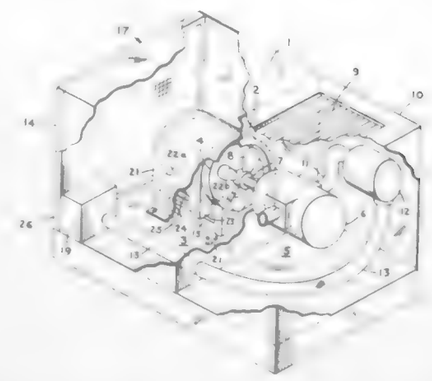
The present invention relates to an envelope construction and more particularly to self-sealing envelopes which self-sealing is provided through a particularly positive pressure sensitive adhesive. This adhesive is applied to this particular envelope along one sealing area adjacent the edge of a closure flap and is overlapped onto the actual edge of the flap. The area adjacent the flap is protected with a quick release cover thereover that the adhesive located on the edge of the flap itself is exposed such that the flap may be held open to facilitate filling of the envelope.

3,372,862
CENTRIFUGAL COMPRESSOR
Carl F. Koenig III, Montgomery, Ohio, assignor to De Laval Turbine Inc., Trenton, N.J., a corporation of Delaware
Filed Oct. 22, 1965, Ser. No. 501,865
2 Claims. (Cl. 230—114)



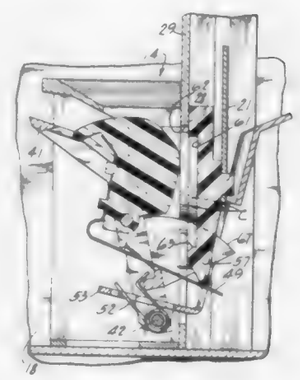
A centrifugal compressor is provided with fixed and movable diffuser vanes disposed around the periphery of its impeller. The movable diffuser vanes are in the form of airfoils pivoted and free to rotate about axes in order to provide variable throat areas between the leading and trailing edges of adjacent vanes. The vanes are pivoted so that this throat area is directly proportional to flow rate and inversely proportional to absolute discharge velocity so that optimum pressure and efficiency are obtained. The movable vanes may be provided with dampers, and may be connected to control an outlet by-pass valve in order to prevent the occurrence of a surge condition.

3,372,863
ENCLOSED MOTOR DRIVEN COMPRESSOR UNIT
Carl Bloom, Springfield, Mass., assignor to Worthington Corporation, Harrison, N.J., a corporation of Delaware
Filed Apr. 26, 1966, Ser. No. 545,311
6 Claims. (Cl. 230—117)



A cooling means for an enclosed fan cooled industrial compressor and motor unit wherein the enclosure for the unit is divided by means of a partition into a first compartment containing the motor and a second compartment containing the compressor, the partition being provided with an opening through which the driving shaft of the motor is connected to the driven shaft of the compressor and in which a fan is to be mounted for rotation and to draw air from an opening in the first compartment and over said motor and discharge the same through said second compartment, and the suction of the compressor in the second compartment receives an independent source of cooler denser filtered air from outside the enclosure.

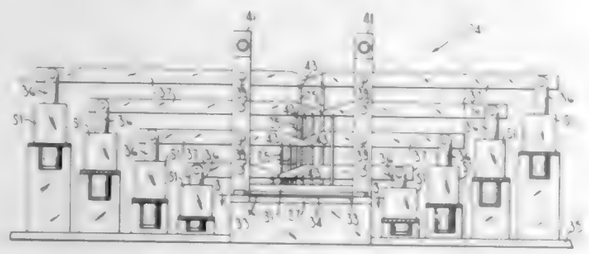
3,372,864
COIN RETURN MECHANISM
Henry C. Kovar, Osseo, Minn., assignor to The Cornelius Company, Anoka, Minn., a corporation of Minnesota
Filed Oct. 31, 1966, Ser. No. 590,912
14 Claims. (Cl. 232—57.5)



1. A coin return mechanism, comprising:
(a) means defining a hopper directed to receive a rejected coin;
(b) a pivoted coin support member disposed beneath said hopper for extending beneath any coins therein;
(c) a transfer member pivoted on said pivoted coin support member and defining one side of a coin pocket therewith;
(d) a pivoted check member defining an opposite side of said coin pocket; and

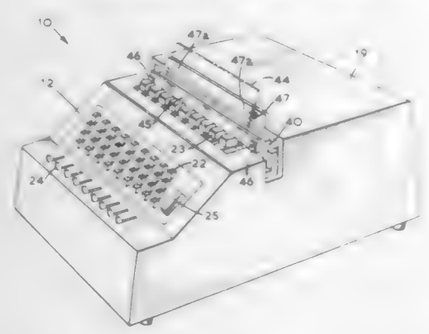
(e) a manually movable coin carrier adapted at one position to pivot said check member in a direction away from the coin, to pivot said transfer member toward the coin to effect transfer of the coin from said pocket into said carrier, and to effect pivoting of said coin support member away from said pocket to accommodate temporarily an additional number of coins, said carrier being movable to a second carrier position where any coin in said carrier is accessible.

3,372,865
STENOGRAPHIC APPARATUS PROVIDING PUNCHED TAPE RECORD
Frank L. Pellegrini, Crestwood, Mo., assignor to Stenomation Incorporated, St. Louis, Mo., a corporation of Missouri
Filed Mar. 30, 1966, Ser. No. 538,644
10 Claims. (Cl. 234—36)



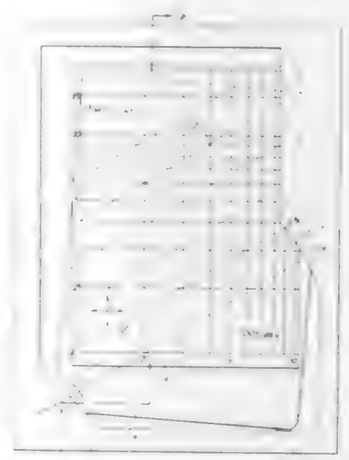
The stenographic apparatus disclosed herein employs a plurality of punches which are indepently operable by respective drive means to punch distinctive patterns of holes in a paper tape. Each of the punches is controlled by a respective key of a stenographic machine. Thus, when a preselected combination of keys are operated, the corresponding punches are operated to punch their respective patterns in a predetermined section of the tape. The apparatus also includes means for advancing the tape to place a new, unpunched section of tape in position to be operated on by the punches when previously operated keys are released. In this way, the apparatus provides a punched record which is readable for digital computing equipment for automatically preparing a printed transcription of the record.

3,372,866
KEYPUNCH MACHINE
Francis Allen McLean, Nixon Knowlton, and Nicholas E. Steiner, Hawkesbury, Ontario, Canada, assignors, by mesne assignments, to Grant Darbyson, Ontario, Canada
Filed Oct. 18, 1965, Ser. No. 496,952
11 Claims. (Cl. 234—123)



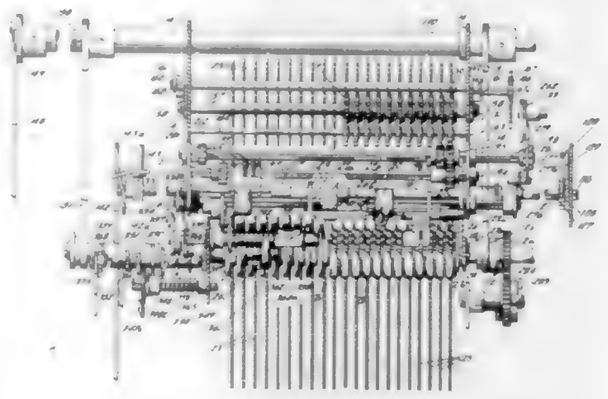
An electric keypunch machine for cutting notches in the edges of tabulating cards. Cards to be punched are placed on a reciprocable card table of the machine. The cards are punched by means of pivotable punches each of which is controlled by a key. When a key is depressed, the corresponding punch is held stationary, and as the punches are in the path of the card table the card is cut as the card table reciprocates. If the key is not depressed, the punch pivots freely upon engagement with the card and the card is not cut.

3,372,867
DATA INDICATING APPARATUS
Wilhelm F. Braun, Haldenrain 6, Lucerne, Switzerland
Filed Aug. 31, 1966, Ser. No. 576,261
Claims priority, application Switzerland, Sept. 2, 1965, 12,376/65
9 Claims. (Cl. 235—61)



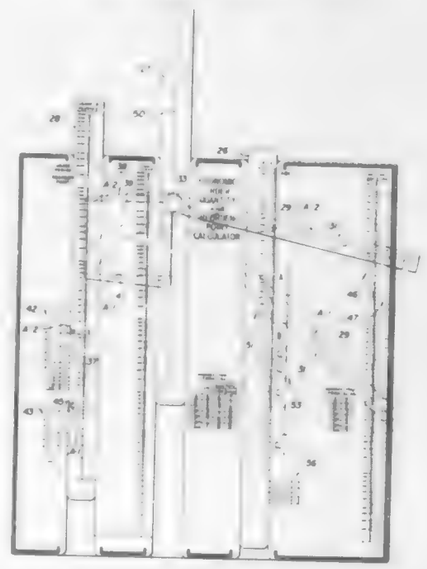
A calculating device comprising at least two plates which are movable with respect to each other. One of the two plates carries thereon logorithmic chart coordinates. The other plate has drawn thereon a plurality of straight parallel lines. The latter plate is rotatable with respect to the former plate, both plates being preferably made of plastic transparent material. This device permits the determination of exponential functions, as well as the determination of a P-value (price) as a function of any K-value (capacity) of a plant from a relationship and the exponent. The device, furthermore, furnishes the graphic representation of the relationship of the two values over the entire range of the logarithmic system.

3,372,868
DIVISION CONTROL MEANS
Herman Gang, Morris Plains, N.J., assignor to Litton Business Systems, Inc., a corporation of Delaware
Continuation of application Ser. No. 364,621, May 4, 1964. This application Mar. 31, 1966, Ser. No. 539,222
15 Claims. (Cl. 235—63)



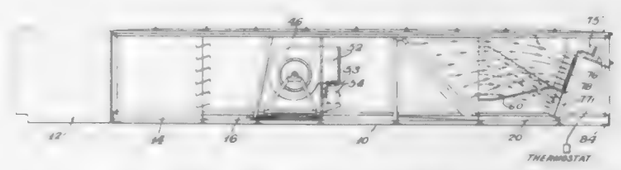
1. In a calculating machine having a register:
cyclic rotary digital actuators for said register rotatable a full turn in each cycle; idly operable during a part of each cycle, and adjustable for additive or for subtractive registering operation; and
division control means including:
means for detecting an overdraft in said register during subtractive registration by said actuators;
normally disabled means operable during idle operation of said actuators to adjust said actuators for additive operation; and
means controlled by said overdraft detecting means for enabling said normally disabled means.

3,372,869
CALCULATOR
René P. Motte, William Wraith III, and Renato B. Cucchi, all of Apartado 1229, Lima, Peru
Filed June 13, 1966, Ser. No. 557,095
10 Claims. (Cl. 235—70)



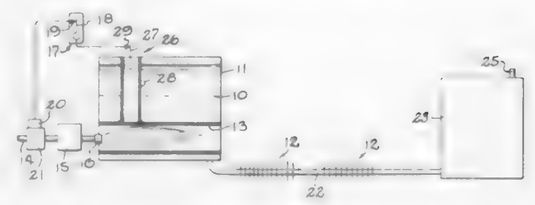
A slide rule type calculator for finding economic order quantities including a base having a first and second spaced slide members disposed in slots formed therein and intersected by an isopleth member pivotally mounted to one of the slides. The calculator carries scales representing the annual useage values and reorder quantities, useage period and reorder points, economic order quantities and K values.

3,372,870
AIR TREATING UNIT
John W. Norris, Marshalltown, and Wayne F. Sieverding, Union Grove Lake, Iowa, assignors to Lennox Industries Inc., a corporation of Iowa
Original application Dec. 28, 1964, Ser. No. 421,427, now Patent No. 3,324,782, dated June 13, 1967. Divided and this application Feb. 20, 1967, Ser. No. 632,480
3 Claims. (Cl. 236—13)



A mixing damper assembly including a housing having side-by-side inlets for warm air and for cool air and baffle means within the housing for directing warm air in a separate path above the cool air. Dampers are provided in the plurality of side-by-side outlets for regulating the temperature of the air discharged through the outlets.

3,372,871
HOT WATER HEATING SYSTEM
Richard T. Pfluger, Rockford, Ill., assignor to Atwood Vacuum Machine Company, Rockford, Ill.
Filed Apr. 1, 1966, Ser. No. 539,551
10 Claims. (Cl. 237—8)



1. In a heating system, the combination of, a boiler having a chamber within which to heat liquid, a radiating device for transferring heat from the liquid to the surrounding atmosphere and thereby cooling the liquid, a reservoir open to the atmosphere for storing the cooled liquid, a conduit leading from said chamber to said radiating device, and then to said reservoir, heating mechanism associated with said boiler for heating the liquid in said chamber and for increasing the pressure of the vapor therein whereby the pressure exerted on the liquid by the vapor forces the liquid in one direction through said conduit from said chamber to said radiating device, and then to said reservoir, and control means operable in response to the flow of liquid from said chamber to deactivate said heating mechanism whereby the vapor within said chamber cools and condenses to form a vacuum therein for drawing the liquid in the opposite direction through said conduit from said reservoir to said chamber.

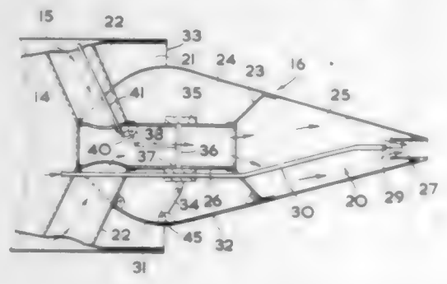
3,372,872
ARTIFICIAL SNOW PRODUCTION
George F. Le Bus III, 1801 Ems Road W., Fort Worth, Tex. 76116; James L. Le Bus, 1525 Melody, Wichita Falls, Tex. 76302; and George F. Le Bus, Jr., Gen. Del., Taos, N. Mex. 87571
Filed July 26, 1966, Ser. No. 567,967
6 Claims. (Cl. 239—2)

4. A method for producing artificial snow, said method comprising: heating one supply of water to a temperature and maintaining a pressure thereon to insure the formation of steam, at least when the pressure is suddenly reduced to atmospheric; pumping said heated water and a supply of cold water in separate conduits to selected outlet locations; mixing said hot and cold water with suitable nozzle means, while simultaneously discharging the mixture into the atmosphere and onto a selected ground area.

3,372,873
VORTEX PRODUCING APPARATUS
Leonard Weiss, 8721 Bay Parkway, Brooklyn, N.Y. 11214, and Theodore B. Meyerstein, 166—10 Powels Cove Blvd., Beechhurst, N.Y.
Filed June 24, 1966, Ser. No. 560,329
20 Claims. (Cl. 239—99)

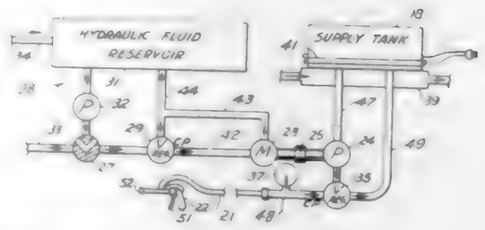
1. Apparatus for producing a ring vortex comprising, in combination, means defining an enclosure having a discharge orifice therein, a support member positioned within said enclosure for movement with respect thereto toward said orifice, a flexible diaphragm carried by said support member, a supply of vortex producing material, means for inserting said material into said enclosure, and means for moving said support member toward said orifice and for thereafter abruptly arresting said support member, to thereby flex said diaphragm and expel said material from said orifice in the form of a ring vortex.

3,372,874
JET NOZZLE
Francis Jeffrey Colville, Sutton-in-Ashfield, and Norman Roberts, Hucknall, England, assignors to Rolls-Royce Limited, Derby, England, a British company
Filed Oct. 18, 1965, Ser. No. 497,121
Claims priority, application Great Britain, Nov. 9, 1964, 45,670/64
9 Claims. (Cl. 239—127.3)



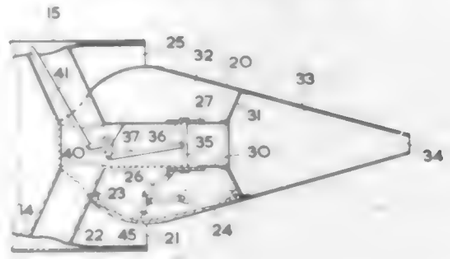
A jet nozzle assembly for use on gas turbine engines employed in supersonic aircraft propulsion, the jet nozzle assembly including a cylindrical outer casing and an inner body mounted coaxially within the outer casing and spaced therefrom to define an annular space through which jet gases flow, the inner body having an opening at its downstream end for discharging of cooling air, the cooling air being supplied to the inner body by conduit means extending through and sealed from the annular space. An additional nozzle is provided within the inner body and is disposed therein and connected to a source of high pressure fluid for inducing flow of cooling air through the inner body and out of its downstream opening.

3,372,875
COMBINATION CLEANING FLUID NOZZLE AND HYDRAULICALLY OPERATED HOPPER FOR REFUSE COLLECTING APPARATUS
Anthony J. Torrey, 874 Edgell Road, Framingham, Mass. 01701
Filed Oct. 21, 1965, Ser. No. 499,453
14 Claims. (Cl. 239—129)



A refuse collection vehicle with a hydraulically operated lift mechanism and a hydraulically powered supply system which pumps cleaning fluid between a supply vessel and the manually controlled nozzle on a flexible hose. A selectively operable diverter valve alternately directs hydraulic fluid from the vehicle's hydraulic fluid pressure system to either the lift mechanism or the cleaning fluid supply system.

3,372,876
JET NOZZLE
Francis Jeffrey Colville, Sutton-in-Ashfield, and Norman Roberts, Hucknall, England, assignors to Rolls-Royce Limited, Derby, England a British Company
Filed Oct. 23, 1965, Ser. No. 502,864
Claims priority, application Great Britain, Nov. 6, 1964, 45,424/64
6 Claims. (Cl. 239—265.35)

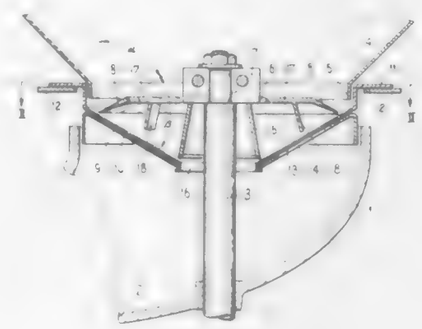


A jet nozzle assembly for aircraft gas turbine engines, the assembly including a cylindrical outer casing and a coaxially mounted hol ow inner body which define an annular space therebetween, the outer casing being movable relative to the inner body selectively to form a convergent or a convergent-divergent nozzle, the inner body having movable parts to vary the shape of said space. The inner body has means for compensating for pressure differences across the movable parts to minimize the force required to move the movable parts, has a downstream end aperture, and its upstream end communicates with a source of cooling fluid to cool the interior of the inner body.

3,372,877
APPARATUS FOR SPREADING POWDERED OR GRANULAR FERTILIZERS
Herbert Vissers, Nieuw Vennep, Netherlands, assignor to Landbouwwerktuigen- en Machinefabriek H. Vissers N.V., Netherlands, a company of the Netherlands
Filed Apr. 8, 1966, Ser. No. 541,232
Claims priority, application Netherlands, May 3, 1965, 65—5,595
3 Claims. (Cl. 239—659)

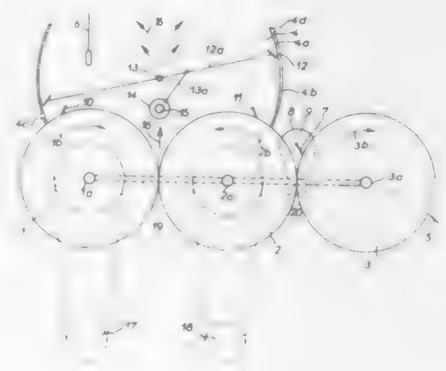
The invention relates to an apparatus for spreading powdered or granular fertilizers, provided with a storage hopper, supported by a travelling frame and having a

bowl arranged below the discharge mouth of the hopper, said bowl having a spout provided with at least one outlet-hole and extending opposite to the travelling direction of the frame, driving means being provided for angularly reciprocating said bowl with said spout on a vertical



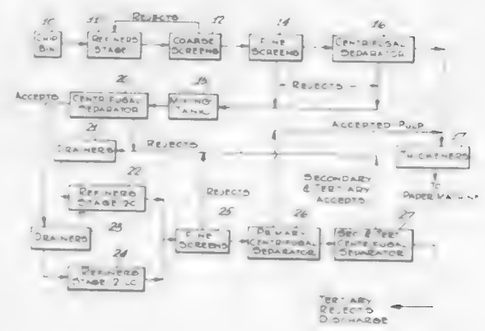
shaft and said shaft carrying agitator means located in the lower part of the hopper, two super-imposed discs provided with passage holes being located between the outlet mouth of the hopper and the bowl and one of said discs being angularly adjustable with respect to the other disc.

3,372,878
GRINDING OF MATERIALS IN GRINDERS HAVING ROLLS WITH STEPWISE-INCREASING SPEEDS
André Louis Verdier, 6 Ave. Daniel-Lesueur, Paris, Seine, France
Filed Sept. 15, 1964, Ser. No. 396,690
Claims priority, application France, Sept. 20, 1963, 948,254
12 Claims. (Cl. 241—16)



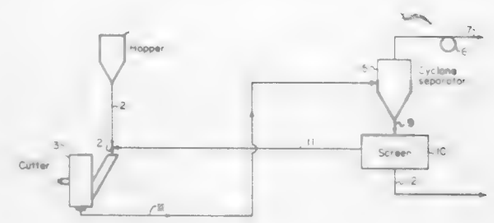
1. A process for the preparation of pigments by the method of liquid substitution known as the "flushing process" using a grinder having a charging hopper adapted to receive material and a series of rolls rotating at speeds increasing stepwise from roll to roll, pressed one against the other and between which the material passes, comprising the steps of:
(a) introducing into the hopper a composition consisting of a mixture of water and precipitated pigments together with the substitution liquid,
(b) causing the composition to pass between the rolls and allowing it to return to the hopper in a closed circuit while adjusting the temperature, the speed and the pressure of the rolls one against the other in concomitance, for a time sufficient for the composition to become a paste constituted by a dispersion of the pigments in the substitution liquid and having the desired quality of dispersion, and
(c) removing the paste by causing it to pass between the rolls for the last time and detaching it from the last roll of the series.

3,372,879
PROCESS FOR MAKING A MECHANICAL PULP FROM WOOD CHIPS
Howard W. H. Jones and Donald E. Helleur, Grand'Mere, Quebec, Canada, assignors to Consolidated Paper (Bahamas) Limited, Nassau, Bahamas
Continuation-in-part of application Ser. No. 170,110, Jan. 31, 1962. This application Aug. 18, 1966, Ser. No. 573,381
10 Claims. (Cl. 241—24)



1. A process for the treatment of wood chips comprising the steps of:
disc refining wood chips,
separating the disc refined wood material into a primary acceptable pulp and a non-acceptable wood material,
separating the non-acceptable wood material into a coarse fraction and a less coarse fraction,
disc refining the coarse and less coarse fractions separately,
combining the disc refined coarse and less coarse fractions,
separating the combined fractions of wood material into a secondary acceptable pulp and a primary reject material, and
blending said primary and secondary acceptable pulps.

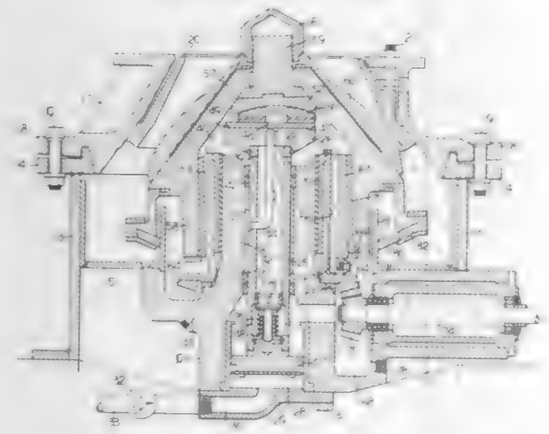
3,372,880
PROCESS FOR THE PRODUCTION OF POLYMER POWDER
Kim L. O'Hara, Odessa, Tex., assignor to Rexall Drug and Chemical Company, Los Angeles, Calif., a corporation of Delaware
Filed Apr. 14, 1966, Ser. No. 542,559
5 Claims. (Cl. 241—30)



1. A process for producing a powder from substantially crystalline thermoplastic pellets which comprises the steps of:
(1) continuously applying and maintaining a shearing force to said pellets, and

(2) recovering from step (1) a powder containing no more than 35 weight percent oversized material having a particle size of greater than 20 mesh and no more than 1 weight percent fines having a particle size of less than 100 mesh.

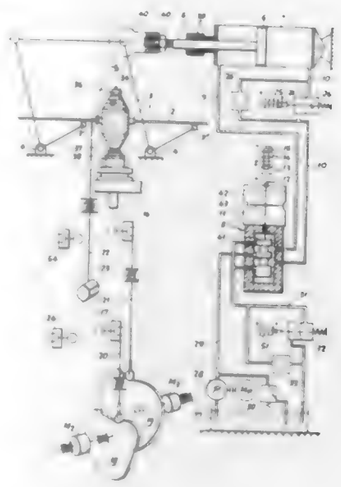
3,372,881
SPIDERLESS GYRATORY CRUSHER WITH RELIEF VALVE SYSTEM
Heinz W. Winter, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis.
Filed Apr. 25, 1966, Ser. No. 544,872
4 Claims. (Cl. 241—208)



1. In a spiderless gyratory crusher having a frame, a vertical crusher post slidably supported by said frame, an overhanging concave ring horizontally supported in a fixed position within the upper portion of said frame concentrically above said crusher post, a crusher head mounted on top of said crusher post with a step bearing assembly therebetween and disposed within the space defined by the concave ring, a hydraulically operated piston assembly supporting the lower end of said crusher post and crusher head to vary the opening defined between said concave ring and said crusher head, a check valve for releasing the hydraulic support from said piston assembly upon a sudden increase in pressure, an eccentric sleeve member rotatably supported on said frame concentrically around said crusher post, a skirt member rigidly supported to said crusher head and extending downward to engage the eccentric circumference of said eccentric member and to form a conical chamber between said crusher head and said eccentric member, and a means for rotating said eccentric sleeve member, in combination therewith, the improvement comprising: valve means for quickly releasing the hydraulic pressure in said conical chamber upon a sudden increase in said pressure, and valve means for slowly releasing excessive hydraulic pressure in said conical chamber whenever said pressure exceeds a predetermined value.

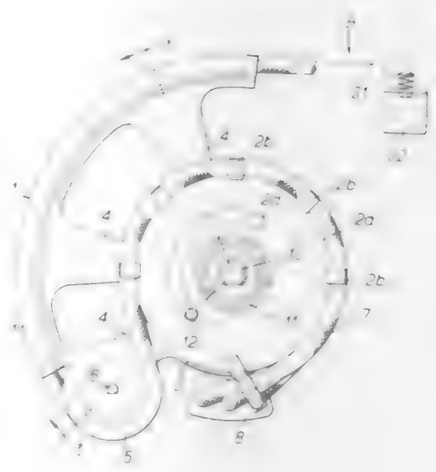
3,372,882
METHOD OF CONTROLLING THE RING RAIL MOVEMENT OF A RING TWISTING MACHINE
Felix Andreas Graf, Winterthur, Switzerland, assignor to Maschinenfabrik Rieter A.G., Winterthur, Switzerland, a corporation of Switzerland
Original application Dec. 12, 1962, Ser. No. 244,109. Divided and this application Aug. 17, 1965, Ser. No. 480,437
Claims priority, application Switzerland, Feb. 26, 1962, 2,290/62
8 Claims. (Cl. 242—26.1)

The method of winding the filament packages includes an initial step of winding a small number of very steep windings on the spindle. Thereafter, the knotting windings are wound onto the spindle and, following that, a



small number of very steep windings are wound on the spindle. The package proper is then wound onto the spindle.

3,372,883
APPARATUS FOR DRAWING IN AND OUT DENTAL HOSES
Sadayasu Ota, 19 Momoyama Tsutsui Igacho, Fushimi-ku, Kyoto, Japan
Filed Aug. 22, 1966, Ser. No. 574,000
Claims priority, application Japan, Dec. 10, 1965, 40/75,961
7 Claims. (Cl. 242—47.5)

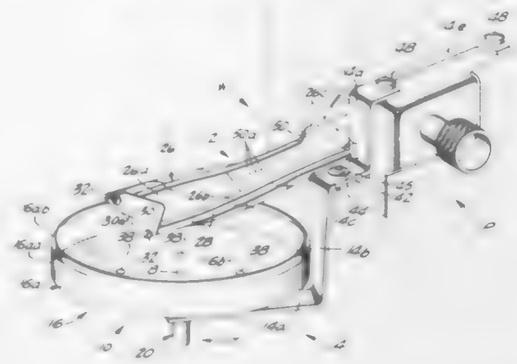


This disclosure relates to rotatable apparatus for paying out and drawing in dental hoses in dental accessory equipment. The apparatus includes rotatable means mounted on an axis and having a dental hose or the like mounted with a portion thereof extending in contact with the rotatable means. Means associated with the rotatable means and immovable relative thereto supports another portion of the hose in contact therewith. Means are included for biasing the rotatable means to rotate in one direction about the axis so as to move the hose in the same direction in sliding contact with the rotatable means, thereby drawing in the hose.

3,372,884
AUTOMATIC TAPE THREADING MACHINE
Suketada Nagano, Tokyo, Japan, assignor to Sony Corporation, Tokyo, Japan, a corporation of Japan
Filed Mar. 11, 1966, Ser. No. 533,685
9 Claims. (Cl. 242—55.12)

1. An automatic tape threading machine comprising a flanged reel, a spindle mounting said reel for rotation, a tape wound upon said reel, a spool having means on its periphery for attaching itself to the end of said tape, a magnetic head, and an arm pivotally mounting said spool to draw tape from said reel and bring it into operative engagement with said magnetic head.

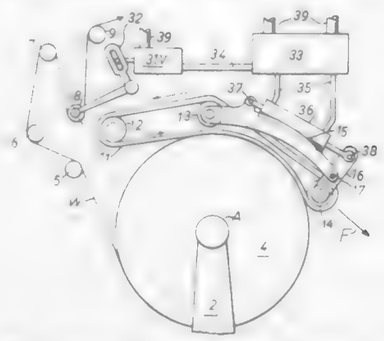
3,372,885
TAPE WINDER
William A. Nichols, 5617 Hawthorne Ave., and Ralph E. Simpson, 9815 Monte Vista Ave., both of Montclair, Calif. 91763
Continuation of application Ser. No. 467,229, June 28, 1965. This application Aug. 21, 1967, Ser. No. 662,187
10 Claims. (Cl. 242—55.21)



A tape winding apparatus having turntable means for receiving a longitudinally moving tape in edge standing orientation on the floor thereof, and guide means guiding the tape to the turntable means, said guide means guiding the tape from a horizontal position to a vertical position and imparting a turn to the tape to substantially change the direction of movement of the tape for delivery to the turntable means. The longitudinally moving tape transmits a rotative force to an upstanding wall on the turntable as it is delivered thereto whereby the tape is wound into spiralling coils which build inwardly to form a roll.

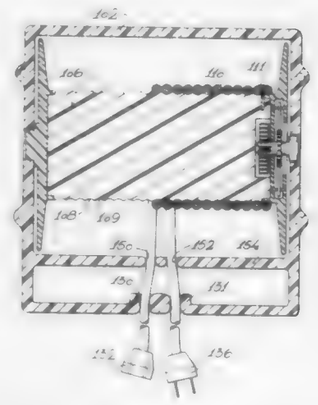
3,372,886
PAPER REEL TENSION CONTROL
John J. McDonald, Park Ridge, N.J., assignor to R. Hoe & Co. Inc., New York, N.Y., a corporation of New York
Filed May 18, 1966, Ser. No. 551,050
2 Claims. (Cl. 242—75.42)

A device for controlling the tension in a paper web having a belt driven about an idler pulley and which is in contact with the periphery of a web roll. Means for exerting a force on the idler pulley in response to reactions of a web tension sensor and in a direction substantially parallel to the belt course leading from the web roll, resulting in a change in belt tension and consequently



a shift in belt pitchline. This in turn causes minute variations in the speed of thed riven belt to thereby vary the torque exerted by the belt on the web roll which ultimately affects the tension of the web.

3,372,887
RETRACTABLE CORD DEVICE
Shaul Ludany, 431 Riverside Drive, New York, N.Y. 10025
Filed Mar. 23, 1966, Ser. No. 536,695
4 Claims. (Cl. 242—107.13)

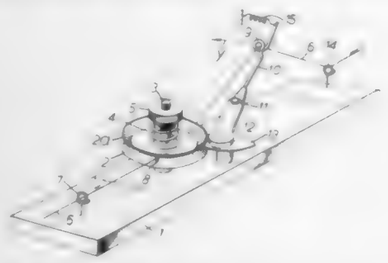


A retractable cord device comprises a housing, a spring-loaded drum rotatably mounted within the housing, a cord adapted to be wound upon the drum, the drum being formed with a spiral groove for the reception of the cord. The housing is formed with a shaped orifice through which the cord passes as it is unwound from the drum, the orifice including an inwardly extending annular lip which snugly engages the cord and applies a resistance to the passage of the cord. In a modification, the mid-point of the cord is fixed to the drum and the two ends of the cord pass through a pair of adjacently-disposed orifices. A cord guide is provided between the orifices and the drum for displacing the cord ends from the perpendicular as they pass through the orifices.

3,372,888
TENSION CONTROL FOR TEXTILE MACHINES
Pierre Charles Eppendahl, Lyon, France, assignor to Thermiguides S.A., Lyon, France, a French company
Filed Aug. 29, 1966, Ser. No. 575,806
Claims priority, application France, Sept. 15, 1965, 46,396, Patent 1,457,631
6 Claims. (Cl. 242—150)

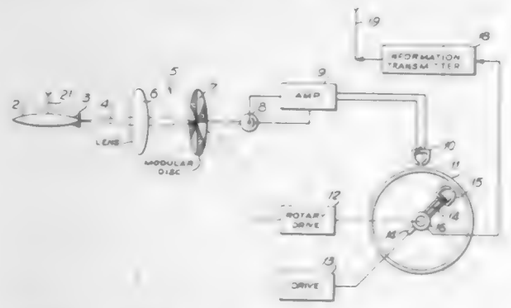
1. Mechanism for controlling the tension of thread in textile machines, comprising fixed and movable friction members between which the thread passes, the movable friction member including at least a part formed of magnetic material, and means for applying a force to the

movable member urging it towards the fixed friction member and for controlling that force, comprising spring means urging the movable friction member towards the fixed friction member, a pivoted tension-sensing lever on which the thread acts after passing between the fixed and movable friction members, and a permanent magnet connected to the pivoted lever and movable therewith in relation to the said part of magnetic material so as to modify by magnetic force the pressure applied by the movable friction member to the thread lying between it and the fixed friction members wherein, during its movement with



the pivoted lever the magnet travels continuously in parallel relationship to the said part of magnetic material so that the magnetic flux between said magnet and the magnetic material imposes on the magnet no force tending to cause pivotal movement of the pivoted lever but the magnet nevertheless imposes on the magnetic material included in the movable friction member a magnetic force which tends to move that member relatively to the fixed friction member and which varies with movement of the pivoted lever to vary the pressure applied to the thread between the movable and fixed friction members.

3,372,889
ROLLING MISSILE, REMOTE CONTROL SYSTEM
Joseph F. Menke, Heidelberg, Germany, assignor to Eltro G.m.b.H. & Co., Heidelberg, Germany
Continuation-in-part of application Ser. No. 381,750, July 10, 1964. This application Nov. 23, 1966, Ser. No. 596,615
2 Claims. (Cl. 244—3.14)



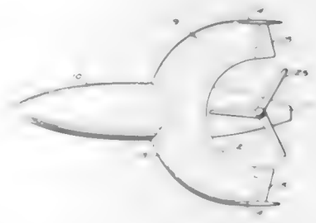
A rolling missile is tracked by goniometer which develops guidance signals which are transmitted back to the missile after a suitable delay to account for the rolling of the missile. The delay is provided by temporarily storing the signal developed by the goniometer.

3,372,890
DATA PROCESSOR FOR CIRCULAR SCANNING TRACKING SYSTEM
James R. Bogard, Roger A. Gaskill, and George Lamar Harmon, Orange County, Fla., assignors to Martin-Marietta Corporation, Baltimore, Md., a corporation of Maryland
Filed Feb. 4, 1966, Ser. No. 525,090
24 Claims. (Cl. 244—3.17)

This invention relates to a novel data processor particularly adapted for utilization in a closed loop correlation tracking system which utilizes a stable iterative process for converting tracking error signals into stable yaw, pitch and roll error signals. These error signals are employed by a three axis servo to cause the difference be-

tween the line of sight axis and the boresight axis to converge to zero, thus to keep the tracking system aligned in a desired manner with a chosen target.

3,372,891
MEANS AND METHOD OF ROTOR AUGMENTED LIFT FOR AIRPLANES
Frank S. Malvestuto, Jr., Granada Hills, Calif. (% Malvestuto Aero Space, 7333 Deering Ave., Canoga Park, Calif. 91303)
Filed Oct. 22, 1965, Ser. No. 500,719
3 Claims. (Cl. 244—12)



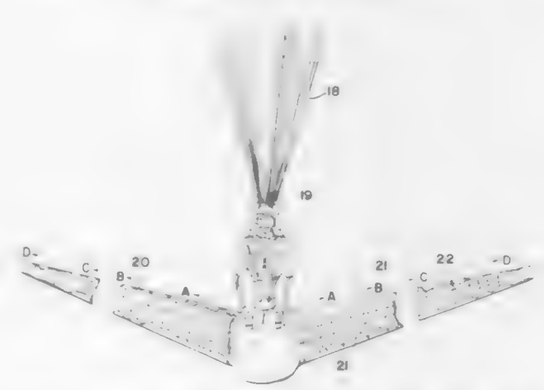
An aircraft having a wing provided with a semicircular recess in its trailing edge. A powered rotor rotatable about the axis of the recess and having blades whose tips extend close to the semicircular edge below the upper surface of the wing. The rotor produces direct upward thrust on the aircraft and also creates low pressure over the wing and higher pressure below the wing to augment the direct upward thrust of the rotor. Centrifugally moving air impinges on the edge surface of the recess to produce forward thrust.

3,372,892
RETRACTABLE WHEEL MOUNTINGS
Charles William May, St. Albans, and Edward Charles Poncia, Hatfield, England, assignors to Hawker Siddeley Dynamics Limited, Hatfield, England, a British company
Filed Jan. 19, 1966, Ser. No. 521,678
Claims priority, application Great Britain, Jan. 17, 1966, 2,215/65
14 Claims. (Cl. 244—102)

The retractable ground wheel mounting has an outrigger member projecting laterally from the aircraft fuselage which is swingable inwardly around a vertical axis near its inner end, with a leg extending downwardly from its outer end connected thereto by a knee joint whose pivotal axis lies fore-and-aft when the mounting is extended; also a wheel assembly is carried at the lower end of the leg; and means are provided whereby when the outrigger member is swung inwardly into parallelism with the fore-and-aft line of the vehicle the leg will turn outwardly and upwardly about the knee joint until the joint is nearly straightened, a fixed-length rigid strut being coupled at one end by a universal joint to the leg and at the other end by a second universal joint to the fuselage to accom-

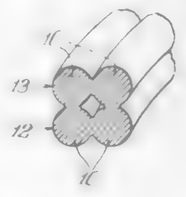
plish the turning of the leg about the knee joint and to act as a lateral bracing member when the mounting is extended.

3,372,893
AIR TO GROUND DESCENT MEANS
Agnew E. Larsen, New Britain, and Robert F. Le Vino, Huntingdon Valley, Pa., assignors to the United States of America as represented by the Secretary of the Army
Filed Sept. 7, 1965, Ser. No. 485,654
4 Claims. (Cl. 244—138)



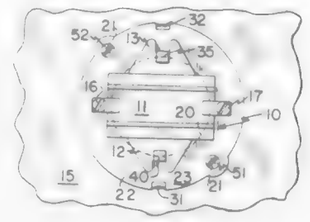
A combination of a parachute attached to, and working in connection with, an inflatable aircraft having an inflation means attached thereto.

3,372,894
TIRE BEADS AND METHODS OF MAKING SAME
Thomas H. Pearce, Niles, Mich., assignor to National-Standard Company, Niles, Mich., a corporation of Delaware
Filed Nov. 5, 1965, Ser. No. 506,498
3 Claims. (Cl. 245—1.5)



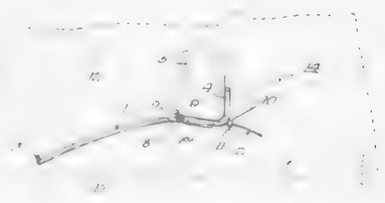
Tire beads of round wire disposed in superposed touching layers with the successive convolutions of the wire in the layers being in side by side touching relation, and in which the touching portions of the wire are homogeneously joined.

3,372,895
MOUNTING APPARATUS
Azmi Kaya, Minneapolis, Minn., assignor to Honeywell Inc., Minneapolis, Minn., a corporation of Delaware
Filed Nov. 24, 1965, Ser. No. 509,495
10 Claims. (Cl. 248—27)



Thermostat mounting apparatus which includes two members constructed so that one can be used alone with the thermostat to provide "insertion mounting" of the thermostat, they can be used together in one relationship with the thermostat to provide "flush mounting" thereof, and they can be used together in another relationship with the thermostat to provide "standoff mounting" thereof.

3,372,896
PORTABLE TELEVISION RECEIVING SET SUPPORT
Walter P. Myers, River Forest, and Joseph J. Orlof, Wheaton, Ill. (both of 2958 W. Carroll Ave., Chicago, Ill. 60612)
Filed May 31, 1966, Ser. No. 553,755
1 Claim. (Cl. 248—350)

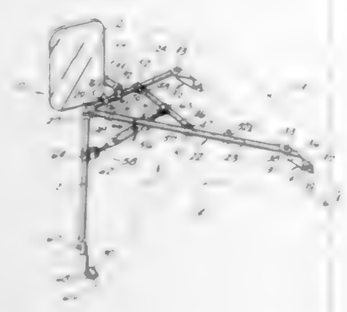


A support advantageous for supporting television receiving sets within an auotmobile body having bowed and opposed telescopically interengaged relatively longitudinally adjustable U-shaped frames one of which has upstanding stops on its ends and a transversely disposed relatively inwardly spaced stop rod adjustably engageable over, with and along its opposite sides, and the other being constructed of material having a limited degree of flexibility.

3,372,897
REAR VIEW MIRROR
Edward R. Lee, Ceresco, Mich., assignor to S. H. Leggitt Company, Inc., Marshall, Mich., a corporation of Michigan
Continuation-in-part of application Ser. No. 454,476, May 10, 1965. This application Mar. 28, 1966, Ser. No. 538,010
The portion of the term of the patent subsequent to July 5, 1983, has been disclaimed
11 Claims. (Cl. 248—480)

A mirror construction for an automotive vehicle having a frame including a pair of divergent substantially horizontal arms joined adjacent one end thereof, the other end of the arms having brackets thereon engageable between the hood and fender of the vehicle. A cross member extends between the arms for interconnecting same.

The upper end of a downwardly and inwardly extending leg is pivotally connected to the joined ends of the arm, the lower end of the leg having a bracket thereon engageable with the edge of the adjacent wheel opening. Ten-

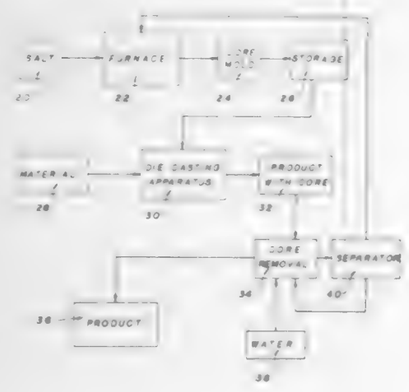


sion means interconnect the frame and the leg to cause the mirror frame to securely grip the vehicle. Arm means are connected to the frame means, which arm means has a mirror secured at one end thereof.

3,372,898
METAL CASTING SYSTEM WITH ANHYDROUS CALCIUM CHLORIDE CORE

Merlyn E. Townsend, Concord, Eugene J. Guelda, Oakland, and Donald G. La Rue, Orinda, Calif., assignors to Kaiser Aluminum & Chemical Corporation, Oakland, Calif., a corporation of Delaware

Original application May 24, 1965, Ser. No. 458,066, now Patent No. 3,311,956, dated Apr. 4, 1967. Divided and this application July 18, 1966, Ser. No. 575,206
2 Claims. (Cl. 249—61)



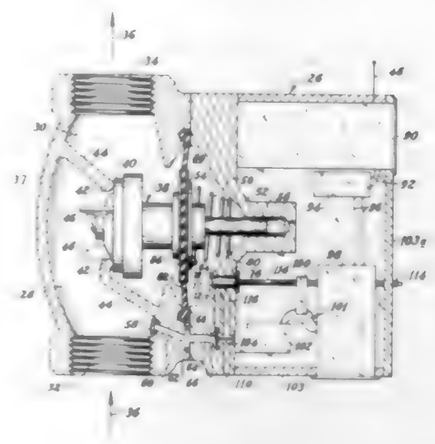
A metal casting system including a mold in which is positioned a fused cast core consisting essentially of anhydrous calcium chloride.

3,372,899
RADIO ACTUATED AND MANUALLY OPERABLE PILOT VALVE CONTROLS

John A. McPherson, Palo Alto, Calif., assignor to Robert Trent Jones, Inc., Palo Alto, Calif.

Filed Sept. 15, 1965, Ser. No. 487,477
5 Claims. (Cl. 251—26)

An electrically-actuated irrigation system, providing radio-controlled outlets, particularly advantageous for existing sprinkler installations, as on golf courses; for no control wiring need be installed, and existing waterlines may be used. The sprinkler outlets each have a line valve urged by line pressure to open position, and have conveniently-provided control means for the line valve, including a pair of independently-actuated control valves for regulating pressure in a chamber which hydrau-

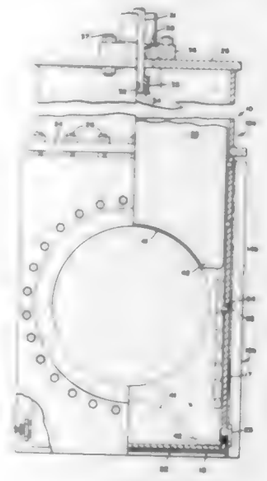


lically holds the line valve closed unless irrigation-actuation is desired.

3,372,900
VALVE WITH GATE MEMBER GUIDE BARS

Marvin H. Grove, Piedmont, Calif., assignor to M & J Valve Company, Houston, Tex., a corporation of Delaware

Filed Jan. 6, 1965, Ser. No. 423,741
1 Claim. (Cl. 251—205)



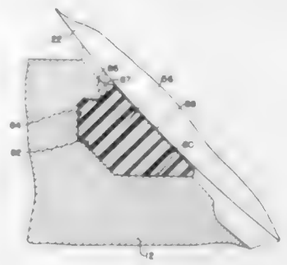
1. In a gate valve construction, a body substantially rectangular in section and formed of flat end walls and flat side walls joined together at their corners, the end walls having aligned circular flow passages of equal diameter adapted for connection with associated piping, a flat gate disposed within the body and movable between open and closed positions relative to the flow passages and having parallel side margins, the body having upper and lower extending portions for accommodating the gate, the gate having flat parallel valve working surfaces formed thereon, annular sealing assemblies carried by the body and forming fluid tight seals between the body and the valve working surfaces of the gate in regions surrounding the flow passages and for closed position of the gate, said assemblies including seal rings and spring means for yieldably urging the seal rings against the sides of the gate, operating means connected to the upper portion of the gate and extending through the corresponding upper portion of the body, the lower end of the gate having a configuration as viewed in a direction corresponding to the axis of the passages which conforms to

the arc of a circle with the extremities of the arc being located at the lower edge of the gate in regions spaced equal distances from the side edges of the gate, the arc being on a radius corresponding generally to the radius of said flow passages and extending through an angle of from 100 to 180°, the arc being substantially coincident with the periphery of the passages and the inner peripheries of the seal rings for full open position of the valve and being within the bottom portion of the body and below the seal rings for full closed position of the valve, the seal rings engaging the lower margin of the gate for the entire length of said arcuate configuration for full open position of the valve, and guide bars mounted upon the inner surfaces of the end walls within the body and disposed to extend along the sides of the flow passages, said bars forming abutment guides for engaging the side margins of the gate.

3,372,901
VALVES

Paul A. Manor and Gustav Kania, Pittsburgh, Pa., and William A. Generke, Wadsworth, Ohio, assignors to Rockwell Manufacturing Company, Pittsburgh, Pa., a corporation of Pennsylvania

Filed Apr. 13, 1964, Ser. No. 359,098
4 Claims. (Cl. 251—315)



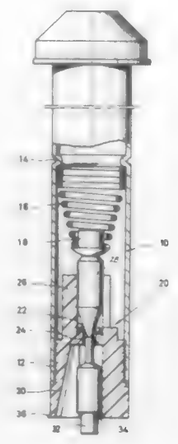
1. A valve comprising a metal body having flow passages intersecting an enlarged central chamber, a ported ball valve member in said chamber mounted for rotation between open and closed positions, and sealing structure for said valve comprising a pair of integrally formed solid elastically deformable seat rings fixedly mounted with a shrink fit in grooves in said valve body structure, said rings extending around said body adjacent the inner ends of said flow passages to effectively surround said flow passages, said rings each having an essentially conical seating surface engaging the ball member and joined at its radially outer edge to an essentially cylindrical surface extending into a corresponding cylindrical surface in said groove, and interlocking means at the inner peripheries of said rings to hold said rings against accidental dislodgement from said grooves comprising an annular curved surface open recess extending around the inner periphery of each ring adjacent said seating surface and a correspondingly shaped annular curved surface lip on the adjacent groove wall projecting into said recess.

3,372,902
VALVE, ESPECIALLY EXPANSION VALVE FOR REFRIGERATOR

Rudibert Götzenberger, Feilbach, near Stuttgart, Germany, assignor to Firma Ernst Flitsch, Feilbach, near Stuttgart, Germany

Filed Dec. 3, 1965, Ser. No. 511,888
Claims priority, application Germany, Dec. 12, 1964, F 44,695
6 Claims. (Cl. 251—321)

An expansion valve for refrigerators in which a spring pressed valve member is engaged at one end by a coaxial pin member to be moved by the latter against the spring force out of engagement with the valve seat and in which

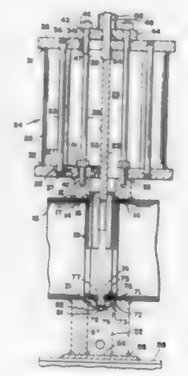


the valve member and the pin member are guided by guide means for movement in axial direction.

3,372,903
VALVE BODY CONSTRUCTION

Marvin H. Grove, Piedmont, Calif., and Kee W. Kim, Houston, Tex., assignors, by mesne assignments, to M & J Valve Company, Houston, Tex., a corporation of Delaware

Filed May 5, 1965, Ser. No. 453,377
7 Claims. (Cl. 251—329)



A gate valve in which the body consists of a box-like main body portion with at least one fabricated body extension made in the form of a pressure vessel.

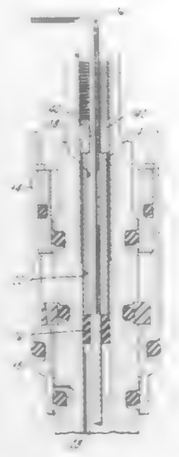
3,372,904
WATER FAUCET VALVE MEANS CONTAINING A LUBRICANT

Bernard A. Graham, Phoenix, Ariz., and Carl Dailey, Covina, Calif., assignors to Standard Screw Company, Bellwood, Ill., a corporation of New Jersey

Filed Aug. 28, 1964, Ser. No. 392,814
3 Claims. (Cl. 251—355)

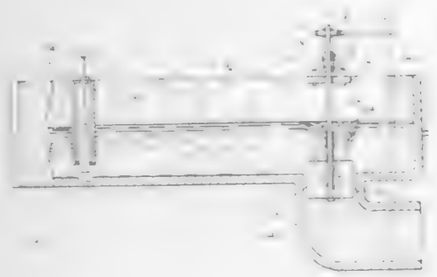
A hot and cold water faucet type mixing valve having a self-contained lubricant chamber within the valve member which is slidable relative to its valve housing. Lubricant is forced out of the chamber to lubricate the seals

between the valve member and valve housing by a piston in the lubricant chamber, the piston being actuatable



from outside the valve without disassembling the interior of the valve.

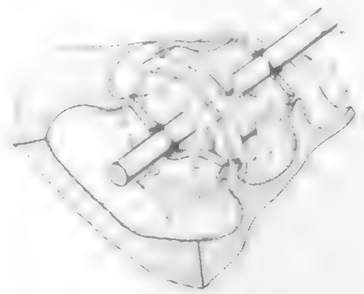
3,372,905
POWER GENERATING METHOD AND APPARATUS
Kenard D. Brown, 1227 S. Willow St., Casper, Wyo. 82601
Continuation-in-part of application Ser. No. 578,870, Sept. 12, 1966. This application July 20, 1967, Ser. No. 660,153
15 Claims. (Cl. 253—26)



A method for generating power comprises the production of a vortex in liquid, the confining of a portion of the vortex, and the utilization of the vortical forces in the confined zone for rotating a power output device; an apparatus is disclosed in which the method is practiced and which is arranged to provide and maintain a liquid vortex and to employ the rotational forces of the vortex, as distinguished from the vertical flow produced by the head of liquid, for rotating a power transmitting shaft.

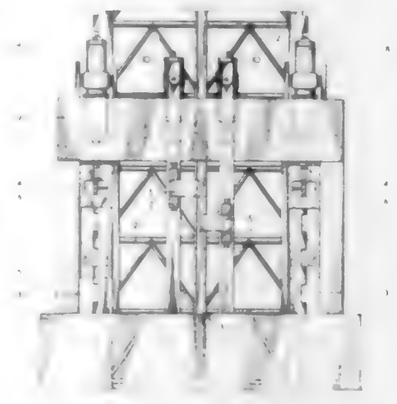
3,372,906
SMALL VOLUMETRIC FLOW REACTION TURBINE
Jerry D. Griffith, 1001 Rockville Pike, Rockville, Md. 20852
Filed June 22, 1965, Ser. No. 466,133
7 Claims. (Cl. 253—39)

This invention relates to reaction turbines and more particularly to a small volumetric flow, small power, high speed reaction turbine capable of operating on high tem-



perature and high pressure fluids at relatively high efficiencies.

3,372,907
APPARATUS FOR PRODUCING A RELATIVE LINEAR DISPLACEMENT BETWEEN A COLUMN AND A MOVABLE BODY
August Hendrik Maria Smulders, Wassenaar, Jakob Jan Bieze, Schiedam, Johannes Frans Hage, Zwijndrecht, and Simon Splinter, Schiedam, Netherlands, assignors to N.V. Werf Gusto v/h Firma A. F. Smulders, Schiedam, South Holland, Netherlands
Filed July 19, 1966, Ser. No. 566,362
Claims priority, application Netherlands, July 26, 1965, 65—9,650
7 Claims. (Cl. 254—110)

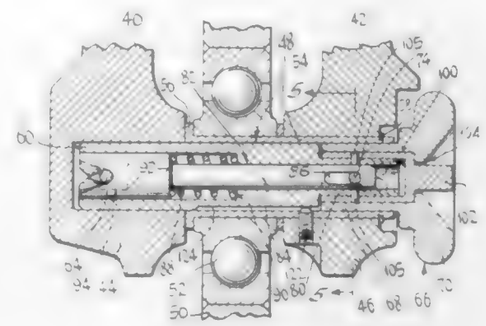


Apparatus for producing a relative linear displacement between a vertical column and a movable body is characterized in that the column is square and has regularly spaced outwardly extending teeth disposed along each vertical corner of the column. Driving and blocking pawls in the form of horizontal bars selectively engage with and drive the column and the movable body relative to each other under the influence of a pair of fluid motors of the cylinder-and-piston type that are connected to the ends of each bar on opposite sides of each corner of the column.

3,372,908
QUICKLY OPENABLE SNATCH BLOCK
John J. McCarthy, Weston, Conn., assignor to Norco, Inc., Ridgefield, Conn., a corporation of Connecticut
Filed Feb. 27, 1967, Ser. No. 618,722
6 Claims. (Cl. 254—193)

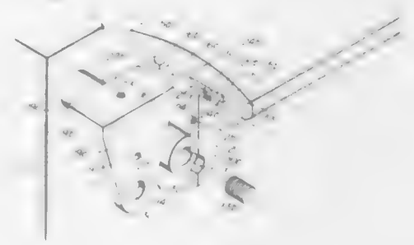
A quick-opening snatch block having a yoke with pivotally connected spaced arms which can be swivelled apart, one arm carrying a bearing bushing extending toward the other arm and having a pulley on said bushing, said one arm also having a captive pulley pin passing through the bushing and releasably latched to the other arm to either lock the arms in parallelism or else release the arms to permit their being swivelled apart. The yoke also has a

swivel-mounted hook with a locking and release pin which passes through the swivel of the hook. The pulley pin of the snach block is a multi-part assemblage especially



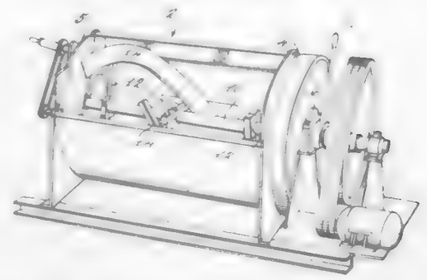
arranged to be quickly locked to or released from a cross member in said other arm of the block, all without requiring the use of tools.

3,372,909
ANCHOR AND BRACKET ARRANGEMENT FOR RAIL
Julian J. Attaway, 4520 Elmdale Drive, Tucker, Ga. 30084
Filed Oct. 11, 1966, Ser. No. 585,800
6 Claims. (Cl. 256—69)



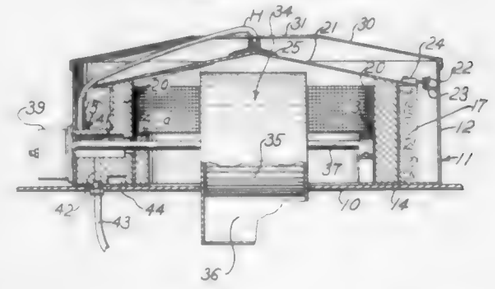
1. A rail and anchor arrangement comprising, an anchor including a pair of discrete lugs having contacting legs for said lugs to be back to back and each of said lugs having a lateral extension integral with an inner end of said leg thereof for outer ends of said extensions to be outward from opposite sides of said legs and said anchor to be generally T-shaped in transverse cross section when said lugs are securely held back to back, and a set screw for at least one of said lugs, said set screw threadedly engaging said lateral extension of the lug within an opening leading from a first side of said extension to a second side of said extension in a direction away from the leg of said lug and having a driving end accessible adjacent to said first side and an inner end to advance outside said second side, and a rail having an inwardly laterally oppositely enlarging slot entering the underneath side thereof and said slot being of a size and proportion for each of said lugs separately to have said lateral extension thereof inserted into said slot laterally of the slot at a location intermediate the opposite longitudinal ends of said rail and said lugs brought into said back to back relation, thereafter to be securely held having said extensions interlocked with said rail laterally of said rail and slidable longitudinally of said rail in said slot and having said set screw to be driven for said inner end thereof to engage said rail and secure said anchor interlocked with said rail laterally of said rail against movement along the length of said rail.

3,372,910
MIXER FOR CONCRETE AND SIMILAR HARDENABLE MATERIALS
Lonnie J. Estis, Mobile, Ala., assignor of one-half to Wright Smith, Jr., Mobile, Ala.
Filed Nov. 30, 1966, Ser. No. 598,083
2 Claims. (Cl. 259—178)



A stationary generally cylindrical mixing drum for concrete, etc., in which there is a rotatable horizontally extending shaft provided with mixing paddles carried on arms extending normal to the shaft. Loose metallic rings are carried by the shaft and by the arms to eliminate the accumulation of cementitious material thereon.

3,372,911
EVAPORATIVE COOLER FOR VEHICLE MOUNTING
Bennie B. Herboldsheimer, Potter, Nebr. 69156
Filed Jan. 16, 1967, Ser. No. 609,451
8 Claims. (Cl. 261—24)

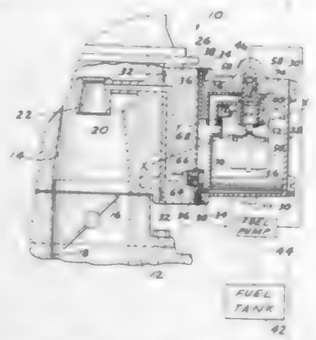


A ring-like trickle pad supported within a housing with the suction of a blower applied to the inside wall of the pad. The housing and pad are constructed to guide outside air into the outer face of the pad around the circumference thereof. Water is delivered to the upper edge of the trickle pad to flow therethrough by gravity, the water being supplied to the upper edge by a distributor from a central point.

3,372,912
CARBURETOR
Stanley H. Benmore, Dearborn, Mich., assignor to Holley Carburetor Company, Warren, Mich., a corporation of Michigan
Filed Dec. 21, 1966, Ser. No. 603,514
10 Claims. (Cl. 261—36)

This application discloses an improved internal combustion engine carburetor in which the fuel supplied to the induction passage is normally metered through a calibrated jet fed from the fuel bowl in which a predetermined necessary fuel level is maintained by a float-operated valve controlling the fuel inlet, the improvement comprising a relatively small capacity, heat insulated cavity within the fuel bowl and feeding the jet, the cavity having an overflow positioned slightly below the bowl level and the fuel inlet discharging directly into the small capacity cavity so that it quickly fills to its overflow level and provides an approximately proper fuel level sooner upon cranking of the engine than a comparable level would be reached if the fuel inlet discharged into the larger capacity fuel bowl, the improvement being particularly

beneficial in but not limited to carburetors in which the fuel bowl is drained each time the engine is shut down to control air pollution by evaporation, a main benefit being

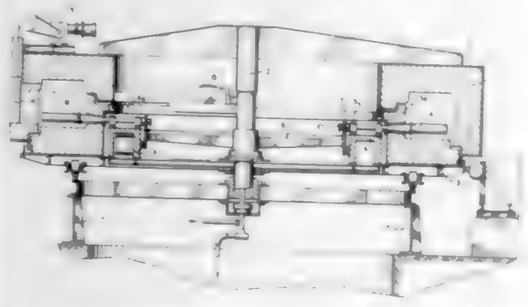


an acceptable cranking time on starting and reduction in undesirable fuel vaporization on hot starting when the fuel bowl must be refilled.

3,372,913
ROTARY DEVICE FOR HEAT TREATMENT OF PIPES

Siegfried Gaabs, Berlin-Weissensee, Germany, assignor to VEB Lokomotivbau-Elektrotechnische Werke "Hans Beimler," Henningsdorf, Germany

Filed Oct. 11, 1965, Ser. No. 494,773
7 Claims. (Cl. 263—7)

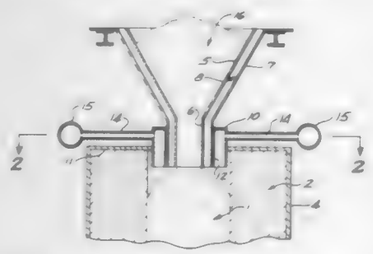


A rotary hearth furnace for heat treatment of pipes of a thermoplastic material, preferably of scoria, having a ring shaped heating channel defined by a stationary cover portion carrying heating elements and by a step-by-step driven hearth portion, a plurality of roller pairs arranged radially within said heating channel for supporting rotatably the pipes to be treated, whereby said roller pairs are driven by separate driving means irrespective of the motion of said hearth portion.

3,372,914
SHAFT KILN AND METHOD OF OPERATION

Earl Leatham, Wexford, Pa., and William W. Campbell and Carl E. Rossi, Ludington, Mich., assignors to Harbison-Walker Refractories Company, Pittsburgh, Pa., a corporation of Pennsylvania

Filed May 5, 1966, Ser. No. 547,975
6 Claims. (Cl. 263—29)

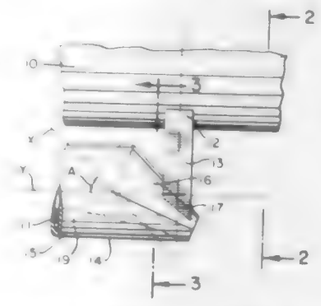


A shaft kiln charging apparatus and gas-collection hood having an integral surge system which accommodates sudden upward blasts of hot, solid material and exhaust gas on the collapse of material hang-ups in the kiln.

3,372,915
ROTARY KILN ASSEMBLIES

Flemming Edvin Jensen, Copenhagen-Valby, Denmark, assignor to F. L. Smidth & Co., New York, N.Y., a corporation of Delaware

Filed Sept. 19, 1966, Ser. No. 580,469
Claims priority, application Great Britain, Sept. 28, 1965, 41,208/65
7 Claims. (Cl. 263—32)

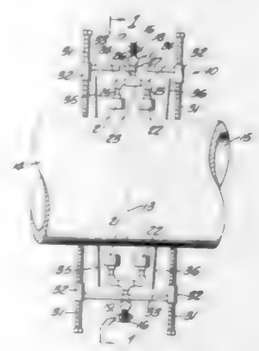


1. In a rotary kiln assembly having an outlet end from which the material is discharged, the improvement in combination therewith comprising a plurality of generally cylindrical cooler tubes mounted about the kiln at the inlet end thereof, a communicating chute interconnecting the kiln with each tube for transfer of material from the kiln to the tubes with the outlet end of the chute opening into the inlet end of the tube, the inlet end of each tube having a first portion opposite the outlet end of the respective connected chute which is an extension of the cylindrical wall of the tube and a second portion nearer the kiln than the first portion which is a section of a cylinder, the axis of which is inclined with respect to the axis of the tube to form an inclined surface down which material in the cooler tube can slide away from the outlet of the chute when the cooler tube is above the kiln axis, and the outlet of the chute is received in the second inclined cylindrical portion at a point offset in the direction of rotation of the kiln from the plane of symmetry of the second portion.

3,372,916
APPARATUS FOR STRESS-RELIEVING PIPE WELDS

George Robert Prescott, Pasadena, and Harold Wilson Sharp, Whittier, Calif., assignors to C. F. Braun & Co., Alhambra, Calif., a corporation of California

Filed Sept. 21, 1965, Ser. No. 489,102
2 Claims. (Cl. 266—2)

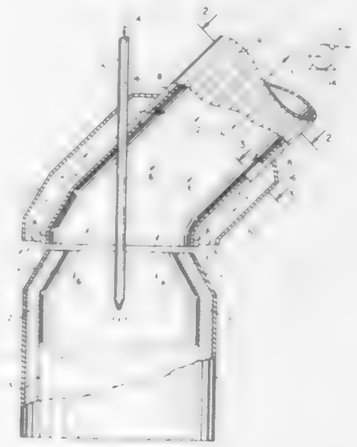


Stress-relieving of a welded joint in a horizontal pipe is accomplished by two series of radiant heaters encircling the pipe, one series on each side of the welded joint. Duplicate hinged ring segments support the radiant heaters and supply combustible gas to them. Laterally spaced pipe-engaging means on the ring segments position the radiant heaters in an eccentric position with respect to the pipe, and upwardly diverging annular wind screens positioned between the pipe-engaging elements encircle the pipe and confine the radiant heaters between them.

3,372,917
APPARATUS FOR RECOVERY OF CONVERTER OFF-GASES

Harry L. Richardson, Pittsburgh, Pa., assignor to Chemical Construction Corporation, New York, N.Y., a corporation of Delaware

Filed Aug. 16, 1965, Ser. No. 479,717
9 Claims. (Cl. 266—15)



Combustible off-gas is removed from the mouth of a converter, such as an oxygen steel converter, by inducting a stream of off-gas substantially undiluted with air into a hood disposed with gas inlet opening over the mouth of the converter. A stream of air, mixed with a small amount of off-gas escaping from the spacing between the hood and the converter mouth, is concomitantly withdrawn from about the perimeter of the mouth of the converter and external to the hood, by providing an outer coaxial duct external to the hood. The air stream is inducted through the annular passage between the outer duct and the hood, and the withdrawn air stream or mixture of air with a small amount of off-gas is added to the main off-gas stream through openings in the wall of the hood. Combustion of the off-gas entirely within the hood thus takes place, at a location displaced from the mouth of the converter, and mixing of air with the main off-gas stream at the mouth of the converter is prevented, which effectively avoid combustion of the off-gas at the mouth of the converter and consequent damage to the converter.

3,372,918
APPARATUS FOR MAINTAINING PRESSURE-TIGHT SEAL ON BLAST FURNACE BELLS

Stephen W. Wheeler, Youngstown, Ohio, assignor to Republic Steel Corporation, Cleveland, Ohio, a corporation of New Jersey

Filed Dec. 6, 1965, Ser. No. 511,835
2 Claims. (Cl. 266—27)

1. A pressure seal charging apparatus for a pressurized blast furnace comprising:

(a) a materials lock having a generally cylindrical top opening and a generally cylindrical bottom opening and defining an enclosure except for said openings;

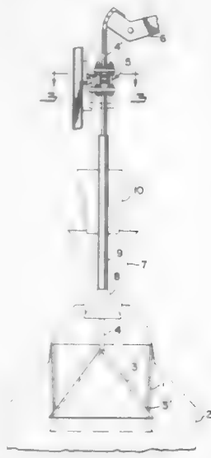
(b) an auxiliary bell adapted to close said top opening and movable with respect to said lock, whereby material may be deposited in said enclosure through said top opening, and the top opening thereafter closed;

(c) a main bell adapted to close said bottom opening, and movable with respect to said lock, whereby said main bell may be in a closed position with respect to said lock during the charging of materials into said materials lock, and thereafter lowered to open said bottom opening and thereby discharge said materials from said lock;

(d) a supporting means for said auxiliary bell adapted to move upward and downward with said auxiliary bell in its closing and opening operations of said top opening, said auxiliary bell supporting means having a cylindrical opening extending through the length of said supporting means;

(e) a supporting rod for said main bell extending through and beyond the said cylindrical opening in said supporting means for said auxiliary bell;

(f) a rotating means adapted to rotate said main bell as said main bell is being moved upward into contact with the corresponding bell seat, said rotating means being attached to the upper end of said supporting arm for said main bell and adapted to support the main bell and said supporting arm, said rotating means comprising:



(1) an overrunning clutch attached to the upper end of said main bell supporting rod and adapted to rotate said supporting rod and thereby said main bell when turned in one direction and not to turn said supporting rod and said main bell when turned in the opposite direction,

(2) a lever attached to said clutch and extending a considerable distance therefrom, its extreme end having a slot therein,

(3) an adjustable cam extending into said slot of said lever,

(4) a protruding arm extending from said rotating means having a yoke at the extreme end of said arm,

(5) a vertically extending yoke guide fastened to a supporting means independent of and separated from said rotating means and adapted to fit into said yoke and to guide said yoke in its upward and downward paths as said supporting arm and said main bell are raised and lowered, said adjustable cam being fastened to said yoke guide and adjusted at an angle so that as the rotating means is moved upward with the supporting arm for said main bell, the adjustable cam strikes the side of the said groove of said lever and causes a rotating movement of said lever about the center line of said clutch attached to the top of said supporting arm, said adjustable cam being positioned at such an angle that it activates said lever and said clutch to

rotate said supporting bar and said main bell prior to and during the initial contact of said main bell with said bell seat whereby a grinding effect is produced between the two said surfaces, and

(g) a means for raising and lowering said rotating means and thereby also said supporting arm and said main bell.

3,372,919
AUTOMATIC VEHICLE LEVELING SYSTEM

George W. Jackson, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Continuation of application Ser. No. 408,218, Nov. 2, 1964. This application July 29, 1966, Ser. No. 568,978
11 Claims. (Cl. 267—65)

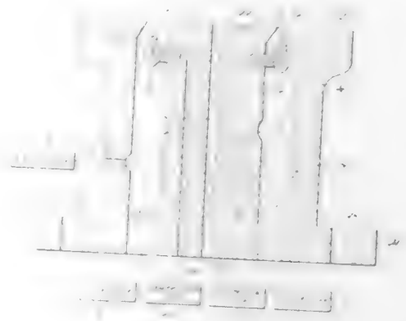
1. An auxiliary suspension system comprising the combination of, a shock absorber having a cylinder portion and a piston rod portion reciprocal relative thereto, fluid spring means for producing a predetermined height relationship between said cylinder portion and said piston rod portion, a pressurized enclosure having compressor means therein with an outlet discharging interiorly of said enclosure, a fluid receiver fluidly communicated with the inlet to said compressor means, means for directing pressurized fluid from said pressurized enclosure interiorly of said fluid spring means, height control means including valve means for controlling flow of fluid from said fluid spring means back to said fluid receiver, said pressurized enclosure, fluid receiver, fluid spring and fluid directing means having a volume including a predetermined amount of compressible fluid wherein said system is maintained at a predetermined pressure when said compressor means is inoperative to prevent complete deflation of said fluid spring means, said volume and said predetermined amount of compressible fluid limiting the pressure buildup in said fluid spring means produced during operation of said compressor means.

3,372,920
METHOD FOR PRODUCING THERMOPLASTIC SHEET MATERIAL

Herbert O. Corbett, Bridgeport, and John J. Quackenbush, Monroe, Conn., assignors to National Distillers and Chemical Corporation, New York, N.Y., a corporation of Virginia

Filed July 12, 1965, Ser. No. 471,018
2 Claims. (Cl. 264—95)

Extrusion die and method for producing corrugated thermoplastic film, the die including spaced core pins for introducing parallel air-streams into the extruded film and, where three-layered corrugated thermoplastic film is produced, the die including spaced and alternately offset core pins whereby the extruded product is constituted



by smooth outer layers and a central uniformly corrugated inner layer, each layer originating from a separate source of plastic material.

3,372,921
ADJUSTABLY POSITIONED SUPPORT BOARD FOR A SURGICAL TABLE

Roger Anderson, 4221 E. Lee, Seattle, Wash. 98102

Filed Jan. 3, 1966, Ser. No. 518,213
11 Claims. (Cl. 269—328)

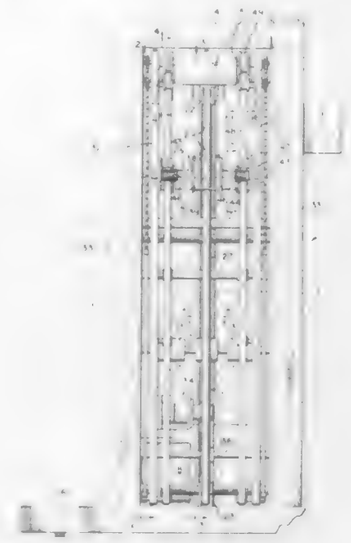
1. A support for a surgical table having a leg table top section mounting plate with front and back faces which comprises a mounting section connected to the back face of said mounting plate; a support board having brackets attached thereto adapted for mounting said support board on said mounting section; said mounting section comprising a cross-arm slidably mounted adjacent and transverse to the mounting plate back face and having side flanges, one at each end, which extend beyond the sides of said mounting plate and which have outer edges parallel with the slide axis of said cross-arm adapted to receive said brackets when mounted from a direction perpendicular to said mounting plate.

3,372,922
SHEET CONVEYOR MECHANISM

Donald L. Snellman and Jack D. Keeler, Seattle, Wash., assignors to Norfin, Inc., Seattle, Wash., a corporation of Washington

Continuation-in-part of application Ser. No. 521,077, Jan. 17, 1966. This application Sept. 29, 1966, Ser. No. 583,012
12 Claims. (Cl. 270—58)

A collator distributor having a set of conveyor belts disposed vertically in front of a plurality of shelves. Non-moving, retractable, metallic tapes are disposed contiguous to each of the conveyor belts to hold sheets against the belts as the sheets are fed downwardly. Moving,

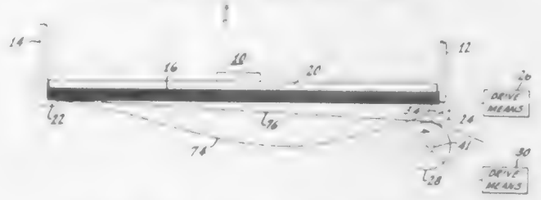


vacuum tape means are mounted between the conveyor belts to hold the sheets flat as they are conveyed.

3,372,923
FEEDER APPARATUS

James P. Watson, Jupiter, and Onnie J. Shamblin, Lake Park, Fla., assignors to Radio Corporation of America, a corporation of Delaware

Filed Nov. 30, 1965, Ser. No. 510,519
8 Claims. (Cl. 271—23)

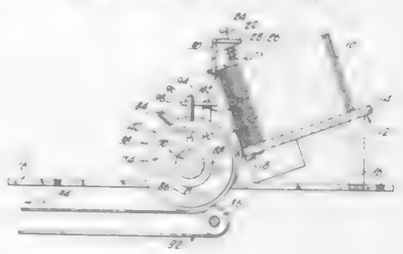


An apparatus for holding and feeding sheets of material such as documents and cards by means of a hopper and oscillating and rotating rollers wherein one sheet is separated from a stack of said sheets by a roller with a knife edge which causes the sheet to bow outwardly and away from the stack.

3,372,924
VACUUM SHEET FEEDER

Ernest H. Treff, Port Washington, N.Y., assignor to F. L. Smithe Machine Co., Inc., New York, N.Y., a corporation of New York

Filed Dec. 13, 1965, Ser. No. 513,339
6 Claims. (Cl. 271—29)

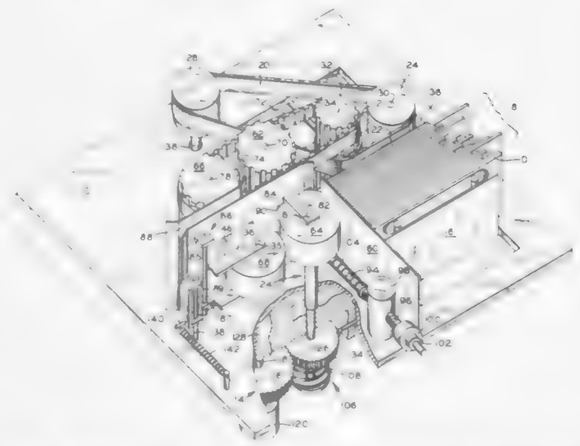


A hollow, rotary housing includes a movable wall portion through which suction may be applied at timed intervals in order to grasp the leading blank in a stack and then deliver the blank to a conveyor.

3,372,925
APPARATUS FOR SEPARATING AND GUIDING A VARIETY OF DIFFERENT DOCUMENTS

Hans Jacobus de Vries, Leidschendam, and Carolus Pieter Leersnijder, Heemstede, Netherlands, assignors to De Staat der Nederlanden, ten Deze Vertegenwoordigd Door de Directeur-Generaal der Posterijen, Telegrafie en Telefonie, The Hague, Netherlands

Continuation-in-part of application Ser. No. 429,062, Jan. 29, 1965. This application Apr. 12, 1967, Ser. No. 630,395
20 Claims. (Cl. 271—37)

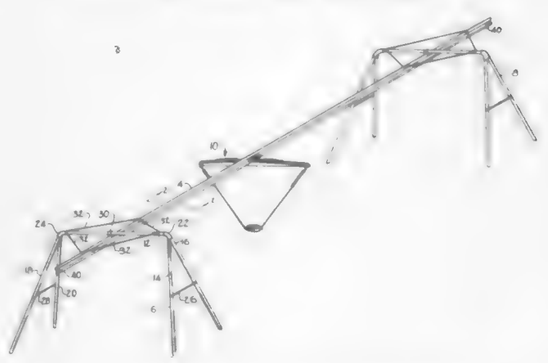


An apparatus for separating and guiding documents such as forms, cards, letters and the like of different size, stiffness and quality having an intermittently driven continuous belt for conveying documents from a stack to and between two successive pairs of opposed conveying rollers along an adjustable slot formed by a pivoted plate. The first pair of rollers insure that only one document at a time is fed to the second pair of rollers. Both of the rollers of the first pair may be driven, however, one is adjustably spaced and resiliently mounted with respect to the other, is driven through a friction clutch, and its speed is variable and considerably slower than that of the other roller of that pair. One of the second pair of rollers is frictionally driven by contact with the other driven roller of that pair.

3,372,926
PLAYGROUND AND GYMNASTIC EQUIPMENT FOR TUMBLING EXERCISES

Raymond J. Murphy, Boune Terre, Mo. (20412 Craimer Lane, Huntington Beach, Calif. 92646)

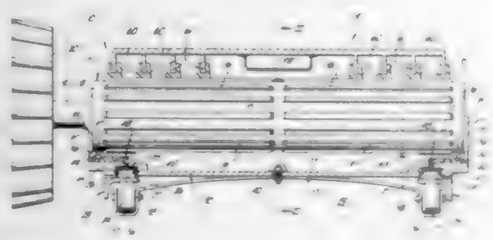
Continuation-in-part of application Ser. No. 286,828, June 10, 1963. This application Dec. 18, 1965, Ser. No. 516,937
21 Claims. (Cl. 272—60)



1. A tumbling device comprising a single carriage way, means for supporting the carriage way in upwardly spaced relation to a man-supporting surface, a carriage mounted

on the carriage way for movement therealong, a belt adapted to snugly embrace a tumbler's waist, and means for supporting the belt from the carriage at a preselected height above the man-supporting surface whereby a tumbler will be supported by the belt if he loses his balance and falls while practicing tumbling exercises, means disposed between the belt supporting means and the carriage for preventing rotation of the belt supporting means about a vertical axis, and means between said belt supporting means and said belt for allowing free rotation of the belt about a first axis perpendicular to the plane of the belt and about a second axis perpendicular to said first axis.

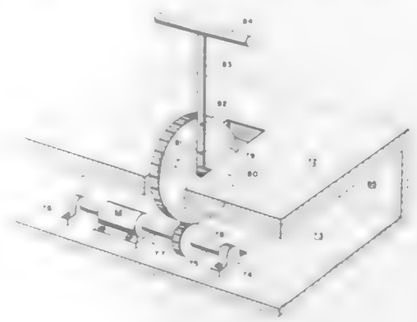
3,372,927
MOVABLE FULCRUM FOR SPRINGBOARDS
Raymond C. Rude, 2468 Wagner, Pasadena, Calif. 91107
Filed Sept. 24, 1965, Ser. No. 490,050
8 Claims. (Cl. 272—66)



1. A movable fulcrum for a springboard having a supported end and an unsupported end, the springboard being disposed over a support located below the springboard intermediate the ends thereof, the support providing a pair of horizontal rectangularly cross-sectioned parallel rails spaced transversely of the springboard and aligned with the length of the springboard, the fulcrum comprising a frame adapted to be supported on the rails and including a rail engaging shoe slidably engageable with each rail, means for guiding movement of the frame along the rails, a drum engaging the underside of the springboard, means rotatably mounting the drum to the frame transversely of the springboard, means connected to the drum operable by a person on the springboard over the drum for rotating the drum to drive the drum against the springboard thereby to move the drum along the springboard, wherein said frame comprises an upwardly open elongate frame disposed transversely of the rails and having end walls defining upwardly open coaxially aligned recesses, the means mounting the drum to the frame includes a quantity of material having a low coefficient of friction relative to the material from which the drum is fabricated secured to the frame in each recess and having an upwardly open semi-circularly curved surface conforming to the curvature of the drum and engaging the drum adjacent a respective end thereof and means extending from the frame over the drum at substantially the midlength of the drum for retaining the drum in the frame.

3,372,928
EXERCISING MACHINES OPERABLE INDEPENDENTLY OF THE EXERCISING PERSON'S APPLIED FORCE
Merle Robert Showalter, 4733 Shoremeade Road, Richmond, Va. 23234
Filed Aug. 13, 1965, Ser. No. 479,528
10 Claims. (Cl. 272—67)

1. A supporting surface, an exerciser mounted on said supporting surface and comprising first means for operative engagement by a portion of the human body, second means mounting said first means for back and forth movement in opposite directions, third means for selectively moving said first means in either of said directions and for movement between extreme positions both of which

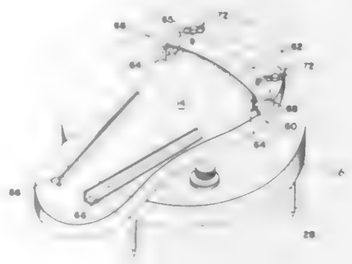


extreme positions are within reach of a person in contact with said supporting surface, and at a speed of movement substantially independent of humanly possible muscular exertion by the user on said first means in the direction of exercise.

3,372,929
BILLIARD CUE STROKE GUIDING STEM
John Molis, Box 3915, Baytown, Tex. 77520
Filed Sept. 13, 1965, Ser. No. 486,933
6 Claims. (Cl. 273—23)

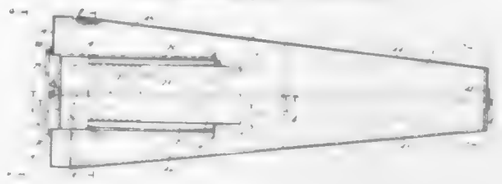
1. In a billiard cue, an elongated tubular stem member provided at one end with an enlarged handle portion and at its other end with a relatively soft deformable cue tip, said stem member being formed with a longitudinal slot, a slide element mounted in said stem member, and a support leg pivotally-connected to said slide element and extending through said slot.

3,372,930
FOOT TRAINER WITH ADJUSTABLE ROTATION AND FRICTION MEANS
Michael P. Sertich, 200 Henry Grady Bldg., Atlanta, Ga. 30303
Filed May 5, 1965, Ser. No. 453,286
6 Claims. (Cl. 273—26)



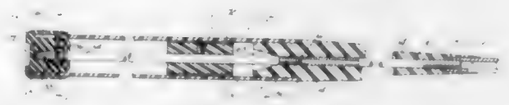
The invention is a trainer for sportsmen which is designed to restrict, while guiding, the rotational movement of one of the sportman's feet. By varying the degree of rotation of the foot and varying the force required to rotate the foot, the trainer adjustably controls the foot of the sportsman during the movement of his body as in striking a golf ball or tennis ball or baseball.

3,372,931
BOWLING GAME WITH RELATIVELY MOVABLE SECTIONS FOR CONTROLLING BALL MOVEMENT
Carl I. Oberg, Annandale, N.J. 08801
Filed Mar. 3, 1965, Ser. No. 436,767
5 Claims. (Cl. 273—39)



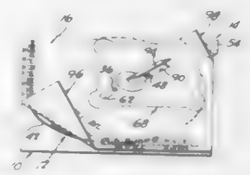
There is provided a bowling game consisting of pivotally attached bed sections in which provision is made for the player to release a ball at one section to strike a bumper at the second section, said ball returning to the first section whereat pins to be contacted by said ball are located; with means located at the first section for moving the second section relative thereto for directing said ball.

3,372,932
BILLIARD CUE HANDLE ASSEMBLY
John Molis, Box 3915, Baytown, Tex. 77520
Filed Sept. 13, 1965, Ser. No. 486,935
6 Claims. (Cl. 273—68)



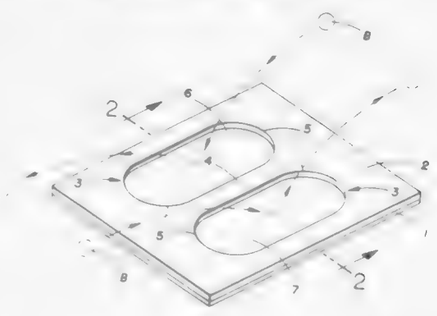
1. A billiard cue comprising an elongated stem member provided at one end with a cue tip, a tapered mid-section threadedly-secured to the other end of said stem member, a hollow tubular handle mounted on said mid-section, said handle being formed with an end slot, a butt member engageable on said handle, rod means secured to said butt member and threadedly-engaging said mid-section, and radial pin means on said butt member received in said end slot.

3,372,933
BASEBALL GAME APPARATUS
Walter S. Murzyn, 1613 Caroline Ave., Whiting, Ind. 46394
Filed Dec. 10, 1965, Ser. No. 512,930
7 Claims. (Cl. 273—88)



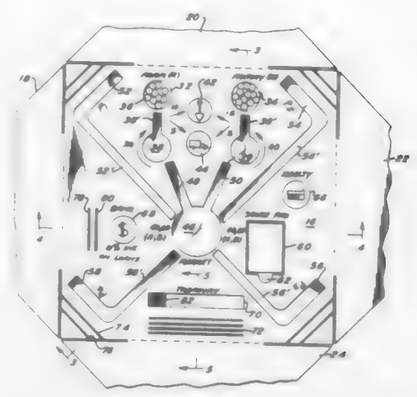
1. Baseball game apparatus comprising a support, a rotary pitcher's pitch selecting plate journalled on the support, a batter's slide plate supported above the pitcher's plate and movable endwise thereacross, and a playing field plate supported over the batter's slide plate, the pitcher's plate having circumferentially arranged play designating means thereon, said pitcher's plate having a peripheral portion thereof exposed to view at a side of the playing field plate, said batter's slide plate having a tab exposed beyond another side of the playing field plate, said tab having spaced different play designations disposed there-along, the playing field plate being formed with opening means adapted to selectively cover and expose to view play designations related to the play designations on the pitcher's plate and the batter's plate, the slide plate being formed with a slot adapted to register with said opening means so as to expose through said opening means selected play designating means on the pitcher's plate according to the endwise adjustment of the slide plate relative to the other plates.

3,372,934
GAME BOARD AND SMALL BOUNCEABLE BALL
Theodore Heil, P.O. Box 387, Lodi, Calif. 95240
Filed July 26, 1965, Ser. No. 474,627
3 Claims. (Cl. 273—95)



A game board for use with a hand-played bounceable ball; the game board having a bounce-deadening top cushion sheet, and such sheet being formed with one or more cutouts each exposing a hard and smooth-surfaced playing zone.

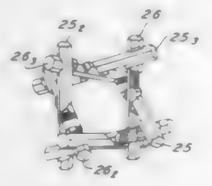
3,372,935
ECONOMIC ACTIVITY GAME
Charles G. Santora, 38A Atlantic Ave., Pleasantville, N.J. 08232
Filed Feb. 12, 1965, Ser. No. 432,201
7 Claims. (Cl. 273—130)



A game of skill which is a simplified representation of the economic system where economic activities are obtained by bid and assets are acquired by economic transactions in series play comprising a game board having a centrally disposed receptacle representing the market. A plurality of player positions are spaced equally around the periphery of the board. The winner of the game is the player having acquired the most points corresponding to assets in a prestipulated number of cycles. The board has player receptacles thereon at each player position. Chutes slope down from the centrally disposed receptacle toward the player receptacles so that assets may be delivered from the market to each player receptacle. Storage receptacles for farm and factory units are supplied on the game board. At least one slot is provided adjacent each player receptacle in which activity cards may

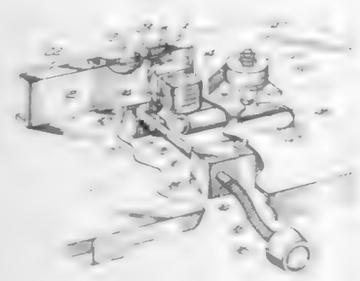
be placed. Transfer receptacles are provided adjacent the market receptacle. There are chutes which slope down from points adjacent the farm and factory receptacles to the transfer receptacles. Gravity displaceable game pieces which are used to represent assets are adapted to be disposed in the farm and factory receptacles and are visually distinguishable.

3,372,936
INTERLOCKING BAR PUZZLE COMPRISING HELICALLY NOTCHED BARS
Robert E. Sanson, 1402 Reservoir Ave., Roslyn, Pa. 19001
Filed Aug. 27, 1965, Ser. No. 483,165
7 Claims. (Cl. 273—160)



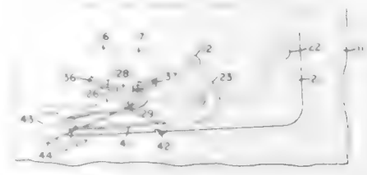
1. A puzzle comprising twenty-four bars of equal length and cross-section arranged in two respective sets of twelve identically-notched reversible bars, said notches being disposed helically around the bars, the notches of the bars in one set being respectively interengageable with the notches of the bars of the other set to form a symmetrical self-sustaining structure.

3,372,937
ELECTRICAL TRANSDUCING
Frank B. Flint, Weymouth, Mass., assignor to Automatic Radio Manufacturing Co., Inc., Melrose, Mass., a corporation of Massachusetts
Filed Oct. 20, 1965, Ser. No. 498,289
4 Claims. (Cl. 274—11)



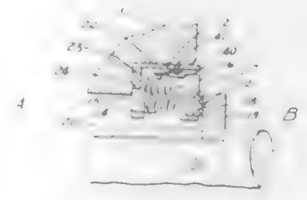
In a tape player a tape transducing head is secured to a vertical slide that terminates at its lower end in a cam lever riding upon a cam as the horizontal flange of the vertical slide is urged downward by a leaf spring attached to the upper flange of a head support subchassis. A rubber follower urges the tape against the drive spindle. The rubber follower may be selectively positioned from a withdrawn position below the tape player chassis to an extended position urging the tape against the drive spindle. In the extended position a pair of springs are so arranged that they exert a moment about the horizontal pivotal axis of the rubber follower to keep it urged against the drive spindle. With one of the springs very close to this pivotal axis, only a slight angular displacement of the rubber follower about that axis toward the retracted position causes this spring to move to the other side of this pivotal axis and help angular movement in this direction toward the retracted position.

3,372,938
TAPE RECORDER HEAD-PAD MECHANISM
Yates M. Hoag, Utica, N.Y., assignor to General Electric Company, a corporation of New York
Filed July 15, 1965, Ser. No. 472,147
7 Claims. (Cl. 274—11)



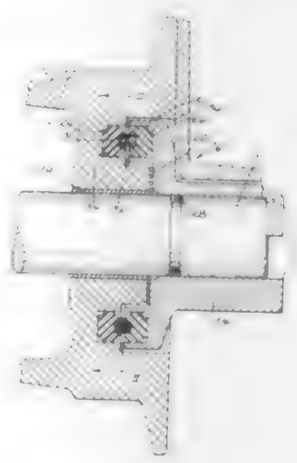
A tape recorder head pad mechanism including a head pad carried by a lever arm pivotally attached to a movable member, a fixed member engaging the lever arm when the movable member is moved away from the head to thereby swing the head pad away from the head.

3,372,939
ROTARY FACE SEAL WITH VIBRATION DAMPING MEANS
Raymond A. Coulombe, Adelphi, and Ernest J. Taschenberg, Baltimore, Md., assignors to Kopper Company, Inc., a corporation of Delaware
Filed Oct. 22, 1965, Ser. No. 501,329
3 Claims. (Cl. 277—88)



A face seal for a rotatable shaft having a bellows and a vibration damping finger engaging a wear-resistant surface connected to the bellows for damping vibration in the bellows.

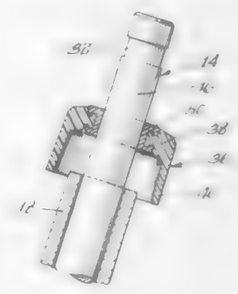
3,372,940
FACE SEAL
Edwin G. Keller, Mount Prospect, Ill., assignor to International Harvester Company, a corporation of Delaware
Filed July 15, 1965, Ser. No. 472,121
10 Claims. (Cl. 277—92)



Symmetrical face seal composed of double O-rings, each presenting a hard-faced, self-contained metal insert establishing an interface of sealing contact with the insert

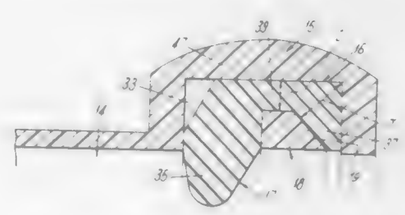
of the other one of the O-rings, and together establishing a friction drive forcing the seal halves to slide at the common interface and transmitted thereto from two, relatively rotatable host members containing the seal.

3,372,941
VALVE SEAL
Joseph M. Liebig, Wheaton, Ill., assignor to Illinois Milling, Incorporated, Chicago, Ill., a corporation of Illinois
Filed Jan. 26, 1965, Ser. No. 428,080
5 Claims. (Cl. 277—178)



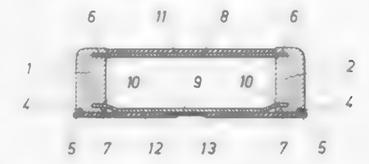
1. In a valve seal and valve stem assembly for use in an internal combustion engine, the provision of a cup-shaped body of semi-rigid synthetic plastic resinous material capable of maintaining its form and shape up to about 300° F. and having an inwardly directed portion defining an axial aperture therethrough larger than the diameter of the valve stem leaving a space therebetween, and a relatively non-rigid insert of elastomeric material disposed within the aperture and substantially coextensive with the axial extent of the inwardly directed portion of the cup-shaped body and interlocked therewith and substantially filling the space between the inwardly directed portion of the body and the valve stem, said elastomeric material having the properties of withstanding up to about 500° F. and swelling in the presence of hot oil whereby the assembled body and insert is slidably assembled with the valve stem when initially positioned thereon and wherein subsequent heat swelling of the insert in use fixedly grips the valve stem for movement of the valve seat in unison therewith and with the inwardly directed portion of the cup-shaped body serving to back up the insert against outward radial enlargement.

3,372,942
PIPE COUPLINGS
Raymond Charles Carter, Hazlehead, near Sheffield, England, assignor to The Hepworth Iron Company Limited
Filed May 13, 1965, Ser. No. 455,445
Claims priority, application Great Britain, Feb. 13, 1965, 6,344/65
3 Claims. (Cl. 277—207)



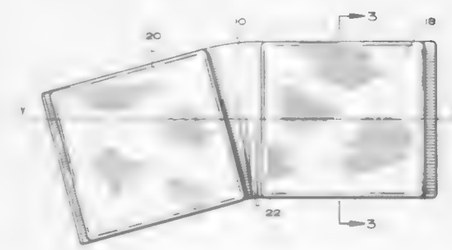
A pipe coupling for clayware piping comprising a slightly resilient plastic socket having an inwardly facing annular recess, a resilient sealing ring substantially filling said recess, and an incompressible locking ring, the side of the locking ring nearest the mouth of the socket being bevelled externally.

3,372,943
COMPOSITE SKI
Rudolf Grossauer, Steyr, Austria, assignor to Bruder Riha K.G., Steyr-Pyrach, Austria
Filed Oct. 1, 1965, Ser. No. 492,055
Claims priority, application Austria, Oct. 9, 1964, A 8,602/64
12 Claims. (Cl. 280—11.13)



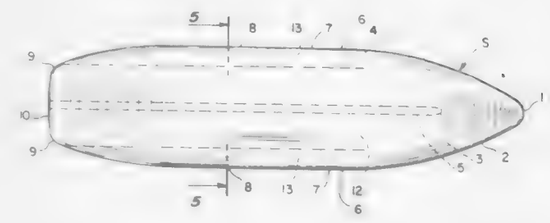
The main carrying frame of a composite ski comprises interconnected resilient edge strips increasing in cross section from the shovel to the binding portion of the ski. Two covering sheets connect the spaced edge strips and extend across the top and bottom of the frame. The edge strips have longitudinal grooves on their inside which accommodate the edges of the covering sheets.

3,372,944
SNOW SLED
Norman R. Lauritzen, 5734 South 565 East, Salt Lake City, Utah 84100
Filed May 31, 1966, Ser. No. 553,910
4 Claims. (Cl. 280—17)



A snow sled comprising an elongated sleigh bottom having a bottom surface, an upper surface adapted to be ridden upon without substantially deforming said sleigh bottom, an upwardly turned front end, and a back end. The sleigh bottom transversely bends between its front end and back end thereby enabling the front end to be turned from side to side to shift the longitudinal axis of said sleigh bottom. A cushion can be secured to the upper surface of the sleigh bottom proximate the front end and a second cushion can be secured to the upper surface proximate the back end.

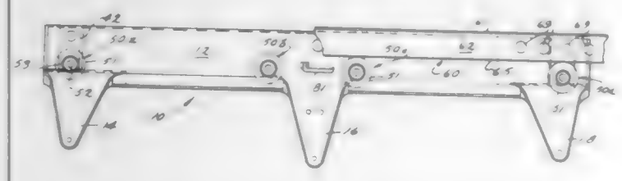
3,372,945
SNOW SLED
Joel Salisbury, Rte. 3, Box 93, Golden, Colo. 80401
Filed Mar. 15, 1965, Ser. No. 439,727
5 Claims. (Cl. 280—18)



A single, board-like member for supporting a user for sliding down a snow slope, having a width to accommodate both feet of the user, an upwardly curving front end having converging sides, a bottom having a longitudinally extending, flat planar surface at each side,

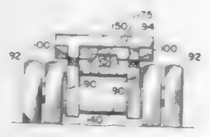
a longitudinally extending and laterally concave surface disposed between the flat surfaces and a longitudinally extending groove disposed centrally of the concave surface, with the concave surface extending to the underside of the upwardly curving front end, and a rear end which converges at each side to the intersection of the concave surface and planar surfaces. The member has an upper surface which is convex in both directions, the surface of the top being formed by a resin impregnated, fiberglass cloth of coarse weave and the surface of the bottom of a resin impregnated, fiberglass cloth of fine weave, such coatings being placed on a blank formed of wood, an expanded resin or the like.

3,372,946
ROLLER SLIDES FOR TRAILERS
Charles T. Hutchens, P.O. Box 1427, Springfield, Mo. 65805
Filed Apr. 26, 1966, Ser. No. 545,493
5 Claims. (Cl. 280—81)



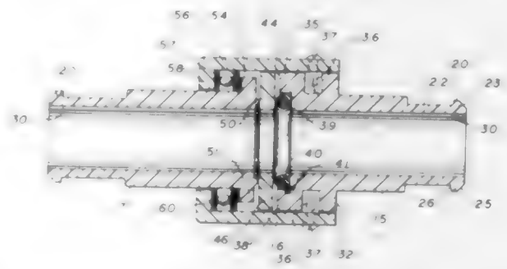
1. An adjustable tandem subframe comprising: a pair of horizontally disposed channel-shaped support members lying in parallel vertical planes; a plurality of spring mounting brackets connected to each channel-shaped support member and depending therefrom; a plurality of horizontally aligned rollers projecting from the outside surface of each support member, each roller being secured on a mounting means for rotation in a vertical plane about an axis fixed to the corresponding support member, said mounting means having an inner end affixed within one of said channel-shaped support members, the rollers on each side of said subframe being adapted to engage a vehicle body frame angle member and support the same in sliding relationship with respect to said subframe; and stop means carried by said subframe and adapted to slide through said channel-shaped support members and engage said vehicle body frame angle members.

3,372,947
SUSPENSION MOUNTING FOR A WHEELED VEHICLE
Henry C. Doennecke, Tulsa, Okla., assignor to Unit Rig & Equipment Company, Tulsa, Okla., a corporation of Delaware
Continuation of applications Ser. No. 563,932, July 5, 1966, and Ser. No. 471,100, July 12, 1965, which is a division of application Ser. No. 338,459, Jan. 17, 1964. This application Feb. 20, 1967, Ser. No. 632,125
4 Claims. (Cl. 280—124)



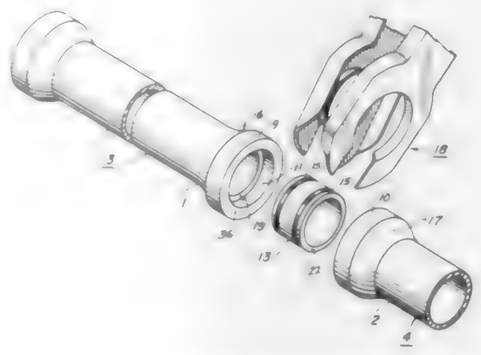
A suspension apparatus for the rear wheels of an off-highway type vehicle which absorbs vertical movement of the wheels with respect to the vehicle. The suspension mounting utilizes resilient pad means for absorbing the shock and the overall construction substantially eliminates vertical movement of the vehicle with the wheels.

3,372,948
ROTATABLE COUPLING
Howard M. Arneson, San Rafael, Calif., assignor to Arneson Products, Inc., San Rafael, Calif., a corporation of California
Filed Mar. 24, 1965, Ser. No. 442,384
1 Claim. (Cl. 285—98)



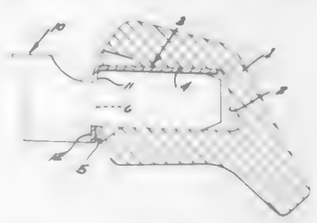
A flexible coupling for high pressure fluid transfer including a pair of axially aligned barrels in which a rigid washer and a flexible washer are interposed between the abutting ends of the two barrels to effect a water-tight rotatable seal between the two barrels in which the two barrels are restricted in nested end to end alignment by rotatable restricting means.

3,372,949
JOINT CONSTRUCTION FOR GLASS PIPE AND THE LIKE
Joseph F. McLay, Warminster, Pa., assignor to Fischer & Porter Company, Warminster, Pa., a corporation of Pennsylvania
Filed May 21, 1965, Ser. No. 457,703
10 Claims. (Cl. 285—364)



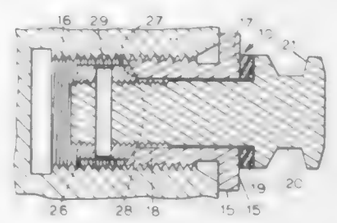
A glass joint construction for joining juxtaposed ends of two pieces of glass pipe of the kind used in chemical apparatus, in which the juxtaposed pipe-ends have enlarged coupling-bells with glazed cylindrical coupling-chambers therein whose inner diameter is substantially larger than the bore of the pipe and whose inner ends terminate at transverse annular shoulders between the coupling-chamber and the bore of the pipe, and a thin-walled Teflon coupling-sleeve of an axial length greater than the combined axial lengths of said coupling-chambers and having an outer diameter greater than the inner diameter of said coupling-chambers, telescoped into said coupling chambers with an interference fit, said coupling-sleeve having two ring-receiving grooves, one disposed in each of said coupling-chambers, and an O-ring in each of said ring-receiving grooves formed of an elastomer which is substantially more readily deformable than the Teflon sleeve.

3,372,950
CONNECTING APPARATUS
Harold D. Wind, Grand Rapids, Mich., assignor to Lescoa, Inc., Grand Rapids, Mich., a corporation of Michigan
Filed Aug. 10, 1966, Ser. No. 571,622
4 Claims. (Cl. 287—53)



A connecting apparatus having a knob, a generally L-shaped spring and a shaft, one of said legs of said spring mounted within said knob and the other of said legs lying proximate thereto, said spring having a slot in said other of said legs extending in the direction of said other leg, said shaft having a first shoulder on one side and a second shoulder on the opposite side, said shaft inserted through said slot and into said knob, said spring mounted within said knob to be biased such that said first shoulder bears against the free end of said other leg and said second shoulder bears against the opposite end of said other leg, thereby locking said shaft within said knob.

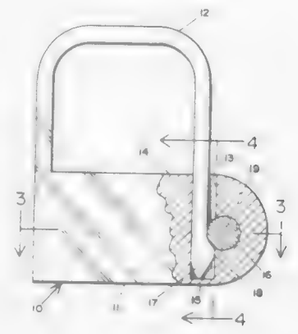
3,372,951
TOOL ADAPTER FOR RECIPROCATING DRAWBOLT CONNECTION
Robert M. McCash, Cincinnati, Ohio, assignor to The Cincinnati Milling Machine Co., Cincinnati, Ohio, a corporation of Ohio
Filed Mar. 21, 1966, Ser. No. 535,765
3 Claims. (Cl. 287—91)



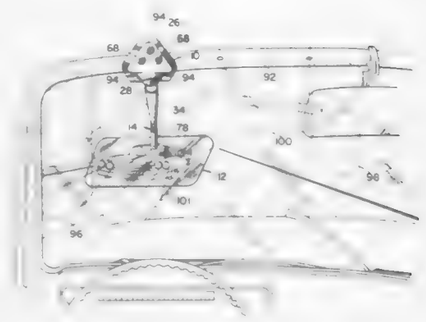
1. A bayonet adapter for a tool to be secured in a machine tool spindle by a drawbar mechanism comprising in combination:
(a) an adapter sleeve including means for securing said adapter sleeve to the tool with the forward end thereof in the tool,
(b) a bayonet member extending loosely and axially through said adapter sleeve and having a surface thereon at its rearward end adapted for connection with the drawbar mechanism,
(c) means for providing a connection between said adapter sleeve and bayonet member for the transmission of axial forces therebetween and permitting a limited swivel movement of said bayonet member about the forward end thereof in said adapter sleeve,
(d) means for yieldably holding said bayonet member in axial alignment in said adapter sleeve.

3,372,952
SEAL
William G. Newton, Lubbock, Tex., assignor to No-vak, Inc., Miami, Fla., a corporation of Florida
Filed Oct. 17, 1966, Ser. No. 587,118
2 Claims. (Cl. 292—307)

1. A seal comprising a body member, an elongated strap portion extending from said body member and forming a loop, said elongated strap portion having a free end portion extending in the direction of said body member, shoulder means mounted on said free end portion of said elongated strap portion, said body member having a longitudinally disposed slot, said slot having side walls and an end wall and receiving said free end portion of said elongated strap portion, said body member having a transversely disposed bore extending therethrough, said last named bore communicating with said slot in proximity of said shoulder means, and rivet means mounted in said bore and extending into said slot and engaging said shoulder means whereby said elongated strap portion is prevented from being withdrawn from said body member.

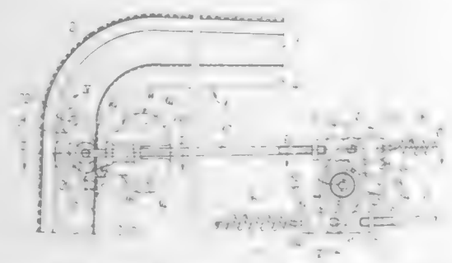


3,372,953
GLARE SHIELD
Theron P. Weaver, 2621 Indiana Ave., Fort Wayne, Ind. 46807
Filed July 28, 1965, Ser. No. 475,477
4 Claims. (Cl. 296—97)



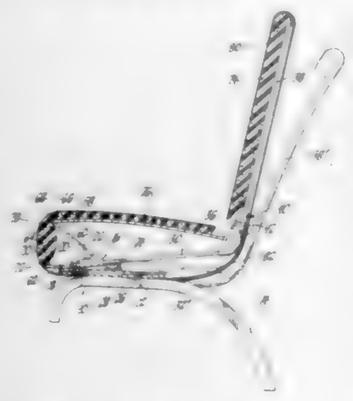
An apparatus for reducing glare in localized areas having a sheet of transparent material with glare-reducing properties pivotally and swivelly connected to a bracket for mounting a device to a vehicle with an elongated and telescoping neck portion therebetween. The glare-reducing sheet has a shape of a parallelogram with pairs of opposite corners being acute and obtuse, respectively. The glare-reducing sheet is pivotally connected to the neck portion so as to be movable with respect to the neck portion about two different axes generally perpendicular to each other and to the neck portion. The neck portion is telescopically extensible and retractable and is swivelly connected to said mounting bracket. Each of the connections between the respective parts of the apparatus is supplied with suitable friction, whereby the glare-reducing sheet may be selectively positioned in the line of sight of localized glare.

3,372,954
SLIDING ROOFS OF VEHICLES AND CONTROL AND LOCKING DEVICE THEREFOR
Gaëtan de Coye de Castelet, Billancourt, France, assignor to Regie Nationale des Usines Renault, Billancourt, France
Filed Mar. 17, 1966, Ser. No. 535,177
Claims priority, application France, Apr. 8, 1965, 12,479, Patent 1,439,226; Oct. 13, 1965, 34,838, Patent 89,956
8 Claims. (Cl. 296—137)



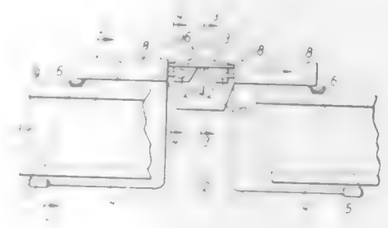
A sliding roof for closing an aperture formed in the roof of a vehicle. The sliding roof is slidably mounted between two parallel slideways provided on opposite sides of the aperture and is equipped with lock members. The slideways each consists of an angle iron having a first substantially vertical flange having an upper portion connected to a second flange directed towards the center of said aperture. The sliding roof is provided with a plurality of slide members having a slot therein for slidably engaging with said second flange. At least one slide member on each side of the roof is formed with a guide passage each having a lock rod slidably engaging therewith. The end of the lock rods disposed in the vicinity of the center of the aperture are connected to the lock control device secured to the roof. The other ends of said rods extend over the angle iron and form depending lock bolt terminal portions having fitted thereon rubber or plastic blocks disposed level with the first flange. The locking rods are guided by the slide member so that tractive force exerted on said rods by said control device towards the center of the aperture will press the blocks against the first flange of the two angle irons.

3,372,955
UNISON ACTION SEAT
Hyland C. Flint, 3551 Walnut Lake Road, Orchard Lake, Mich. 48033
Filed Aug. 16, 1965, Ser. No. 480,207
12 Claims. (Cl. 297—300)



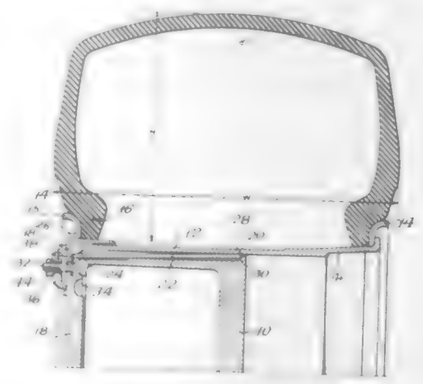
In a preferred form the subject invention relates to a type of unison action seating wherein both the seat and backrest portions of the seat are integrally formed by a spring wire member, said spring wire member being adaptable against a base or ramp portion of the seat structure which effectively shortens the lever arm of the spring as the deflection distance increases changing the spring rate in the process to inhibit further spring deflection.

3,372,956
ARTICULATED PLANER MINING MACHINE MEMBERS WITH INTERPOSED PARTITION
Willy Heyer, Bochum-Gerthe, Germany, assignor to Gewerkschaft Eisenhutte Westfalia, Wethmar, near Lunen, Westphalia, Germany, a corporation of Germany
Filed June 23, 1966, Ser. No. 559,970
Claims priority, application Germany, June 29, 1965, G 44,017
7 Claims. (Cl. 299—34)



1. In a mining machine adapted to be conducted along a longitudinal guide means extending adjacent a mine face, with such mining machine in operative engagement with such mine face for extracting mineral therefrom, in which such mining machine includes a pair of longitudinally spaced apart tandem-arranged linkably interconnected base means and each said base means includes a keel adapted to underlie such guide means and slide along the mine floor thereat, said keels being correspondingly spaced apart, the improvement which comprises intermediate means interposed longitudinally between said pair of base means and articulatedly interconnecting said pair of base means, said intermediate means forming a longitudinal partition between said pair of base means which defines a cushion pocket with the adjacent portion of the mine face between said pair of base means whereby to accommodate fine particles of mineral which serve as a sealing cushion between such portion of the mine face and said intermediate means thereat to prevent excessive entry of extracted mineral into the space defined between the adjacent portions of said pair of base means, said keels, the underside of such guide means and the mine floor therebeneath.

3,372,957
WEDGE BAND FOR WHEEL RIM STRUCTURE
Forrest C. Taylor, Northlake, Ill., assignor to International Harvester Company, Chicago, Ill., a corporation of Delaware
Filed Feb. 7, 1966, Ser. No. 525,746
9 Claims. (Cl. 301—18)



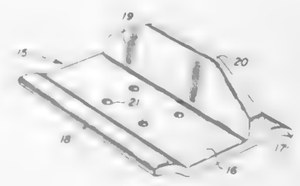
Adapter to mount single rim on dual wheel. The adapter comprises a substantially circumferentially continuous, wide wedge band which is variable in configuration, made

in one piece, and formed with an external frusto-conical surface at one end and with an internal bevel at the other.

3,372,958
AUTOMATIC FEEDER FOR PNEUMATIC CONVEYING LINES
Roe R. Black, Aurora, Nebr., assignor to York Manufacturing Company, a corporation of Nebraska
Filed May 2, 1966, Ser. No. 546,883
6 Claims. (Cl. 302—53)

A hopper with a bottom feed to a pneumatic conveying line is provided with an inlet and a valve controlling said inlet. The valve is operated automatically alternately to admit product to the hopper and to seal the inlet opening, the complete cycle being repeated several times a minute. Control of the inlet valve is in response to pressure conditions within the hopper which alternate between positive and negative pressure, positive pressure being applied to unload the hopper and negative pressure to assist in loading.

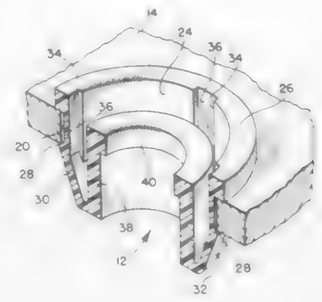
3,372,959
GROUSER FOR TRACTOR
Cleal T. Watts, Jr., Russellville, Ark. (2823 Olive, Texarkana, Tex. 75501)
Filed Aug. 5, 1966, Ser. No. 570,521
1 Claim. (Cl. 305—54)



A grouser for a crawler type tractor having endless tracks and wherein each track includes spaced parallel chains on which supporting wheels roll inwardly of the sides of each track. The invention is directed to grouser bars extending across plates which comprise the track and which bars are beveled so as to provide horizontal ground edges less than the widths of the parallel chains.

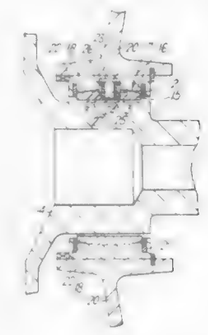
3,372,960
SELF-LOCKING BUSHING
Julian V. Fisher, Carpentersville, Ill., assignor to Illinois Tool Works Inc., Chicago, Ill., a corporation of Delaware
Filed Oct. 21, 1965, Ser. No. 500,034
2 Claims. (Cl. 308—15)

This invention relates to a one-piece plastic bushing capable of being self-retained in an apertured workpiece for mounting a shaft in spaced relation within said



apertured workpiece and capable of permitting radial and longitudinal movement of said shaft.

3,372,961
BEARING
William John Davies and John Kenneth Rhodes, Derby, England, assignors to Rolls-Royce Limited, Derby, England, a British company
Filed Dec. 13, 1965, Ser. No. 513,367
Claims priority, application Great Britain, Dec. 30, 1964, 52,886/64
8 Claims. (Cl. 308—72)

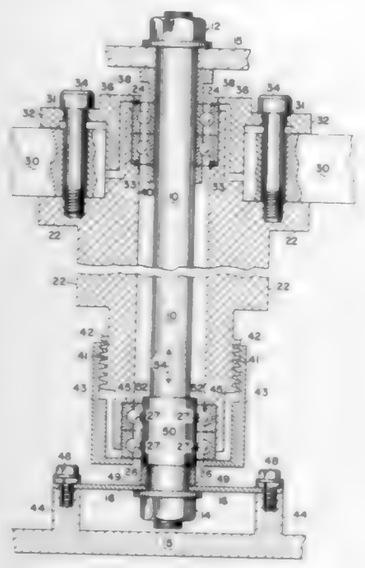


A bearing device, primarily for use in supporting the shaft of a gas turbine jet propulsion engine adapted to be used as a "tip jet" on the end of a helicopter rotor blade, has a bush within which a shaft is rotatably mounted and a fixed housing within which the bush is mounted. The outer surface of the bush is arcuate in a plane containing the axis of the shaft and abuts the inner surface of the fixed housing which is arcuate in the same plane. The radius of curvature of the inner surface of the housing is greater than the radius of curvature of the outer surface of the bush to permit the bush to rock within the housing and thus accommodate tilting of the shaft relative to the housing. The bush is biased to a tilted position with respect to the housing and shaft to prevent unobstructed axial flow passages being formed between the shaft, bush and housing.

3,372,962
SPINDLE APPARATUS USEFUL WITH ROTATING MEMORY DISCS
Clarence R. Linsley, La Crescenta, Calif., assignor to General Precision Systems Inc., a corporation of Delaware
Filed Feb. 21, 1966, Ser. No. 528,892
2 Claims. (Cl. 308—184)

A temperature compensating spindle construction for rotating memory discs. The disc-carrying end of a hollow, rotating spindle is supported upon an inserted stationary shaft by a bearing fixed on the shaft near one end. The other end of the spindle is supported upon the shaft by

a ball bearing whose inner race is an ungrooved cylindrical surface carried by the shaft adjacent its other end.



The disc end of the shaft is fixed in a supporting structure and its other end is secured to a radially rigid but axially flexible diaphragm fixed to the supporting structure.

3,372,963
CORRUGATED BEARING RING
Dwight E. Harris, Woodstock, N.Y., assignor to Rotron Manufacturing Company, Inc., Woodstock, N.Y., a corporation of New York
Filed Dec. 2, 1965, Ser. No. 511,065
5 Claims. (Cl. 308—236)

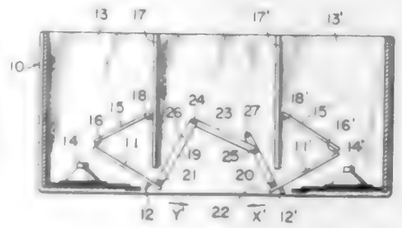
In the described embodiment of the invention, a corrugated bearing ring is interposed between the outer race of a conventional ball bearing and a supporting sleeve and secures the two elements against relative rotation. The bearing ring is formed of resilient material having a thickness so related to the radial clearance between the outer race of the ball bearing and the support sleeve that when assembled, the corrugations of the ring are essentially flattened out and the ring fills substantially all the clearance space between the ball bearing and the support sleeve.

3,372,964
KNEE SPACE FLOATING SHELF FOR DESKS
Carl A. Eversman, Toledo, Ohio, assignor to The Globe-Wernicke Co., Cincinnati, Ohio, a corporation of Ohio
Filed Apr. 12, 1966, Ser. No. 542,102
2 Claims. (Cl. 312—194)

A floating shelf mounted in the knee space of a pedestal desk, the shelf being provided with rollers which coact with rails secured to the inner walls of the pedestals. The inner walls of the pedestals are provided with apertures and the rails are mounted on the pedestals by means of hook bolts which may be passed from the knee space through the aperture and hooked behind a flange of the pedestal whereupon they are secured by tightening a nut on

the hook bolt. The shelf is provided with a rubber mounted handle by means of which it may easily be reached for moving the shelf in or out.

3,372,965
DEVICE FOR OPENING OR CLOSING TWO DOORS SIMULTANEOUSLY
Hideki Abe, Tokyo, Japan, assignor to Victor Company of Japan, Limited, Yokohama, Japan, a corporation of Japan
Filed Feb. 15, 1966, Ser. No. 527,569
Claims priority, application Japan, Feb. 25, 1965 (utility model), 40/14,298
4 Claims. (Cl. 312—275)

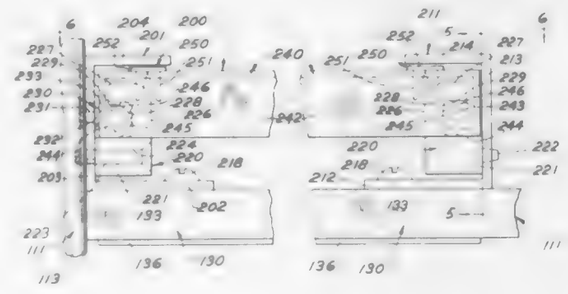


A device for simultaneously opening or closing two doors comprising first and second adjacent doors, first and second side plates each having one end pivotally connected to a fixed frame and the other end thereof being pivotally connected to the respective one of said doors for pivotal motion about said frame, first and second levers each of which has one end pivotally connected to the respective one of said doors for swinging motion through an angle about the center of swinging motion of the lever in conjunction with the movement of the door, and means for transmitting the turning force of one of said first and second levers to the other said lever in such a manner that when said one lever swings, the other lever is caused to swing in the direction opposite to the direction in which said one lever swings whereby each of said levers causes one of said first and second doors to move in the direction opposite to the direction in which the other of said doors moves when one door is opened or closed.

3,372,966
SLIDING SHELF
Le Roy W. Duy, Aurora, Ill., assignor to Lyon Metal Products, Incorporated, Aurora, Ill., a corporation of Illinois
Filed June 13, 1966, Ser. No. 557,134
18 Claims. (Cl. 312—341)

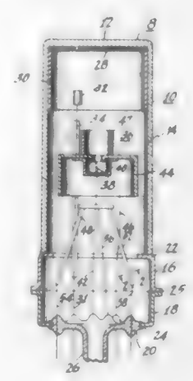
A storage cabinet and sliding shelf construction comprising a cabinet including a body having a front opening therein, a support member disposed in the body and in general longitudinal alignment with the front opening, a pair of spaced apart rails mounted within the body upon the support member with the longitudinal axes of the rails

disposed generally parallel to each other and in longitudinal alignment with the front opening, a front pair of lubric glides respectively mounted on the forward ends of the rails in general horizontal alignment, a rear pair of lubric glides respectively mounted on the rails in general horizontal alignment and in general longitudinal alignment with the front pair of lubric glides and spaced a short distance rearwardly thereof, and a shelf disposed in the body and including a main panel and a pair of side panels integral therewith and a pair of support flanges respectively mounted on the side panels and extending in-



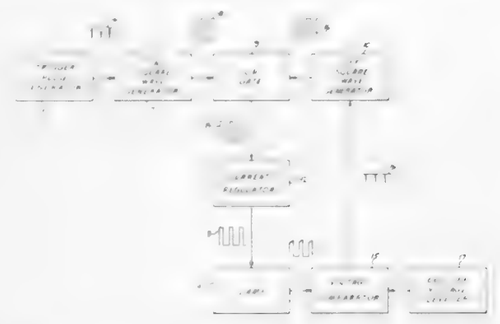
wardly therefrom, each of the glides including a lower support surface extending below the associated one of the support flanges for engagement therewith and an upper support surface extending over the associated one of the support flanges for engagement therewith, the shelf being shiftable longitudinally on the glides relative to the rails between a storage position fully disposed within the body and an extended position at least partially disposed outwardly with respect to the body, the shelf being supported upon the glides in cantilever fashion in both the storage position thereof and the fully extended position thereof.

3,372,967
METHOD OF MAKING A MULTI-ALKALI CATHODE
Frederick R. Hughes, Lancaster, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Filed July 6, 1966, Ser. No. 563,255
5 Claims. (Cl. 316—5)



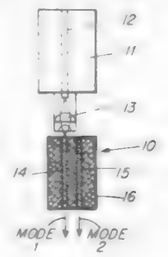
A multi-alkali photocathode including antimony, potassium, sodium and cesium is made by co-evaporating potassium and sodium from a common channel and sequentially evaporating antimony and cesium from two other channels. Substantially the same temperature, i.e., from 160° C. to 175° C., is preserved during the co-evaporation of potassium and sodium and the evaporation of cesium.

3,372,968
FLASH GETTERING METHOD AND APPARATUS HAVING PULSE DURATION CONTROL
Willard M. Grimes, Jr., Bloomfield, N.J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Filed Oct. 29, 1964, Ser. No. 407,295
17 Claims. (Cl. 316—25)



A lamp gettering method and apparatus which provides a series of constant current pulses of predetermination duration and magnitude through a filament sufficient to flash getter material from the filament but insufficient to cause the filament to recrystallize and thus become brittle. The IR drop across the filament is sensed, compared to a maximum permissible value and the duration of the constant current pulses controlled to maintain the IR drop across the filament and hence the getter flashing temperature at a predetermined level.

3,372,969
HIGH RESOLUTION FILTER FOR LASER-EMISSIVE ENERGY
Elias Snitzer, Sturbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Filed Dec. 6, 1963, Ser. No. 328,710
1 Claim. (Cl. 350—96)

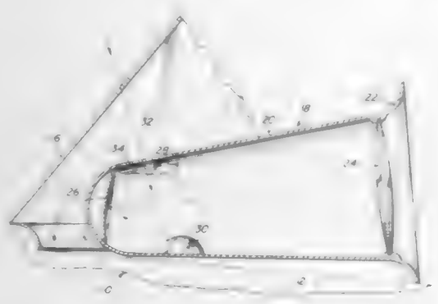


A mode selection filter for laser-emissive energy wherein two fiber devices are provided in parallel relationship within an enclosing cladding material which permits fringing of light from one fiber to the other. The laser light is applied to the end of one fiber, which, along with the other fiber, has preselected transverse parameters so that only desired modes are propagated. The length of fibers is then properly chosen so that only one mode will exit from each fiber.

3,372,970
TRAFFIC LIGHT INDICATOR
Oliver D. Winkle, 908 E. Lee St., Tucson, Ariz. 85719
Filed Feb. 28, 1964, Ser. No. 348,078
4 Claims. (Cl. 350—100)

An elongated generally cylindrical housing for mounting on the dashboard of a vehicle in generally horizontal position with the housing extending longitudinally of the vehicle and the forward end of the housing disposed closely adjacent the lower marginal edge portion of a forwardly and downwardly inclined windshield of the vehicle, the

forward end of the housing being closed and having a circumferentially extending aperture formed in its upper wall portion with a concave rearwardly facing mirror disposed in the forward end of the housing forward of the aperture, a converging lens recessed in the open rear end of the housing and a convex spherical mirror disposed in



the housing below the longitudinal center line thereof forward of the concave mirror for reflecting light rays passing downwardly through the viewing aperture in a rearward and downwardly inclined direction forwardly and upwardly onto the concave mirror for subsequent reflection rearwardly through the converging lens.

3,372,971
OPTICAL SYSTEM AND MATERIALS
John J. Quackenbush, Monroe, and Herbert O. Corbett, Bridgeport, Conn., assignors to National Distillers and Chemical Corporation, New York, N.Y., a corporation of Virginia
Filed Dec. 28, 1964, Ser. No. 421,227
7 Claims. (Cl. 350—117)

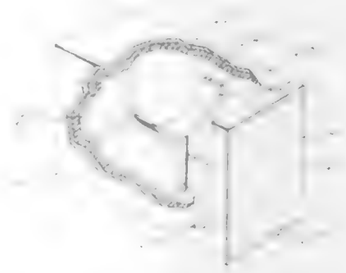
A projection screen and projection system in which the projection screen is flexible and formed of two or more extruded layers of plastic material which are intimately bonded to one another along their adjacent surfaces. One layer is composed of a mixture of polyethylene and polypropylene, while the other is composed of a copolymer of polyethylene and polypropylene with the total screen thickness being about 100 mils. An excellent image from the projector is formed on the surface of the screen remote from the projector, while a poor image is developed on the front surface of the screen. The screen can be formed of three layers of plastic material, each having a thickness of 30 mils, where the two outer layers may be of the same material.

3,372,972
OPTICAL BEAM DEFLECTOR
Uwe J. Schmidt, Canoga Park, Calif., and Frithjof N. Mastrup, Simi, Calif., assignors to TRW, Inc., a corporation of Ohio
Filed July 30, 1962, Ser. No. 213,235
3 Claims. (Cl. 350—160)

1. An optical energy beam deflector comprising:
a light energy source;
means for transmitting a light beam from said source along a path;
a material positioned in said path having a first index of refraction whereby the light beam passes through the material and leaves in a given direction, said material having chromium atoms therein; and
means for varying the index of refraction of said material in a direction transverse to said beam path,

said last mentioned means exciting more chromium atoms in said material on one side of the beam than on the other side,
thereby varying the population density of energy levels transverse to the beam path and laterally across said material effectively changing said given direction.

3,372,973
TWO-DIMENSIONAL BEAM SCANNING DEVICE
David E. Flinchbaugh, Andover, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Filed Feb. 8, 1965, Ser. No. 430,957
11 Claims. (Cl. 350—161)



A liquid acoustic cell has a curved or cylindrical transducers therein to which a sinusoidal actuating voltage is applied to produce focused acoustic waves therein. An optical beam passed through the cell adjacent the focal point of the acoustic waves will be deflected in a circular scanning motion.

3,372,974
MECHANICALLY COMPENSATED ZOOM LENS SYSTEM
Walter R. Linke, Chicago, Ill., assignor to Bell & Howell Company, Chicago, Ill., a corporation of Illinois
Filed Apr. 2, 1964, Ser. No. 356,769
3 Claims. (Cl. 350—186)

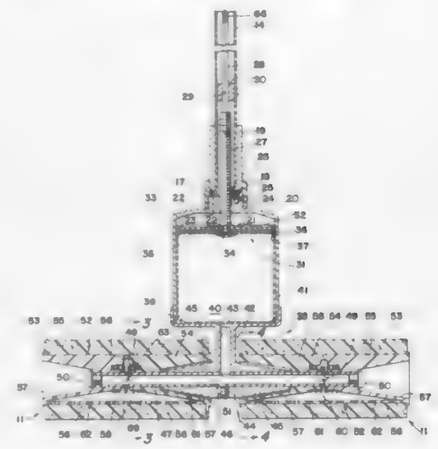
An optical zoom system having a positive member movable for zooming and mounted between and in axial alignment with a front negative member, movable for

image compensation, and a fixed rear positive member or prime lens, the said zoom system being highly corrected for lens aberrations at large apertures. The movable positive member may comprise two biconvex components or a cemented triplet and a single lens element or four lens elements including two cemented surfaces of negative power.

3,372,975
PAINT APPLICATORS
Elias J. Johnson, 122 S. 80th St., Milwaukee, Wis. 53213
Filed Oct. 20, 1965, Ser. No. 498,650
2 Claims. (Cl. 401—183)

A paint applicator including a handle reservoir for the paint containing internal spring means and communicating with a sleeve, and a hollow element pivoted on the opposite end of said sleeve triangular in cross-section and covered with absorbent material through which the paint exudes for transfer to a surface to be painted.

3,372,976
FLOOR WAXER
Charles H. MacFarland, Rocky River, Ohio, assignor to The Scott & Fetzer Company, Cleveland, Ohio, a corporation of Ohio
Filed Aug. 12, 1965, Ser. No. 479,175
7 Claims. (Cl. 401—197)



A roller applicator for applying wax to a floor having a pair of hollow wax applying rollers supported on a non-rotating hollow axle, a combined handle and wax storage container mounted above the rollers, and a supply tube from the wax storage container to the hollow axle, through the hollow axle and into the chamber defined by each hollow roller.

CHEMICAL

3,372,977
PROCESS OF CREASEPROOFING CELLULOSIC TEXTILES WITH A SINGLE AQUEOUS SOLUTION CONTAINING BOTH d,l-BUTADIENE DIOXIDE AND A LEWIS BASE CATALYST
Ralph J. Berni, Ruth R. Benerito, and John B. McKelvey, New Orleans, La., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Filed Aug. 27, 1965, Ser. No. 483,372
1 Claim. (Cl. 8—120)

1. A process for imparting improved wet and dry crease recovery to cellulosic textile comprising reacting cellulosic textile containing free cellulose hydroxyl groups by immersing said textile in an aqueous solution consisting essentially of d,l-butadiene dioxide and a Lewis base catalyst in molar ratio of from about 1:2:0.16 to 1:4:0.50, respectively of anhydroglucose units of cellulose:d,l-butadiene dioxide:catalyst, for a period of time from about 10 minutes to 24 hours at room temperatures, said aqueous solution being produced by dissolving the d,l-butadiene dioxide in water and then adding said catalyst.

3,372,978
FIBROUS MATERIAL CARRYING A DEPOSIT OF A CROSS-LINKED POLYMER
Robert E. Whitfield, Pleasant Hill, Allen G. Pittman, El Cerrito, and William L. Wasley, Berkeley, Calif., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Filed May 28, 1964, Ser. No. 371,150
15 Claims. (Cl. 8—127.6)

Fibrous materials, such as wool, cotton, rayon, nylon, etc., are modified by applying thereto a pre-formed polymer and cross-linking it to form a three-dimensional structure, the cross-linking being accomplished by reaction of the pre-formed polymer and the fixative at a phase boundary. In a typical embodiment, wool is first impregnated with an aqueous solution of the fixative, e.g., a diamine such as hexamethylene diamine. The wool is then impregnated with a solution of a pre-formed polymer in a water-immiscible solvent such as carbon tetrachloride. The polymer may be, for example, a copolymer of ethylene and methacryloyl chloride. By serial application of these solutions to the fabric, each fibrous element is coated with a two-phase system, for example, an inner layer of diamine in water and an outer layer of the highly reactive polymer in water-immiscible solvent. Under these conditions, the diamine and the polymer react almost instantaneously at the boundary between the phases, producing in situ on the fiber a cross-linked, insoluble, resin coating. By suitable selection of the complementary reactants, a wide variety of polymeric, fiber-modifying agents can be cross-linked in situ on fibers to yield such improvements as increased resistance to shrinkage when subjected to washing operations; increased resistance to soils, bleaches, and light; decreased tendency of the textiles to becoming creased or wrinkled, etc.

3,372,979
PRODUCTION OF ALKALI-SOLUBLE CELLULOSIC TEXTILE MATERIALS BY THE ALUMINUM NITRATE TREATMENT OF PARTIALLY ETHERIFIED COTTONS AND THE OXIDATION OF CELLULOSE WITH ALUMINUM NITRATE
Robert M. Reinhardt, New Orleans, and Russell M. H. Kullman, Metairie, La., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Filed Feb. 17, 1965, Ser. No. 433,523
8 Claims. (Cl. 8—120)

1. A process for producing an alkali-soluble cellulosic textile that substantially retains its textile properties which comprises partially etherifying cotton textile to a degree of substitution of from about 0.04 to about 0.40 ether groups per anhydroglucose unit, said ether group being a member selected from the group consisting of

carboxyethyl, carboxymethyl, hydroxyethyl, methyl, phosphonomethyl, ethyl, alpha-methylcarboxymethyl, aminoethyl, carbamoylethyl and sulfoethyl, and oxidizing said partially etherified cotton textile by impregnating it to about 100% pickup with an aqueous solution of aluminum nitrate having a concentration from about one weight percent to a saturated solution, and dry heat treating the aluminum nitrate impregnated partially etherified cotton textile at a temperature of from about 120° to about 160° C. for from about one to about five minutes, the time and temperature of the heat treatment being inversely related, to dry said etherified cotton textile and decompose the aluminum nitrate.

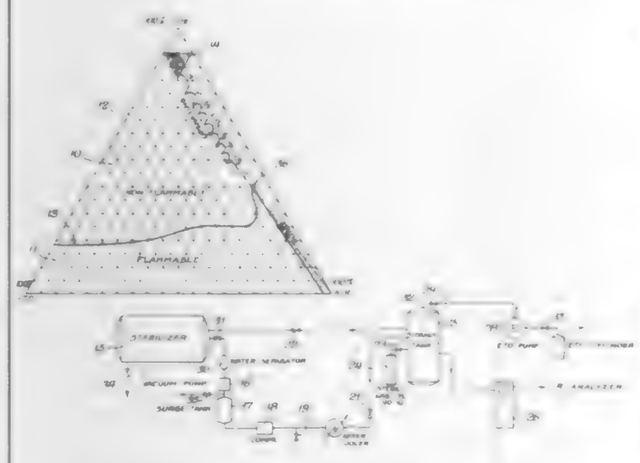
8. A process for the oxidation of cellulose which comprises impregnating the cellulose to about 100% pickup with an aqueous solution consisting essentially of aluminum nitrate having a concentration from about one weight percent to a saturated solution, and dry heat treating the aluminum nitrate impregnated cellulose at a temperature of from about 120° to about 160° C. for from about one to about five minutes, the time and temperature of the heat treatment being inversely related, to dry said cellulose and decompose the aluminum nitrate.

3,372,980

RECYCLIZATION OF ETHYLENE OXIDE

Donatas Satas, Palatine, Ill., assignor to The Kendall Company, Boston, Mass., a corporation of Massachusetts

Filed July 5, 1963, Ser. No. 293,120
10 Claims. (Cl. 21—58)



A method of sterilizing with a mixture of ethylene oxide and inert gas which allows safe and uniformly effective reuse of the sterilizing gas for a plurality of successive sterilization cycles. The gas mixture is refortified with substantially pure ethylene oxide when necessary so that the mixture contains at least 10% ethylene oxide at the start of each sterilization cycle, and the mixture is vented to the air while its composition is such that it will not pass through a flammable state when diluted with air.

3,372,981

STABILIZATION OF MONOETHANOLAMINE SOLUTIONS IN CARBON DIOXIDE SCRUBBERS

Harold Ravner, Accokeek, and Charles H. Blachly, West Hyattsville, Md., assignors to the United States of America as represented by the Secretary of the Navy

Filed Mar. 11, 1965, Ser. No. 439,110
2 Claims. (Cl. 23—4)

Aqueous monoethanolamine solutions which contain trace amounts of copper and iron compounds are used as absorber solutions for carbon dioxide in air purifying systems when stabilized to aeration-oxidation by the addition thereto of equal amounts of the monosodium salt of N,N-diethanolglycine and tetrasodium ethylenediamine tetraacetic acid which are in the range of from 4.8 to 8% by weight on the monoethanolamine content of the solutions.

3,372,982

METHOD OF RECOVERY OF VANADIUM FROM ITS ORES

Wayne C. Hazen, Denver, Colo., assignor to Hazen Research Inc., Golden, Colo., a corporation of Colorado

No Drawing. Filed Mar. 1, 1963, Ser. No. 262,189
5 Claims. (Cl. 23—18)

1. A process for the recovery of vanadium from its ores which comprises: treating the ore with a solvent to bring the vanadium into solution; oxidizing the vanadium in solution to the pentavalent state; adjusting the pH of the solution to a value between about 1 and about 6; contacting the solution with charcoal to adsorb the vanadium; stripping the adsorbed vanadium from the charcoal with a solvent for the vanadium to form a substantially pure solution of vanadium and recovering the vanadium from the stripping solution by precipitation.

5. A method for the recovery of vanadium from solutions containing vanadium in the pentavalent state which comprises adjusting the pH of the solution to a value between about 1 and about 6; contacting the solution with charcoal to adsorb the vanadium on the charcoal; stripping the vanadium from the charcoal with a solvent for the vanadium to form a relatively pure solution of vanadium; and recovering the vanadium from the strip solution by precipitation.

3,372,983

CHEMICAL PROCESSES AND PRODUCTS RESULTING THEREFROM

Edward L. Moore, St. Louis, Mo., assignor to Monsanto Company, a corporation of Delaware

No Drawing. Filed Dec. 23, 1963, Ser. No. 332,852
6 Claims. (Cl. 23—106)

A sodium tripolyphosphate product having improved hydration characteristics and exhibiting a new X-ray diffraction pattern, and a process for producing the new improved crystalline sodium tripolyphosphate comprising lowering the temperature of heated, low temperature form sodium tripolyphosphate at an average rate of at least about 25° C. per minute through the temperature range of 350° C. to 125° C.

3,372,984

TRISODIUM DIPOTASSIUM TRIPOLYPHOSPHATES AND PROCESSES FOR THEIR MANUFACTURE

Joe S. Metcalf, Trenton, Mich., and Kenneth J. Shaver and Chung Yu Shen, St. Louis, Mo., assignors to Monsanto Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Filed Apr. 21, 1964, Ser. No. 361,566
18 Claims. (Cl. 23—107)

The new compounds selected from the group consisting of hydrated and anhydrous trisodium dipotassium tripolyphosphates and a process for producing them comprising reacting in an aqueous slurry a strong base selected from the group consisting of strong sodium cation-bearing bases and strong potassium cation-bearing bases and a triphosphate selected from the group consisting of (1) acidic tripolyphosphates containing at most three alkali metal cations per molecule selected from the group consisting of Na and K and (2) trimetaphosphates containing from 1 to 3 alkali metal cations selected from the group consisting of Na and K; the ratio of K:Na in the slurry being from about 1:3 to about 1:7 and the ratio of the free water to the combined weights of said strong base and said triphosphate in said slurry being at most about 0.65:1.

3,372,985

PROCESS FOR REMOVING IMPURITIES FROM THE PRECIPITATION SYSTEM OF THE BAYER PROCESS

Reginald F. Roberts, Jr., and Robert H. Lister, Baton Rouge, La., and William A. James, Toronto, Ontario, Canada, assignors to Kaiser Aluminum and Chemical Corporation, Oakland, Calif., a corporation of Delaware

Continuation of application Ser. No. 259,826, Feb. 20, 1963. This application June 5, 1967, Ser. No. 645,544
10 Claims. (Cl. 23—143)

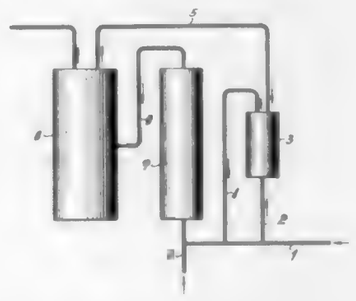
1. In the Bayer process wherein alumina is extracted from aluminous material by digesting said aluminous material in a caustic liquor and said extracted alumina is precipitated from pregnant caustic liquor containing oxalate as a contaminant, which oxalate also precipitates and contaminates the precipitated alumina hydrate, and the precipitated solids are separated from the major portion of the mother liquor after which the concentrated solids-containing slurry is classified according to particle size into product alumina hydrate and alumina hydrate seed for recycle to the aforesaid precipitation, the improvement in particle size control and increased capacity of precipitation comprising separating the spent caustic liquor from the alumina hydrate seed by filtering and subjecting the alumina hydrate filter cake to cold water washing, the amount of cold water used being not in excess of that which is sufficient to remove substantially all of the spent caustic liquor remaining in the seed solids, recycling of the spent caustic liquor to the digestion phase of the Bayer process, subjecting the cold-water-washed-alumina hydrate to a washing with hot water to dissolve substantially all of the sodium oxalate contaminant, separating the washed seed from the oxalate-containing wash liquor, and thereafter recycling the washed seed to the precipitation reaction.

3,372,986

PROCESS FOR PRODUCING HYDROCYANIC ACID AND ACRYLONITRILE FROM ACROLEIN-CYANOHYDRIN

Kurt Sennewald, Wilhelm Vogt, and Klaus Gehrmann, Knapsack, near Cologne, and Alexander Oborodnik, Berrenrath, near Cologne, Germany, assignors to Knapsack-Griesheim Aktiengesellschaft, Knapsack, near Cologne, Germany, a corporation of Germany

Filed Aug. 29, 1963, Ser. No. 305,366
Claims priority, application Germany, Sept. 15, 1962, K 47,740
6 Claims. (Cl. 23—151)



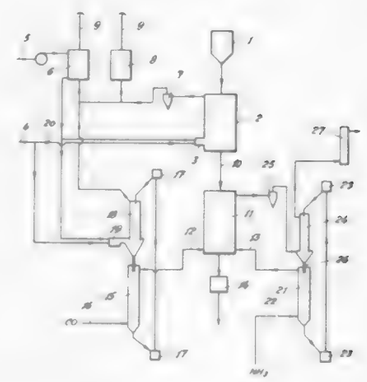
1. A process for producing acrylonitrile and hydrocyanic acid comprising contacting acrolein-cyanohydrin reactant with reactive amounts of ammonia and at least one substance selected from oxygen and air and effecting the reaction at a temperature of about 300–550° C. in the presence of a catalyst consisting substantially of at least one oxide of an element selected from the group consisting of barium, rhenium, rhodium, palladium, antimoney, aluminum, thorium, molybdenum, vanadium, tin, chromium, tungsten, cobalt, iron, manganese, nickel, copper, bismuth, titanium, zinc, cadmium, silver, gold, lead, niobium, tantalum, uranium, cerium and phosphorus.

3,372,987

PREPARATION OF COMPOUNDS CONTAINING A CN LINKAGE

Hermann Kronacher, Trostberg, Upper Bavaria, Germany, assignor to Suddeutsche Kalkstickstoff-Werke Aktiengesellschaft and Dr. C. Otto & Comp. G.m.b.H., Trostberg, Upper Bavaria, and Bochum, Germany

Filed Dec. 24, 1964, Ser. No. 420,961
1 Claim. (Cl. 23—151)



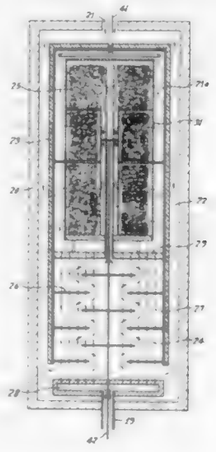
In the preparation of —CN compounds from ammonia and carbon monoxide or hydrocarbons, the latter are preheated in contact with copper or copper alloys as circulating heat transfer material to a temperature above the reaction temperature and then passed with ammonia of lower temperature through the reaction zone whereby the temperature of said zone is controlled by the amount and temperature of the preheated carbon supplying gas.

3,372,988

PROCESS AND APPARATUS FOR PERFORMING REACTIONS IN THE GASEOUS PHASE

Hans Jürgen Hansen, Lyngby, Denmark, assignor to Haldor Topsøe, Hellerup, Denmark, a company of Denmark

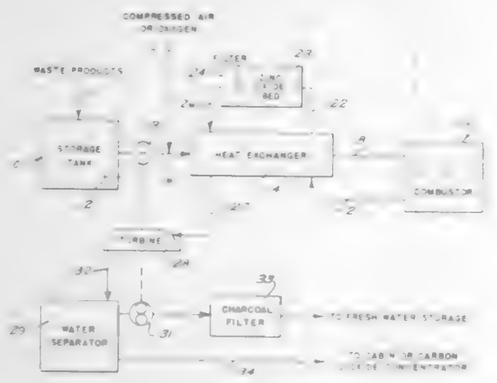
Filed Sept. 18, 1964, Ser. No. 397,481
Claims priority, application Denmark, Sept. 28, 1963, 4,572
10 Claims. (Cl. 23—198)



This invention relates to a process and apparatus for performing catalytic reactions in the gaseous phase, the apparatus including a pressure shell preferably having a

plurality of bodies of catalyst therein, means for passing a synthesis gas into the pressure shell, means for passing the gas through the catalyst bodies successively in a radial direction, and means for withdrawing a product gas from the pressure shell.

3,372,989
WASTE COMBUSTION AND WATER RECOVERY SYSTEM
Martin R. Macklin, Cleveland, Ohio, assignor to TRW Inc., a corporation of Ohio
Filed Apr. 1, 1964, Ser. No. 356,468
8 Claims. (Cl. 23—204)



Method and apparatus for recovering potable water from an organic waste product wherein the product is passed through a heat exchanger where it is heated sufficiently to volatilize the water present and to vaporize the organic volatiles, the vaporous mixture is then oxidized in a combustion zone, the combustion products are recirculated to the aforementioned heat exchanger, the combustion products are filtered and finally water vapor is condensed therefrom.

3,372,990
CYCLIC PROCESS FOR MANUFACTURING HYDROGEN PEROXIDE
Michel Charret, Champ-sur-Drac, France, assignor to Oxysynthese, Paris, France
No Drawing. Filed Mar. 26, 1965, Ser. No. 443,092
Claims priority, application France, Apr. 16, 1964, 971,147, Patent No. 1,405,861
7 Claims. (Cl. 23—207)

The present disclosure relates to a process for manufacturing hydrogen peroxide by reducing a quinone compound and oxidizing the resultant hydroquinone compound, and separating the hydrogen peroxide formed. The process involves the introduction into the working solution of an aqueous solution of an acid pyrophosphate of an alkali metal, particularly disodium acid pyrophosphate. Preferably, ammonium nitrate is also needed.

3,372,991
METHOD OF PRODUCING PYROLYTIC GRAPHITE
William H. Avery, Silver Spring, Md., assignor to the United States of America as represented by the Secretary of the Navy
Filed Aug. 14, 1964, Ser. No. 392,071
4 Claims. (Cl. 23—209.3)

The invention relates to a method for producing anisotropic graphite from ordinary graphite. According to the invention, a block of ordinary graphite is first shaped to a configuration having a reduced central portion between enlarged end portions. Pressure and electric current are applied on the graphite block through its enlarged end portions, thereby creating anisotropic graphite in the reduced central portion of said block. The central portion is then cut out or otherwise removed from the remainder of the graphite block.

3,372,992
METHOD FOR DETERMINING BLOOD SERUM IRON-BINDING CAPACITY
Robert H. Storey, Waukegan, Howard J. Glenn, Lake Bluff, and William J. O'Malley, Gurnee, Ill., assignors to Abbott Laboratories, Chicago, Ill., a corporation of Illinois
No Drawing. Filed Sept. 30, 1964, Ser. No. 400,588
5 Claims. (Cl. 23—230)

1. A method for measuring the unsaturated iron-binding capacity of serum which comprises the steps of: mixing a tracer amount of radioactive iron with blood serum; placing in intimate contact with said mixture a resin sponge comprising a polyurethane foam of intercommunicating cell type containing a strong base anion-exchange resin; incubating the mixture and the resin sponge; measuring the initial radioactivity of the combined mixture and resin sponge with suitable detecting means; removing the resin sponge from the mixture; washing the resin sponge with an aqueous solution; and measuring the residual radioactivity in the resin sponge.

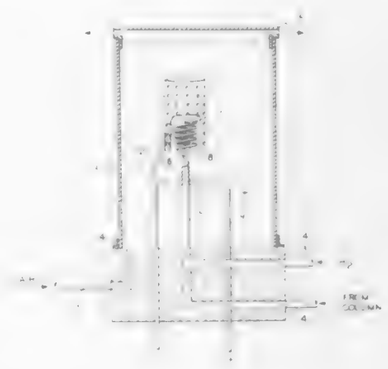
3,372,993
SCRAP SAMPLING METHOD
Edward E. Brown, Marietta, Ohio, assignor to Interlake Steel Corporation, a corporation of New York
Filed Sept. 11, 1963, Ser. No. 308,161
16 Claims. (Cl. 23—230)

1. In a method providing a sample for metallurgical analysis the steps comprising, selecting an original sample from a quantity of ferrous material containing tramp elements, reducing the ferrous material into relatively small particle size, mixing the particles into a substantially homogeneous mixture, selecting a test sample of predetermined size from said mixture, introducing said test sample into a container, introducing a stream of oxygen into said container, igniting and burning the test sample in the presence of said oxygen for a time sufficient to convert said test sample to a molten condition, said burning indicated by a glow emitted from said container, continuing to burn said material for a time sufficent to convert the tramp elements of said test sample to molten oxides indicated by an initial disappearance of said glow, placing an oxygen introducing lance in close, spaced proximity to said molten oxides and moving said lance relative to said molten oxide with a stirring-like action to impart agitation to the molten oxides, allowing the molten oxides to solidify into a solid mass, removing the solid mass from the container and reducing the solid mass into relatively fine particles size, and then analyzing the chemical composition of said particles.

3,372,994
FLAME IONIZATION DETECTOR
Laura E. Giuffrida, Arlington, Va., assignor to the United States of America as represented by the Secretary of the Department of Health, Education, and Welfare and the Secretary of the Department of Agriculture
Filed Jan. 8, 1965, Ser. No. 424,443
4 Claims. (Cl. 23—254)

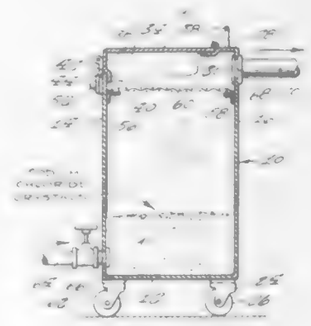
A hydrogen flame ionization detector, for use in gas chromatography, the heated electrode being coated with a fused alkali metal salt. Coating the electrode in this

manner renders the detector selectively specific to phosphorus-containing organic compounds in mixtures, so that higher, more characteristic peaks are indicated when these



mixtures are analyzed, while smaller peaks, or none at all, are indicated for the non-phosphorus-containing components of the mixtures.

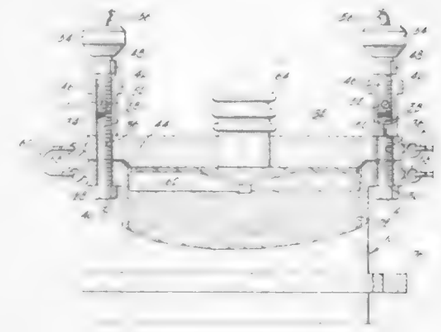
3,372,995
PORTABLE SALT DISSOLVER FOR MELTING ICE AND SNOW
Joseph D. Ryan, Box 4136, Bergen Station, 267 Cator Ave., Jersey City, N.J. 07305
Filed Dec. 31, 1964, Ser. No. 422,813
1 Claim. (Cl. 23—267)



An apparatus having a tank for containing sodium chloride crystals, the tank having an inlet at the lower end and an outlet at the upper end for passing water therethrough, the dispensing liquid comprising a solution including dissolved sodium chloride, the solution being used for spraying over a sidewalk or roadway to prevent formation of, or dissolving existing ice and snow, the tank including a water-tight door at its upper end for use to replenish the sodium chloride crystals when used up.

3,372,996
UNDERWATER GAS GENERATOR
Wayne T. Barrett, Malvern, and Charles L. Scheer, Berwyn, Pa., assignors to Foote Mineral Company, Exton, Pa., a corporation of Pennsylvania
Filed Oct. 14, 1963, Ser. No. 317,100
8 Claims. (Cl. 23—282)

A gas generator, particularly adapted for underwater use in forming hydrogen gas by mixing water with a paste of lithium hydride in a water soluble organic dispersant, utilizes a container having a cover at one end secured by explosive bolts and a piston within the container movable from near the closed end toward the open end of the container. The container, which is normally sealed and provided with a bellows for equalizing pressures, is adapted to contain the lithium hydride paste on both sides of the piston. A pressurized source of water is connected by way of an explosively actuatable valve to the lower closed interior end of the container, so that, when the explosive bolts and the valve are operated simultaneously, water is forced into the lower end of the container, which reacts with the lithium hydride paste therein to generate a gas for driving the piston toward the open end of the container. The remaining lithium hydride paste is thereby



rapidly swept out through the open end of the container around the edges of the cover, an arrangement of vanes preferably providing turbulent mixing of the expelled lithium hydride with the surrounding water to produce hydrogen. The arrangement is suitable for generating gas to expel water from pontoons, or for the filling of weather balloons, for example.

3,372,997
TERNARY COPPER, ZINC, CADMIUM AND MANGANESE DICHALCOGENIDES HAVING THE PYRITE-TYPE CRYSTAL STRUCTURE
Tom A. Bither, Jr., Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
No Drawing. Filed Dec. 22, 1966, Ser. No. 603,759
17 Claims. (Cl. 23—315)

Ternary dichalcogenides having the pyrite-type crystal structure of the formula $M_yM'_{1-y}X_z$ wherein M is copper, zinc or cadmium, M′ is manganese, zinc or cadmium, X is sulfur, selenium or tellurium, y is a number between 0.20 and 0.96 and z is a number between 1.9 and 2.1 are produced. These compounds are prepared by subjecting mixtures of elements or mixtures of chalcogenides and the chalcogen to pressures between 50–100 kilobars and temperatures between 600–1200° C. The products are useful as components for electrical circuitry.

3,372,998
REPROCESSING OF SPENT URANIUM FUEL BY MEANS OF CHLORINATION AND FRACTIONAL ABSORPTION BY BARIUM CHLORIDE
Takehiko Ishihara and Kenmei Hirano, Mito-shi, Ibaraki-ken, and Takeshi Soga, Naka-gun, Ibaraki-ken, Japan, assignors to Japan Atomic Energy Research Institute, Tokyo, Japan
No Drawing. Filed Mar. 4, 1966, Ser. No. 531,773
Claims priority, application Japan, Mar. 18, 1965, 40/15,390
10 Claims. (Cl. 23—326)

Spent uranium fuel from an atomic reactor is converted at about 600° C. by reaction with a chlorine-bearing carbon compound free from hydrogen into gaseous

chlorides of uranium, mainly the tetrachloride, and of the fission products. Uranium tetrachloride is preferentially absorbed from the chloride mixture on barium chloride with which it forms a stable compound below 583° C. The compound is decomposed by chlorine to volatile uranium hexachloride. The latter decomposes spontaneously to the tetrachloride which may be recycled for further purification.

3,372,999

CONTINUOUS PRECIPITATION PROCESS FOR RECOVERING URANIUM AND/OR PLUTONIUM FROM SOLUTION

David Gordon Stevenson, Kempshott, Basingstoke, England, assignor to United Kingdom Atomic Energy Authority, London, England

Filed Mar. 9, 1965, Ser. No. 438,195
Claims priority, application Great Britain, Mar. 20, 1964, 12,027/64
7 Claims. (Cl. 23—332)

The invention relates to an improvement in a continuous process for precipitating uranium and plutonium compounds from solution by adding a base thereto. In accordance with the invention, readily filterable precipitates are obtained by introducing an acidic aqueous solution of a metal to be precipitated together with a base into a precipitation zone in the presence of an aliphatic monocarboxylic acid having from 1 to 5 carbon atoms.

3,373,000

PROCESS FOR PREPARING TETRAFLUORIDES AND HEXAFLUORIDES

James J. Pitts, West Haven, and Albert W. Jache, North Haven, Conn., assignors to Olin Mathieson Chemical Corporation, a corporation of Virginia

No Drawing. Filed Nov. 1, 1966, Ser. No. 591,079
9 Claims. (Cl. 23—352)

The tetrafluorides and hexafluorides of sulfur, selenium and tellurium are provided by reacting chlorine monofluoride with sulfur, selenium, tellurium, metal sulfides, metal selenides or metal tellurides. The hexafluorides of tungsten, molybdenum and uranium are provided by the reaction of chlorine monofluoride with the metals, their oxides, sulfides and salts containing the metallate anion. These tetrafluorides and hexafluorides are well-known compounds, useful as fluorinating agents, gaseous dielectrics, sources of high purity metallic powders, etc.

3,373,001

INORGANIC POLYMERS

William C. Drinkard, Jr., Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Filed Dec. 18, 1963, Ser. No. 331,379
16 Claims. (Cl. 23—358)

New B_{10} boron-cage radicals and wholly inorganic polymers containing these B_{10} boron-cage radicals and a process for their manufacture. The process comprises reacting a lower oxide of a Group V, VI, or VII element in a solution of $(H_3O)_2B_{10}H_{10}$ at a temperature of 0° C. to 50° C.

3,373,002

BERYLLIUM-ALUMINUM-COPPER COMPOSITES

Earl I. Larsen, Indianapolis, Ind., and Richard H. Krock, Peabody, and Clintford Ross Jones, Arlington, Mass., assignors to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware

Filed May 11, 1967, Ser. No. 637,737
4 Claims. (Cl. 29—182.1)

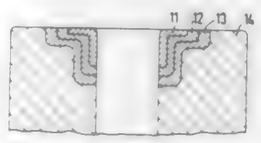
A two phase composite material whose microstructure consists of beryllium dispersed in an aluminum-copper-beryllium solid solution alloy matrix was produced by liquid phase sintering pressed powder mixtures of beryllium, aluminum and copper.

3,373,003

MULTI-LAYER BONDED METAL STRUCTURE

Horst Schreiner, Nurnberg, Germany, assignor to Siemens Aktiengesellschaft, a corporation of Germany

Filed Mar. 28, 1966, Ser. No. 537,896
Claims priority, application Germany, Apr. 1, 1965, S 96,322
1 Claim. (Cl. 29—182.2)



Disclosed is an improved multi-layer bonded metal structure suitable for use in high voltage and heavy duty electrical contacts. The multi-layer bonded metal structure consists essentially of a sintered plurality of substantially parallel compressed metal powder layers. These layers respectively consist of a first metal composition which is impregnated with a second metal. The abutting surfaces of the respective layers interpregnate into one another. The metal layers are selected from the group consisting of tungsten, molybdenum and rhenium and the impregnating metal is selected from the group consisting of copper, silver, copper alloys, silver alloys, nickel, iron, cobalt and chromium.

3,373,004

COMPOSITES OF BERYLLIUM-ALUMINUM-COPPER

Earl I. Larsen, Indianapolis, Ind., and Richard H. Krock, Peabody, and Clintford R. Jones, Arlington, Mass., assignors to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware

Filed May 26, 1967, Ser. No. 641,622
4 Claims. (Cl. 29—182.2)

A composite material whose microstructure consists of beryllium dispersed in an aluminum-copper-silicon-beryllium solid solution alloy matrix was produced by liquid phase sintering pressed powder mixtures of beryllium, aluminum, copper and silicon or powder mixtures of beryllium and pre-alloyed aluminum-copper-silicon.

3,373,005

MOTOR FUELS

Edmund L. Niedzielski, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Filed May 1, 1964, Ser. No. 364,290
12 Claims. (Cl. 44—69)

1. A motor fuel consisting essentially of
(a) a mixture of hydrocarbons boiling in the gasoline boiling range in which from 15 to about 75 volume percent are aromatic hydrocarbons,
(b) an antiknock quantity of at least one tetraalkyl lead antiknock compound,
(c) at least one halogenated hydrocarbon scavenger for the lead in the antiknock compound, and

(d) from 1 to about 30 moles of a lead appreciator for each mole of tetraalkyl lead antiknock compound,
(e) said lead appreciator consisting of at least one polyacylated nitrogen base which has the formula

$$(R-\overset{O}{\overset{\|}{C}}-)_{p-n}N[(-O-\overset{O}{\overset{\|}{C}}-)_p-R']_n$$

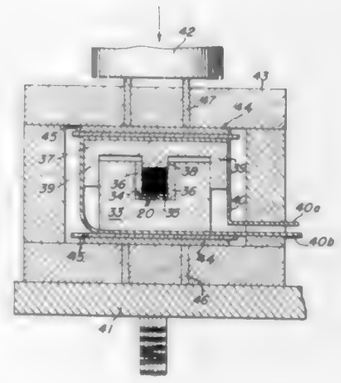
wherein R is a hydrocarbon radical of 1–7 carbon atoms devoid of aliphatic unsaturation, R′ is a member of the group consisting of hydrogen and hydrocarbon radicals of 1–7 carbon atoms devoid of aliphatic unsaturation, at least two of the R and R′ groups are alkyl radicals of 1–7 carbon atoms, n is zero to 1, p is zero to 1, and n is 1 when p is 1.

3,373,006

APPARATUS FOR MAKING FIBER OPTICAL IMAGE TRANSFER DEVICES

Richard F. Woodcock, Woodstock, Conn., assignor, by mesne assignments, to American Optical Company, Southbridge, Mass., a corporation of Massachusetts

Application Nov. 23, 1960, Ser. No. 71,872, now Patent No. 3,215,029, Nov. 2, 1965, which is a continuation-in-part of application Ser. No. 826,762, July 13, 1959. Divided and this application Nov. 16, 1964, Ser. No. 422,873
3 Claims. (Cl. 65—1)



Supporting means of refractory material for compacting and fusing a length of bundled glass clad fibers. The supporting means has a bottom member, a cover member, side walls and opposite open ends forming a channel in which the bundle may be placed for compaction and fusion. Facing sides of the bottom and cover members have oppositely disposed portions of their lengths sloped gradually away from each other in directions from points internally of the channel toward each of its opposite open ends. At least one of the members is movable toward the other for compressing the length of bundled fibers to a greatest amount intermediately of its extension and in progressively lesser amounts away therefrom.

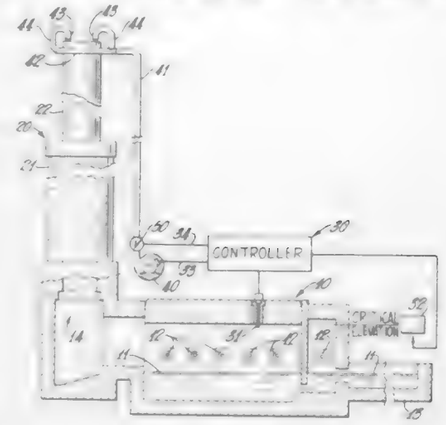
3,373,007

METHOD AND MEANS FOR CONTROLLING INTERNAL FURNACE PRESSURES

Winton A. Ticknor, Lancaster, Ohio, assignor to Owens-Corning Fiberglas Corporation, a corporation of Delaware

Filed Nov. 12, 1965, Ser. No. 507,442
8 Claims. (Cl. 65—161)

Apparatus for controlling the level of a pool of molten glass in a feeder-forehearth supplying glass for attenuation into fibers and thus controlling the diameter of the fibers attenuated wherein the feeder-forehearth is connected to receive a pool of glass from a melting tank of a direct-melt furnace. The pressure in the melting tank of the furnace is detected. The volume of a vertical air curtain directed downwardly into the furnace stack is



controlled in response to the pressure detected and thus controls the level of the pool of glass in the melting tank and in the forehearth-feeder.

3,373,008

PROTECTING SLIPPER FOR AN EDGE ROLLER IN A GLASS SHEET SUPPORT BATH

Jack Lawrenson, St. Helens, and Frederick William Silverwood, Appley Bridge, England, assignors to Pilkington Brothers Limited, Liverpool, England, a corporation of Great Britain

Filed Mar. 22, 1965, Ser. No. 441,427
Claims priority, application Great Britain, Mar. 25, 1964, 12,711/64
7 Claims. (Cl. 65—182)

An edge roll for engaging under a margin of a ribbon of glass being advanced along a bath of molten metal is mounted in an open-topped protecting slipper which is partially submerged in the bath.

3,373,009

NUTRIENT PLANT MATRIX

Malcolm E. Pruitt, Lake Jackson, and Joseph M. Baggett, Freeport, Tex., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Filed July 30, 1964, Ser. No. 386,430
11 Claims. (Cl. 71—28)

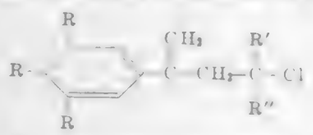
1. An integral nutrient plant growth medium consisting essentially of a stable, water-insoluble, open-celled, foamed polymer matrix having intimately imbedded therein as an integral part thereof, plant nutrients in a leach resistant nutrient mixture, wherein said leach resistant nutrient mixture contains from about 2 to 60 parts by weight of a substantially insoluble salt mixture selected from the group consisting of substantially water-insoluble inorganic salts, fritted salts and resin imbedded inorganic salts and from about 0.3 to 7.8 parts by weight of nitrogen calculated as elemental nitrogen, wherein said nitrogen is supplied at least in part as nitrate exchanged on an anion exchange resin, and wherein said leach resistant nutrient mixture is added in an amount which does not exceed about 65 percent of the weight of the polymer mixture prior to foaming.

3,373,010
HERBICIDAL COMPOSITION AND METHOD
Harold C. Olson, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
No Drawing. Filed Oct. 8, 1964, Ser. No. 402,608
4 Claims. (Cl. 71—120)

Compositions containing an herbicidally effective amount of 1-(p-chlorophenyl)-3,3-dimethylurea, 1-(3,4-dichlorophenyl) - 3,3 - dimethylurea or 1-(3,4-dichlorophenyl)-3-n-butyl-3-methylurea in combination with an herbicidally effective amount of alpha,alpha,alpha-trifluoro-2,6-dinitro-N,N-dipropyl-p-toluidine and method of using same for synergistic herbicidal response.

3,373,011
COMPOSITION AND METHOD FOR SUPPRESSING PLANT GROWTH
Dorsey R. Mussell, Clare, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Continuation-in-part of application Ser. No. 194,704, May 14, 1962. This application Oct. 10, 1963, Ser. No. 315,335
9 Claims. (Cl. 71—126)

1. A method of suppressing plant growth which comprises applying to a plant part an at least growth-suppressing amount of styrene compound of the formula



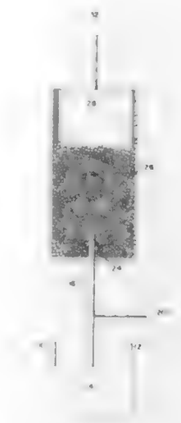
wherein each R independently represents a member selected from the group consisting of hydrogen, bromo, chloro, and loweralkyl being of from 1 to 3, inclusive, carbon atoms; R′ represents a member selected from the group consisting of bromo and chloro; and R″ represents a member selected from the group consisting of hydrogen, methyl, and chloro.

3,373,012
PRODUCTION OF METALLURGICAL PRODUCTS
John F. Hardy, Andover, and Merrill E. Jordan, Walpole, Mass., assignors to Cabot Corporation, Boston, Mass., a corporation of Delaware
No Drawing. Filed Nov. 12, 1964, Ser. No. 410,712
19 Claims. (Cl. 75—.5)

1. A process for producing finely-divided metallurgical products comprising the steps of:
(1) mixing into a liquid medium
(a) a soluble compound of a metal,
(b) carbon black, and
(c) a substance which precipitates a compound of said metal which can be converted by reaction with carbon,
(2) recovering the solids from said medium, and
(3) heating said solids in an atmosphere selected from the group consisting of reducing atmospheres and inert atmospheres to convert said metal compound of Step 1 part (c) to a metallurgical product.

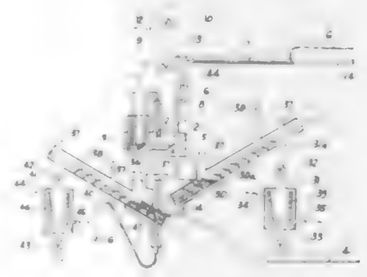
3,373,013
PROCESS FOR PRODUCING FINELY DIVIDED METAL PRODUCTS
John F. Hardy, Andover, and Merrill E. Jordan, Walpole, Mass., assignors to Cabot Corporation, Boston, Mass., a corporation of Delaware
Filed Nov. 6, 1964, Ser. No. 409,410
20 Claims. (Cl. 75—.5)

1. A process for producing finely-divided metallurgical powders comprising the steps of:
(a) uniformly mixing into a liquid medium
(1) at least one metal compound which upon heating in an oxidizing atmosphere can be converted to the corresponding oxide, and
(2) carbon black,



(b) subdividing the resulting mixture into droplets and contacting said droplets with a plurality of fluidized particulate bodies heated to a temperature at least sufficient to convert said metal compound to the corresponding oxide.

3,373,014
METHOD FOR PURIFICATION OF ALUMINUM
Jacques Merles, Tarascon-sur-Ariege, France, assignor to Pechiney Compagnie de Produits Chimiques et Electrometallurgiques, Paris, France
Filed July 14, 1964, Ser. No. 382,600
Claims priority, application France, July 19, 1963, 941,998
27 Claims. (Cl. 75—68)



1. In the process of purification of aluminum by treatment of impure aluminum with mercury in a solution zone to dissolve out aluminum while impurities remain undissolved including a main stream comprising the treatment of the impure aluminum in a solid state with liquid mercury at elevated temperature to dissolve aluminum in the mercury, separating the formed solution of aluminum in mercury from undissolved impurities, cooling the solution of aluminum in mercury to form the solution into a crystalline phase of amalgam crystals and a liquid phase of mercury with aluminum dissolved therein separating the amalgam crystals from the remainder and then removing mercury by vaporization from the amalgam crystals to leave purified aluminum, and a secondary cycle comprising the step which includes the portion of the main stream of flowing liquid mercury into contact with the solid particles of impure aluminum to dissolve out aluminum, and which includes the step of draining the liquid mercury with aluminum dissolved therein from the impure aluminum, recycling the drained liquid mercury for flowing into contact with the solid particles of impure aluminum and repeating the secondary cycle for a number of times, continuously bleeding a fraction of the drainage of the liquid mercury with the aluminum dissolved therein to the main stream for separation of undissolved impurities and for separation of dissolved aluminum, and adding liquid mercury to the secondary cycle in an amount corresponding to the amount removed from the secondary cycle into the main stream in which the main stream and secondary cycle are carried out as a continuous operation.

3,373,015
STAINLESS STEEL AND PRODUCT
Paul M. Allen, Middletown, Ohio, and Ronald H. Espy, Randallstown, and Harry Tanczyn, Baltimore, Md., assignors to Armco Steel Corporation, Middletown, Ohio, a corporation of Ohio
No Drawing. Filed Mar. 16, 1965, Ser. No. 440,280
5 Claims. (Cl. 75—128)

Chromium-nickel-titanium stainless steel containing delta-ferrite, this in small amounts (i.e. 1%) up to 20% or more by volume, which steel is ductile and readily weldable and essentially consists of carbon not exceeding .07%, manganese up to 1.00%, silicon up to .75%, with chromium in the amount of 10.5% to 12.5%, nickel at least 1.0% but less than 3.0%, titanium .2% to .75%, and remainder essentially iron.

3,373,016
BRAZING ALLOY
Edward R. Roeder and Ernst G. Huschke, Jr., Canoga Park, Calif., assignors to North American Aviation, Inc.
No Drawing. Filed Sept. 20, 1965, Ser. No. 488,745
2 Claims. (Cl. 75—173)

1. A brazing alloy comprising:
from 0.93 to 1.25 weight percent Cu,
from 0.70 to 0.94 weight percent Ni,
from 13.5 to 15.0 weight percent Zn,
and the remainder being Ag and incidental amounts of impurities and compatible elements, wherein the ratio of Ni to Cu is at least .75:1.

3,373,017
ZIRCONIUM-HAFNIUM ALLOYS FOR COINAGE
Donald R. Spink, East Amherst, and William W. Stephens, Williamsville, N.Y., assignors to Amax Specialty Metals, Inc., Akron, N.Y., a corporation of Delaware
No Drawing. Filed Mar. 29, 1965, Ser. No. 443,620
4 Claims. (Cl. 75—177)

1. Coins having a silvery-white appearance, a feel and a characteristic ring when dropped similar to high silver content coins and having wear characteristics at least equal to such silver coins consisting essentially of an alloy of zirconium and hafnium, said hafnium being present in an amount greater than 8.5 weight percent of said alloy.

3,373,018
PRODUCTION OF RIGID SHAPES OF REFRACTORY METALS BY DECOMPOSITION OF THE METAL HEXAFLUORIDE IN THE INTERSTICES OF A GREEN COMPACT
Joseph H. Oxley and John M. Blocher, Jr., Columbus, Ohio, assignors, by mesne assignments, to Allied Chemical Corporation, New York, N.Y., a corporation of New York
No Drawing. Filed Feb. 17, 1965, Ser. No. 433,484
4 Claims. (Cl. 75—211)

1. A process for producing a chemically sintered, rigid body of particles of a refractory metal joined by interstitial deposits of the same refractory metal, which process comprises:
(a) introducing vapor of a higher halide of a refractory metal into interstices of a mass of stagnant particles of the same refractory metal maintained at a temperature conducive to formation and deposition of a subhalide of the refractory metal by reaction of said higher halide with said particles;
(b) interrupting the introduction of said vapor; and
(c) introducing hydrogen gas into said interstices containing said subhalide, so formed and deposited, maintained at a temperature conducive to reduction of the subhalide to the refractory metal by reaction of hydrogen gas with the subhalide.

3,373,019
METHOD AND APPARATUS FOR PRODUCING IMAGES
William E. Bixby, Deerfield, Ill., assignor to Bell & Howell Company, Chicago, Ill., a corporation of Illinois
Filed May 21, 1964, Ser. No. 369,123
19 Claims. (Cl. 96—1)

A copying method and apparatus wherein an electrostatic charge pattern is formed in a photoconductive surface corresponding to an image, for example, through an optical system forming a greatly reduced microimage, and a gaseous material is ionized to form gas ions of polarity opposite that of the charge image. The resulting ions are then deposited on the surface to form a latent image at the charge pattern and a copy medium is then contacted against the thus treated photoconductive surface, the copy medium being provided with a surface capable of reacting with the image to form a permanent visible image on the copy medium. By having the gaseous material comprise an alkaline reacting material and by having the copy medium coated with a diazonium compound, microimages of particularly high resolution may be formed on the copy medium.

3,373,020
ELECTROPHOTOGRAPHIC MATERIAL AND PROCESS EMPLOYING METAL RESINATES
Martha Tomanek, Wiesbaden-Biebrich, Germany, assignor, by mesne assignments, to Azoplate Corporation, Murray Hill, N.J., a corporation of New Jersey
No Drawing. Filed Dec. 16, 1963, Ser. No. 330,602
Claims priority, application Germany, Dec. 18, 1962, K 48,510
31 Claims. (Cl. 96—1.5)

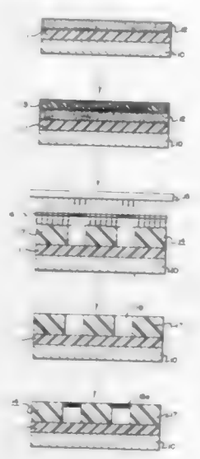
The present invention relates to an electrophotographic material comprising a conductive carrier and a photoconductive insulating layer applied thereto, the latter comprising metal resinates or such compounds in combination with additives. The term metal resinates as used herein means salt-like compounds of metals and resin acids.

3,373,021
PRESENSITIZED POSITIVE WORKING LITHOGRAPHIC PLATE
Dolor N. Adams, Cleveland Heights, and Daniel C. Thomas, Warrensville Heights, Ohio, assignors to Harris-Intertype Corporation, Cleveland, Ohio, a corporation of Delaware
Filed Jan. 29, 1964, Ser. No. 340—929
16 Claims. (Cl. 96—33)

1. A lithographic plate comprising a support member, and a light-sensitive layer overlying the support member comprising the reaction product of a light-sensitive diazo resin and a cycloaliphatic polyphosphoric acid.

12. A method of preparing a lithographic printing plate comprising forming on a support member adapted to de-

fine the backing of the plate a layer comprising the reaction product of a light-sensitive diazo resin and a cycloaliphatic polyphosphoric acid, said layer being non-reactive with the support member, exposing selected portions



of the light-sensitive layer to light to convert said portions to non-ink-attractive areas of the plate, and thereafter treating said layer with a coupling agent to convert the non-selected portions to ink-attractive areas of the plate.

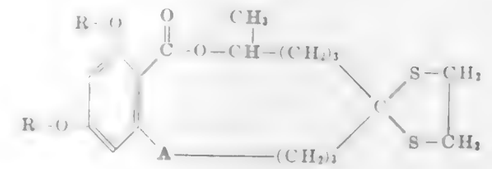
3,373,022
DEVELOPER REAGENTS, METHOD OF AND MEANS FOR UTILIZING THE SAME
Clarence Scott Johnson, 5607 Taliferro St., Tampa, Fla. 33604
Filed Sept. 23, 1963, Ser. No. 310,728
3 Claims. (Cl. 96—49)

1. The process of developing diazotype reproductions which comprises exposing the surface of an exposed light-sensitive diazo sheet to the vapor of a developing solution comprising a mixture of an ammonium hydroxide of a Baumé degree above 26 degrees and methanol.

3,373,023
MICROCRYSTALLINE CELLULOSE PARTICLES IN PHOTOGRAPHIC SILVER HALIDE ELEMENTS
Vere Maffet, East Brunswick, N.J., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
No Drawing. Filed Dec. 11, 1963, Ser. No. 331,090
8 Claims. (Cl. 96—113)

4. A method for counteracting the deleterious effect of contaminant oil and greases in aqueous coating compositions containing a water-permeable, macromolecular organic colloid binding agent having dispersed therethrough light-sensitive silver halide grains characterized by bringing said solution into contact with microcrystalline cellulose particles.

3,373,024
ESTROGENIC COMPOUNDS AND ANIMAL GROWTH PROMOTERS
Edward B. Hodge, Phil H. Hidy, and Herbert L. Wehrmeister, Terre Haute, Ind., assignors to Commercial Solvents Corporation, a corporation of Maryland
No Drawing. Continuation-in-part of application Ser. No. 530,362, Feb. 28, 1966, which is a continuation-in-part of application Ser. No. 432,811, Feb. 15, 1965. This application Mar. 3, 1967, Ser. No. 620,256
10 Claims. (Cl. 99—2)

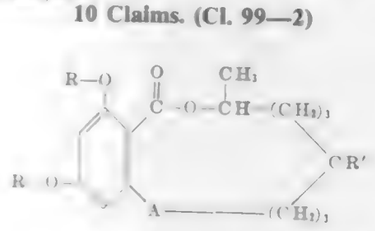


where A is selected from the group consisting of

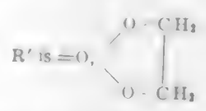
—CH=CH—

and —CH_2CH_2—, and R is selected from the group consisting of hydrogen, lower alkyl, e.g. methyl and lower saturated acyclic acyl, e.g., acetyl, and animal feeds containing growth promoting amounts thereof.

3,373,025
ESTROGENIC COMPOUNDS AND ANIMAL GROWTH PROMOTERS
Edward B. Hodge, Phil H. Hidy, and Herbert L. Wehrmeister, Terre Haute, Ind., assignors to Commercial Solvents Corporation, a corporation of Maryland
No Drawing. Continuation-in-part of application Ser. No. 432,812, Feb. 15, 1965. This application Mar. 3, 1967, Ser. No. 620,259
10 Claims. (Cl. 99—2)

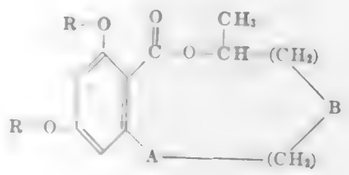


where R is hydrogen or benzyl, at least one R being benzyl, A is —CH_2CH_2— or —CH=CH—, and

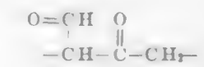


or =NOH, and animal feeds containing growth promoting amounts thereof.

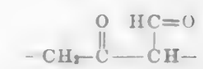
3,373,026
ESTROGENIC COMPOUNDS AND ANIMAL GROWTH PROMOTERS
Edward B. Hodge, Phil H. Hidy, and Herbert L. Wehrmeister, Terre Haute, Ind., assignors to Commercial Solvents Corporation, a corporation of Maryland
No Drawing. Continuation-in-part of application Ser. No. 561,339, June 29, 1966. This application Mar. 3, 1967, Ser. No. 620,260
10 Claims. (Cl. 99—2)



where A is a radical selected from the group consisting of —CH_2—CH_2— and —CH=CH—, B is a radical selected from the group consisting of

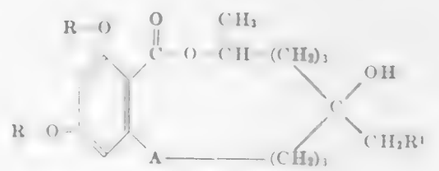


and



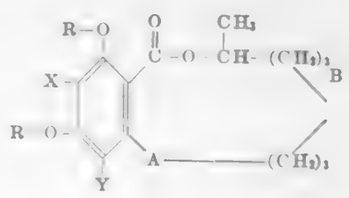
and R is selected from the group consisting of hydrogen, benzyl and lower alkyl, and animal feeds containing growth promoting amounts thereof.

3,373,027
ESTROGENIC COMPOUNDS AND ANIMAL GROWTH PROMOTERS
Edward B. Hodge, Phil H. Hidy, and Herbert L. Wehrmeister, Terre Haute, Ind., assignors to Commercial Solvents Corporation, a corporation of Maryland
No Drawing. Continuation-in-part of application Ser. No. 561,371, June 29, 1966. This application Mar. 3, 1967, Ser. No. 620,261
10 Claims. (Cl. 99—2)



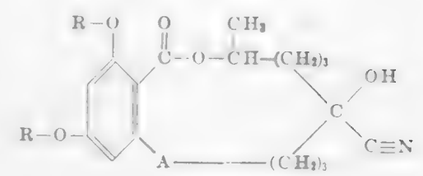
where R is selected from the group consisting of hydrogen, benzyl and lower alkyl, R^1 is selected from the group consisting of nitro- and amino-radicals and A is a radical selected from the group consisting of —CH=CH— and —CH_2—CH_2—, and animal feeds containing growth promoting amounts thereof.

3,373,028
ESTROGENIC COMPOUNDS AND ANIMAL GROWTH PROMOTERS
Edward B. Hodge, Phil H. Hidy, and Herbert L. Wehrmeister, Terre Haute, Ind., assignors to Commercial Solvents Corporation, a corporation of Maryland
No Drawing. Continuation-in-part of application Ser. No. 561,392, June 29, 1966. This application Mar. 3, 1967, Ser. No. 620,262
10 Claims. (Cl. 99—2)



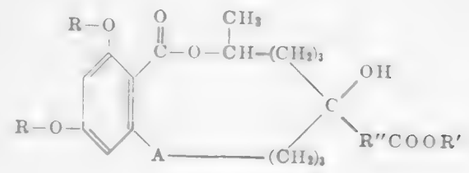
where A is a radical selected from the group consisting of —CH_2—CH_2— and —CH=CH—; R is selected from the group consisting of hydrogen, lower alkyl such as methyl, benzyl and lower saturated acyclic acyl, e.g. acetyl, one of X and Y is —CO_2H and the other is hydrogen; and B is a radical selected from the group consisting of >C=O, >CHOH and >CH_2, with the proviso that A is —CH_2—CH_2— when B is >CH_2, and animal feeds containing growth promoting amounts thereof.

3,373,029
ESTROGENIC COMPOUNDS AND ANIMAL GROWTH PROMOTERS
Edward B. Hodge, Phil H. Hidy, and Herbert L. Wehrmeister, Terre Haute, Ind., assignors to Commercial Solvents Corporation, a corporation of Maryland
No Drawing. Continuation-in-part of application Ser. No. 561,393, June 29, 1966. This application Mar. 3, 1967, Ser. No. 620,263
10 Claims. (Cl. 99—2)



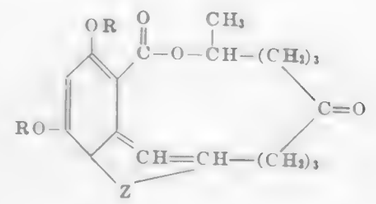
where R is selected from the group consisting of hydrogen, lower alkyl and benzyl and A is a radical selected from the group consisting of —CH=CH— and —CH_2—CH_2—; and animal feeds containing growth promoting amounts thereof.

3,373,030
ESTROGENIC COMPOUNDS AND ANIMAL GROWTH PROMOTERS
Edward B. Hodge, Phil H. Hidy, and Herbert L. Wehrmeister, Terre Haute, Ind., assignors to Commercial Solvents Corporation, a corporation of Maryland
No Drawing. Continuation-in-part of application Ser. No. 561,403, June 29, 1966. This application Mar. 3, 1967, Ser. No. 620,265
10 Claims. (Cl. 99—2)

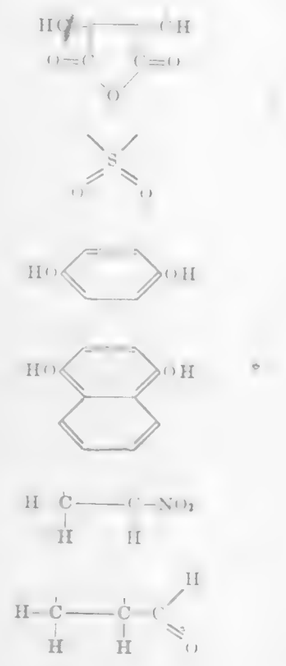


where A is a radical selected from the group consisting of —CH_2CH_2— and —CH=CH—, R is selected from the group consisting of hydrogen, benzyl and lower alkyl, e.g., methyl, R′ is lower alkyl such as ethyl, hexyl, etc., and R″ is lower alkylene, e.g., methylene, and animal feeds containing growth promoting amounts thereof.

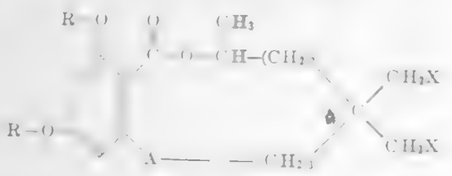
3,373,031
ESTROGENIC COMPOUNDS AND ANIMAL GROWTH PROMOTERS
Jerome L. Martin, Terre Haute, Ind., assignor to Commercial Solvents Corporation, a corporation of Maryland
No Drawing. Continuation-in-part of application Ser. No. 566,486, July 20, 1966. This application Mar. 3, 1967, Ser. No. 620,266
8 Claims. (Cl. 99—2)



where R is selected from the group consisting of hydrogen, benzyl and lower alkyl, and Z is selected from the group:

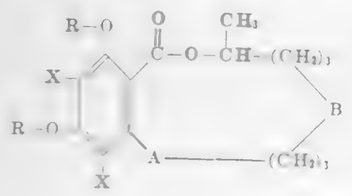


3,373,032
ESTROGENIC COMPOUNDS AND ANIMAL GROWTH PROMOTERS
Jerome L. Martin, Terre Haute, Ind., assignor to Commercial Solvents Corporation, a corporation of Maryland
No Drawing. Continuation-in-part of application Ser. No. 561,401, June 29, 1966. This application Mar. 3, 1967, Ser. No. 620,269
10 Claims. (Cl. 99—2)



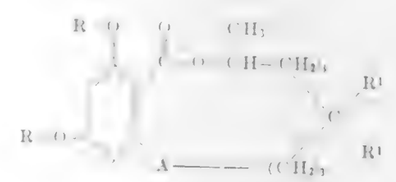
where A is a radical selected from the group consisting of —CH=CH— and —CH_2—CH_2—, R is selected from the group consisting of hydrogen, lower alkyl and benzyl, and X is selected from the group consisting of nitro- and amino-; and animal feeds containing growth promoting amounts thereof.

3,373,033
ESTROGENIC COMPOUNDS AND ANIMAL GROWTH PROMOTERS
Edward B. Hodge, Phil H. Hidy, and Herbert L. Wehrmeister, Terre Haute, Ind., assignors to Commercial Solvents Corporation, a corporation of Maryland
No Drawing. Continuation-in-part of application Ser. No. 561,373, June 29, 1966. This application Mar. 3, 1967, Ser. No. 620,270.
10 Claims. (Cl. 99—2)



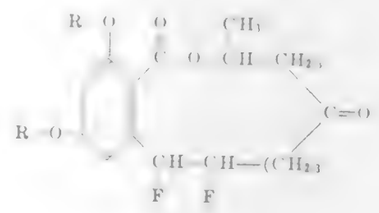
where A is selected from the group consisting of —CH=CH— and —CH_2—CH_2—; R is selected from the group consisting of hydrogen, lower alkyl, benzyl and lower saturated acyclic acyl; X is selected from the group consisting of hydrogen, —SO_3H, —SO_3R_1, —SO_2Cl and —SO_2NHR_2 wherein R_1 is lower alkyl and R_2 is selected from the group consisting of hydrogen, alkyl of about 1 to 20 carbon atoms, monocyclic aryl and halogen with the proviso that not more than one X is hydrogen and that R is selected from the group consisting of lower alkyl and benzyl when X is —SO_2Cl, and B is selected from the group consisting of >C=O, >CHOH and >CH_2 with the proviso that A is —CH_2—CH_2—, when B is >CH_2; and animal feeds containing growth promoting amounts thereof.

3,373,034
ESTROGENIC COMPOUNDS AND ANIMAL GROWTH PROMOTERS
Edward B. Hodge, Phil H. Hidy, and Herbert L. Wehrmeister, Terre Haute, Ind., assignors to Commercial Solvents Corporation, a corporation of Maryland
No Drawing. Continuation-in-part of application Ser. No. 561,372, June 29, 1966. This application Mar. 3, 1967, Ser. No. 620,271.
10 Claims. (Cl. 99—2)



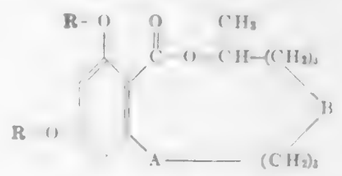
where R is selected from the group consisting of hydrogen, benzyl, and lower alkyl, A is a radical selected from the group consisting of —CH=CH— and —CH_2—CH_2—, and R^1 is selected from the group consisting of hydrogen and halogen, with the proviso that at least one R^1 is Halogen; and animal feeds containing growth promoting amounts thereof.

3,373,035
ESTROGENIC COMPOUNDS AND ANIMAL GROWTH PROMOTERS
Jerome L. Martin, Terre Haute, Ind., assignor to Commercial Solvents Corporation, a corporation of Maryland
No Drawing. Continuation-in-part of application Ser. No. 561,400, June 29, 1966. This application Mar. 3, 1967, Ser. No. 620,284
6 Claims. (Cl. 99—2)



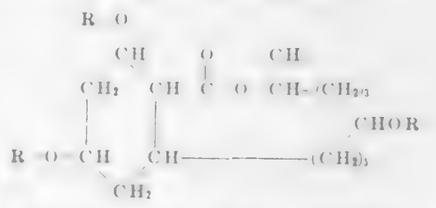
where R is selected from the group consisting of hydrogen, lower alkyl and benzyl and animal feeds containing growth promoting amounts thereof.

3,373,036
ESTROGENIC COMPOUNDS AND ANIMAL GROWTH PROMOTERS
Edward B. Hodge, Phil H. Hidy, and Herbert L. Wehrmeister, Terre Haute, Ind., assignors to Commercial Solvents Corporation, a corporation of Maryland
No Drawing. Continuation-in-part of application Ser. No. 561,410, June 29, 1966. This application Mar. 3, 1967, Ser. No. 620,286.
10 Claims. (Cl. 99—2)



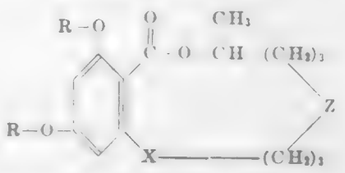
wnere R is selected from the group consisting of hydrogen, benzyl and lower alkyl, A is a radical selected from the group consisting of —CH=CH— and —CH_2—CH_2— and B is a radical selected from the group consisting of —CH_2—CO— and —CO—CH_2—, and animal feeds containing growth promoting amounts thereof.

3,373,037
ESTROGENIC COMPOUNDS AND ANIMAL GROWTH PROMOTERS
Richard L. Abbott, Monroe, La., assignor to Commercial Solvents Corporation, a corporation of Maryland
No Drawing. Continuation-in-part of application Ser. No. 561,350, June 29, 1966. This application Mar. 6, 1967, Ser. No. 620,604
10 Claims. (Cl. 99—2)

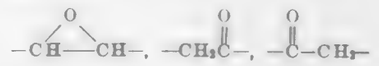


where R is selected from the group consisting of hydrogen, lower alkyl, lower saturated acylic acyl and benzyl and animal feeds containing the same.

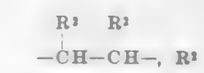
3,373,038
ESTROGENIC COMPOUNDS AND ANIMAL GROWTH PROMOTERS
Edward B. Hodge, Phil H. Hidy, and Herbert L. Wehrmeister, Terre Haute, Ind., assignors to Commercial Solvents Corporation, a corporation of Maryland
No Drawing. Continuation-in-part of application Ser. No. 620,264, Mar. 3, 1967. This application Oct. 18, 1967, Ser. No. 676,079
10 Claims. (Cl. 99—2)



where R is selected from the group consisting of hydrogen, lower alkyl, and lower saturated acyclic acyl; Z is a radical selected from the group consisting of >C=O, >CHOH, and >CHOR; and X is a radical selected from the group consisting of

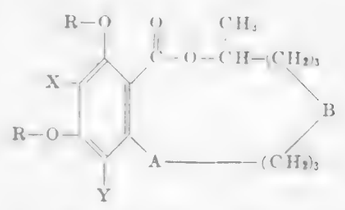


and



is selected from the group consisting of hydrogen, hydroxyl and —$N(R^3)_2$ and R^3 is selected from the group consisting of hydrogen, alkyl of about 1 to 15 carbon atoms, monocyclic aryl and aralkyl of about 1 to 15 carbon atoms, with the proviso that at least one R^2 is hydroxyl; and animal feeds containing growth promoting amounts thereof.

3,373,039
ESTROGENIC COMPOUNDS AND ANIMAL GROWTH PROMOTERS
Edward B. Hodge, Phil H. Hidy, and Herbert L. Wehrmeister, Terre Haute, Ind., assignors to Commercial Solvents Corporation, a corporation of Maryland
No Drawing. Continuation-in-part of application Ser. No. 640,503, May 23, 1967. This application Oct. 26, 1967, Ser. No. 678,177
10 Claims. (Cl. 99—2)
Compounds of the formula



wherein A is —CH=CH— or —CH_2—CH_2—; B is >C=O, >CHOR, or >CH_2; R is hydrogen, alkyl, acyl or aryl; and X or Y is hydrogen, nitro, amino, dialkylamino, diazonium, cyano, hydroxyl, aryl, alkenyl, alkyl, alkoxy or acyl; and animal feeds containing growth promoting amounts of these compounds.

3,373,040
PRODUCTION OF MALT LIQUOR PRODUCTS HAVING VERY LOW PROTEIN, SUGAR AND REAL EXTRACT CONTENTS WITH DISTINCTIVE VINOUS FLAVOR
Charles Gluek, R.R. 5, Wayzata, Minn. 55391
No Drawing. Filed Jan. 8, 1965, Ser. No. 424,204
2 Claims. (Cl. 99—31)

Process for producing a malt liquor which comprises preparing a cooker mash and a main malt mash separately, withdrawing from the main mash a quantity of infusion liquid, mixing the main mash and the hot cooker mash, drawing off the wort from the mixed mash and boiling the wort and adding hops, fermenting the boiled wort during which withdrawn infusion liquid is added to the wort, adding to the fermented wort brewing water of pH 4.3 to obtain a beverage having 3.5% and 5% alcohol by volume, with a saccharometer indication by plato of less than 0.6%, a real extract content of less than 3.3 and a protein content of less than 3.8.

3,373,041
METHOD OF PREPARING BREWED COFFEE
Jack Bloom and Leroy W. Brown, Chicago, Ill., assignors to Continental Coffee Company, a corporation of Illinois
No Drawing. Filed Jan. 23, 1964, Ser. No. 339,596
6 Claims. (Cl. 99—68)

1. The method of preparing a coffee adapted for use with softened water which comprises roasting green coffee beans to a temperature in the range between about 375° F. and 425° F. until the filtrate obtained by brewing 2 ounces of comminuted roasted beans of a particle size of 100% passing a 30 mesh standard screen to 100 cc. of boiling distilled water and boiling for five minutes, cooling the decoction to 68° F., diluting with distilled water to a volume of 100 ml., and filtering, when read on the spectrophotometer at a 500 millimicron wavelength, has an optical density between 0.35 and 0.45, and irrespective

of order, the steps of incorporating an organic food acid in an amount between about 0.1% and about 0.5% by weight of the coffee and comminuting the roasted beans whereby a particulate material is recoverable of a particle size such that at least 95% passes through a No. 16 U.S. Standard Screen and the maximum amount of particles passing a No. 100 U.S. Standard Screen is less than about 6%.

3,373,042
PROCESS FOR CONTINUOUSLY FREEZING COFFEE EXTRACT

Byron Everett Elerath, Mountain Lakes, N.J., and Esra Pitchon, Flushing, N.Y., assignors to General Foods Corporation, White Plains, N.Y., a corporation of Delaware

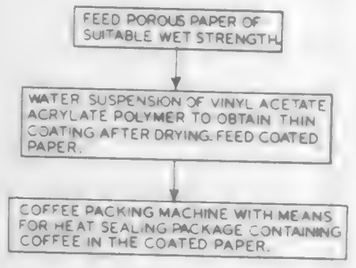
No Drawing. Filed Sept. 9, 1964, Ser. No. 395,299
6 Claims. (Cl. 99—71)

Coffee extract is partially frozen with agitation into a slush in a first conductive cooling zone, the slush is then placed in a second conductive cooling zone for completion of the freeze, and the completely frozen product is then freeze-dried.

3,373,043
METHOD OF PACKAGING COFFEE AND PACKAGE

Sherman Rubenstein, Skokie, Ill., assignor to Robert L. Kahn and Harry Rubenstein, both of Chicago, Ill., as joint trustees.

Filed July 29, 1966, Ser. No. 568,972
3 Claims. (Cl. 99—77.1)



FEED POROUS PAPER OF SUITABLE WET STRENGTH.
WATER SUSPENSION OF VINYL ACETATE ACRYLATE POLYMER TO OBTAIN THIN COATING AFTER DRYING. FEED COATED PAPER.
COFFEE PACKING MACHINE WITH MEANS FOR HEAT SEALING PACKAGE CONTAINING COFFEE IN THE COATED PAPER.

A desired quantity of coffee is disposed in normally porous paper sized with a harmless water soluble material as vinyl acetate acrylate copolymer. The package is heat sealed and, prior to brewing, protects coffee from atmosphere. During brewing, the water soluble sizing is dissolved and permits normal brewing to occur. After brewing, the entire package may be thrown out.

3,373,044
CULINARY COMPOSITION CONTAINING ACIDIC LIPID ALKYL CARBONATES

James E. Thompson, Colerain Township, Hamilton County, and Norman B. Howard, Hamilton, Ohio, assignors to The Procter & Gamble Company, Cincinnati, Ohio, a corporation of Ohio

No Drawing. Filed Dec. 17, 1964, Ser. No. 419,234
22 Claims. (Cl. 99—92)

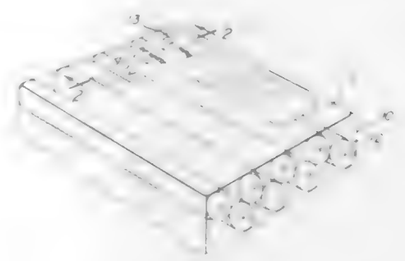
Shortening, cake batters, dry cake mixes and the like containing minor amounts of acidic lipid alkyl carbonates.

3,373,045
PACKAGE AND INSERT LABEL

Harold F. Peterson, Chicago, Ill., assignor to Armour and Company, Chicago, Ill., a corporation of Delaware

Filed Sept. 27, 1965, Ser. No. 490,392
4 Claims. (Cl. 99—171)

1. In combination with a food package having a wrapper with a transparent cover, a removable insert label secured by transpurent pressure-sensitive adhesive to the underside of the wrapper cover, said label being imprinted upon its outer side facing said wrapper with notice information, and upon its reverse side with a coupon, said

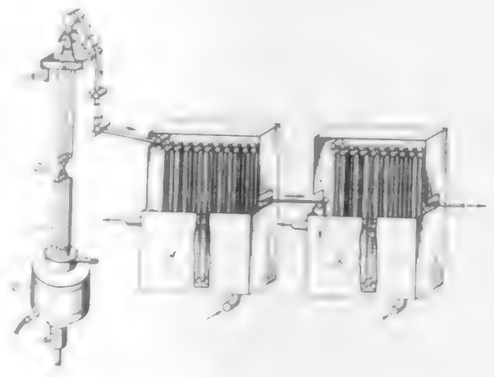


reverse side being covered with a non-toxic, ink-impervious coating, whereby the purchaser, after opening the package, may peel off the label and apply it to a forwarding mailing piece.

3,373,046
PROCESS FOR THE MANUFACTURE OF COLLAGEN CASINGS FROM LIMED HIDES

Paul V. Fagan, Bridgewater Township, Somerville, N.J., assignor to Johnson & Johnson, a corporation of New Jersey

Continuation-in-part of application Ser. No. 395,828, Sept. 11, 1964. This application June 15, 1965, Ser. No. 464,112
14 Claims. (Cl. 99—175)



Collagen sausage casings are prepared from limed hides by reacting the comminuted hides with a proteolytic enzyme. The hide particles are then acid swollen to form a fluid mass of acid swollen collagen fibrils that is extruded in the form of a tube.

3,373,047
MATERIAL FOR HOT TOP

Herbert D. Sheets and John W. Lennon, Columbus, Ohio, assignors, by mesne assignments, to Oglebay Norton Company, Cleveland, Ohio, a corporation of Delaware

Filed Oct. 6, 1964, Ser. No. 401,944
5 Claims. (Cl. 106—38.2)

1. An insulating structure for use in hot topping and adapted to be supported at the upper end of an ingot mold comprising a body to be supported at the upper end of the ingot mold, said body having one surface for defining at least a portion of an opening through which molten metal is poured into the mold, said one surface being contacted by molten metal poured into the mold, and said body at least in part constructed of a mixture consisting essentially

of 79–90 parts by weight of granular refractory filler, 5–10 parts by weight of inorganic fibrous asbestos form material having a water content between 0 to 6%, 0 to 2 parts by weight of organic fibrous material, and 5–10 parts by weight of a binder therefor.

3,373,048
HARDENING ACCELERATED PORTLAND CEMENT

Richard L. Angstadt, Silver Spring, and Forrest R. Hurley, Ellicott City, Md., assignors to W. R. Grace & Co., New York, N.Y., a corporation of Connecticut

Filed June 23, 1964, Ser. No. 377,281
9 Claims. (Cl. 106—90)

Lithium oxalate is added to Portland cement compositions to accelerate the hardening rate of the cement.

3,373,049
METHOD FOR BONDING SILICEOUS FIBERS TO SILICONE RUBBER

Siegfried Nitzsche and Karl-Heinrich Wegehaupt, Burghausen, Bavaria, Germany, assignors to Wacker-Chemie G.m.b.H., Munich, Bavaria, Germany

No Drawing. Filed July 5, 1963, Ser. No. 293,127
Claims priority, application Germany, July 11, 1962, W 32,590
6 Claims. (Cl. 117—76)

1. A method for adhering silicone rubber to a siliceous substrate consisting essentially of

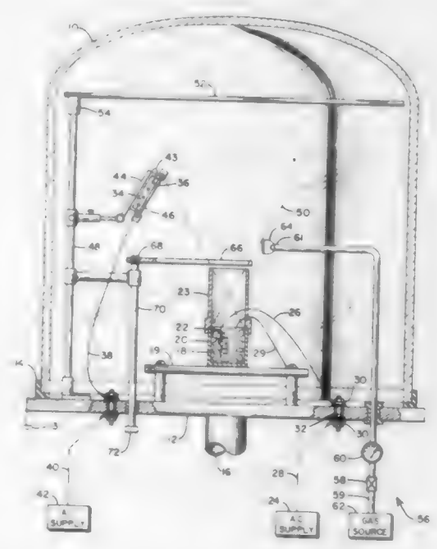
(1) contacting the substrate with a mixture of silanes containing 10 to 85 mol percent of silicon tetrahalide, 15 to 90 mol percent of triorganohalogenosilane and 0 to 50 mol percent of diorganodihalogenosilane in each of said silanes the organic substituents being selected from the group consisting of monovalent hydrocarbon and halogenohydrocarbon radicals,

---

3,373,050
DEFLECTING PARTICLES IN VACUUM COATING PROCESS

Maynard C. Paul and Paul E. Oberg, Minneapolis, Minn., assignors to Sperry Rand Corporation, New York, N.Y., a corporation of Delaware

Filed Dec. 30, 1964, Ser. No. 422,161
9 Claims. (Cl. 117—106)

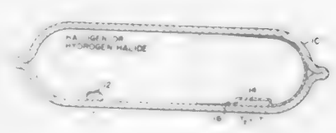


The use of a jet of inert gas in a thin film vacuum deposition apparatus to separate unduly large particles which may spatter from the melt from the evaporant to be deposited on the substrate.

3,373,051
USE OF HALOGENS AND HYDROGEN HALIDES IN INSULATING OXIDE AND NITRIDE DEPOSITS

Ting L. Chu, Forest Hills, Pittsburgh, and Harold F. John, Wilkingsburg, Pa., assignors to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania

Original application Apr. 27, 1964, Ser. No. 362,733. Divided and this application Mar. 16, 1967, Ser. No. 623,699
9 Claims. (Cl. 117—106)

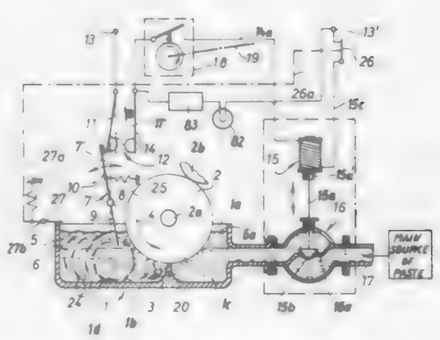


Certain oxide and nitride insulating materials are deposited on a substrate by a transport process using halogens or a hydrogen halide as the transport agent and having the substrate at a lower temperature than the source of the insulating material. Application of layers of such insulating materials to semiconductor devices is also described.

3,373,052
METHOD AND APPARATUS FOR FEEDING PASTE IN CIGARETTE MACHINES AND THE LIKE

Ludwig Rode, Neu-Bornsen, Kreis Herzogtum, Lauenburg, Germany, assignor to Hauni Werke Korber & Co. K.G., Hamburg-Bergedorf, Germany

Filed Mar. 12, 1964, Ser. No. 351,287
Claims priority, application Great Britain, Mar. 19, 1963, 10,736/63
26 Claims. (Cl. 117—111)



A minimum supply of paste in a paste tank is maintained by a feeler which dips into the supply of paste and changes its position in response to changes in the strength of a current produced by agitation of the supply of liquid, such agitation being produced by the paste-withdrawing roller or by an independent agitating device. The feeler can effect generation of visible or otherwise detectable signals or it controls the operation of a valve which admits fresh paste when the strength of the current is reduced to an extent which indicates that the supply of liquid has decreased below a minimum permissible value.

3,373,053
TRANSPARENT SHEET MATERIAL

Harold A. Clark, Midland, Mich., assignor to Dow Corning Corporation, Midland, Mich., a corporation of Michigan

Filed Sept. 3, 1964, Ser. No. 394,147
2 Claims. (Cl. 117—126)

A thermally stable siloxane transparent sheet material. When used in electrostatic printing equipment the sheet

material retains suitable flexibility and exhibits nonstickiness during the heating process. When used in image projection instruments the sheet material displays appropriate clarity for transparencies.

An illustrative example being dipping twice with subsequent curing 116 type glass cloth into a 35% by weight xylene solution of copolymer resin having the following composition: 10 mol percent monomethylsiloxane, 33.5 mol percent dimethylsiloxane, 40 mol percent monophenylsiloxane, and 16.5 mol percent diphenylsiloxane.

3,373,054

CHEMICAL PLATING

Konrad Lang, Cologne-Stammheim, and Heinz-Günter Klein, Cologne-Deutz, Germany, assignors to Farbenfabriken Bayer Aktiengesellschaft, Leverkusen, Germany, a German corporation

No Drawing. Filed June 18, 1964, Ser. No. 376,207
Claims priority, application Germany, July 22, 1963, F 40,295
9 Claims. (Cl. 117—130)

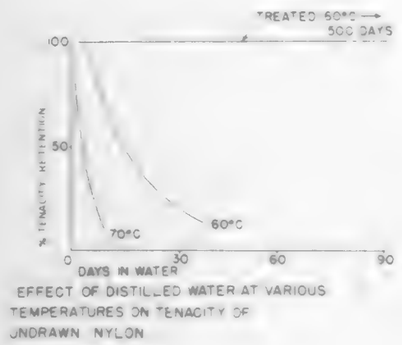
An improved process for chemical plating with alkaline aqueous plating baths containing a nickel and/or cobalt salt, a primary complexing agent such as ethylene diamine and a boron hydride compound is disclosed. The improvement is directed to the regeneration of such plating baths, the same to be carried out in the plating bath itself and without interrupting the process. The improvement in accordance with the invention lies in the teaching to add to the bath during the plating process an aqueous solution containing a secondary complex forming agent, the same being characterized in that it is volatile at the temperature at which the plating operation is being carried out; the primary complexing agent not being volatile at such temperature and further the secondary complexing agent being characterized in that it forms less stable complexes with the metal salt than does the primary complexing agent, together with a metal salt, i.e., nickel and/or cobalt salt.

3,373,055

PROCESS FOR TREATING POLYAMIDE MATERIALS

John Edward Swallow, Farnborough, England, assignor to Minister of Aviation, in Her Majesty's Government of the United Kingdom of Great Britain and Northern Ireland, London, England

Filed May 22, 1963, Ser. No. 282,427
4 Claims. (Cl. 117—138.5)



EFFECT OF DISTILLED WATER AT VARIOUS TEMPERATURES ON TENACITY OF UNDRAWN NYLON

1. A process for treating nylon to increase its resistance to deterioration consisting of the immersion of said nylon in a saturated solution of aqueous 8-hydroxyquinoline for a time sufficient to impregnate said nylon, removing said impregnated nylon from said solution and drying the same.

3,373,056

MODIFYING CELLULOSE ESTER OSMOTIC MEMBRANES

Fred Eli Martin, Azusa, Calif., assignor to Aerojet-General Corporation, Azusa, Calif., a corporation of Ohio

No Drawing. Filed Aug. 28, 1964, Ser. No. 392,932
7 Claims. (Cl. 117—144)

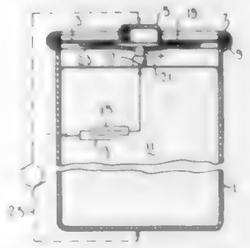
A method for improving the salt retention characteristics of a cellulose reverse osmosis membrane by treatment with various modifiers such as polyvinyl methyl ether, guartec gum, activated charcoal and copper ferrocyanide.

3,373,057

BATTERY HAVING AN AUTOMATIC CIRCUIT BREAKER THEREIN

Ernest M. Jost, Attleboro, and Pieter J. Nieuwkoop, Norton, Mass., assignors to Texas Instruments Incorporated, Dallas, Tex., a corporation of Delaware

Filed Oct. 24, 1965, Ser. No. 504,359
5 Claims. (Cl. 136—6)



The cover of a sealed rechargeable-battery casing is provided centrally with an inwardly concave contact button. A dished (which is to say concavoconvex) snap-acting spring disc of the automatic reset type is marginally sealed to the inside of the cover. Its concave side faces the cover. An automatic reset disc after snapping in one direction in response to pressure on its convex side will return with snap action when the pressure is relieved. The disc is provided centrally with a sealed movable contact for engagement and disengagement with an internal fixed contact when the disc snaps to and fro. The arrangement is such that when the contacts are engaged the disc is slightly sprung toward the cover but short of causing snap action. This maintains good electrical contact pressure under safe internal gas pressures. The fixed contact is electrically connected with one set of battery plates and the other set of plates is electrically connected with the casing.

3,373,058

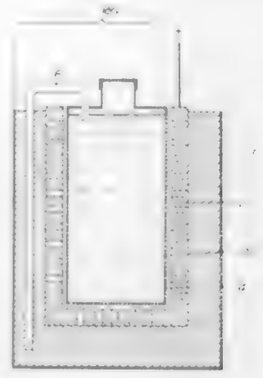
PRIMARY CELL COMPRISING AN AQUEOUS SOLUTION CONTAINING HALOGEN AND A METAL HALIDE

Moshe Rudolf Bloch, Beersheba, Israel, assignor to Dead Sea Works Limited, Beersheba, Israel, an Israeli company

Filed June 14, 1965, Ser. No. 463,633
Claims priority, application Israel, June 24, 1964, 21,599
8 Claims. (Cl. 136—83)

1. A primary cell comprising a casing, an aqueous solution containing halogen and a metal halide selected from the group of zinc halides and cadmium halides within the casing, an Me electrode where Me is a metal selected from the group consisting of zinc and cadmium and spaced therefrom an inert perforated electrode, said Me and inert

electrode are both in contact with said aqueous solution, and in contact with said aqueous solution at least one



halogen permeable container enclosing a source of free halogen.

3,373,059

METHOD OF MAKING PHOTOSENSITIVE ELEMENTS

Frank Augustine, Cleveland, Ohio, assignor to Clevite Corporation, a corporation of Ohio

Filed Oct. 24, 1963, Ser. No. 318,692
14 Claims. (Cl. 136—89)

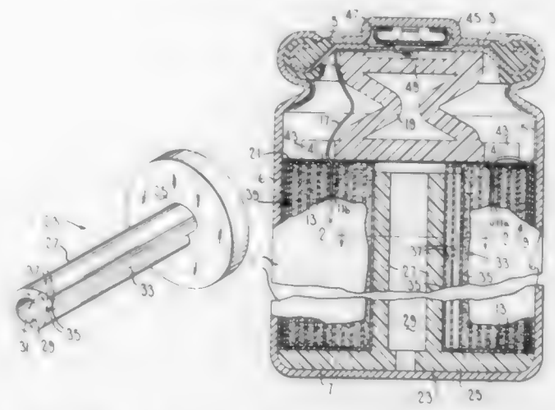
1. The method of fabricating a photosensitive cell which includes the steps of: fabricating a plate of semiconductor material doped throughout its bulk with donor defects; coating one surface of the plate with an aqueous acceptor impurity slurry containing precipitated hydrated metal selected from the group consisting of copper, silver, gold; heating the plate for a predetermined time at a predetermined temperature to diffuse the acceptor impurity into the plate and establish a photosensitive diffused layer not greater in thickness than about .01 mm.; and attaching electrodes to the plate.

3,373,060

ELECTRICAL CELL WITH COILED SEPARATORS AND ELECTRODES

Earl E. Gray, North Attleboro, Mass., assignor to Texas Instruments Incorporated, Dallas, Tex., a corporation of Delaware

Filed Jan. 3, 1966, Ser. No. 518,218
10 Claims. (Cl. 136—100)



1. An electrode assembly for an electrical cell comprising a mandrel having a periphery of spiral form providing a longitudinal offset shoulder on a substantially radial plane extending substantially throughout the length of said mandrel, alternating separator and electrode strips wound around said mandrel, the inner ends of said strips abutting said shoulder, and means holding the strips wound around the mandrel.

3,373,061

CHALCOGENIDE THERMOELECTRIC DEVICE HAVING A BRAZE COMPRISING ANTIMONY COMPOUNDS AND METHOD OF FORMING SAID DEVICE

Leopold Pessel, Wyndmoor, Pa., assignor to Radio Corporation of America, a corporation of Delaware

Filed July 19, 1962, Ser. No. 210,889
5 Claims. (Cl. 136—237)

1. The method of forming a low electrical resistance connection between a thermoelectric body composed of at least one member selected from the group consisting of sulfides, selenides, and tellurides, and another body, comprising the step of bonding said bodies with a braze selected from the group of intermetallic compounds consisting of palladium antimonide, antimony telluride, indium antimonide, and silver antimony telluride, said thermoelectric body being composed of a different compound from said braze compounds.

3. The method of forming a low electrical resistance connection between a thermoelectric body composed of at least one member of the group consisting of sulfides, selenides, and tellurides, and another body, comprising the steps of comminuting a compound selected from the group consisting of palladium antimonide, antimony telluride, indium antimonide, and silver antimony telluride; pressing said comminuted compound into a preform; positioning said preform between the surfaces of said bodies to be joined; pressing said bodies together; and heating said bodies in a non-oxidizing ambient to a temperature above the melting point of said compound but below the melting point of said thermoelectric body while maintaining said pressure.

4. A thermoelectric device including a body of thermoelectric material comprising at least one member of the group consisting of sulfides, selenides, and tellurides, and having another body bonded thereto, the bond between said bodies comprising a layer of a braze selected from the group consisting of palladium antimonide, antimony telluride, indium antimonide, and silver antimony telluride, said thermoelectric material being comprised of a different compound from said braze compounds.

5. A thermoelectric device including a doped body of thermoelectric material comprising at least one member of the group consisting of sulfides, selenides, and tellurides, and having another body bonded thereto, the bond between said bodies comprising a layer of a braze selected from the group consisting of palladium antimonide, antimony telluride, indium antimonide, and silver antimony telluride, said layer of braze including from about 0.1 to 2.0 weight percent of the substance used as a doping agent in said thermoelectric body, said thermoelectric material being comprised of a different compound from said braze compounds.

3,373,062

ENCAPSULATION OF PARTICULATE METAL HYDRIDE IN SOLID PROPELLANTS

Quentin L. Morris, McGregor, Tex., assignor to North American Aviation, Inc.

No Drawing. Filed July 14, 1964, Ser. No. 384,030
8 Claims. (Cl. 149—6)

8. A solid propellant grain comprising:
a binder,
a fuel,
and an encapsulated reactive oxidizer prepared by dissolving two pre-polymers capable of copolymerization in a solvent therefor,
suspending the reactive material in the resultant polymer solution,
adding a nonsolvent material to the solution effecting phase separation,
heating for a sufficient period of time to cure said polymers in a film about said reactive material.

3,373,063
CONTROLLED BURNING OF POTENT SOLID OXIDIZER

Herman Bieber, Kenilworth, N.J., George Chludzinski, Brooklyn, N.Y., and Lawrence Spenadel, Fanwood, N.J., assignors to Esso Research and Engineering Company, a corporation of Delaware

No Drawing. Filed Dec. 29, 1960, Ser. No. 79,946
3 Claims. (Cl. 149—7)

1. Nitronium perchlorate mixed with a critical quantity in the range of about 2 to 5 wt. percent of finely divided, solid, hydrocarbonaceous material which is principally polymethylene in composition.

2. A solid oxidizer of composition defined in claim 1 in which the hydrocarbonaceous material is polyethylene.

3,373,064
APPARATUS FOR SINGLE SURFACE ETCHING OF GLASS PLATES

Albert E. Junge, New Kensington, and Joseph Chabal, Curtisville, Pa., assignors to Pittsburgh Plate Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania

Filed Aug. 4, 1964, Ser. No. 387,392
3 Claims. (Cl. 156—34.5)

This invention relates to a method and apparatus for etching, and in particular to a method and apparatus for etching only selected surface portions of an article while the article is immersed in a bath of etching solution. More specifically, the present invention relates to a method and apparatus for completely etching only a single major surface of flat glass articles while immersed in a bath of acid etching solution and to a novel manufacture employing the use of the etched article thus obtained. More particularly, the invention relates to an apparatus comprising an impervious or etch resistance protective seal disposed between the faces of a pair of glass plates to be etched in such a manner to form a void and means for creating a vacuum within the void formed by the gasket and plates.

3,373,065
GYPSUM BOARD-FORMING METHODS AND MACHINES

Douglas F. Gutzman, Arlington Heights, and Rupert J. Straub, Lisle, Ill., assignors to United States Gypsum Company, Chicago, Ill., a corporation of Illinois

Filed Apr. 29, 1964, Ser. No. 363,497
18 Claims. (Cl. 156—40)

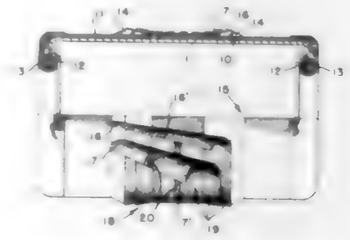
Sealed edge gypsum board of the type having the edge portions of the bottom cover sheet underlapping and adhered to the edge portions of the top cover sheet is formed with the slurry being confined entirely by the cover sheets throughout the formation of the board. Support guides on the support bed of the machine raise the edge portions of the bottom cover sheet to form a trough which is of a depth substantially greater than the clearance in the throat. The slurry is deposited in this trough. The top cover sheet is guided onto the raised edge portions of the bottom sheet, with these edge portions contacting the underside of the top sheet to form an envelope of

the cover sheets. Support guides maintain the contact between the cover sheets to confine the slurry, including the slurry head accumulated at the entrance to the throat, as the sheets and the slurry are moved to and through the throat and are thereby formed into board.

3,373,066
METHOD AND INTERMEDIATE ARTICLE OF MANUFACTURE FOR MAKING RADIAL TIRES

Herbert B. Hindin, Southfield, Mich., assignor to Uniroyal, Inc., a corporation of New Jersey

Filed Jan. 2, 1964, Ser. No. 335,162
8 Claims. (Cl. 156—128)



This application discloses a method of making a radial tire including a single building stage wherein the radial body ply or plies are applied conventionally to the building drum, a breaker comprised of an even number of low bias cut angle cord plies is subsequently applied thereon, the breaker plies being lubricated except for a narrow central circumferential strip which is left tacky, and the building of the tire is thereafter completed followed by the forming and curing of the tire. It also discloses the intermeditae article of said method before the forming of the tire.

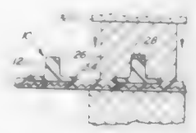
3,373,067
METHOD OF MAKING CLEATED CONVEYOR BELTS

Carlyle E. Hagstrom, Portland, Oreg., assignor to Goodyear Rubber & Supply Company, Inc., Portland, Oreg., a corporation of Oregon

Filed Feb. 19, 1965, Ser. No. 433,917
4 Claims. (Cl. 156—153)

This application discloses a method of making cleated conveyor belts. In the illustrated method the outer cured rubber surface of a length of finished belt material is roughened at intervals therealong corresponding to the desired spacing of the cleats. A generally I-shaped strip of uncured rubber cleat material is then inserted into a preheated aluminum mold having a cavity conforming in size and shape to the desired finished size and shape of the cleat, the amount of strip material being such that it substantially fills the cavity and has an edge portion protruding beyond the outer end thereof. A vulcanizing cement is applied to the roughened surface that will receive the cleat, and the loaded mold is placed on the belt overlying the roughened surface, after which

a vulcanizer press presses the mold against the belt and applies heat to the mold. The resulting heat and pressure transmitted to the strip material causes such material to flow into exact conformity with the mold cavity and into interengagement with the roughened surface of the belt to form a permanent bond with the latter. Simultaneously, the strip material is cured. The open end portion of the mold cavity is so shaped that the base of

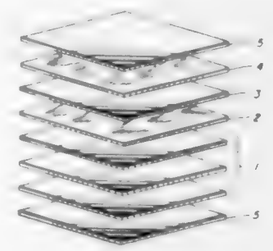


the resulting finished cleat is formed with curved surfaces which merge smoothly and gradually with the surface of the belt. Thus, upon removal of the mold from the belt, no finish grinding operations are required, and the belt is provided with a permanent cleat which appears as an integral part of the belt material. Several cleats can be joined to the belt simultaneously using the foregoing method.

3,373,068
PROCESS FOR PREPARING AN EMBOSSED LAMINATE

Gene Edward Grosheim and George Edward Power, Cincinnati, Ohio, assignors to Formica Corporation, Cincinnati, Ohio, a corporation of Delaware

Continuation-in-part of application Ser. No. 423,945, Jan. 7, 1965. This application Nov. 16, 1966, Ser. No. 604,507
13 Claims. (Cl. 156—219)



1. A process for producing a decorative laminate with an embossed surface comprising preparing an assembly in superimposed relationship of

(1) a plurality of thermosetting phenolic resin impregnated core sheets,

(2) a decorative sheet positioned immediately above said core sheets and impregnated with a noble thermosetting resin which is not subject to significant darkening upon the application of heat,

(3) a release sheet positioned above said decorative sheet carrying on the side of said release sheet away from said decorative sheet a raised printed design providing increased thickness in the printed area wherein the raised printed design has substantially no tendency to deform under the subsequently applied laminating conditions, thereupon heat and pressure consolidating the assembly to a unitary structure and removing the release sheet carrying the raised printed design.

3,373,069
METHOD OF MAKING AN INFLATABLE PANEL

Warren Gillespie, Jr., Newport News, Va., assignor to the United States of America as represented by the Administrator of the National Aeronautics and Space Administration

Original application Jan. 13, 1961, Ser. No. 82,658, now Patent No. 3,220,004, dated Nov. 23, 1965. Divided and this application Aug. 10, 1964, Ser. No. 392,992
2 Claims. (Cl. 156—285)

This invention relates to a method of forming inflatable panels for use as erectable radio signal reflecting space vehicles wherein two sheets of the material making up the inflatable are placed in overlying relationship on a plate having a plurality of male protuberances thereon, a partial vacuum is created between the plate and the sheet of material adjacent thereto to draw the sheets into conformity with the male protuberances thereon, a flow of heated gas is directed against the top of said sheets to thereby further conform the sheets to the pattern on the plate through the combined effects of heat and pressure, a sublimatory inflation material is inserted between the sheets and the peripheries of the sheets are bonded to thereby form an inflatable panel.

3,373,070
LAMINATES

Peter E. Fuerst, Coshocton, Ohio, assignor to General Electric Company, a corporation of New York

No Drawing. Filed May 1, 1964, Ser. No. 364,319
2 Claims. (Cl. 161—79)

2. An abrasion-resistant plastic laminate comprising a core and print sheet and superimposed thereon a cured thermosetting resin-impregnated overlay paper of fibrous material containing silica flour, said silica being uniformly distributed throughout said paper, the silica particles being held in a network of fibrous material, said silica being present in said paper in weight proportions of about one part of silica to from about six parts to about forty parts of fibrous material, said resin-impregnated overlay paper being clear and highly translucent in its cured condition.

3,373,071
LAMINATES

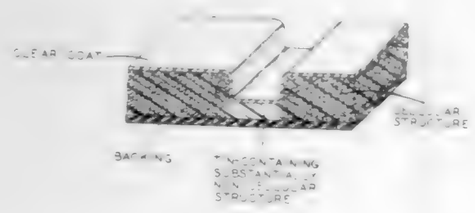
Peter E. Fuerst, Coshocton, Ohio, assignor to General Electric Company, a corporation of New York

Filed Mar. 26, 1964, Ser. No. 354,968
4 Claims. (Cl. 161—79)

2. An abrasion-resistant decorative laminate comprising a core and a single surface lamina positioned thereover, said surface lamina comprising a print sheet impreg-

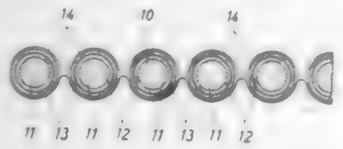
nated with a thermosetting resin and coated with a composition comprising (1) 100 parts by weight of a melamine aldehyde resin, (2) from about 5 to about 30 parts by weight of silica flour, (3) from about 10 to about 50 parts by weight of microcrystalline cellulose having a refractive index approximating that of the cured melamine aldehyde resin said microcrystalline cellulose being mechanically disintegrated level-off D.P. cellulose, and (4) up to about 3% of a water-soluble thickening agent, said composition being clear and highly translucent in its cured condition.

3,373,072
CHEMICAL EMBOSSING METHOD AND PRODUCT
James R. Jones, Lancaster, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania
Filed Dec. 16, 1965, Ser. No. 514,353
7 Claims. (Cl. 161—116)



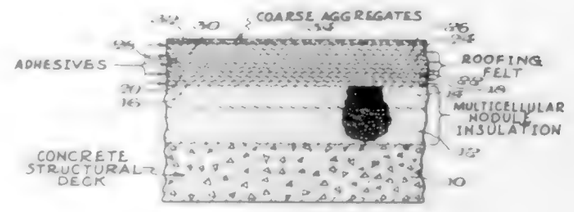
1. A chemically embossed surface covering comprising a sheet of fused and plasticized vinyl resin, the sheet having a plurality of cellular elevated regions separated by substantially non-cellular lower regions arranged in a predetermined pattern, the cellular elevated regions containing the decomposition products of an organic blowing agent, the substantially non-cellular lower regions containing said blowing agent in undecomposed form and a tin salt.

3,373,073
ELASTICALLY EXTENSIBLE BAND
Christian Heinrich Turcksin, 27 Saganer Strasse, Detmold Lippe, Germany
Filed Mar. 18, 1964, Ser. No. 352,874
Claims priority, application Austria, May 31, 1963, A 4,438/63
5 Claims. (Cl. 161—144)



A band of high elasticity, which is extensible in both the longitudinal and transverse directions, is produced in an extremely simple manner by juxtaposing highly elastic longitudinal threads in side-by-side relationship and connecting them by means of an elastic material so as to form a flat band. Each of the elastic longitudinal threads consists of an elastically extensible core thread with textile threads wrapped around the core thread.

3,373,074
THERMAL ROOF INSULATION AND METHOD OF PREPARING AN INSULATED BUILT-UP ROOF
Dominic D'Eustachio, Pittsburgh, and Howard E. Johnson, Trafford, Pa., assignors to Pittsburgh Corning Corporation, Port Allegany, Pa., a corporation of Pennsylvania
Continuation-in-part of application Ser. No. 363,518, Apr. 29, 1964. This application July 27, 1965, Ser. No. 475,222
19 Claims. (Cl. 161—161)

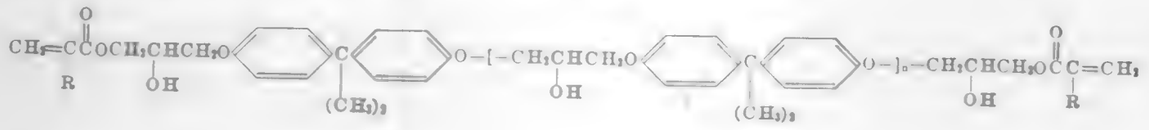


Thermal insulation having interconnected interstitial voids for the flow of fluid between contiguous spherical nodules. The thermal insulation includes substantially spherical multicellular glass nodules arranged in contiguous relation and bonded to each other by a thermoplastic bituminous material with interconnected interstitial voids between the nodules. The cellular glass nodules have thermal insulating properties and are themselves impervious to moisture. The thermo-plastic bonding material provides flexibility so that a layer of the thermal insulation can deflect and conform to irregular surfaces. The thermal insulation may be fabricated as a roof insulation board or may be applied directly to a substrate as a monolithic layer. The method of making the roof board includes admixing heated nodules and liquefied bitumen bonding material, forming a layer of this mixture and applying a compressive force thereto so that the nodules are bonded in contiguous relation with interconnected interstitial voids therebetween. The method of making a monolithic layer of the thermal insulation includes spreading an admixture of nodules and liquefied bitumen over a roof deck in a manner that the nodules are in contiguous relation with interconnected interstitial voids therebetween.

3,373,075
DIACRYLATE COMPOSITIONS, HEAT RESISTANT POLYMERS CONTAINING THE SAME AND METHOD OF MAKING ELECTRICAL LAMINATES THEREFROM
Frank Fekete, Monroeville, Patrick J. Keenan, Pittsburgh, and William J. Plant, Monroeville, Pa., assignors to H. H. Robertson Company, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Continuation-in-part of abandoned application Ser. No. 160,247, Dec. 18, 1961. This application Dec. 17, 1963, Ser. No. 331,106
6 Claims. (Cl. 161—185)

4. A laminated article comprising glass fibers embedded within a cured thermoset resinous composition comprising a copolymerized mass formed by addition polymerization of

(a) from 95 to 50 percent by weight of a diacrylate having the formula



wherein R is a substituent selected from the class consisting of hydrogen, methyl and ethyl radicals and n is an integer from zero to twenty; and

(b) about 50 to 50 percent by weight of at least one copolymerizable monomer having a terminal $>C{=}CH_2$ radical;

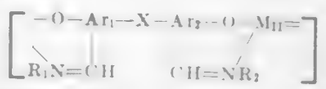
said laminated article after copolymerization of said mass having been exposed to an elevated temperature which is above its curing temperature and also is above 150° F. for more than one hour.

3,373,076
LAMINATION OF AMORPHOUS FLUOROCARBON POLYMER AND GLASS AND METHOD OF MAKING SAME
Rex B. Gosnell, San Diego, Calif., assignor to Whittaker Corporation, Los Angeles, Calif., a corporation of California
No Drawing. Filed Mar. 29, 1965, Ser. No. 443,682
13 Claims. (Cl. 161—189)

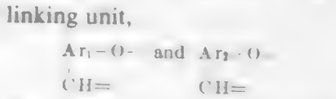
1. A novel glass laminate comprising at least two glass sheets separated by a plastic interlayer comprising an amorphous, high molecular weight chlorotrifluoroethylene, tetrafluoroethylene, vinylidene fluoride terpolymer.

3,373,077
SOLUBLE AND FUSIBLE, HEAT RESISTANT, CHELATE POLYMERS
John J. O'Connell, Waltham, Mass., assignor to Monsanto Research Corporation, St. Louis, Mo., a corporation of Delaware
No Drawing. Filed June 7, 1963, Ser. No. 286,196
22 Claims. (Cl. 161—198)

1. Chelated metal polymers characterized by repeating units of the formula



where X is a linking unit,



are o-hydroxyarylcarboxaldehyde residues and wherein R_1 and R_2 are aliphatic groups having at least 4 carbon atoms, $=NR_1$ and $=NR_2$ are mono-primary-amine residues and M_{II} is a divalent tetracoordinated metal atom.

2. The polymers of claim 1, wherein said M_{II} represents a zinc atom.

3,373,078
LAMINATES HAVING AN ADHESIVE COMPOSITION CONTAINING AN OXIDIZED POLYETHYLENE AND A RUBBERY TERPOLYMER
Thomas E. Ferington, Sandy Spring, Md., assignor to W. R. Grace & Co., New York, N.Y., a corporation of Connecticut
No Drawing. Filed Dec. 17, 1964, Ser. No. 419,238
16 Claims. (Cl. 161—217)

1. Adhesive composition consisting essentially of:

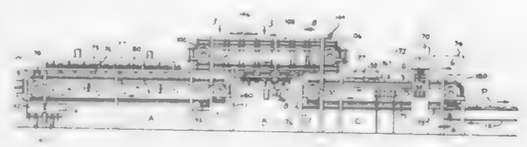
(a) a normally solid rubbery terpolymer of ethylene, propylene and a nonconjugated hydrocarbon diene;

(b) for each 100 parts by weight of said terpolymer, from about 15 to about 105 parts by weight of a normally solid oxidized, linear polyethylene having a density of from about 0.937 to about 1.050 grams per cubic centimeter, a crystalline melting point of from about 125° to about 135° centigrade, a melt index of from about 0.1 to about 50, a carbonyl content of from about 0.2 to about 7.5 percent by weight, and an oxygen functionality index greater than about 0.03; and

(c) for each of 100 parts by weight of said terpolymer, from about 30 to about 120 parts by weight of a hard clay.

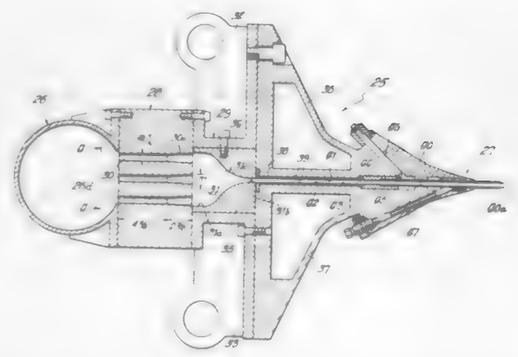
9. Laminate comprising superimposed layers of metal sheet each of which is directly adhered to an intervening layer consisting essentially of an adhesive composition as defined in claim 1.

3,373,079
PULP AND FIBER MOLDING APPARATUS INCLUDING RESIN APPLICATION MEANS
Watson S. Eastman, 7325 SW. Newton Place, Portland, Oreg. 97225, and Leo M. Bergman, Portland, Oreg.; said Bergman assignor to said Eastman
Filed Sept. 18, 1964, Ser. No. 397,369
17 Claims. (Cl. 162—265)



5. A pulp molding machine comprising suction pick-up dies, means for forming pre-forms on said dies from an aqueous slurry, a first drying stage arranged to dry said pre-forms from one side to center, a second drying stage arranged to dry said pre-forms from opposite side to center, means to move said pre-forms from said forming means to said first drying stage and from said first drying stage to said second drying stage, a high compression stage, and means for moving said pre-forms from said second drying stage to said high compression stage.

3,373,080
STOCK INLET FOR A PAPERMAKING MACHINE
David W. Appel and John B. Graham, Neenah, Wis., and Charles L. Sanford, Memphis, Tenn., assignors to Kimberly-Clark Corporation, Neenah, Wis., a corporation of Delaware
Filed Apr. 8, 1965, Ser. No. 446,643
5 Claims. (Cl. 162—343)



A stock inlet for a papermaking machine including a stock redirecting section having an array of openings through it connected to the side of a stock header, a pair of parallel plates forming a thin stock turbulizing passage between them for directing stock onto a Fourdrinier fabric and a transition section formed with a passage therethrough which has the relatively large thickness at its entrance end of the array of openings and which has at its outlet end the relatively thin thickness of said passage for flowing the stock from said openings to said passage.

3,373,081
METHOD FOR DIAGNOSING PHEOCHROMOCYTOMA

Albert Sjoerdsma, Bethesda, Md., and Karl Engelman, Boston, Mass., assignors to the United States of America as represented by the Secretary of the Department of Health, Education, and, Welfare

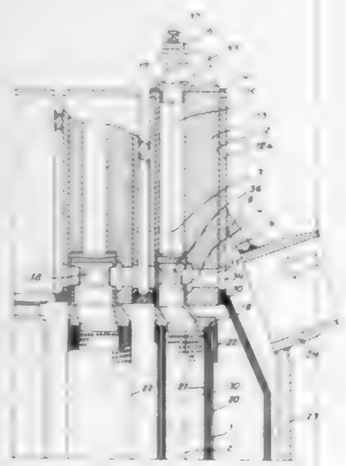
No Drawing. Filed Apr. 28, 1964, Ser. No. 363,282
4 Claims. (Cl. 167—84.5)

A new, accurate method for disgnosing pheochromocytoma which comprises determining the pressor response in systolic blood pressure to intravenous injection of tyramine. The baseline systolic blood pressure of a patient is determined, an intravenous injection of 250 to 1000 micrograms of tyramine is administered, and a rise in systolic blood pressure greater than 20 mm. of mercury is observed if pheochromocytoma is present.

3,373,082
CONTROL OF NUCLEAR POWER REACTOR

Jöns Arthur Dahlgren, Saltsjobaden, Sweden, assignor to Alfa-Laval AB, Tumba, Sweden, a corporation of Sweden

Filed Jan. 11, 1966, Ser. No. 520,005
Claims priority, application Sweden, Jan. 20, 1965, 687/65
5 Claims. (Cl. 176—28)



The reactor core contains fuel elements extending generally parallel to a central axis of the core and having respective longitudinal axes located at different radial distances from the core axis. A moderator fluid is fed into the core and between the fuel elements, and means are provided to mount each of at least some of those elements for rotation about only one axis which is offset from the core axis and is eccentric to and parallels the said longitudinal axis of the element, whereby the quantity of moderator fluid between the fuel elements is variable.

3,373,083
METHOD OF INHIBITING THE CORROSION OF GRAPHITE IN A CO_2-COOLED NUCLEAR REACTOR

Charles Koch and René Ranc, Grenoble, France, assignors to Commissariat à l'Energie Atomique, Paris, France

No Drawing. Filed May 16, 1966, Ser. No. 550,142
Claims priority, application France, June 9, 1965, 20,087
3 Claims. (Cl. 176—38)

The corrosion of graphite in a graphite moderated CO_2-cooled nuclear reactor is inhibited by adding about 0.2% by weight of SiH_4, Si_2H_6 or $Si(OC_2H_5)_4$ to the CO_2 coolant.

3,373,084
SYNTHESIS OF STEROIDS

Patrick A. Diassi, Westfield, and Pacifico A. Principe, South River, N.J., assignors, by mesne assignments, to E. R. Squibb & Sons, Inc., New York, N.Y., a corporation of Delaware

No Drawing. Original application Mar. 23, 1965, Ser. No. 442,202, now Patent No. 3,320,290, dated May 16, 1967. Divided and this application Jan. 27, 1967, Ser. No. 623,789
1 Claim. (Cl. 195—51)

Preparation of 4,8,14-trimethyl - 18 - nor-8α,9β,14β-androst-4-en-3,11,17-trione by subjecting 4α,8,14 - trimethyl-18-nor-5α,8α,9β,14β-androstane-3,11,17-trione to *Pseudomonas testosteroni*.

3,373,085
METHOD OF PURIFYING COKE-WORKS WASTE LIQUOR

Philip X. Masciantonio, Penn Township, Westmoreland County, Pa., assignor to United States Steel Corporation, a corporation of Delaware

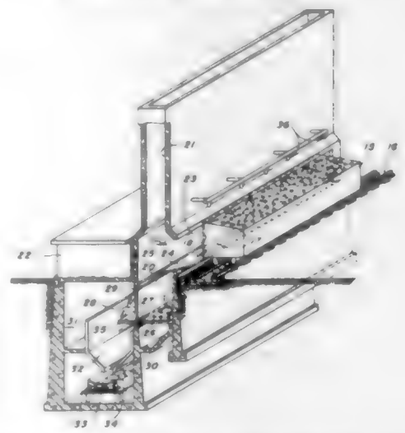
Filed Sept. 12, 1962, Ser. No. 223,181
5 Claims. (Cl. 201—21)

1. In a method of recovering phenol from coke-works waste water contaminated therewith, the steps comprising bringing said water into contact with coking coal, thereby permitting adsorption by the coal of phenol from the water, draining the water from the coal, and charging the coal into a coke oven.

3,373,086
METHOD AND APPARATUS FOR QUENCHING COKE

Hugo S. Wilson, Gary, Ind., assignor to United States Steel Corporation, a corporation of Delaware

Filed Nov. 19, 1963, Ser. No. 324,778
9 Claims. (Cl. 201—39)

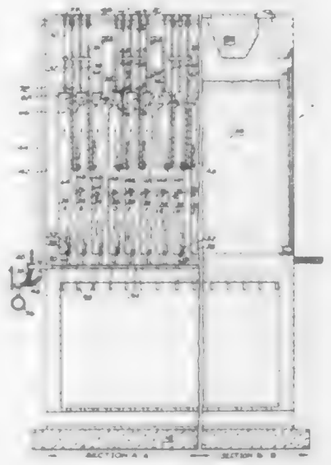


Coke-quenching method and apparatus in which coke is pushed from ovens into a car, transported to a quenching apparatus and dumped therein. Water is sprayed on the coke within the apparatus, after which the quenched coke is conveyed away for further processing. Expedites return of cars and prolongs their life by avoiding quenching while coke remains in cars.

3,373,087
COKE OVEN STRUCTURE

Joseph Van Ackeren, Pittsburgh, Pa., assignor to Koppers Company, Inc., a corporation of Delaware

Filed Aug. 31, 1964, Ser. No. 393,124
10 Claims. (Cl. 202—135)



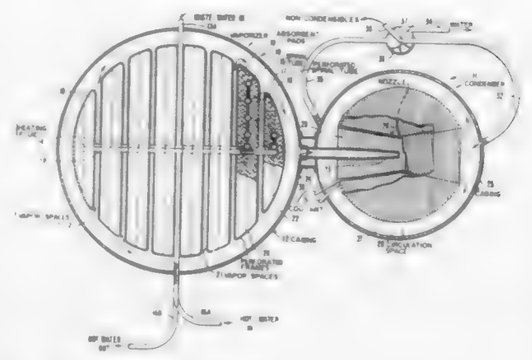
1. In a high chambered horizontal coking retort oven the combination of heating elements therefor to provide uniform heat for the coking chambers comprising,
elongated heating walls on opposite sides of said coking chambers,
said heating walls each having transverse division walls and a plurality of intermediate partition walls therebetween forming groups of vertical combustion flues connected to a common crossover duct,
said combustion flues each having a base portion with an opening therein forming a gas port for a low burner,
a source of pressurized fuel gas for each of said low level burners located below said combustion flue base portion,
conduit means connecting said source of pressurized fuel gas to each of said low level burners,
said division walls having vertical passageways extending downwardly therethrough and each said pasageway terminating in a gas port for a high level burner in a flue adjacent to said respective division wall,
said high level burner positioned above said low level burner in said respective flues,
a source of pressurized fuel gas for each of said high level burners located above the upper portion of said combustion flues, and
means connecting said vertical passageways with said source of pressurized fuel gas.

3,373,088
ATTITUDE-INDEPENDENT DISTILLATION APPARATUS

James F. Harkee, Glendora, and Myron B. Cooley, Pomona, Calif., assignors to Aerojet-General Corporation, El Monte, Calif., a corporation of Ohio

Filed Jan. 8, 1965, Ser. No. 424,300
8 Claims. (Cl. 202—185)

1. Distillation apparatus for obtaining pure water from waste water and like contaminated liquids comprising:
a vaporizer unit generating vapor from the contaminated liquid,
means for circulating heating medium through said vaporizer unit, and
a vapor delivering nozzle leading heated vapor out of said vaporizer unit;
a condenser unit comprising a casing associated with said vaporizer unit and having a nozzle arranged therein, the vapor delivering nozzle discharging vapor into the throat of the nozzle in the condenser casing,
an internal wall within said casing and disposed outwardly with respect to the nozzle in the casing in surrounding relation thereto,

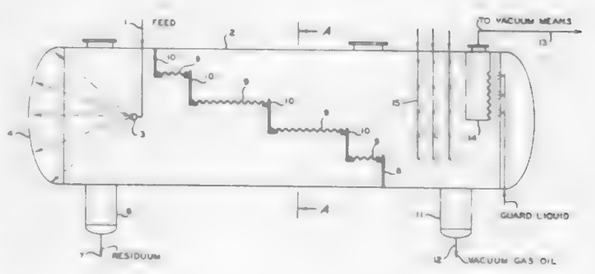


means associated with said nozzle in the casing and said internal wall within the casing for circulating cooling medium within said casing so as to cool said nozzle in the casing and said internal wall within the casing, and
said internal wall within said casing cooperating therewith to define a circulation path therebetween from the outlet end to the inlet end of said nozzle in the casing for the vapor flowing through said nozzle in the casing and effective to cause condensation of the said vapor; and
means effective to continuously withdraw some of the condensed vapor from said condenser unit and deliver it as liquid to storage, to vent non-condensed vapor, and to return undelivered condensed vapor to said condenser unit.

3,373,089
HORIZONTAL DISTILLATION VESSEL HAVING DEMISTERS IN DIFFERENT PLANES AND METHOD

Lucien H. Vautrain and Dale L. Smith, Okmulgee, and Paul M. Waddill and Donald M. Little, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware

Filed July 27, 1964, Ser. No. 385,422
17 Claims. (Cl. 203—40)



A distillation vessel adapted for horizontal flow therethrough of vapors is equipped with at least one demister element disposed at a substantial angle to the vertical. In one embodiment the demister is disposed horizontally.

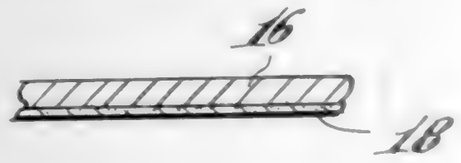
In another embodiment the demister section of the vessel contains several demister elements as described. In a further embodiment a stair-step demister arrangement is provided, a specific form of which is accomplished by forming the stair-step arrangement employing a screen extended over progressively lower disposed support bars extending across the vessel. In operation a method for distilling a distillable material by feeding it to one end of a vessel according to the invention causing horizontally travelling vapors momentarily to depart from their horizontal travel, then continuing the horizontal travel of these vapors and recovering vapors and or condensate from the other end of said distillation vessel.

3,373,090

ADHESIVE ELECTROLYTIC RECORDING PAPER

Milton Alden, 419 Grove St.,
Needham, Mass. 02192

Filed Nov. 15, 1963, Ser. No. 324,003
2 Claims. (Cl. 204—2)



A moist recording paper impregnated with a solution of electrolyte and coated on one surface with an adhesive which may be electrically conductive.

3,373,091

DATA STORAGE DEVICE AND METHOD

Eugene Findl, Pasadena, Calif., assignor to Electro-Optical Systems, Inc., Pasadena, Calif., a corporation of California

Filed May 21, 1964, Ser. No. 369,240
12 Claims. (Cl. 204—18)

1. An efficient, easily reversible process for the reproduction of a light image requiring a low electrical potential comprising:

(a) exposing to said light image a photoconductive layer on a contiguous electrolytically conductive layer, said electrolytically conductive layer consisting essentially of:

(I) a first film having a dye fixed therein whose color changes at a set electrical potential and having at least one associated ion movable therein adapted to change concentration by the passage of current through said first film with said concentration change causing an electrical potential change in said first film which includes said set dye electrical potential, and

(II) a contiguous second film having at least one counterpart ion movable therein adapted to change concentration by the passage of current through said second film, said counterpart ion concentration change being opposite to said associated ion concentration change; and

(b) preventing said associated ions from mixing with said counterpart ions, said ions being related by a reversible electrochemical reaction; and passing current selectively through the light exposed portions of said photoconductive layer and the adjoining portions of said electrolytically conductive layer to change the color of said dye in said portions.

3,373,092

ELECTRODEPOSITION OF PLATINUM GROUP METALS ON TITANIUM

Kenkichi Yoshimura, Yokohama-shi, Kanagawa-ken, Kiyoshi Aoki, Tokyo, and Shiro Honda, Yokohama-shi, Kanagawa-ken, Japan, assignors to Ajinomoto Co., Inc., Tokyo, Japan

No Drawing. Filed Mar. 24, 1964, Ser. No. 354,825
Claims priority, application Japan, Mar. 29, 1963, 38/14,116
4 Claims. (Cl. 204—32)

When titanium objects are immersed in fused alkali metal halide salts until the surface is roughened, platinum metal electrodeposits formed thereafter in aqueous electrolytes perfectly adhere to the titanium and are so continuous that the plated titanium, when employed as an anode in a mercury cell for caustic and chlorine production, significantly reduces the cell voltage as compared to similarly plated titanium electrodes pretreated in a conventional manner.

3,373,093

METHOD OF FORMING AN OXIDE COATING ON METALS

Richard L. Every, Ponca City, Okla., assignor to Continental Oil Company, Ponca City, Okla., a corporation of Delaware

Continuation-in-part of application Ser. No. 368,956, May 20, 1964. This application Mar. 2, 1966, Ser. No. 531,261
2 Claims. (Cl. 204—39)

1. A method of putting an oxide coating on metallic nickel comprising:

(a) immersing the metallic nickel in a molten salt consisting essentially of one salt selected from the group consisting of alkali metal nitrates and alkali metal chlorates;

(b) making the metallic nickel the anode in an electrolytic circuit including the alkali metal salt; and

(c) passing sufficient current through said electrolytic circuit to provide a current density between about 1 to about 50 ma./sq. cm.

2. A method of putting an oxide coating on platinum having a previously applied coating of platinum black deposited thereon comprising:

(a) immersing said platinum in a molten salt consisting essentially of one salt selected from the group consisting of alkali metal nitrates and alkali metal chlorates;

(b) making said platinum the anode in an electrolytic circuit including the alkali metal salt; and

(c) passing sufficient current through said electrolytic circuit to provide a current density between about 1 to about 50 ma./sq. cm.

3,373,094

GOLD AND GOLD ALLOY ELECTROPLATING

Donald Gardner Foulke, Plainfield, N.J., assignor to Sel-Rex Corporation, Nutley, N.J., a corporation of New Jersey

No Drawing. Continuation-in-part of application Ser. No. 392,286, Aug. 26, 1964. This application Oct. 18, 1965, Ser. No. 497,454
15 Claims. (Cl. 204—43)

Bright electroplated gold and gold alloys are obtained from an aqueous acid electroplating bath which contains as a brightening agent a proportion of piperazine or alkyl substituted piperazine.

3,373,095

ELECTROPLATING OF COPPER

Charles N. Abbott, Dayton, Ohio, assignor to The Dayton Bright Copper Company, Dayton, Ohio

No Drawing. Continuation-in-part of application Ser. No. 375,344, June 15, 1964. This application June 5, 1967, Ser. No. 643,405
8 Claims. (Cl. 204—52)

The present invention relates to improved extender compositions used in copper electroplating comprising a sulfurized sulfonated aromatic compound, an amino derivative of a triarylmethane, and as a leveling agent a compound containing the radical

$$-N=C-X-$$
$$\|$$
$$S$$
$$|$$
$$Hg$$

The combination of the ingredients of the type specified gives synergistic results in the form of improved brightness and leveling properties over a wider range of current density than previous compositions used in copper electroplating baths.

3,373,096

ELECTROLYTIC PREPARATION OF CHLORINE PENTAFLUORIDE

Emil A. Lawton and Howard H. Rogers, Woodland Hills, Calif., assignors to North American Rockwell Corporation, a corporation of Delaware

Filed Sept. 24, 1964, Ser. No. 399,110
3 Claims. (Cl. 204—59)

1. A process for synthesizing chlorine pentafluoride comprising the steps of passing an electric current between spaced electrodes in an electrolyte comprising chlorine, hydrogen fluoride, and an alkali metal halide, whereby chlorine pentafluoride is evolved, and collecting the evolved chlorine pentafluoride.

3,373,097

METHOD FOR SEPARATION OF A METAL-CONTAINING HALIDE PHASE FROM A GANGUE-CONTAINING SILICATE PHASE AND ELECTROLYSIS OF HALIDE PHASE TO OBTAIN THE METAL

John M. Gomes, Don H. Baker, Jr., and Kenji Uchida, Reno, Nev., assignors to the United States of America as represented by the Secretary of the Interior

No Drawing. Filed Feb. 16, 1965, Ser. No. 433,229
9 Claims. (Cl. 204—64)

1. A process for separating a metal from gangue constituents in a mineral comprising adding to the mineral an alkali metal halide and an alkali metal silicate, heating the mixture to a temperature and for a time sufficient to form a halide phase containing the desired metal and a silicate phase containing the gangue constituents, and separating the two phases.

9. The process of claim 1 in which the metal is separated from the halide phase by electrolysis.

3,373,098

PHOTOCHEMICAL METHOD FOR THE PREPARATION OF SUBSTITUTED POLYHEDRAL BORANE ANIONS

Swiatoslaw Trofimenko, Philadelphia, Pa., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Filed Jan. 10, 1964, Ser. No. 337,514
9 Claims. (Cl. 204—157.1)

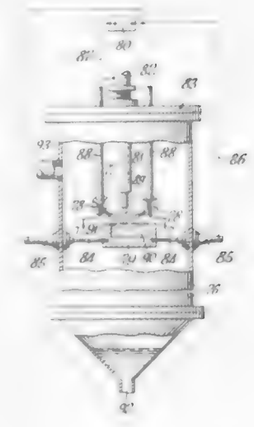
1. A process for preparing substituted polyhedral borane anions which comprises irradiating with ultraviolet light a solution containing a divalent polyhedral borane anion selected from the class consisting of $[B_{10}H_{10-n'}(Hal.)_{n'}]^{-2}$ and $[B_{12}H_{12-n''}(Hal.)_{n''}]^{-2}$ wherein n' is a positive whole number from 1 to 10, inclusive, n'' is a positive whole number from 1 to 12, inclusive, and Hal. is a halogen, and an anion A, to form a polyhedral borane anion distinct from the anion irradiated.

3,373,099

PROCESS OF CRACKING LIQUID HYDROCARBONS IN AN ELECTRIC ARC USING LIQUID METAL ELECTRODES

Harry E. Kennedy, Berkeley, Calif., assignor to Union Carbide Corporation, a corporation of New York

Filed Mar. 24, 1965, Ser. No. 442,270
3 Claims. (Cl. 204—171)



1. A process for cracking liquid hydrocarbons which comprises directing a stream of electrically conductive liquid downward toward a pool of electrically conductive liquid, said pool being at a negative potential in relation to said stream, forming an electric arc in the region where said stream contacts said pool and introducing liquid hydrocarbon to the region of said arc.

3,373,100

PRECONTROL SALINITY COMPENSATOR FOR AUTOMATIC CATHODIC PROTECTION SYSTEM

Haydn Rubelmann, 1222 Cromwell Ave., Chesapeake, Va. 23320

Filed May 22, 1964, Ser. No. 369,645
8 Claims. (Cl. 204—196)

1. A cathodic protection assembly for controlling the amount of alternating current supplied to a cathodic protection load in accordance with the resistance of an electrolyte, comprising:

a source of alternating current;

first and second input windings connected in opposing senses;

first and second current rectifying paths each coupled to said alternating current source and coupled to said first and second input windings respectively;

means in said second path responsive to the resistance of the electrolyte for changing its electrical characteristics in accordance with the resistance of the electrolyte;

bi-directional gating means coupled to said source for receiving supply current therefrom;

a threshold conduction device connected in circuit with said bi-directional gating means;

said threshold conduction device having a signal control element for receiving signals to drive said device to conduction; and

first and second signals control windings connected to the signal control element of said threshold device, said windings being located in coupling relation with said first and second input windings to thereby receive by induction the algebraic sum current thereof;

whereby when the current flowing in said first and second input windings is sufficiently unequal, a gating signal pulse is produced in said signal control windings to drive said threshold device to conduction thereby causing current to flow in said bi-directional gating means for a portion of an alternating current cycle according to the resistance of said electrolyte.

3,373,101

FRIEDEL-CRAFTS CATALYST PLUS BITUMEN TO PRODUCE PITCH OF INCREASED BETA RESIN CONTENT

Hillis O. Folkins and John W. Walsh, Crystal Lake, Ill., assignors, by mesne assignments, to Union Oil Company of California, Los Angeles, Calif., a corporation of California

No Drawing. Filed Jan. 24, 1964, Ser. No. 339,905
14 Claims. (Cl. 208—40)

1. A process for the preparation of a petroleum pitch which comprises heating a cracked petroleum bituminous material at a temperature of about 650° to 850° F. in the presence of a Friedel Crafts catalyst, the concentration of said catalyst being about 0.1 to 5.0 wt. percent of the petroleum bituminous material until a pitch having a softening point of 180° to 250° F. and a beta-resin content from 17 to 24 percent is produced and recovering said pitch from said process.

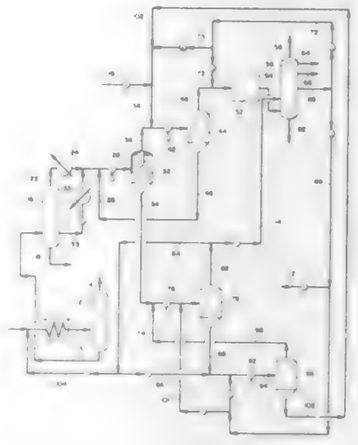
3,373,102

PRETREATMENT OF CATALYTIC CRACKING FEED STOCKS

Bernard L. Schulman, Livingston, N.Y., assignor to Esso Research and Engineering Company, a corporation of Delaware

Filed Dec. 17, 1965, Ser. No. 514,603
6 Claims. (Cl. 208—91)

1. A method for removing catalyst contaminating material from oil feed stocks for catalytic cracking which comprises mixing a high boiling contaminated hydrocarbon oil feed with finely divided cracking catalyst at an elevated temperature in at least one stage, passing the resulting oil-catalyst mixture into a hydroclone for separating at least 95% of the partially spent catalyst particles from treated oil feed having a reduced contaminant content, catalytically cracking the treated oil feed to produce lower boiling hydrocarbons, fractionating the catalytically cracked lower boiling products to recover gasoline and cycle oil, mixing at least part of the recovered cycle oil with said partially spent finely divided catalyst particles separated in said hydroclone to regenerate and wash said finely divided catalyst particles and passing the resulting mixture to a second hydroclone for separating



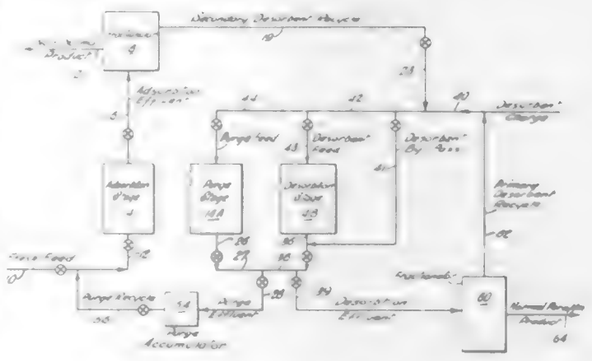
washed or regenerated finely divided catalyst particles from the cycle oil in at least one stage and utilizing the separated washed finely divided catalyst for treating further amounts of contaminated oil feed for catalytic cracking.

3,373,103

N-HYDROCARBON SEPARATION WITH A MOLECULAR SIEVE

David E. Cooper and Ralph M. Lewis, Nederland, Henry D. Moorer, Port Arthur, and Benjamin F. Smith, Groves, Tex., assignors to Texaco Inc., New York, N.Y., a corporation of Delaware

Filed Feb. 1, 1966, Ser. No. 524,050
16 Claims. (Cl. 208—310)



A vapor phase process for the separation of straight chain hydrocarbons from mixtures thereof with non-straight chain hydrocarbons with a molecular sieve selective adsorbent which adsorbs the straight chain hydrocarbons from the feed mixture. The adsorbed straight chain hydrocarbons are desorbed from the molecular sieve by a desorbing gas stream composed of lighter straight chain hydrocarbons.

3,373,104

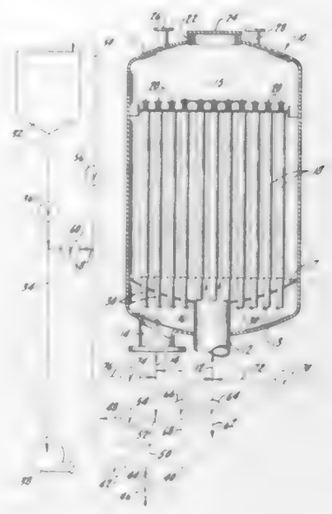
METHOD OF CLEANING FILTER TANK

Leo F. Ryan, Westwood, N.J., assignor to Union Tank Car Company, Chicago, Ill., a corporation of New Jersey

Filed Dec. 17, 1964, Ser. No. 419,126
15 Claims. (Cl. 210—32)

A method of cleaning pre-coated filters in a filter tank in which the tank is drained, then air is passed through the filters in reverse flow to normal operation while wash

water is gradually added to the tank to gradually submerge the filters, whereafter the wash liquid is drained



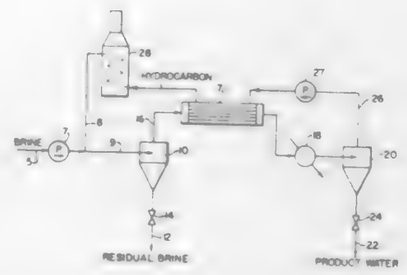
from the tank while air flow is continued, finally air flow is stopped and the filters are backwashed with liquid.

3,373,105

RECOVERY OF FRESH WATER FROM BRINE

Frank E. Guptill, Jr., Fishkill, and Howard V. Hess, Glenham, N.Y., assignors to Texaco Inc., New York, N.Y., a corporation of Delaware

Filed Sept. 3, 1964, Ser. No. 394,244
19 Claims. (Cl. 210—59)



Fresh water is separated from brine by selective extraction with an organic liquid at elevated temperature and pressure in a batch extraction process, preferably in a series of counterflow batch extraction steps, utilizing as solvent higher molecular weight hydrocarbons, alcohols, ethers, aldehydes, and forming a liquid complex or extract phase immiscible with residual brine, wherein separation of said extract phase from residual brine is preferably carried out by utilizing a centrifugal force of at least one g developed in a vortex-forming zone, e.g. a cyclone separator.

3,373,106

WELL-DRILLING METHOD

John B Lister, Scottsdale, Ariz., and Victor A. Rundle, Oakland, Calif., assignors to Seepage Control, Inc., Phoenix, Ariz., a corporation of Arizona

No Drawing. Filed Apr. 8, 1965, Ser. No. 446,713
10 Claims. (Cl. 252—8.5)

A method of drilling a borehole through an earth formation containing strata which tend to absorb water and swell or slough using an aqueous drilling fluid such as brine or water to which has been added a minor quantity of an emulsion of petroleum wax.

3,373,107

FRICTION PRESSURE REDUCING AGENTS FOR LIQUIDS

Herbert L. Rice, Kenneth W. Becker, and Frank L. Szabo, Houston, Tex., assignors to Milchem Incorporated, Houston, Tex., a corporation of Delaware

No Drawing. Filed July 16, 1964, Ser. No. 383,230
2 Claims. (Cl. 252—8.55)

Friction pressure reducing compositions including cationic compounds generally characterized as alkyl-substituted mono- or poly-functional amines in which at least one alkyl group contains from 16–20 carbons having a straight-chain segment of at least 16 carbon atoms.

3,373,108

METHOD OF PREPARING OVERBASED CALCIUM SULFONATE OIL CONCENTRATES

Robert A. Woodle, Edward H. Holst, and Robert S. Edwards, Nederland, Tex., assignors to Texaco Inc., New York, N.Y., a corporation of Delaware

No Drawing. Filed Apr. 12, 1966, Ser. No. 541,949
4 Claims. (Cl. 252—33)

A method of producing an overbased calcium sulfonate lube oil concentrate comprising contacting a mixture of normal calcium sulfonate, basic calcium inorganic compound, an oxygenated vehicle, a lubricating oil and a thiophenol with carbon dioxide and separating residual water, oxygenated vehicle and thiophenol from the final reaction mixture leaving said concentrate as residue.

3,373,109

CRYSTALLINE ALUMINOSILICATE CATALYST

Vincent J. Frilette, Cherry Hill Township, Camden County, N.J., and Russell W. Maatman, Sioux Center, Iowa, assignors to Mobil Oil Corporation, a corporation of New York

No Drawing. Continuation-in-part of application Ser. No. 774,124, Nov. 17, 1958. This application Oct. 29, 1963, Ser. No. 319,639
8 Claims. (Cl. 252—455)

1. A catalyst consisting essentially of a crystalline aluminosilicate characterized by rigid three-dimensional networks and uniform pores not in excess of about 6 angstroms in diameter and containing therein a minor amount of a metal, ions of said metal, or mixtures thereof, said metal being one capable of forming a Werner complex of the formula

$$[(M^n)a_xb_yc_zd_w]^m$$

wherein

M is the metal,

n is the valence state of the metal and is an integer from $+1$ to $+6$,

a, b, c, and d are coordinated groups,

x, y, z, and w are integers from zero to 8, the sum of x, y, z, and w being not in excess of 8, and

m is the electrostatic charge of the complex,

said aluminosilicate having resulted from the growth of crystals of said aluminosilicate from an aqueous medium containing a water-soluble compound of said metal.

3,373,110

PROCESS FOR THE PREPARATION OF PLATINUM METAL CONTAINING ALUMINOSILICATES

Nai Yuen Chen, Cherry Hill, N.J., assignor to Mobil Oil Corporation, a corporation of New York

No Drawing. Continuation-in-part of application Ser. No. 235,135, Nov. 2, 1962. This application Apr. 14, 1966, Ser. No. 542,455
9 Claims. (Cl. 252—455)

The invention relates to a method for preparing crystalline aluminosilicates which contain a metal of the platinum series. The invention is directed to preparing crystalline aluminosilicates by incorporating a platinum type metal in the forming or precursor solutions used

for preparing crystalline aluminosilicates, followed by crystallization, washing, drying and calcining to obtain a crystalline aluminosilicate which contains a metal of the platinum series.

3,373,111

REACTION PRODUCTS OF AN ORGANIC EPOXIDE AND AN ACYLATED POLYAMINE

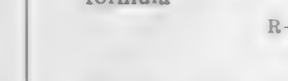
William M. Le Suer, Cleveland, and Clark O. Miller, Willoughby, Ohio, assignors to The Lubrizol Corporation, Wickliffe, Ohio, a corporation of Ohio

No Drawing. Filed Oct. 14, 1963, Ser. No. 321,385

19 Claims. (Cl. 252—51.5)

1. Oil-soluble nitrogen-containing compositions prepared by reacting an acylated amine with at least 0.2 equivalent of an organic epoxide at a temperature within the range from about 50° C. to the decomposition temperature, said acylated amine being prepared by reacting at a temperature above about 80° C., an alkylene amine with from about 0.2 to 2 equivalents, per equivalent of alkylene amine, of an acid-producing compound selected from the class consisting of

(A) substituted succinic acids having the structural formula



wherein R is a hydrocarbon radical having at least about 50 aliphatic carbon atoms,

(B) monocarboxylic acids having the structural formula

R'COOH

wherein R' is a branched-chain, hydrocarbon radical having from about 12 to about 50 aliphatic carbon atoms in the principal chain and at least 1 aliphatic substituted aryl pendant group,

(C) mixtures of succinic acids of (A) and monocarboxylic acids selected from the class consisting of the monocarboxylic acids of (B) and aliphatic monocarboxylic acids having from about 12 to about 50 carbon atoms, and

(D) the esters of alcohols boiling below about 120° C. and phenol.

3,373,112

TRIS(HYDROCARBYL ALKYLENE POLYAMINES) AS LUBRICATING OIL DETERGENTS

Robert Gordon Anderson, Novato, and Yngve G. Hendrickson, El Cerrito, Calif., assignors to Chevron Research Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Filed May 18, 1966, Ser. No. 550,897

10 Claims. (Cl. 252—51.5)

Tris(aliphatic hydrocarbon substituted alkylene polyamines) bonded to a central nucleus, finding use as lubricating oil detergents.

3,373,113

PROCESS FOR ETCHING COPPER PRINTED CIRCUITS

Karl Achenbach, Frankfurt am Main, Germany, assignor to FMC Corporation, New York, N.Y., a corporation of Delaware

No Drawing. Filed Aug. 18, 1965, Ser. No. 480,750

Claims priority, application Germany, Aug. 22, 1964, D 45,263

5 Claims. (Cl. 252—79.2)

Process for etching printed copper circuits in which an aqueous solution of a mineral acid such as H_2SO_4 or HNO_3 containing H_2O_2 as activator and H_3PO_4 as stabilizer for the H_2O_2 is employed as the etching liquid.

3,373,114

DRY COMPOSITIONS FOR DEOXIDIZING AND DESMUTTING ALUMINUM AND ALUMINUM ALLOYS

John J. Grunwald, New Haven, Conn., assignor to MacDermid Incorporated, Waterbury, Conn., a corporation of Connecticut

No Drawing. Continuation-in-part of application Ser. No. 313,785, Oct. 4, 1963. This application Jan. 3, 1967. Ser. No. 606,575

4 Claims. (Cl. 252—136)

1. A dry composition for desmutting aluminum and aluminum alloys, which consists essentially of an admixture of dry salts selected from the group consisting of sodium, potassium, and ammonium persulfate, and a soluble acid salt of an acid selected from the group consisting of the sodium, potassium and ammonium acid salts of sulfuric acid, said acid salt of sulfuric acid and said persulfate salt being present, on a mol equivalent basis, in ratios of from 1:1 to 10:1.

3,373,115

CLEANING SOLUTION FOR PRINTING PLATES

Hartmut Steppan, Wiesbaden-Dotzheim, Germany, assignor, by mesne assignments, to Azoplate Corporation, Murray Hill, N.J.

No Drawing. Filed Oct. 1, 1964, Ser. No. 400,943

Claims priority, application Germany, Oct. 14, 1963, K 50,998

2 Claims. (Cl. 252—153)

1. A process for removing undesired tone from the non-image areas of a negative-working planographic printing plate which comprises treating the plate with a solution consisting essentially of effective amounts of an organic solvent capable of dissolving lacquers and greasy ink, and a compound selected from the group consisting of hydrochloric acid, hydrobromic acid, and salts of such acids with a base selected from the group consisting of ammonia, hydroxylamine, hydrazine, and aromatic amines and carboxylic acid amides having a dissociation constant less than 10^{-3} at 25° C., the compound being present in the solution in a quantity of 0.01 to 10 equivalents per liter of total solution.

3,373,116

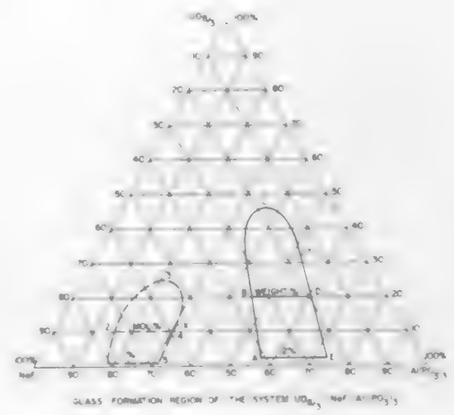
RADIOACTIVE FLUOPHOSPHATE GLASS COMPOSITION

Kuan-Han Sun, Pittsburgh, Pa., Ching-Tang Chen-Tsai, Hsin-Chu, Taiwan, China, and Yueh Shan, Bloomington, Ind., assignors to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania

Filed Mar. 15, 1965, Ser. No. 439,536

19 Claims. (Cl. 252—301.1)

1. A stable fluophosphate glass melting above about 800° C. consisting essentially of by weight from 34 to 75% of at least one phosphate of a metal of the group consisting of aluminum and beryllium; 15 to 43% of at least one fluoride or oxide selected from the group consisting of a univalent metal fluoride, a bivalent metal oxide, and boron oxide; and 2 to 46% of at least one compound selected from the group consisting of uranium oxide, uranium fluoride, plutonium oxide, plutonium fluoride, thorium oxide and thorium fluoride, with the proviso



that there be present a fluoride selected from either of the two last groups.

3,373,117

LUBRICANTS CONTAINING CHLOROANILINE-PHOSPHATE SALTS

Earl Eugene Sommers, Graylyn Crest, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing Filed Dec. 17, 1965, Ser. No. 514,711

3 Claims. (Cl. 252—32.5)

Salts of aromatic chloroamines and C_8–C_{10} alkyl acid phosphates as extreme pressure additives for conventional lubricating oils and "break-in" lubricating oils.

3,373,118

SHIELDING COMPOSITION OF ANHYDROUS NAPHTHENIC AND 2-ETHYL-HEXANOIC ACID SALTS OF CADMIUM, GADOLINIUM, AND SAMARIUM IN PARAFFIN AND METHOD OF SHIELDING

Anthony R. Ronzio, Littleton, Colo., assignor to Morco Oil Corporation, Denver, Colo., a corporation of Nevada

Filed Sept. 22, 1965, Ser. No. 493,304

4 Claims. (Cl. 252—478)

1. A composition for shielding components from neutron irradiation which comprises a wax-soluble organic salt of an element having a high neutron capture cross section, in solid solution in wax or a mixutre of waxes, said element being selected from the group consisting of anhydrous cadmium 2-ethyl-hexanoate, anhydrous gadolinium 2-ethyl-hexanoate and anhydrous samarium 2-ethyl hexanoate.

3,373,119

TERNARY METALLIC OXIDE AGGLOMERATE AND METHOD OF PREPARATION

Casimir W. Krystyniak, Schenectady, N.Y., assignor to General Electric Company, a corporation of New York

Filed Dec. 1, 1965, Ser. No. 510,886

2 Claims. (Cl. 252—517)

1. In a powder mass consisting of discrete particles of metal oxide composition for the preparation of a high temperature fuel cell component, said fuel cell component exhibiting both ionic and electronic conductivity and comprising a first material selected from the group consisting of zirconia and thoria with said first material being stabilized with one or more oxides selected from the group consisting of calcium oxide, yttrium oxide, ytterbium oxide and a mixture of rare earth oxides, and a second material selected from the group consisting of iron oxide, cobalt oxide, nickel oxide, titanium oxide, zinc oxide, titanium oxide-iron oxide, zinc oxide-iron oxide and zinc oxide-lead oxide, the improvement comprising the discrete particles each being substantially spherically-shaped agglomerates substantially uniform in composition with respect to the requisite component metal oxides.

2. In the preparation of a powder mass consisting of discrete particles of metal oxide composition for the preparation of a high temperature fuel cell component, said fuel cell component exhibiting both ionic and electronic conductivity and comprising a first material selected from the group consisting of zirconia and thoria with said first material being stabilized with one or more oxides selected from the group consisting of calcium oxide, yttrium oxide, ytterbium oxide, and a mixture of rare earth oxides, and a second material selected from the group consisting of iron oxide, cobalt oxide, nickel oxide, titanium oxide, zinc oxide, titanium oxide-iron oxide, zinc oxide-iron oxide and zinc oxide-lead oxide, the improvement comprising the steps of

(a) preparing a slurry containing the requisite finely-divided component metal oxides in the desired proportions in a liquid comprising one or more of the group consisting of water and alcohol,

(b) spray drying said slurry, and

(c) collecting the mass of discrete particles of agglomerated metal oxides produced therefrom, said particles being substantially uniform in composition and substantially spherical in configuration.

3,373,120

SEMICONDUCTIVE CERAMIC COMPOSITIONS WITH POSITIVE TEMPERATURE, COEFFICIENT OF RESISTANCE

Tsuneharu Nitta, Osaka-fu, Hiromitsu Taki, Sakai-shi, Osaka-fu, and Yoshihiro Matsuo, Suita-shi, Osaka-fu, Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Filed Dec. 2, 1965, Ser. No. 511,185

3 Claims. (Cl. 252—520)

A ceramic composition for semiconductive materials with a positive temperature coefficient of electrical resistance consists of (a) 95.5 to 99.85% by weight of barium titanate composed of 46 to 51 mole percent of barium oxide and 49 to 54 mole percent of titanium oxide and (b) 0.15 to 4.5% by weight of an additive combination of aluminum oxide and silicon oxide, the molar ratio of aluminum oxide to silicon oxide in said combination ranging from 0.1 to 1.00 to 9.0 to 1.00. From 0.1 to 30 atomic percent of barium and/or of titanium can be replaced by an equivalent amount of lead oxide or strontium oxide.

3,373,121

POLYEPOXIDE FOAM

Billy E. Burgert and William G. Moore, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

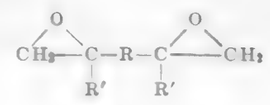
No Drawing. Filed Feb. 12, 1962, Ser. No. 172,799

10 Claims. (Cl. 260—2.5)

1. A cellular resinous solid foam consisting of the reaction product of:

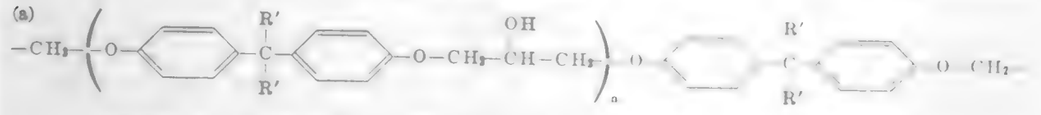
component (A) a diglycidyl compound selected from the class consisting of:

(I)



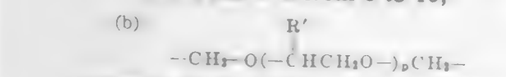
wherein R′ is a substituent selected from the class consisting of H, CH_3, and C_2H_5 and R is selected from the class having the formula:

(a)



wherein R′ has the same significance as in (1) above and *n* is from 0 to 10;

(b)



wherein R′ has the same significance as in (1) above and *p* is from 1 to 15;

(2) a mixture of the diglycidyl compounds of (a) and (b), and

component (B) a polyfunctional alcohol selected from the class consisting of (1) polyoxyalkylene glycols, having an average molecular weight of between about 1,000 and about 2,500, (2) reaction products of propylene oxide and glycerol having an average molecular weight of between about 2,000 and about 3,500, and (3) mixtures of the polyoxyalkylene glycols of (1) or the reaction product of (2) or of both (1) and (2) with glycerol in a weight proportion of between about 99 and 90 percent of the polyfunctional alcohol, selected from (1) and (2), and mixtures of both (1) and (2), and between about 1 and about 10 percent of the glycerol to provide a molar ratio of oxirane groups comprising component (A) to hydroxyl groups comprising component (B) of between 1 5 and 3;

(C) a Friedel-Crafts catalyst to effectuate cross-linking of components A and B;

(D) a blowing agent selected from the class consisting of substantially chemically inert gases and inert liquids and solids which yield a substantially chemically inert expanding gas in controlled amounts when dispersed in the reaction mixture upon the application of heat, in an amount sufficient to produce a foamed product of desired density.

3,373,122

FOAMED POLYURETHANES

Maurice Richard Porter, Sully, Glamorgan, and Basil Longden, Barry, Glamorgan, Wales, assignors to Midland Silicones Limited, London, England

No Drawing. Filed Jan. 27, 1964, Ser. No. 340,537
Claims priority, application Great Britain, Jan. 29, 1963, 3,548/63
7 Claims. (Cl. 260—2.5)

1. A composition for use in the production of foamed polyurethanes based on reaction products of a polyhydric polyether and a compound selected from the group consisting of polyisocyanates and polyisothiocyanates consisting essentially of a mixture of (a) copolymer selected from the group consisting of polysiloxane-polyoxyalkylene copolymers and polysiloxane-polyalkyleneoxy copolymers and (b) 0.1 to 10.0% by weight based on the weight of copolymer (a) of an additive which is an anhydride of an aliphatic carboxylic acid and contains from 1–20 carbon atoms.

6. A process for the preparation of foamed polyurethanes which comprises reacting a polyhydric polyether, a compound selected from the group consisting of polyisocyanates and polyisothiocyanates, copolymer selected from the group consisting of polysiloxane-polyoxyalkylene copolymers and polysiloxane-polyalkyleneoxy copolymers and a foaming agent in the presence of a catalyst and 0.1 to 10.0% by weight based on the weight of copolymer (a) of an additive selected from the group consisting of aliphatic carboxylic acids and anhydrides thereof, and thereafter allowing the mixture to foam.

3,373,123

COMPOSITION OF MATTER AND GOLF BALL MADE THEREFROM

George H. Brice, Glen Rock, N.J., assignor to Uniroyal, Inc., a corporation of New Jersey

No Drawing. Filed Oct. 11, 1965, Ser. No. 494,902
9 Claims. (Cl. 260—2.5)

The invention is a composition of matter comprising a blend of hard crystalline polytetrahydrofuran and an elastomer such as cis-polybutadiene, styrene-butadiene copolymer, or natural rubber. The invention is also a molded golf ball or golf core comprising a vulcanized blend of aforesaid components, optionally with added filler.

3,373,124

PHENOLIC RESIN ADHESIVE EXTENDED WITH PARTIALLY CARBONIZED CELLULOSIC MATERIAL

Fred Bryner, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporaton of Delaware

No Drawing. Continuation-in-part of application Ser. No. 213,901, Aug. 1, 1962. This application July 18, 1966, Ser. No. 565,744
16 Claims. (Cl. 260—17.2)

Highly extended, phenolic-resin based adhesives for wood products are prepared comprising, a material proportion up to about 1 part by weight of a finely divided, partially carbonized cellulosic material. The useful materials are obtained by heating cellulose at an elevated temperature until it undergoes a weight loss of about 10 to 35 weight percent. In addition, the adhesive composition contains a water-swellable extender, a basic catalyst for initiating the thermosetting reaction of the resin and sufficient water to adjust the total glue solids within the range from about 35 to about 65 weight percent of the total composition.

3,373,125

PROCESS OF PRODUCING ACRYLONITRILE-NEVER DRIED CUPRAMMONIUM CELLULOSE RAYON YARN GRAFT POLYMERS

Robert L. McClure, Elizabethton, Tenn., assignor to Beaunit Corporation, New York, N.Y., a corporation of New York

No Drawing. Filed Oct. 1, 1962, Ser. No. 227,558
4 Claims. (Cl. 260—17.4)

1. The process of producing graft polymers which comprises reacting monomeric acrylonitrile dissolved in an aqueous medium at a pH not greater than 3.5 in the presence of a ceric salt with a freshly formed, never dried cuprammonium cellulose rayon yarn, said ceric salt being soluble in at least one component of said aqueous medium.

3,373,126

STARCH COMPOSITION CONTAINING HYDROPHOBIC POLYTETRAFLUOROETHYLENE PARTICLES

David Lehrman, Cheltenham, Pa., and Joseph J. Shay, Wilmington, Del., assignors to The Ironees Company, Philadelphia, Pa., a corporation of Pennsylvania

No Drawing. Filed Sept. 20, 1965, Ser. No. 488,806
3 Claims. (Cl. 260—17.4)

1. A liquid laundry starch composition having superior anti-sticking pressing properties comprising an aqueous mixture of 2 to 25 weight percent of starch and from ½ to 6 percent by weight based on the starch of tetrafluoroethylene resin in the form of a hydrophobic negatively charged colloidal dispersion of particles having a diameter of between 0.05 and 0.5 micron.

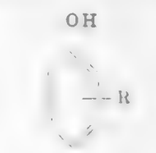
3,373,127

WAX EMULSION SYSTEMS

Claude Thomas Bean, Jr., Niagara Falls, and Donald H. Thorpe, Williamsville, N.Y., assignors to Hooker Chemical Corporation, Niagara Falls, N.Y., a corporation of New York

No Drawing. Continuation-in-part of application Ser. No. 143,543, Oct. 9, 1961. This application June 30, 1966, Ser. No. 561,688
10 Claims. (Cl. 260—28)

1. A wax emulsion polishing composition comprising a wax component and an ammonia-soluble resin in a weight ratio of between about 1:15 and 15:1, said ammonia-soluble resin comprising a thermoplastic ester derivative prepared by the process comprising the steps of (A) reacting together (1) a fusible, organic solvent soluble condensation product of a phenol and an aldehyde containing condensate units having reactive phenolic hydroxyl groups, said phenol being defined by the formula:



where R may be H, F, Cl, Br or a suitable substituent selected from (a) alkyl groups of 1 to 18 carbon atoms, (b) alicyclic groups of 5 to 18 carbon atoms, (c) aromatic or aralkyl groups of 6 to 18 carbon atoms, (d) alkyl, alicyclic, aryl and aralkyl ketones wherein the respective hydrocarbon is defined as in (a), (b), and (c), (e) alkyl, alicyclic, aryl and aralkyl carboxylic groups wherein the respective hydrocarbon is defined as in (a), (b) and (c), and (f) mixtures thereof wherein when the phenol is a mixture of phenol itself and an above-defined substituted phenol the mole ratio of substituted phenol groups to phenol groups is between zero to one and about 0.75 to one, and (2) a substance reactive with the phenolic hydroxyl groups selected from the group consisting of monooxirane ring compounds, alkylene halohydrins, alkylene carbonates, and mixtures thereof, in a proportion in the range of about one to about three moles of said substance per phenolic hyroxyl group of said condensation product, to produce a hydroxy ether derivative containing substantially no free reactive phenolic hydroxyl groups, and (B) esterifying the hydroxy ether derivative by reacting it together with between about 0.8 and about one mole per hydroxyl equivalent of a substance selected from the group consisting of polycarboxylic acids, polycarboxylic acid anhydrides, polycarboxylic acid halides and mixtures thereof to produce a thermoplastic ester derivative which has an acid number above at least about 100.

3,373,128

STABLE GELLED DISPERSIONS OF HYDROXYL TERMINATED URETHANE POLYMERS

George S. Wooster, Hamburg, N.Y., assignor to Allied Chemical Corporation, New York, N.Y., a corporation of New York

No Drawing. Filed Feb. 12, 1964, Ser. No. 344,256
3 Claims. (Cl. 260—29.1)

Production of stable hydroxyl terminated urethane polymer gel dispersions having a viscosity within the range of D to H on the Gardner-Holdt scale at 20–25% non-volatiles and a hydroxyl number of within the range of 30–40, adapted for use in the produc ion of non-penetrating urethane coatings by blending (1) a low viscosity hydroxyl terminated urethane polymer gel dispersed in a solvent free of active hydrogen containing groups, said viscosity being less than D on the Gardner scale at 20–25% non-volatiles, said hydroxyl terminated urethane polymer having a hydroxyl number in the range of 30 to 40 (2) a high viscosity hydroxyl terminated urethane polymer gel dispersed in a solvent free of active hydrogen containing groups as determined by the Zerewitinoff method, said viscosity being greater than H on the Gardner scale at 20–25% non-volatiles.

3,373,129

METHOD FOR THE PRODUCTION OF FORMABLE RESIN MATERIALS OF INCREASED VISCOSITY

Shoichiro Kori, 2147 Higashiterao, Tsurumi-ku; Yasuo Sagane, 62 Kuritaya, Kanagawa-ku; and Keitaro Inoue, 2441 Kawashima-cho Hodogaya-ku, all of Yokohama, Japan

No Drawing. Continuation-in-part of application Ser. No. 420,120, Dec. 21, 1964. This application June 9, 1967, Ser. No. 644,794
Claims priority, application Japan, Dec. 25, 1963, 38/69,464; May 26, 1964, 39/29,395
7 Claims. (Cl. 260—29.6)

Unsaturated polyester resin is mixed with an aluminum alkoxide compound capable of increasing the viscosity of said resin and a free water-supplying material. The free water content of the resulting mixture is maintained during the mixture below 0.75 mol per mol of said aluminum alkoxide compound, and when heated, the mixture releases free water from said free water-supplying material to raise a total free water content of the mixture to the order between above 0.75 to about 4.0 mol per mol of said aluminum alkoxide compound, thereby the viscosity of the mixture being increased and controlled appropriately.

3,373,130

VINYL CHLORIDE POLYMER INSULATION COMPOSITIONS CONTAINING ORTHO-HYDROXYBENZALDEHYDE

George F. Hardy, Madison, N.J., assignor to Allied Chemical Corporation, New York, N.Y., a corporation of New York

No Drawing. Filed Feb. 8, 1965, Ser. No. 431,151
1 Claim. (Cl. 260—31.8)

1. A plasticized vinyl chloride polymer resin composition having improved volume resistivity comprising a vinyl chloride polymer of the class consisting of vinyl chloride homopolymers and polymers containing predominant portions of vinyl chloride with minor proportions of other ethylenically unsaturated compounds, from about 15 to about 40% of organic ester plasticizer based on weight of the composition, and from about 0.001 to 0.5% of ortho-hydroxybenzaldehyde, based on weight of the composition.

3,373,131

EPOXY RESIN COMPOSITIONS AND NOVEL INKS CONTAINING THE SAME

Richard Bolstad, Bronx, N.Y., and Michael J. Tinghitella, Wayne, and Rupert J. Schefbauer, Hasbrouck Heights, N.J., assignors to Interchemical Corporation, New York, N.Y., a corporation of Ohio

No Drawing. Filed Nov. 30, 1965, Ser. No. 510,691
14 Claims. (Cl. 260—31.8)

1. A composition comprising (1) an epoxy resin produced by the reaction of p,p′-dihydroxy diphenyl dimethyl methane and epichlorohydrin and containing a plurality of 1,2-epoxide groups and (2) a dialkyl terephthalate wherein the alkyl group has from 1 to 3 carbons.

3,373,132
PROCESS FOR THE PRODUCTION OF ELASTOMERIC DIENE POLYMERS WITH IMPROVED PROPERTIES

Hubert Sutter, Cologne-Flittard, Karl Nutzel and Kurt Vohwinkel, Cologne-Stammheim, and Friederich Haas, Cologne-Buchheim, Germany, assignors to Farbenfabriken Bayer Aktiengesellschaft, Leverkusen, Germany, a corporation of Germany

No Drawing. Filed Aug. 5, 1965, Ser. No. 477,587
Claims priority, application Germany, May 26, 1965, F 46,163
3 Claims. (Cl. 260—33.6)

Vulcanizable oil-extended diene polymers are produced by treating diene polymers with sulfur chlorides and extending the treated polymers with extender oils.

3,373,133
ANTICORROSIVE COMPOSITIONS

Georg Stern and Felix Munk, Haifa, and Simha Harel, Motzkin, Israel, assignors to Chemicals and Phosphate, Ltd., Haifa Bay, Israel, a company of Israel

No Drawing. Filed July 31, 1964, Ser. No. 386,739
Claims priority, application Israel, Aug. 6, 1963, 19,742
3 Claims. (Cl. 260—37)

1. Protective paint compositions comprising 10–55% by weight of a potassium-chromium-fluoride pigment of the formula

$$(KF)_a(HF)_bCrF_3[Cr(OH)_3]_c(H_2O)_d$$

wherein a is a number of 1.5 to 3, b is a number from 0 to 1, c is a number of 0 to 1, d is a number from 0 to 3, 14–35% by weight of binder solids selected from the group consisting of alkyd resins, phenolic resin varnishes, epoxy resins, chlorinated rubber, and polyvinyl copolymers the balance comprising conventional filters, other pigments, solvents and dryers.

3,373,134
COMPOSITIONS OF CALCIUM CARBONATE, PROCESS FOR THE PRODUCTION AND USES OF THE SAME

Eizo Yasui, Shichiro Shoda, Hiroshi Suzuki, and Hiroshi Yamada, Nagoya-shi, Japan, assignors to Toa Gosei Kagaku Kogyo Kabushiki Kaisha, Tokyo, Japan, a corporation of Japan

Filed Aug. 13, 1964, Ser. No. 389,453
Claims priority, application Japan, Oct. 18, 1963, 38/54,917; May 7, 1964, 39/25,527
6 Claims. (Cl. 260—41.5)

Calcium carbonate crystals of the vaterite and aragonite type containing silicic acid for use as a reinforcing filler in a vulcanization composition, and a process for the preparation thereof.

3,373,135
SHAPED ARTICLES OF SELF-EXTINGUISHING EPOXY RESINS

Herbert Jenkner, Cologne-Deutz, and Hans Eberhard Praetzel, Bensberg-Frankenforst, Germany, assignors to Chemische Fabrik Kalk G.m.b.H., Cologne-Kalk, Germany

No Drawing. Filed Dec. 1, 1965, Ser. No. 510,959
Claims priority, application Germany, Dec. 1, 1964, C 34,507
3 Claims. (Cl. 260—45.7)

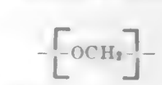
Self-extinguishing cured epoxy resin molding compositions containing about 0.1 to 20% of halogen bound directly to a carbon atom in an organic compound and an effective amount of red phosphorus to render said compositions self-extinguishing.

3,373,136
3,5-DIOXABICYCLO(5.4.0) UNDECANE AND COPOLYMERS THEREOF

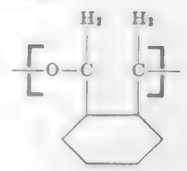
Thomas H. Wicker, Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N.Y., a corporation of New Jersey

No Drawing. Filed Feb. 11, 1964, Ser. No. 343,964
11 Claims. (Cl. 260—45.9)

1. A copolymer consisting essentially of the units of the formula



and units of the formula



3,373,137
NITROGEN-CONTAINING ORGANOSILICON COMPOUNDS AND THEIR PREPARATION

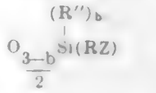
John C. Saam, Midland, Mich., assignor to Dow Corning Corporation, Midland, Mich., a corporation of Michigan

No Drawing. Continuation-in-part of application Ser. No. 195,970, May 18, 1962. This application Jan. 4, 1963, Ser. No. 249,314
31 Claims. (Cl. 260—46.5)

1. A nitrogen-containing compound of the general formula

wherein R′ is a monovalent hydrocarbon radical containing no aliphatic unsaturation, R″ is a monovalent saturated hydrocarbon radical, R is a divalent saturated aliphatic hydrocarbon radical containing at least two carbon atoms, there being at least two carbon atoms between the silicon atom and the carbon atom which is bonded to nitrogen, X is a halogen atom selected from the group consisting of chlorine, bromine and iodine atoms and b is an integer of less than 4.

9. A nitrogen-containing siloxane copolymer consisting essentially of (I) at least one unit of the formula



wherein R″ is a monovalent saturated hydrocarbon radical, R is a divalent saturated aliphatic hydrocarbon radical containing at least 2 carbon atoms, there being at least two carbon atoms between the Z radical and the silicon atom, Z is selected from the group consisting of

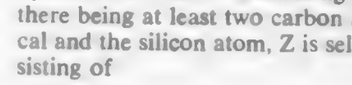
and

radicals, wherein Y is selected from the group consisting of hydrogen atoms and monovalent saturated hydrocarbon radicals and b has an average value of less than 3, and (II) units of the formula

wherein R‴ is selected from the group consisting of monovalent hydrocarbon and monovalent halogenated hydrocarbon radicals and x has an average value of from 1 to 3 inclusive.

11. A nitrogen-containing compound of the general formula

wherein R′ is a monovalent hydrocarbon radical containing no aliphatic unsaturation, R″ is a monovalent saturated hydrocarbon radical, R is a divalent saturated aliphatic hydrocarbon radical containing at least two carbon atoms, there being at least two carbon atoms between the Z radical and the silicon atom, Z is selected from the group consisting of



and

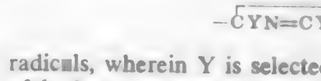
radicals, wherein Y is selected from the group consisting of hydrogen atoms and monovalent saturated hydrocarbon radicals, Q is selected from the group consisting of halogen atoms and

radicals wherein M is selected from the group consisting of alkyl and phenyl radicals and b is an integer of less than 4.

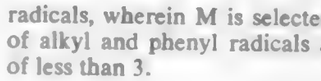
13. A nitrogen-containing siloxane of the unit formula

wherein R″ is a monovalent saturated hydrocarbon radical, R is a divalent saturated aliphatic hydrocarbon radical containing at least 2 carbon atoms, there being at least 2 carbon atoms between the Z radical and the silicon atom, Z is selected from the group consisting of

and



radicals, wherein Y is selected from the group consisting of hydrogen atoms and monovalent saturated hydrocarbon radicals, Q is selected from the group consisting of halogen atoms and



radicals, wherein M is selected from the group consisting of alkyl and phenyl radicals and b has an average value of less than 3.

3,373,138
PROCESS FOR MAKING SILOXANE POLYMERS FROM SILANES

Eric D. Brown, Midland, Mich., assignor to Dow Corning Corporation, Midland, Mich., a corporation of Michigan

No Drawing. Continuation-in-part of application Ser. No. 341,095, Jan. 29, 1964. This application Dec. 30, 1965, Ser. No. 517,793
4 Claims. (Cl. 260—46.5)

The process of hydrolyzing with vigorous agitation at least one organohalosilane in an aqueous solution in the absence of solvents for the siloxance products and the subsequent aging thereof.

3,373,139
POLYURETHANES PREPARED FROM 4,4′-(HEXAFLUOROISOPROPYLIDENE)DIPHENOL AND DIAMINES

Paul Winthrop Morgan, West Chester, Pa., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Filed Dec. 30, 1964, Ser. No. 422,436
7 Claims. (Cl. 260—47)

High melting polyurethanes suitable for use in the manufacture of fibers for wash-wear fabrics are prepared from selected bisphenols and diamines.

3,373,140
THERMOPLASTIC EPOXY RESIN PHOTOCONDUCTORS

Siegfried Aftergut, Schenectady, N.Y., assignor to General Electric Company, a corporation of New York

No Drawing. Filed Sept. 24, 1964, Ser. No. 399,085
7 Claims. (Cl. 260—47)

A process is disclosed whereby high molecular weight epoxy resins are reacted in dilute solutions with compounds having phenol and amine groups which are reactive with the epoxy groups to produce reaction products which are substantially free of cross-linking and hence are thermoplastic and soluble. These products are also photoconductive and useful in electrophotographic processes.

3,373,141
PHOTOCONDUCTIVE COPOLYMERS OF STYRENE AND ACROLEIN DERIVATIZED WITH ARYL AMINES

Siegfried Aftergut, Schenectady, N.Y., assignor to General Electric Company, a corporation of New York

No Drawing. Filed Oct. 8, 1964, Ser. No. 401,635
8 Claims. (Cl. 260—52)

A copolymerized styrene-acrolein resin is reacted with an aromatic amine or hydrazine to give a photoconductive material.

3,373,142
PREPARATION OF FORMALDEHYDE-DICHLOROACETALDEHYDE COPOLYMERS WITH ALKYLAMINE CATALYST

Kornel D. Kiss, University Heights, and Irving Rosen, Painesville, Ohio, assignors to Diamond Shamrock Corporation, a corporation of Delaware

No Drawing. Filed Oct. 5, 1964, Ser. No. 401,723
3 Claims. (Cl. 260—67)

The present invention relates to the preparation of thermoplastic copolymers possessing flame-resistant properties, by reacting a major amount of formaldehyde and a minor amount of dichloroacetaldehyde under substantially anhydrous conditions and in the presence of between 0.001 to about 25 millimols per mol of formaldehyde, of either triethylamine, dipropylamine or tributylamine as the polymerization catalyst.

3,373,143
MANUFACTURE OF POLYURETHANE SOLUTIONS

Kenneth William Chilvers, Gordon Trappe, and Gerald Patrick Crowley, Manchester, England, assignors to Imperial Chemical Industries Limited, London, England, a corporation of Great Britain

No Drawing. Filed May 24, 1963, Ser. No. 282,875
Claims priority, application Great Britain, May 30, 1962, 20,856/62
5 Claims. (Cl. 260—75)

A process for obtaining solutions of polyurethanes in organic solvents, suitable for preparing elastomeric films, coatings, and adhesives, by interaction in an inert solvent of a hydroxyl-terminated compound and excess diisocyanate in presence of a controlled small quantity

of water, and thereafter adding isocyanate reactive compounds to remove residual free isocyanate groups.

3,373,144

PROCESS FOR THE PREPARATION OF ISOMERIZED UNSATURATED POLYESTERS

Harald Janssen, Witten-Heven, and Helmut Wulff, Witten-Annen, Germany, assignors to Chemische Werke Witten G.m.b.H., Witten (Ruhr), Germany

No Drawing. Filed May 13, 1964, Ser. No. 367,218

Claims priority, application Germany, May 18, 1963, C 29,973

14 Claims. (Cl. 260—75)

A method for isomerizing maleic acid and esterifiable derivatives thereof and preparing unsaturated polyester resins of fumaric acid comprising polycondensing maleic acid or esterifiable derivatives thereof with a polyhydric alcohol in the presence of an effective catalytic quantity of a cyclic secondary amine, to effect a cis-trans isomerization of the maleic acid or esterifiable derivative thereof to fumaric acid and to shorten the esterification time of the fumaric acid and polyhydric alcohol.

3,373,145

WASHING OF POLYMER PARTICULATES BY REGULAR PERIODIC EBB AND FLOW OF AQUEOUS SOLVENT

John W. Wagner, Petersburg, Va., assignor to Allied Chemical Corporation, New York, N.Y., a corporation of New York

Filed Apr. 29, 1965, Ser. No. 451,886

9 Claims. (Cl. 260—78)

This invention reduces the volume of aqueous solvent required for continuous washing of impurities from particles of organic polymer. The aqueous solvent is supplied in countercurrent flow in contact with the particles in an extraction vessel, and an independent ebb and flow of solvent in the extraction vessel is simultaneously created by introducing an increment of solvent into the incoming solvent stream and periodically withdrawing the increment of solvent from the extraction vessel.

3,373,146

MERCAPTAN TERMINATED POLYMERS

Glen E. Meyer, Kent, Arthur H. Weinstein, Hudson, Albert J. Costanza, Akron, and Richard J. Coleman, Uniontown, Ohio, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

No Drawing. Continuation-in-part of application Ser. No. 329,231, Dec. 9, 1963. This application Nov. 25, 1966, Ser. No. 596,751

6 Claims. (Cl. 260—79.7)

1. A composition of matter capable of reacting with lead dioxide to yield a cured product which has a solubility at 75° F. in benzene of less than 30 percent by weight and having the structure of $HSM_p(S_xH_0)_kSH$, where M is a monomer unit derived from a conjugated diene having from 4 to about 8 carbon atoms and a mono-alpha-olefin having from 2 to about 20 carbon atoms with the priviso that some of the M units are always derived from the conjugated diene and the M units derived from the mono-alpha-olefin may be zero; p, q and k are integers having values of at least 1 to values less than those where the sum of p, q and k give the composition a molecular weight of about 10,000; and x is an integer having values of 0 to 8 with the priviso that at least some of the x units must be at least 1.

3,373,147

POLYMERIZATION OF ACRYLONITRILE IN DIMETHYL SULFOXIDE SOLVENT USING AZO CATALYST AND HYDROXYLAMINE SALT COLOR INHIBITOR

Zenzi Izumi and Hideji Kitagawa, Masaki-machi, Japan, assignors to Toyo Rayon Kabushiki Kaisha, Tokyo, Japan, a corporation of Japan

Filed Oct. 15, 1964, Ser. No. 404,057

Claims priority, application Japan, Oct. 21, 1963, 38/55,875

6 Claims. (Cl. 260—85.5)

A process for that solution polymerization of acrylonitrile using dimethyl sulphoxide as the solvent and an azobis compound as the catalyst, the improvement comprises effecting the polymerization reaction in the presence of at least one hydroxylamine salt, also included within the scope of the invention is the combination of sulfuric acid with the hydroxylamine salt; as a result of the incorporation of at least one hydroxylamine salt alone or in combination with sulfuric acid in the reaction mixture, a remarkable coloration-inhibiting effect is provided. The solution polymerization product obtained in accordance with the process can be used as a spinning solution, from which spinning solution may be manufactured acrylic fibers having an excellent degree of whiteness.

3,373,148

POLYMERIZATION OF ETHYLENE

Edwin J. Mackie and Gordon H. Lovett, Texas City, Tex., assignors to Monsanto Company, St. Louis, Mo., a corporation of Delaware

Continuation-in-part of application Ser. No. 179,292, Mar. 16, 1962, which is a continuation-in-part of application Ser. No. 125,655, July 21, 1961. This application July 1, 1965, Ser. No. 472,394

17 Claims. (Cl. 260—87.3)

2. In a process for the manufacture of ethylene polymers in an elongated polymerization zone into which ethylene-containing monomer and free-radical initiator are introduced at elevated pressures in the range from 5,000 to 60,000 p.s.i. to establish flow through said elongated polymerization zone and elevated temperatures continuously increasing from the inlet of said elongated polymerization zone to form a polymerization mixture containing polymer and unpolymerized monomer, the improvement comprising withdrawing said polymerization mixture from said elongated polymerization zone at at least one point where the temperature is above the polymerization initiation temperature and introducing said withdrawn polymerization mixture into said elongated polymerization zone at at leasst one point upstream where said withdrawn polymerization mixture is subjected to further polymerization.

6. The process of claim 2 wherein said ethylene-containing monomer is ethylene and a comonomer selected from the group consisting of an olefin having not more than 8 carbon atoms per molecule and a vinyl ester.

3,373,149

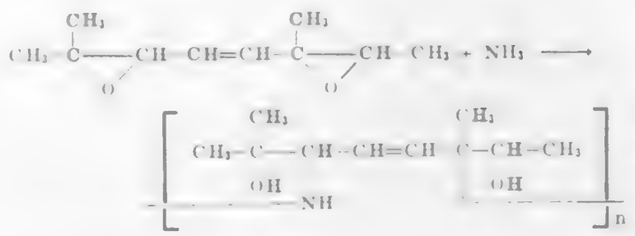
POLYMERS OF ALLO-OCIMENE DIEPOXIDE AND AMMONIA AND THEIR PRODUCTION

William C. Doyle, Jr., Fairway, Kans., assignor to Tenneco Chemicals, Inc., a corporation of Delaware

No Drawing. Filed Nov. 19, 1964, Ser. No. 412,331

11 Claims. (Cl. 260—88.3)

The present invention relates to copolymers, and their production, of allo-ocimene diepoxide and ammonia containing recurring amino groups and recurring divalent, open-epoxy ring hydroxylated allo-ocimene diepoxide groups. A major portion of the recurring groups are secondary amino groups. Essentially, the reaction to form the copolymers involves reacting from 0.8 to 1.2 moles of ammonia with one mole of the diepoxide under superatmospheric pressure with the initial pressure being at least 50 pounds per square inch gauge at a temperature at least initialy above 75° C. The primary reaction involved is:



in which n has a greater value than 2. As the epoxy groups may open in either direction the hydroxyl group shown on the 2 carbon atom may be on the 3 carbon atom and the hydroxyl group shown on the 7 carbon atom may be on the 6 carbon atom. There may be some cross-linking through the oxygen or nitrogen atoms.

3,373,150

POLYMERISING VINYL CHLORIDE

Gordon Edmund Alfred Pears, St. Albans, and Andrzej Pajaczkowski, Harpenden, England, assignors to Imperial Chemical Industries Limited, London, England, a corporation of Great Britain

No Drawing. Filed Dec. 2, 1963, Ser. No. 327,511

Claims priority, application Great Britain, Dec. 7, 1962, 46,247/62

21 Claims. (Cl. 260—92.8)

Paste grade vinyl chloride polymers are prepared by homogenised dispersion polymerisation using dialkyl peroxydicarbonate catalysts, in which the alkyl groups contain at least 5 carbon atoms, in conjunction with long chain peroxides, thereby obviating the long reaction times associated with such peroxides when used alone and the excessive build up occurring with the use of peroxydicarbonates alone.

3,373,151

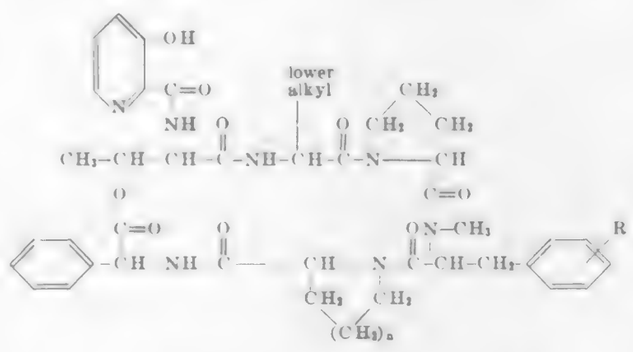
PATRICIN A AND B AND RELATED COMPOUNDS

Miklos Bodanszky, Princeton, Miguel A. Ondetti, Highland Park, and John T. Sheehan, Middlesex, N.J., assignors, by mesne assignments, to E. R. Squibb & Sons, Inc., New York, N.Y., a corporation of Delaware

No Drawing. Filed Jan. 28, 1965, Ser. No. 428,845

16 Claims. (Cl. 260—112.5)

This invention relates to new chemical compounds having the formula



and to new intermediates used in the synthesis of those compounds. R in the above formula represents hydrogen, halogen or lower alkyl and n represents 1 or 2. Preferred are compounds in this group wherein R is hydrogen and the lower alkyl group is ethyl. When $n=1$, the compound has been named patricin A; when $n=2$, the compound has been named patricin B. The compounds are useful as antimicrobial agents.

3,373,152

METHOD OF DEGASSING VISCOSE

Harry F. Haeusel, Chester, Pa., assignor to FMC Corporation, Philadelphia, Pa., a corporation of Delaware

No Drawing. Filed Nov. 23, 1964, Ser. No. 413,365

6 Claims. (Cl. 260—218)

1. A method of degassing viscose containing aqueous sodium hydroxide including the steps of adding oxygen into the viscose, mixing the viscose during the oxygen addition to disperse the oxygen throughout the viscose and maintaining the oxygen treated viscose in a quiescent condition after the mixing thereof whereby the added oxygen and entrained gases are expelled therefrom.

3,373,153

N-LOWER ALKYLIDENE AMINO-IMINODIBENZYL

Aaron Cohen, Basil Heath-Brown, and Christopher John Cattanach, Welwyn Garden City, England, assignors to Hoffmann-La Roche Inc., Nutley, N.J., a corporation of New Jersey

No Drawing. Filed May 25, 1965, Ser. No. 458,765

Claims priority, application Great Britain, Apr. 14, 1965, 22,738/64

1 Claim. (Cl. 260—239)

1. A compound of the formula

(IV)

wherein R′ is selected from the group consisting of hydrogen and a C_1–C_6 alkyl group.

3,373,154

PROCESS FOR THE PREPARATION OF N-AMINO-IMINODIBENZYL

Aaron Cohen and Basil Heath-Brown, Welwyn Garden City, and Carey Ernest Smithen, Ware, England, assignors to Hoffmann-La Roche Inc., Nutley, N.J., a corporation of New Jersey

No Drawing. Filed May 25, 1965, Ser. No. 458,770

Claims priority, application Great Britain, Apr. 14, 1965, 16,041/65

4 Claims. (Cl. 260—239)

1. A process for the preparation of N-amino-iminodibenzyl comprising the steps of:

(a) reacting iminodibenzyl with an alkali metal derivative of dimethyl sulfoxide and

(b) treating the resulting reaction product with chloramine.

3,373,155

SUBSTITUTED PENICILLINS AND CEPHALOSPORINS

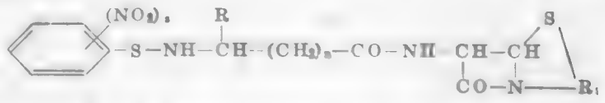
Bertil Åke Ekström and Berndt Olof Harald Sjöberg, Sodertalje, Sweden, assignors to Aktiebolaget Astra, Apotekarnes Kemiska Fabriker, Sodertalje, Sweden

No Drawing. Filed Jan. 11, 1965, Ser. No. 424,811

Claims priority, application Sweden, Jan. 16, 1964, 545/64

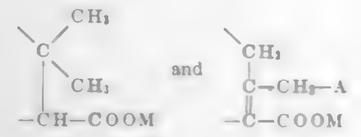
10 Claims. (Cl. 260—239.1)

1. Antimicrobially active compounds of the general formula:



wherein R is a radical selected from the group consisting of hydrogen, lower alkyl, monocarbocyclic aryl, lower alkyl-substituted monocarbocyclic aryl, sulfur-heterocyclic radicals containing from 4 to 7 ring members, mercaptoalkyl, lower alkyl-substituted mercaptoalkyl,

lower alkylamide, and nitrophenyl-sulfenyl-amino-substituted monocarbocyclic aryl radicals; R_1 is a radical selected from the group consisting of:



and

wherein A is a radical selected from the group consisting of hydrogen, 1-pyridinium, alkanolyoxy, and benzoyloxy radicals; and M is a radical selected from the group consisting of hydrogen, and pharmaceutically useful, nontoxic cations forming salts with the substituted penicillanic and cephalosporanic acids; said NO_2 radical is attached to the phenyl radical at a position selected from positions 2 and 4, z is an integer from 1 to 2; and n is an integer from 0 to 4.

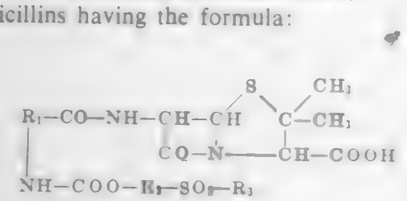
3,373,156

SUBSTITUTED 6-AMINOPENICILLANIC ACIDS AND SALTS

Peter Bamberg, Bertil Åke Ekström, and Berndt Olof Harald Sjöberg, Sodertalje, Sweden, assignors to Aktiebolaget Astra, Sodertalje, Sweden, a company of Sweden

No Drawing. Filed Aug. 29, 1966, Ser. No. 575,533
Claims priority, application Sweden, Aug. 30, 1965, 11,313/65
13 Claims. (Cl. 260—239.1)

1. Penicillins having the formula:



and non-toxic salts thereof; wherein R_1 is selected from the group consisting of unsubstituted and substituted lower alkyl radicals, with the substituted lower alkyl radicals having substituent radicals selected from the group consisting of lower alkyl, lower alkanoyloxy, monocarbocyclic aryl containing from 6 to 10 carbon atoms, carbethoxy, lower alkanoyloxyamino and lower monocarbocyclic aryloxyamino, lower alkyl sulfoxy, lower alkyl sulfonyl, lower alkyl thio and sulfur and oxygen-substituted monoheterocyclic radicals containing a maximum of 10 carbon atoms, and monocarbocyclic aryloxy radicals containing from 6 to 10 carbon atoms; R_2 is ethylene; R_3 is selected from the group consisting of unsubstituted and substituted monocarbocyclic aryl radicals containing from 6 to 10 carbon atoms, with the substituted radicals having substituent radicals selected from the group consisting of halide, lower alkyl, lower alkoxy, and nitro radicals.

3,373,157

6,6-ETHYLENE-19 NORTESTOSTERONES

Vlasios Georgian, Belmont, Mass., and Kenneth G. Holden, Stratford, N.J., assignors to Smith Kline & French Laboratories, Philadelphia, Pa., a corporation of Pennsylvania

No Drawing. Filed Sept. 17, 1965, Ser. No. 488,274
4 Claims. (Cl. 260—239.55)

6,6-ethylene-19-nortestosterones having anabolic-androgenic activity are prepared by ring closure of appropriate 6-hydroxyethyl testosterones.

3,373,158

TETRAHYDRO-1,3,5-THIADIAZINE-2-THIONES

Manfred Schorr, Frankfurt am Main, Walter Dürckheimer, Hattersheim am Main, and Georg Lämmler, Frankfurt am Main, Germany, assignors to Farbwerke Hoechst Aktiengesellschaft vormals Meister Lucius & Bruning, Frankfurt am Main, Germany, a corporation of Germany

No Drawing. Filed Feb. 19, 1965, Ser. No. 434,126
Claims priority, application Germany, Feb. 20, 1964, F 42,061
10 Claims. (Cl. 260—243)

Tetrahydro-1,3,5-thiadiazine-2-thiones substituted in the 3-position by a halogen-substituted aralkyl and in the 5-position by lower alkyl, lower alkenyl or lower hydroxy alkyl. These compounds are good fungistatics and bacteriostatics, and are especially useful for the treatment of trematodes infections.

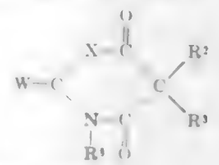
3,373,159

AZINEDIONES

James C. Martin and Kent C. Brannock, Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N.Y., a corporation of New Jersey

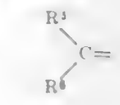
No Drawing. Filed Dec. 13, 1965, Ser. No. 513,602
10 Claims. (Cl. 260—244)

1. An azinedione of the formula:



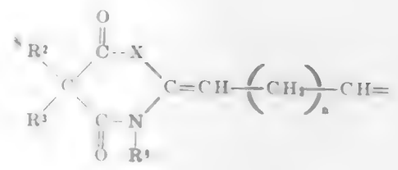
in which W has the formula

(a)



or

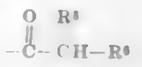
(b)



X is
- (a) oxygen
- (b) sulfur, or
- (c) imino of the formula

each of R^2 and R^3, when taken singly, is
- (a) alkyl of 1 to 10 carbons, or
- (b) mononuclear aryl of 6 to 10 carbons

each of R^4 and R^8, when taken singly, is
- (a) hydrogen
- (b) alkyl of 1 to 10 carbons
- (c) mononuclear aryl of 6 to 10 carbons, or
- (d) acyl of the formula



each of R^5 and R^6, when taken singly, is
- (a) hydrogen
- (b) alkyl of 1 to 10 carbons,
- (c) mononuclear aryl of 6 to 10 carbons, or
- (d) halogen

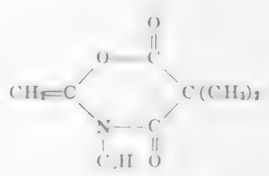
R^2 and R^3, when taken collectively with the carbon atom to which they are attached, represent joined alkylene groups completing a carbocyclic ring of 4 to 6 ring carbon atoms

R^5 and R^6, when taken collectively with the carbon atom to which they are attached, represent joined alkylene groups completing a carbocyclic ring of 4 to 6 ring carbon atoms

R^6 and R^8, when taken collectively with the carbon and nitrogen atom to which they are attached, represent joined alkylene groups completing a heterocyclic ring of 4 to 6 ring atoms, and

n is an interger from 0 to 8.

2. A compound as defined in claim 1 having the formula:



3,373,160

PROCESS FOR OXYGENATING SOLID CYCLIC ACETALS AND PRODUCTS OBTAINED THEREBY

Carol K. Ikeda, Wallingford, Pa., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Continuation-in-part of application Ser. No. 111,174, May 19, 1961. This application Oct. 1, 1963, Ser. No. 312,882
The portion of the term of the patent subsequent to June 8, 1983, has been disclaimed
12 Claims. (Cl. 260—248)

1. A process for improving the air-drying properties of a normally solid cyclic acetal which contains a plurality of 1,3-cyclic acetal radicals, each bearing, in the 2-position, a radical selected from the group consisting of vinyl and isopropenyl, said cyclic acetal radicals being linked together by an interposed polyvalent radical, said process comprising contacting said solid cyclic acetal, in the molten state, with oxygen until the acetal is normally liquid.

3,373,161

PIPERAZINE DERIVATIVES

Laszlo Beregi, Boulogne-sur-Seine, Pierre Hugon, Rueil-Malmaison, and Jean-Claude Le Douarec, Suresnes, France, assignors to Societe en nom Collectif dite: Science Union et Cie, Societe Francaise de Recherche Medicale, Suresnes, France

No Drawing. Filed Sept. 7, 1965, Ser. No. 485,562
Claims priority, application Great Britain, Sept. 10, 1964, 37,087/64
16 Claims. (Cl. 260—268)

Compounds which are 1-(1,1-dialkyl-2-phenyl-ethyl)-piperazines and benzylpiperazines having fluorine or halogenomethyl substituent on the phenyl ring which are useful as analgesics, anorexigencies, and lipid and glucide metabolism regulators, and process for the preparation thereof.

3,373,162

PREPARATION OF SUBSTITUTED PIPERAZINIUM SALTS

Clarence R. Dick, Lake Jackson, Tex., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Filed Nov. 16, 1965, Ser. No. 508,138
6 Claims. (Cl. 260—268)

Substituted piperazinium halides are made by the reaction of an N-substituted aziridine with an alkylating agent in the presence of a source of halogen ion.

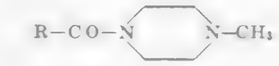
3,373,163

N-METHYL-PIPERAZIDES OF ALICYCLIC AND HETEROCYCLIC CARBOXYLIC ACIDS

Heinz Loewe, Kelkheim, Taunus, Josef Urbanietz, Schwalbach, Taunus, and Georg Lämmler, Giessen, Germany, assignors to Farbwerke Hoechst Aktiengesellschaft vormals Meister Lucius & Bruning, Frankfurt am Main, Germany, a corporation of Germany

No Drawing. Filed Jan. 18, 1966, Ser. No. 521,445
Claims priority, application Germany, Jan. 27, 1965, F 45,069
6 Claims. (Cl. 260—268)

1. A member selected from the group consisting of a carboxylic acid-N-methyl-piperazide and its physiologically tolerable salts, said piperazide having the formula



wherein R is a member selected from the group consisting of:
- (A) saturated and olefinically mono-unsaturated cycloaliphatic hydrocarbons having 5–7 carbon atoms;
- (B) such hydrocarbons having a monomethyl substituent thereon;
- (C) bicyclo [2.2.1] hept-5-ene-2-yl; and
- (D) 4-tetrahydro pyranyl.

3,373,164

DIFLUORAMINO-1-DIMETHANESULPHONYL-PIPERAZINES

Godfrey Fort, Ardrossan, Scotland, assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Navy

No Drawing. Filed Feb. 2, 1966, Ser. No. 524,972
Claims priority, application Great Britain, Feb. 5, 1965, 5,216/65
13 Claims. (Cl. 260—268)

1. The compound difluoramino - 1,4 - dimethanesulphonylpiperazine.

5. A process for the preparation of difluoramino-1,4-dimethanesulphonylpiperazine which comprises reacting a compound selected from the group consisting of 2,3,5,6-tetrahydroxy-1,4-dimethanesulphonylpiperazine, a partial difluoraminated derivative thereof and an acetic ester derivative thereof, with difluoramine in an inert atmosphere in the presence of an acidic condensing agent.

3,373,165

NOVEL SUBSTITUTED HYDRAZIYOHIMBANES

Anthony Edward Lanzilotti, Pearl River, and Leon Goldman, Nanuet, N.Y., assignors to American Cyanimid Company, Stamford, Conn., a corporation of Maine

No Drawing. Continuation-in-part of application Ser. No. 551,232, May 19, 1966. This application July 7, 1967, Ser. No. 651,672
10 Claims. (Cl. 260—287)

This disclosure describes 16-hydraziyohimbane and compounds of the class of ring-E substituted 17- and 18-hydraziyohimbanes, useful as central nervous system depressants.

3,373,166

NOVEL 17-[(METHYLTHIO)METHOXY] YOHIMBANES

Jay Donald Albright and Leon Goldman, Nanuet, N.Y., assignors to American Cyanamid Company, Stamford, Conn., a corporation of Maine

No Drawing. Continuation-in-part of application Ser. No. 556,584, June 10, 1966. This application July 7, 1967, Ser. No. 651,673
10 Claims. (Cl. 260—287)

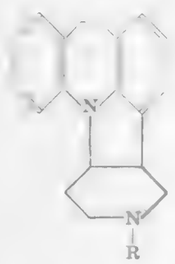
This disclosure describes compounds of the class of ring-E substituted 17-[(methylthio)methoxy]yohimbanes useful as central nervous system depressants.

3,373,167
PREPARATION OF ALPHA-BETA-UNSATURATED SULFONES
James L. Dever and Ivan C. Popoff, Ambler, Pa., assignors to Pennsalt Chemicals Corporation, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Filed July 28, 1964, Ser. No. 385,797
13 Claims. (Cl. 260—289)

A process for preparing vinyl sulfones by reacting in an inert organic solvent at a temperature between about −10° C. and about 30° C. a sulfonyl methylphosphinyl carbanion with an essentially stoichiometric amount of an aldehyde or ketone.

3,373,168
CERTAIN BENZAZEPINOXYRIDOINDOLE COMPOUNDS AND THEIR PREPARATION
Aaron Cohen and Basil Heath-Brown, Welwyn Garden City, England, assignors to Hoffmann-La Roche Inc., Nutley, N.J., a corporation of New Jersey
No Drawing. Filed May 25, 1965, Ser. No. 458,766
Claims priority, application Great Britain, June 2, 1964, 22,738/64; Apr. 14, 1965, 16,042/65
10 Claims. (Cl. 260—293)

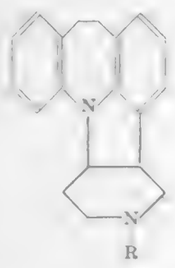
1. A compound selected from the group consisting of (a) a compound of the formula



(I)

wherein R is lower alkyl and (b) an acid addition salt of a compound of Formula I with a pharmaceutically acceptable acid.

9. A process for the preparation of a compound of the formula



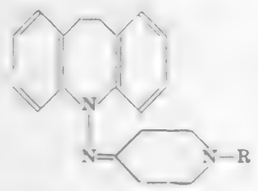
(I)

wherein R is lower alkyl comprising the steps of

(A) reacting iminodibenzyl with nitrous acid to form N-nitroso-iminodibenzyl,

(B) reducing N-nitroso-iminodibenzyl with an alkali metal-Group III metal hydride to form N-amino-iminodibenzyl,

(C) reacting a compound selected from the group consisting of (a) N-amino-iminodibenzyl and (b) an acid addition salt thereof with a 1-lower alkyl-4-oxo-piperidine to form a hydrazone of the formula



wherein R is lower alkyl

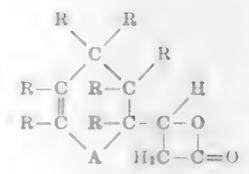
(D) reacting said hydrazone with an acidic cyclizing agent selected from the group consisting of glacial acetic acid and a mineral acid to form a cyclization product of the formula

wherein R is lower alkyl

(E) reducing the resulting cyclization product at the double bond common to the 5- and 6-membered heterocyclic rings to form a compound of Formula I.

3,373,169
HETEROCYCLIC-SUBSTITUTED β-LACTONES
Harald H. O. Cherdron, Ittenbach (Rhine), Hans H. W. Ohse, Oberdollendorf (Rhine), Richard A. Palm, Niederdollendorf (Rhine), Wilfried Draber, Ippendorf, Bonn, Juergen F. Falbe, Bonn, and Friedrich W. A. G. K. Korte, Hangelar, Germany, assignors to Shell Oil Company, New York, N.Y., a corporation of Delaware
No Drawing. Filed July 2, 1964, Ser. No. 380,028
2 Claims. (Cl. 260—343.9)

1. Chemical compound of the formula



wherein R is a member of the group consisting of hydrogen, chlorine and lower alkyl, and A is oxygen or sulfur.

3,373,170
AMINE SALTS OF BORIC ACID-POLYOL COMPLEXES
Loyd W. Jones, Tulsa, Okla., assignor to Pan American Petroleum Corporation, Tulsa, Okla., a corporation of Delaware
No Drawing. Filed Sept. 17, 1964, Ser. No. 397,289
7 Claims. (Cl. 260—345.8)

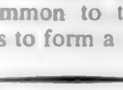
A group of compounds are proposed for inhibiting corrosion and controlling microbiological growth which can be generically described as amine salts of boric acid-polyol complexes, or as amine borates in polyol solutions.

3,373,171
1-NAPHTHALENE-PROPIONIC ACID, 4-CARBOXYL-α, 4-BIS(CARBOXYMETHYL)-1,2,3,4-TETRAHYDRO-4,4,α, 1-DIANHYDRIDE
Howard Robert Lucas, Greenwich, and Roland Ralph Di Leone, Rowayton, Conn., assignors to American Cyanamid Company, Stamford, Conn., a corporation of Maine
No Drawing. Filed Mar. 23, 1965, Ser. No. 442,207
1 Claim. (Cl. 260—346.8)

1-naphthalene-propionic acid, 4 carboxyl-α, 4-bis(carboxymethyl)-1,2,3,4-tetrahydro-4,4,α, 1-dianhydride.

3,373,172
PHARMACOLOGICALLY ACTIVE 10α-METHYL, 9β-STEROIDS OF THE PREGNANE SERIES
Engbert Harmen Reerink, Pieter Westerhof, and Hendrik Fredrik Louis Scholer, Van Houtenlaan, Weesp, Netherlands, assignors to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware
No Drawing. Continuation-in-part of application Ser. No. 201,824, June 12, 1962, which is a continuation-in-part of application Ser. No. 805,020, Apr. 8, 1959. This application Feb. 7, 1964, Ser. No. 343,233
Claims priority, application Netherlands, Apr. 12, 1958, 226,774
6 Claims. (Cl. 260—397.45)

1. A 10α methyl 9β, 8β, 13β, 14α hormonal steroid of the pregnane series having more than 19 carbon atoms in the molecule, a halogen free C_3 position on the steroid nucleus and wherein the substituent attached to the C_{17} carbon atom of the steroid nucleus in the β position is



wherein R′ is selected from the group consisting of monohydroxy substituted methyl and acyloxy substituted methyl.

8. 11α,17α,21-trihydroxy-retro-pregn-4-ene-3,20-dione.

3,373,173
WATER-SOLUBLE SURFACTANT COMPOSITIONS IN THE FORM OF CONDENSATION PRODUCTS OF LONG CHAIN MONOCARBOXYLIC ACIDS, DIETHANOLAMINE AND AROMATIC POLYBASIC ACIDS IN CERTAIN MOL RATIOS
John T. Foley, Verona, and Graham Barker, Fairlawn, N.J., assignors to Witco Chemical Company, Inc., New York, N.Y., a corporation of Delaware
No Drawing. Filed Mar. 24, 1964, Ser. No. 354,424
17 Claims. (Cl. 260—404)

Water-soluble surfactants which are useful as detergents and emulsifying agents and which comprise condensation products of long chain aliphatic monocarboxllic acids, diethanolamine, and mononuclear aromatic polybasic acids in certain molar ratios to each other, depending upon whether the mononuclear aromatic polybasic acid is dicarboxylic, tricarboxylic, tetracarboxylic or hexacarboxylic, illustrated by a condensation product of 1 mol of a long chain aliphatic monocarboxylic acid, 6 to 7.5 mols of diethanolamine, and 2 to 2.4 mols of phthalic anhydride.

3,373,174
A METHOD FOR IMPROVING COLOR AND THE COLOR AND ODOR STABILITY OF FATTY AMIDES
Edgar S. Hammerberg and Sydney H. Shapiro, Chicago, Ill., assignors to Armour and Company, Chicago, Ill., a corporation of Delaware
No Drawing. Filed Dec. 17, 1964, Ser. No. 419,222
6 Claims. (Cl. 260—404)

Improvement in color and color and odor stability of fatty amides is accomplished by admixing an alkaline-type borohydride with the fatty amide.

3,373,175
CONJUGATION OF VEGETABLE OILS VIA IRON TRICARBONYL COMPLEX
Edwin N. Frankel, Peoria, Ill., assignor to the United States of America as represented by the Secretary of Agriculture
No Drawing. Filed July 9, 1965, Ser. No. 470,938
3 Claims. (Cl. 260—405.6)

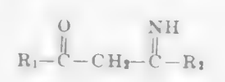
Conjugation of polyunsaturated vegetable oils or methyl esters thereof with excess iron pentacarbonyl for 2–4 hours at a critical temperature of 185° C. provides markedly improved yields of conjugated fatty iron tricarbonyl complex that is then completely decomposed with $FeCl_3$ to provide an almost fully conjugated drying oil product. At 185° C. the formation of conjugated complex is greatly increased and the reaction need not be interrupted to vent complex inhibiting formations of CO_2.

3,373,176
TERTAMETHYL CYCLOBUTANEDIOL DIESTERS OF LINSEED-DERIVED C_{18} SATURATED VICINALLY SUBSTITUTED CYCLIC MONOCARBOXYLIC ACID ISOMER MIXTURE
John P. Friedrich, Green Valley, Ill., assignor to the United States of America as represented by the Secretary of Agriculture
No Drawing. Filed Sept. 22, 1965, Ser. No. 489,435
1 Claim. (Cl. 260—410)

The diesters formed by reacting a de-aromatized cyclized linolenic acid isomer mixture with two equivalents of tetramethyl cyclobutanediol exhibit low pour points coupled with high resistance to thermal oxidation. The product meets current military specifications for aviation lubricants.

3,373,177
PREPARATION OF METAL CHELATES OF β-IMINOCARBONYLS
Donald C. Young, Fullerton, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
No Drawing. Filed May 20, 1963, Ser. No. 281,757
3 Claims. (Cl. 260—429)

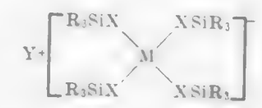
1. The preparation of a metal chelate salt from a transition metal that forms ammine salts in aqueous ammoniacal solutions and a ligand having the following structure:



wherein R_1 and R_2 are selected from the class consisting of hydrogen and alkyl groups having 1 to about 5 carbons; said method comprising forming the ammine salt of said metal in an aqueous ammoniacal solution and thereafter admixing said ligand with said solution containing from about 5 to 50 percent ammonia at a temperature between about 5° and about 50° C. to form said complex as a solid precipitate.

3,373,178
ALKALI METAL TETRAKIS (TRIORGANOSILOXY AND -SILYLAMINO) METAL III SALTS
Max Schmidt and Hubert Schmidbaur, Marburg, Germany, assignors to Wasag-Chemie Aktiengesellschaft, Essen, Germany
No Drawing. Filed Mar. 19, 1963, Ser. No. 266,172
Claims priority, application Germany, Aug. 18, 1962, W 32,807, W 32,808
10 Claims. (Cl. 260—429)

1. As a new composition of matter, an organo-silicon compound of the formula



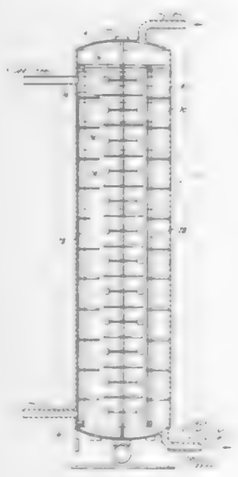
wherein M represents a metal selected from the group consisting of Al, Ga, Fe and Co, Y represents an alkali

metal, X is selected from the group consisting of O and NH, and R is selected from the group consisting of alkyl and cycloalkyl groups containing up to 6 carbon atoms, alkenyl and alkinyl hydrocarbon radicals containing up to 6 carbon atoms, mononuclear aryl radicals and monophenylated derivatives of saturated and unsaturated hydrocarbons containing up to 4 carbon atoms, and members of these groups which are between 1 and 4 times substituted with at least 1 substituent selected from the group consisting of nitro groups, amino groups and halogens.

3,373,179
METHOD FOR THE MANUFACTURE OF DIALKYL ALUMINUM HYDRIDE COMPOUNDS

Allen L. Lewis, Houston, Tex., assignor to Continental Oil Company, Ponca City, Okla., a corporation of Delaware

Filed Sept. 14, 1962, Ser. No. 223,755
4 Claims. (Cl. 260—448)



1. In a process for preparing dialkyl aluminum hydride by the reaction of trialkyl aluminum, aluminum, and hydrogen at an elevated temperature and pressure, the improvement which comprises:

(a) introducing to the upper end of a vertical, multistage reaction zone having a plurality of vertically-tiered reaction spaces therein separated by baffle means and containing mechanical agitation means, said reaction zone being capable of handling aluminum particles as large as 0.125 inch, a slurry of finely divided metallic aluminum, having a particle size between about 3 microns and about 0.125 inch, in a liquid trialkyl aluminum compound in which the alkyl substituents of the trialkyl aluminum contain from 2 to 20 carbon atoms;

(b) introducing to the lower end of said reaction zone, from about 0.45 to about 5 moles of hydrogen gas per mole of said trialkyl aluminum compound;

(c) thoroughly mechanically agitating the slurry-gaseous mixture in each of said reaction spaces while maintaining the temperature in said multistage reaction zone in the range of from about 200° F. to about 350° F., and the pressure therein from about 200 p.s.i.g. to about 5000 p.s.i.g.; and

(d) removing the dialkyl aluminum hydride reaction product from the same end of said multistage reaction zone wherein said hydrogen gas is introduced and opposite that end to which said slurry is introduced.

3,373,180
PURIFICATION PROCESS

John Arnold Glass, Texas City, Tex., and Wilbert H. Urry, Chicago, Ill., assignors to Monsanto Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Filed June 22, 1966, Ser. No. 559,420
11 Claims. (Cl. 260—450)

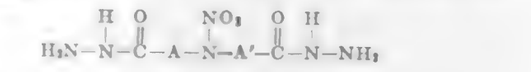
1. A process for the removal of iron carbonyl impurities from an alkanol stream containing such impurities, said alkanol having from 1 to 15 carbon atoms, which process comprises passing said stream at a temperature of from about 0° C. to about 120° C. through a resin bed, said resin bed having been prepared by replacing at least a portion of the replaceable cations in a cation exchange resin with ferric ions.

3,373,181
ALIPHATIC NITRAZA HYDRAZIDES AND PROCESSES FOR PREPARING NITRAZA DIISOCYANATES THEREFROM

Gustave B. Linden, Short Hills, N.J., and Karl Klager, Sacramento, Calif., assignors to Aerojet-General Corporation, Azusa, Calif., a corporation of Ohio

No Drawing. Filed May 21, 1962, Ser. No. 196,858
15 Claims. (Cl. 260—453)

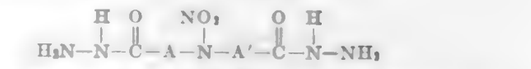
1. As a composition of matter, the compounds have the formula:



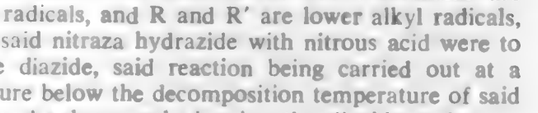
wherein A and A′ are alkylene radicals.

15. The method which comprises reacting hydrazine with a compound of the formula

to form a nitraza hydrazide of the formula



wherein A and A′ in each of the above formulae are alkylene radicals, and R and R′ are lower alkyl radicals, reacting said nitraza hydrazide with nitrous acid were to form the diazide, said reaction being carried out at a temperature below the decomposition temperature of said diazide, and subsequently heating the diazide under anhydrous conditions to effect rearrangement to the nitraza diisocyanate of the formula



wherein the above formula A and A′ are alkylene radicals.

3,373,182
PURIFICATION OF ISOCYANATES BY REDUCTION OF THE HYDROLYZABLE CHLORINE AND ACID CONTENT

Eugene L. Powers, New Martinsville, W. Va., assignor to Mobay Chemical Company, Pittsburgh, Pa., a corporation of Delaware

No Drawing. Continuation-in-part of application Ser. No. 395,952, Sept. 11, 1964. This application June 30, 1965, Ser. No. 468,619
10 Claims. (Cl. 260—453)

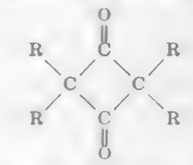
1. A method of reducing the hydrolyzable chlorine and acidity content of organic isocyanates containing hydrolyzable chlorides which comprises mixing with the organic isocyanate an amount of a compound selected from the group consisting of cadmium naphthenate, cobalt naphthenate, copper naphthenate, lead naphthenate, manganese naphthenate, zinc naphthenate, and mixtures thereof sufficient to reduce the hydrolyzable chlorides in the isocyanate and distilling the mixture to separate the isocyanate.

3,373,183
MANUFACTURE OF 2,2,4,4-TETRAALKYL-3-OXOBUTYRONITRILES

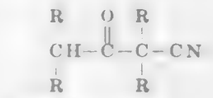
Edgar L. McDaniel and James P. Hawk, Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N.Y., a corporation of New Jersey

No Drawing. Filed Nov. 1, 1965, Ser. No. 505,951
10 Claims. (Cl. 260—465.1)

1. The process which comprises contacting a 2,2,4,4-tetraalkylcyclobutane-1,3-dione of the formula:



with ammonia in the vapor phase at elevated temperature and in the presence of dehydrogenation catalyst and obtaining a 2,2,4,4-tetraalkyl-3-oxobutyronitrile of the formula:



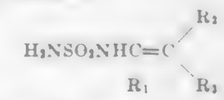
in which each R is lower alkyl.

3,373,184
SULFAMIDE DERIVATIVES

Milton Wolf, West Chester, Pa., assignor to American Home Products Corporation, New York, N.Y., a corporation of Delaware

No Drawing. Filed Sept. 24, 1965, Ser. No. 490,083
15 Claims. (Cl. 260—465.4)

1. A compound selected from the group consisting of those having the formula:



wherein R_1 is selected from the group consisting of hydrogen and lower alkyl; and R_2 and R_3 are selected from the group consisting of cyano and carboxy(lower)alkyl.

3,373,185
3,3′,3″-NITRILOTRIS (1,2-PROPANEDIOL), HEXANITRATE AND METHOD FOR PREPARING SAME

Gerhard R. Wendt, Havertown, and Kurt W. Ledig, Philadelphia, Pa., assignors to American Home Products Corporation, New York, N.Y., a corporation of Delaware

No Drawing. Filed Jan. 17, 1967, Ser. No. 609,783
2 Claims. (Cl. 260—467)

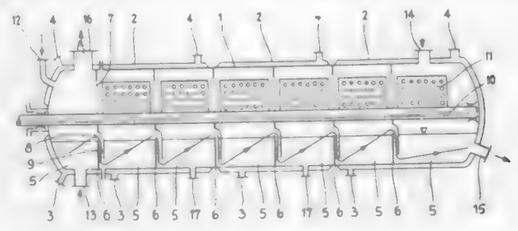
A new compound, 3,3′,3″-nitrilotris(1,2-propanediol), hexanitrate prepared by reacting triallylamine with iodine and silver nitrate, is useful as a vasodilator.

3,373,186
PROCESS FOR THE CONTINUOUS PREPARATION OF BIS-2-HYDROXYETHYL PHTHALATES

Ditmar Bachmann, Hofheim, Taunus, Karlheinz Grafen, Offenbach am Main, and Wolfgang Fischer and Armin Schubring, Frankfurt am Main, Germany, assignors to Farbwerke Hoechst Aktiengesellschaft vormals Meister Lucius & Bruning, Frankfurt am Main, Germany, a corporation of Germany

Filed Mar. 22, 1965, Ser. No. 441,471
Claims priority, application Germany, May 2, 1964, F 42,776
2 Claims. (Cl. 260—475)

1. In a process for the continuous preparation of bis-2-hydroxyethyl esters of aromatic dicarboxylic acids selected from the group consisting of terephthalic acid and isophthalic acid and the polymers of said esters which have a low molecular weight and contain up to ten monomer units in the chain by reesterification of the dimethyl esters of the aforesaid acids with ethylene glycol in the presence of a catalyst in a heated apparatus which is subdivided into a plurality of parts in which the different stages of the process take place, into which ethylene glycol and dimethyl esters of the said acids are continuously introduced and from which the vapours that form and the bis-2-hydroxyethyl esters that form are continuously drawn off, in which process the vapours of



methanol, ethylene glycol and by-products which form are immediately drawn off and additional quantities of ethylene glycol are introduced into at least one part of the apparatus, the improvement which comprises conducting a gas that is inert towards the reaction in such a quantity in counter-current to the liquid reaction mixture that the speeds at which the vapours flow in the free spaces between the vapour chambers in which the individual reactions take place are higher than the speed at which the vapours diffuse into the inert gas.

3,373,187
METHOD OF PREPARING ASPIRIN

Robert T. Edmunds, Norwich, N.Y., assignor to The Norwich Pharmacal Company, a corporation of New York

No Drawing. Filed June 12, 1964, Ser. No. 374,812
3 Claims. (Cl. 260—480)

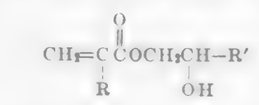
An improved method for the manufacture of aspirin utilizing a metallic salt catalyst.

3,373,188
STORAGEABLE, POLYMERIZABLE COMPOSITIONS CONTAINING 2-HYDROXYALKYL ESTERS OF ETHYLENICALLY UNSATURATED CARBOXYLIC ACIDS AND PROCESS OF PREPARING THE SAME

Glenn R. Svoboda, Port Washington, Wis., assignor to Freeman Chemical Corporation, Port Washington, Wis., a corporation of Delaware

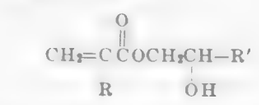
No Drawing. Filed June 22, 1964, Ser. No. 377,079
11 Claims. (Cl. 260—486)

1. A storageable, polymerizable composition comprising essentially (a) monomeric ester having the formula



wherein R is a substituent selected from the class consisting of hydrogen and methyl radical and R′ is a substituent selected from the class consisting of hydrogen, methyl and ethyl radical; and (b) a polymerization-inhibiting quantity of phenyl pyrazolidone.

8. In the method of preparing a storageable, polymerizable ester having the formula



wherein R is a substituent selected from the class consisting of hydrogen and methyl radical and R′ is a substituent selected from the class consisting of hydrogen,

methyl and ethyl radical; which comprises esterifying 1,2-alkylene oxide selected from the class consisting of ethylene oxide, propylene oxide and butylene oxide with a carboxylic acid selected from the class consisting of acrylic acid and methacrylic acid, the improvement comprising:

carrying out said esterification in the presence of a polymerization inhibiting quantity from about 0.01 to about 1.0 percent by weight, based on esterification reactants, of phenyl pyrazolidone; and

recovering substantially colorless, storageable, polymerizable ester containing the said phenyl pyrazolidone.

9. The improvement of claim 8 wherein the said reactants are combined in the presence of an ionic esterification catalyst.

11. The improvement of claim 9 wherein the said ionic esterification catalyst is selected from the class consisting of triphenyl phosphine, triphenyl stibine and mixtures thereof.

3,373,189

VAPOR PHASE PROCESS FOR PRODUCING VINYL ACETATE FROM ETHYLENE

David W. Lum, Cincinnati, Ohio, assignor to National Distillers and Chemical Corporation, New York, N.Y., a corporation of Virginia

No Drawing. Filed July 9, 1965, Ser. No. 470,910
8 Claims. (Cl. 260—497)

1. The process for the preparation of vinyl acetate which comprises sequentially contacting, at temperatures within the range of about 110° to 250° C., a feed mixture consisting of ethylene, about 5 to 40% by volume of oxygen based on ethylene and 2 to 10% by volume of water based on the total volume of ethylene and oxygen in vapor phase with (a) a carbon-supported palladium group metal-oxide or salt catalyst, and (b) an alumina-supported palladium group metal oxide or salt catalyst, and recovering a gaseous reaction mixture containing said vinyl acetate.

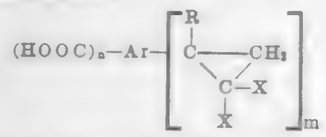
3,373,190

DIHALOCYCLOPROPYL AROMATIC CARBOXYLIC ACID

Ivan C. Popoff, Ambler, and Bernard Loev, Broomall, Pa., assignors to Pennsalt Chemicals Corporation, Philadelphia, Pa., a corporation of Pennsylvania

No Drawing. Continuation-in-part of application Ser. No. 724,527, Mar. 28, 1958. This application Apr. 26, 1965, Ser. No. 451,032
4 Claims. (Cl. 260—515)

1. A 1-(2,2-dihalocyclopropyl) aromatic carboxylic acid having the formula



wherein Ar is an aromatic hydrocarbon group, *n* is 1, *m* is 1, and wherein R is hydrogen and X is chlorine.

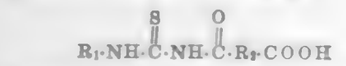
3,373,191

N-ARYLTHIOCARBAMOYLAMIC ACIDS

Asher A. Hyatt, Lexington, Mass., assignor to Monsanto Research Corporation, St. Louis, Mo., a corporation of Delaware

No Drawing. Filed July 9, 1965, Ser. No. 470,919
6 Claims. (Cl. 260—516)

1. New compounds of the formula



where R_1 is an aromatic hydrocarbon radical containing up to 12 carbon atoms and R_2 is an aliphatic hydrocarbon radical of up to 5 carbon atoms.

3,373,192

PREPARATION OF ALKANE SULFONYL CHLORIDES FROM TRIALKYLALUMINUM AND SULFURYL CHLORIDE

Pat W. K. Flanagan, Ponca City, Okla., assignor to Continental Oil Company, Ponca City, Okla., a corporation of Delaware

No Drawing. Filed Aug. 20, 1959, Ser. No. 834,958
7 Claims. (Cl. 260—543)

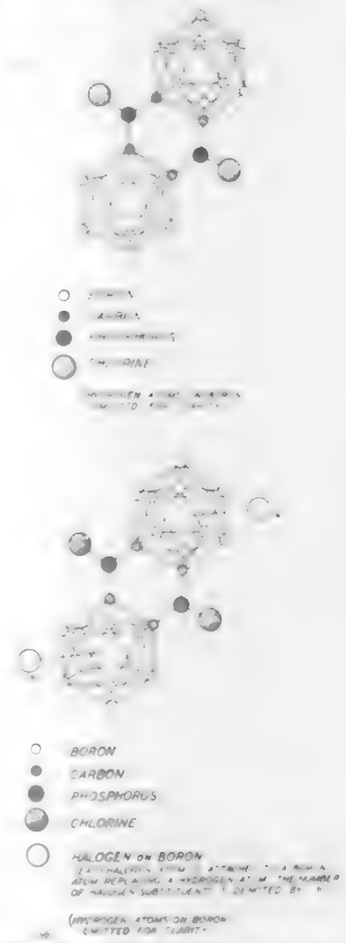
1. A process for the preparation of an alkane sulfonyl chloride which comprises reacting a trialkylaluminum compound with sulfuryl chloride wherein the alkyls in said alkyl aluminum compound contains from 1–18 carbon atoms therein, and wherein said trialkylaluminum compound is added under an atmosphere of an inert gas to sulfuryl chloride at a temperature within the range of −25 to 100° C. in the presence of an inert organic solvent, cooling the resultant reaction mixture, and then recovering the alkane sulfonyl chloride.

3,373,193

DIMERIC HALOPHOSPHA (III)-CARBORANES AND THEIR PRODUCTION

Roy P. Alexander, Killingworth, and Hansjuergen A. Schroeder, New Haven, Conn., assignors to Olin Mathieson Chemical Corporation, a corporation of Virginia

Filed Nov. 13, 1963, Ser. No. 323,278
15 Claims. (Cl. 260—543)



Dimeric halophospha (III)-carboranes are prepared by reacting a carborane compound of the formula:

$$B_{10}H_nX'_{10-n}[C(M)C(M)]$$

where X′ is chlorine, bromine or iodine, *n* is an integer of from 0 to 10 and M is an alkali metal such as sodium, potassium or lithium, with a phosphorus halide of the formula:

$$PX_3$$

where X is chlorine, bromine or iodine.

3,373,194

POLY(N-ACYLETHYLENIMINES) FROM 2-SUBSTITUTED-2-OXAZOLINES

Robert Fuhrmann, Morris Plains, Emery C. Lazar, Morristown, and Jan F. Van Peppen, Chester, N.J., assignors to Allied Chemical Corporation, New York, N.Y., a corporation of New York

No Drawing. Filed July 26, 1965, Ser. No. 474,994
6 Claims. (Cl. 260—559)

This invention relates to novel polyethylenimines having etheric acyl group side chains attached to the nitrogen atoms of the backbone chain. These polymers are prepared by the polymerization of 2-oxazolines having ether-containing substituents on the 2-position.

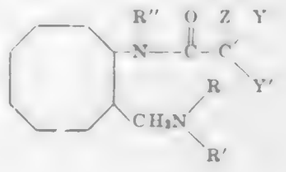
3,373,195

2-SUBSTITUTED AMINOMETHYLCYCLOOCTYL AMIDES OF ALKYL SUBSTITUTED ACETIC ACID

Edward J. Pribyl, Metuchen, and Jack Bernstein, New Brunswick, N.J., assignors to E. R. Squibb & Sons, Inc., New York, N.Y., a corporation of Delaware

No Drawing. Continuation of application Ser. No. 323,880, Nov. 15, 1963, now Patent No. 3,322,776, dated May 30, 1967, which is a continuation-in-part of abandoned application Ser. No. 72,328, Nov. 29, 1960. This application Mar. 7, 1967, Ser. No. 621,143
6 Claims. (Cl. 260—559)

This invention relates to basic amides having the general formula



the meaning of the symbols being explained below, and salts of compounds of this formula. These substances have central nervous system stimulant activity and are useful as psychotomimetic agents.

3,373,196

7- AND/OR 9-(LOWER ALKYL) AMINO-5a,6-ANHYDROTETRACYCLINES

Panayota Bitha, New York, and Joseph John Hlavka, Tuxedo, N.Y., assignors to American Cyanamid Company, Stamford, Conn., a corporation of Maine

No Drawing. Filed Mar. 21, 1967, Ser. No. 624,711
10 Claims. (Cl. 260—559)

This disclosure describes compounds of the class of 7- and/or 9-nitro, amino or substituted amino-5a,6-anhydrotetracyclines and 7- and/or 9-nitro, amino or substituted amino-6-demethyl-5a,6-anhydrotetracyclines useful as intermediates in the preparation of the corresponding 7- and/or 9-substituted aminotetracyclines and 7- and/or 9-substituted amino-6-demethyltetracyclines which possess antibacterial activity.

3,373,197

SUBSTITUTED 6-EPITETRACYCLINES AND 5a-EPI-6-EPITETRACYCLINES

Michael Joseph Martell, Jr., Pearl River, and Adma Schneller Ross, Suffern, N.Y., assignors to American Cyanamid Company, Stamford, Conn., a corporation of Maine

No Drawing. Filed Apr. 27, 1967, Ser. No. 634,100
10 Claims. (Cl. 260—559)

This disclosure describes compounds of the class of 6-epitetracyclines and 5a-epi-6-epitetracyclines, useful as anti-bacterial agents.

3,373,198

SUBSTITUTED 5a,11a-DEHYDRO-6-EPITETRACYCLINES

Michael Joseph Martell, Jr., Pearl River, and Adma Schneller Ross, Suffern, N.Y., assignors to American Cyanamid Company, Stamford, Conn., a corportion of Maine

No Drawing. Filed Apr. 27, 1967, Ser. No. 634,141
10 Claims. (Cl. 260—559)

This disclosure describes compounds of the class of 5a,11a-dehydro-6-epitetracyclines, useful as anti-bacterial agents.

3,373,199

WATER-MISCIBLE, STORAGE-STABLE AURAMINE BASE SOLUTION AND PROCESS OF PREPARING SAME

Werner Victor Cohen, Glen Farms, Md., and Eugene Coley Dietemann, Woodstown, N.J., assignors to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Filed May 28, 1962, Ser. No. 197,921
4 Claims. (Cl. 260—566)

1. A water-miscible, storage-stable, coloring composition of matter consisting essentially of a solution of auramine base in a solvent consisting of mixtures of acetic acid with hydroxyacetic acid containing the latter in a quantity not exceeding 30% by weight, said solution being essentially free of mineral acids, inorganic salts, salts of auramine base, and Michler's ketone, said solution being free of moisture in excess of 1.5% by weight and also free of acetic salts in excess of about 3% by weight.

3. A process for preparing a water-miscible, storage-stable, solution of auramine base, which comprises

(1) reacting auramine with a water-soluble alkali whereby to produce auramine base,

(2) filtering off the latter and drying the same at a temperature not exceeding 60° C. whereby to minimize hydrolysis of the base during said drying step, and

(3) dissolving the dried base at a temperature not exceeding 60° C. in a solvent consisting of mixtures of acetic acid with hydroxyacetic acid containing the latter in a quantity not exceeding 30% by weight, dissolving step excluding contamination of the solution with moisture in a quantity exceeding 1.5% by weight.

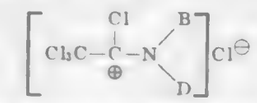
3,373,200

TRIHALOTHIONOACETAMIDES

Lowell R. Smith, St. Louis, and Angelo John Speziale, Creve Coeur, Mo., assignors to Monsanto Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Filed July 22, 1963, Ser. No. 296,427
1 Claim. (Cl. 260—566)

1. An iminium salt of the formula



wherein B and D respectively have from 1 to 10 carbon atoms and are alkyl radicals.

3,373,201

CONTINUOUS PROCESS FOR THE PRODUCTION OF CHOLINE CHLORIDE

Cyrille Van Eygen, Boitsfort, Belgium, assignor to UCB (Union Chimique-Chemische Bedrijven) S.A.

No Drawing. Filed Oct. 23, 1965, Ser. No. 504,236
Claims priority, application Great Britain, Nov. 4, 1964, 44,989/64
11 Claims. (Cl. 260—567.6)

1. A continuous process for the production of an aqueous solution of choline chloride which comprises continuously introducing a stream of an aqueous solution of tri-

methylamine hydrochloride and a stream of liquid ethylene oxide in excess referred to the stoichiometric quantity, into a first reaction zone subjected to agitation, which is substantially free from gaseous phase and which is at a temperature of from at least 60° C. to at most 120° C. and at a pressure of 5 to 20 atmospheres, passing the resulting reaction mixture through a second reaction zone which is substantially free from agitation, which is substantially free from gaseous phase and which is at a temperature of from at least 60° C. to at most 120° C. and at a pressure of 5 to 20 atmospheres and finally passing the reaction mixture withdrawn from said second zone through a concentration zone wherein excess ethylene oxide is evaporated off and the reaction mixture is concentrated, thus obtaining an aqueous solution of choline chloride ready for use.

3,373,202

METHOD OF PREPARING TETRAETHYLAMMONIUM DECAHYDRODECABORATES

Joseph M. Makhlouf, Mars, and Gerald T. Heffernan, Butler, Pa., assignors to Callery Chemical Company, Pittsburgh, Pa., a corporation of Pennsylvania

No Drawing. Filed Sept. 14, 1966, Ser. No. 579,198

3 Claims. (Cl. 260—567.6)

1. A method of preparing tetraethylammonium decahydrodecaborate comprising the steps of thermally decomposing tetraethylammonium borohydride under an inert non-oxidizing atmosphere and recovering the tetraethylammonium decahydroborate.

3,373,203

PREPARATION OF DECAHYDRODECABORATES

Joseph M. Makhlouf, Mars, and William V. Hough, Gibsonia, Pa., assignors to Callery Chemical Company, Pittsburgh, Pa., a corporation of Pennsylvania

No Drawing. Filed Sept. 14, 1966, Ser. No. 579,220

6 Claims. (Cl. 260—567.6)

1. A method of preparing a decahydrodecaborate salt comprising thermally decomposing under an inert atmosphere an octahydrotriborate of the formula MB_3H_8, where M is potassium, cesium, tetramethylammonium, or tetraethylammonium and recovering the decahydrodecaborate salt.

3,373,204

PROCESS FOR PREPARING OXYALKYLENE AMINES

Ralph A. Hales, West Chester, Pa., and Francis A. Hughes, Wilmington, Del., assignors to Atlas Chemical Industries, Inc., Wilmington, Del., a corporation of Delaware

No Drawing. Filed Apr. 15, 1964, Ser. No. 360,129

7 Claims. (Cl. 260—570.7)

Process of producing secondary amines which comprises reacting in the liquid phase a polyoxyalkylene derivative of phenol, alcohol, or amine with an aminating agent at a temperature from 200° C. to 275° C. for at least two hours in the presence of a Raney metal catalyst, with water evolution as it is formed, and recovering a reaction product predominating in secondary amines.

3,373,205

STABILIZED COMPOSITION OF AROMATIC DIAMINES

Duncan J. Crowley, deceased, late of Penns Grove, N.J., by Helen T. Crowley, executrix, Penns Grove, N.J., assignor to E. I. du Pont de Nemours and Company

No Drawing. Filed May 27, 1965, Ser. No. 459,469

5 Claims. (Cl. 260—578)

1. A stabilized composition consisting essentially of an aromatic amine selected from the group consisting of m-phenylenediamine and 2,4-toluylenediamine and from about 0.001 to 0.5% by weight of said amine of a thiol ester selected from the group consisting of diphenyl dithiolisophthalate, dibenzyl dithiolisophthalate, di-n-amyl dithiolisophthalate and benzyl thiolbutyrate.

5. A process for stabilizing an aromatic amine selected from the group consisting of m-phenylenediamine and 2,4-toluylenediamine which comprises incorporating in said amine from about 0.001 to 0.5% by weight of said amine of a thiol ester selected from the group consisting of diphenyl dithiolisophthalate, dibenzyl dithiolisophthalate, di-n-amyl dithiolisophthalate and benzyl thiolbutyrate.

3,373,206

PROCESS FOR MANUFACTURE OF ALIPHATIC ARALKYL KETONES

André Rocca, Bolbec, France, assignor to Oril S.A., Paris, France

No Drawing. Filed Sept. 20, 1965, Ser. No. 488,778

Claims priority, application Great Britain, Sept. 25, 1964, 39,261/64

6 Claims. (Cl. 260—590)

Process for manufacture of aliphatic aralkyl-ketones by reacting an organo-magnesium compound with an allyl halide, isomerizing the product to shift the double bond, reacting the product with an organic peroxide to produce a diol-1,2, and converting the diol into a ketone of desired structure by heating in the presence of an arylsulphonic acid catalyst.

3,373,207

IONYLIDENETHYL PHOSPHONIUM SALTS AND A PROCESS FOR PREPARING THE SAME

Axel Nuerrenbach, Wilhelm Sarnecki, and Werner Reif, Ludwigshafen (Rhine), Germany, assignors to Badische Anilin- & Soda-Fabrik Aktiengesellschaft, Ludwigshafen (Rhine), Germany

No Drawing. Filed May 19, 1964, Ser. No. 368,685

Claims priority, application Germany, May 24, 1963, B 72,042

The portion of the term of the patent subsequent to Dec. 27, 1983, has been disclaimed

3 Claims. (Cl. 260—606.5)

Production of quaternary β-ionylidenethyl phosphonium salts by reacting a carboxylic ester of β-ionylidenethanol with a tertiary phosphine and an acid or with the hydrosalt of a tertiary phosphine in a solvent or diluent at −20° C. to 120° C.

3,373,208

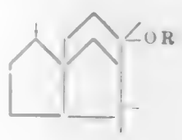
CEDROL ETHERS

Jack H. Blumenthal, Oakhurst, N.J., assignor to International Flavors & Fragrances Inc., New York, N.Y., a corporation of New York

No Drawing. Filed May 20, 1966, Ser. No. 551,535

5 Claims. (Cl. 260—611)

1. A lower aliphatic ether of cedrol useful as a perfume and having the formula



wherein R is selected from the group consisting of methyl, ethyl, propyl, butyl, allyl and methallyl.

3,373,209

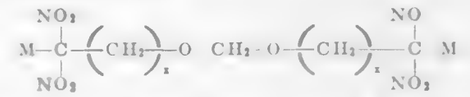
BIS(METALLO-DINITROALKYL) FORMALS AND PREPARATION THEREOF

Donald J. Glover, Bowie, Md., assignor to the United States of America as represented by the Secretary of the Navy

No Drawing. Filed Aug. 29, 1962, Ser. No. 220,944

4 Claims. (Cl. 260—615)

1. Bis(metallo-dinitroalkyl) formals having the following structural formula:



wherein M is an alkali metal selected from the group consisting of lithium, sodium and potassium and x is 0, 1, 2 or 3.

3. The method of preparing bis(metallo-dinitroalkyl) formals which comprises reacting a bis(trinitroalkyl) formal with hydrogen peroxide in the presence of a mutual solvent, adding an alkali metal hydroxide to the resultant solution and recovering a bis(metallo-dinitroalkyl) formal.

3,373,210

PROCESS FOR THE PRODUCTION OF ALKYLPHENOLS

Fumihiko Nishio and Reichi Oi, Ashigara-Kamigun, Kanagawa, Japan, assignors to Fuji Shashin Film Kabushiki Kaisha, Kanagawa, Japan

No Drawing. Filed Oct. 22, 1965, Ser. No. 502,275

Claims priority, application Japan, Nov. 4, 1964, 39/62,399

7 Claims. (Cl. 260—624)

1. A process for the production of an alkylphenol which comprises reacting a phenol with diisobutylene in the presence of methanol using sulfuric acid as a catalyst, the volume of the methanol being from ½ to 2 times the volume of sulfuric acid in the system.

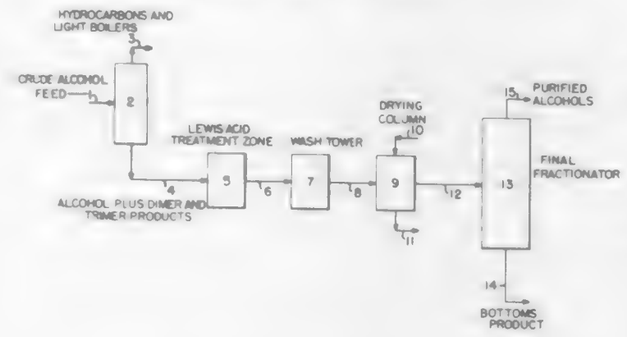
3,373,211

PURIFICATION OF ALCOHOLS BY TREATMENT WITH ANHYDROUS LEWIS ACIDS

Rhea N. Watts, deceased, late of St. Francisville, La., by Beulah Smith Watts, legal representative and sole heir, St. Francisville, La., David Edward Gensheimer, Calvert City, Ky., and Joseph Kern Mertzweiller, Baton Rouge, La., assignors to Esso Research and Engineering Company, a corporation of Delaware

Continuation of application Ser. No. 268,167, Dec. 28, 1962. This application Oct. 31, 1966, Ser. No. 591,019

8 Claims. (Cl. 260—643)



1. A process for purifying C_6 to C_{16} alcohols selected from the group consisting of oxo alcohols and alcohols prepared by the oxidation and subsequent hydrolysis of aluminum alkyls and containing between about 0.01 and about 1.0 wt. percent of carbonyl compound impurities in mixture therewith which consists essentially of contacting said alcohols with from 0.5 to 50 grams per liter of a substantially anhydrous material selected from the group consisting of aluminum chloride, boron trifluoride and zinc chloride at temperatures from about room temperature to below the boiling point of the alcohol for a sufficient time to convert said carbonyl compounds to higher boiling compounds, neutralizing the treated alcohol with caustic, washing the neutralized mixture with water and then distilling the treated mixture to recover the purified alcohols overhead substantially free of carbonyl compounds.

3,373,212

CERTAIN 2,3-DINITRO-5,8-ALKANO-5,6,7,8-TETRAHYDRONAPHTHALENES

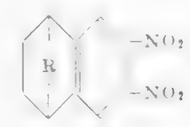
Hiroshi Tanida, Osaka-shi, and Ryonosuke Muneyuki, Itami-shi, Japan, assignors to Shionogi & Co., Ltd., Osaka-shi, Japan

No Drawing. Original application Jan. 22, 1965, Ser. No. 427,470, now Patent No. 3,336,331, dated Aug. 15, 1967. Divided and this application Apr. 25, 1967, Ser. No. 647,269

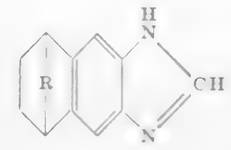
Claims priority, application Japan, Jan. 24, 1964, 39/3,392, 39/3,393

6 Claims. (Cl. 260—645)

2,3 - dinitro-5,8-alkano-5,6,7,8-tetrahydronaphthalenes of the formula



which are obtained by nitrating the corresponding 5,8-alkano - 5,6,7,8 - tetrahydronaphthalenes, are useful intermediates in the production of 5,8-alkano - 5,6,7,8-tetrahydro - 1H - naphtho[2,3-d]imidazoles of the formula



which are useful analgesic agents.

3,373,213

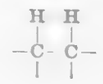
PROCESS FOR DEHYDROGENATING HYDROCARBONS

Israel S. Pasternak and Mohan Vadekar, Sarnia, Ontario, Canada, and Choo Seng Giam, Irvine, Calif., assignors to Esso Research and Engineering Company, a corporation of Delaware

No Drawing. Filed July 29, 1965, Ser. No. 475,884

18 Claims. (Cl. 260—666)

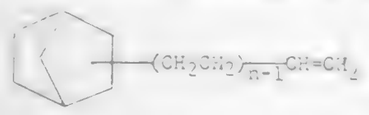
1. A process for producing an unsaturated organic compound from an organic feedstock having 2 to 20 carbon atoms and containing at least one



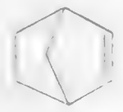
group which comprises a vapor phase reaction of said feedstock at a temperature in the range of 800° to 1400° F. with at least 0.25 mole of oxygen per mole of feed, at least 0.5 mole of H_2S per mole of oxygen and at least 0.001 mole of at least one halogen material per mole of said feed said halogen being selected from the group consisting of free halogens and hydrogen halides.

3,373,214
HIGH MOLECULAR WEIGHT COMPOUNDS CONTAINING AN ALIPHATIC-SUBSTITUTED BICYCLOHEPTANE STRUCTURE
Erich Marcus, Charleston, Donald L. MacPeek, South Charleston, and Samuel W. Tinsley, Charleston, W. Va., assignors to Union Carbide Corporation, a corporation of New York
No Drawing. Filed Jan. 17, 1966, Ser. No. 520,870
16 Claims. (Cl. 260—666)

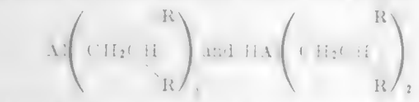
1. The process for the production of high molecular weight alkenylbicycloheptyl compounds of the formula:



wherein *n* is an integer of from 1 to 16, which process comprises the steps of (a) bringing a bicycloheptene compound of the formula:

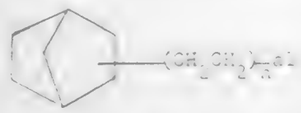


into reactive admixture with an isoalkylaluminum compound of the formula selected from the group:



wherein each R, independently, designates an alkyl radical of from 1 to 4 carbon atoms, at a temperature of from about 70° C. to about 200° C., for a period of time sufficient to produce a bicycloheptylaluminum compound containing bicycloheptylaluminum units of the formula:

(b) bringing said bicycloheptylaluminum compound into reactive admixture with at least one mole of ethylene per bicycloheptylaluminum unit thereof, in the absence of a catalyst, at a temperature of from about 70° C. to about 200° C., for a period of time sufficient to produce an ethylenically grown bicycloheptylalkylaluminum compound containing bicycloheptylalkylaluminum units of the formula:



wherein *n* is as defined above, and (c) bringing said ethylenically grown bicycloheptylalkylaluminum compound into reactive admixture with at least one mole of ethylene per bicycloheptylalkylaluminum unit thereof, at a temperature of from about 25° C. to about 350° C. and in contact with an alumnium displacement catalyst when said temperature is in the range of from about 25° C. to about 200° C., for a period of time sufficient to produce said high molecular weight alkenylbicycloheptyl compound.

3,373,215
ACID CATALYZED ISOMERIZATION OF CYCLIC-MONOOLEFINS
Paul R. Stapp, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Filed June 27, 1966, Ser. No. 560,815
8 Claims. (Cl. 260—666)

1. A process for isomerizing a cyclic-monoolefin containing from 6 to 15 carbon atoms in the ring to a mixture of cyclic-monoolefins having at least one less carbon atom in the ring which comprises contacting said cyclic-monoolefin with an acid catalyst in an inert diluent under isomerizing conditions at a temperature below 300° C.

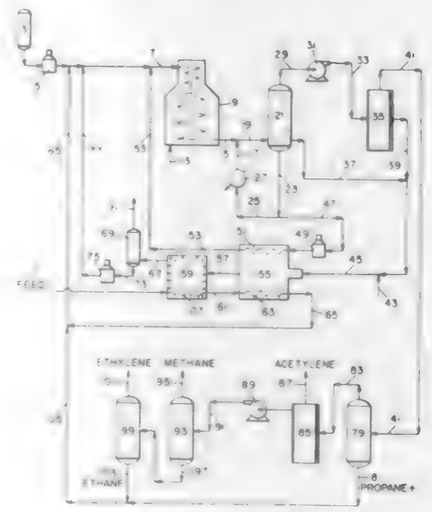
3,373,216
PREPARATION OF POLYALKENYL AROMATIC HYDROCARBONS FROM AROMATIC HYDROCARBONS AND DIOLEFINS
Erik Tornqvist, Roselle, Union, N.J., assignor to Esso Research and Engineering Company, a corporation of Delaware
No Drawing. Filed Dec. 2, 1965, Ser. No. 511,228
10 Claims. (Cl. 260—668)

1. A process for the formation of polyalkenyl-aromatic polymers which comprises contacting an aliphatic diolefin having from 4 to 6 carbon atoms and an aromatic compound selected from the group consisting of unsubstituted mononuclear aromatic compounds, C_1 to C_4 alkyl substituted mononuclear aromatic compounds and tetrahydronaphthalene with a catalyst system comprising a chromium halide compound and a lower alkyl aluminum halide compound at polymerization temperatures for a time sufficient to recover a yield of said polymers.

3,373,217
HYDROGENOLYSIS OF SYM-DIPHENYLETHANE TO ETHYLBENZENE
Robert M. Engelbrecht and Richard N. Moore, St. Louis, and James C. Hill, Chesterfield, Mo., assignors to Monsanto Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Filed Mar. 22, 1967, Ser. No. 624,988
10 Claims. (Cl. 260—668)

A process for the production of ethylbenzene by thermally hydrocracking bibenzyl (1,2-diphenylbenzene).

3,373,218
PRODUCTION OF ETHYLENE AND ACETYLENE
Seymour C. Schuman, P.O. Box 252, Rocky Hill, N.J. 08553
Filed June 7, 1965, Ser. No. 462,000
17 Claims. (Cl. 260—679)



A process for the production of ethylene and acetylene as major co-products by reaction of a light hydrocarbon with elemental sulfur in proportions corresponding to from about 0.25 to 2.5 moles of S_2 per moles of C_2 and heavier hydrocarbons in the total feed, and at a temperature from 1450° F. to 1650° F., and at other specified conditions of pressure and contact time.

3,373,219
PROCESS FOR THE SELECTIVE HYDROGENATION OF C_4-FRACTIONS
Walter Krönig, Wilhelm Mayrhofer, and Gerhard Scharfe, Leverkusen, and Kurt Halcour, Cologne-Stammheim, Germany, assignors to Farbenfabriken Bayer Aktiengesellschaft, Leverkusen, Germany, a corporation of Germany
No Drawing. Filed Oct. 26, 1966, Ser. No. 589,506
Claims priority, application Germany, Nov. 30, 1965, F 47,785
7 Claims. (Cl. 260—681.5)

The disclosure concerns selective hydrogenation with gaseous hydrogen of C_4-acetylenes in butadiene-containing C_4-fractions (e.g., at 15–50° C. and e.g., at 2–12 atm.) in trickle-phase through fixed palladium/lithium aluminum spindle-containing carrier catalysts prepared by heating lithium solution-impregnated highly active aluminum oxide (e.g., at 900–1300° C.) to form the spinel followed by palladium solution-impregnation thereof and reduction to palladium metal thereon.

3,373,220
ETHYLENE PRODUCTION
Harold J. Hepp, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Filed Aug. 3, 1964, Ser. No. 386,868
6 Claims. (Cl. 260—683)

Propane is converted to methane and ethylene by thermal hydrogenolysis followed by cracking, with recycle of hydrogen and heavy products of the thermal cracking to the hydrogenolysis.

3,373,221
REACTION PRODUCTS OF UNSATURATED ESTERS OF POLYEPOXIDES AND UNSATURATED CARBOXYLIC ACIDS, AND POLYISOCYANATES
Clayton A. May, Orinda, Calif., assignor to Shell Oil Company, New York, N.Y., a corporation of Delaware
No Drawing. Filed Nov. 4, 1964, Ser. No. 408,772
16 Claims. (Cl. 260—837)

Compositions are prepared from polyepoxides and unsaturated mono and dicarboxylic acids forming ester linkages. These esters are further reacted with polyisocyanates or polythioisocyanates. The ratio of polyepoxide to polycarboxylic acid ranges from 0.5 to 2.0 equivalents. Additionally from 1 to 70% of another ethylenically unsaturated monomer may be present. In an example 68.8 parts of the diglycidyl ether of bisphenol A were combined with 31.2 parts of glacial methacrylic acid and 0.43 parts of tetramethyl ammonium chloride and heated at 115° C. for 1 hr. and 15 min. to form a liquid ester. This was combined with styrenes to form a 50% styrene solution. 100 pts. of the polyester styrene soln. were combined with 6 pts. toluene diisocyanate incrementally added, and cured with a peroxide at 115° C.

3,373,222
COMPOSITIONS CONTAINING POLYAMIDES, POLYOLEFINS AND CARBOXYLATED POLYETHYLENE
Robert G. Armstrong, Chicago Heights, Ill., assignor to Continental Can Company, Inc., New York, N.Y., a corporation of New York
No Drawing. Filed Sept. 10, 1965, Ser. No. 486,559
20 Claims. (Cl. 260—857)

Homogeneous polymeric blends resistant to permeation by organic fluids may be prepared from 40–60% by weight of a polyolefin resin, 40–60% by weight of a polyamide resin, and 2–10% by weight of a carboxylated polyethylene having an acid number from 2.75 to 50.

3,373,223
COMPOSITIONS CONTAINING POLYAMIDES, POLYOLEFINS, AND ETHYLENE-ACRYLIC OR METHACRYLIC ACID COPOLYMERS
Robert G. Armstrong, Chicago Heights, Ill., assignor to Continental Can Company, Inc., New York, N.Y., a corporation of New York
No Drawing. Filed Sept. 28, 1965, Ser. No. 491,029
20 Claims. (Cl. 260—857)

Homogeneous polymeric blends resistant to permeation by organic fluids may be prepared from 25–90% of a polyolefin resin, 5–70% by weight of a polyamide resin, and 1–10% by weight of an ethylene-acrylic or methacrylic acid copolymer wherein the acid component is present in the range of 1–10 mole percent.

3,373,224
COMPOSITIONS CONTAINING POLYAMIDES, POLYOLEFINS AND ETHYLENE-ALPHA, BETA UNSATURATED ACID COPOLYMERS NEUTRALIZED WITH SODIUM IONS
Robert B. Mesrobian, Hinsdale, Paul E. Sellers, Oak Forest, and Domas Adomaitis, Chicago, Ill., assignors to Continental Can Company, Inc., New York, N.Y., a corporation of New York
Continuation-in-part of application Ser. No. 376,945, June 22, 1964. This application June 19, 1967, Ser. No. 652,990
8 Claims. (Cl. 260—857)

A composition having improved resistance to the permeation of fluids is comprised of a homogeneous mixture of a polyolefin resin, a water insoluble polyamide resin, and a metal ion-containing resin composed of a copolymer containing at least 50 mole percent ethylene based on the copolymer and an α,β-ethylenically unsaturated monocarboxylic acid, the acid monomer content of the copolymer being from 0.2 to 25 mole percent based on the copolymer, the copolymer having at least 10 percent of the carboxylic acid groups thereof neutralized by sodium ions.

3,373,225
TRANSPARENT FLAME RETARDANT UNSATURATED POLYESTER RESINS CONTAINING ANTIMONY TRIHALIDE
Edward R. Degginger, Syracuse, N.Y., assignor to Allied Chemical Corporation, New York, N.Y., a corporation of New York
No Drawing. Filed Oct. 23, 1965, Ser. No. 504,196
1 Claim. (Cl. 260—863)

Hard, transparent, flame retardant unsaturated polyester resins are prepared by reacting a halogenated unsaturated polyester resin, a vinyl monomer, an antimony tri-halide flame retardant and a catalyst.

3,373,226
POLYMERIC FILMS COMPRISING A POLYPHENYLENE OXIDE AND BLENDS THEREOF WITH POLYSTYRENE
Alastair C. Gowan, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
No Drawing. Filed Aug. 2, 1965, Ser. No. 476,650
21 Claims. (Cl. 260—874)

13. A process for forming a craze resistant, ductile film from a blend of a polymeric composition consisting of a polyphenylene oxide and a polystyrene which comprises the steps of:

(a) forming a film from said polymeric composition
(b) cross-linking the polymeric components of said film
(c) contacting the film with a dilatant capable of causing said film to swell without dissolving
(d) removing the swollen film from contact with said dilatant
(e) securing said film at its edges to prevent shrinkage during drying
(f) drying said film.

3,373,227

POLYMERIZATION OF ABS RESINS IN THE PRESENCE OF LOW MOLECULAR WEIGHT, THERMALLY INITIATED POLYSTYRENE

Arnold B. Finestone, Leominster, Mass., and Gerald Goldberg, Parkersburg, W. Va., assignors to Foster Grant Co., Inc., Leominster, Mass., a corporation of Delaware

No Drawing. Continuation-in-part of application Ser. No. 416,645, Dec. 7, 1964. This application Apr. 24, 1967, Ser. No. 632,923

18 Claims. (Cl. 260—880)

High impact solvent resistant moldable polymers having good flow characteristics prepared by copolymerizing at least one monovinyl aromatic compound, at least one monomer, such as acrylonitrile or methacrylonitrile, at least one rubbery polymer, and a low molecular weight polystyrene prepared by thermal initiation.

3,373,228

POLYVINYL CHLORIDE RESINS HAVING IMPROVED FUSING PROPERTIES

Emmett Jean Glazer, Stow, and Edwin Studley Smith, Cuyahoga Falls, Ohio, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

No Drawing. Continuation-in-part of application Ser. No. 335,401, Jan. 2, 1964. This application Oct. 5, 1966, Ser. No. 584,344

4 Claims. (Cl. 260—884)

More readily processed thermoplastic resins characterized by reduced fusing time requirements during elevated temperature, high shear processing are formed by polymerization of a "soft" resin in the presence of a "hard" resin. A resin such as vinyl chloride forms the core of the particle and is surrounded by a shell of a softer resin such as a vinyl chloride vinylidene chloride polymer.

3,373,229

VINYL POLYMER COMPOSITIONS

David Joseph Philpot, Stockton-on-Tees, England, and David Victor Wise, Sarnia, Ontario, Canada, assignors to Imperial Chemical Industries Limited, London, England, a corporation of Great Britain

No Drawing. Continuation-in-part of application Ser. No. 297,688, July 25, 1963. This application Jan. 10, 1966, Ser. No. 519,457

Claims priority, application Great Britain, Aug. 1, 1962, 29,568/62

8 Claims. (Cl. 260—899)

There is provided a rigid polyvinyl chloride composition containing high molecular weight polymers of methyl methacrylate, or copolymers of methyl methacrylate with a small amount of an alkyl acrylate, as processing aids. The methyl methacrylate polymers or copolymers have a reduced specific viscosity (measured on at 0.1% solution in chloroform at 20° C.) of at least 4.5.

3,373,230

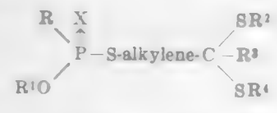
PHOSPHONATED MERCAPTALS AND MERCAPTOLES

Edward Nelson Walsh, Chicago Heights, Ill., and David J. Broadbent, San Jose, Calif., assignors to Stauffer Chemical Company, New York, N.Y., a corporation of Delaware

No Drawing. Filed July 9, 1964, Ser. No. 381,512

5 Claims. (Cl. 260—949)

Phosphonated mercaptals and mercaptoles corresponding to the formula



in which "alkylene" means a divalent saturated aliphatic having from 1 to 3 carbon atoms; X is oxygen or sulfur; R is lower alkyl or phenyl; R^1 is lower alkyl; R^2 and R^4 are independently lower alkyl, phenyl or halo-substituted phenyl; and R^3 is lower alkyl or hydrogen. The above compounds are effective as pesticides. Representative compounds are O-ethyl-S-[2,2-bis(ethyl hio)propyl-1]ethylphosphonodithioate, O-ethyl-S-[2,2-bis(ethylthio)propyl-1]methylphosphonodithioate, O-ethyl-S-[2,2-bis(4-chlorophenyl)propyl-1]methylphosphonodithioate and O-ethyl-S-[2,2-bis(butylthio)propyl-1]ethylphosphonodithioate.

3,373,231

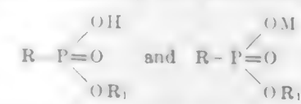
MONOESTERS OF PHOSPHONIC ACIDS

Emile Cherbuliez and Joseph Rabinowitz, Geneva, Switzerland, assignors to Hooker Chemical Corporation, Niagara Falls, N.Y., a corporation of New York

No Drawing. Continuation-in-part of application Ser. No. 230,315, Oct. 11, 1962. This application Nov. 24, 1965, Ser. No. 509,646

8 Claims. (Cl. 260—956)

1. A compound selected from the group consisting of compounds represented by the formulas



wherein R is selected from the group consisting of phenyl, halogeno-phenyl and nitro-phenyl, R_1 is alkenyl of 2 to 18 carbon atoms, and M is selected from the group consisting of alkali metals and alkaline earth metals.

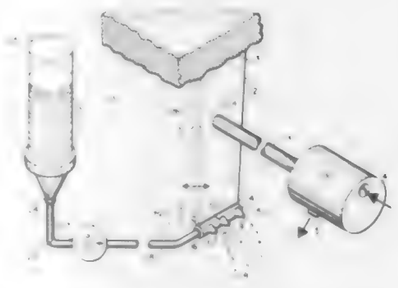
3,373,232

SONIC METHOD OF PRODUCING PARTICLES FROM A LIQUID

Boyd A. Wise and Larry M. Ogden, Penfield, N.Y., assignors to General Dynamics Corporation, a corporation of Delaware

Original application Oct. 2, 1964, Ser. No. 401,097. Divided and this application Nov. 21, 1966, Ser. No. 595,839

4 Claims. (Cl. 264—9)



The disclosure describes a method of producing uniform particles from a viscous liquid. The liquid is extruded at a uniform rate through the free end of a vibrating blade which accelerates the liquid in one direction to impart an inertia to a leading segment of the liquid and then reverses its direction so that the leading segment is pulled apart from the stream by virtue of the inertia imparted to the leading segment.

3,373,233

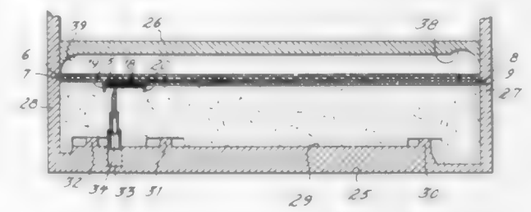
METHOD OF MOLDING COUNTERTOPS

Svend B. Rondum, Bradford, Pa., assignor to Plexowood, Inc., Bradford, Pa., a corporation of Pennsylvania

Filed Mar. 30, 1964, Ser. No. 355,669

7 Claims. (Cl. 264—25)

1. In the molding of a countertop, the method including steps of placing a mixture of wood chips and resin into a mold having a body portion and a backsplash portion, inserting a deformable connecting strip between the body portion and backsplash portion, covering said connecting strip with means for preventing adhesion, placing a plastic overlay over the body portion, the backsplash portion and the connecting strip, applying pressure and heat to the assembled plastic overlay, body portion and



backsplash portion thereby simultaneously molding a horizontal body and a backsplash on a common plane at the same time anchoring the connecting strip to said body and backsplash and at the same time molding the laminated plastic overlay that is bonded to said body and backsplash by the molding operation.

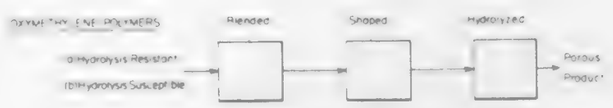
3,373,234

FORMATION OF CELLULAR OXYMETHYLENE POLYMER STRUCTURES

Arthur W. Schnizer, Corpus Christi, Tex., and Walter E. Heinz, Frankfurt am Main, Germany, assignors to Celanese Corporation, a corporation of Delaware

Filed July 28, 1964, Ser. No. 385,803

7 Claims. (Cl. 264—49)



Disclosed herein is a process for preparing strong, porous structures. In accordance with this invention, the structures are made by blending a mixture of two oxymethylene polymers which have different levels of resistance to alkaline hydrolysis, forming the mixture into a shaped article, and then at least partially removing one of the oxymethylene polymers by alkaline hydrolysis. This results in a strong, porous structure which is resistant to alkaline hydrolysis and which has cavities within the polymeric structure which results from the removal of the less resistant oxymethylene polymer.

ERRATUM

For Class 264—95 see:
Patent No. 3,372,920

3,373,235

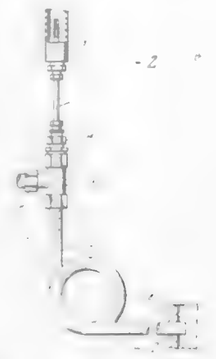
METHOD FOR PRODUCING POLYMERIC PARTICLES

Billy D. Rice, Pasadena, Tex., assignor to Petro-Tex Chemical Corporation, Houston, Tex., a corporation of Delaware

Filed Sept. 17, 1965, Ser. No. 487,986

9 Claims. (Cl. 264—143)

A method of separation of polybutene polymer from a solvent characterized by extruding the polymer at a positive pressure into an area of reduced pressure and impinging the polymer against an arcuate surface to achieve



further separation by volatilization of the solvent and particulation of the filament.

ERRATUM

For Class 264—310 see:
Patent No. 3,372,820

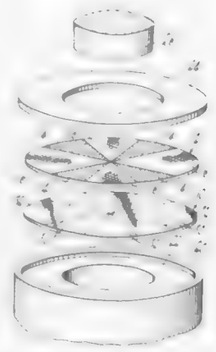
3,373,236

METHOD OF MAKING ROLLING SEAL DIAPHRAGMS

John F. Taplin, 15 Sewall St., West Newton, Mass. 02165

Filed Dec. 28, 1962, Ser. No. 248,049

8 Claims. (Cl. 264—313)



1. The method of manufacturing a rolling seal diaphragm which comprises the steps of

forming a blank from fabric defined by a multiplicity of threads in interlocking relationship to permit limited relative movement thereamong,

said fabric being compressible upon itself with rearrangement of said threads in directions tangential to imaginary circles around a center thereof,

said fabric being more readily compressible upon itself along a first of said directions in a first zone than along a second of said directions in a second zone, and

said fabric having upper and lower surfaces generally defined by said threads and spaced apart by an amount constituting the initial thickness of said fabric;

placing against at least one of said surfaces a deformable die to cooperate with said blank in forming a stack including said blank and said deformable die,

said deformable die including a third zone overlying said first zone and a fourth zone overlying said second zone,

said fourth zone being more readily compressible along said second of said directions than is said third zone along said first of said directions;

drawing said stack between male and female drawing dies to rearrange said threads and circumferentially compress said blank in directions including said first of said directions,

while simultaneously confining said stack in a thickness direction within and without said drawing dies to maintain said fabric throughout at a final thickness less than three times said initial thickness;

setting said fabric in the drawn configuration; and removing said deformable die.

3,373,237

METHOD OF FORMING DELUSTERED SHAPED ARTICLES OF SYNTHETIC RESINS

John A. Mihalik, Swarthmore, and Alfred H. Stewart, Jr., Collingdale, Pa., assignors to FMC Corporation, Philadelphia, Pa., a corporation of Delaware

No Drawing. Filed June 22, 1964, Ser. No. 377,123
5 Claims. (Cl. 264—316)

A method of forming delustered shaped articles of synthetic resins wherein an easily releasable sheet comprising a non-fibrous cellulosic sheet impregnated with finely-divided rubber particles is employed, is disclosed herein.

3,373,238

PROCESS FOR MOLDING MOLECULARLY ORIENTED PLASTIC CONTAINER CLOSURES

William J. Powers, Jr., Wilmington, Del., and Nathaniel C. Wyeth, Rosedale, Pa., assignors to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

Original application Feb. 21, 1964, Ser. No. 346,509, now Patent No. 3,250,417, dated May 10, 1966. Divided and this application Feb. 18, 1966, Ser. No. 528,438
2 Claims. (Cl. 264—322)

A bottle cap is formed by cold extruding a cylindrical slug of thermoplastic resin into an axially symmetrical opening in a die cavity, with the cavity defining the top and a wall depending from the edge of the top and terminating in a bead, whereby the molecules of the resin become preferentially circumferentially aligned and the resin entering the bead portion of the cavity becomes folded over upon itself.

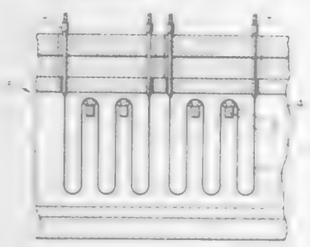
ELECTRICAL

3,373,239

HIGH-TEMPERATURE ELECTRIC FURNACE WITH MOLYBDENUM SILICIDE HEATER ELEMENTS

Ottmar Rubisch, Meitingen uber Augsburg, Germany, assignor to Siemens-Planiawerke Aktiengesellschaft fur Kohlefabrikate, Meitingen uber Augsburg, Germany, a German corporation

Filed June 16, 1965, Ser. No. 464,439
Claims priority, application Germany, June 18, 1964, S 91,595
2 Claims. (Cl. 13—25)



High-temperature electric furnace includes at least one molybdenum silicide heater element having two mounting terminals and having a glow portion forming a number of sequential meander loops between the terminals, the heater element being mounted in the furnace with the loops suspended from the terminals so as to have the bights of the loops alternately at top and bottom locations, ceramic structure supporting the glow portion between the terminals, and spacer means of molybdenum silicide interposed between the ceramic structure and the glow portion.

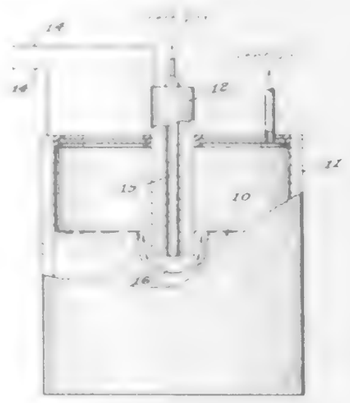
3,373,240

METHOD OF OPERATING AN ELECTRIC ARC FURNACE

Walter H. Boeckler, Gilbert S. Layne, and James O. Huml, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

Filed June 1, 1964, Ser. No. 371,547
2 Claims. (Cl. 13—34)

An improved method of operating an electric arc furnace by immersing a hollow electrode below the surface of the melt and passing an inert gas through the hollow electrode to form an envelope of inert gas between the electrode and the melt. By varying the flow rate of the



inert gas and consequently varying the size of the gas envelope, the electrical resistance between the electrode and the bath is controlled thereby controlling the power to the electric arc furnace.

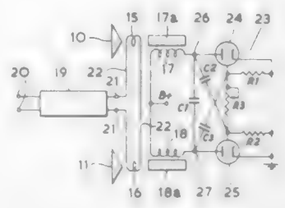
3,373,241

ELECTRONIC TREMULANT DEVICE PARTICULARLY FOR ELECTRONIC ORGANS

John Szabo, Kitchener, Ontario, Canada, assignor to Dominion Electrohome Industries Limited, Kitchener, Ontario, Canada

Continuation-in-part of application Ser. No. 211,597, July 23, 1962. This application Sept. 29, 1964, Ser. No. 400,180
10 Claims. (Cl. 84—1.25)

A tremulant effect is created electronically by alternately and periodically increasing and decreasing the intensity of sound reproduced by one loudspeaker while at the same time alternately and periodically decreasing and increasing the intensity of the sound reproduced by another loudspeaker by supplying out of phase signals to the field coils of the loudspeakers, both loudspeakers each having



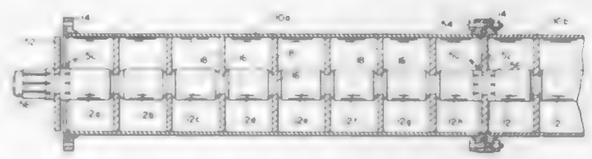
a voice coil supplied with an electrical signal to be reproduced.

3,373,242

RESILIENT INNER CONDUCTOR SUPPORT

Donald N. Sewell, Acton, Mass., assignor to Dielectric Products Engineering Company, Inc., Littleton, Mass., a corporation of Michigan

Continuation-in-part of application Ser. No. 555,147, June 3, 1966. This application Feb. 15, 1967, Ser. No. 616,298
19 Claims. (Cl. 174—21)



A resilient inner conductor support for use in coupling adjacent, axially-spaced inner conductor sections of a coaxial transmission line to allow, and provide mechanical and electrical compensation for, relative movement between the various portions of the transmission line. Each support includes rigid coupling rings secured to the ends of adjacent inner conductor sections and a relatively rigid beryllium copper connector located therebetween. No portion of the support protrudes beyond the outer circumference of the inner conductor sections. Each connector has a ring-shaped base of smaller diameter than the inner conductor sections and two, axially-spaced, flexible disc portions extending radially outwardly from the base, thereby defining an annular space, channel shaped in cross-section, for receiving a dielectric support that maintains the inner and outer conductors in coaxial relation. A flange at the outer circumference of each disc portion is secured to the adjacent coupling ring. In one disclosed embodiment, the connector is constructed of several circumferentially spaced, arcuate, channel-shaped in cross-section beryllium copper connector portions, each of which has a number of relief slots extending through its base portion and radially outwardly therefrom.

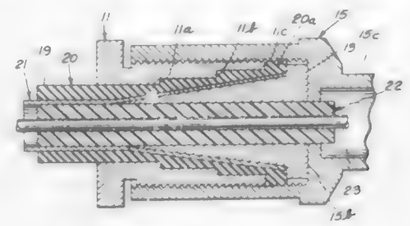
3,373,243

ELECTRICAL MULTICONDUCTOR CABLE CONNECTING ASSEMBLY

Robert M. Janowiak, Chicago, Joseph S. Conway, Freeport, and Walter J. Swistek, Chicago, Ill., and Edwin S. Oxner, Menlo Park, Calif., assignors, by mesne assignments, to The Bendix Corporation, Detroit, Mich., a corporation of Delaware

Continuation of application Ser. No. 451,675, Mar. 15, 1965, which is a division of application Ser. No. 48,534, Aug. 9, 1960, now Patent No. 3,209,287, dated Sept. 28, 1965. This application June 6, 1966, Ser. No. 587,338
6 Claims. (Cl. 174—89)

An electrical multi-conductor cable connecting assembly wherein a sleeve and collar coact to compress the jacket and shield of the cable between the collar and a tapered



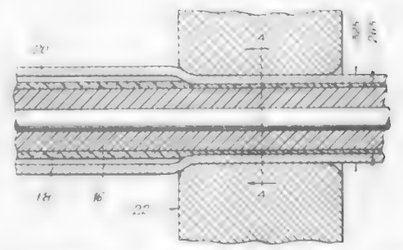
inner ferrule, with the cable inner conductor and di-electric passing centrally through the ferrule.

3,373,244

CO-AXIAL CABLE AND METHOD OF MAKING IT

John W. Holland, La Grange, Ill., assignor to Amphenol Corporation, Broadview, Ill., a corporation of Delaware

Filed Sept. 20, 1966, Ser. No. 580,743
9 Claims. (Cl. 174—102)



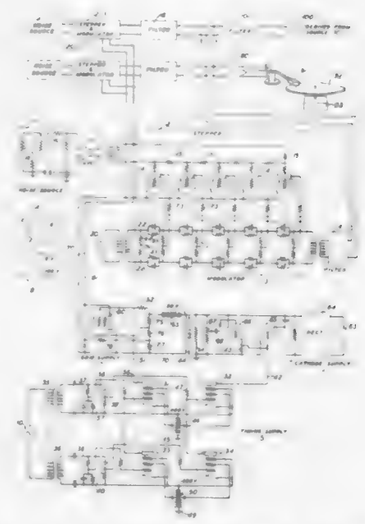
Co-axial cable having dielectric material between the outer and inner conductors, the dielectric material is of two layers, an inner solid non-compressible layer and an outer cellular compressible layer, the outer conductor being reduced in diameter on the outer layer which is thereby compressed, maintaining accuracy of dimensions of the conductors.

3,373,245

PRODUCTION OF CURRENT OF RANDOM VARIATION

Neal D. Newby, Leonia, N.J., and Henry E. Vaughan, Valley Stream, N.Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N.Y., a corporation of New York

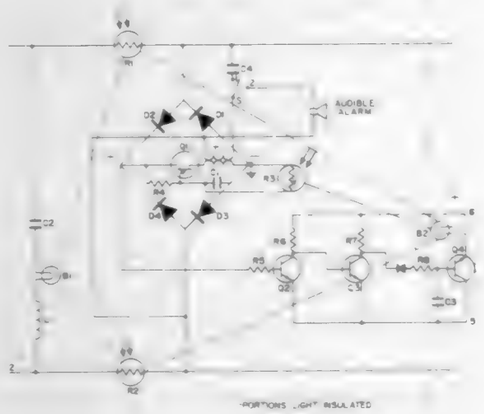
Filed Aug. 27, 1942, Ser. No. 456,356
4 Claims. (Cl. 178—22)



1. A circuit for producing currents having stepped amplitudes approximating random distribution in successive time intervals comprising a source of continuous

frequency noise waves, a group of trigger tubes having input electrodes coupled to said source with graduated increase of coupling from tube to tube, a loss pad divided into sections, means controlled from the output electrodes of said trigger tubes for effectively switching out individual sections of said loss pad in response to discharge current through respective trigger tubes, a timing circuit for blocking the inputs of said trigger tubes except for an instant at the beginning of each time interval and for restoring all trigger tubes at the end of each time interval, a source of voltage, an indicator, and a circuit for connecting said loss pad in series between said source of voltage and said indicator.

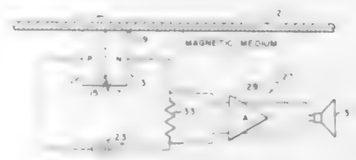
3,373,246
COUNTER-MEASURES SYSTEM FOR BLOCKING TELEPHONE LINES TO UNAUTHORIZED SIGNALS
Carlton Swain Moorefield, Fairfax County, Va. (6704 Edsall Road, Alexandria, Va. 22312)
Filed July 8, 1963, Ser. No. 293,497
5 Claims. (Cl. 179—2)



1. A protective device for a conductor of a communication instrument which uses a plurality of conductors as a signal and carrier means comprising,
light dependent elements series connected into said conductors,
means for insulating said elements for unwanted light,
a source of light within said insulating means,
means for detecting the signal used to announce an incoming call,
means connected to said means for detecting the signal to cause said light source to illuminate light dependent elements, said illumination decreasing the resistance of said light dependent elements,
means for detecting electrical energy on said conductors,
means connected to said electrical energy detector means for generating a noise signal in response to a predetermined amount of said electrical energy,
means for deactivating said noise generator under predetermined conditions in said conductors.

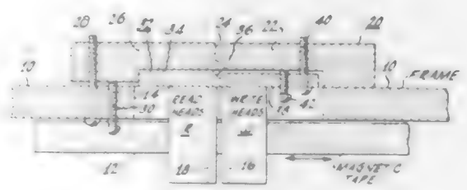
3,373,247
SEMI-CONDUCTOR JUNCTION MAGNETIC TAPE PLAYBACK HEAD
John F. Hyland, Fairfax County, Va. (914 Timber Lane, Vienna, Va. 22180)
Filed Apr. 29, 1963, Ser. No. 276,669
11 Claims. (Cl. 179—100.2)

1. A playback transducer arrangement for reproducing intelligence recorded on a magnetic medium comprising:
a semi-conductor body having at least one junction, said body being oriented relative to the magnetic medium so that said junction is substantially perpendicular and transverse to the direction of relative movement of said magnetic medium, by which movement any changes in the intelligence recorded on said medium produce magnetic flux changes affecting the flow of current through said junction;



means for reverse biasing said junction to secure operation in the linear operating range; and
output means connected in circuit with said semi-conductor body.

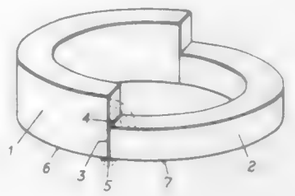
3,373,248
MAGNETIC TAPE TRANSPORT WITH AZIMUTH ADJUSTMENT
Solomon Baybick, Riverton, John B. Kelly, Haddonfield, and Anthony A. Sariti, Cherry Hill, N.J., assignors to Radio Corporation of America, a corporation of Delaware
Filed Apr. 1, 1964, Ser. No. 356,415
5 Claims. (Cl. 179—100.2)



A magnetic tape transport includes a read head unit and a write head unit. The units are collectively adjustable in azimuth relative to the direction of tape motion, one unit is adjustable relative to the other. The head units are fixed on respective fixed and movable portions of a one support member, which in turn has its fixed portion affixed to the movable portion of another support member having a fixed portion affixed to the tape transport frame.

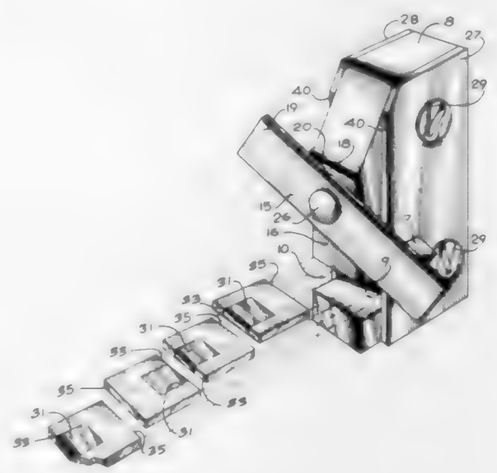
3,373,249
MAGNETIC ERASING HEAD
Gerold Schager, Vienna, Austria, assignor to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware
Filed Mar. 3, 1964, Ser. No. 348,945
Claims priority, application Austria, Mar. 6, 1963, A 1,751/63
5 Claims. (Cl. 179—100.2)

A magnetic core structure for an erasing head which will have a minimal stray field is built of two core parts separated by a gap and having one side of the parts bounding the gap in coplanar relationship, while one of the other sides of the parts bounding the gap



projects from the gap boundary surface with respect to the remaining side.

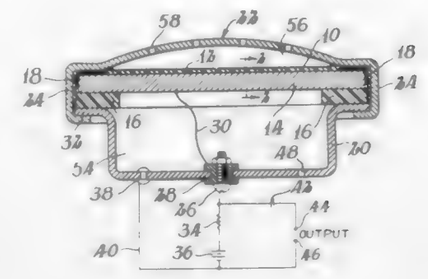
3,373,250
HAND HELD MULTI-CHANNEL MAGNETIC TAPE ERASER
Clarence H. Adams, 601 E. Armour, Kansas City, Mo. 64109
Filed Apr. 6, 1964, Ser. No. 357,669
7 Claims. (Cl. 179—100.2)



A hand held multi-channel magnetic tape eraser includes a plurality of magnetic field producing members which may be selectively stacked so as to correspond to respective channels on the tape, the members being individually rotatable for deactivation or replaceable with a non-magnetic member for selecting the channels to be erased.

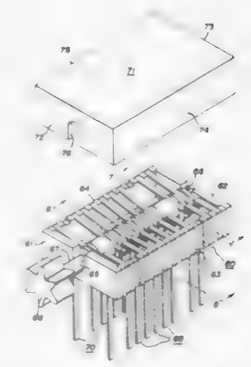
3,373,251
ELECTROSTATIC TRANSDUCER
Charles E. Seeler, Evanston, Ill., assignor to Shure Brothers Incorporated, a corporation of Illinois
Filed Feb. 23, 1965, Ser. No. 434,603
10 Claims. (Cl. 179—111)

1. The improvement of an electrostatic transducer comprising the combination of a porous backplate, said porous backplate having a textured surface formed by a plurality of closely spaced indentations and pores, a flexible film diaphragm positioned upon the textured surface of said porous backplate such that the film diaphragm is supported by only distributed points, ridges and small areas of the textured surface to form a plurality of vibratile areas on the diaphragm where the latter is spaced from the backplate, an acoustical impedance at the side of the backplate opposite the side contacting the diaphragm, said porous backplate having a plurality of air paths extending therethrough to place the air spaces beneath the vibratile areas in air communication with said acoustical impedance, a layer of electrically conductive material on the side of the diaphragm opposite the side



in contact with the backplate, and electrical conductors connected to the conductive layer on the diaphragm and to the backplate to permit electrical connections to be made to the transducer.

3,373,252
MULTIPLE POSITION SWITCH HAVING MULTIPLE SETS OF CONTACTS AND CAMS
Sanjar Ghaem-Maghami and Julius Kemeny, Liverpool, N.Y., assignors to General Electric Company, a corporation of New York
Filed July 15, 1966, Ser. No. 565,529
8 Claims. (Cl. 200—6)

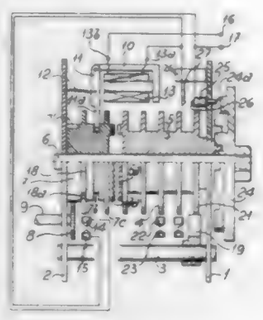


In a tuner, a first plurality of contacts engage a second plurality of contacts to form a plurality of contact pairs. Each of the pairs is individually controlled by individual cams mounted on a single shaft. The cams are of differing contours and mutually angularly displaced to effect a closing of different pairs in different positions of the shaft.

3,373,253
PROGRAM SWITCH
Jean Jullien Davin, Valence-sur-Rhone, France, assignor to Crouzet S.r.l., Milan, Italy
Continuation-in-part of application Ser. No. 443,895, Mar. 30, 1965. This application Oct. 21, 1965, Ser. No. 499,948
Claims priority, application Italy, Feb. 20, 1965, 3,570/65
9 Claims. (Cl. 200—38)

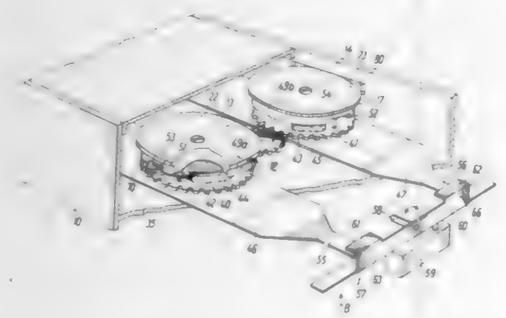
The program control cams of a program switch are driven by a rotating coaxial wheel through an overriding clutch when the clutch is engaged by its solenoid operated actuator. The energizing circuit of the actuator

has three parallel switches, the first being closed once during each revolution of the wheel, the second by the pawl of a ratchet attached to the control cams while the



ratchet turns through one tooth spacing, and the second by a cam attached to the control cams. The control cams operate switches in an external circuit such as that of a washing machine.

3,373,254
TIME SWITCHING DEVICE FOR CONTROLLING A HEATING SYSTEM
Hans Berger, Schonaich, Germany, assignor, by mesne assignments, to Zentra Albert Burkle Kommanditgesellschaft, Schonaich, Germany, a limited partnership
Filed Jan. 24, 1966, Ser. No. 522,486
Claims priority, application Austria, Jan. 22, 1965, A 537/65
7 Claims. (Cl. 200—38)

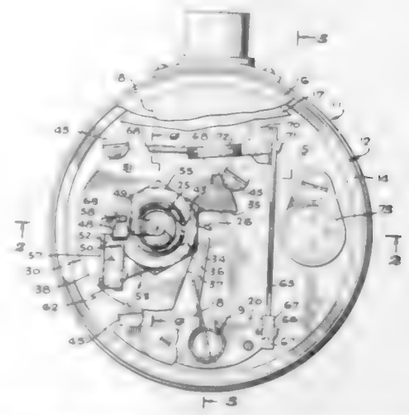


A time switching device for controlling a central heating system in accordance with a daily, weekly or monthly program including two indexing devices. Each device comprises a sprocket wheel sandwiched between a disk having a flange with a cam track on the radial surface thereof and a leaf spring and the sprocket wheel is provided with a slot for receiving a ball which is urged into contact with the cam track by the leaf spring. A recess is provided in the cam track and a sprocket wheel is rotated relative to the disk by a clockwork mechanism and when the ball moves into the recess the leaf spring is displaced to trip an electric switch.

One device activates the heating circuit and the other deactivates the heating surface with each of the disks being adjustable to regulate the time interval between the successive operation of the two devices.

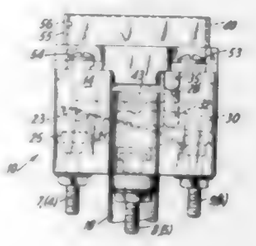
3,373,255
METHOD OF SENSING LOSS OF GASEOUS MASS AND PRESSURE-SENSITIVE SWITCH THEREFOR
Myrl J. Saarem, North Hollywood, Calif., assignor to Roylyn Incorporated, Glendale, Calif., a corporation of California
Filed June 22, 1966, Ser. No. 559,568
5 Claims. (Cl. 200—140)

The application discloses a pressure-sensitive switch utilizing a Bourdon tube to sense pressure and actuate a



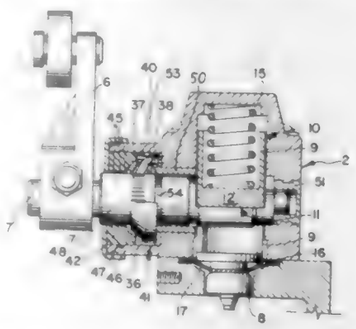
movable switch contact and a thermal responsive means for adjusting the switch gap.

3,373,256
FLUSH PUSHBUTTON SWITCH WITH SUBSTANTIALLY SIMULTANEOUS ACTUATION
Buckley R. Reed, Valley Station, Ky., assignor to K. M. White Company, Louisville, Ky., a corporation of Kentucky
Filed Jan. 25, 1966, Ser. No. 522,955
4 Claims. (Cl. 200—159)



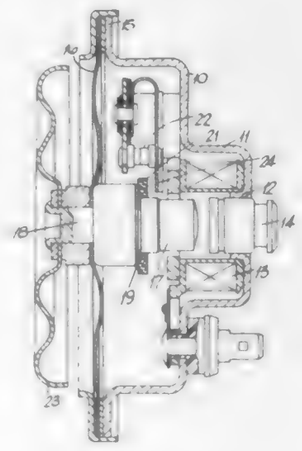
A pushbutton switch having two movable contacts disposed in a common plane perpendicular to that in which the force is normally applied and arranged to be advanced by the button, has added hereto a yoke pivotally mounted in the switch and adapted to be depressed by the pushbutton for uniformly and contemporaneously activating the contact members.

3,373,257
FLUID DAMPED ELECTRIC SWITCH ACTUATOR
Lynn H. Matthias, Fox Point Village, and Roy E. Wilson, Milwaukee, Wis., assignors to Allen-Bradley Company, Milwaukee, Wis., a corporation of Wisconsin
Filed Sept. 2, 1966, Ser. No. 577,038
9 Claims. (Cl. 200—166)



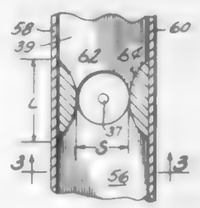
An electric switch having a switch contact actuator and a fluid chamber and fluid adjacent to the actuator so that the fluid will damp actuator motion.

3,373,258
ELECTROMAGNETIC HORNS
Maurice James Allport, Stourbridge, England, assignor to Joseph Lucas (Industries) Limited, Birmingham, England, a British company
Filed Feb. 15, 1967, Ser. No. 616,297
Claims priority, application Great Britain, Mar. 1, 1966, 8,841/66
1 Claims. (Cl. 200—166)



An electromagnetic horn having means for compensating for wear of the fixed and movable contacts thereof.

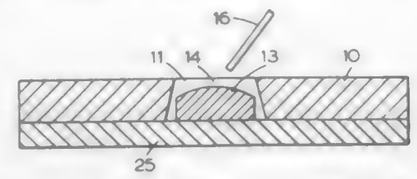
3,373,259
ELECTRONIC OVEN
Peter H. Smith, Maidenhead, England, assignor to J. Lyons & Company, Limited, London, England, a corporation of England
Filed Mar. 26, 1965, Ser. No. 444,942
7 Claims. (Cl. 219—10.55)



This disclosure relates to microwave ovens of the type having apparatus for coupling two inputs of microwave energy into the heating compartment. A power divider having a pair of outputs and a single input matches the impedance of the coupling apparatus to a single microwave source. The two outputs of the power divider are at opposite ends of a length of wave guide, the cross-sectional area of which is reduced in the vicinity of the single input by inwardly bowed surfaces on two opposite walls of the waveguide.

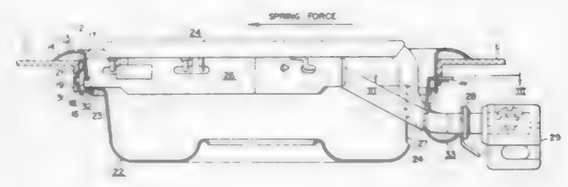
3,373,260
VAPORIZATION OF METALS AND METALLOIDS
Alfred Hilliard, London, England, assignor to Societe des Poudres Metalliques et des Alliages Speciaux Ugine-Carbone, Paris, France
Filed Apr. 26, 1965, Ser. No. 450,730
Claims priority, application Great Britain, Apr. 30, 1964, 17,963/64
13 Claims. (Cl. 219—275)

The disclosure provides an electrical heater which supports a plug for evaporating aluminium or other volatilisable material, the plug being contained in a recess in the heater which recess is smaller at the upper part than the



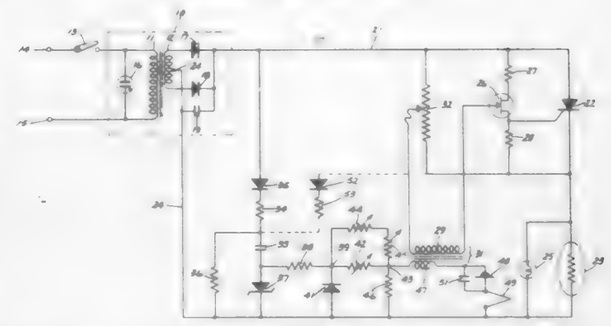
lower part so that the plug will not rise out of the recess due to electromagnetic action.

3,373,261
ELECTRIC RANGE
Edmund H. Filipak, Lexington, Ohio, assignor to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Filed May 20, 1965, Ser. No. 457,451
2 Claims. (Cl. 219—463)



2. Electric heater structure comprising: a supporting surface having an opening therein, an annular wall depending from said supporting surface adjacent said opening, an electric heater supported in the opening, said depending wall having an aperture therein, resilient means attached to said heater and having a horizontally extending arm insertable in said aperture to form a hinge knuckle for pivotally mounting said heater to said depending wall, latch means in said depending wall at the side of said opening opposite said hinge knuckle engageable with a portion of said heater for retaining the latter in a horizontal position in said opening, the spacing between said aperture and said latch means being less than the distance between said portion of said heater and said resilient means whereby said resilient means is effective to bias said heater into latching engagement with said latch means.

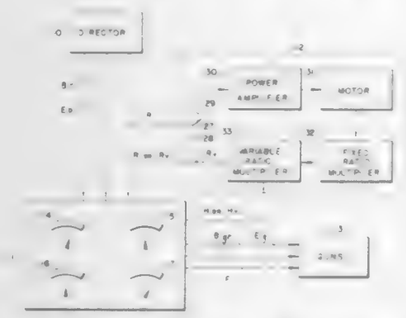
3,373,262
TEMPERATURE CONTROL CIRCUIT
Edward K. Howell, Skaneateles, N.Y., assignor to General Electric Company, a corporation of New York
Filed Aug. 25, 1965, Ser. No. 482,404
3 Claims. (Cl. 219—497)



1. A temperature sensing and control circuit for automatically controlling and maintaining the temperature of a device at an adjustable, preselected level, said temperature sensing and control circuit comprising: a source of potential; a heating means for supplying heat to a device whose temperature is to be controlled and maintained; an electrical switch means coupling said heating means to said source of potential for selectively applying

said potential to said heating means to cause it to apply heat to said device in response to control signals; a temperature sensing means for continuously providing a first control potential proportional to the actual temperature of said device; an adjustable source of reference potential for providing a second control potential proportional to a preselected desired temperature level at which said device is to be maintained; and an electrical comparison and control means coupled to said temperature sensing means and to said adjustable source of reference potential for receiving and comparing said first and second control potentials and producing control signals in response thereto, said electrical comparison and control means including a tunnel diode coupled to a unijunction transistor and said electrical switching means comprising a controlled rectifier triggered by a unijunction transistor which is coupled to said electrical comparison and control means for causing said source of potential to be selectively applied to said heating means in accordance with said control signals to maintain said device at said preselected desired temperature level.

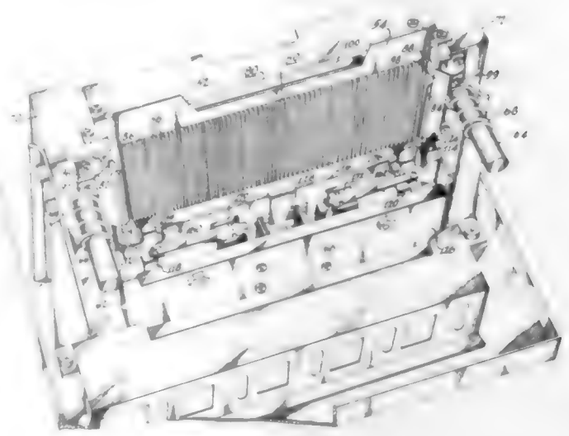
3,373,263
GUNFIRE CONTROL SYSTEM FOR SUPPLYING AIMING INFORMATION FOR GUNS HAVING DIFFERENT BALLISTIC CHARACTERISTICS
Densil M. Cooper, Washington, D.C., Charles F. Wysong, Atlanta, Ga., and Thomas W. Chappelle, U.S. Navy, assignors to the United States of America as represented by the Secretary of the Navy
Filed Feb. 27, 1946, Ser. No. 650,584
2 Claims. (Cl. 235—61.5)



2. A fire control system for selectively controlling a plurality of guns having dissimilar ballistic characteristics, comprising a director for providing target bearing, elevation and range signals, a computer responsive to signals derived by the director for positioning a first gun of selected characteristics, and a signal alteration apparatus interposed in the path of range signals from the director to the computer when the system is to be used for positioning a second gun of characteristics different from the first, said apparatus comprising a means for altering director derived range signals in proportion to the ratio of the time of flight of a projectile for the second gun to the time of flight of a projectile for the first gun, said signal alteration apparatus also comprising a means for altering additionally the range signals by a variable amount which is dependent upon the product of target height multiplied by said ratio.

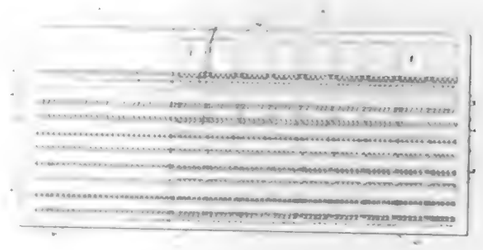
3,373,264
PUNCHED CARD READER WITH REGISTRATION INDICATING MEANS
Edward A. Damerau, Pine Hill, N.J., assignor to Radio Corporation of America, a corporation of Delaware
Filed Mar. 12, 1963, Ser. No. 264,645
11 Claims. (Cl. 235—61.11)

A movable frame has opposed guide slots for receiving a record card, and the frame transports the card to a reader. Each side member of the frame has a skewed roller oriented in the same direction, and each roller projects into its associated slot to drive the card relative



to the frame as the frame is moved. A pair of switch actuators project across the card path and are actuated when the card is in correct reading position.

3,373,265
INFORMATION STORAGE AND RETRIEVAL PROCESS AND CODED RECORD CARD THEREFOR
Louis A. Smitzer, Chicago, Ill., assignor to Bell & Howell Company, Chicago, Ill., a corporation of Illinois
Filed Dec. 12, 1962, Ser. No. 244,138
6 Claims. (Cl. 235—61.12)

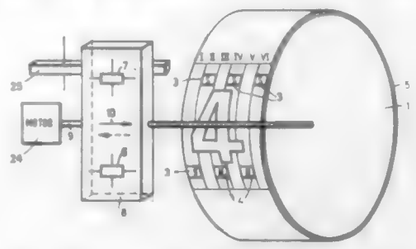


6. A coded film card comprising
a transparent film base having an image support surface extending completely across said film base to form a working face on one side of said card,
said working face being presoftenable locally,
and visible opaque medium disposed in the form of plural microimages fused in said surface to form a utilitarian image in said working face and disposed in vertical columns and horizontal rows.

3,373,266
COUNTING DEVICE WITH MEANS FOR REMOTE INDICATION
Walter Engel and Lothar Roth, Nurnberg, Germany, assignors to Siemens Aktiengesellschaft, Munich, Germany, a corporation of Germany
Filed July 1, 1964, Ser. No. 379,526
Claims priority, application Germany, July 3, 1963, S 85,999
11 Claims. (Cl. 235—92)

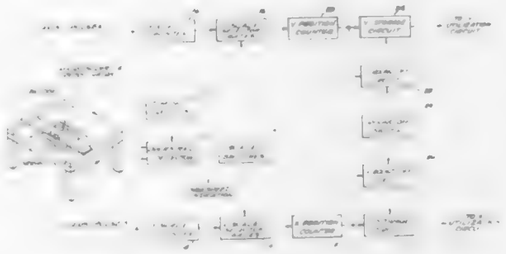
A count indicator comprises a count indicating member having an outer surface and different indicating positions corresponding to different counts to be indicated on the outer surface in parallel tracks. Each of the indicating positions comprises magnetic indications. A Hall probe readout device is mounted in operative proximity with the outer surface of the count indicating member for responding to the magnetic indications of a selected

one of the indicating positions. A guide supports the Hall probe readout device for selective transverse movement parallel to the axis of the count indicating member in



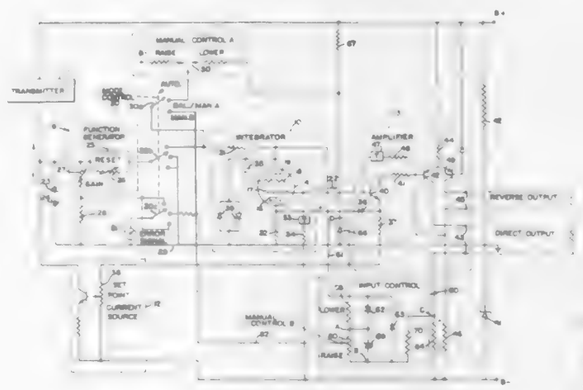
operative proximity with the magnetic indications of the indicating positions to enable readout of a selected count at a time.

3,373,267
PROGRAMMING DEVICE
Carter H. Swann, Waynesboro, Va., assignor to General Electric Company, a corporation of New York
Filed May 12, 1964, Ser. No. 366,722
10 Claims. (Cl. 235—92)



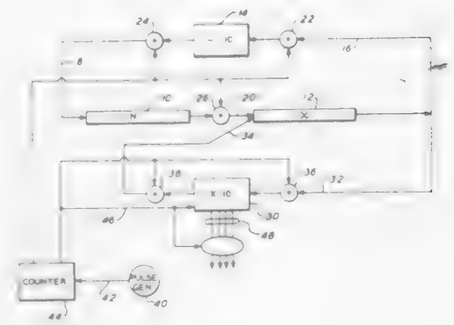
A programming device for converting the information of a drawing or model to numerical data indicative of this information. An electrical circuit produces the desired indication of position for a predetermined scale drawing or model to be used with the programming device. If the scale of the drawing or model is changed, the electrical circuit can be modified by switches so that the same desired indication of position is produced. Also, an electrical circuit rounds off or modifies the indication of position to any multiple of a unit of distance or measurement.

3,373,268
PROCESS CONTROLLER HAVING ELECTROCHEMICAL CELL INTEGRATING MEANS
Clarence W. Hewlett, Jr., Hampton, N.H., assignor to General Electric Company, a corporation of New York
Filed Feb. 24, 1964, Ser. No. 346,991
12 Claims. (Cl. 235—151.1)



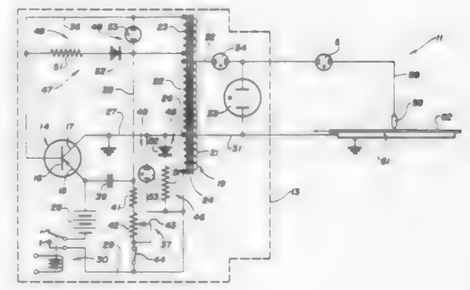
A process controller having an electrochemical cell integrating means. An error signal is connected to a derivative function generating circuit the output of which is coupled to the input of an electrochemical cell integrating circuit. The integral output signal is then coupled through an amplifier to control a process load.

3,373,269
BINARY TO DECIMAL CONVERSION METHOD AND APPARATUS
Howard M. Rathbun, Smithtown, and Mark Pivovonsky, New York, N.Y., assignors to Litton Business Systems, Inc., a corporation of Delaware
Filed Nov. 25, 1964, Ser. No. 413,864
8 Claims. (Cl. 235—155)



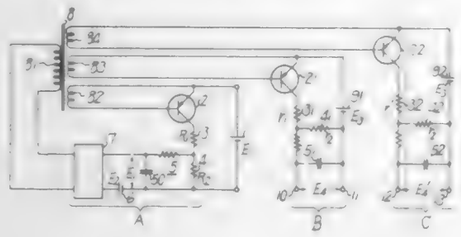
The invention is directed to a radix conversion device for converting a number of binary notation to a number in a coded decimal notation. The conversion technique employs the repeated division of a number in binary notation by 10 until the number goes to zero or a number of times equal to the number decimal digits that could be contained in the binary number to be converted. The number of divisions by 10 is counted and the result of the divisions is multiplied by 10 the same number of times. The result is in the proper coded notation. Variations of the basic structural configuration permit the coded decimal result to take the form of 8421, 5211, and 4221.

3,373,270
SYSTEM, APPARATUS AND METHOD FOR RECORDING AND SENSING
Ralph L. Fenner, Berkeley, Calif., assignor, by mesne assignments, to Berkeley Instruments, Emeryville, Calif., a partnership
Original application June 10, 1959, Ser. No. 819,294, now Patent No. 3,218,647, dated Nov. 16, 1965. Divided and this application Aug. 23, 1965, Ser. No. 490,759
8 Claims. (Cl. 235—155)



Information is read from perforated sheet material by sensing the perforations. A sheet is moved between a pair of electrodes which have impressed across them a pulse having a voltage less than the dielectric strength of the air in the perforation. As the sheet is moved past the electrodes, a perforation is sensed by the electrode ionizing the air in the perforation causing a current flow to produce a signal.

3,373,271
ELECTRONIC COMPUTING CIRCUIT
Miyaji Tomota, Musashino-shi, Tokyo, Japan, assignor to Kabushikikaisha Yokogawa Denki Seisakusho (Yokogawa Electric Works, Ltd.), Tokyo, Japan, a corporation of Japan
Filed June 11, 1964, Ser. No. 374,342
Claims priority, application Japan, June 29, 1963, 38/33,976; Feb. 6, 1964, 39/6,202
2 Claims. (Cl. 235—193)

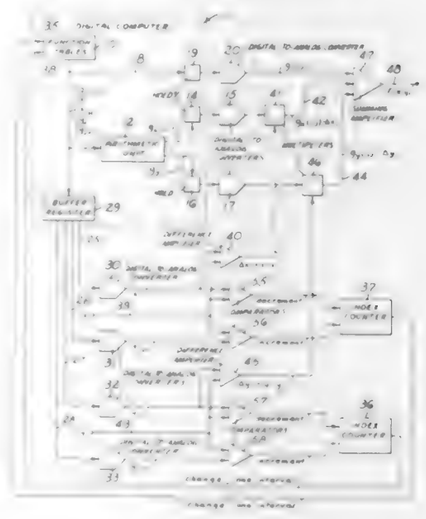


The invention is directed to an electronic computing circuit having a plurality of switching circuits each including an electronic switching device for turning on and off a direct current voltage source. The operation of the switching devices is controlled by sensing the difference between a controlled voltage and a reference voltage to produce a difference voltage which, in turn, controls the operation of an alternating current generator. The amplitude of the alternating current generator is proportional to the value of the difference voltage when the difference voltage is of a given polarity. The output of the alternating current voltage generator is connected to a transformer which has a plurality of secondary windings each connected to one of the switching devices.

3,373,272
ELECTRIC VECTOR PRODUCT GENERATOR
Wolja Saraga, Orpington, Kent, England, assignor to Associated Electrical Industries Limited, London, England, a British company
Filed Oct. 22, 1964, Ser. No. 405,876
Claims priority, application Great Britain, Oct. 25, 1963, 42,229/63
5 Claims. (Cl. 235—194)

1. An electric vector product generator for generating in three coordinate directions in real space the three coordinate components of the vector product of two vectors, said generator comprising a Hall effect body which is symmetrical along three mutually transverse axes and has three pairs of input/output electrodes respectively located along these axes for feeding to said body three coordinate electric current components representing the three co-ordinate components of one of said two vectors, magnetic means for subjecting said body to three coordinate magnetic components representing the three coordinate components of the other of said two vectors, the Hall effect body being effective by virtue of this effect to generate in dependence on the electric current density vector produced therein by the three electric current components and on the magnetic field strength vector produced by the three magnetic components, an electric field strength vector from which can be derived at the three input/output electrode pairs of the Hall effect body respective Hall output voltages representing the three coordinate components of the vector product of the said two vectors.

3,373,273
ANALOG FUNCTION GENERATOR INCLUDING MEANS FOR MULTIVARIABLE INTERPOLATION
Ernest J. Schubert, Hacienda Heights, Calif., assignor to Beckman Instruments, Inc., a corporation of California
Filed Apr. 17, 1964, Ser. No. 360,531
3 Claims. (Cl. 235—197)



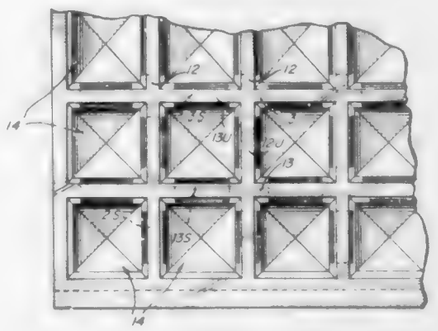
An analog function generator employing a digital computer having a memory for storing a function table and an arithmetic unit for computing values for multivariable interpolations over a zone between a pair of limits for each independent variable function. Comparators are provided to decrement or increment index counters by generating up and down limit signals when a corresponding limit is reached, the index counters, in turn, addressing the proper section of the function tables. An index counter is provided for each independent variable.

3,373,274
ELECTRICAL CANDLE APPARATUS
Herbert Kott, Riveredge, N.J., assignor to Skott Industries, Inc., Newark, N.J., a corporation of New Jersey
Filed Oct. 22, 1965, Ser. No. 500,894
15 Claims. (Cl. 240—10.64)

An electric permanent candle is described where the bulb in the shape of a flame is mounted on a (jack) pin and the top of the candle is fitted with a jack receiver

socket. An insulating cam affixed to the pin is of a geometry to provide a make-break circuit operated by the rotation of the bulb in the absence of additional switches. A like arrangement is described for mating the base of the candle with a recharging fixture.

3,373,275
PLASTIC CELLULAR LENS LOUVER HAVING AIR DISTRIBUTION SLOTS
Jack G. High, Winfield, Ill., assignor to MSL Industries, a corporation of Minnesota
Filed Oct. 13, 1965, Ser. No. 495,567
10 Claims. (Cl. 240—78)

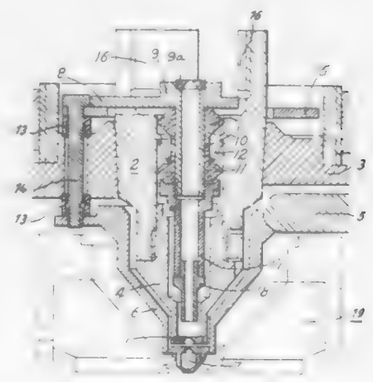


A one piece molded plastic lens louver of light transmitting material is disclosed with masked ventilation openings, the molded louver having a planar top wall, a first set of parallel uniformly spaced continuous ribs integrally depending therefrom and a second set of parallel correspondingly spaced continuous ribs integrally depending from the top wall and intersecting the ribs of the first set at right angles to define a planar grid work of cells, each cell being square in plan outline and being spanned by an integral lens portion of the top wall. The louver has vertical slots opening through the top wall at uniformly distributed regions along each rib to provide a set of four air flow paths opening laterally into each cell. The slots terminate partway through each rib to be masked by the rib and preclude direct light paths.

3,373,276
TERMINAL PEDESTAL FOR UNDERGROUND WIRING SYSTEMS
Kenneth W. Klein, 28517 Wolf Road, Bay Village, Ohio 44140
Filed July 26, 1965, Ser. No. 474,581
2 Claims. (Cl. 240—[illegible]4)

The combination of, a support pole having a luminaire at its upper end and an underground wiring system enclosure secured to the pole. The enclosure comprises a pair of generally U-shaped ground line cover members secured to the pole to form a hollow open-ended enclosure extending above and below a ground level, a pair of generally U-shaped access members surrounding the pole and extending upwardly from the top of the ground line cover members and cooperating therewith to form an uninterrupted vertically extending enclosure housing above and below ground level and a partition extending between the cooperating edges of the access members to divide the same into two vertical compartments. An apertured cover surrounds the pole for closing the upper end of the enclosure. The access members are selectively removably mounted on the ground line cover members and the cap for individually exposing each compartment.

3,373,277
OBJECT CARTRIDGE WHEREIN THE SPECIMEN CARRIER IS SURROUNDED BY A COOLING CHAMBER
Hans Gunther Heide, Berlin-Charlottenburg, Germany, assignor to Max-Planck-Gesellschaft zur Forderung der Wissenschaften e.V.
Filed Dec. 27, 1963, Ser. No. 333,912
Claims priority, application Germany, Apr. 19, 1963, M 56,547
20 Claims. (Cl. 250—49.5)

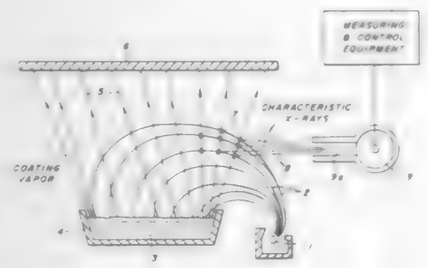


1. A corpuscular apparatus, operating in conjunction with an evacuating pump, especially an electron microscope, comprising an object cartridge having two cartridge parts disposed in heat insulated relation to one another, a specimen carrier, the first of said cartridge parts holding the specimen carrier and being with such carrier in good heat conducting connection with parts of the corpuscular ray apparatus having at least approximately room temperature and capable of maintaining the specimen carrier at close to room temperature, the second cartridge part having walls of good heat conducting capacity and forming a chamber the walls of which are operatively connected in good heat conducting relation with a deep freeze device, the cooling chamber so formed surrounding the specimen carrier in heat insulated relation with respect thereto.

3,373,278
DETERMINATION OF VAPOR COATING RATE BY X-RAYS EMITTED FROM SAID VAPOR
Frank F. Cilyo, Hinsdale, Ill., assignor to United States Steel Corporation, a corporation of Delaware
Filed Jan. 6, 1965, Ser. No. 423,764
7 Claims. (Cl. 250—49.5)

Method and apparatus are provided for determining coating thickness in vapor deposition processes. Vapor density may be correlated with deposition rate, which in turn determines coating thickness at a given speed of travel of the substrate. The vapor density is determined

by X-ray measurement. The energy source for the X-rays may be independent of the energy source for evaporation of coating material. However, if the latter energy source



is adapted to generate the required X-rays, it may perform the dual function of evaporation and X-ray production.

3,373,279

EUROPIUM ACTIVATED STRONTIUM IODIDE SCINTILLATORS

Robert Hofstadter, Stanford, Calif., assignor, by mesne assignments, to Kewanee Oil Company, Bryn Mawr, Pa., a corporation of Delaware

No Drawing. Filed Jan. 29, 1965, Ser. No. 429,141
5 Claims. (Cl. 250—71.5)

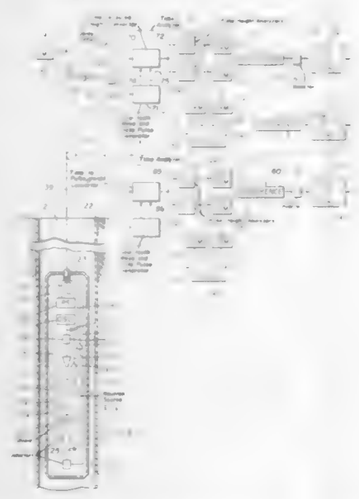
This invention comprises a scintillation crystal composed of strontium iodide activated by europium. The invention also comprises a radiation detector having a detecting element and a chamber optically coupled to this detecting element, having within the chamber a scintillator consisting of strontium iodide activated with about 10–16,000 parts per million of europium.

3,373,280

PULSED RADIOACTIVE WELL LOGGING METHOD FOR MEASUREMENT OF POROSITY AND SALINITY

William R. Mills, Jr., Dallas, Tex., assignor to Mobil Oil Corporation, a corporation of New York

Filed Dec. 18, 1963, Ser. No. 331,502
16 Claims. (Cl. 250—83.3)



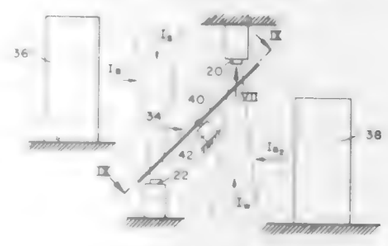
1. A method of investigating formations traversed by a borehole for two parameters of interest and of a different nature comprising the steps of passing into the borehole a logging tool containing a source of primary radiation, irradiating the formations with bursts of primary radiation spaced in time for the production of secondary radiation, at a first location spaced from the source detecting secondary radiation passing from the formations into the borehole, at a second location spaced from the source by a different distance detecting secondary radiation passing from the formations into the borehole, producing in correlation with depth a first measurement representative of the secondary radiation detected at the first location following each burst of primary radiation, producing in correlation with depth a second measurement representative of the secondary radiation detected at the second location following each burst of primary radiation, from the first and second measurements producing first and second functions characterizing the secondary radiation detected respectively at the first and second locations, recording a third function representative of the difference between the first and second functions to obtain a measurement of one of the parameters of interest, and from one of the first and second measurements recording a function characterizing the secondary radiation detected at one of said locations for comparison with the parameter measured for obtaining information about the other of the two parameters of interest.

3,373,281

METHOD FOR DETERMINING TOTAL HEAT FLOW FROM THE SEA SURFACE BY MEANS OF DETECTING INFRARED RADIATION IN TWO WAVELENGTH BANDS

Edward D. McAlister, La Jolla, Calif., assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Navy

Filed Apr. 21, 1965, Ser. No. 449,906
14 Claims. (Cl. 250—83.3)



The present invention is a method and device for enabling a determination of the total heat flow from the sea surface. This is accomplished by measuring the radiation from the top and bottom extremeties of an ocean layer where heat flow is substantially by water conduction only. This layer has been found to be approximately defined by the depths 0.1 mm. and 1.00 mm. It has been further found that the infrared radiation at the ocean depth .01 mm. is in the region of 3.5 to 4.0 microns of wavelength whereas the infrared radiation from the 1.00 mm. depth lies within the range of 2.0 to 2.4 microns of wavelength. The temperature corresponding to the indicated infrared readings may then be compared to indicate the temperature gradient and the corresponding total heat flow from the sea surface.

3,373,282

IONIZING RADIATION DOSE RATE MEASURING DEVICES INCLUDING UTILIZATION AS GAS DENSITY METERS

Fred W. Falk, Pirmasens, Germany, assignor to the United States of America as represented by the Secretary of the Army

Filed Feb. 13, 1964, Ser. No. 344,614
7 Claims. (Cl. 250—83.6)

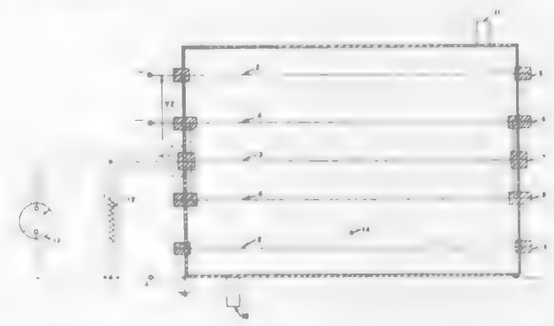
5. An ionizing radiation dose rate measuring system comprising:

(a) a radiation detector comprising a conductive housing, an anode element, a cathode element, and a grid element means for reducing space charge around said anode element within said housing;

(b) means connecting said housing with electrical ground;

(c) means for biasing said cathode element and grid element means negative with respect to said anode element and said housing;

(d) means for detecting the mean current flow from said anode element when said elements are exposed to radiation;



(e) means for exhausting air from within said housing including a vacuum pump and flow meter for indicating the rate of flow through said vacuum pump; and,

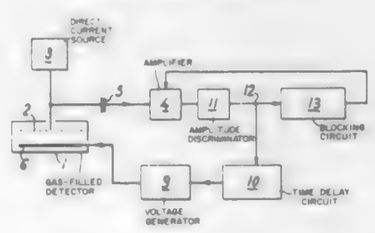
(f) means for introducing air within said housing.

3,373,283

DEVICE FOR TRIGGERING A NUCLEAR PARTICLE DETECTOR OF THE GAS TYPE

Alain Lansiart, Orsay, Jean Leloup, Gif-sur-Yvette, and Jean Lequais, Orsay, France, assignors to Commissariat à l'Energie Atomique, Paris, France

Filed June 3, 1964, Ser. No. 372,324
Claims priority, application France, June 11, 1963, 937,613
4 Claims. (Cl. 250—83.6)



1. In a nuclear particle detector, a gap-filled spark chamber housing an anode and a cathode adapted to be energized by a D-C potential, means connected to said anode for amplifying electron pulses caused as nuclear particles pass through said chamber and ionize the gas therein, generator means responsive to such an amplified pulse for applying a high voltage pulse to said cathode to cause a spark in said chamber along the path of a passing nuclear particle, and circuit means also responsive to an amplified pulse for blocking the amplifier means during a predetermined dead time of the spark chamber.

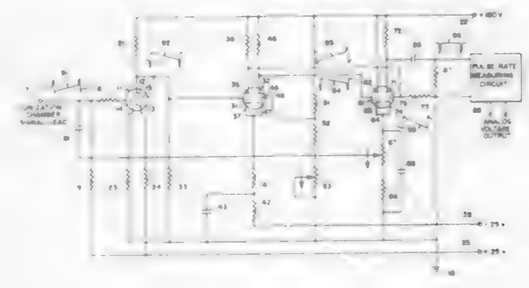
3,373,284

CURRENT MEASURING APPARATUS FOR USE WITH AN IONIZATION CHAMBER

Herbert A. Brown, San Pablo, and Donald G. Hutson, Albany, Calif., assignors to Laboratory for Electronics, Inc., Boston, Mass., a corporation of Delaware

Filed June 14, 1965, Ser. No. 463,500
7 Claims. (Cl. 250—83.6)

This invention contemplates the use of an integrating circuit coupled to an ionization chamber for developing a voltage which is a function of the amplitude of the current from the ionization chamber. A trigger circuit is coupled to the integrating circuit to produce a pulse signal when the developed voltage reaches a predetermined threshold value. Upon the occurrence of such a pulse, reset means are provided to dissipate the voltage thereby enabling the trigger circuit to produce a train of pulses at a rate commensurate with the rate at which the



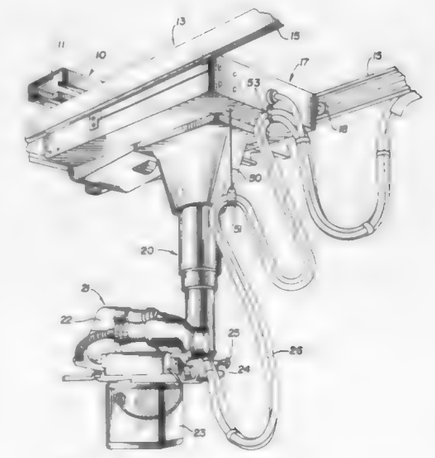
voltage is developed. Finally, a pulse rate measuring circuit is used to derive an analog signal which is a logarithmic function of the pulse rate.

3,373,285

DEVICE FOR CONTROLLING THE SLACK IN HIGH TENSION CABLES FOR A CEILING MOUNTED X-RAY TUBE ASSEMBLY

David M. Barrett, Lyndhurst, Ohio, assignor to Picker X-Ray Corporation, Waite Manufacturing Division, Inc., Cleveland, Ohio, a corporation of Ohio

Filed June 8, 1965, Ser. No. 462,362
7 Claims. (Cl. 250—91)



The preferred construction has a ceiling-mounted carriage with a depending telescopic column supporting an X-ray tube, high-tension cables extending from the carriage to the X-ray tube, and a support cable connected to the high-tension cables midway between their connections to the carriage and the X-ray tube and connected to a counterbalance mechanism in such a manner that the support cable is taken up or let out at a vertical rate of movement approximately one-half the vertical movement of the X-ray tube.

3,373,286

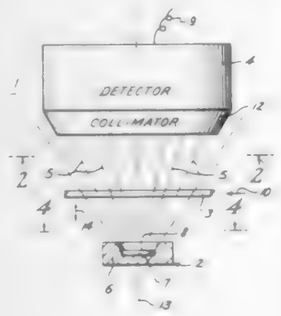
DEVICE FOR MEASURING THE CHARACTERISTICS OF A MATERIAL MOVING ON A CONVEYOR WITH MEANS FOR MINIMIZING THE EFFECT OF FLUTTER

Linus K. Han, Columbus, Ohio, assignor to Industrial Nucleonics Corporation, a corporation of Ohio

Filed Sept. 18, 1964, Ser. No. 397,502
14 Claims. (Cl. 250—105)

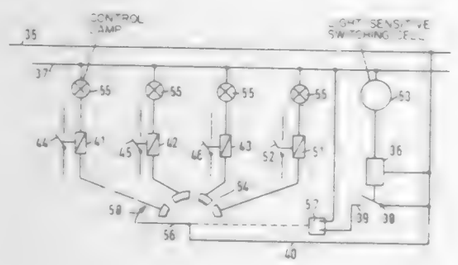
1. Improved apparatus for measuring a characteristic of a material, that is transported by a material conveyor with nuclear radiation to minimize the effect of flutter, said apparatus comprising,

a source of nuclear radiation,
a detector positioned opposite and spaced from said source to permit said material to pass therebetween for producing an electrical signal that is a function of nuclear radiation passing through the material from said source, said detector having a window facing said material,
means for supporting said source and detector in said opposite relationship,
said source having a radiation emitting surface area that is less than the area of said window,



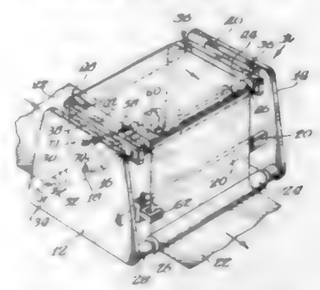
means disposed between said detector and the material to select substantially only the part of the nuclear radiation passing through the material that radiates directly from the source, said selecting means including a collimator having apertures angularly disposed to focus said detector substantially on the location of said source.

3,373,287
PROGRAMME SELECTION ARRANGEMENT FOR WASHING MACHINES
Walter Holzer, Drosteweg 19, Meersburg (Bodensee), Germany
Filed Aug. 31, 1964, Ser. No. 393,152
Claims priority, application Germany, Sept. 4, 1963, H 50,177
5 Claims. (Cl. 250—215)



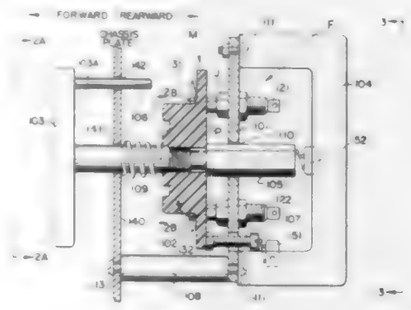
In washing machines where various washing programmes take place fully automatically, this disclosure relates to an arrangement for selecting a desired programme from these by means of light activated photocells. The photocells are mounted inwardly of a humidity-screening and partially-translucent control panel. Partial programmes may be integrated into a total programme by activation of some but not all of the photocells. A photocell may be energized for a certain length of time to run a motor which in turn activates a series of photocell switches to effect a desired total programme responsive to the time for which the photocell was energized.

3,373,288
PHOTOSENSITIVE WEB SHIFTING APPARATUS
Rudolph T. Otepka, Lombard, and Robert Fokos, Addison, Ill., assignors to Web Press Engineering, Inc., Addison, Ill., a corporation of Illinois
Filed Aug. 26, 1965, Ser. No. 482,739
8 Claims. (Cl. 250—219)



1. A box tilt assembly for straightening moving webs comprising in combination, a support frame comprising a pair of spaced side walls, an entrance roller over which the web travels journaled in said side wall, a pair of parallel tilt roller each journaled at it end in a tilt frame, parallel links supporting said tilt frame on said side walls, each parallel link forming a variable acute angle with the support frame, the acute angles of all parallel links being on the same side with respect to the direction of web travel, means on said support frame for actuating said tilt frame in response to a predetermined position of the web to provide a canting movement of the pair of tilt rollers to move the web transversely to maintain web alignment, and an exit roller over which the web travels journaled in said side walls, the axes of the entrance roller and exit roller being parallel to one another.

3,373,289
POLARITY REVERSING SWITCH FOR ELECTRON TUBE
Paul R. Fruzzetti, Brockton, Mass., assignor to National Research Corporation, Cambridge, Mass., a corporation of Massachusetts
Filed Oct. 7, 1965, Ser. No. 493,719
1 Claim. (Cl. 307—113)

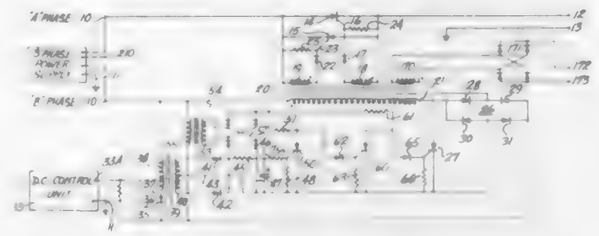


Polarity reversing electrical switch for use with high voltage discharge tube having two modes of operation at opposite polarities. The switch has a switching member which is movable in rotational and translational senses and is provided with a chassis plate having spaced guide apertures for the movable member.

3,373,290
POLYPHASE CURRENT CONTROL SYSTEM
Edward S. Baker, Seattle, Wash., assignor to The Boeing Company, Seattle, Wash., a corporation of Delaware
Continuation-in-part of application Ser. No. 444,196, Mar. 31, 1965. This application Dec. 13, 1965, Ser. No. 513,452
14 Claims. (Cl. 307—133)

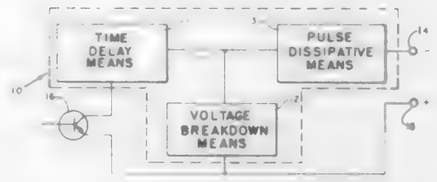
A system is disclosed for controlling a polyphase power supply in a manner to insure that power from each phase

is initially applied to a load under zero voltage conditions. The application discloses one such system wherein controlled rectifiers such as silicon controlled rectifiers are connected in series circuit arrangement between each phase of the power supply and the load with the gating signals for the various controlled rectifiers being derived from the various phases in a manner which prevents initial turn on of power except under zero voltage conditions.



In a three phase example the A phase controlled rectifiers are gated from B phase voltage, the B phase rectifiers are gated from the C phase, and the C phase gated from the A phase voltage. The gating circuits include zero voltage detection circuits and are so interconnected that the succeeding phases can turn on only after the circuitry for the preceding phase has been properly actuated. Thus a single input control network coupled with one of the phases serves to control all three phases.

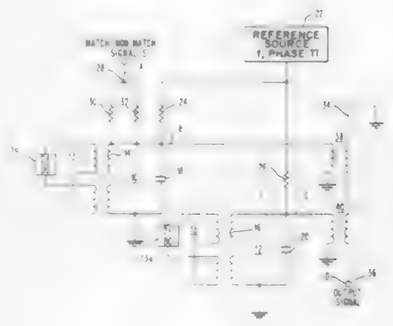
3,373,291
MEANS FOR PROTECTING TRANSISTORS FROM HIGH VOLTAGE PULSES
Glen Peterson, 540 S. 83rd E. Ave. 74112, and Hubert A. Burns, 7925 E. 27th Court 74129, both of Tulsa, Okla.
Filed Aug. 21, 1961, Ser. No. 132,957
16 Claims. (Cl. 307—202)

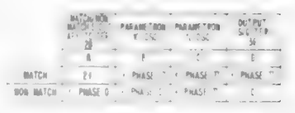


1. A three-terminal voltage protective device for transistors comprised of time delay means, pulse dissipative means and voltage break-down means, said terminals identified as input, output and ground terminals, respectively, one terminal of said time delay means connected to said output terminal, a second terminal of said time delay means connected to one terminal of each of said pulse dissipative means and said voltage break-down means, a second terminal of said pulse dissipative means connected to said input terminal, a second terminal of said voltage break down means connected to said ground terminal, said time delay means and said pulse dissipative means, in addition to said delay and dissipative functions, together providing at least one low resistance path for the conduction of direct currents between said input and output terminals.

3,373,292
SENSING CIRCUITRY
William J. Bartik, Jenkintown, Pa., assignor to Sperry Rand Corporation, New York, N.Y., a corporation of Delaware
Filed Jan. 27, 1965, Ser. No. 428,500
4 Claims. (Cl. 307—210)

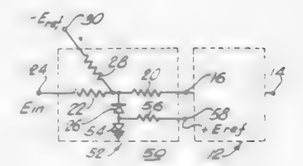
3. A frequency logic circuit comprising
means for receiving an input signal, said signal being one of two different types, one type being a signal at a frequency f at a phase 0 mode of oscillation, the other type being a signal at a frequency $2f$;
a reference source of oscillations at said frequency f at a phase π mode of oscillation;
a first tuned circuit resonant of said frequency f;
means coupling said reference source to said tuned circuit;
means coupling said receiving means to said tuned circuit,





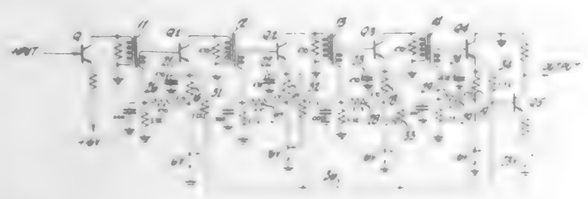
whereby said first tuned circuit is caused to oscillate at said frequency f in said phase π mode when said input signal is a signal at said frequency $2f$, and whereby said first input tuned circuit is caused to oscillate at said frequency f in said phase 0 mode when said input signal is a signal at said frequency f, phase 0 mode;
a second tuned circuit resonant at said frequency f;
means coupling said reference source to said second tuned circuit; and
an output circuit coupled to said first and second tuned circuits.

3,373,293
TEMPERATURE COMPENSATED FUNCTION GENERATING CIRCUIT
Peter D. Hansen, Lynnfield, and Robert H. Malter, Sharon, Mass., assignors to George A. Philbrick Researches Inc., Dedham, Mass., a corporation of Massachusetts
Filed May 21, 1965, Ser. No. 457,574
7 Claims. (Cl. 307—229)



Temperature compensation of diode function generating circuits wherein compensation is achieved by using a semi-conducting junction device (e.g. silicon diode) having temperature characteristics closely matching those of the diode or diodes in the function generating circuits. In one embodiment, a single compensating diode connected to a reference voltage is used for a plurality of function generating circuits.

3,373,294
LINEAR LOGARITHMIC AMPLIFYING DETECTOR
Takeshi Don Fujinami, Los Angeles, Calif., assignor to Radio Corporation of America, a corporation of Delaware
Filed Nov. 4, 1964, Ser. No. 408,915
5 Claims. (Cl. 307—230)



There is disclosed a plural stage cascade linear logarithmic amplitude modulated-carrier frequency amplifier which does not require any external detector for demodulating the amplitude modulated carrier frequency input signal applied thereto. This is accomplished by producing an output signal from each stage which is characterized by having both a carrier frequency component and a direct current component, the respective value of each of which is an approximately linear gain function of the amplitude of the signal at the input of that stage when the amplitude of the input signal is below a given value and each of which has a respective fixed value which is independent of the amplitude of that input signal when the amplitude of that input signal is at least this given value. The carrier frequency component of each stage is applied as an input to the next succeeding stage, while the direct current components of all of the stages are combined to produce the demodulated output of the circuit.

3,373,295
MEMORY ELEMENT
Peter F. Lambert, New Haven, Conn., assignor to Aerojet-General Corporation, El Monte, Calif., a corporation of Ohio
Filed Apr. 27, 1965, Ser. No. 451,123
5 Claims. (Cl. 307—238)

This invention relates to memory elements, and more particularly, to memory elements having variable gain characteristics in addition to relatively long term electrical storage capabilities.

A memory element according to the present invention comprises a field-modifiable variable resistor, for example, a field-effect transistor having a gate terminal, a drain terminal and a source terminal. Means is provided for applying adaptation or information signals to the gate terminal. Storage means is electrically related to the gate terminal of the transistor for storing the adaption signals. A source of signals to be adapted is electrically related to the drain and source terminals to produce a current between the drain and source termials. The information or adaption signals stored in the storage means maintains the transistor in a reverse-biased condition, thereby substantially preventing flow of adaption signal current through the transistor. To effect a read-out, the adaption signal stored in the storage device produces an electric field in the transistor, thereby providing a flow of drain-source current. Thus, the output voltage measured across the transistor is functionally related to the charge on the storage device. Furthermore, increasing or decreasing the stored adaption signal produces a corresponding change in the electric field, thereby providing a resultant modulation of the drain-source current.

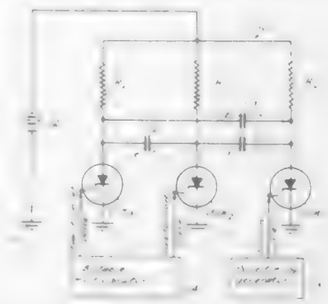
According to one modification of the invention, a dual-gate-field-effect transistor is provided so that one gate receives a supply of adaption electric signals while the other gate receives a supply of electrical signals to be adapted. A fixed bias is electrically connected to both the drain and source terminals.

3,373,296
AC MAGNITUDE RESPONSIVE ELECTRONIC RELAY
Balthasar H. Pinckaers, Edina, Minn., assignor to Honeywell Inc., a corporation of Delaware
Filed Oct. 2, 1964, Ser. No. 401,100
4 Claims. (Cl. 307—247)

4. In an electronic relay including an electronic contact having a control circuit, means for providing control current to said control circuit comprising:
- first energy storage means connected to means for providing energy;
- bistable switch means having an input and an output circuit;
- means connecting said input circuit across said first energy storage means;
- means including said control circuit connecting said output circuit across said first energy storage means;
- second energy storage means connected to means for providing energy;
- voltage reference means;
- and means including said input circuit connecting said voltage reference means across said second energy storage means, so that when said second energy storage means reaches a predetermined magnitude of charge said voltage reference means will cause a change in current to actuate said bistable switch means.

3,373,297
SILICON CONTROLLED RECTIFIER LOCK-UP PROOF FLIP-FLOP
Lowell D. Yates, El Paso, Tex., assignor to the United States of America as represented by the Secretary of the Army
Filed Feb. 9, 1965, Ser. No. 431,482
3 Claims. (Cl. 307—252)

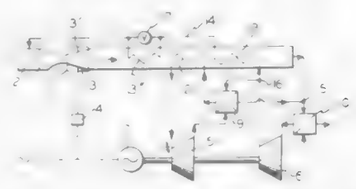
1. A tristable controlled rectifier lock-up proof flip-flop including turn-on pulse means and turn-off pulse means and which reverts temporarily to bistable operation when coincidence between a turn-on pulse and a turn-off pulse occurs comprising in combination, a D-C power supply, a first controlled rectifier, a second controlled rectifier, a third controlled rectifier, each of said controlled rectifiers provided with anode, cathode and gate elements, the anodes of said controlled rectifiers connected to the positive pole of said D-C power supply, the cathodes of said controlled rectifiers connected to the negative pole of said D-C power supply, first commutation means coupling the anodes of said first and second controlled rectifiers, second commutation means coupling the anodes of said second and third controlled rectifiers, third commutation means coupling the anodes of said first and third controlled rectifiers, said turn-on pulse means connected to the gate of said first controlled rectifier whereby signals are applied to said gate turning on said first controlled rectifier, said turn-off pulse means generating alternate pulses and having one of its terminals connected to the gate of said second controlled rectifier and the other of its terminals connected to the gate of said third controlled rectifier causing said second and third controlled rectifiers to alternately fire whereby said first controlled rectifier is accordingly extinguished.



3,373,298
SWITCHING CIRCUIT
William R. Tompkins, San Diego, and James L. Kimball, La Mesa, Calif., assignors to Cohu Electronics, Inc., San Diego, Calif., a corporation of Delaware
Filed May 4, 1965, Ser. No. 453,110
15 Claims. (Cl. 307—256)

A switching circuit in which a pair of diodes are rendered alternatively reversed biased and forward baised respectively by the presence of a positive or negative control signal. When forward biased, the first diode allows signals to be passed to the base of an emitter follower transistor while the second diode is back biased. When the first diode is reversed biased, the second diode is forward biased so that signals are shunted to ground and the base of the emitter follower is also grounded so that it is rendered non-conductive. A compensating circuit for maintaining a constant load for the source of signals is provided as is a network for varying the response time of the switch with respect to positive and negative control signals.

3,373,299
THERMAL POWER PLANT WITH MHD GENERATOR
Kurt Keller, Kusnacht, Switzerland, assignor to Escher Wyss Aktiengesellschaft, Zurich, Switzerland, a corporation of Switzerland
Filed Oct. 19, 1964, Ser. No. 404,579
Claims priority, application Switzerland, No. 7, 1963, 13,650/63
10 Claims. (Cl. 310—11)



Schemes for utilizing the waste heat of a magneto-hydrodynamic (MHD) generator in a closed circuit gas turbine power plant. The gas turbine circuit may be separate from or include the circuit of the MHD generator. In the latter case, the MHD generator is located either in series with the power plant components, or in a by-pass connection between high and low pressure points of the closed circuit. A similar shunt or by-pass connection, containing a cooler and an expansion turbine, can be employed to produce a stream of low temperature gas that is utilized to cool the magnet of the MHD generator.

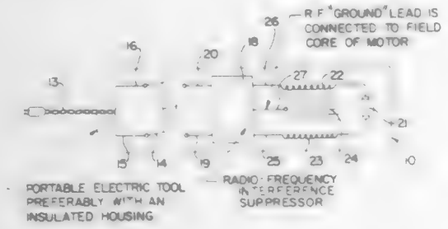
3,373,300
ELECTRIC BEARING FAILURE INDICATOR
Francis P. Sullivan, 97 Mountain Ave., Bloomfield, N.J. 07003
Filed Feb. 4, 1966, Ser. No. 525,034
5 Claims. (Cl. 310—68)

1. A bearing failure indicator for an A.C. generator having a housing, a stator mounted in said housing and a rotor mounted by bearings in said housing and having a predetermined air gap between said stator and rotor, the improvement comprising a pair of windings located 180° apart in slots in said stator, an indicator, circuit means connecting said windings in phase opposition in series with said indicator, said winding being responsive to unsymmetrical changes in said air gap to actuate said indicator.

3,373,301
SYSTEM FOR RADIO-FREQUENCY INTERFERENCE SUPPRESSION
Elliott M. Black, Baltimore, Md., assignor to The Black and Decker Manufacturing Company, Towson, Md., a corporation of Maryland
Filed Oct. 22, 1965, Ser. No. 500,952
3 Claims. (Cl. 310—72)

A portable tool is provided with an electric motor mounted within a housing which is formed, preferably, of a molded-plastic insulating material. During operation of the tool, the motor generates spurious energy in the radio-frequency spectrum. This energy may interfere with, and thus have a deleterious effect upon, the performance of radio or other electronic equipment located in the

vicinity of the tool. Accordingly, a suppressor is mounted within the tool housing for the purpose of eliminating this radio-frequency interference or else minimizing it to an acceptable level. This radio-frequency interference suppressor, which is conventional and is sometimes referred to in the art as an "REI" suppressor, is ordinarily provided with a "ground" lead. The purpose of this so-called "ground" lead is to dissipate the radio-frequency



R.F. "GROUND" LEAD IS CONNECTED TO FIELD CORE OF MOTOR
PORTABLE ELECTRIC TOOL PREFERABLY WITH AN INSULATED HOUSING
RADIO-FREQUENCY INTERFERENCE SUPPRESSOR

energy filtered out by the suppressor. In a conventional tool employing a metallic housing which is at ground potential, the "ground" lead of the suppressor is connected to the metallic housing. In this disclosure, however, the "ground" lead is connected directly to the field core of the motor; the field core is ungrounded electrically, yet serves to dissipate the radio-frequency energy filtered out by the suppressor.

3,373,302
CATHODE RAY TUBE DISPLAY SCREEN COMPRISING WOVEN MAT OF LUMINESCENT GLASS FIBERS

Stephen W. Barber, Toledo, Ohio, assignor to Owens-Illinois, Inc., a corporation of Ohio

Filed Dec. 21, 1964, Ser. No. 419,944
1 Claim. (Cl. 313—92)

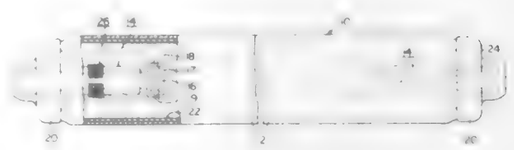
1. A cathode ray tube including an electron gun and a display screen excitable into luminescent emission by electrons from said gun, said display screen comprising a woven mat of substantially transparent, uniformly coalesced, homogeneous, fused glass fibers prepared from a composition consisting essentially of finely divided, anhydrous, particulate, non-crystalline, substantially pure silica and a luminescent producing quantity of at least one member selected from lanthanum, cerium, praseodymium, neodymium, samarium, europium, gadolinium, terbium, dysprosium, holmium, erbium, thulium, ytterbium, and lutetium.

3,373,303
AMALGAM-CONTAINING FLUORESCENT LAMP WITH INTEGRAL STARTING AID

George S. Evans, Caldwell, N.J., assignor to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania

Filed Apr. 29, 1965, Ser. No. 451,904
7 Claims. (Cl. 313—109)

A small amount of xenon, preferably from 0.1% to 2% by volume, is added to the fill gas of an amalgam-containing fluorescent lamp to compensate for the initial deficiency of mercury vapor when the lamp and amalgam are at ambient temperature and reduce the starting voltage to a value such that the lamp can be operated in fixtures and on ballasts designed for conventional fluores-

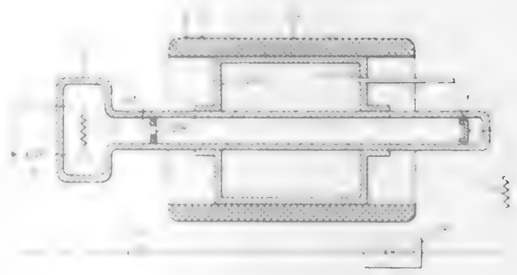


cent lamps. The xenon additive also permits the electrical characteristics of the lamp to be adjusted and correlated with the design parameters of the ballast.

3,373,304
MEANS FOR INCREASING ELECTRON DENSITY IN LOW PRESSURE GAS DISCHARGE TUBE

Claude D. Lustig, Arlington, Mass., assignor to Sperry Rand Corporation, Great Neck, N.Y., a corporation of Delaware

Filed Aug. 20, 1965, Ser. No. 481,340
6 Claims. (Cl. 313—161)



An elongated electron discharge tube having a constriction in the electron path and a solenoidal magnet for producing a longitudinal unidirectional magnetic field in a region between the constriction and the anode of the discharge tube.

3,373,305
DUOPLASMATRON SOURCE HAVING AN OFFSET COMPRESSOR ELECTRODE

Leslie Edward Collins, Reading, and Royston Henry Gobbett, Basingstoke, England, assignors to United Kingdom Atomic Energy Authority, London, England

Filed Oct. 18, 1965, Ser. No. 497,248
Claims priority, application Great Britain, Oct. 26, 1964, 43,658/64
3 Claims. (Cl. 313—230)

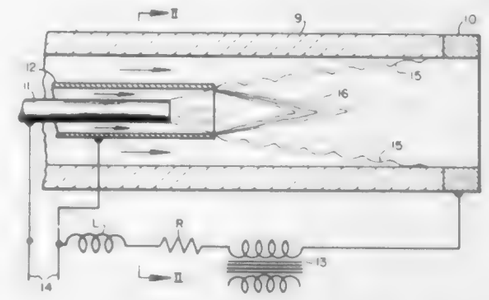
A duoplasmatron source for producing negative ions including a compressor having an orifice, an anode having an orifice and an extractor having an orifice. The axis of the compressor orifice is displaced from the common

axis of the anode and the extractor orifices to allow negative ions from the outer region of an arc discharge established between compressor and anode to be extracted through the anode orifice.

3,373,306
METHOD AND APPARATUS FOR THE CONTROL OF IONIZATION IN A DISTRIBUTED ELECTRICAL DISCHARGE

Bela Karlovitz, Pittsburgh, Pa., assignor to Northern Natural Gas Company, Omaha, Nebr., a corporation of Delaware

Filed Oct. 27, 1964, Ser. No. 406,810
12 Claims. (Cl. 313—231)



1. In the production of an electrical discharge distributed substantially uniformly through a gaseous stream the steps comprising,

(A) maintaining a high temperature gaseous piloting zone,

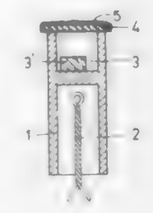
(B) introducing ionizing additives into said piloting zone, and

(C) introducing into said gaseous stream ionized gases from the high temperature piloting zone.

3,373,307
DISPENSER CATHODE

Pieter Zalm, Johannes Wilhelmus Catharina Sprengers, Antonius Johannes Alberta van Stratum, and Petrus Cornelis van der Linden, Emmasingel, Eindhoven, Netherlands, assignors to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware

Filed Nov. 12, 1964, Ser. No. 410,655
Claims priority, application Netherlands, Nov. 21, 1963, 300,825; Feb. 12, 1964, 64—1,191
6 Claims. (Cl. 313—346)

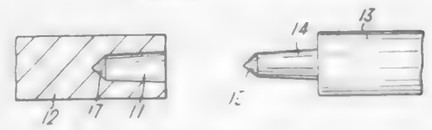


A dispenser type cathode comprising a refractory metal matrix of tungsten or tungsten-molybdenum in reactive relationship with an alkaline earth metal compound which will supply free barium to the emitting surface of the matrix. A thin porous layer of a refractory metal having a work function higher than that of tungsten covers the emitting surface. The layer metal is selected from the group of osmium, iridium, ruthenium, and rhenium. The resultant cathode exhibits increased electron emission at the same temperature, or the same electron emission at a lower temperature, than that of a comparable cathode without the layer.

3,373,308
NEGATIVE ELECTRODES FOR CARBON ARC LAMPS

Jean Adrien Perrin, Pagny-sur-Moselle, France, assignor to Societe le Carbone Lorraine, Paris, France, a French body corporate

Continuation-in-part of application Ser. No. 337,763, Jan. 15, 1964. This application July 5, 1966, Ser. No. 575,203
Claims priority, application France, Oct. 31, 1963, 952,421, Patent 1,383,904
5 Claims. (Cl. 313—357)

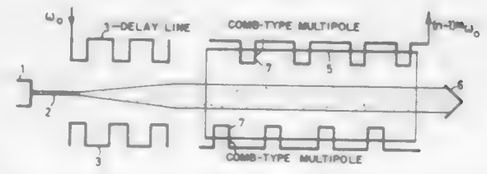


A negative electrode for a high-intensity carbon arc lamp has a male end of truncated conical shape terminating in a conical point of greater apical angle. This male end fits into the complementarily-shaped female end of a preceding electrode. The electrode burns from the male towards the female end and at the junction the cathodic spot of the arc is constrained to pass to the point so minimising risk of dowsing the arc.

3,373,309
ELECTRON BEAM TUBE FOR FREQUENCY MULTIPLICATION

Klaus Pöschl and Werner Veith, Munich, Germany, assignors to Siemens Aktiengesellschaft, a corporation of Germany

Filed Sept. 30, 1963, Ser. No. 313,412
Claims priority, application Germany, Oct. 3, 1962, S 81,874
11 Claims. (Cl. 315—3)

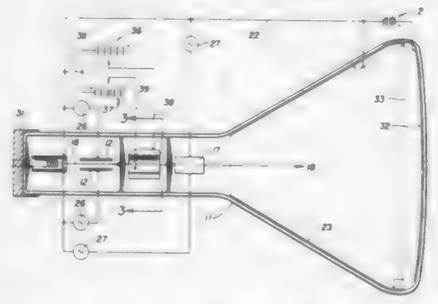


An electron beam tube for frequency multiplication comprising an electron beam generating system, a coupling system for synchronous waves, an electrostatic multiple field of even pole number having at least six poles, a decoupling system and a collector, in which system electron beam extends in a longitudinal magnetic field.

3,373,310
CATHODE RAY TUBE SELECTIVE DEFLECTION AMPLIFIER USING A QUADRUPOLE LENS OF CRITICAL LENGTH

John L. Worcester, Walnut Creek, Calif., assignor to E-H Research Laboratories, Inc., Oakland, Calif., a corporation of California

Filed July 17, 1964, Ser. No. 383,363
1 Claim. (Cl. 315—18)



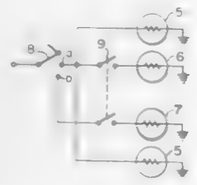
A deflection amplifier for use in a cathode ray tube which comprises a quadrupole lens. The length of the

quadrupole lens is critical and is determined by a formula, causing amplification of the deflection in one direction and no effect on deflection in a second direction. Opposite pairs of plates in the quadrupole lens have equal and opposite D.C. voltages impressed on them.

3,373,311
AUTOMOBILE HEADLAMP SYSTEM

Karl H. Neulinger, Bronx, N.Y., and Paul J. Yatcko, Livingston, N.J., assignors to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania

Filed Oct. 22, 1965, Ser. No. 502,258
4 Claims. (Cl. 315—83)

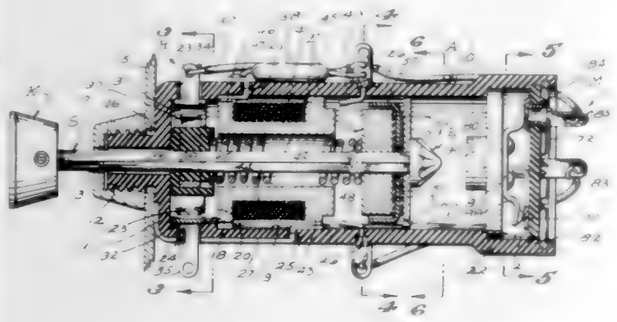


An automobile headlamp system including four sealed-beam headlamps disposed in pairs on each side of the front of a motor vehicle and an energizing circuit having a panel switch and a dimmer switch. The energizing circuit is operable in one position of the panel switch to provide low beam illumination from one headlamp of each pair and operable to add the illumination of a third headlamp to the low beam illumination by actuation of the dimmer switch. The energizing circuit is operable in a second position of the panel switch to add the remaining headlamp to the low beam illumination provided by the first mentioned headlamps and the dimmer switch is operable in the second position of the panel switch to return the system to low beam illumination from a condition wherein all four headlamps are lit without any visible jumping effect in transition from one beam to another.

3,373,312
SOLENOID ACTUATED AUTOMOBILE HEADLIGHT SWITCH

Marks Mervyn Conn, 2319 Charlton, Los Angeles, Calif. 90034

Filed Apr. 1, 1966, Ser. No. 539,389
9 Claims. (Cl. 315—83)

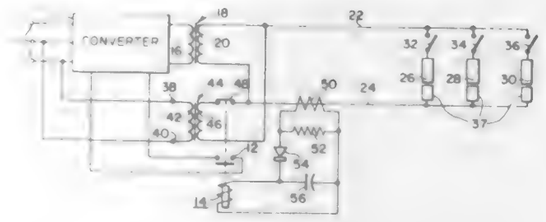


A solenoid actuated automobile headlight switch including an elongate body with front and rear ends, an elongate shaft extending arranged parallel with the body with a forward portion projecting forwardly beyond the forward end of the body, said shaft being shiftable axially between front and normal rear positions, a primary contact carried by the body, a first power line, a power source and a normally open auto ignition switch, said first power line extending between the power source and the primary contact, said ignition switch being arranged in said power line to control the flow of power therethrough, a secondary contact carried by the body, suitably grounded head lamps, a second power line connected between the secondary contact and the head and tail lamps, a connector carried by the shaft to establish connection between the primary and secondary contacts when the shaft is in its front position, an electro magnet carried by the body and having a core and a coil about the core, said coil having a primary lead grounded and a secondary lead connected with the second power line, a ferrous mass carried by the shaft to occur rearward of the electro magnet when the shaft is in its rear position and to engage the magnet core when the shaft is in its front position, and spring means related to and normally yieldingly urging the shaft to its rear position.

3,373,313
POWER SUPPLY SYSTEM FOR LOW-FREQUENCY AND HIGH-FREQUENCY DISCHARGE DEVICES AND SWITCHING MEANS THEREFOR

Frank J. Prines, Penn Hills, Pa., and Eugene R. Pledger, West Seneca, N.Y., assignors to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania

Continuation-in-part of application Ser. No. 292,853, July 5, 1963. This application Aug. 16, 1965, Ser. No. 480,084
10 Claims. (Cl. 315—56)



1. An electrical circuit comprising:
(a) a source of electric current of low frequency,
(b) a plurality of light source devices operable on said current of low frequency, and said devices operable with improved performance on current of high-frequency;
(c) normally deactivated frequency-converting means operable to generate said current of high-frequency when actuated;
(d) means for initiating operation of any of said devices on said current of low frequency;
(e) current sensing means responsive to current through said initially operated devices to generate an electric output signal which is substantially constant regardless of the number of said devices initially operated;
(f) primary switching means and secondary switching means and the operating means for said switching means;
(g) said primary switching means, when in a closed position, actuating said frequency-converting means to cause the resulting generated high-frequency current to operate said initially operated devices;
(h) said secondary switching means, operable when open, to terminate electric current of said low frequency through said initially operated devices; and
(i) said operating means for said switching means responsive to the output signal of said sensing means to close said primary switching means, and at substantially the same time, open said secondary switching means.

3,373,314
TRANSISTORIZED IGNITION SYSTEM WITH A SATURABLE TRANSFORMER CONTROL AND VOLTAGE COMPENSATION MEANS

Ole K. Nilssen, Livonia, Mich., assignor to The Ford Motor Company, Dearborn, Mich., a corporation of Delaware

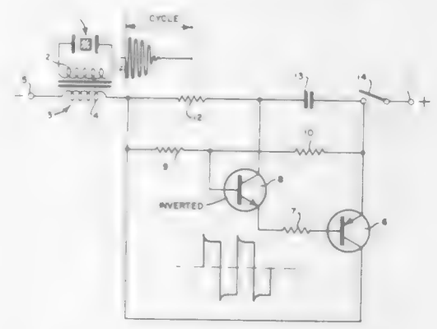
Filed June 25, 1965, Ser. No. 466,949
10 Claims. (Cl. 315—214)

An ignition system for an internal combustion engine in which means are employed for charging an electrical storage means from a source of electrical energy to a substantially constant value irrespective of fluctuations in the terminal voltage of the source of electrical energy. This electrical storage means is charged immediately prior to the requirement for ignition voltages from the electrical storage means. The means for charging the electrical storage means comprises a transistor or other solid state switching device, a saturable switching transformer or core and circuit means coupling the transistor and the saturable switching core or transformer for causing the transistor or other solid state switching device to be switched to the conducting state only during the time that the saturable switching transformer or core is switched from a steady state operating condition to one of its states of saturation. Circuit means are coupled to the source of electrical energy and the saturable switching transformer or core for biasing the saturable switching transformer or core toward one state of saturation as a function of the terminal voltage of the source of electrical energy and this means may comprise a winding coupling the saturable switching transformer or core and connected across the source of electrical energy.

3,373,315
FLASHER CIRCUIT FOR ELECTROLUMINESCENT CELLS

Robert Colman, 421 E. 80th St., New York, N.Y. 10021

Filed Oct. 23, 1965, Ser. No. 503,835
5 Claims. (Cl. 315—240)

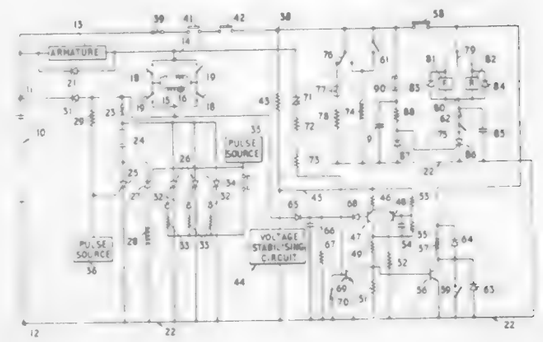


A high efficiency power supply which converts a DC voltage to an AC voltage for driving light sources and other loads.

3,373,316
ELECTRICAL CONTROL SYSTEM FOR AN INDUSTRIAL TRUCK

Norman Harold George Palmer, Sutton Coldfield, England, assignor to Eaton Yale & Towne Inc., a corporation of Ohio

Filed Oct. 26, 1965, Ser. No. 505,250
Claims priority, application Great Britain, Nov. 17, 1964, 46,719/64
8 Claims. (Cl. 317—13)

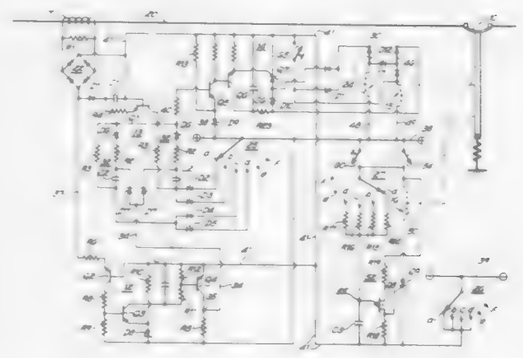


1. An electrical control system for an industrial truck, comprising an electric motor for driving the truck, the motor incorporating a field coil assembly, a first pair of contactors which when closed permit current flow through the field coil assembly in one direction, a second pair of contactors which when closed permit current flow through the field coil assembly in the opposite direction, a pair of terminals which in use are connected to the truck battery, at least one switching device controlling current flow from said pair of terminals through the contactors to the field coil assembly, means for switching said device on and off to provide a pulsating current flow from said terminals, a safety circuit for opening the contactors whenever a switching device is on for longer than a predetermined period of time, a testing circuit operable before the truck is moved to test the safety circuit, and means preventing closing of the contactors unless the safety circuit is first tested and is operative.

3,373,317
REPEATING CIRCUIT INTERRUPTER WITH IMPROVED STEP ADVANCE CONTROL MEANS

Clyde Gilker, South Milwaukee, Wis., assignor to McGraw-Edison Company, Milwaukee, Wis., a corporation of Delaware

Filed Jan. 17, 1966, Ser. No. 521,081
11 Claims. (Cl. 317—22)



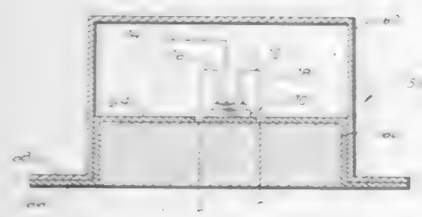
1. A repeating circuit interrupter including switch means in circuit with an electrical system, electroresponsive switch opening means, first circuit means coupled to said system for providing a control signal upon the occurrence of a predetermined condition in said system, second circuit means coupled to said switch opening means and to said first circuit means and being operable

to complete an energizing circuit to said switch opening means upon the occurrence of said control signal, step acting sequencing means operative to a plurality of stages to initiate a switch closing operation after each of a predetermined number of switch opening operations and to prevent further reclosure thereof after the next succeeding switch opening operation after said predetermined number, said step acting means including an electroresponsive actuating part coupled to said second circuit means for being energized upon the completion of an energizing circuit to said switch opening means, contact means coupled to said switch means and in circuit with said electroresponsive actuating part for open circuiting the latter upon the opening of said switch means and for interrupting said control signal, and static means coupled to said first circuit means for disabling the same when a switch opening operation is initiated.

3,373,318
ELECTRICAL COMPONENT MOUNTING INCLUDING THERMAL COUPLING AND ELECTRICAL ISOLATING MEANS

Howard H. Rogers, Woodland Hills, Calif., assignor to North American Aviation, Inc.

Filed June 25, 1965, Ser. No. 466,968
4 Claims. (Cl. 317—101)

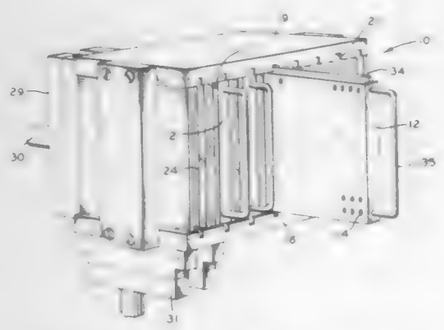


An electrically conductive mounting plate for mounting at least two electrical components such as transistors in heat conductive relationship. Leads of the elements extend from opposite portions of the plate and are separated physically by an intervening portion of the plate to achieve electrical isolation. The plate can act as a common connection for DC or low frequency components of a circuit.

3,373,319
CIRCUITRY SYSTEM

Joseph De Robertis, Yorktown Heights, N.Y., assignor to Sealectro Corporation, Mamaroneck, N.Y., a corporation of New York

Filed Apr. 22, 1966, Ser. No. 544,564
4 Claims. (Cl. 317—101)

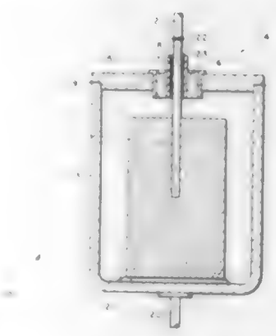


1. An electrical control system comprising spaced frame members having a plurality of pairs of opposed slots, conductor cards received in first and third pairs of said slots, each having a plurality of parallel conducting paths formed thereon, the paths on one card being at right angles to those on the second card of the pair and facing each other, and a connector board of insulating material positioned between said conductor cards in an intermediate pair of slots and having a plurality of rows of openings corresponding to lines of intersection of said conducting paths, and connectors having contacts at their ends which are spring urged outwardly and which are positioned in selected openings in the connector board, said contacts engaging a conducting path in each conductor card.

3,373,320
SOLID ALUMINUM CAPACITOR WITH ALUMINUM FELT ELECTRODES

Richard H. Krock, Peabody, and Gerhart P. Klein, Manchester, Mass., assignors to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware

Filed Nov. 6, 1964, Ser. No. 409,389
14 Claims. (Cl. 317—230)

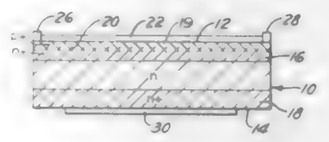


High surface area electrodes for electrolytic capacitors fabricated by pressing and sintering of attenuated aluminum fibers. The aluminum fibers are randomly arranged and intimately bonded at points of contact with adjoining fibers to provide a porous anode having a density up to about 75 percent of theoretical density.

3,373,321
DOUBLE DIFFUSION SOLAR CELL FABRICATION

Krishan S. Tarneja, Pittsburgh, Pa., and Mohammed S. Shaikh, Mountain View, Calif., assignors to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania

Filed Feb. 14, 1964, Ser. No. 344,901
7 Claims. (Cl. 317—234)

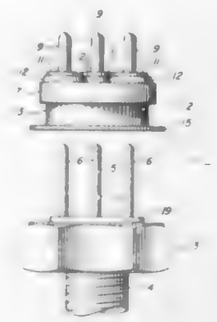


1. A semiconductor structure for use in solar cells comprising a body of semiconductive material of a first semiconductivity type and a high resistivity and having opposed major surfaces, a thin zone of the first semiconductivity type and of a low resistivity material in each of the major surfaces thereof, a zone thinner than said first zone of the first semiconductivity type, of opposite semiconductivity type and of low resistivity in surface of one of the thin zones of first semiconductivity type whereby a p-n junction is provided, a grid type ohmic contact on a portion of the surface of the thin zone of opposite semiconductivity type and a large area ohmic contact on the surface of the first conductivity type surface.

3,373,322
SEMICONDUCTOR ENVELOPE

Gary Hillman, Livingston, and Allan Davis, Hazlet, N.J., assignors to Mitronics Inc., Murray Hill, N.J.

Filed Jan. 13, 1966, Ser. No. 520,386
4 Claims. (Cl. 317—234)

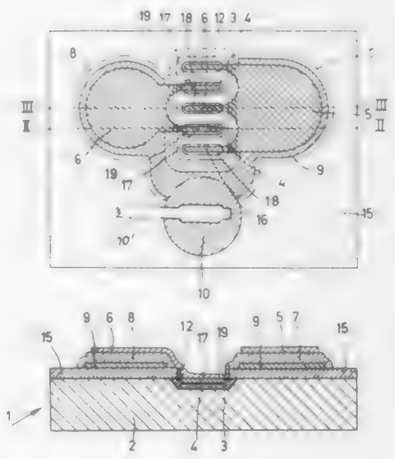


Semiconductor envelope comprises base, and ceramic header having spaced, flat metallized bosses with a perforation extending through each boss. Flanged nipples are brazed to the bosses. Prongs mounted to the base and electrically connected to various portions of the encapsulated semiconductor extend through the perforations into nipples and are crimped therein. Flanged collar on ceramic header is secured to base to complete envelope. Alternatively, nipples extend into perforations, and are brazed to the flat metallized bosses at the tops thereof.

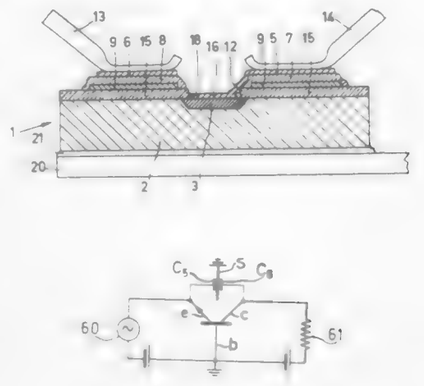
3,373,323
PLANAR SEMICONDUCTOR DEVICE WITH AN INCORPORATED SHIELD MEMBER REDUCING FEEDBACK CAPACITANCE

Gunther Carl Maximilian Eduard Wolfrum, Jacobus Johannes Rongen, Alfons Matthijs Reinier van Iersel, and Petrus Martinus Albertus Wilhelmus Moors, Nijmegen, Netherlands, assignors to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware

Continuation of applications Ser. No. 455,078, May 12, 1965, and Ser. No. 488,078, Sept. 17, 1965. This application Aug. 17, 1966, Ser. No. 572,938.
Claims priority, application Netherlands, May 15, 1964, 64—5,411; July 23, 1965, 65—9,551; Aug. 6, 1965, 65—10,237
15 Claims. (Cl. 317—235)



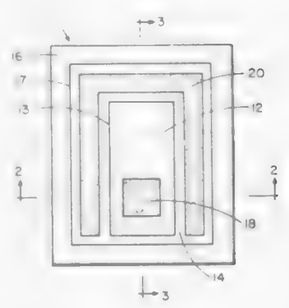
A planar semiconductor device incorporating an integrated shield underneath the contact pad for one of the semiconductor zones. A principal embodiment is a planar transistor in which the shield is a surface zone underneath the contact pad for the emitter or base zone. By connecting the shield to a point of potential, preferably the same point of constant potential as the other electrode of the emitter and base, the feedback capacitance of the transistor is substantially reduced enabling operation at much higher frequencies.



3,373,324
SEMICONDUCTOR DEVICE WITH AUTOMATIC GAIN CONTROL

John C. Haenichen, Scottsdale, Ariz., assignor to Motorola, Inc., Chicago, Ill., a corporation of Illinois

Filed Dec. 5, 1962, Ser. No. 242,466
8 Claims. (Cl. 317—235)



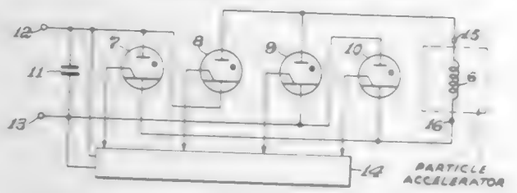
1. In a high frequency transistor including emitter, base and collector regions and having a power gain which is related to the maximum frequency at which the high frequency transistor will oscillate, the maximum frequency at which the transistor will oscillate being proportional to the square root of the value of the frequency at which the transistor current gain is unity divided by the product of the resistance of the base region and the capacitance of the collector region, the improvement comprising, a body of semiconductor material including said emitter region, said emitter region forming a planar rectifying junction within said semiconductor material and having an exposed major surface, and contact means operatively connectable to a source of high frequency signals, said contact means including a metallic conductor making ohmic contact with said emitter region in a contact area which is substantially less than the exposed area of said major surface for simultaneously causing a decrease in said frequency at which said high frequency transistor current gain is unity and an increase in said base resistance as the current through said contact means is increased, thereby decreasing said maximum frequency at which said high frequency transistor will oscillate.

3,373,325

METHOD OF INCREASING THE YIELD OF ACCELERATED PARTICLES IN A BETATRON OR SYNCHROTRON

Ladislav Šípek and Jan Dvořák, Prague, Czechoslovakia, assignors to Československá akademie věd, Prague, Czechoslovakia

Filed Oct. 24, 1963, Ser. No. 318,632
Claims priority, application Czechoslovakia, Nov. 2, 1962, 6,206/62
4 Claims. (Cl. 317—262)



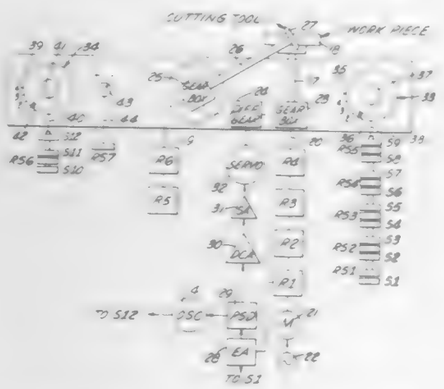
1. In combination in a particle accelerating organization, particle accelerating means including winding means for generating a unidirectional magnetic field, and energizing means connected to said winding means for energizing said winding means with unidirectional current pulses spaced from each other by a determined time interval, said energizing means comprising a voltage source for supplying an alternating potential having a determined frequency which is half the repetition rate of said current pulses, said alternating potential being characterized by maximum values in a first and second reference polarity, first controlled switching means for completing a first conduction path between said voltage source and said winding means, second controlled switching means for completing a second conductive path between said voltage source and said winding means, and control means for energizing said first and second switching means between the times when said voltage source is supplying a peak voltage in said first and second, and said second and first reference polarities, said peak voltage determining the duration of said determined time interval.

3,373,326

POSITION MEASURING TRANSFORMER SYSTEM FOR MULTIPLE SHAFT SYNCHRONIZATION

Clair L. Farrand, Bronxville, N.Y., assignor to Inductosyn Corporation, Carson City, Nev., a corporation of Nevada

Filed June 25, 1964, Ser. No. 377,874
12 Claims. (Cl. 318—18)



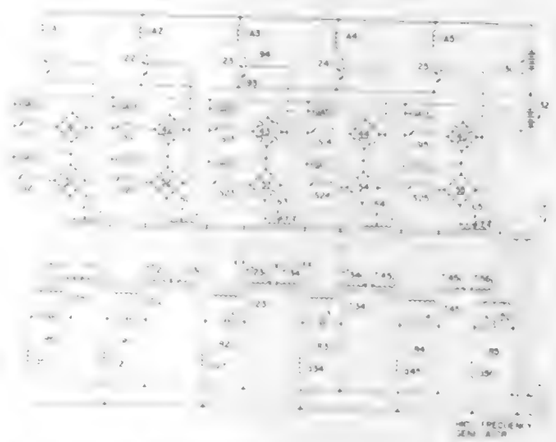
Rotary position measuring transformers such as resolvers, selsyns and Inductosyns (trademark) and others have been used with relatively movable members having two or more poles. With two poles, one cycle of the coupling wave is produced between the windings of the members for each revolution. This has been designated a one-speed field. When a plurality of poles are used, such as, for example, fifty-four poles, producing twenty-seven cycles of the coupling wave per revolution, this has been designated a twenty-seven-speed device. Hence, speed as applied to a position measuring transformer represents the number of cycles of coupling wave per revolution.

3,373,327

CONTROL CIRCUIT FOR CRYOGENIC MOTORS

Dieter L. Teuber, Huntsville, Ala., assignor to the United States of America as represented by the Secretary of the Army

Filed Sept. 22, 1964, Ser. No. 398,461
8 Claims. (Cl. 318—138)



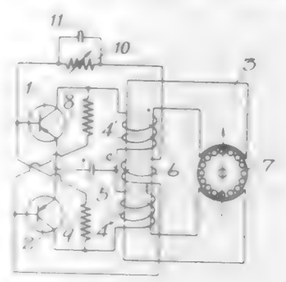
1. A motor comprising a plurality of coil means; a rotor mounted for rotation; first circuit means for sensing the direction of change in the inductivity of each coil means due to rotation of said rotor; said first circuit means having a plurality of control windings, each wound around and associated with different pairs of adjacent coil means; said control windings being so arranged that a difference in inductivity of any two control windings associated with one of said coil means is proportional to the inductivity of said one coil means, control circuit means having inputs connected to outputs of said first circuit means; and said control circuit means having outputs connected to the coil means so as to control the energization of said coil means.

3,373,328

INDUCTION-MOTOR TYPE TRANSISTOR MOTOR

Nobuhito Hobo, Kariya-shi, Japan, assignor to Nippon Denso Kabushiki Kaisha, Kariya-shi, Japan

Filed Mar. 10, 1965, Ser. No. 438,509
2 Claims. (Cl. 318—138)



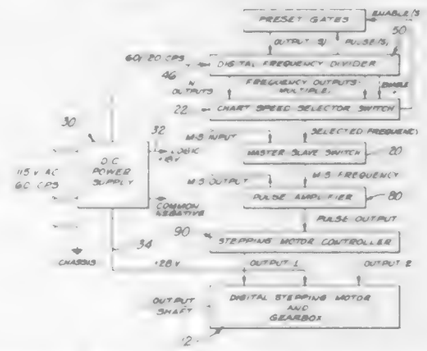
1. In an induction-motor type transistor motor, an induction motor having a stator and a rotor, a stator winding on said stator, said stator winding being divided into two spaced segments, connected together, a tap connection connected to the connection between said two spaced segments, an auxiliary winding wound on said stator between said two segments, a pair of transistors connected in push-pull for relaxation oscillation, a first resistor connected between the base of a first one of said transistors and the collector of a second one of said transistors, a second resistor of resistance equal to the resistance of said first one of said resistors connected between the base of the second one of said transistors and the collector of the first one of said transistors, the emitters of said two transistors being connected together, a source of direct current connected between said tap connection between said spaced segments and the emitters of said two transistors, and the two ends of said auxiliary winding being respectively connected to the bases of said two transistors and the free ends of said two segments of said stator winding which are not connected together being respectively connected to the two collectors of said pair of transistors.

3,373,329

DEVICE FOR DRIVING RECORDING CHARTS AT ANY ONE OF A PLURALITY OF PREDETERMINED SPEEDS

Robert Thomas Kaiser, San Diego, Calif., assignor, by mesne assignments, to Kinetics Corporation of California, Solana Beach, Calif., a corporation of California

Filed Mar. 31, 1965, Ser. No. 444,161
8 Claims. (Cl. 318—305)



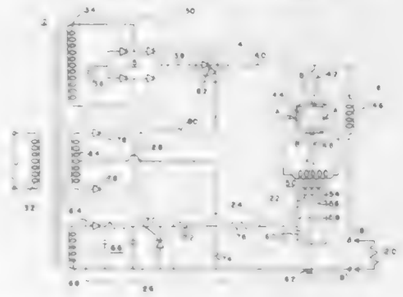
A frequency divider has a signal generator connected thereto, and is connected through a frequency selector switch to a master-slave switch. In master position, the master-slave switch connects the selector switch determined frequency to the controller of a stepping motor arranged for driving a chart, and in slave position, said master-slave switch connects an outside determined frequency therethrough in similar manner. A group of similar devices, one in the master condition and the others in the slave condition, with the stepping motor controllers thereof connected to the selector switch determined frequency of the master device, will drive a group of charts at synchronized speeds.

3,373,330

POWER REGULATOR

Donald F. O'Brien, 55 Fairview Ave., Watertown, Mass. 02172

Filed Oct. 15, 1964, Ser. No. 404,110
19 claims (Cl. 318—308)



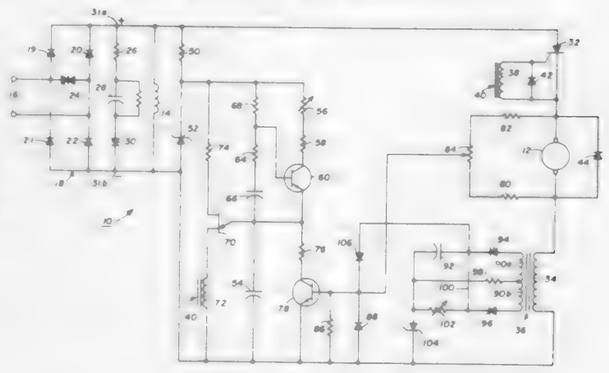
An alternating current-to-alternating current power regulator for an alternating current consuming load having a wide range of impedance variations wherein the power components supplied to or extracted from the load are sampled and applied as inputs to a combiner such as a Hall effect device. The output of the combiner is utilized to control the conduction angle of the alternating current power input for the load.

3,373,331

D.C. MOTOR CONTROL CIRCUIT

Ronald C. Dow, Garland, Tex., assignor to Power Engineering, Inc., Dallas, Tex., a corporation of Texas

Filed Feb. 23, 1965, Ser. No. 434,364
8 Claims. (Cl. 318—331)



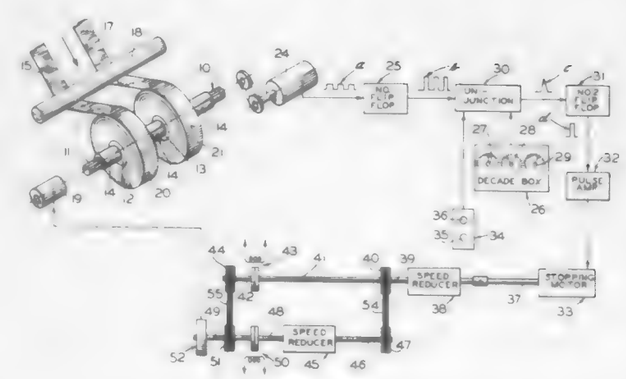
A control circuit for a D.C. motor driven by a rectified A.C. power supply including an armature power circuit having a control switch in series with the armature. A reference capacitor is connected in a series discharge loop including a breakover device which conducts when the charge potential on the reference capacitor exceeds a predetermined value, in order to energize the control switch. A first circuit including a transistor is connected to the power supply and reference capacitor for charging the reference capacitor at a progressively increasing rate to progressively advance the point at which the control switching device is energized. A second circuit including a second transistor connected to the capacitor and armature power circuit decreases the charging rate of the reference capacitor in response to increases in the voltage across the armature above a predetermined value and in response to the current through the armature power circuit exceeding a predetermined value.

3,373,332

APPARATUS FOR AUTOMATICALLY CONTROLLING THE SPEED OF A REWIND MANDREL

Oluf Olsen, Cranford, N.J., assignor to John Dusenbery Company, Inc., Clifton, N.J., a corporation of New Jersey

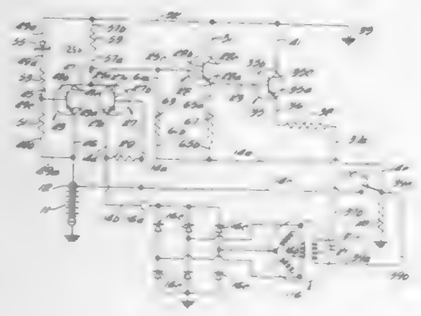
Filed June 25, 1965, Ser. No. 467,067
11 Claims. (Cl. 318—396)



Apparatus for automatically reducing the speed of rotation of a motor-driven mandrel in correspondence with the increased diameter of a roll of material wound upon

a core carried by the mandrel. A switching device, mechanically-coupled to the mandrel, produces voltage pulses upon rotation of the mandrel. A predetermined number of the voltage pulses are converted into a control voltage which actuates a control device for effecting a predetermined decrease in the speed of the motor.

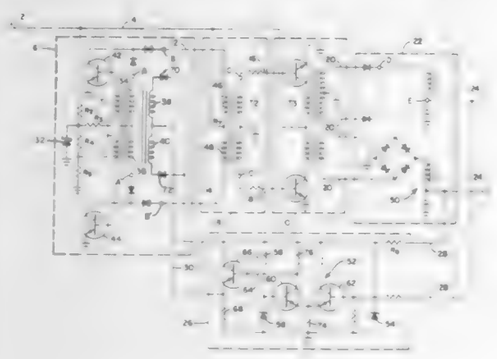
3,373,333
VOLTAGE AND CURRENT REGULATOR FOR AUTOMOBILES
Gary R. Eckard, Louada Drive, Rte. 5, Newark, Ohio 43055
Filed Oct. 20, 1965, Ser. No. 498,378
12 Claims. (Cl. 320—32)



1. A battery voltage regulating device having an electrical current producing device (1) driven by an engine and (2) connected electrically to the battery normally to continuously charge said battery, in combination with

means comprising a transistor for controlling current through the field winding of said current producing device, means comprising a transistor controlled solely by the voltage of the battery for at times limiting the operation of the electrical current producing device and means comprising a transistor controlled solely by the current being produced by said current producing device for limiting the operation of the electrical current producing device.

3,373,334
REGULATED D.C. TO D.C. POWER SUPPLY
Eugene W. Geisz, South St. Paul, and Walter C. Timm, Minneapolis, Minn., assignors to Sperry Rand Corporation, New York, N.Y., a corporation of Delaware
Filed June 1, 1965, Ser. No. 459,991
2 Claims. (Cl. 321—2)



A D.C. to D.C. converter which regulates output voltage against input voltage variations by providing a saturable reactor which produces square wave voltage pulses which are pulse-width modulated depending upon the amplitude of the input supply voltage thereby providing an output pulse which has a constant voltage-time product. The D.C. output of the power supply is regulated against load variations by providing a transformer-coupled oscillator whose frequency determines the output voltage by driving the reactor and which frequency is changed in accordance with a change in the output voltage.

3,373,335
STACKED ASSEMBLY OF RECTIFIER UNITS INCORPORATING SHUNT CAPACITORS
Harold B. Rosenberg, New Rochelle, N.Y., assignor to Electronic Devices, Inc., Yonkers, N.Y., a corporation of Delaware
Filed Dec. 22, 1964, Ser. No. 420,341
1 Claim. (Cl. 321—11)

An integrated assembly of rectifier units and protective shunt capacitors wherein a row of such units has electrodes interposed therebetween to connect the units in series, the electrodes having larger dimensions than said units to define an annular area which surrounds each unit, this area being occupied by an annular dielectric body which forms with the adjacent electrodes a capacitor in shunt relation with the unit and having a value acting to protect the unit from voltage surges.

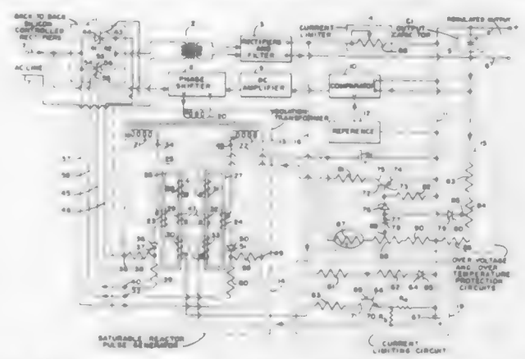
3,373,336
SEMICONDUCTOR-RECTIFIER DEVICE FOR HIGH-VOLTAGE AND HIGH-FREQUENCY
Ekkehard Schillmann, Heinz Eggert, and Reinhard Schatz, Berlin, Germany, assignors to Siemens Aktiengesellschaft, Munich, Germany
Filed Mar. 22, 1965, Ser. No. 441,460
Claims priority, application Germany, Mar. 25, 1964, S 90,191
3 Claims. (Cl. 321—11)

In a high voltage high frequency rectifying circuit for voltages above 5 kv. and frequencies above 10 kc., a rectifier connecting a voltage supply source to the DC output terminals comprises a column of semiconductor rectifier members stacked upon each other. Each of the rectifier members has an active rectifying area which is $^{1}/_{100}$ to $^{1}/_{4}$ of its total surface. The number of semiconductor rectifier members is so small that the blocking losses of the rectifier are of substantially the same order of magnitude as the forward losses.

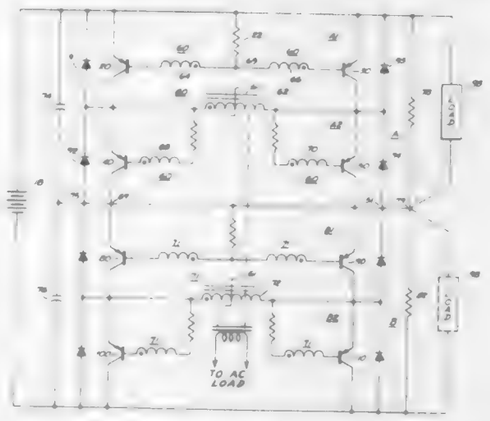
3,373,337
INPUT REGULATED POWER SUPPLIES
Han-Min Hung, Bayside, N.Y., assignor to Forbro Design Corp., New York, N.Y., a corporation of New York
Filed June 16, 1965, Ser. No. 464,367
4 Claims. (Cl. 321—16)

1. In a regulated power supply, the combination of, a power transformer including primary and secondary windings, rectifier and filter means for producing a direct current connected to said secondary, a pair of back-to-back connected silicon controlled rectifiers connected in

series with said primary for controlling alternating current flow from an alternating current source to said primary, a saturable reactor pulse generator including two saturable reactors coupled to said silicon controlled rectifiers, pulse responsive means coupling said saturable reactors polled to reset one of said reactors in response to a pulse in the other, phase shift means connected to receive alternating current from said alternating current source and coupled to said saturable reactor to control the phase of pulses generated thereby, and a source of phase control signals coupled to said phase shift means including voltage comparison means connected to compare a source of reference voltage with at least a portion of said direct current.



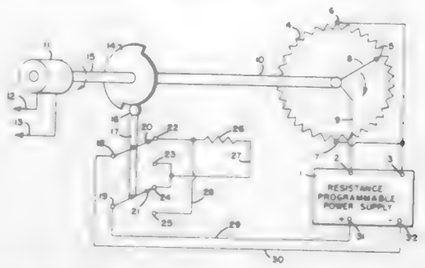
3,373,338
POWER CONVERSION SYSTEM WITH MAGNETICALLY FORCED VOLTAGE SHARING FOR THE SWITCHING DEVICES
Philip D. Corey and Armistead L. Wellford, Waynesboro, Va., assignors to General Electric Company, a corporation of New York
Continuation of application Ser. No. 260,257, Feb. 21, 1963. This application Feb. 2, 1967, Ser. No. 613,684
7 Claims. (Cl. 321—27)



A transistorized inverter employing a single multiple-winding transformer to achieve lossless forced collector voltage sharing, permitting improved operation of the oscillator from very high voltage DC power sources with high efficiency.

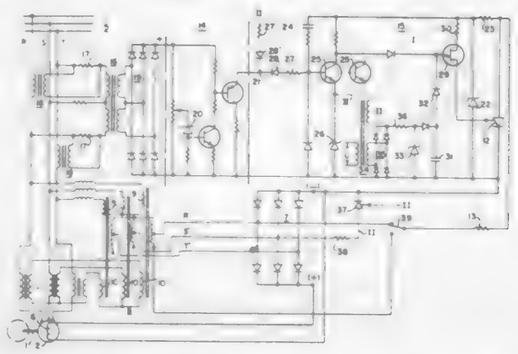
3,373,339
GENERATING ALTERNATING CURRENT BY REVERSING A DIRECT CURRENT SOURCE
Paul Birman, Flushing, N.Y., assignor to Forbro Design Corp., New York, N.Y., a corporation of New York
Filed June 7, 1965, Ser. No. 461,982
4 Claims. (Cl. 321—49)

In accordance with the present invention AC power may be derived from a programmable DC power supply generally capable of supplying unidirectional programmed output current in accordance with the command of a unidirectional programming means. The power supply and its program are to create DC output current starting and ending at zero. The invention also provides for reversing the polarity of the output by means of a suitable



switch synchronized and phased with the programming means to effect the polarity reversal at the zero output points. In this way no transients or discontinuities are created in the output current and the output current is made bidirectional or in other words an AC output is created from unidirectional DC current.

3,373,340
VOLTAGE REGULATING SYSTEM FOR SYNCHRONOUS GENERATORS
Rudolf Dirr and Hermann Waldmann, Erlangen, Germany, assignors to Siemens Aktiengesellschaft, Munich, Germany, a corporation of Germany
Filed June 28, 1965, Ser. No. 467,203
Claims priority, application Germany, June 27, 1964, S 91,739
13 Claims. (Cl. 322—28)

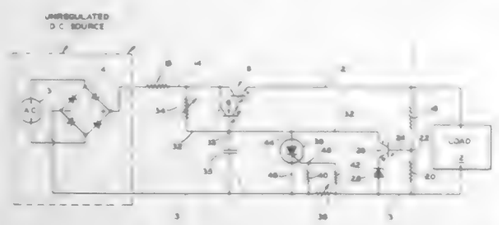


A voltage reglating system for a self-excited synchronous generator comprises a bridge network of uncontrolled rectifiers. A transformer is connected to the network and supplies mutually superimposed base and load-responsive shares of current from the generator to the network. A comparator provides a control voltage dependent upon the departure of the generator voltage from a datum voltage. A controlled rectifier has a control circuit connected to the comparator and energized by the control voltage of the comparator to be phase controlled by the departure of the generator voltage from the datum voltage. The anode of the controlled rectifier is connected to the secondary phase of the transformer via a resistor. The cathode of the controlled rectifier is connected to the negative pole of the bridge network.

3,373,341
ELECTRICAL NETWORK FOR PREVENTING EXCESSIVE LOAD CURRENT
Harry B. Wattson, Rutherford, N.J., assignor to The Bendix Corporation, Teterboro, N.J., a corporation of Delaware
Filed May 18, 1964, Ser. No. 368,264
8 Claims. (Cl. 323—9)

An electrical network for preventing excessive current from flowing to a load and including a normally nonconductive silicon controlled rectifier connected across the

power supply to the load. When excessive load current develops, the silicon controlled rectifier is rendered conductive which in turn cuts off a regulating transistor to

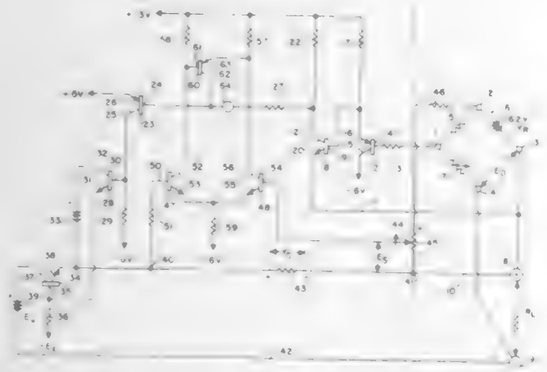


prevent current flow to the load. The silicon controlled rectifier is automatically cut off when the load current returns to normal thereby returning current flow to the load.

3,373,342
CURRENT CUTOFF CIRCUIT FOR REGULATED POWER SUPPLY

Joseph R. Gately, Woodside, N.Y., assignor to Forbro Design Corp., New York, N.Y., a corporation of New York

Filed Feb. 3, 1966, Ser. No. 524,789
7 Claims. (Cl. 323—9)



1. In a direct current voltage regulating system, the combination of, a source of voltage to be regulated, output terminals for the regulated voltage, a signal responsive series pass device and a current sensing means connected in series between said source and one of said output terminals, a source of reference voltage, means for comparing the output voltage across said output terminals with said reference voltage to provide an error signal in accordance with the difference therebetween, a multistage transistor amplifier for amplifying said error signal to provide an augmented signal to control said pass device, a resistor in series between two stages of said amplifier, and means responsive to current of greater than a predetermined magnitude in said current sensing means including a transistor connected to said resistor for passing current in a predetermined direction through said resistor and thereby to at least partially disable said amplifier between said resistor and said series pass device.

3,373,343
PRESSURE-ELECTRIC TRANSDUCERS WITH PERFORMANCE STABILIZATION

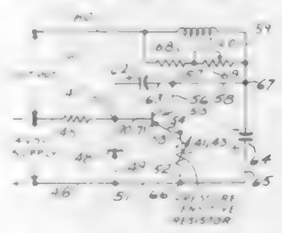
James R. Bailey, Milwaukee, Wis., assignor to Johnson Service Company, Milwaukee, Wis., a corporation of Wisconsin

Filed Nov. 24, 1965, Ser. No. 509,582
14 Claims. (Cl. 323—19)

1. In combination with a pressure-electric transducer having an electric circuit and having input signal mechanism which includes pressure-responsive electric contact means, the resistance of which decreases in accordance with pressure thereon to thereby effect the voltage drop across said contact means, said transducer including magnetic feedback means having a coil in said circuit, control means including said pressure-responsive contact means controlling the flow of current through said feedback coil, the improvement comprising:

voltage limiting means connected in parallel with said contact means and feedback coil and including a diode;

transistor means having a first terminal connected to the negative side of said contact means and having a base, there being a connection between said base and the negative side of said diode;



the positive side of said diode being connected to the positive terminal of said contact means to cause a drop in voltage across said contact means whereby a constant low voltage drop across the contact means is maintained to stabilize the transducer performance; and

means between the feedback coil of the transducer and another terminal of said transistor for activating said feedback coil.

3,373,344
VOLTAGE REGULATOR CIRCUIT INCLUDING A STORAGE CAPACITOR AND A SWITCHING MEANS RESPONSIVE TO A VOLTAGE DIFFERENCE FOR CHARGING THE CAPACITOR

Harold G. Seer, Jr., Wilmington, Del., assignor to Radio Corporation of America, a corporation of Delaware

Filed Sept. 14, 1964, Ser. No. 396,075
9 Claims. (Cl. 323—22)

An unregulated source supplies current to a capacitor by way of a switching means. The capacitor acts as a current supply for a voltage regulator. Means are provided to turn the switching means off only when the voltage of the source exceeds the voltage of the output of the regulator by more than a critical value.

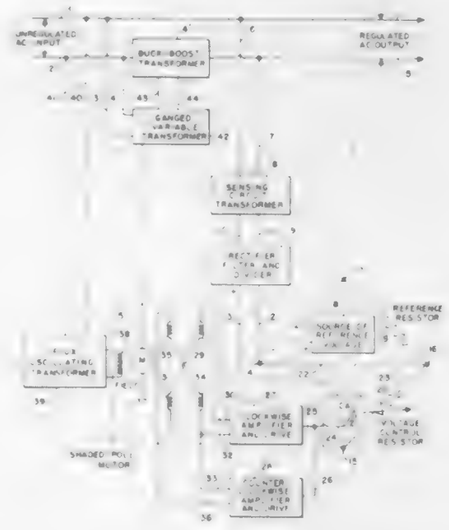
3,373,345
ALTERNATING CURRENT LINE REGULATOR

Han-Min Hung, Bayside, N.Y., assignor to Forbro Design Corp., New York, N.Y., a corporation of New York

Filed Feb. 3, 1966, Ser. No. 524,804
6 Claims. (Cl. 323—45)

1. In an alternating current line voltage regulating system the combination of, input terminals for receiving alternating current to be regulated, output terminals to transmit regulated alternating current, a buck-boost transformer connected in series between one of said input terminals and one of said output terminals for increasing

or decreasing the alternating current voltage between said input and output terminals, programmable variable transformer means connected to said input terminals and said buck-boost transformer for providing input voltage to said buck-boost transformer, a shaded pole reversible induction motor including a field winding, clockwise drive shading coils and counterclockwise drive shading coils, mechanical coupling means between said motor and said variable transformer to program said variable transfomer in accordance with the rotation of said motor, means for exciting said field, means for sensing the voltage across said output terminals, means for rectifying said sensed

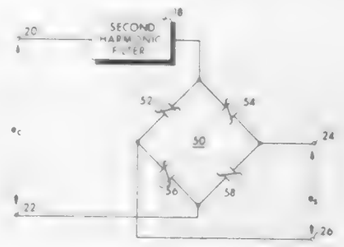


voltage to provide a direct current voltage representative of said sensed voltage, means for comparing said direct current voltage with a reference voltage to provide an error signal of a polarity and magnitude in accordance with the difference therebetween, means for amplifying said error signal to provide an enhanced error signal, signal responsive means for energizing said clockwise drive shading coils, signal responsive means for energizing said counterclockwise drive shading coils, and coupling means for applying said enhanced error signal to the last two said signal responsive means to provide rotation of said motor in accordance with the polarity and magnitude of said error signal.

3,373,346
LINEAR REACTIVE VOLTAGE CONTROL NETWORKS

Paul R. Johannessen, Lexington, Mass., assignor to Sylvania Electric Products Inc., a corporation of Delaware

Filed Feb. 25, 1965, Ser. No. 435,252
5 Claims. (Cl. 323—75)

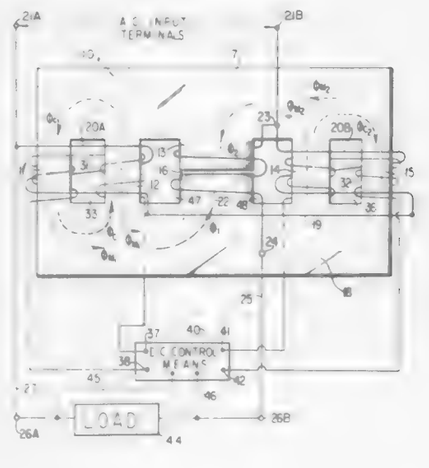


4. An electrically controllable, linear reactive network comprising, four varactors having identical square law characteristics and connected in a bridge configuration with a pair of input terminals located respectively at the first and third junctures between adjacent varactors, and a pair of output terminals located respectively at the second and fourth junctures between adjacent varactors, a source of direct current control voltage, a band rejection filter connected in series with said source of control voltage and the input terminals of said bridge configuration and having a high admittance at the second harmonic of the operating frequency, and means connecting the output terminals of said bridge configuration to a utilization circuit.

3,373,347
AC POWER REGULATOR WITH MAGNETIC AMPLIFIER

Theodore F. Maka, Winfield, Ill., assignor to Basic Products Corporation, Milwaukee, Wis., a corporation of Wisconsin

Filed Jan. 21, 1965, Ser. No. 426,820
4 Claims. (Cl. 323—89)



A power modulator for regulating an A.C. voltage or current delivered to a load in which a main winding connected across the A.C. input comprises two series connected sections each mounted on spaced apart legs of a shell type core structure. A buck-boost auxiliary winding adapted to be connected in series with the load is wound on a central or intermediate leg having an air gap therein and so positioned as to receive magnetic flux in opposite directions from the spaced-apart legs. Separate D.C. control windings for each of the spaced-apart legs control the level of magnetic saturation or reluctance in the legs thereby to control the flux distribution within the core.

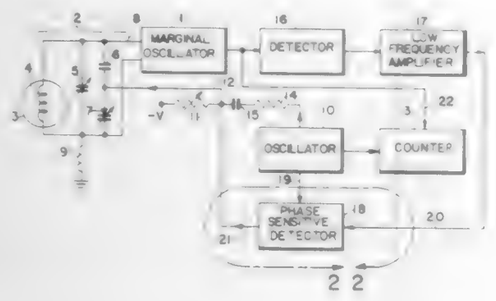
3,373,348
NUCLEAR QUADRUPOLE RESONANCE THERMOMETER AND/OR TEMPERATURE CONTROL

Jacques P. Vanier, Beverly, Mass., assignor to Varian Associates, Palo Alto, Calif., a corporation of California

Continuation of application Ser. No. 383,568, July 20, 1964. This application July 3, 1967, Ser. No. 651,046
10 Claims. (Cl. 324—.5)

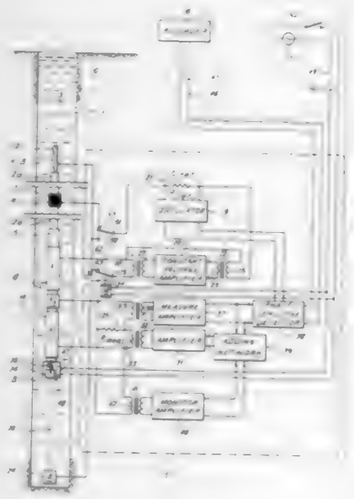
1. A quadrupole reasonance temperature responsive apparatus including, means for producing and applying a characteristic reference frequency signal to a temperature sensitive quadrupole resonance material for exciting quadrupole resonance of the material, means for detecting the quadrupole resonance produced in the temperature sensitive quadrupole resonance material, means for deriving a feedback control signal from the detected resonance

of the resonance material which varies in accordance with the difference between the reference frequency and the quadrupole resonance frequency, and means responsive to the feedback control signal for counteracting changes



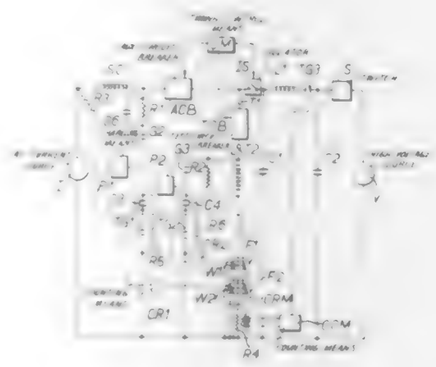
in frequency determinative resonance conditions which changes tend to increase the difference in frequency between said reference frequency of said resonance exciting means and the resonance frequency of the quadrupole resonance material.

3,373,349
WELL LOGGING METHODS AND APPARATUS FOR SOLVING THE POTENTIAL REFERENCE PROBLEM IN ELECTRODE TYPE INVESTIGATING APPARATUS
Denis R. Tanguy, Houston, Tex., assignor, by mesne assignments, to Schlumberger Technology Corporation, Houston, Tex., a corporation of Texas
Filed July 14, 1965, Ser. No. 471,808
13 Claims. (Cl. 324—10)



In accordance with an illustrative embodiment of the invention, a focused electrode array is maintained at a relatively constant voltage with respect to a remote potential reference electrode located above the focused electrode array. For investigating most of the borehole, a current return electrode is located below the constant voltage electrode array so that the constant voltage electrodes can electrically shield the potential reference electrode from the current return electrode. To allow for investigating the bottom portion of the borehole, the lower current return electrode is held in a close proximity position below the focused electrode array and a current return electrode located above the focused electrode array is utilized for returning the current emitted by the focused electrode array. Then, when the focused electrode array is a sufficient interval from the bottom of the borehole, the lower current return electrode is released to fall a fixed distance below the focused electrode array. The current return path is then switched from the upper current return electrode to the lower current return electrode for investigating the remainder of the borehole.

3,373,350
APPARATUS FOR TESTING THE ARC CAPABILITY OF AN ELECTRICAL CIRCUIT BREAKER
Michael Peter Reece, London, England, assignor to Associated Electrical Industries Limited, London, England, a British company
Continuation-in-part of application Ser. No. 261,283, Feb. 27, 1963. This application June 9, 1966, Ser. No. 556,479
Claims priority, application Great Britain, Mar. 7, 1962, 8,815/62
4 Claims. (Cl. 324—28)



An arrangement for testing the arc interrupting capability of an electrical circuit breaker at rated kilovolt amperes without the expenditure of a corresponding amount of power by means of a first circuit connected to apply a large main test current at low voltage to the arc interrupting contacts of the circuit breaker and a second circuit connected to apply to these contacts a small additional test current followed by a high voltage surge simulating a recovery-voltage transient at the last current zero of the main test current before the arc is interrupted, characterized by the provision of a third circuit which is operable at a preceding current zero of the main test current to apply to the arc interrupting contacts a current pulse which is effective to change the polarity of the current in the arc drawn between these contacts sufficiently rapidly to prevent the arc from being extinguished at such preceding current zero.

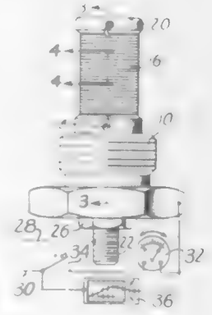
3,373,351
PROBE TO INDICATE RESISTANCE CHANGES IN ION EXCHANGE MATERIAL IN A WATER SOFTENER
Stanley F. Rak, Mundelein, Ill., assignor to Culligan, Inc., Northbrook, Ill., a corporation of Delaware
Continuation-in-part of application Ser. No. 583,164, Sept. 30, 1966. This application Feb. 16, 1967, Ser. No. 629,049
20 Claims. (Cl. 324—30)

A nonconductive resistance sensing probe unit having spaced electrodes in the probe; which probe is inserted into the top of a resin-filled water conditioning tank and positioned therein adjacent the bottom of the resin bed

to sense the change in resistance of the resin bed as it is exhausted. Leads from the electrodes extend up through

the probe to the exterior of the tank to actuate a control circuit for regeneration of the resin in the tank.

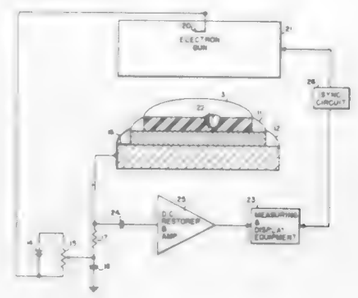
3,373,352
MAGNETIC CHIP GAUGE UTILIZING A COIL WHOSE TURNS ARE SHORT CIRCUITED BY CHIPS
Wilfred J. Huigens, Clarinda, Iowa, assignor to Lisle Corporation, Clarinda, Iowa, a corporation of Iowa
Filed Aug. 2, 1965, Ser. No. 476,587
8 Claims. (Cl. 324—41)



A magnetic chip detector of the monitoring type having a wire so disposed that spaced portions may be short circuited by the deposit of ferrous particles thereon which are attracted by the magnet of the detector. Means is provided for measuring the flow of electricity through the wire to give an indication of the quantity of ferrous particles collected by the magnet.

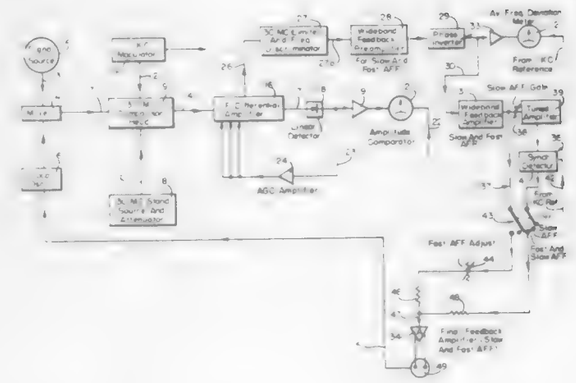
3,373,353
ELECTRON BEAM SCANNING SYSTEM FOR QUALITY CONTROL OF MATERIALS
Franklin H. Harris, Accokeek, Md., assignor to the United States of America as represented by the Secretary of the Navy
Filed Sept. 30, 1965, Ser. No. 491,847
5 Claims. (Cl. 324—54)

A quality control system for testing the dielectric strength of materials by measuring the thickness thereof utilizing a beam of electrons which are scanned over the material to be tested. A conductive film is positioned on the side of the material to be tested opposite from the side which is scanned by electrons and is positively charged to create an electric field across the test material



so that a current flows through points of the material which is proportional to the thickness of the material at these points.

3,373,354
VOLTAGE RATIO METER WITH FAST AND SLOW AUTOMATIC FREQUENCY FOLLOWER
Gunther U. Sorger, Rockville, and Bruno O. Weinschel, Bethesda, Md., assignors to Weinschel Engineering Co., Inc., Gaithersburg, Md., a corporation of Delaware
Filed Aug. 20, 1964, Ser. No. 390,894
5 Claims. (Cl. 324—58)

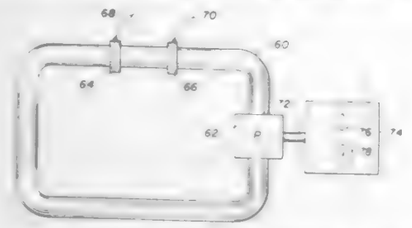


A high-frequency voltage ratio meter system for use in the range up to 4,000 megacycles having long time-constant means for maintaining the average frequency of an input intermediate frequency signal at the same value as the frequency of a standard source, and also having fast time-constant means for continuously and instantaneously correcting the frequency of the intermediate frequency for very fast deviations of the frequency of the input signal so as to at all times maintain an accurate comparison with the reference signal.

3,373,355
APPARATUS FOR MEASURING ELECTRIC FIELD STRENGTH UTILIZING AN ELECTROVISCOUS FLUID
Donald L. Klass, Barrington, and Robert M. Haines and Thomas W. Martinek, Crystal Lake, Ill., assignors, by mesne assignments, to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Filed Jan. 17, 1964, Ser. No. 338,329
1 Claim. (Cl. 324—92)

The invention relates to a method for determining the strength of an electric field comprising subjecting an electroviscous fluid having predetermined electric field-in-

duced viscosity characteristics to the electric field while simultaneously subjecting the fluid to shear at a constant

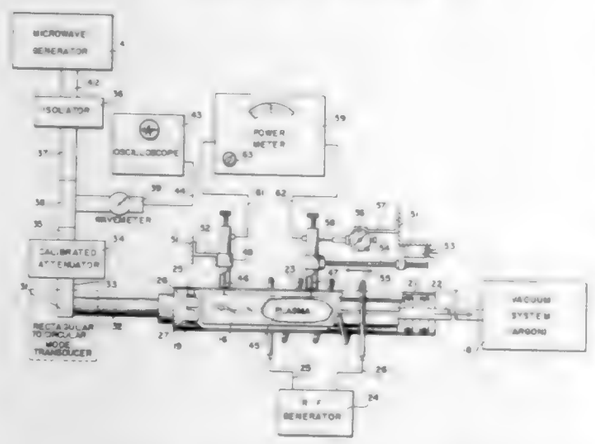


rate, and correlating the shear resistance of the fluid with said predetermined characteristics.

3,373,356
HOLDING CURRENT METER FOR SCR OR THE LIKE
Hans R. Camenzind, Lexington, Mass., assignor to P. R. Mallory & Co. Inc., Indianapolis, Ind., a corporation of Delaware
Filed Mar. 23, 1966, Ser. No. 536,929
3 Claims. (Cl. 324—158)

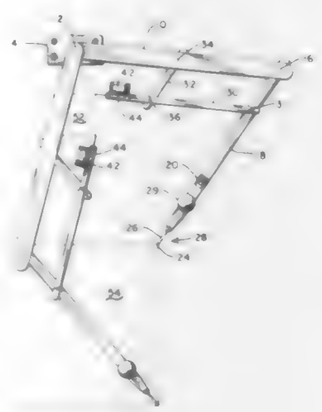
Current from an AC source is supplied to an SCR having a know resistance connected to its anode. The SCR is triggered during positive half cycles of the AC wave. A peak-reading voltmeter is triggered by the rise in anode potential as the AC wave drops to the SCR holding current; the voltmeter remains triggered for the balance of the positive half-cycle. Holding current is computed from the peak voltage thus found and from the value of the known resistance.

3,373,357
CONTROLLED MODE PLASMA DIAGNOSTIC APPARATUS
Peter P. Keenan, Van Nuys, and Frank L. Kelly, Granada Hills, Calif., assignors to Lockheed Aircraft Corporation, Burbank, Calif.
Filed Jan. 4, 1965, Ser. No. 422,959
10 Claims. (Cl. 324—58.5)



An electrodeless discharge plasma is generated by induction in a low-pressure gas confined within a slotted circular waveguide. Microwave energy at a selected probing frequency is then propagated in the TM_{01} mode through the waveguide, and hence through the plasma, to permit measurement of various plasma phenomena. Propagation characteristics, plasma density profiles and other measurements are obtained by means of a fixed antenna probe and a movable antenna probe. Both of these probes extend through the slotted wall of the waveguide and provide signals to ancillary indicating devices.

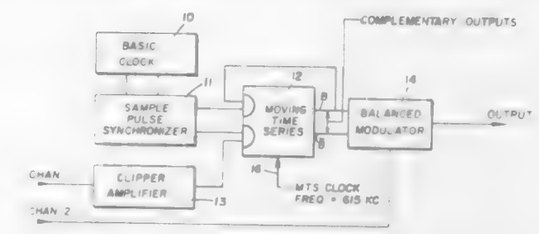
3,373,358
PANTOGRAPH PROBE SYSTEM FOR TESTING ELECTRICAL CIRCUITS
John M. Wagner, Minneapolis, Minn., assignor to Sperry Rand Corporation, New York, N.Y., a corporation of Delaware
Filed Apr. 30, 1964, Ser. No. 363,893
2 Claims. (Cl. 324—72.5)



A device for testing electrical circuits which includes a pair of independently movable pantographic devices each having a long arm and a needle arm. Each long arm has a test probe end, and each needle arm has a contact point end. A master template having a plurality of reference points thereon is positioned under the test probe end and an electrical circuit to be tested is positioned under the contact point end. The electrical circuit to be tested has a plurality of test points corresponding to at least a like plurality of the reference points on said template whereby the contact points are positioned above the selected test points as determined by the positions of the test probes with respect to the reference points on said template. When the proper positions are obtained, a switch mounted on at least one of the pantographic devices is actuated which energizes a solenoid mounted on each of the devices. Each solenoid has an extended armature connected to a respective contact point whereby, when the switch is actuated, the solenoids cause the contact points to engage the test points located thereunder. Appropriate meters or lights connected to the contact points indicate the condition of the circuit under test.

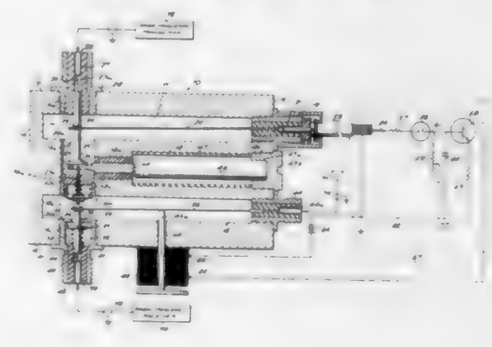
3,373,359
ONE-SAMPLE REAL TIME CROSS-CORRELATOR
Cabell N. Pryor, Jr., Silver Spring, Md., and Charles R. Greene, Jr., Santa Barbara, Calif., assignors to the United States of America as represented by the Secretary of the Navy
Filed Oct. 20, 1964, Ser. No. 405,310
2 Claims. (Cl. 324—77)

A hybrid correlator which is a compromise between a polarity-concidence correlator and a multiplier correlator. The hybrid correlator multiplies one channel of amplitude information with another channel of time compressed polarity quantized information. The product of this multiplication appears at the output as a number of



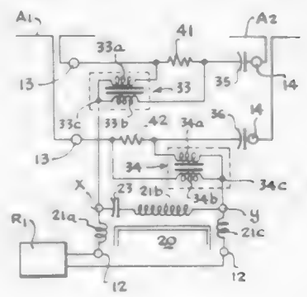
real time correlation delay points that are based on an integration time equal to the sample period.

3,373,360
AUTOMATIC COAXIAL SWITCH
Curtis L. Wilson, 3103 Elizabeth, Space 25, Pueblo, Colo. 81003
Filed Jan. 27, 1966, Ser. No. 523,476
3 Claims. (Cl. 325—22)



1. An automatic coaxial transmit-receive switch comprising in combination a rectangular metal block provided with first and second spaced longitudinal bores extending from the front surface of said block to approximately the rear surface of said block, a transverse bore formed in said block adjacent the closed ends of and intersecting said first and second longitudinal bores and extending from one side of said block to the opposite side of said block; a first coaxial connector affixed in said transverse bore for coupling a radio receiver to said switch, said first coaxial connector formed with a housing comprising a base member extending from said one side to said first longitudinal bore, a spring loaded plunger slidably mounted in said first coaxial connector and provided with a flange member for contacting the inside surface of said housing whereby the input of said radio receiver is shorted to ground when said switch is in the transmit position, said plunger having one end connected to the center contact means of said first coaxial connector by flexible conductor means and extending through a perforation in the base of said housing into said first longitudinal bore; a second coaxial connector for coupling a radio transmitter to said switch affixed in said transverse bore with its base member extending from said opposite side to said second longitudinal bore, a plunger slidably mounted in said second coaxial connector having one end connected to the center contact means of said second coaxial connector, said plunger passing through said second longitudinal bore and terminating in the transverse bore between said first and second longitudinal bores, a circumferential groove formed in that portion of said plunger in the said second longitudinal bore; a third coaxial connector affixed in the open end of said second longitudinal bore, a spring reed positioned in said second longitudinal bore, said spring reed having one end affixed in said third coaxial connector and in contact with the center contact means thereof, the opposite end of said spring reed being split and in engagement with said circumferential groove, said spring reed being stressed to normally urge said plunger into the portion of said transverse bore between said first and second longitudinal bores; a cup member formed with a centrally perforated bottom wall extending into said first longitudinal bore and opposite the housing of said first coaxial connector, said cup member having an insulated closure with a central bore, a second spring loaded plunger slidably mounted in the central bore of said closure having one end extending into said transverse bore in alignment with said plunger and its opposite end extending into said first longitudinal bore in alignment with said first spring loaded plunger, a flange formed on the portion of said second spring loaded plunger within said cup member being normally urged against the inside surface of said bottom providing a closure for the perforation in said bottom wall; a fourth coaxial connector affixed in the open end of said first longitudinal bore for connecting an antenna thereto, a second spring reed positioned in said first longitudinal bore having one end affixed in said fourth coaxial connector and in contact with the center contact means thereof and its opposite end provided with contact means in alignment with said first and second spring loaded plungers, said second spring reed stressed so that its contact means normally engages said first spring loaded plunger, a plunger-solenoid affixed to said one side of said housing, a bore in said housing extending from said one side to said first longitudinal bore through which the plunger of said plunger-solenoid passes for cooperation with said second spring reed, and means in said switch providing a resistance load for said radio transmitter until after the antenna has been switched to said radio transmitter.

3,373,361
ANTENNA COUPLER SYSTEM PROVIDING ISOLATION BETWEEN ANTENNAS
John R. Winegard, Burlington, Iowa, assignor to The Winegard Company, Burlington, Iowa, a corporation of Iowa
Filed Apr. 26, 1965, Ser. No. 450,931
3 Claims. (Cl. 325—367)



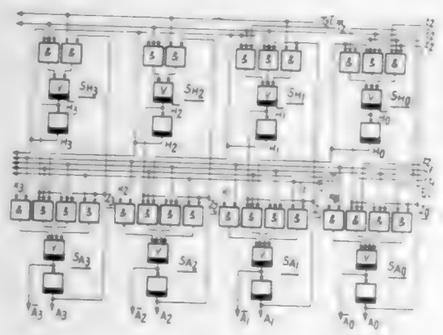
1. In combination:
a television receiving apparatus having a predetermined input impedance and operable over a band including a plurality of television channels;
a first television signal source having said predetermined impedance and being effective to supply signals in at least one of said channels;
a second television signal source having said predetermined impedance and being effective to supply signals in at least one other such channel;
a coupler device having first and second pairs of input terminals, a pair of output terminals and a pair of reference terminals;
means connecting the pair of output terminals to the television receiving apparatus;

means connecting the first pair of input terminals to the first television signal source;

means connecting the second pair of input terminals to the second television signal source; and

circuit means in the coupler defining circuit connections from one terminal of the output terminal pair to one terminal of each of said first and second input terminals pairs and from the other terminal of the output terminal pair to the other terminal of each of said first and second terminal pairs, said circuit means including impedance transformation means having substantially a 2:1 impedance ratio interposed between the pair of output terminals and the pair of reference terminals, at least one transformer having a core and a pair of windings encircling the same, one winding being interposed between one of the reference terminals and one of the terminals of the first input terminal pair and the other winding being interposed between said one terminal of the pair of reference terminals and one terminal of the second input terminal pair, the windings being so constructed and poled as to produce substantially equal and opposing magnetomotive forces in the core upon like current flow from the first and second input terminal pairs to the output terminal pair.

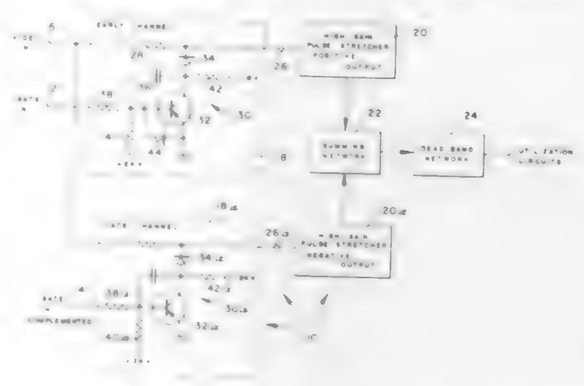
3,373,362
STATIC COUNTER INCORPORATING STAGES HAVING MAIN AND AUXILIARY STORES
Dieter Petzold, Berlin-Neukolln, Germany, assignor to Licentia Patent-Verwaltungs-G.m.b.H., Frankfurt am Main, Germany
Filed Apr. 5, 1965, Ser. No. 445,505
Claims priority, application Germany, Apr. 3, 1964, L 47,481
4 Claims. (Cl. 328—41)



A static counter having counter stages incorporating main and auxiliary stores. Timely staggered counting signals are applied only to the main and auxiliary stores, respectively, of the lowest-order counting stage, from whose outputs are derived new counting and auxiliary counting signals which are applied in parallel to the main and auxiliary stores, respectively, of all higher-order counter stages.

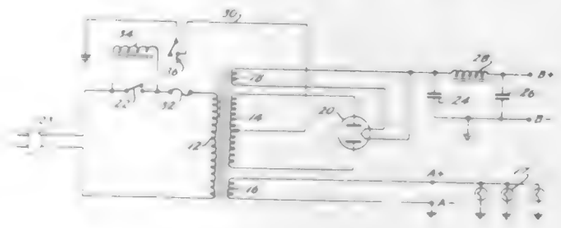
3,373,363
DISCRIMINATOR CIRCUIT RESPONSIVE TO A PULSE POSITION RELATIVE TO A GATE PERIOD
Joseph S. Brugler and William H. Woodworth, China Lake, Calif., assignors to the United States of America as represented by the Secretary of the Navy
Filed Sept. 15, 1965, Ser. No. 487,635
3 Claims. (Cl. 328—109)

The invention is a discriminator circuit which is linearly responsive to a video position within a gate. It consists of two parallel processing channels. The gate pulse is applied to both processing channels, with the pulse applied to one of the channels of positive polarity and the pulse applied to the other of the channels of negative polarity. In each channel the pulse is applied to an integrator circuit which produce ascending and descending ramps, respectively. The video signal is superimposed on both of these ramps. The superimposed video signal and ramp signals are applied to a so-called "sample and hold"



circuit in each channel. The sample and hold circuit is of a type producing an exponentially declining potential from across a capacitor charged by its input. The outputs of the sample and hold circuits are summed by a common summing network and the summer output is passed through a "dead-band" diode network including parallel diodes, but oppositely poled.

3,373,364
STANDBY CATHODE HEATING CIRCUIT FOR VACUUM TUBE
Gerald A. Tumarkin, West Orange, and Walter Ng, Newark, N.J., assignors to Griffiths Electronics, Inc., Newark, N.J., a corporation of New Jersey
Filed Sept. 23, 1965, Ser. No. 489,626
2 Claims. (Cl. 328—270)

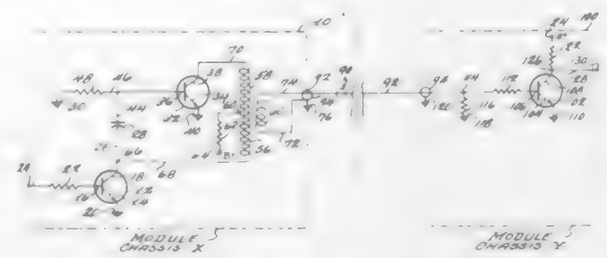


An electric circuit employing electronic vacuum tubes with heated cathodes is quickly brought to operative condition through the use of a control switch by-passed by an inductance which inductance is the relay coil of a relay of which the contacts control the high voltage supplied to the tubes. When the switch is open, the high voltage to the tubes is cut off by the relay contacts opening and the current to the heaters is reduced because of the reactance of the relay coil. The low and high voltage supplied to the tubes may be through a transformer and the inductance by-passed switch may be in the primary of the transformer.

3,373,365
COAXIAL CABLE TRANSMISSION SYSTEM
Lester T. Davis, Chippewa Falls, Wis., assignor to Control Data Corporation, Minneapolis, Minn., a corporation of Minnesota
Filed July 8, 1964, Ser. No. 381,040
5 Claims. (Cl. 330—53)

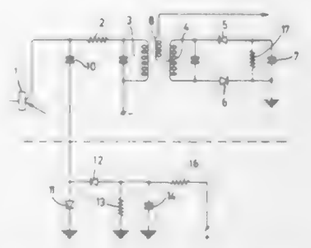
A coaxial cable transmission system for interconnecting circuit modules mounted on separate chassis. Transistor driver circuitry in a first module is connected to

transistor receiver circuitry of a second module via a coaxial cable. The transistor driver utilizes a transformer arranged to develop opposing magnetizing forces while coupling the driver to the transmission line. More par-



ticularly, the driver circuitry utilizes a pair of interconnected transistors the outputs of which are joined to the transformer primary winding to develop equal and opposing magnetizing forces, but at different times.

3,373,366
DYNAMIC LIMITER FOR A FREQUENCY MODULATION RECEIVER
Alfred Schulz, Wetzlar, Germany, assignor to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware
Filed Oct. 30, 1964, Ser. No. 407,704
Claims priority, application Germany, Oct. 31, 1963, P 32,891
3 Claims. (Cl. 329—131)



A limiter circuit for frequency modulation signals in which the signals are applied to biasing network of a parallel circuit of a capacitor and non-linear resistor by way of a diode. A direct current source is connected to the capacitor by way of a resistor for biasing the diode in the pass direction in the absence of signals.

3,373,367
AMPLIFIER FAILURE INDICATOR
Wallace E. Clarke, Belleville, Ontario, Canada, assignor to Northern Electric Company Limited, Montreal, Quebec, Canada
Filed Mar. 1, 1965, Ser. No. 436,081
8 Claims. (Cl. 330—2)

1. In an amplifier system having two amplifiers each with a pair of output terminals, a corresponding output terminal of each amplifier being connected to opposite ends of a first center-tapped coil, and a substantially resistive load connected between the center-tap of said first coil and a common connection to the other output terminal of each amplifier, indicating apparatus for indicating individual failure of one of the amplifiers comprising,

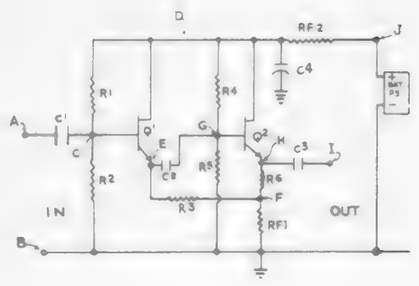
a second coil, having a first and a second end and a center-tap, magnetically coupled to said first coil, said center-tap of said second coil being connected to said common connection,

the number of turns of said second coil being substantially equal to the number of turns of said first coil,

a first indicating device connected between said first end of said second coil and said center-tap of said first coil, and

a second indicating device connected between said second end of said second coil and said center-tap of said first coil.

3,373,368
WIDE BAND TRANSISTOR ISOLATION AMPLIFIER
Stanley J. Gewirtz, New York, N.Y., assignor to Solid State Systems, Inc., New York, N.Y.
Filed Sept. 24, 1962, Ser. No. 225,498
2 Claims. (Cl. 330—22)



1. A wide band transistor amplifier including first and second amplification stages, means for creating a bucking AC voltage at the emitter of said first stage for causing the load impedance of said first stage to appear as a very high AC impedance, said means comprising a tapped resistor divider connected between the emitter of said second stage and ground, said tap being connected to the emitter of said first stage to present said bucking AC voltage thereto, said second transistor receiving its base input AC signal from the emitter of said first transistor.

3,373,369
TEMPERATURE STABILIZED TRANSISTOR AMPLIFIER
Van B. Cones, Indianapolis, Ind., assignor to the United States of America as represented by the Secretary of the Navy
Filed June 10, 1966, Ser. No. 556,786
2 Claims. (Cl. 330—23)

1. An amplifying device having a very stable gain-temperature characteristic when plotted over a wide ambient temperature range, comprising:

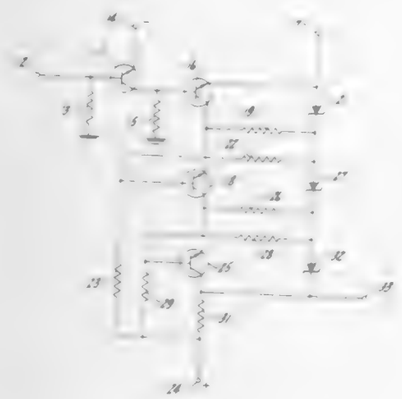
input terminal means coupled to an amplifying transistor means, said transistor means having a control electrode coupled to said input means and having first and second conducting electrodes, said first conducting electrode comprising the output point of the device and being coupled to a load resistor, the opposite end of said load resistor being coupled to a point of one potential, said second conducting electrode being coupled to a dropping resistor the other end of which is coupled to a point of the other potential; and

a feedback network comprising first, second, and third resistors, said first resistor being coupled from said control electrode of said transistor means to said second conducting electrode thereof, said second and third resistors being coupled in series with one another and coupled in parallel with said first resistor,

the junction formed by the series coupling of said first and second resistors being coupled to said first conducting electrode of said transistor means, wherein said second and third resistors are of substantially equal value and are of a very high resistance value

with respect to said second resistor, and wherein said output point of said device produces a signal which is 180° out of phase with the signal at said input terminal means, thereby providing a negative feedback from said output through said feedback network to said input.

3,373,370
TRANSISTOR CIRCUIT ARRANGEMENT
Robert M. Letsinger, Greenfield, Ind., assignor to the United States of America as represented by the Secretary of the Navy
Filed May 20, 1965, Ser. No. 457,531
9 Claims. (Cl. 330—24)

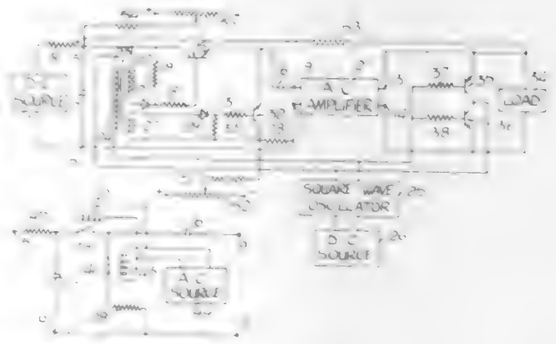


A solid state, high voltage direct current amplifier circuit utilizing a plurality of commercially available transistors which are series energized and which have the emitter and collector electrodes thereof coupled in circuit with various resistance elements and in parallel with respective Zener diodes. These Zener diodes determine the transition points at which the level of conduction of one transistor becomes stabilized and at which any further increases in conduction are passed on to the following transistor. The transistors are also protected by these diodes in a manner which permits the use of transistors having individual maximum voltage ratings lower than the anticipated output voltages of the amplifier.

3,373,371
VHF TUNER NEUTRALIZING CIRCUIT
Eugene K. Von Fange, Syracuse, N.Y., assignor to General Electric Company, a corporation of New York
Filed May 3, 1965, Ser. No. 452,808
3 Claims. (Cl. 330—27)

In a VHF tuner for a television receiver, a neutralizing circuit for an RF transistor comprising inductive tuning means in series with the collector electrode of the transistor, a source of neutralizing voltage in the form of a capacitor connected to the inductive tuning means, and a series inductor-capacitor arrangement connected between the junction of the inductive tuning means and of the capacitor serving as the source of neutralization voltage and the base of the RF transistor. The capacitor-inductor series arrangement includes an inductor of a value to achieve neutralization at the high channel frequencies while the capacitor is of a value to provide a constant desired output band width for the VHF tuner. The neutralizing circuit also includes a trimmer capacitor connected between the collector electrode of the RF transistor and ground and an RC parallel combination connected between the emitter electrode of the RF transistor and ground.

3,373,372
INPUT STAGE FOR A.C. AMPLIFIERS
Henryk Banasiewicz, London, and Kenneth Phillip Frank Terrill, Wealdstone, Middlesex, England, assignors to Joseph Lucas (Industries) Limited, Birmingham, England
Filed May 14, 1964, Ser. No. 367,377
Claims priority, application Great Britain, July 22, 1963, 28,856/63
2 Claims. (Cl. 330—51)



In an input stage for chopping a direct current supply and feeding it to an A.C. amplifier, the direct current is fed through a first switching device and a capacitor in series to the amplifier, and connected across the series connection of the capacitor and amplifier is a second switching device, the switching devices being operated so that when one is conducting the other is not. In addition,

in order to absorb any transients resulting from the operation of the switching devices, a capacitor is connected across the D.C. supply.

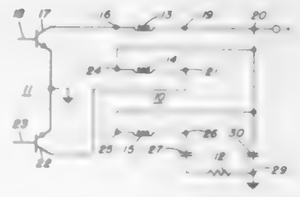
For Class 330—53 read:
Patent No. 3,373,365

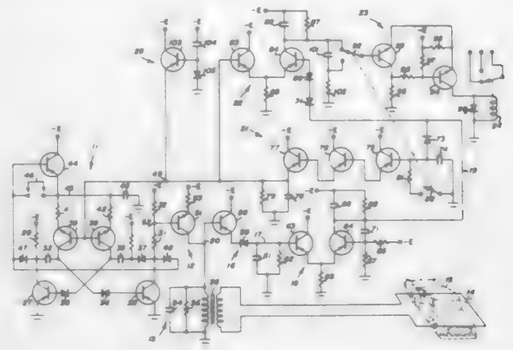
3,373,373
OUTPUT COUPLING METHOD FOR PUSH-PULL POWER AMPLIFIER
Donald A. McClure, Pennsauken, N.J., assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Navy
Filed Dec. 24, 1964, Ser. No. 421,137
5 Claims. (Cl. 330—192)



1. A push-pull coupling network for transmitting power the even order harmonics of which are suppressed comprising:
- a push-pull amplifier having two outputs and operative to generate power through either output during alternative halves of a power cycle;
- a transmission line having a plurality of wires in close parallel relationship, said wires having two terminals, the first wire of which has its first terminal connected to one output of said push-pull power amplifier and the second wire of which has its first terminal connected to the second output of said push-pull power amplifier;
- a load impedance having two terminals, the first terminal of which is connected to the first terminal of the third wire of said transmission line; and
- a terminal of zero AC potential to which the second terminal of the three wires of said transmission line and the load impedance are connected, whereby a signal is transmitted by either of said first or second wires to said load during one-half of the power cycle which is of opposite polarity to the signal transmitted by the other of said first or second wires during the alternate half of the power cycle and whereby said load impedance serves as the characteristic impedance of the transmitting line.

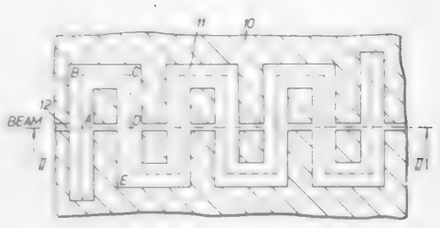
3,373,374
SELF-TUNABLE VEHICLE PRESENCE DETECTOR SYSTEM
Gilbert Marosi, Sunnyvale, Calif., assignor to General Precision Systems Inc., a corporation of Delaware
Filed June 1, 1966, Ser. No. 554,442
9 Claims. (Cl. 331—8)

In this vehicle presence detector system, a constant current oscillatory signal is passed to a tuned circuit including an inductive loop. A vehicle moving over the loop will vary the inductance and the loading thereof to vary the voltage amplitude of the signal which is rectified and amplified, and is passed to an automatic frequency control circuit, AFC. The AFC voltage controls the frequency of a multivibrator which generates the oscillatory signal. During an initial transient period after the system is turned on, a transistor-capacitor "start sweep" circuit pre-empts the AFC to prevent the multivibrator from "running away" at a high frequency. The AFC or the "start sweep" control voltage is applied to bias two transistors for controlling the discharge rate of capacitors and thereby controlling the



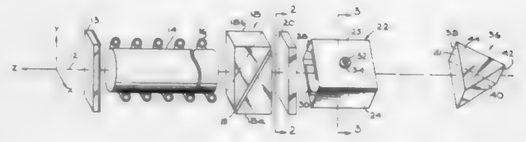
oscillatory frequency of the multivibrator. A further transistor may be selectively coupled into the multivibrator circuit for permitting operation at different power supply voltages.

3,373,375
KLYSTRON OSCILLATOR UTILIZING BOTH FORWARD AND BACKWARD WAVE INTERACTION
Alan B. Cutting and George C. Morrow, both of London, England (% Century Works, Lewisham, London, SE. 13, England)
Filed Mar. 30, 1966, Ser. No. 538,659
Claims priority, application Great Britain, Mar. 31, 1965, 13,566/65
9 Claims. (Cl. 331—83)



In an extended interaction klystron oscillator an electron beam sets up a standing wave in a slow wave structure, the slow wave structure being such that the standing wave set up therein interacts with the electron beam only at locations where antinodes occur.

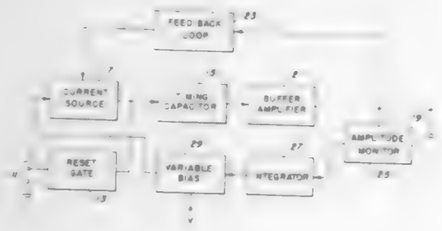
3,373,376
KERR CELL LASER MODULATOR CORRECTED FOR INDUCED CHANGES OF INDEX OF REFRACTION EFFECTS
George L. Clark, Sierra Madre, and Ralph F. Wuerker, Palos Verdes, Calif., assignors to TRW Inc., a corporation of Ohio
Filed Nov. 18, 1963, Ser. No. 324,289
10 Claims. (Cl. 331—94.5)



An electrical shutter having electrically orientable optically anisotropic molecules is interposed between the radiation reflecting elements of a master system, defining a cavity, so as to control the level of radiation between

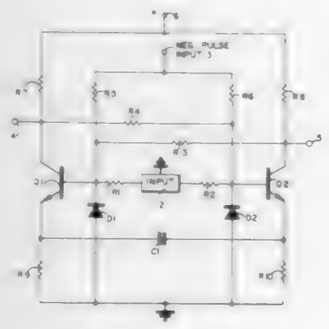
the reflecting elements. A prism is interposed in the cavity to plane polarize the reflecting radiation. A quarter wave plate also interposed in the cavity elliptically or circularly polarizes the plane-polarized radiation from the quarter wave plate such that only elliptical or circular polarized radiation passes through the electrical shutter effectively preventing changes in the index of refraction of the shutter due to radiation induced orientation of the molecules of the shutter.

3,373,377
SELF-ADJUSTING VARIABLE FREQUENCY SAWTOOTH GENERATOR
Stephen E. Townsend, Rochester, N.Y., assignor to Xerox Corporation, Rochester, N.Y., a corporation of New York
Filed July 1, 1966, Ser. No. 562,290
8 Claims. (Cl. 331—111)



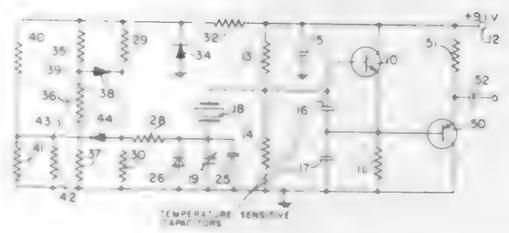
A variable frequency sawtooth waveform generator independent of frequency over a relatively wide range. An amplitude to pulse width converter for determining the magnitude of a feedback control signal to be applied to a constant current generator is utilized in conjunction with variable frequency constant amplitude sawtooth waveform generators.

3,373,378
PULSE WIDTH MODULATOR
George B. Cottrell, Dairy Valley, Calif., assignor to North American Rockwell Corporation, a corporation of Delaware
Filed Feb. 15, 1965, Ser. No. 432,792
5 Claims. (Cl. 331—113)



A digital type servo control system in which a single stage multivibrator is caused to operate as an analog to digital converter producing input to output linearization. The multivibrator receives as inputs a pulse train of substantially constant frequency and amplitude and a differential analog signal corresponding to an error signal of the servo system. The single stage operates upon these two input signals to provide nonsymmetrical complementary square wave output signals of decreasing frequency for increasing input signal amplitude. The linearization technique also produces servo stabilization without additional circuitry or components.

3,373,379
CRYSTAL OSCILLATOR WITH TEMPERATURE COMPENSATION
Paul W. Black, Harvey, Ill., assignor to Motorola, Inc., Franklin Park, Ill., a corporation of Illinois
Filed June 17, 1966, Ser. No. 558,310
5 Claims. (Cl. 331—116)

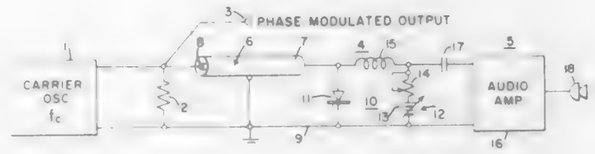


Transistorized crystal oscillator of the Colpitts type with temperature compensating capacitors connected in parallel with the crystal to compensate the linear variation in frequency of the crystal with temperature. A varactor is connected in series with the crystal and a control voltage is applied to change the capacity thereof. The control voltage may be provided by voltage dividers including thermistors so that the capacity changes with temperature and compensates the frequency of the oscillator at the edges of the temperature range.

3,373,380
LASER BEAM-SOUNDWAVE TECHNIQUES USING CURVED ACOUSTIC WAVES
Robert Adler, Northfield, Ill., assignor to Zenith Radio Corporation, Chicago, Ill., a corporation of Delaware
Continuation-in-part of application Ser. No. 388,589, Aug. 10, 1964. This application Aug. 3, 1965, Ser. No. 476,873
11 Claims. (Cl. 332—7.51)

1. Signal translating apparatus comprising:
means for producing a beam containing wave-fronts of spatially coherent substantially monochromatic light;
and means for directing across the path of said beam sound wave-fronts, at least a portion of one of said wave-fronts being curved and the direction of propagation of said sound being oriented relative to that of said light so that the tangents to said portion include a tangent which intersects the other of said wave-fronts at the Bragg angle corresponding to the wavelengths of said sound and light.

3,373,381
TRANSMISSION LINE PHASE MODULATOR
Henry P. Thomas, Lynchburg, Va., assignor to General Electric Company, a corporation of New York
Filed Dec. 18, 1964, Ser. No. 420,251
6 Claims. (Cl. 332—29)



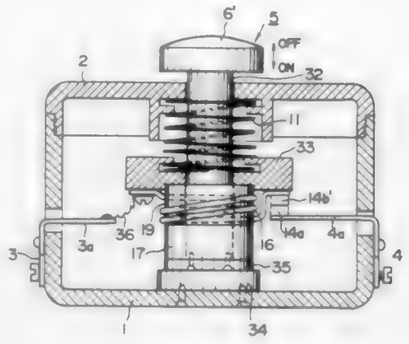
A phase modulator consisting of a transmission line which is terminated by an electrically variable impedance such as a diode. In the absence of a modulating signal, the diode terminates the line in its characteristic impedance Z_0. The line is made ⅛ of a wavelength long at the carrier frequency F_c. The modulating signal is impressed across the diode to vary the terminating impedance. This establishes standing waves on the transmission line and produces a reflected wave at the input of the line which is in quadrature with the carrier, the magnitude of the reflected signal being a function of the modulating signal to produce phase modulation.

3,373,382
DELAY LINE WITH RECESSED SUPPORT TO PREVENT SHORTING BY METAL SPUTTERING
Felix Diamand, Paris, France, assignor to CSF—Compagnie Generale de Telegraphie Sans Fil, Paris, France
Filed July 12, 1963, Ser. No. 294,633
Claims priority, application France, Aug. 23, 1962, 907,603, Patent 1,338,984
4 Claims. (Cl. 333—31)

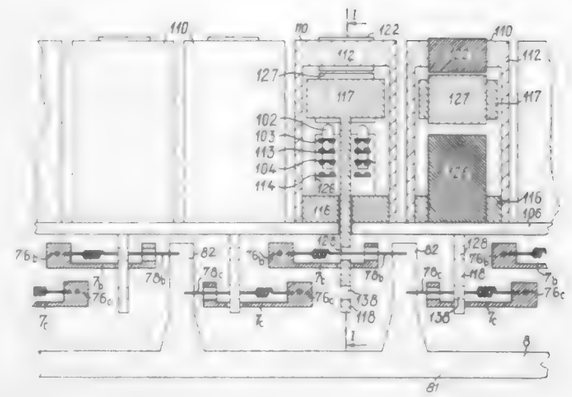
1. In an evacuated tube electron discharge device having a delay line of geometrically periodical structure subject to metal sputtering, said delay line comprising an insulating base, a series of spaced metal elements fixed on said insulating base, and a conductive support for said base, said insulating base being provided with cut-out portions in the spaces between said elements sufficient to bare the surface of said conductive support within said spaces and cause the insulating base to conform substantially to the shape of the spaced metal elements.

3,373,383
AUTOMATIC CURRENT LIMITING CIRCUIT BREAKER
Yasuo Kasahara, Tokyo, Japan, assignor to Shoichi Shimada
Filed Jan. 27, 1966, Ser. No. 523,376
Claims priority, application Japan, Feb. 2, 1965, 40/5,304; Feb. 5, 1965, 40/6,018; June 1, 1965, 40/31,893; Nov. 26, 1965, 40/72,353; Dec. 2, 1965, 40/73,631; Dec. 22, 1965, 40/78,522; Dec. 28, 1965, 40/106,980
7 Claims. (Cl. 335—18)

A circuit breaker comprising a pair of contacts, an armature having thermally reversible magnetic properties and carrying one of said contacts, a magnetic locking means to attract said armature, a spring biasing the contacts away from their closed position, and a manual actuating means, whereby upon occurrence of an overcurrent, the magnetic attraction between said armature and said locking means is reduced to open said contacts.



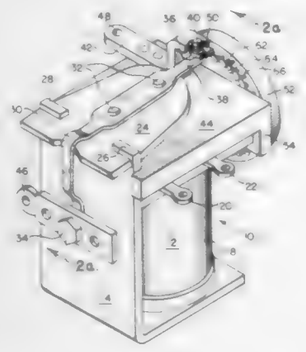
3,373,384
CO-ORDINATE SELECTION SWITCHES
Pierre M. Lucas, 20 Rue Tariel, Issy-les-Moulineaux, France
Filed Oct. 17, 1966, Ser. No. 587,193
Claims priority, application France, Oct. 22, 1965, 35,946; Dec. 10, 1965, 41,871; Aug. 3, 1966, 71,995
6 Claims. (Cl. 335—112)



1. A crossbar switch comprising a rectangular matrix, crosspoints arranged along the horizontal rows and vertical columns of said matrix, horizontal selection bars and vertical control bars, each of said crosspoints comprising at least one set of contacts and one intermediate member equipped with an operating member under the action of which it can be subjected to a movement of translation between two stable end positions of equilibrium in which said contacts are respectively opened and closed, each of said vertical bars being in the form of a substantially rectangular panel adapted to pivot in one direction and in the other about one of its large vertical sides, pierced with apertures affording free passage to the operating members for the crosspoints of a vertical column and carrying selection fingers individually associated with said crosspoints, said selection fingers having one of their ends resiliently fitted into an edge of the vertical bar which carries them in the vicinity of its pivotal axis and their other end engaged in a vertical slot in the opposite edge of said panel in such a manner that, in the position

of rest they are not in engagement with the operating members of the crosspoints and that their only possible movement is bending in a plane parallel with said panel, and each of said horizontal bars allows the selection fingers of a horizontal row of crosspoints to be displaced in such a manner as to cause them to come into engagement with said operating members whereby the selection of a horizontal row of crosspoints is effected through the operation of a horizontal bar, and the rendering operative and inoperative of a given crosspoint in said row is effected through the operation of the appropriate vertical bar in said one direction and in said other direction respectively.

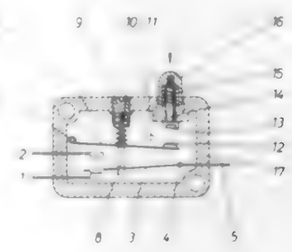
3,373,385
ELECTRICAL RELAY
Seymour Kessler, Wilmette, Ill., assignor to Zenith Radio Corporation, Chicago, Ill., a corporation of Delaware
Filed June 16, 1966, Ser. No. 558,077
10 Claims. (Cl. 335—138)



A latching electromagnetic relay which is stable in at least two modes of contact operation, including a coil and core assembly, a pivoted armature for attraction by the core and including at least one contact for movement by said armature; said armature further including a projecting tip directly cooperating with a pair of concentric cam tracks formed on a rotatable index wheel, said tracks being shaped to step the index wheel upon each movement of the armature, and to act as a changeable armature position stop to control the position of said contact after each successive step of rotation of said index wheel.

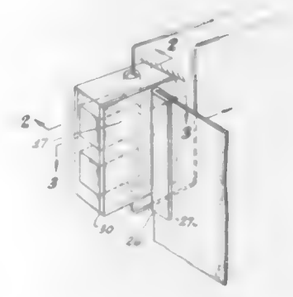
3,373,386
ADJUSTABLE PUSHBUTTON MAGNET SWITCH
Hermann Ehrenberg, Ahornstrasse 9, Langen, near Frankfurt am Main, Germany
Filed Jan. 28, 1966, Ser. No. 523,622
Claims priority, application Germany, Feb. 2, 1965, E 28,598
4 Claims. (Cl. 335—205)

A push button switch comprising a first and second magnet means for attracting one another, a push button having the first magnet means disposed at one end thereof, and an operating member movably disposed adjacent the push button and having the second magnet means thereon adjacent the first magnet means. Two fixed contacts spaced from each other, are provided as well as a contact member coupled to the operating member for movement therewith between the two fixed contacts, respectively, and a spring means for urging the operating member in a direction opposite to the direction in which the operating member is urged by the first and second magnet means for causing the contact member to engage one of the two fixed contacts. The first and second magnet means are of sufficient magnetic force to cause the operating member to move toward the push button against the force of the spring means so that the contact member engages the other of the two fixed contacts when the push button is moved toward the operating member, and a



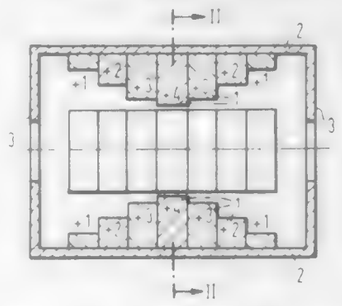
means is provided for adjusting the spring means to vary the force of the latter against the operating lever to thereby change the switching time of the push button switch.

3,373,387
MAGNETICALLY OPERATED PROXIMITY SWITCH
Eugene H. Irasek, Inglewood, Calif., assignor to Houston Fearless Corporation, Los Angeles, Calif., a corporation of California
Filed July 7, 1966, Ser. No. 563,465
7 Claims. (Cl. 335—207)



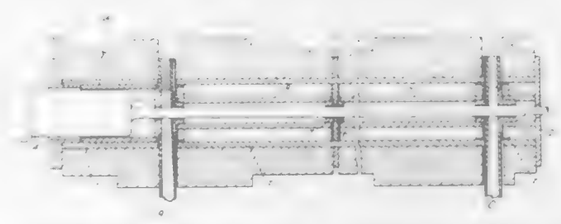
A magnetically operated proximity switch employing a pair of permanent magnet blocks having magnetic pole faces at their front and back surfaces and magnetized therebetween, with the blocks spaced apart in a direction at right angles to their direction of magnetization. A magnetic reed switch is located adjacent the side faces of the magnet blocks other than the magnetic pole faces thereof with the longitudinal axes of the reeds extending generally in the direction of the spacing between the blocks and with the reeds normally separated. Thes polarities of the front and back faces of the magnet blocks are reversed so that the flux passing through the reeds between the back pole faces is opposite in direction to the flux passing through the reeds between the front pole faces to affect cancellation of the fluxes to an extent that the resultant flux is insufficient to close the reeds in the absence of an element of magnetic material adjacent the front magnetic pole faces to bleed off the flux thereat. To increase the sensitivity of the proximity switch the magnetic reeds are offset from the center plane of the permanent magnet blocks away from their front faces to establish a normally predominant resultant flux through the reeds between the back pole faces. The spacing between the permanent magnets is made sufficiently small to substantially restrict the depth of the fringing field from the pole faces so that the proximity switch will be responsive to the proximity of a magnetic element regardless of the presence of a magnetic background at a greater distance.

3,373,388
PERMANENT MAGNET SYSTEM FOR THE GENERATION OF AT LEAST TWO OPPOSITE MAGNETIC FIELDS LYING ONE BEHIND THE OTHER FOR THE BUNDLED GUIDANCE OF AN ELECTRON BEAM, ESPECIALLY FOR TRAVELING WAVE TUBES
Paul Meyerer, Ottobrunn, Germany, assignor to Siemens Aktiengesellschaft, Munich, Germany, a corporation of Germany
Filed Jan. 21, 1966, Ser. No. 522,059
Claims priority, application Germany, Jan. 26, 1965, S 95,153
9 Claims. (Cl. 335—210)



A permanent magnet array for a so-called "reversed field" focusing for travelling wave tubes with permanent magnets symmetrically arranged relative to the system axis which according to the invention are arranged in a closed series one behind the other, wherein the expansion of the magnets decreases uniformly and perpendicularly to the system axis from the middle of the closed series to its two ends, the magnets particularly consisting of a material with a high coercive force.

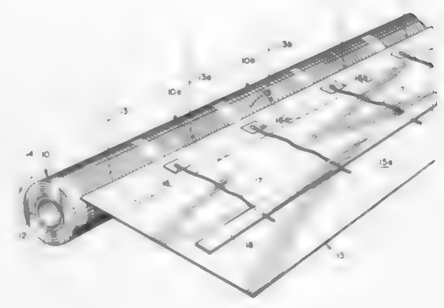
3,373,389
MAGNETIC FIELD STRAIGHTENER
John Graham Armstrong, London, England, assignor to International Standard Electric Corporation, New York, N.Y., a corporation of Delaware
Filed Oct. 20, 1965, Ser. No. 498,451
Claims priority, application Great Britain, Feb. 19, 1965, 7,253/65
8 Claims. (Cl. 335—211)



A magnetic field straightener of ferromagnetic material is positioned between the envelope of an electron beam tube and a cylindrical permanent magnet focusing structure. Two longitudinal sections are arranged on each side of a field reversal gap. The field straightener is supported and spaced from the envelope by non-magnetic metallic supports and is in the form of a small diameter wire helix closely wound on a non-magnetic metallic cylinder.

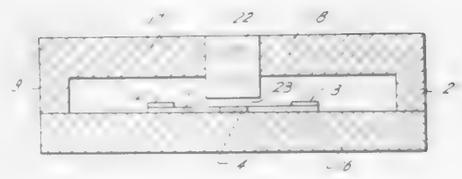
3,373,390
ELECTRICAL INDUCTANCE AND METHOD
Edwin C. Rechel, Lancaster Road, Shirley, Mass. 01464
Continuation-in-part of application Ser. No. 592,615, Nov. 7, 1966. This application June 7, 1967, Ser. No. 657,442
9 Claims. (Cl. 336—192)

An electrical inductance and method. The inductance includes a coil of relatively fine wire wound on a coil form and a flexible wrapper. The wrapper carries contact means adjacent one edge thereof from which a lead wire of relatively large diameter extends. Said wrapper



edge is positioned between the last turn of the coil winding and the remainder of the winding and the last turn is secured to the contact means. The wrapper extends circumferentially about the outer surface of the coil.

3,373,391
HALL GENERATOR MAGNETIC STRUCTURE
Peter Böhm and Karl Maaz, Nuremberg, Germany, assignors to Siemens Aktiengesellschaft, Munich, Germany, a corporation of Germany
Filed Apr. 13, 1966, Ser. No. 542,408
Claims priority, application Germany, Apr. 23, 1965, S 96,709
9 Claims. (Cl. 338—32)

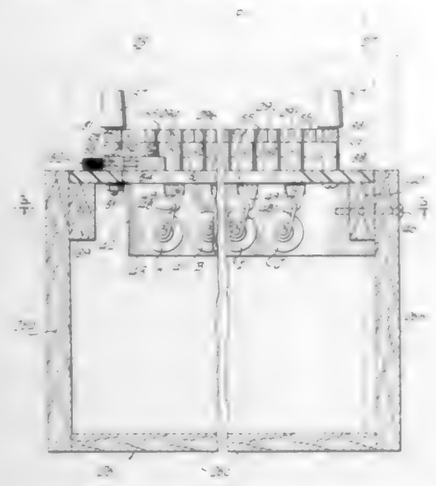


A Hall device is positioned on a carrier plate of ferrite material. A spacer frame of non-magnetic material which is a poor conductor of electricity is affixed to the carrier plate in space relation with the Hall device. A bridge member of ferromagnetic material is supported by the spacer frame in operative proximity with, but spaced by an air gap from, the conductor plate and functions to concentrate magnetic flux upon a surface of the conductor plate which is most effective for the Hall effect.

3,373,392
RESISTANCE AND CONDUCTANCE REFERENCE DECADE STANDARD
Loebe Julie, Riverdale, N.Y., assignor to Julie Research Laboratories, Inc., New York, N.Y., a corporation of New York
Continuation of application Ser. No. 332,713, Dec. 23, 1963. This application Mar. 13, 1967, Ser. No. 648,176
16 Claims. (Cl. 338—77)

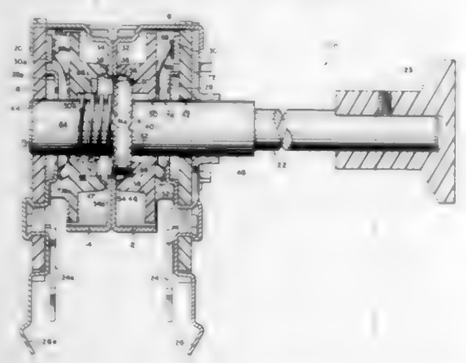
An impedance decade standard wherein precision and stability inaccuracies due to spurious leakage and contact resistances are minimized by a novel terminal plug block structure. The individual impedance elements of the standard are connected to correlated terminal blocks. The terminal blocks are raised in air with respect to the supporting insulator base. Also the blocks are isolated by surrounding air gap in the insulator base from the

outer housing and ground connections. In addition the blocks arranged in novel positional array which increases



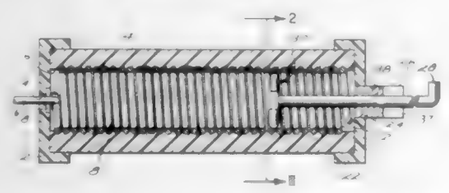
the versatility of the standard as well as increasing its precision and stability.

3,373,393
VARIABLE RESISTOR UTILIZING NOVEL CONTROL SYSTEM
Edgar F. Hauenstine and Charles L. Burns, Frankfort, Ind., assignors to P. R. Mallory & Co. Inc., Indianapolis, Ind., a corporation of Delaware
Filed Aug. 11, 1966, Ser. No. 571,817
6 Claims. (Cl. 338—134)



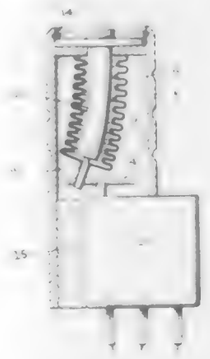
Two variable resistors are independently operable off of a single drive shaft which is spring biased for axial displacement to alternately engage the resistors through independent driving means.

3,373,394
ADJUSTABLE ELECTRICAL RESISTOR
William J. Mairs, 85 Canterbury Road, Waltham, Mass. 02154
Filed May 12, 1966, Ser. No. 549,516
14 Claims. (Cl. 338—143)



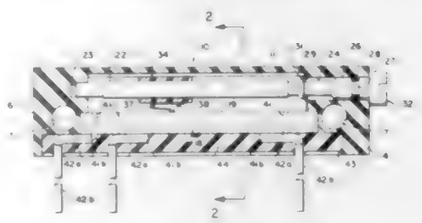
An adjustable electrical resistor comprising a tubular housing, a helical wire resistance element embedded in the inner surface of the housing, end caps closing off both ends of the housing, and first and second terminal leads mounted in the end caps. The first terminal lead is permanently connected to one end of the resistance element. The second terminal lead carries a contact member adapted to moveably engage the resistance element and is mounted so as to be able to advance the contact member along the resistance element by rectilinear and rotational movement.

3,373,395
HERMETICALLY SEALED MULTI-TRIMMER POTENTIOMETER
Raymond W. Sargent, Yorktown Heights, N.Y., assignor to Simmonds Precision Products, Inc., Tarrytown, N.Y., a corporation of New York
Filed Aug. 1, 1967, Ser. No. 657,640
2 Claims. (Cl. 338—164)



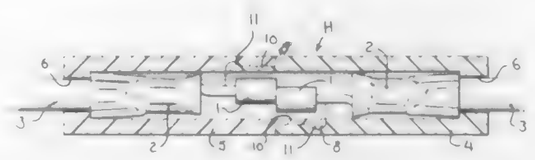
A sub-miniature multi-turn potentiometer mounted to a solderable metal housing containing a hermetically sealed bent shaft mechanically coupled by means of a crank to the multi-turn potentiometer for adjusting the same within an air-tight environment.

3,373,396
VARIABLE RESISTANCE DEVICE
Charles Walter Yungblut, Santa Ana, Alan John Wright, Orange, and Leslie Thomas, Peart, Santa Ana, Calif., assignors to Beckman Instruments, Inc., a corporation of California
Filed July 29, 1965, Ser. No. 475,648
3 Claims. (Cl. 338—183)



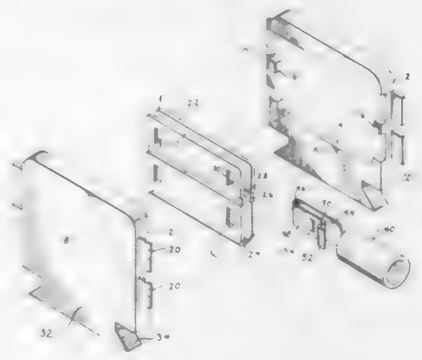
A variable resistance device including a housing open on one side thereof and having disposed therein a nonconductive ceramic base member supporting a resistance element. Terminal pins are fired into the base member each having an end thereof in contact with the resistance element and an opposite end portion extending through the base member and bent parallel to the surface of the base member opposite from the resistance element. To these bent end portions of the terminal pins are connected L-shaped terminal extensions having one leg disposed adjacent to bent portion of the terminal pin and welded or otherwise secured thereto. A nonconductive potting material surrounds the weld and supports the terminal extension adjacent to base member of the device so that bending of the terminal pin takes place at points remote from the weld.

3,373,397
ELECTRICAL CONNECTOR AND INSULATION HOUSING THEREFOR
Floyd Harold Renshaw, Jr., Hershey, Pa., assignor to AMP Incorporated, Harrisburg, Pa.
Filed Oct. 6, 1965, Ser. No. 493,380
2 Claims. (Cl. 339—47)



An insulation housing having identical parts each provided with an arcuate shaped recess along an interior surface of one end and an arcuate shaped extension extending outwardly from this one end. The extensions mate with the recesses when the housing parts are interconnected and means are located in the recesses and on the extensions to latch the parts together to surround and insulate an electrical connection within the housing.

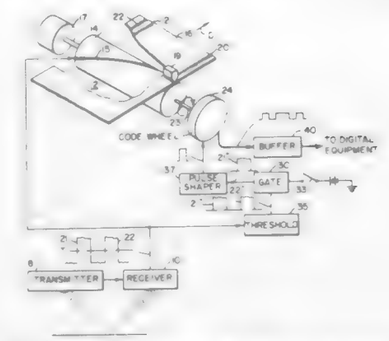
3,373,398
TERMINAL BLOCK
Robert Volinskie, Hershey, Pa., assignor to AMP Incorporated, Harrisburg, Pa.
Filed Sept. 23, 1965, Ser. No. 489,535
2 Claims. (Cl. 339—217)



Connector block for commonly connecting a plurality of wires comprises spaced-apart metallic plates contained in insulating housing. Terminal on wire end has reversely bent tongue which is adapted to be inserted through opening in housing so that it is received between plates. Terminal tongue has flexible arm with detent means which enters hole in one plate. Flexible ear on housing engages flexible arm on terminal and disengages detent to permit removal of terminal.

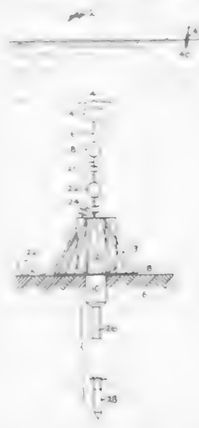
3,373,399
SONAR BOTTOM TRACKING RECORDING SYSTEM
John A. Dorr, Baltimore, and Melvin L. Hiller, Annapolis, Md., assignors to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Filed Jan. 20, 1966, Ser. No. 521,912
4 Claims. (Cl. 340—3)

Sonar signals are successively transmitted toward the ocean bottom to obtain a profile display on a paper recorder having a rotating drum. A code wheel connected to the drum provides a digital representation of depth. When a point of interest on the display is encountered a manually operated switch is closed allowing the code wheel to be read out by a return signal thereby providing a corresponding digital representation of depth.



In another display a cathode ray storage tube is utilized in conjunction with a counter which provides a running digital representation of depth.

3,373,400
DETERMINATION OF GEOPHYSICAL PROPERTIES OF THE SEA BOTTOM
Sidney Epstein and David Epstein, Brooklyn, N.Y., assignors to Vadys Associates, Ltd., Brooklyn, N.Y., a corporation of New York
Filed Oct. 14, 1965, Ser. No. 495,822
6 Claims. (Cl. 340—7)

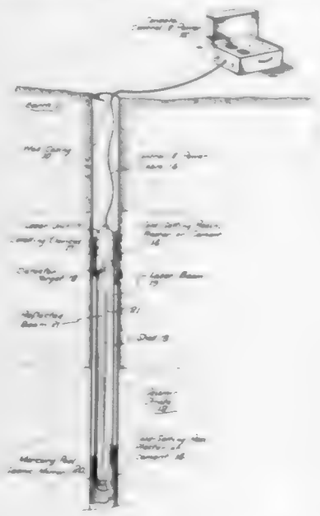


1. In the determination of the geophysical properties of localized sea bottom areas by observation of sediment flow behavior patterns, the steps of
positioning a first explosive charge at a predetermined location and at a selected distance above the sea bottom,
positioning a second explosive charge generally beneath said first explosive charge and on said sea bottom and
positioning a third explosive charge generally beneath said second explosive charge and at a selected distance beneath said sea bottom and
sequentially detonating said first, second and third charges in predetermined order and at spaced time intervals of sufficient duration to permit discrete recordation of the bubble-pulse characteristics of each such detonation.

3,373,401
SEISMIC DETECTION SYSTEM
Ralph E. Bayer, Pomona, Calif., assignor to General Dynamics Corporation, a corporation of Delaware
Filed Sept. 27, 1966, Ser. No. 582,369
7 Claims. (Cl. 340—17)

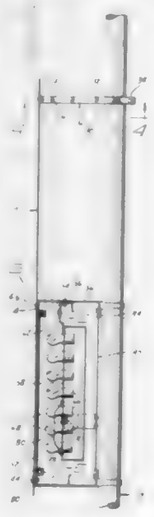
Broadly, the disclosure is directed to a seismic detection system in which a laser beam is reflected from a

mirror-like assembly subject to seismic agitation to a detecting assembly thereby indicating seismic variations by corresponding electrical signals. More specifically, the laser, mirror-like assembly, and detector assembly are lowered into a bore hole and are permanently fixed by embedding the same in cement, plaster, or the like. The mirror-like assembly includes a liquid mercury surface which is employed to sense seismic variations and reflect the incident laser beam accordingly. The detector assembly for analyzing reflected laser signals is comprised



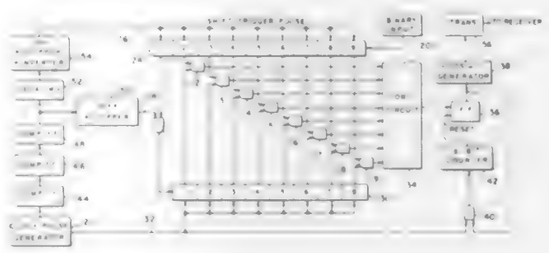
of a photodetector unit divided into four quadrants, for example, each separated from another by insulation. The system operates so that when no seismic variations are sensed, the laser signal is equally distributed over the four segments of the detector assembly. When seismic disturbances cause agitation of the mirror assembly, which may be made of mercury, the laser signal is reflected unequally over the detector which, in turn, produces electrical signals indicative of the direction, frequency and magnitude of the disturbing seismic displacements.

3,373,402
ILLUMINATED VEHICLE TRAFFIC CONTROL SIGNAL
Edward F. Gervais, Lansing, Mich., assignor to James M. Hare, Secretary of State, State of Michigan
Filed Jan. 27, 1964, Ser. No. 340,216
5 Claims. (Cl. 340—107)



This specification describes a traffic control sign having an illuminated legend and a painted legend. The illuminated legend is formed by a light matrix panel carrying incandescent lamps which may be removed readily for servicing. The illuminated legend is rendered inactive by a louvered screen construction that forms a cover for the matrix panel.

3,373,403
REDUNDANT ENCODED MONOCYCLE SYSTEM
William A. Huber, 216 Monroe Ave., Spring Lake, N.J. 07762
Filed Aug. 26, 1963, Ser. No. 304,699
The portion of the term of the patent subsequent to Sept. 28, 1982, has been disclaimed
13 Claims. (Cl. 340—146.1)

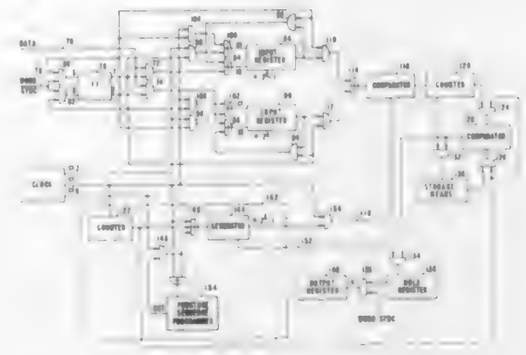


The present invention relates to a coded digital communication system which includes means for predicting in advance from one "mark" signal position to the next "mark" signal position whether or not a "mark" signal should appear. During transmission the sequence of binary signals to be received is converted to the same sequence of minus-cosine wave signals which are time-spaced such that when the minus-cosine wave signals are decoded, the presence or absence of a "mark" signal within a prescribed time period may be predicted.

3,373,404
ERROR-CORRECTING METHOD AND APPARATUS
James E. Webb, Administrator of the National Aeronautics and Space Administration, with respect to an invention of Gustave Solomon, Hollywood, Jack J. Stiffler, La Canada, Tage O. Anderson, Arcadia, and Warren A. Lushbaugh, Los Angeles, Calif.
Filed Nov. 10, 1964, Ser. No. 420,245
15 Claims. (Cl. 340—146.1)

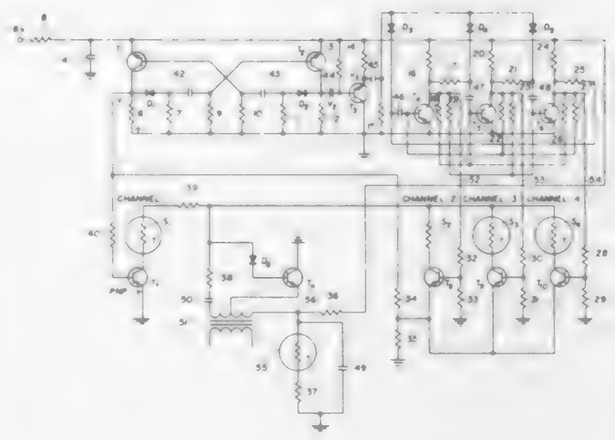
An error-correcting system for use in a digital data communication system. The system comprises an encoding apparatus responsive to a digital data word for developing a maximal length shift register code word corresponding thereto. Means are also provided for deleting digits in selected positions of the developed code word to thus provide a punctured code word. This punctured code word is applied to the transmitting end of a communication channel which operates on the punctured code word to produce a received word at the receiving end of the channel. The channel may introduce random

errors. Means are provided at the receiving end for developing a plurality of punctured cyclic permutations of



the maximal length shift register code word. The received word is then compared with each of the punctured cyclic permutations.

3,373,405
FOUR-CHANNEL TELEMETRY CIRCUIT
George A. Gadbois, Silver Spring, Md., assignor to the United States of America as represented by the Secretary of the Navy
Filed Aug. 19, 1964, Ser. No. 390,767
8 Claims. (Cl. 340—147)



1. A plural channel telemetry circuit for sampling meteorological information in a predetermined timed sequence comprising:
a multi-stage pulse stepping circuit,
a pulse generating circuit connected to said pulse stepping circuit for providing the successive energization of the separate stages of said pulse stepping circuit,
a variable frequency oscillator,
a plurality of sensor means, each coupled between said variable frequency oscillator and a separate stage of said pulse stepping circuit,
gating means coupled to the output of said pulse generating circuit and to said pulse stepping circuit for selectively connecting each of said sensor means to said variable frequency oscillator at a first frequency upon the initiation of conduction through each of said sensor means by pulses applied to said gating means from the individual stages in said pulse stepping circuit,
a further sensor coupled to said oscillator and isolated from said plurality of sensor means,
a further gating circuit interconnecting said further sensor and said pulse generating circuit for connecting said isolated sensor to said variable frequency oscillator at a second frequency which is higher than said first frequency.

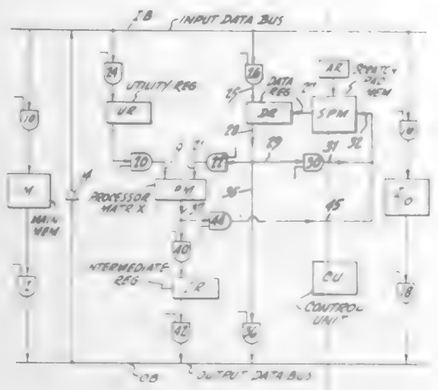
3,373,406
LOGIC CIRCUIT BOARD MATRIX HAVING DIODE AND RESISTOR CROSSPOINTS
John W. Cannon, Los Angeles, and John Workings, Torrance, Calif., assignors to The Scam Instrument Corporation, Skokie, Ill., a corporation of Illinois
Filed Dec. 4, 1963, Ser. No. 328,034
5 Claims. (Cl. 340—166)

A logic circuit board includes a series of input wires suspended over a first surface of the board, and a series of output wires are suspended over a second surface and extend transversely of the input wires. Logic diodes extend through holes in the board and are connected between input and output wires at selected crossing points. A power bus, connected to the positive side of a power supply, is supported on the first surface of the board and is connected to supply a positive potential to each output wire by resistors extending through the board. The input wires are connected to the outputs of bistable circuits effective to ground selected input wires in response to external control. When an input wire is grounded, selected output wires are grounded through the logic diodes to produce an output signal that is applied to output terminals through isolating diodes, also extending through the board.

3,373,407
SCRATCH PAD COMPUTER SYSTEM
Andrew T. Ling, Collingswood, N.J., assignor to Radio Corporation of America, a corporation of Delaware
Filed Aug. 2, 1965, Ser. No. 476,423
14 Claims. (Cl. 340—172.5)

A computer system in which a processor matrix is provided for performing addition, subtraction, comparisons, shifts, etc., on one or two operand inputs. An operand can be supplied from an input data bus through a "utility" register to the processor matrix. An operand can also be supplied from a data register of a scratch pad storage means to the processor matrix. The output of the processor matrix can be directed to a storage location in the scratch pad storage means. There is thus a direct, local data-path loop from the scratch pad storage means through the data register, through the processor matrix from its input to its output, and back to the scratch pad

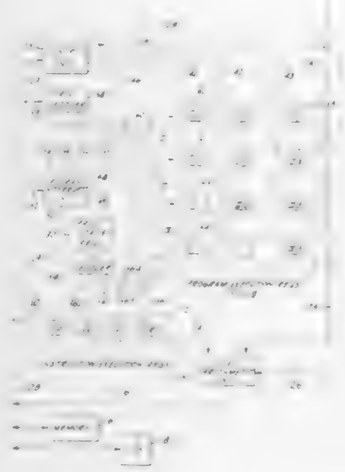
storage means. This local data-path loop is provided in addition to other intercommunication data paths including the data buses, to minimize the time required for data transfers and to most fully utilize the processor matrix.



3,373,408
COMPUTER CAPABLE OF SWITCHING BETWEEN PROGRAMS WITHOUT STORAGE AND RETRIEVAL OF THE CONTENTS OF OPERATION REGISTERS

Andrew T. Ling, Collingswood, N.J., assignor to Radio Corporation of America, a corporation of Delaware

Filed Apr. 16, 1965, Ser. No. 448,708
11 Claims. (Cl. 340—172.5)



A computer includes one set of "instruction execution registers" for information used during execution of an instruction and not needed during execution of another instruction, and a plurality of sets of "program execution registers" for information used during execution of an instruction and needed also during execution of a following instruction in the same program. Each set of "program execution registers" is used in executing a corresponding different program. The particular set of "program execution registers" used at any particular time is determined by the contents of a processor state or program state register. The computer can switch from one program to another without the necessity of an intervening transfer to memory of all information needed later for continuing the interrupted program and without the necessity of a retrieval of all information needed at once for execution of the interrupting program.

3,373,409
INFORMATION STORAGE UNIT AND MEMORY CARD THEREFOR

Philip A. Lord, Vestal, N.Y., assignor to International Business Machines Corporation, New York, N.Y., a corporation of New York

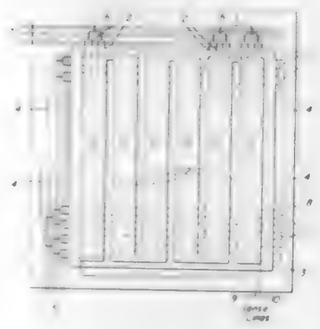
Filed Apr. 20, 1965, Ser. No. 449,432
5 Claims. (Cl. 340—173)

A card capacitor read only storage unit employing a printed circuit board and a printed circuit memory card having an insulating substrate which serves as the dielectric between capacitor tabs on said board and card and wherein said card is provided with test probe pads to facilitate checking without requiring removal from the unit and also edge strips to facilitate processing in conventional card punching and handling equipment.

3,373,410
SENSING SYSTEM FOR AN ARRAY OF FLUX STORAGE ELEMENTS

Vernon L. Newhouse, Scotia, and Raoul E. Drapeau, Troy, N.Y., assignors to General Electric Company, a corporation of New York

Filed Dec. 24, 1964, Ser. No. 421,021
7 Claims. (Cl. 340—173.1)

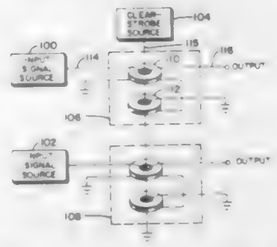


A system for sensing data stored in an array of storage elements wherein a plurality of conducting strips, each strip wider than any storage element, are situated on one side of the array in alignment with the elements. The strips are spaced close to each other to minimize the amount of undetected flux, and are connected in series to detect voltages induced therein by flux changes in any of the elements. A second plurality of strips may be similarly connected to cover the gaps between the strips of the first plurality and detect flux changes in the gaps.

3,373,411
MEMORY APPARATUS AND METHOD FOR SAMPLING TRANSIENT ELECTRICAL SIGNALS

Raymond H. James, Bloomington, Minn., assignor to Sperry Rand Corporation, New York, N.Y., a corporation of Delaware

Filed Nov. 6, 1963, Ser. No. 321,909
17 Claims. (Cl. 340—174)

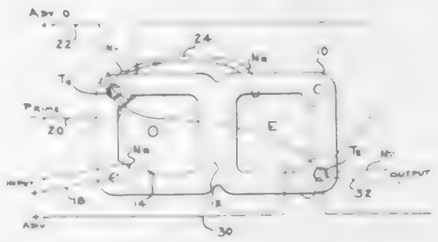


A magnetic memory device that stores discrete levels of data as a function of the degree of the partial switching of the device's magnetizable element's magnetic flux.

3,373,412
MULTIAPERTURE MAGNETIC CORE DEVICE HAVING A DYNAMIC READOUT

Charles Thomas Wyrick, Camp Hill, Pa., assignor to AMP Incorporated, Harrisburg, Pa.

Filed Apr. 17, 1964, Ser. No. 360,591
1 Claim. (Cl. 340—174)

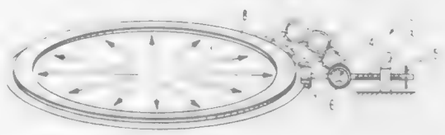


A multiaperture magnetic core having two major apertures defining two intelligence bit positions is disclosed including a readout winding linking a first major aperture and the material therearound to a utility device. The magneic material surrounding a second major aperture includes therein a minor transmitter aperture containing a coupling loop linking the first major aperture and a circuit is provided to provide an output responsive to a transfer of intelligence by said coupling loop.

3,373,413
PLIABLE MAGNETIC RECORDING DISK WITH DIRECT TRANSDUCER CONTACT

Robert C. Treseder, San Jose, Calif., assignor to International Business Machines Corporation, New York, N.Y., a corporation of New York

Filed Oct. 30, 1963, Ser. No. 320,210
3 Claims. (Cl. 340—174.1)



A stretched, annular membrane magnetic recording disk having a magnetic recording surface, which is under tension at tension points spaced substantially equidistant around its circumference to provide a recording surface, small areas of which are optically flat and which is pliable for contact recording.

3,373,414
AXIALLY AND RADIALLY AIR BEARING SUPPORT

Donald L. Carter, Vestal, N.Y., assignor to International Business Machines Corporation, New York, N.Y., a corporation of New York

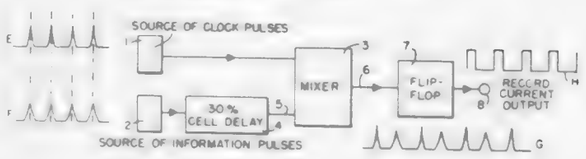
Filed May 6, 1963, Ser. No. 278,130
16 Claims. (Cl. 340—174.1)

1. In a magnetic information storage assembly having a support body, a magnetic storage member within said support body, means for rotating the storage member relative to said body, the improvement comprising self-acting gas bearing means for axially and radially supporting the storage member in non-contacting relationship with respect to said support body during the rotation of said magnetic storage member.

3,373,415
UNSYMMETRICAL HIGH DENSITY MAGNETIC RECORDING SYSTEM

Andrew Gabor, Huntington, N.Y., assignor to Potter Instrument Company, Inc., Plainview, N.Y., a corporation of New York

Original application Feb. 1, 1961, Ser. No. 86,338. Divided and this application Nov. 4, 1964, Ser. No. 408,948
11 Claims. (Cl. 340—174.1)



This invention is a self-clocking magnetic recording in which one binary value is recorded solely by reversals at regularly spaced intervals and the other binary value is recorded as a transition at regularly spaced intervals plus a transition substantially in advance of the mid-points between the regular transitions.

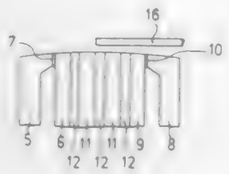
3,373,416
MULTIPLE MAGNETIC HEAD ASSEMBLY

Jan Albert Geurst and George Ludwig Walther, Emmasingel, Eindhoven, Netherlands, assignors to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware.

Filed Feb. 18, 1965, Ser. No. 433,615
Claims priority, application Netherlands, Feb. 25, 1964, 64—1,746
5 Claims. (Cl. 340—174.1)

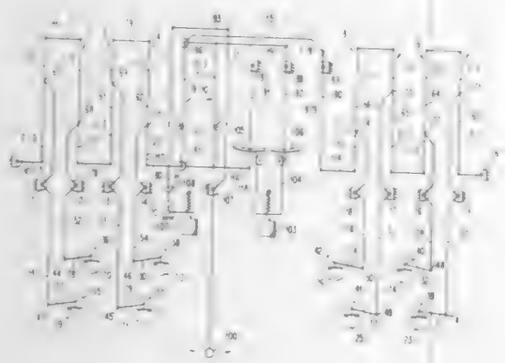
1. A device for reducing or suppressing the relative influence in a multiple magnetic head for recording and reproducing one or more parallel records in one or more parallel corresponding tracks on a unilaterally magnetisable carrier, said heads comprising at least two magnetic circuits one for recording and one for reproducing lying one after the other and connected with each other, each circuit consisting of at least two portions of sintered,

oxidic, ferromagnetic material, and having a useful gap filled with non-magnetisable material between said two portions and affixing the two portions to each other, at least two plates of sintered, oxidic, ferromagnetic material arranged between said magnetic circuits, at least one plate of electrically conducting, non-magnetisable material arranged between said two plates, a plate of electrically conducting, non-magnetisable material positioned between one circuit and the adjacent plate of sintered, oxidic ferro-



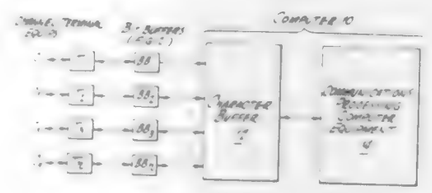
magnetic material, a plate of electrically poor conducting, magnetisable, ferromagnetic material positioned adjacent at least in part to the rear side of said carrier, said plate having a width at least equal to the over-all width of the tracks and their intermediate spaces, said plate being adjustably arranged in the direction of movement of the carrier in an asymmetrical position relative to an imaginary line lying centrally between a gap of a recording circuit and a gap of a circuit reproducing the same track.

3,373,417
POSITIONER FOR MAGNETIC HEADS COACTING WITH MULTITRACK MAGNETIC RECORDS
Jaap M. Unk, Hilversum, Netherlands, assignor to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware
Filed May 14, 1965, Ser. No. 455,756
4 Claims. (Cl. 340—174.1)



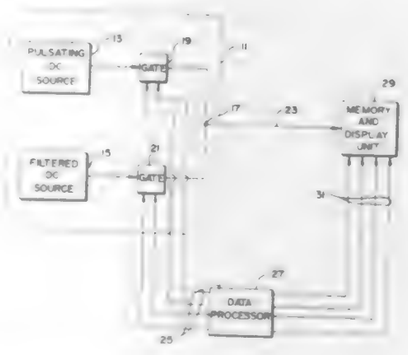
1. Positioning apparatus for positioning at least one magnetic transducer adjacent one track of a plurality of tracks on a magnetic record carrier, comprising: a plurality of driver means, each driver being adapted to be driven into one of two positions in response to an input signal, a plurality of differential levers corresponding in number to said plurality of driver means, a plurality of coupling means each coupling one driver to its corresponding differential lever, said coupling means imparting a substantially sinusoidal movement to each lever in response to a change in position of the corresponding driver, each lever having two ends which are a fixed distance apart and are at different distances respectively from an intermediate point actuated by said coupling means, a plurality of link means linking together predetermined ends of said levers, and at least one magnetic head coupled to said link means, said head having a substantially sinusoidal movement in response to the substantially sinusoidal lever movements and assuming a particular position determined by the particular positions of said plurality of driver means in response to an input signal.

3,373,418
BIT BUFFERING SYSTEM
Robert H. G. Chan, Barrington, N.J., assignor to Radio Corporation of America, a corporation of Delaware
Filed Sept. 14, 1964, Ser. No. 396,207
7 Claims. (Cl. 340—172.5)



A bit buffering system for use between many real-time digital communications channels each supplying and receiving bit-serial information at its own independent rate, and a communications processing computer capable of receiving information from and supplying information to the many communications channels in an ordered time sequence. The buffering system employs a bit buffer between each communications channel and a computer means capable of performing character buffering. Each bit buffer includes a two-stage input register for temporarily storing a received information bit and input bit status information. Each bit buffer also contains a three-stage output register for temporarily storing one outgoing information bit and output status information.

3,373,419
MULTI-MODE MEMORY AND DISPLAY SYSTEM
Flavius A. Mathamel, Allen Park, Mich., assignor to Burroughs Corporation, Detroit, Mich., a corporation of Michigan
Filed Mar. 9, 1965, Ser. No. 438,293
17 Claims. (Cl. 340—324)

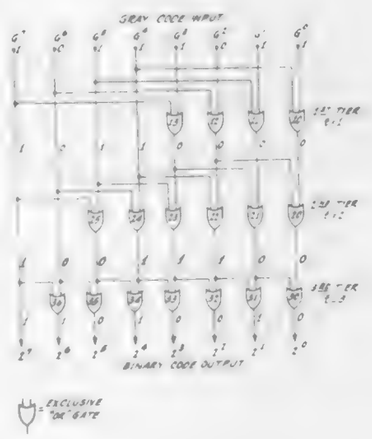


A multi-mode information memory and display system having a plurality of modules respectively including an indicator lamp and a gate controlled rectifier connected in series to a common bus. Pulsating and steady mode control currents are selectively gated individually or in combination, to the common bus to respectively operate the lamp in a visual indication mode and the gate controlled rectifier in a storage mode. Data signals applied to the gates of the controlled rectifiers determine the particular modules which are activated.

3,373,420
MOVABLE CONTROL BOXES FOR CONTROLLING MACHINE TOOLS
Rene Deflandre, Paris, France, assignor to Societe DEREFA, Etablissement pour le Developpement, Recherches et Fabrications Industrielles, Vaduz, Liechtenstein
Filed Apr. 20, 1965, Ser. No. 449,564
Claims priority, application France, Apr. 28, 1964, 972,565
8 Claims. (Cl. 340—324)

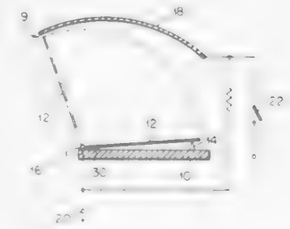
This invention is concerned with a suspended machine tool control assembly composed of two parts, a first part that is fixed to the end of a flexible suspension member and carries certain ancillary apparatus for checking and regulating members in the machine, and a second part that is rotatably supported by the first part and carries the apparatus for controlling the machine members.

3,373,421
CONVERSION FROM GRAY CODE TO BINARY CODE
Mao C. Wang, Camden, N.J., assignor to Radio Corporation of America, a corporation of Delaware
Filed Oct. 15, 1964, Ser. No. 404,117
4 Claims. (Cl. 340—347)



A Gray-to-binary code converter includes N bit input terminals connected through respective signal paths to an equal number of output terminals. The signal paths include tiers of exclusive "or" gates, the number of tiers being equal to $\log_2 N$ where N is a number of bits equal to an integral power of two. Each tier includes a number equal to $N-N/2^t$ of exclusive "or" gates having inputs coupled to respective low-order signal paths, where t is the number of the particular tier. Each gate also has an input coupled to a respective signal path $N/2^t$ bits positions removed in the higher order direction.

3,373,422
SIGNALLING DEVICE HAVING VANE ROTATED ABOUT AN AXIS BY AN ELECTROSTATIC FIELD
William R. Aiken, Los Altos Hills, Calif., assignor to Electronix Ten, Inc., San Francisco, Calif., a corporation of California
Filed Sept. 21, 1965, Ser. No. 489,017
10 Claims. (Cl. 340—373)



In a signalling device of the type constituted by a vane mounted for swinging movement from a first position to an angularly displaced second position, wherein movement of the vane is effected by setting up electrostatic fields between the vane and adjacently located electrodes, the improvement of providing an electrode of arched or curved conformation adjacent the intended path of movement of an outer edge of the vane, and of arranging said arched electrode in such a manner that the electrostatic field established between said vane and said arched electrode increases in strength in the direction of the intended movement of the vane from said first toward said second position. This is accomplished by increasing the width of the electrode in the direction of the intended movement of the vane and/or by locating said electrode in such a manner that it converges toward the path of movement of the outer edge of said vane in the direction of the intended movement of said vane.

3,373,423
LOW-LEVEL FLIGHT SYSTEM
Kurt Levy, Vestal, N.Y., assignor to General Precision Systems Inc., a corporation of Delaware
Filed May 26, 1965, Ser. No. 458,904
9 Claims. (Cl. 343—5)

7. A passive low-level flight system operable to display to the pilot of an operational aircraft simulated terrain elevation features, comprising, in combination:

a photographic film transparency having encoded thereon in gray scale variations terrain elevation contours representative of the height above sea level of each incremental portion of the terrain located in the area over which the aircraft is to be flown;

a flying-spot-scanner and a photo-sensitive device;

means positioning said transparency intermediate said flying-spot-scanner and said photo-sensitive device whereby said gray scale variations modulate the light transmitted by said scanner incident upon said photo-sensitive device, said positioning means being responsive to the location of said aircraft to emplace successive specific regions of said transparency in the area scanned by said flying-spot-scanner;

first and second deflection circuits coupled to said flying-spot-scanner to deflect the light beam provided thereby across said successive specific regions of said transparency;

computer circuitry coupled to said photo-sensitive device to provide a modified video signal proportional to h_1, $R(t)$, and $e'(t)$ wherein

h_1 is the height of the aircraft above the terrain as encoded upon said transparency,

$R(t)$ is the linear range between the aircraft position and the terrain being viewed, and

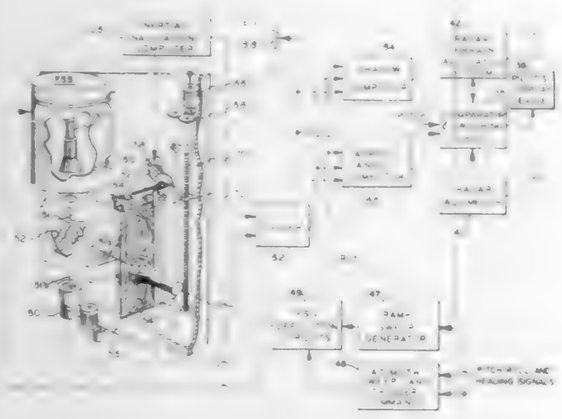
$e'(t)$ is the output of said photo-sensitive device as modulated by said gray scale variations encoded upon said transparency;

a pilot's display device having at least one input terminal;

a comparison and switching circuit interconnecting said modified video signal with said at least one input terminal normally operable to couple said modified video signal to said at least one input terminal;

radar means for deriving a signal h_2 corresponding to the actual height of the aircraft above the terrain; and

said comparator and switching circuit being further operable to decouple said modified video signal from said at least one input terminal when the magnitudes of h_1 and h_2 differ by a predetermined amount.



8. The system of claim 7 including,

a radar terrain avoidance system;

circuit means coupling the output of said radar terrain avoidance system to an input to said comparator and switching circuit; and

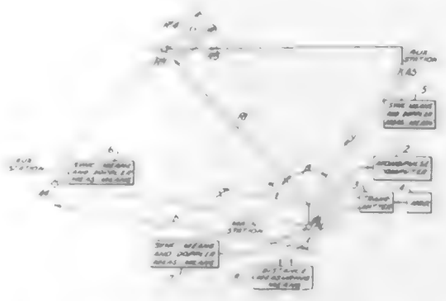
said comparator and switching circuit additionally operable to normally maintain said radar terrain avoidance system inactive when the magnitudes of h_1 and h_2 differ by less than said predetermined amount and to render said radar terrain avoidance system active and couple the output therefrom to said pilot's display device when the magnitudes of h_1 and h_2 differ by more than said predetermined amount.

3,373,424
TRACKING AND SYNCHRONIZING SYSTEM

Leo Maria Hendrik Thyssens, Ekeren, Belgium, assignor to International Standard Electric Corporation, New York, N.Y., a corporation of Delaware

Filed Apr. 29, 1966, Ser. No. 546,255
Claims priority, application Belgium, Apr. 30, 1965, 663,241
22 Claims. (Cl. 343—6)

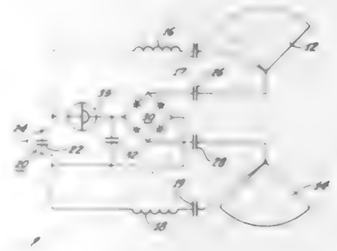
A system for determining the position and velocity vectors of a satellite or the like wherein the position is obtained by means of an interferometer system and a monopulse system, both systems being located in a main tracking station, and the velocity vector is obtained by measuring in the main and auxiliary tracking stations the Doppler frequency shifts of a carrier wave emitted in the main station and returned by the satellite transponder. The velocity measurments are synchronized in a novel manner by means of phase-locked loops located in the stations.



3,373,425
TUNNEL DIODE CIRCUIT UTILIZED TO CONTROL THE REPLY OF A PASSIVE TRANSPONDER

Erwin E. Barischoff, Quartz Hill, Calif., assignor to Allen L. Well, Redondo Beach, Calif.

Filed Apr. 14, 1967, Ser. No. 631,003
7 Claims. (Cl. 343—6.8)

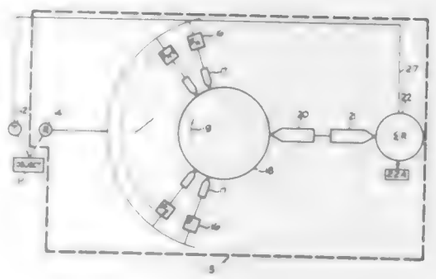


A passive transponder comprised of a disk with a dipole antenna and a rectifier with a storage type load for accumulating electrical energy; a resonant circuit is coupled intermittently to the store for oscillatory discharge thereof, the oscillations to be transmitted by the antenna.

3,373,426
METHOD AND SYSTEM FOR RANGE AND RELATIVE VELOCITY DETECTION

Park H. Miller, Jr., Del Mar, Calif., assignor, by mesne assignments, to Gulf General Atomic Incorporated, San Diego, Calif., a corporation of Delaware

Filed Apr. 1, 1966, Ser. No. 539,352
29 Claims. (Cl. 343—7.7)

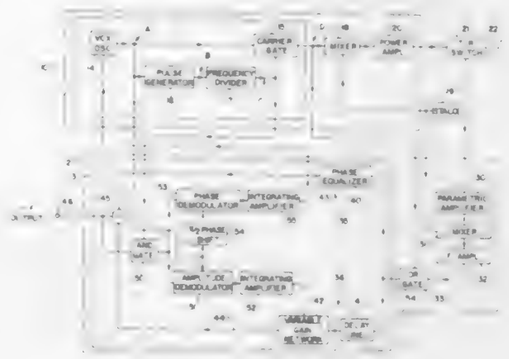


A method and apparatus for detecting relative motion of two objects in a medium is provided in which short single frequency wave trains are applied to the medium with predetermined cycles having first time relationships. After the wave trains have traveled between the objects detection signals are produced which are systematically related to the applied wave trains and which each have a cycle corresponding to the predetermined cycle of the applied wave train. The detection signals are then combined with these corresponding cycles in second time relationships to provide a compressed pulse. Relative motion of the objects may cause a change in the shape of this pulse which may be adjusted by changes in either the first or second time relationships. Any or all of these changes are then utilized to determine the relative motion.

3,373,427
DELAY LINE CANCELLER FOR RADAR SYSTEM

Thomas W. J. Kennedy and Edgar J. Fischer, Ottawa, Ontario, Canada, and John O. Taylor, Winchester, Mass., assignors to Northern Electric Company Limited, Montreal, Quebec, Canada

Filed Nov. 23, 1966, Ser. No. 596,536
3 Claims. (Cl. 343—7.7)

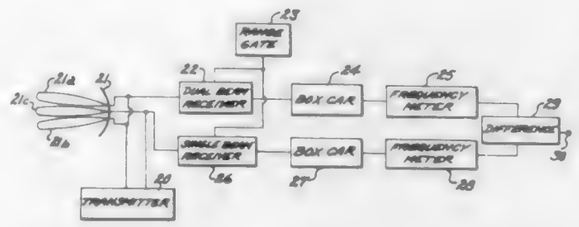


A moving target indicator, for a radar system, utilizing a delay line canceller; in which during the transmitting interval, a sample of the transmitted signal is fed through the calceller. This produces a control signal at the canceller's output which is used to control the period of the transmitted pulse signals so that the period is fully synchronized with the time delay encountered in the canceller.

3,373,428
METHOD AND SYSTEM FOR RADAR VELOCITY MEASUREMENTS

David Atlas, Newton, Mass.
(828 Chestnut St., Waban, Mass. 02168)

Filed July 28, 1965, Ser. No. 475,612
12 Claims. (Cl. 343—8)

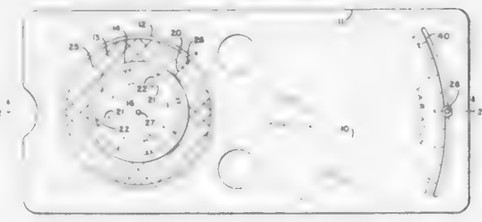


A method and system for measurement of wind velocity by transmitting two radar beams simultaneously toward distributed targets (e.g. precipitation, ground) in such a manner that the echoes in one beam produce a small positive Doppler shift, and those in the other an equal negative shift. The returning echoes beat with one another to produce a fluctuating return whose variance is proportional to the sum of the intrinsic variance of the targets within a single beam plus the cross-beam velocity of the targets. The single beam variance is then subtracted out either by measuring on one beam alone or using a third beam. The remainder is directly proportional to target velocity.

3,373,429
NAVIGATIONAL INSTRUMENT

Warren D. Anderson, 421 Ocean Drive W., Stamford, Conn. 06902

Filed Oct. 24, 1965, Ser. No. 504,585
6 Claims. (Cl. 343—115)

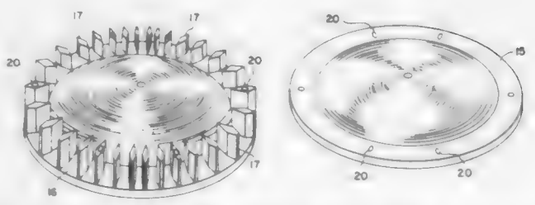


A navigational instrument which eliminates the necessity for reading any bearing angles in sighting a known object and plotting the corresponding line of position on a chart.

3,373,430
OMNIDIRECTIONAL MICROWAVE SPACECRAFT ANTENNA

William F. Croswell and Melvin C. Gilreath, Hampton, Va., assignors to the United States of America as represented by the Administrator of the National Aeronautics and Space Administration

Filed Mar. 15, 1965, Ser. No. 440,039
12 Claims. (Cl. 343—708)

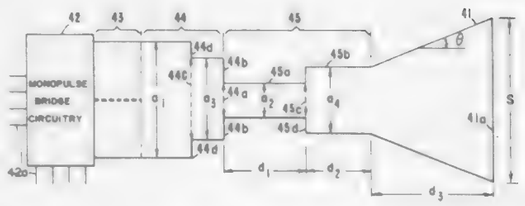


An omnidirectional antenna utilized with a spacecraft. The antenna is a biconical horn placed between segments of the spacecraft. The antenna halves are connected by wedge-shaped scattering obstacles which offer minimum interference to a wave, and re-radiate obstructed portions of the wave.

3,373,431
LOW-NOISE SINGLE APERTURE MULTIMODE MONOPULSE ANTENNA FEED SYSTEM

James E. Webb, Administrator of the National Aeronautics and Space Administration, with respect to an invention of Paul A. Jensen, Fullerton, Calif.

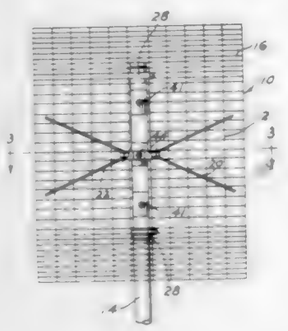
Filed Nov. 2, 1964, Ser. No. 408,438
8 Claims. (Cl. 343—786)



A feed system which includes a monopulse bridge capable of providing sum and dual plane (H and E) difference modes for two orthogonal polarization orientations. A multimode matching section is connected to match

the principal modes from the bridge and to inhibit undesired modes. An excitation and control section is used to control the phases of the different modes, as well as, to excite additional modes. When these additional modes are combined with the sum modes they minimize the side lobes of the radiated sum patterns in both the E and H planes.

3,373,432
ULTRAHIGH-FREQUENCY TELEVISION ANTENNA
Walter E. Breneman, 579 W. College Ave., York, Pa. 17404
Filed June 10, 1965, Ser. No. 462,896
17 Claims. (Cl. 343—808)

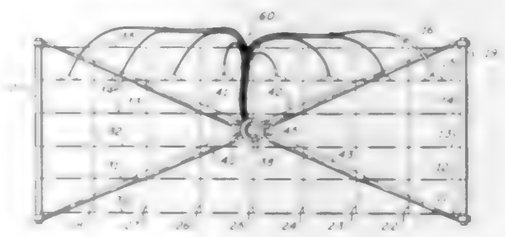


1. A television receiver antenna comprising in combination, an elongated supporting bracket having means on the ends attachable to a supporting pole, a reflector grid having a planar central portion and integral opposite end wing portions disposed at obtuse angles to said central portion, a spacing bracket having opposite ends spaced laterally from the plane of the central portion thereof, connecting means engaging said opposite ends of said spacing bracket and said supporting bracket with the central portion of said reflector grid sandwiched therebetween and the central portion of said spacing bracket extending outward from said reflector grid, a pair of V-shaped receiving dipoles, a spacing support of insulating material connected to said central portion of said spacing bracket and projecting outwardly therefrom, and means connecting the apex portions of said dipoles to said spacing support to support said dipoles a predetermined distance forwardly from said reflector grid and parallel to the central portion thereof.

3,373,433
DUAL LINEAR/CIRCULAR POLARIZATION SPIRAL ANTENNA
Leonard L. Blaisdell, Medway, Mass., assignor to Sylvania Electric Products Inc., a corporation of Delaware
Filed Dec. 16, 1964, Ser. No. 418,839
2 Claims. (Cl. 343—850)

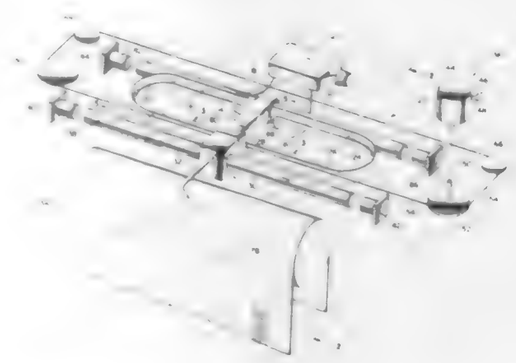
A spiral antenna system capable of selectively providing linearly or circularly polarized radiation. The antenna has a pair of spiral arms, differing in length by one quarter wavelength, which are energized by a pair of quadrature-phased signals from a quadrature feed device to provide linear polarization. A 90° plane shifter can be selectively interconnected between the feed device and the shorter of the two spiral arms to provide circular polarization.

3,373,434
LIGHTWEIGHT ANTENNA FORMED FROM NET OF DIELECTRIC CORD, HAVING METALIZED SECTORS THEREON
John J. Lorenzo, Rosedale, George O. Nagel, Massapequa Park, and Leon Schwartzman, Brooklyn, N.Y., assignors to Sperry Rand Corporation, Great Neck, N.Y., a corporation of Delaware
Filed Dec. 1, 1964, Ser. No. 415,003
1 Claim. (Cl. 343—879)



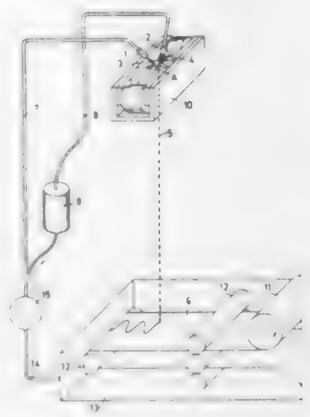
A lightweight portable antenna having a collapsible support member comprising a net-like structure of dielectric cords. Selected ones of the cords are covered by conductive segments to provide the elements of an antenna having a shape conforming to the contour of the selected cords of the net-like support structure.

3,373,435
RECORDER WITH FLEXIBLE LOOP SUPPORT FOR INK SUPPLY TUBING
Roger K. Strong, Doylestown, Pa., assignor to Honeywell Inc., Minneapolis, Minn., a corporation of Delaware
Filed Jan. 30, 1967, Ser. No. 612,725
10 Claims. (Cl. 346—140)



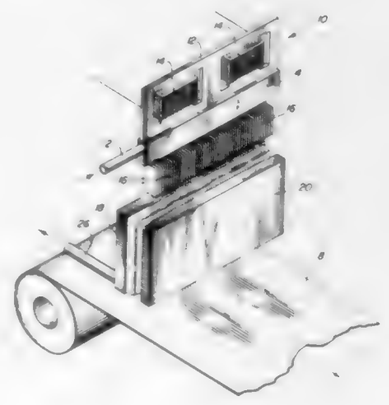
A high speed recording apparatus for inscribing a continuous solid line on a chart containing a unitary elongated loop of flexible material and a loop of capillary tubing operably connected therewith for joint rolling movement about a fixed portion of the flexible loop by the movement of a carriage that is fixedly connected thereto to effect a feeding of ink from a stationary ink supply through the capillary tubing to and through a reservoir having a flexible wall and/or the tip of a pen mounted on the carriage as this carriage-pen unit is moved at recording speeds up to and/or exceeding four hundred inches per second along and in contact with the chart.

3,373,436
INK JET RECORDER
Michel Auphan, Neuilly-sur-Seine, France, assignor to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware
Filed May 3, 1965, Ser. No. 452,547
Claims priority, application France, May 6, 1964, 973,558
9 Claims. (Cl. 346—75)



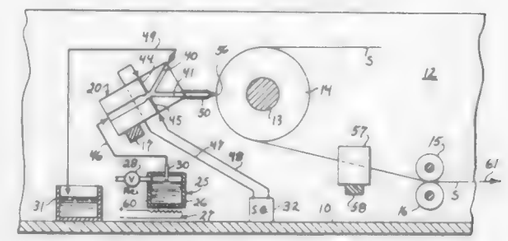
A recording apparatus for recording information on a surface employs electrically conductive fluid directed from a pair of nozzles closely arranged to one another and electrically insulated. The nozzles are positioned such that their axes intersect at a point between the nozzles and the recording surface and from this point travel as a single stream towards the recording surface. A potential difference is applied between the two nozzles and a gradient appears along the length of the stream from nozzle to nozzle. Movement of the single stream is controlled by means of a modulating signal applied as an electrostatic field to one of the streams.

3,373,437
FLUID DROPLET RECORDER WITH A PLURALITY OF JETS
Richard G. Sweet, 4076 Orme Ave., and Raymond C. Cumming, 4129 Donald Drive, both of Palo Alto, Calif. 94306
Continuation-in-part of application Ser. No. 354,721, Mar. 25, 1964. This application Aug. 1, 1967, Ser. No. 660,163
16 Claims. (Cl. 346—75)



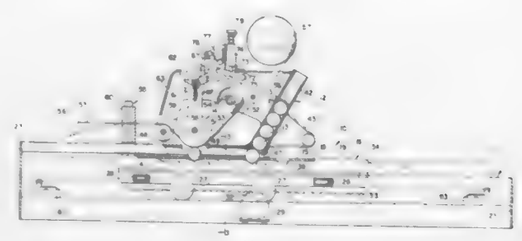
Signal controlled recording apparatus having an array of jet nozzles each producing a succession of discrete droplets of writing fluid. The droplets are electrostatically and selectively deflected in response to signal values to effect either droplet deposition on a record medium or droplet interception. The controlling signals may be programmed in accordance with a character matrix in synchronism with the rate of droplet formation.

3,373,438
JET PRINTER
David Louis Hochberg, New York, N.Y., assignor to Pitney-Bowes, Inc., Stamford, Conn., a corporation of Delaware
Filed Jan. 3, 1966, Ser. No. 518,419
1 Claim. (Cl. 346—75)



Fluid jet printing apparatus having a plurality of wall attachment type fluidic devices each of which is supplied with a printing fluid under pressure and each of which has two output lines. A nonprinting output line of each fluidic device is connected to a fluid reservoir while the other printing output line of each fluidic device is coupled with a nozzle that is adapted to direct the printing fluid against a record sheet. The printing fluid flowing through each fluidic device is selectively directed through the printing or the nonprinting outlet lines thereof by means of predetermined control signals.

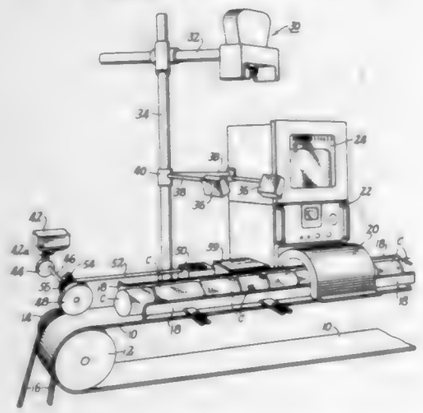
3,373,439
CODE-PUNCHED DOCUMENT RECORDING DEVICE
Kenneth Porteous, Sr., Glendale, Calif., assignor to Lockheed Aircraft Corporation, Burbank, Calif.
Filed May 22, 1962, Ser. No. 196,637
20 Claims. (Cl. 346—79)



1. An apparatus for sensing and recording data items coded in columns as a series of perforations on a document, comprising:
- a frame;
- a plurality of sensing elements;
- magazine means fixed on said frame for receiving, storing, and delivering the sensing elements into the perforations in the document;
- recording means on said frame for registering each sensing element in the perforations in the document;
- carriage means mounted for supporting the document and moving it columnwise past the magazine means and the recording means; and
- said carriage means having a plurality of element-receiving depressions equal in number to the maximum number of data items codable in a column of the document and in spaced increments substantially equal thereto so as to underlie perforations in the document whereby the carriage means moves a

document past the magazine means to deposit the sensing means in the document perforations and also past the recording means where the sensing means are registered.

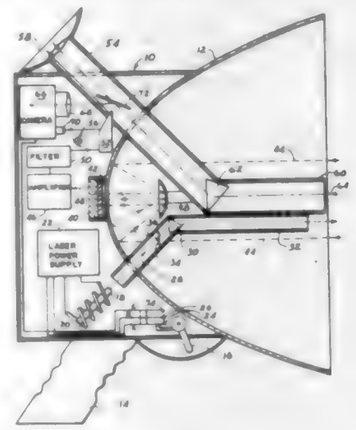
3,373,440
APPARATUS FOR PHOTOGRAPHING WELL CORE SAMPLES
Ralph E. Jenkins, Irving, and Harold T. Barnaby, Duncanville, Tex., assignors to Core Laboratories, Inc., Dallas, Tex.
Filed Feb. 1, 1966, Ser. No. 524,169
3 Claims. (Cl. 346—107)



Well core samples are photographed by arranging them on a conveyor end-to-end in a string in the same order they occupied prior to removal from the well borehole, moving the conveyor continuously while actuating the shutter of a camera directed at the string by automatic means coupled to the conveyor so that the shutter is actuated at uniform intervals during which the string moves a distance equal to the length of the field of view of the camera, and advancing the film between successive exposures a distance substantially equal to the length of the film exposed on each such actuation to form a continuous strip photograph of the string.

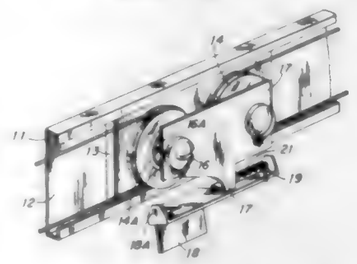
3,373,441
LASER SPEED DETECTOR
Ernest A. Zadig, 1 Bouton St., South Norwalk, Conn. 06854
Filed June 17, 1966, Ser. No. 558,440
5 Claims. (Cl. 346—107)

1. A speed detector comprising a laser for the generation of a narrow coherent beam of light, means for projecting said light towards a target vehicle, means for receiving a portion of said transmitted light reflected from said target vehicle, means for mixing said received reflected light with a portion of said generated beam, photodetector means to detect the beat frequency generated as a result of mixing said reflected and said generated beams, indicator means to indicate the target speed in response to



variation in frequency of said photodetector signal, and optical means for viewing a portion of said target vehicle upon which said laser beam impinges.

3,373,442
PEN CARRIAGE
John A. Belanich, Delbert C. Baars and Olof Kok, San Diego, Calif., assignors, by mesne assignments, to Honeywell Inc., Minneapolis, Minn., a corporation of Delaware
Filed Jan. 25, 1965, Ser. No. 427,583
1 Claim. (Cl. 346—139)



1. A recording pen tracking system comprising:
track means having a guide channel therein,
a single self-lubricating bearing block slidably mounted within said guide channel,
first and second pulley wheels,
means for rotatably attaching said pulley wheels to said single self-lubricating bearing block for imparting motion thereto within said guide channel,
a first plate fixedly attached to said bearing block by said means for attaching said pulley wheels,
a second plate hingedly attached to said first plate, and
spring means for biasing said second plate with respect to said first plate.

DESIGNS

MARCH 12, 1968

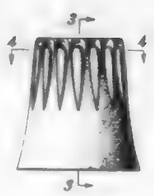
210,443
JUG OR SIMILAR ARTICLE
Stanley I. Mason, Jr., Fullerton, Calif., assignor to Hunt-Wesson Foods, Inc., Fullerton, Calif., a corporation of Delaware
Filed Jan. 6, 1967, Ser. No. 5,330
Term of patent 14 years
(Cl. D9—39)

210,444
BOTTLE
Andres Sancho Cortina, Barcelona, Spain, assignor to Andres Sancho, S.A., Barcelona, Spain
Filed Dec. 13, 1966, Ser. No. 5,020
Term of patent 14 years
(Cl. D9—54)

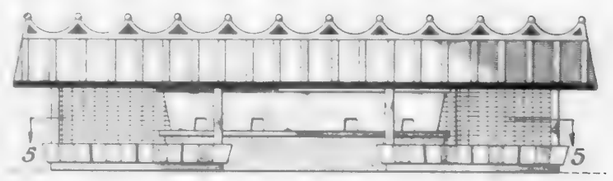
210,445
BOTTLE
Robert Emmett Bourke, Weston, Conn., assignor to The Coca-Cola Company, Atlanta, Ga., a corporation of Delaware
Filed Jan. 26, 1967, Ser. No. 5,579
Term of patent 14 years
(Cl. D9—136)

210,446
CONTAINER FOR NEEDLES OR THE LIKE
Donald R. Bowes, Fanwood, N.J., assignor to Johnson & Johnson, a corporation of New Jersey
Filed Dec. 22, 1966, Ser. No. 5,149
Term of patent 14 years
(Cl. D9—172)

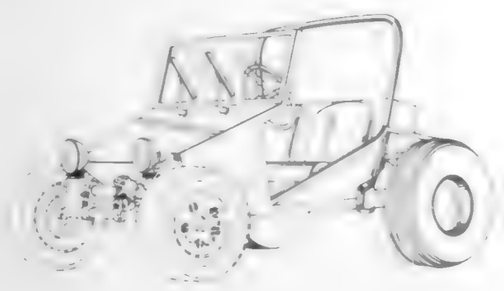
210,447
CAP FOR A JUG OR THE LIKE
Harold J. Vanderhyde, North Merrick, N.Y., assignor to The Procter & Gamble Company, Cincinnati, Ohio, a corporation of Ohio
Filed Jan. 11, 1967, Ser. No. 5,388
Term of patent 14 years
(Cl. D9—285)



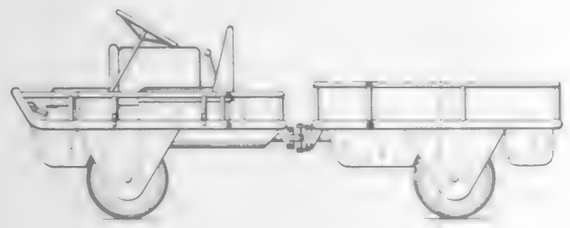
210,448
RESTAURANT
Lee V. Burns, Glendale, David A. Deane, Hollywood, and Monroe T. Leung, Los Angeles, Calif., assignors to Federal Sign and Signal Corporation, Blue Island, Ill., a corporation of New York
Filed Nov. 21, 1966, Ser. No. 4,750
Term of patent 14 years
(Cl. D13—1)



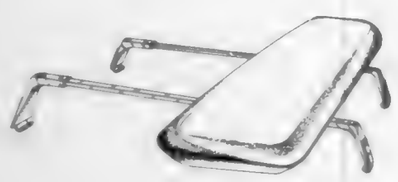
210,449
VEHICLE BODY WITH REAR WHEEL UNIT
Hilder T. Thompson, 1353 Santiago Ave., Santa Ana, Calif. 92701
Filed Oct. 17, 1966, Ser. No. 4,291
Term of patent 7 years
(Cl. D14—3)



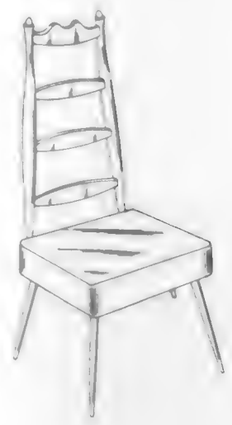
210,450
VEHICLE FOR USE IN SNOW AND ON UNIMPROVED LAND
Joseph A. Poltorak, 1716 Robert Road, Auburn, Mich. 48611
Filed May 9, 1967, Ser. No. 7,042
Term of patent 14 years
(Cl. D14—3)



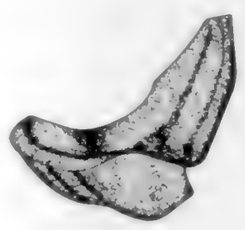
210,451
SKI POD
Vincent E. Gardner, Wayne, Mich., assignor to Marilyn Sue Powers, Allen Park, Mich.
Filed Apr. 12, 1967, Ser. No. 6,653
Term of patent 14 years
(Cl. D14—27)



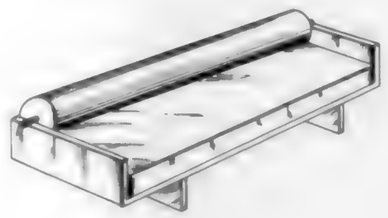
210,452
CHAIR
John D. Beinert, Babylon, N.Y., assignor to Spiegel Industries Corp., Teaneck, N.J., a corporation of New Jersey
Filed Mar. 13, 1967, Ser. No. 6,206
Term of patent 14 years
(Cl. D15—1)



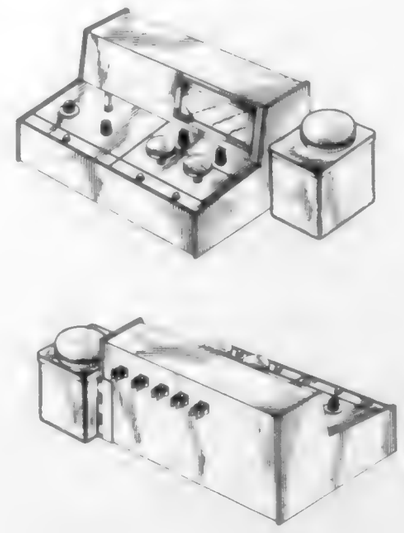
210,453
ROCKING CHAIR
Vincent E. Gardner, Wayne, Mich., assignor to Marilyn Sue Powers, Allen Park, Mich.
Filed Apr. 12, 1967, Ser. No. 6,652
Term of patent 14 years
(Cl. D15—6)



210,454
SOFA OR SIMILAR ARTICLE
Vladimir Kagan, 1225 Park Ave., New York, N.Y. 10028
Filed Mar. 10, 1967, Ser. No. 6,150
Term of patent 7 years
(Cl. D15—11)

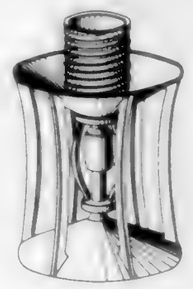


210,455
TITRATION INSTRUMENT
Theodore Christie and Joseph J. Kregzdys, Chicago, Ill., assignors to Precision Scientific Company, Chicago, Ill., a company of Illinois
Filed May 29, 1967, Ser. No. 7,286
Term of patent 3½ years
(Cl. D16—2)



210,456
SPRINKLER HEAD
Gary Lewis Mease, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
Filed Nov. 10, 1966, Ser. No. 4,605
Term of patent 14 years
(Cl. D23—6)

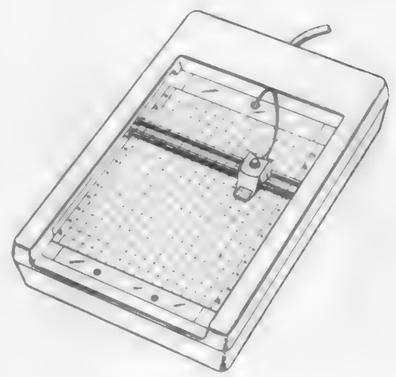
210,457
SPRINKLER HEAD
Gary Lewis Mease, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
Filed Nov. 10, 1966, Ser. No. 4,606
Term of patent 14 years
(Cl. D23—6)



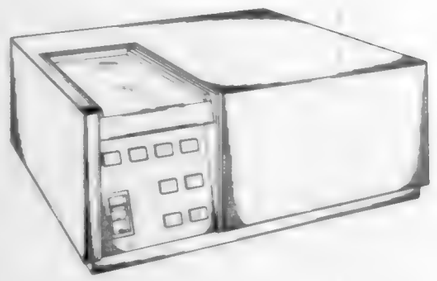
210,458
SPRINKLER HEAD
Gary Lewis Mease, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
Filed Nov. 10, 1966, Ser. No. 4,607
Term of patent 14 years
(Cl. D23—6)

210,459
SPRINKLER HEAD
Gary Lewis Mease, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
Filed Nov. 10, 1966, Ser. No. 4,608
Term of patent 14 years
(Cl. D23—6)

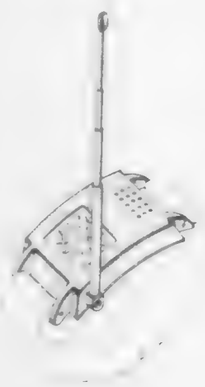
210,460
DATA ENCODING UNIT
Erneil Eugene Gilbert, Garden Grove, and Patrick F. Conners, Arcadia, Calif., assignors to Bolt Beranek and Newman, Inc., Cambridge, Mass.
Filed Mar. 22, 1966, Ser. No. 1,586
Term of patent 14 years
(Cl. D26—5)



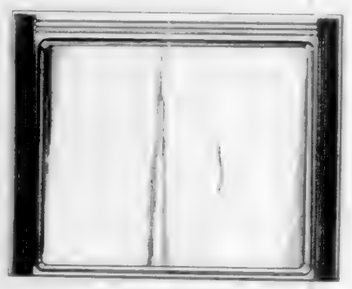
210,461
DATA TRANSMISSION TERMINAL
Collan B. Kneale, Rochester, Minn., assignor to International Business Machines Corporation, Armonk, N.Y., a corporation of New York
Filed Feb. 24, 1967, Ser. No. 5,946
Term of patent 14 years
(Cl. D26—5)



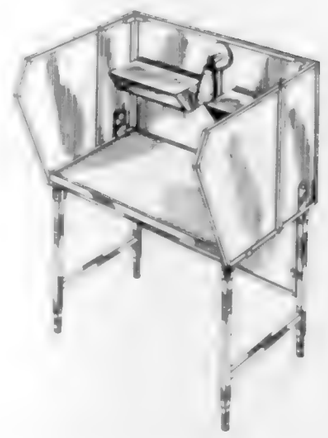
210,462
WRISTWATCH COMMUNICATION TRANSMITTER
Jack C. Roberts, 23660 Pacific Coast Highway, Malibu, Calif. 90265, and Charles J. Smith, 11459 Bellagio Road, Bel Air, Calif. 94558
Filed Jan. 26, 1967, Ser. No. 5,572
Term of patent 14 years
(Cl. D26—14)



210,463
TRAY INSERT FOR A FURNITURE DRAWER
Joseph R. Sander, University City, Mo., assignor to H. Robert Industries, Inc., St. Louis, Mo., a corporation of Missouri
Filed Oct. 27, 1966, Ser. No. 4,440
Term of patent 14 years
(Cl. D33—1)



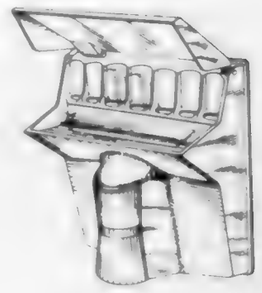
210,464
PORTABLE SHIELDED DESK
Frederick W. Howlett, 4519 30th St., San Diego, Calif. 92116
Filed July 11, 1966, Ser. No. 3,037
Term of patent 14 years
(Cl. D33—7)



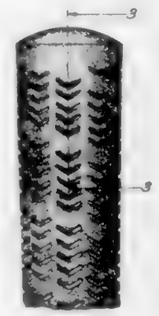
210,465
COMBINED DESK, CAROM POOL TABLE AND RECORD PLAYER UNIT
Allen N. Eide, 2001 Winnetka Ave. N., Minneapolis, Minn. 55427
Filed Feb. 9, 1967, Ser. No. 5,749
Term of patent 14 years
(Cl. D33—7)

210,466
PEDESTAL TABLE
John B. Thorn, Lynchburg, and Andre Bus, Altavista, Va., assignors to The Lane Company Inc., Altavista, Va., a corporation of Virginia
Filed Apr. 10, 1967, Ser. No. 6,610
Term of patent 14 years
(Cl. D33—14)

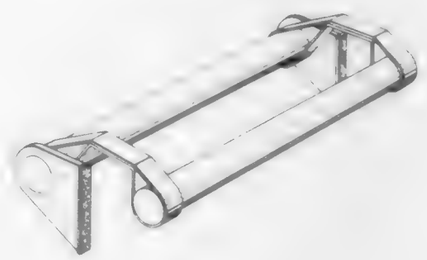
210,467
COMBINED TOOTHBRUSH AND PASTE HOLDER AND CUP DISPENSING UNIT
Vincent E. Gardner, Wayne, Mich., assignor to Marilyn Sue Powers, Allen Park, Mich.
Filed Apr. 12, 1967, Ser. No. 6,647
Term of patent 14 years
(Cl. D33—26)



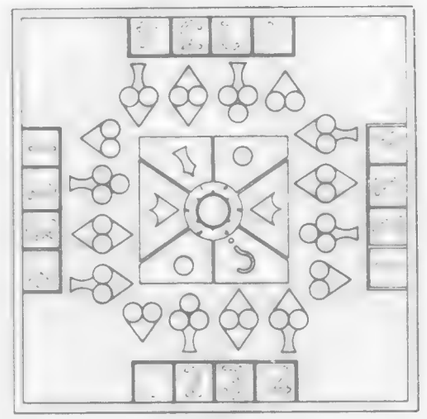
210,468
GOLF CLUB GRIP
Francis T. Brewer, Hinsdale, Ill., assignor, by mesne assignments, to Wilson Sporting Goods Co., River Grove, Ill., a corporation of Delaware
Filed Apr. 26, 1966, Ser. No. 2,029
Term of patent 14 years
(Cl. D34—5)



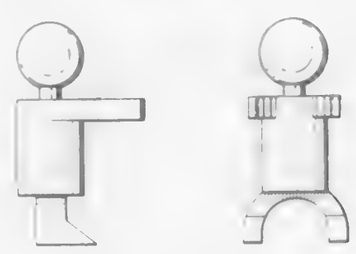
210,469
EXERCISE BAR
Henrik Baekgaard Sejersen, Hojstrupvej 44, Odense, Fyn, Denmark
Filed Mar. 6, 1967, Ser. No. 6,083
Claims priority, application Denmark Sept. 6, 1966
Term of patent 14 years
(Cl. D34—5)



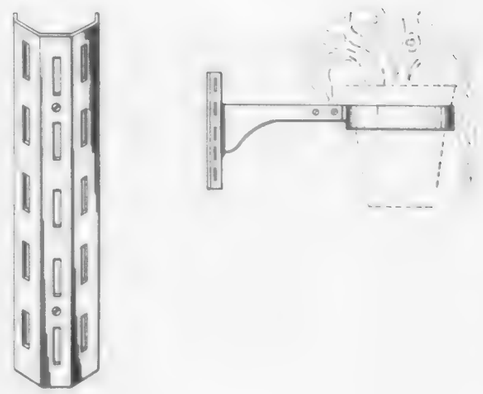
210,470
GAME BOARD OR THE LIKE
James E. Ison, 719 Bromley Road, Ludlow, Ky. 41016
Filed May 23, 1967, Ser. No. 7,232
Term of patent 7 years
(Cl. D34—5)



210,471
TOY CONSTRUCTION FIGURE
Rene Ach, 47 Ave. des Gobelins, Paris 13, France
Filed Mar. 1, 1967, Ser. No. 6,020
Claims priority, application Great Britain Oct. 13, 1966
Term of patent 14 years
(Cl. D34—15)

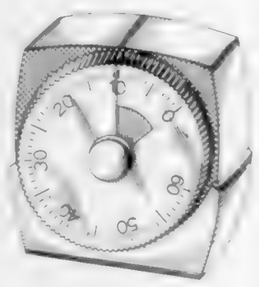


210,472
ADJUSTABLE FLOWER POT HOLDER BRACKET OR THE LIKE
Richard L. Vogt, 1 Brookside Ave., Bellport, N.Y. 11713
Filed Feb. 14, 1967, Ser. No. 5,808
Term of patent 7 years
(Cl. D35—3)

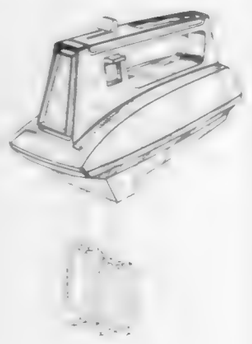


210,473
CLOCK OR SIMILAR ARTICLE
Harry L. Laylon, Syracuse, N.Y., and William V. Judson, Westport, Conn., assignors to General Electric Company, a corporation of New York
Filed Apr. 3, 1967, Ser. No. 6,498
Term of patent 7 years
(Cl. D42—7)

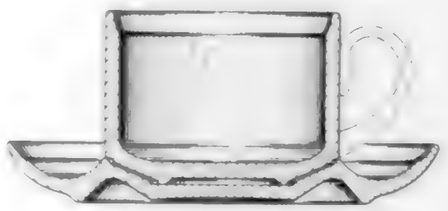
210,474
TIMER
David W. Miley, Peru, Ill., assignor to General Time Corporation, Stamford, Conn., a corporation of Delaware
Filed Aug. 22, 1967, Ser. No. 8,347
Term of patent 14 years
(Cl. D42—7)



210,475
MIXER
Frank J. Di Sesa, Jr., Lombard, Ill., assignor to Sunbeam Corporation, Chicago, Ill., a corporation of Illinois
Filed May 24, 1967, Ser. No. 7,247
Term of patent 14 years
(Cl. D44—1)

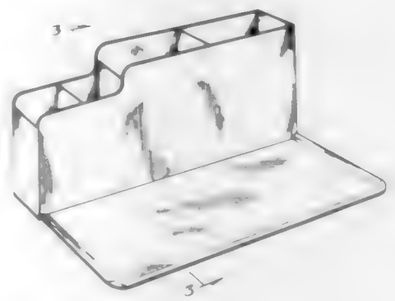


210,476
COMBINED CUP AND SAUCER SERVING UNIT
Gerald Gulotta, New York, N.Y., assignor to Block China Company, New York, N.Y., a partnership composed of Elizabeth Block, Jay L. Block, and Robert C. Block
Filed Nov. 10, 1966, Ser. No. 4,623
Term of patent 14 years
(Cl. D44—9)



210,477
TRIVET
Edward G. Beyer, Santa Monica, Calif., assignor to Gamma Associates, Incorporated, a corporation of California
Filed June 9, 1967, Ser. No. 7,420
Term of patent 14 years
(Cl. D44—10)

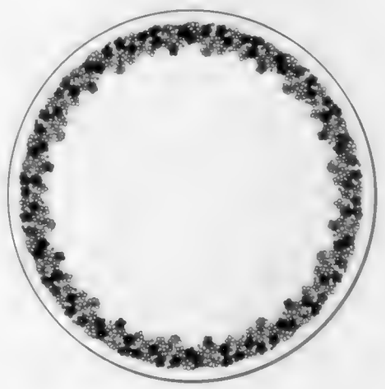
210,478
TRAY FOR COCKTAIL BAR SUPPLIES
Albert L. Fehn, 5042 Winkle Ave., Santa Cruz, Calif. 95060
Filed July 31, 1967, Ser. No. 8,061
Term of patent 14 years
(Cl. D44—10)



210,479
PLATE OR SIMILAR ARTICLE
Ottorino N. Mercadante, Corning, N.Y., assignor to Corning Glass Works, Corning, N.Y., a corporation of New York
Filed Oct. 2, 1967, Ser. No. 8,804
Term of patent 14 years
(Cl. D44—15)

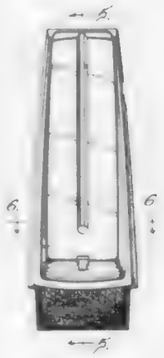
210,480
PLATE OR SIMILAR ARTICLE
Robert R. Gibson, Big Flats Village, N.Y., assignor to Corning Glass Works, Corning, N.Y., a corporation of New York
Filed Oct. 3, 1967, Ser. No. 8,842
Term of patent 14 years
(Cl. D44—15)

210,481
PLATE OR SIMILAR ARTICLE
Sara L. Balbach, Corning, N.Y., assignor to Corning Glass Works, Corning, N.Y., a corporation of New York
Filed Oct. 3, 1967, Ser. No. 8,843
Term of patent 14 years
(Cl. D44—15)

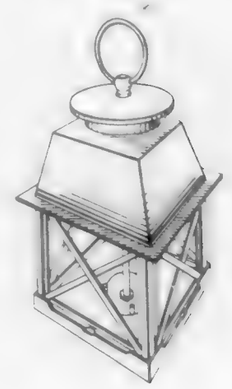


210,482
HAND GRIPPER FOR HOLDING FISH
Theodore J. Tomaluolo, 42 Fairfield Ave., Hartford, Conn. 06114
Filed Feb. 1, 1967, Ser. No. 5,650
Term of patent 14 years
(Cl. D44—29)

210,483
SUPPORTING STAND FOR AN ELECTRIC KNIFE
Richard S. Hart, Wheaton, Ill., assignor to Sunbeam Corporation, Chicago, Ill., a corporation of Illinois
Filed June 12, 1967, Ser. No. 7,438
Term of patent 14 years
(Cl. D44—29)

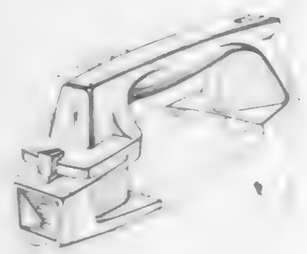


210,484
GAS LAMP
George A. McNeff, P.O. Box 34320, Dallas, Tex. 75231
Filed July 26, 1967, Ser. No. 8,003
Term of patent 14 years
(Cl. D48—31)



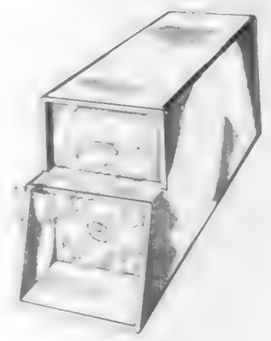
210,485
POLE
Maurice J. Rhude, Marinette, Wis., assignor to Koppers Company, Inc., a corporation of Delaware
Filed Aug. 1, 1967, Ser. No. 8,078
Term of patent 14 years
(Cl. D48—31)

210,486
ELECTRIC IRON OR SIMILAR ARTICLE
John C. Shalvoy, Fairfield, Conn., assignor to General Electric Company, a corporation of New York
Filed Sept. 12, 1967, Ser. No. 8,572
Term of patent 14 years
(Cl. D49—6)

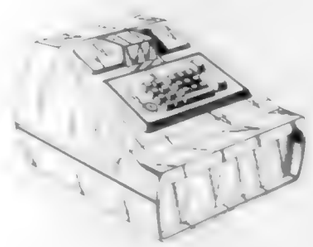


210,487
LITTER RECEPTACLE
Robert P. Reavis, Statesville, N.C., assignor to Fusion Rubbermaid Corporation, Statesville, N.C., a corporation of North Carolina
Filed June 20, 1967, Ser. No. 7,524
Term of patent 14 years
(Cl. D49—34)

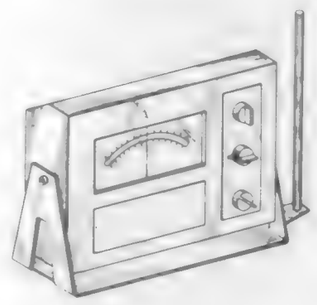
210,488
COIN BOX FOR COIN-OPERATED APPLIANCES
Marlyn R. Hutchins, Minneapolis, Minn., assignor to Coin Security Systems, Inc., Minneapolis, Minn., a corporation of Minnesota
Filed Nov. 23, 1966, Ser. No. 4,787
Term of patent 14 years
(Cl. D52—3)



210,489
CASH CONTROL REGISTER
Chester J. Abend, Camillus, and Thomas E. Hanson and Paul Dennis Younge, Syracuse, N.Y., assignors to SCM Corporation, a corporation of New York
Filed Dec. 15, 1966, Ser. No. 5,061
Term of patent 14 years
(Cl. D52—4)

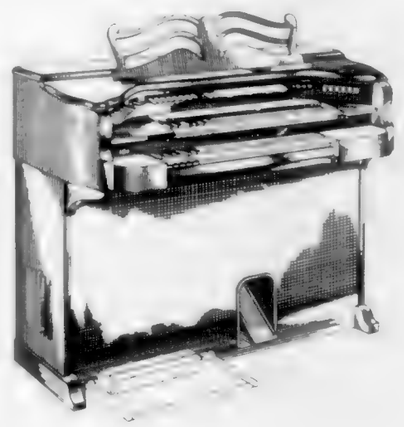


210,490
METER OR SIMILAR DEVICE
Charles M. Dole, Jr., Mount Kisco, N.Y., assignor to Corning Glass Works, Corning, N.Y., a corporation of New York
Filed Feb. 23, 1967, Ser. No. 5,924
Term of patent 14 years
(Cl. D52—6)

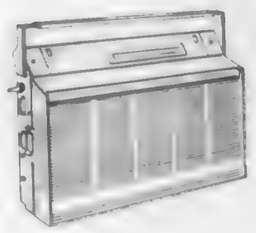


210,491
COMBINED SUPPORT AND HOLDER FOR TRASH RECEPTACLES
Howard W. Lisby and Thomas O. Peterson, both of 2826 E. Rosedale, Fort Worth, Tex. 76110
Filed Dec. 15, 1966, Ser. No. 5,052
Term of patent 14 years
(Cl. D54—1)

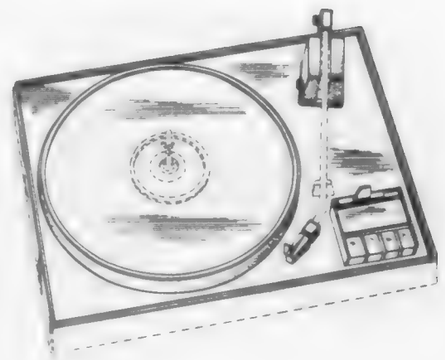
210,492
ORGAN CONSOLE
Winsor D. White, Jr., Blowing Rock, N.C., assignor to D. H. Baldwin Company, Cincinnati, Ohio, a corporation of Ohio
Filed July 11, 1966, Ser. No. 3,030
Term of patent 14 years
(Cl. D56—2)



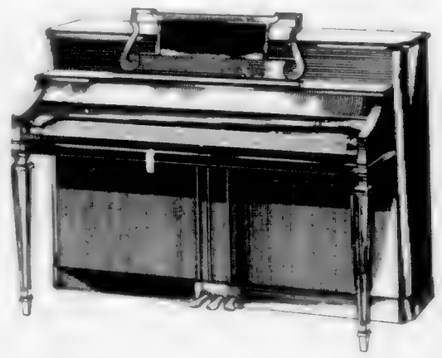
210,493
COMBINED PORTABLE RADIO AND PHONOGRAPH OR SIMILAR ARTICLE
Robert Hegon, 88 Hue de la Jarry, Vincennes 94, France
Filed Dec. 1, 1966, Ser. No. 4,926
Claims priority, application Switzerland June 1, 1966
Term of patent 14 years
(Cl. D56—4)



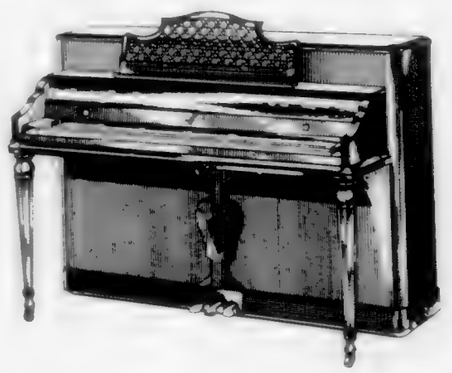
210,494
RECORD CHANGER OR SIMILAR ARTICLE
Ralph D. Davis, Stevensville, Mich., assignor to V-M Corporation, Benton Harbor, Mich., a corporation of Michigan
Filed Feb. 14, 1967, Ser. No. 5,805
Term of patent 14 years
(Cl. D56—4)



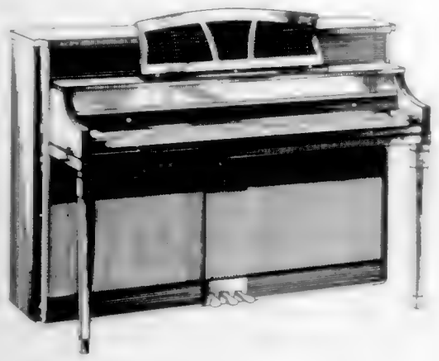
210,495
PIANO CASE
Winsor D. White, Jr., Blowing Rock, N.C., assignor to D. H. Baldwin Company, Cincinnati, Ohio, a corporation of Ohio
Filed Nov. 17, 1966, Ser. No. 4,714
Term of patent 14 years
(Cl. D56—9)



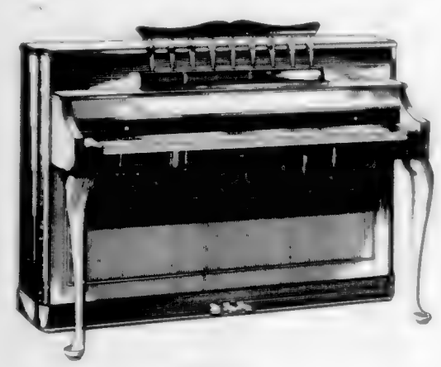
210,496
PIANO CASE
Winsor D. White, Jr., Blowing Rock, N.C., assignor to D. H. Baldwin Company, Cincinnati, Ohio, a corporation of Ohio
Filed Nov. 17, 1966, Ser. No. 4,715
Term of patent 14 years
(Cl. D56—9)



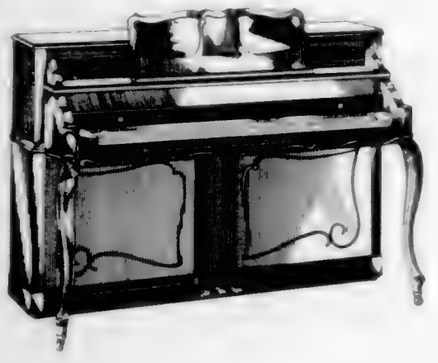
210,497
PIANO CASE
Winsor D. White, Jr., Blowing Rock, N.C., assignor to D. H. Baldwin Company, Cincinnati, Ohio, a corporation of Ohio
Filed Nov. 17, 1966, Ser. No. 4,721
Term of patent 14 years
(Cl. D56—9)



210,498
PIANO CASE
Winsor D. White, Jr., Blowing Rock, N.C., assignor to D. H. Baldwin Company, Cincinnati, Ohio, a corporation of Ohio
Filed Nov. 17, 1966, Ser. No. 4,722
Term of patent 14 years
(Cl. D56—9)



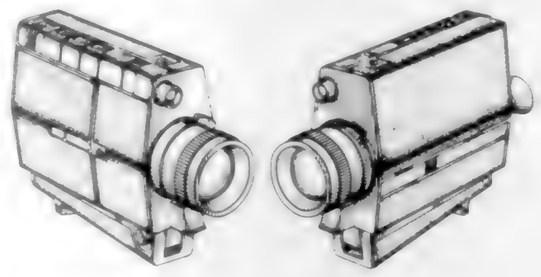
210,499
PIANO CASE
Winsor D. White, Jr., Blowing Rock, N.C., assignor to D. H. Baldwin Company, Cincinnati, Ohio, a corporation of Ohio
Filed Nov. 17, 1966, Ser. No. 4,723
Term of patent 14 years
(Cl. D56—9)



210,500
SPECTACLE FRAME FRONT
Jack Bloch, Leominster, and Vitalino Marchi, Concord, Mass., assignors to Foster Grant Co., Inc., Leominster, Mass., a corporation of Delaware
Filed Dec. 30, 1966, Ser. No. 5,232
Term of patent 14 years
(Cl. D57—1)

210,501
FLASK
Herbert Brammer, London, England, assignor to Charles Mackinlay & Company Limited, Edinburgh, Scotland
Filed Apr. 26, 1966, Ser. No. 2,023
Claims priority, application Great Britain Mar. 30, 1966
Term of patent 14 years
(Cl. D58—8)

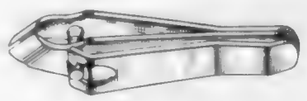
210,502
MOVIE CAMERA
Dale R. Caldwell, Chicago, Ill., assignor to Argus Incorporated, Chicago, Ill., a corporation of Illinois
Filed May 2, 1966, Ser. No. 2,083
Term of patent 14 years
(Cl. D61—1)



210,503
TYPEWRITER
Carl L. Otto, New York, N.Y., assignor to Litton Business Systems, Inc., a corporation of New York
Filed June 21, 1967, Ser. No. 7,547
Term of patent 14 years
(Cl. D64—11)

210,504
MANICURE IMPLEMENT
Donald R. Adams, P.O. Box 865, Felton, Calif. 95018
Filed July 19, 1966, Ser. No. 3,126
Term of patent 14 years
(Cl. D86—10)

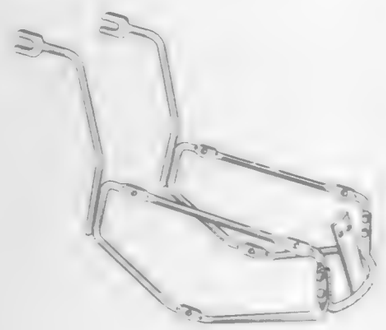
210,505
CUTICLE CLIPPER
Norbert Leopoldi, 4180 Marine Drive, Chicago, Ill. 60613
Filed Dec. 1, 1966, Ser. No. 4,887
Term of patent 3½ years
(Cl. D86—10)



210,506
HAIR DRYER
James Teague, Jr., Glenview, and Victor A. Petertil, Oak Park, Ill., assignors to Sunbeam Corporation, Chicago, Ill., a corporation of Illinois
Filed Feb. 20, 1967, Ser. No. 5,865
Term of patent 14 years
(Cl. D86—10)

210,507
CRUTCH
David Lockett, 574 Hyacinth Place, Highland Park, Ill. 60035
Filed Feb. 2, 1967, Ser. No. 5,662
Term of patent 14 years
(Cl. D88—5)

210,508
MOUNTING BRACKET FOR MOTORCYCLE SADDLEBAGS
Aleksis Lahti, Ann Arbor, and Stephen J. Molitoris, Dearborn, Mich., assignors to American Safety Equipment Corporation of Michigan, Southfield, Mich.
Filed Feb. 20, 1967, Ser. No. 3,887
Term of patent 14 years
(Cl. D90—3)



210,509
CARVING KNIFE
Donald A. Wallance, Croton-on-Hudson, N.Y., assignor to H. E. Lauffer Company, New York, N.Y., a corporation of New York
Filed Feb. 5, 1962, Ser. No. 68,659
Term of patent 14 years
(Cl. D95—3)

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 12TH DAY OF MARCH, 1968

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Air Products and Chemicals, Inc. : *See*—
Kurzinski, Edward F. Re. 26,364.
Allegheny Ludlum Steel Corp. : *See*—
Beattie, Clifford G., and Gumbert. Re. 26,365.
Beattie, Clifford G., and V. D. Gumbert, to Allegheny Ludlum Steel Corp. Control system for surface apparatus. Re. 26,365, 3–12–68, Cl. 51—34.
Fibreboard Corp. : *See*—
Gerton, Mark E. Re. 26,362.
Gerton, Mark E., to Fibreboard Corp. Catalyzed gypsum wallboard and method of production thereof. Re. 26,362, 3–12–68, Cl. 117—60.
Gumbert, Victor D. : *See*—
Beattie, Clifford G., and Gumbert. Re. 26,365.
Holzinger, Alfred S. : *See*—
Mooney, Charles W., and Holzinger. Re. 26,361.
Kurzinski, Edward F., to Air Products and Chemicals, Inc. Metallurgical melting and refining process. Re. 26,364, 3–12–68, Cl. 75—43.
Mills, William J., II. Fabric cover for boats. Re. 26,363, 3–12–68, Cl. 9—1.
Mooney, Charles W., and A. S. Holzinger, to Motorola, Inc. Electromechanical frequency responsive translating device. Re. 26,361, 3–12–68, Cl. 335—90.
Motorola, Inc. : *See*—
Money, Charles W., and Holzinger. Re. 26,361.

LIST OF PLANT PATENTEES

Arends, Lewis, to Hill Top Orchards and Nurseries, Inc. Apple tree. 2,800, 3–12–68, Cl. 34.
Flemer, William, III, to Treesearch. Crab apple tree. 2,801, 3–12–68, Cl. 34.
Hill Top Orchards and Nurseries, Inc. : *See*—
Arends, Lewis. 2,800.
Treesearch : *See*—
Flemer, William, III. 2,801.

LIST OF DESIGN PATENTEES

Abend, Chester J., T. E. Hanson, and P. D. Younge, to SCM Corp. Cash comtrol register. 210,489, 3–12–68, Cl. D52—4.
Ach, Rene. Toy construction figure. 210,471, 3–12–68, Cl. D34—15.
Adams, Donald R. Manicure implement. 210,504, 3–12–68, Cl. D86—10.
American Safety Equipment Corp. of Michigan. : *See*—
Lahti, Aleksis, and Molitoris. 210,508.
Andres Sancho, S.A. : *See*—
Cortina, Andres S. 210,444.
Argus Inc. : *See*—
Caldwell, Dale R. 210,502.
Balbach, Sara L., to Corning Glass Works. Plate or similar article. 210,481, 3–12–68, Cl. D44—15.
Baldwin, D. H., Co. : *See*—
White, Winsor D., Jr. 210,492.
White, Winsor D., Jr. 210,495.
White, Winsor D., Jr. 210,496.
White, Winsor D., Jr. 210,497.
White, Winsor D., Jr. 210,498.
White, Winsor D., Jr. 210,499.
Beinert, John D., to Spiegel Industries Corp. Chair. 210,452, 3–12–68, Cl. D15—1.
Beyer, Edward G., to Gamma Associates, Inc. Trivet. 210,477, 3–12–68, Cl. D44—10.
Bloch, Jack, and V. Marchi, to Foster Grant Co., Inc. Spectacle frame front. 210,500, 3–12–68, Cl. D57—1.
Block China Co. : *See*—
Gulotta, Gerald. 210,476.
Bolt Beranek and Newman, Inc. : *See*—
Gilbert, Ernest E., and Conners. 210,460.
Bourke, Robert E., to The Coca-Cola Co. Bottle. 210,445, 3–12–68, Cl. D9—136.
Bowes Donald R., to Johnson & Johnson. Container for needles or the like. 210,446, 3–12–68, Cl. D9—172.
Brammer, Herbert, to Charles Mackinlay & Co. Ltd. Flask. 210,501, 3–12–68, Cl. D58—8.
Brewer, Francis T., to Wilson Sporting Goods Co. Golf club grip. 210,468, 3–12–68, Cl. D34—5.
Burns, Lee V., D. A. Deane, and M. T. Leung, to Federal Sign and Signal Corp. Restaurant. 210,448, 3–12–68, Cl. D13—1.
Bus, Andre : *See*—
Thorn, John B., and Bus. 210,466.
Caldwell, Dale R., to Argus Inc. Movie camera. 210,502, 3–12–68, Cl. D61—1.
Christie, Theodore, and J. J. Kregzdys, to Precision Scientific Co. Titration instrument. 210,455, 3–12–68, Cl. D16—2.
Coca-Cola Co., The : *See*—
Bourke, Robert E. 210,445.
Coin Security Systems, Inc. : *See*—
Hutchins, Marlyn R. 210,488.
Conners, Patrick F. : *See*—
Gilbert, Ernest E., and Conners. 210,460.
Corning Glass Works : *See*—
Balbach, Sara L. 210,481.
Dole, Charles M., Jr. 210,490.
Gibson, Robert R. 210,480.
Mercadante, Ottorino N. 210,479.
Cortina, Andres S., to Andres Sancho, S.A. Bottle. 210,444, 3–12–68, Cl. D9—54.
Davis, Ralph D., to V-M Corp. Record changer or similar article. 210,494, 3–12–68, Cl. D56—4.
Deane, David A. : *See*—
Burns, Lee V., Deane, and Leung. 210,448.
Di Sesa, Frank J., Jr., to Sunbeam Corp. Mixer. 210,475, 3–12–68, Cl. D44—1.
Dole, Charles M., Jr., to Corning Glass Works. Meter or similar device. 210,490, 3–12–68, Cl. D52—6.
Du Pont de Nemours, E. I., and Co. : *See*—
Mease, Gary L. 210,456.
Mease, Gary L. 210,457.
Mease, Gary L. 210,458.
Mease, Gary L. 210,459.
Eide, Allen N. Combined desk, carom pool table and record player unit. 210,465, 3–12–68, Cl. D33—7.
Federal Sign and Signal Corp. : *See*—

Precision Scientific Co.: *See*—
Christie, Theodore, and Kregzdys. 210,455.
Procter & Gamble Co., The: *See*—
Vanderhyde, Harold J. 210,447.
Reavis, Robert P., to Fusion Rubermaid Corp. Litter receptacle. 210,487, 3–12–68, Cl. D49—34.
Rhude, Maurice J., to Koppers Co., Inc. Pole. 210,485, 3–12–68, Cl. D48—31.
Roberts, Jack C., and C. J. Smith. Wrist watch communication transmitter. 210,462, 3–12–68, Cl. D26—14.
SCM Corp.: *See*—
Abend, Chester J., Hanson, and Younge. 210,489.
Sander, Joseph K., to H. Robert Industries, Inc. Tray insert for a furniture drawer. 210,463, 43–12–68, Cl. D33—1.
Sejersen, Henrik B. Exercise bar. 210,469, 3–12–68, Cl. D34—5.
Shalvoy, John C., to General Electric Co. Electric iron or similar article. 210,486, 3–12–68, Cl. D49—6.
Smith, Charles J.: *See*—
Roberts, Jack C., and Smith. 210,462.
Spiegel Industries Corp.: *See*—
Beinert, John D. 210,452.
Sunbeam Corp.: *See*—
Di Sesa, Frank J., Jr. 210,475.
Hart, Richard S. 210,483.
Teague, James, Jr., and Petertil. 210,506.
Teague, James, Jr., and V. A. Petertil, to Sunbeam Corp. Hair dryer. 210,506, 3–12–68, Cl. D86—10.
Thompson, Hilder T. Vehicle body with rear wheel unit. 210,449, 3–12–68, Cl. D14—3.
Thorn, John B., and A. Bus, to The Lane Co. Inc. Pedestal table. 210,466, 3–12–68, Cl. D33—14.
Tomaluolo, Theodore J. Hand gripper for holding fish. 210,482, 3–12–68, Cl. D44—29.
V-M Corp.: *See*—
Davis, Ralph D. 210,494.
Vanderhyde, Harold J., to The Procter & Gamble Co. Cap for a jug or the like. 210,447, 3–12–68, Cl. D9—285.
Vogt, Richard L. Adjustable flower pot holder bracket or the like. 210,472, 3–12–68, Cl. D35—3.
Wallance, Donald A., to H. E. Lauffer Co. Carving knife. 210,509, 3–12–68, Cl. D95—3.
White, Winsor D., Jr., to D. H. Baldwin Co. Organ console. 210,492, 3–12–68, Cl. D56—2.
White, Winsor D., Jr., to D. H. Baldwin Co. Piano case. 210,495, 3–12–68, Cl. D56—9.
White, Winsor D., Jr., to D. H. Baldwin Co. Piano case. 210,496, 3–12–68, Cl. D56—9.
White, Winsor D., Jr., to D. H. Baldwin Co. Piano case. 210,497, 3–12–68, Cl. D56—9.
White, Winsor D., Jr., to D. H. Baldwin Co. Piano case. 210,498, 3–12–68, Cl. D56—9.
White, Winsor D., Jr., to D. H. Baldwin Co. Piano case. 210,499, 3–12–68, Cl. D56—9.
Wilson Sporting Goods Co.: *See*—
Brewer, Francis T. 210,468.
Younge, Paul D.: *See*—
Abend, Chester J., Hanson, and Younge. 210,489.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 12TH DAY OF MARCH, 1968

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

AB Akerlund & Rausing: *See*—
Bjorkengren, Carl-Axel, and Johansson. 3,372,859.
AMP Inc.: *See*—
Lovendusky, Charles M. 3,372,815.
Renshaw, Floyd H., Jr. 3,373,397.
Stine, Howard E., Jr. 3,372,454.
Vickery, John R., Jr. 3,372,475.
Volinskie, Robert. 3,373,398.
Wyrick, Charles T. 3,373,412.
Abbott, Charles N., to The Dayton Bright Copper Co. Electroplating of copper. 3,373,095, 3–12–68, Cl. 204—52.
Abbott Laboratories: *See*—
Storey, Robert H., Glenn, and O'Malley. 3,372,992.
Abbott, Richard L., to Commercial Solvents Corp. Esterogenic compounds and animal growth promoters. 3,373,037, 3–12–68, Cl. 99—2.
Abe, Hideki, to Victor Co. of Japan, Ltd. Device for opening or closing two doors simultaneously. 3,372,965, 3–12–68, Cl. 312—275.
Abildgaard, William H., to Becton, Dickinson of California, Inc. Self-packaged sterilized glove and method. 3,372,799, 3–12–68, Cl. 206—63.2.
Abrahamson, Clark A.: *See*—
Johnson, Edward P., and Abrahamson. 3,372,861.
Abrasive Developments Ltd.: *See*—
Ashworth, Norman I. 3,372,704.
Achenbach, Karl, to FMC Corp. Process for etching copper printed circuits. 3,373,113, 3–12–68, Cl. 252—79.2.
Adams, Clarence H. Hand held multi-channel magnetic tape eraser. 3,373,250, 3–12–68, Cl. 179—100.2.
Adams, Derek S.: *See*—
Phillips, Brain L., and Adams. 3,372,681.
Phillips, Brian L., and Adams. 3,372,682.
Phillips, Brian L., and Adams. 3,372,683.
Adams, Dolor N., and D. C. Thomas, to Harris-Intertype Corp. Presensitized positive working lithographic plate. 3,373 021, 3–12–68, Cl. 96—33.
Adams, William E., to H. H. Robertson Co. Side sealing members for operating louver assemblies. 3,372,514, 3–12–68, Cl. 49—91.
Addison Products Co.: *See*—
Dyas, Robert E., and Sharp. 3,372,557.
Adler, Robert, to Zenith Radio Corp. Laser beam-soundwave techniques using curved acoustic waves. 3,373,360, 3–12–68, Cl. 332—7.51.
Adomaitis, Domas: *See*—
Mesrobian, Robert B., Sellers, and Adomaitis. 3,373,224.
Advance Hydraulics, Inc.: *See*—
Amanti, Anthony E., and Krokenberger. 3,372,611.
Aerojet-General Corp.: *See*—
Harkee, James F., and Cooley. 3,373,088.
Lambert, Peter F. 3,373,295.
Linden, Gustave B., and Klager. 3,373,181.
Martin, Fred E. 3,373,056.
Af Segerstad, Carl G. H., to Transventor Aktiebolag. Machine intended for barking and pruning. 3,372,720, 3–12–68, Cl. 144—208.
Aftergut, Siegfried, to General Electric Co. Thermoplastic epoxy resin photoconductors. 3,373,140, 3–12–68, Cl. 260—47.
Aftergut, Siegfried, to General Electric Co. Photoconductive copolymers of styrene and acrolein derivatized with aryl amines. 3,373,141, 3–12–68, Cl. 260—52.
Aiken, William R., to Electronix Ten, Inc. Signalling device having vane rotated about axis by an electrostatic field. 3,373,422 3–12–68, Cl. 340—373.
Aitken, William H., to Remington Arms Co., Inc. Fuel tank venting system. 3,372,679, 3–12–68, Cl. 123—136.
Ajem Laboratories, Inc.: *See*—
Arnold, Orlan M. Koepke, Pashaian, Stewart, Umbrichi, and Laslo. 3,372,811.
Ajinomoto Co., Inc.: *See*—
Yoshimura, Kenkichi, Aoki, and Honda. 3,373,092.
Aker, Jimmie R.: *See*—
Cullen, Roy H., Elliott, and Aker. 3,372,762.
Aktiebolaget Astra: *See*—
Bamberg, Peter, Ekstrom, and Sjoberg. 3,373,156.
Aktiebolaget Astra, Apotekarnes Kemiska Fabriker: *See*—
Ekstrom, Bertil A., and Sjoberg. 3,373,155.
Albright, Jay D., and L. Goldman, to American Cyanamid Co. Novel 17 - [(methylthio)methoxy]yohimbanes. 3,373,166, 3–12–68, Cl. 260—287.
Alden, Milton. Adhesive electrolytic recording paper. 3,373,090, 3–12–68, Cl. 204—2.
Alexander, Roy P., and H. A. Schroeder, to Olin Mathieson Chemical Corp. Dimeric halophospha (III)-carboranes and their production. 3,373,193, 3–12–68, Cl. 260—543.
Alfa-Laval AB.: *See*—
Dahlgren, Jons A. 3,373,082.
Skoog, Malte A. 3,372,744.
All American Engineering Co.: *See*—
Russo, Albert, and Greeley. 3,372,773.
Allen-Bradley Co.: *See*—
Matthias, Lynn H., and Wilson. 3,373,257.
Allen, Paul M., R. H. Espy, and H. Tanczyn, to Armco Steel Corp. Stainless steel and product. 3,373,015, 3–12–68, Cl. 75—128.
Allied Chemical Corp.: *See*—
Degginger, Edward R. 3,373,225.
Fuhrmann, Robert, Lazar, and Van Peppen. 3,373,194.
Hardy, George F. 3,373,130.
Oxley, Joseph H., and Blocher. 3,373,018.
Wagner, John W. 3,373,145.
Wooster, George S. 3,373,128.
Allis-Chalmers Mfg. Co.: *See*—
McGrath, Laurence R., and Moore. 3,372,606.
Winter, Heinz W. 3,372,881.
Allport, Maurice J., to Joseph Lucas (Industries) Ltd. Electromagnetic horns. 3,373,258, 3–12–68, Cl. 200—166.
Altschuler, George. Safety vents for plastic covered glass aerosol containers. 3,372,827, 3–12–68, Cl. 215—12.
Amanti, Anthony E., and E. Krokenberger, to Advance Hydraulics, Inc. Torque wrenches and test stands. 3,372,611, 3–12–68, Cl. 81—60.
Amax Specialty Metals, Inc.: *See*—
Spink, Donald R., and Stephens. 3,373,017.
American Air Filter Co., Inc.: *See*—
Harms, John D. 3,372,529.
American Chain & Cable Co., Inc.: *See*—
Mesler, Lilburn L. 3,372,665.
American Cyanamid Co.: *See*—
Albright, Jay D., and Goldman. 3,373,166.
Bitha, Panayota, and Hlavka. 3,373,196.
Lanzilotti, Anthony E., and Goldman. 3,373,165.
Lucas, Howard R., and Di Leone. 3,373,171.
Martell, Michael J., Jr., and Ross. 3,373,197.
Martell, Michael J., Jr., and Ross. 3,373,198.
American Home Products Corp.: *See*—
Wendt, Gerhard R., and Ledig. 3,373,185.
Wolf, Milton. 3 373,184.
American Machine & Foundry Co.: *See*—
Cheng, Chin J. 3,372,463.
Conard, Arthur B., Jr. 3,372,703.
American Optical Co.: *See*—
Snitzer, Elias. 3,372,969.
Woodcock, Richard F. 3,373,006.
American Velcro, Inc.: *See*—
Rinecker, Franz G. 3,372,438.
Ametek, Inc.: *See*—
Brice, William A. 3,372,706.
Amphenol Corp.: *See*—
Holland, John W. 3,373 244.
Ammann, William L. Soil treating apparatus. 3,372,658, 3–12–68, Cl. 111—7.
Amori, Joseph A. Apparatus for drupe halving and pitting. 3,372,722 3–12–68, Cl. 146—28.
Anderson, Andrew W., to Scandia Packaging Machinery Co. Wrapping mechanism. 3,372,526, 3–12–68, Cl. 53—230.
Anderson Co., The: *See*—
Anderson, John W. 3,372,422.
Anderson, John W. 3,372,423.
Anderson, John W., to The Anderson Co. Windshield wiper blade and carriage assembly. 3,372,422, 3–12–68, Cl. 15—250.42.
Anderson, John W., to The Anderson Co. Windshield cleaner. 3,372,423, 3–12–68, Cl. 15—250.42.
Anderson, Robert G., and Y. G. Hendrickson, to Chevron Research Co. Tris (hydrocarbyl alkylene polyamines) as lubricating oil detergents. 3,373,112, 3–12–68, Cl. 252—51.5.
Anderson, Roger. Adjustably positioned support board for a surgical table. 3,372,921, 3–12–68, Cl. 269—328.
Anderson, Warren D. Navigational instrument. 3,373,429, 3–12–68, Cl. 343—115.
Andresen, Donald D. Overhead door hinged suspension. 3,372,515, 3–12–68, Cl. 49—205.
Angstadt, Richard L., and F. R. Hurley, to W. R. Grace & Co. Hardening accelerated Portland cement. 3,373,048, 3–12–68, Cl. 106—90.
Antipol Corp.: *See*—
Zimmer, Walter H. 3,372,530.
Aoki, Kiyoshi: *See*—
Yoshimura, Kenkichi, Aoki, and Honda. 3,373,092.
Aplett, William R.: *See*—
Kunsagi, Laszlo, Aplett, Berman, Heifetz, and Magol. 3,372,565.
Appel, David W., J. B. Graham, and C. L. Sanford, to Kimberly Clark Corp. Stock inlet for a papermaking machine. 3,373,080, 3–12–68, Cl. 162—343.
Apsco Products: *See*—
Humphrey, John H., Scheirer, and Cheslak. 3,372,787.
Aqua Stables, Inc.: *See*—
Lo Bue, Louis. 3,372,663.
Aristov, Pavel I.: *See*—
Ilin, Igor N., and Aristov. 3,372,437.
Armco Steel Corp.: *See*—
Allen, Paul M., Espy, and Tanczyn. 3,373,015.

Armour, Carl E., C. C. Morrison, P. E. Scott, L. A. Smith, and G. Weingarten, to United States of America, Navy. Frictional sensitivity testing apparatus. 3,372,574, 3–12–68, Cl. 73—35.

Armour and Co.: *See*—
Hammerberg, Edgar S., and Shapiro. 3,373,174.
Peterson, Harold F. 3,373,045.

Armstrong Cork Co.: *See*—
Jones, James R. 3,373,072.

Armstrong, John G., to International Standard Electric Corp. Magnetic field straightener. 3,373,389, 3–12–68, Cl. 335—211.

Armstrong, Robert G., to Continental Can Co., Inc. Compositions containing polyamides, polyolefins and carboxylated polyethylene. 3,373,222, 3–12–68, Cl. 260—857.

Armstrong, Robert G., to Continental Can Co., Inc. Compositions containing polyamides, polyolefins, and ethylene-acrylic or methacrylic acid copolymers. 3,373,223, 3–12–68, Cl. 260—857.

Arneson, Edwin L., to Federal Paper Board Co., Inc. Article carrier. 3,372,800, 3–12–68, Cl. 206—65.

Arneson, Howard M., to Arneson Products, Inc. Rotatable coupling. 3,372,948, 3–12–68, Cl. 285—98.

Arneson Products, Inc.: *See*—
Arneson, Howard M. 3,372,948.

Arnold, George B., R. Y. Heisler, H. E. Vermillion, and A. Arkell, to Texaco Inc. Method of operating a rocket engine using heat exchange with hydrocarbon fuels. 3,372,546, 3–12–68, Cl. 60—206.

Arnold, Orlan M., F. W. Koepke, Jr., S. Pashalan, J. M. Stewart, E. Umbrichi, and H. J. Laslo, to Ajem Laboratories, Inc. Rotating drum filter apparatus. 3,372,811. 3–12–68, Cl. 210—387.

Arsenault, Albert J. Fishing rod handling device. 3,372,509, 3–12–68, Cl. 43—21.2.

Arsenault, Albert J. Fishing rod handling device. 3,372,510, 3–12–68, Cl. 43—21.2.

Arsenault, James H., to J. S. Kamborian. Apparatus for lasting shoes. 3,372,414, 3–12–68, Cl. 12—8.2.

Ashton, Albert A., to The Youngstown Sheet and Tube Co. Bottom loading arm. 3,372,715, 3–12–68, Cl. 141—59.

Ashworth, Norman L., to Abrasive Developments Ltd. Degreasing. 3,372,704, 3–12–68, Cl. 134—109.

Bercaw, James W.: *See*—
Lykken, William H., and Bercaw. 3,372,805.

Beregi, Laszlo, P. Hugon, and J. C. Le Douarec, to Societe en nom Collectif dite: Science Union et cie. Societe Francaise de Recherche Medicale. Piperazine derivatives. 3,373,161, 3–12–68, Cl. 260—268.

Bereziat, Andre: *See*—
Podesta, Armando, Vignati, and Bereziat. 3,372,527.

Berger, Hans, to Zentra Albert Burkle Kommanditgesellschaft. Time switching device for controlling a heating system. 3,373,254, 3–12–68, Cl. 200—38.

Bergman, Leo M.: *See*—
Eastman, Watson S., and Bergman. 3,373,079.

Berkeley Instruments: *See*—
Fenner, Ralph L. 3,373,270.

Berkus, Clyde C. Pouring spout. 3,372,846, 3–12–68, Cl. 222—479.

Berman, Irwin: *See*—
Kunsagi, Laszlo, Aplett, Berman, Heifetz, and Magol. 3,372,565.

Berni, Ralph J., R. R. Benerito, and J. B. McKelvey, to United States of America, Agriculture. Process of creaseproofing cellulosic textiles with a single aqueous solution containing both d,l-butadiene dioxide and Lewis base catalyst. 3,372,977, 3–12–68, Cl. 8—120.

Bernstein, Jack: *See*—
Pribyl, Edward J., and Bernstein. 3,373,195.

Bestland, Ardell T., and T. M. Breton. Excessive crankcase pressure warning system and relief valve. 3,372,685, 3–12–68, Cl. 123—198.

Bethlehem Steel Corp.: *See*—
Schmidt, Merle H. 3,372,714.

Bieber, Herman, G. Chludzinski, and L. Spenadel, to Esso Research and Engineering Co. Controlled burning of potent solid oxidizer. 3,373,063, 3–12–68, Cl. 149—7.

Bieze, Jakob J.: *See*—
Smulders, August H. M., Bieze, Hage, and Splinter. 3,372,907.

Birch, Lawrence, to Avalon Mfg. Corp. Antiqued painting on wood and by-the-number system of making the same. 3,372,493, 3–12–68, Cl. 35—26.

Birdwell, Jess H. Apparatus for preventing discharge of contaminants from the engine of an automotive vehicle. 3,372,540, 3–12–68, Cl. 60—30.

Birman, Paul, to Forbro Design Corp. Generating alternating current by reversing a direct current source. 3,373,339, 3–12–68, Cl. 321—49.

Birnbaum, Morris M., L. J. Ridenour, and P. M. Salomon, to General Precision Systems, Inc. Apparatus for plotting contour maps automatically employing a cathode ray tube. 3,372,615, 3–12–68, Cl. 88—14.

Bischaff, Gottfried, KG, Bau Kompletter Gasreinigungs- und Wasserruckkuhlanlagen. Firma: *See*—
Hoff, Hans. 3,372,528.

Bitha, Panayota, and J. J. Hlavka, to American Cyanamid Co. 7- and/or 9-(lower alkyl)amino-5a,6-anhydrotetracyclines. 3,373,196, 3–12–68, Cl. 260—559.

Bither, Tom A., Jr., to E. I. du Pont de Nemours and Co. Ternary copper, zinc, cadmium and manganese dichalcogenides having the pyrite-type crystal structure. 3,372,997, 3–12–68, Cl. 23—315.

Bixby, William E., to Bell & Howell Co. Method and apparatus for producing images. 3,373,019, 3–12–68, Cl. 96—1.

Bjorkengren, Carl-Axel, and F. W. Johansson, to AB Akerlund & Rausing. Package with a corner seal. 3,372,859, 3–12–68, Cl. 229—62.

Blachly, Charles H.: *See*—
Ravner, Harold, and Blachly. 3,372,981.

Black and Decker Mfg. Co., The: *See*—
Black, Elliott M. 3,373,301.

Black, Elliott M., to The Black and Decker Mfg. Co. System for radio-frequency interference suppression. 3,373,301, 3–12–68, Cl. 310—72.

Black, Paul W., to Motorola, Inc. Crystal oscillator with temperature compensation. 3,373,379, 3–12–68, Cl. 331—116.

Black, Robert L., Jr., to Parks-Cramer Co. Apparatus for cleaning floors and disposing of fiber waste in textile mills. 3,372,425, 3–12–68, Cl. 15—312.

Black, Roe R., to York Mfg. Co. Automatic feeder for pneumatic conveying lines. 3,372,958. 3–12–68, Cl. 302—53.

Blaisdell, Leonard L., to Sylvania Electric Products Inc. Dual linear/circular polarization spiral antenna. 3,373,433, 3–12–68, Cl. 343—850.

Bloch, Moshe R., to Dead Sea Works Ltd. Primary cell comprising an aqueous solution containing halogen and a metal halide. 3,373,058, 3–12–68, Cl. 136—83.

Blocher, John M., Jr.: *See*—
Oxley, Joseph H., and Blocher. 3,373,018.

Bloom, Carl, to Worthington Corp. Enclosed motor driven compressor unit. 3,372,863, 3–12–68, Cl. 230—117.

Bloom, Jack, and L. W. Brown, to Continental Coffee Co. Method of preparing brewed coffee. 3,373,041, 3–12–68, Cl. 99—68.

Blumenthal, Jack H., to International Flavors & Fragrances, Inc. Gedrol ethers. 3,373,208, 3–12–68, Cl. 260—611.

Bodanszky, Miklos, M. A. Ondetti, and J. T. Sheehan, to E. R. Squibb & Sons. Patricin A and B and related compounds. 3,373,151, 3–12–68, Cl. 260—112.5.

Bodhaine, James A. Ball sealer injector. 3,372,705, 3–12–68, Cl. 137—268.

Boeckler, Walter H., G. S. Layne, and J. O. Huml, to The Dow Chemical Co. Method of operating an electric arc furnace. 3,373,240, 3–12–68, Cl. 13—34.

Boeing Co., The: *See*—
Baker, Edward S. 3,373,290.
Ford, Robert J. 3,372,435.

Bogard, James R., R. A. Gaskill, and G. L. Harmon, to Martin-Marietta Corp. Data processor for circular scanning tracking system. 3,372,890, 3–12–68, Cl. 244—3.17.

Böhm, Peter, and K. Maas, to Siemens Aktiengesellschaft. Ball generator magnetic structure. 3,373,391, 3–12–68, Cl. 338—32.

Bohn, Horst, and K.-H. Schluter, to Hauni-Werke Korber & Co. K.G. Method and apparatus for making and manipulating cigarettes and similar rod shaped articles. 3,372,702, 3–12–68, Cl. 131—94.

Bolstad, Richard, M. J. Tinghitella, and R. J. Schefbauer, to Interchemical Corp. Epoxy resin compositions and novel inks containing the same. 3,373,131, 3–12–68, Cl. 260—31.8.

Bono, Luigi, to Necchi Societa per Azioni. Device for basting applied to sewing machines of the zigzag type. 3,372,660, 3–12–68, Cl. 112—153.

Boothroyd, Geoffrey: *See*—
Redford, Alan H., and Boothroyd. 3,372,793.

Manor, Paul A., Kania, and Generke. 3,372,901.

Gensheimer, David E. : *See*—
Watts, Rhea N., Gensheimer, and Mertzweiller. 3,373,211.

Georgian, Vlasios and K. G. Holden, to Smith, Kline & French Laboratories. 6,6-ethylene-19-nortesterones. 3,373,157, 3–12–68, Cl. 260—239.55.

Gerber Products Co. : *See*—
Callahan, Richard L. 3,372,824.

Gervais, Edward F., to J. M. Hare, Secretary of State, State of Michigan. Illuminated vehicle traffic control signal. 3,373,402, 3–12–68, Cl. 340—107.

Gesellschaft fur Linde's Eismaschinen Aktiengesellschaft : *See*—
Becker, Rudolf. 3,372,555.

Getchell, Nelson F., to Cotton Producers Institute. Garments and method for altering hems and cuffs. 3,372,403, 3–12–68, Cl. 2—269.

Getchell, Nelson F., and W. R. Thomas, III, to Cotton Producers Institute. Durable press garments and method for altering seams. 3,372,404, 3–12–68, Cl. 2—275.

Geurst, Jan A., and G. L. Walther, to North American Philips Co., Inc. Multirole magnetic head assembly. 3,373,416, 3–12–68, Cl. 340—174.1.

Gewerkschaft Eisenhutte Westfalia : *See*—
Lobbe, Armin. 3,372,792.

Gewirtz, Stanley J., to Solid State Systems, Inc. Wide band transistor isolation amplifier. 3,373,368, 3–12–68, Cl. 330—22.

Ghaem-Maghami, Sanjar, and J. Kemeny, to General Electric Co. Multiple position switch having multiple sets of contacts and cams. 3,373,252, 3–12–68, Cl. 200—6.

Gianetti, Zeffro V., to Thomson National Press Co., Inc. Delivery mechanism. 3,372,637, 3–12–68, Cl. 100—218.

Gibson, Christian D., and R. R. Clark, to The Raymond Corp. Lift truck mast tilting arrangement. 3,372,823, 3–12–68, Cl. 214—674.

Gilbert, Brian, to Joseph Lucas (Industries) Ltd. Spark ignition systems. 3,372,684, 3–12–68, Cl. 123—148.

Gilbert, Jack J., to B. Frank. Pressing irons. 3,372,499, 3–12–68, Cl. 38—77.

Gilker, Clyde, to McGraw-Edison Co. Repeating circuit interrupter with improved step advance control means. 3,373,317, 3–12–68, Cl. 317—22.

Gillespie, Warren, Jr., to United States of America, National Aeronautics and Space Administration. Method of making an inflatable panel. 3,373,069, 3–12–68, Cl. 156—285.

Gilreath, Melvin C. : *See*—
Croswell, William F., and Gilreath. 3,373,430.

Gingras, Marcel, to Dominion Corset Co. Ltd. Brassiere. 3,372,698. 3–12–68, Cl. 128—489.

Girling Ltd. : *See*—
Avner, David A., and Wilkins. 3,372,776.
Beller, Hans A., and Rath. 3,372,775.
Hambling, Stewart K. 3,372,778.

Giuffrida, Laura E., to United States of America, Health, Education, and Welfare and Department of Agriculture. Flame ionization detector. 3,372,994, 3–12–68, Cl. 23—254.

Giurlando, Richard A., to Xerox Corp. Correspondence piece. 3,372,860, 3–12–68, Cl. 229—68.

Glass, John A., and W. H. Urry, to Monsanto Co. Purification process. 3,373,180, 3–12–68, Cl. 260—450.

Glazer, Emmett J., and E. S. Smith, to The Goodyear Tire & Rubber Co. Polyvinyl chloride resins having improved fusing properties. 3,373,228, 3–12–68, Cl. 260—884.

Gleasman, Hollis K., to The Bendix Corp. Three-speed hub gearing for velocipedes. 3,372,608, 3–12–68, Cl. 74—750.

Glenn, Howard J. : *See*—
Storey, Robert H., Glenn, and O'Malley. 3,372,992.

Globe-Wernicke Co., The : *See*—
Eversman, Carl A. 3,372,964.

Hodge, Edward B., Hidy, and Wehrmeister. 3,373,036.
Hodge, Edward B., Hidy, and Wehrmeister. 3,373,038.
Hodge, Edward B., Hidy. and Wehrmeister. 3,373,039.

High, Jack G., to MSL Industries. Plastic cellular lens louver having air distribution slots. 3,373,275, 3–12–68, Cl. 240—78.

High Polymer Chemical Industries, Ltd. : *See*—
Ishimatsu, Heihachi. 3,372,442.

High Standard Mfg. Corp., The : *See*—
Wilhelm, Gary. 3,372,506.

Hilbert Richard G. : *See*—
Macdonald, Warren E., and Hilbert. 3,372,848.

Hill, James C. : *See*—
Engelbrecht, Robert M., Moore, and Hill. 3,373,217.

Hiller, Melvin L. : *See*—
Dorr, John A., and Hiller. 3,373,399.

Hilliard, Alfred. to Societe des Poudres Metalliques et des Alliages Speciaux Ugine-Carbone. Vaporization of metals and metalloids. 3,373,260, 3–12–68, Cl. 219—275.

Hillman, Gary, and A. Davis, to Mitronics Inc. Semiconductor envelope. 3,373,322, 3–12–68, Cl. 317—234.

Hillman, James G. E.: *See*—
Pembroke, George F., Hillman, and New. 3,372,790.
Hindin, Herbert B., to Uniroyal, Inc. Method and intermediate article of manufacture for making radial tires. 3,373,006, 3–12–68, Cl. 156—128.
Hindman, Robert G., and W. J. Ruez III, to Esso Production Research Co. Flare for use in a body of water. 3,372,410, 3–12–68, Cl. 9—8.3.
Hipelius, John W., and G. B. Shields, to Bell & Howell Co. Tape driving assembly having shiftable pinch roller. 3,372,850, 3–12–68, Cl. 226—180.
Hirano, Kenmei: *See*—
Ishihara, Takehiko, Hirano, and Soga. 3,372,998.
Hirsl, Jindrich: *See*—
Maurer, Karel, Hirsl, Benda, and Sternküker. 3,372,445.
Hlavka, Joseph J.: *See*—
Bitha, Panayota, and Hlavka. 3,373,196.
Hoag, Yates M., to General Electric Co. Tape recorder head-pad mechanism. 3,372,938, 3–12–68, Cl. 274—11.
Hobel, Daniel, and M. Sieven, to Whittaker Corp. Digital output transducer. 3,372,579, 3–12–68, Cl. 73—141.
Hobo, Nobuhito, to Nippon Denso Kabushiki Kaisha. Induction-motor type transistor motor. 3,373,328, 3–12–68, Cl. 318—138.
Hochberg, David L., to Pitney-Bowes, Inc. Jet printer. 3,373,438, 3–12–68, Cl. 346—75.
Hodge, Edward B., P. H. Hidy, and H. L. Wehrmeister, to Commercial Solvents Corp. Estrogenic compounds and animal growth promoters. 3,373,024, 3–12–68, Cl. 99—2.
Hodge, Edward B., P. H. Hidy, and H. L. Wehrmeister, to Commercial Solvents Corp. Estrogenic compounds and animal growth promoters. 3,373,025, 3–12–68, Cl. 99—2.
Hodge, Edward B., P. H. Hidy, and H. L. Wehrmeister, to Commercial Solvents Corp. Estrogenic compounds and animal growth promoters. 3,373,026, 3–12–68, Cl. 99—2.
Hodge, Edward B., P. H. Hidy, and H. L. Wehrmeister, to Commercial Solvents Corp. Estrogenic compounds and animal growth promoters. 3,373,027, 3–12–68, Cl. 99—2.
Hodge, Edward B., P. H. Hidy, and H. L. Wehrmeister, to Commercial Solvents Corp. Estrogenic compounds and animal growth promoters. 3,373,028, 3–12–68, Cl. 99—2.
Hodge, Edward B., P. H. Hidy, and H. L. Wehrmeister, to Commercial Solvents Corp. Estrogenic compounds and animal growth promoters. 3,373,029, 3–12–68, Cl. 99—2.
Hodge, Edward B., P. H. Hidy, and H. L. Wehrmeister, to Commercial Solvents Corp. Estrogenic compounds and animal growth promoters. 3,373,030, 3–12–68, Cl. 99—2.
Hodge, Edward B., P. H. Hidy, and H. L. Wehrmeister, to Commercial Solvents Corp. Estrogenic compounds and animal growth promoters. 3,373,033, 3–12–68, Cl. 99—2.
Hodge, Edward B., P. H. Hidy, and H. L. Wehrmeister, to Commercial Solvents Corp. Estrogenic compounds and animal growth promoters. 3,373,034, 3–12–68, Cl. 99—2.
Hodge, Edward B., P. H. Hidy, and H. L. Wehrmeister, to Commercial Solvents Corp. Estrogenic compounds and animal growth promoters. 3,373,036, 3–12–68, Cl. 99—2.
Hodge, Edward B., P. H. Hidy, and H. L. Wehrmeister, to Commercial Solvents Corp. Estrogenic compounds and animal growth promoters. 3,373,038, 3–12–68, Cl. 99—2.
Hodge, Edward B., P. H. Hidy, and H. L. Wehrmeister, to Commercial Solvents Corp. Estrogenic compounds and animal growth promoters. 3,373,039, 3–12–68, Cl. 99—2.
Hoe, R., & Co., Inc.: *See*—
McDonald, John J. 3,372,886.
Hoenig, Mitchell O., to National Research Corp. Vacuum device. 3,372,531, 3–12–68, Cl. 55—269.
Hoff, Hans, to Firma Gottfried Bischaff KG. Bau Kompletter Gasreinigungs- und Wasserruckkuhlanlagen. Method of and apparatus for the removal of dust from converter and other exhaust gases. 3,372,528, 3–12–68, Cl. 55—106.
Hoffmann-La Roche Inc.: *See*—
Cohen, Aaron, Heath, and Cattanach. 3,373,153.
Cohen, Aaron, Heath, and Smithen. 3,373,154.
Hofstadter, Robert, to Kewanee Oil Co. Europium activated strontium iodide scintillators. 3,373,279, 3–12–68, Cl. 250—71.5.
Holden, Kenneth G.: *See*—
Georgian, Vlasios, and Holden. 3,373,157.
Holland, John W., to Amphenol Corp. Co-axial cable and method of making it. 3,373,244, 3–12–68, Cl. 174—102.
Holley Carburetor Co.: *See*—
Benmore, Stanley H. 3,372,912.

Hodge, Edward B., Hidy, and Wehrmeister. 3,373,024–3,373,030.
Wehrmeister, Herbert L.: *See*—
Hodge, Edward B., Hidy, and Wehrmeister. 3,373,033.
Wehrmeister, Herbert L.: *See*—
Hodge, Edward B., Hidy, and Wehrmeister. 3,373,034.
Wehrmeister, Herbert L.: *See*—
Hodge, Edward B., Hidy, and Wehrmeister. 3,373,036.
Hodge, Edward B., Hidy, and Wehrmeister. 3,373,038.
Hodge, Edward B., Hidy, and Wehrmeister. 3,373,039.
Weinert, Harry F., to Cascade Corp. Load handling apparatus with vacuum attaching means. 3,372,822, 3–12–68, Cl. 214—650.
Weinschel, Bruno O.: *See*—
Sorger, Gunther U., and Weinschel. 3,373,354.
Weinschel Engineering Co., Inc.: *See*—
Sorger, Gunther U., and Weinschel. 3,373,354.
Weinstein, Arthur H.: *See*—
Meyer, Glen E., Weinstein, Costanza, and Coleman. 3,373,146.
Weiss, Joseph, and J. G. Macco. Cable tension indicator. 3,372,582, 3–12–68, Cl. 73—144.
Weiss, Leonard, and T. B. Meyerstein. Vortex producing apparatus. 3,372,873, 3–12–68, Cl. 239—99.
Well, Allen L.: *See*—
Barischoff, Erwin E. 3,373,425.
Wellford, Armistead L.: *See*—
Corey, Philip D., and Wellford. 3,373,338.
Wendt, Gerhard R., and K. W. Ledig, to American Home Products Corp. 3,3′,3″-Nitrilotris (1,2-propanediol), hexanitrate and method for preparing same. 3,373,185, 3–12–68, Cl. 260—467.
Westerhof, Pieter: *See*—
Reerink, Engbert H., Westerhof, and Scholer. 3,373,172.
Westinghouse Electric Corp.: *See*—
Chu, Ting L. 3,372,671.
Chu, Ting L., and John. 3,373,051.
Dorr, John A., and Hiller. 3,373,399.
Evans, George S. 3,373,303.
Filipak, Edmund H. 3,373,261.
Grimes, Willard M., Jr. 3,372,968.
Guard, Gilbert M. 3,372,558.
Kastovich, John C., and Meess. 3,372,739.
Kastovich, John C., and Meess. 3,372,740.
McCleerey, Earl W. 3,372,498.
Neulinger, Karl H., and Yatcko. 3,373,311.
Price, David B. 3,372,473.
Primes, Frank J., and Pledger. 3,373,313.
Sienkiewicz, Leon J., and Goldstein. 3,372,669.
Sun, Kuan-Han, Chen-Tsai, and Shan. 3,373,116.
Tarneja, Krishan S., and Shaikh. 3,373,321.
Weyerhaeuser Co.: *See*—
James, Howard E., and Schikofsky. 3,372,721.
Wheelabrator Corp., The: *See*—
Hysinger, David M., and Lindahl. 3,372,534.
Wheeler, Stephen W., to Republic Steel Corp. Apparatus for maintaining pressure tight seal on blast furnace bells. 3,372,918, 3–12–68, Cl. 266—27.
White K. M., Co.: *See*—
Reed, Buckley R. 3,373,256.
Whitfield, Robert E., A. G. Pittman, and W. L. Wasley, to United States of America, Agriculture. Fibrous material carrying a deposit of a cross-linked polymer. 3,372,978, 3–12–68, Cl. 8—127.6.
Whittaker Corp.: *See*—
Gosnell, Rex B. 3,373,076.
Hobel, Daniel, and Sleven. 3,372,579.
Wicker, Thomas H., Jr., to Eastman Kodak Co. 3,5-Dioxabicyclo (5.4.0) undecane and copolymers thereof. 3,373,136, 3–12–68 Cl. 260—45.9.
Wilder, Lawrence B.: *See*—
Vincent, Renic P., and Wilder. 3,372,464.
Wilhelm, Gary, to The High Standard Mfg. Corp. Magazine catch for firearms. 3,372,506, 3–12–68, Cl. 42—7.
Wilkins, Douglas B.: *See*—
Avner, David A., and Wilkins. 3,372,776.
Willi, Richard B., to Baldwin-Lima-Hamilton, Corp. Power-accumulation system. 3,372,645, 3–12–68, Cl. 103—87.
Williams, James A., and R. H. Balch, to Celanese Corp. of America. Process and apparatus for needle felting nonwoven fabrics. 3,372,447. 3–12–68, Cl. 28—4.
Williams, Robert H. Cardinal bird feeder. 3,372,676, 3–12–68, Cl. 119—52.

Williams, Robert W. Baking apparatus. 3,372,655, 3–12–68, Cl. 107—57.

Williams, Sherrod A., to Mobil Oil Corp. Waterflood process employing thickened water. 3,372,749, 3–12–68, Cl. 166—9.

Williams, Sydney L. : *See*—
Wands, Howard G., and Williams. 3,372,851.

Wilson, Curtis L. Automatic coaxial switch. 3,373,360, 3–12–68, Cl. 325—22.

Wilson, Hugo S., to United States Steel Corp. Method and apparatus for quenching coke. 3,373,086, 3–12–68, Cl. 201—39.

Wilson, Roy E. : *See*—
Matthias, Lynn H., and Wilson. 3,373,257.

Wind, Harold D., to Lescoa, Inc. Connecting apparatus. 3,372,950, 3–12–68, Cl. 287—53.

Winegard Co. : *See*—
Winegard, John R. 3,373,361.

Winegard, John R., to Winegard Co. Antenna coupler system providing isolation between antennas. 3,373,361, 3–12–68, Cl. 325—367.

Wingne, Gosta E. Method for drilling holes in articles, especially in books, and apparatus for utilizing the method. 3,372,609, 3–12–68, Cl. 77—5.

Winkle, Oliver D. Traffic light indicator. 3,372,970, 3–12–68, Cl. 350—100.

Winter, Heinz W., to Allis-Chalmers Mfg. Co. Spiderless gyratory crusher with relief valve system. 3,372,881, 3–12–68, Cl. 241—208.

Winter, Joseph : *See*—
Pryor, Michael J., and Winter. 3,372,468.

Wise, Boyd A., and L. M. Ogden, to General Dynamics Corp. Sonic method of producing particles from a liquid. 3,373,232, 3–12–68, Cl. 264—9.

Wise, David V. : *See*—
Philpot, David J., and Wise. 3,373 229.

Witco Chemical Co., Inc. : *See*—
Foley, John T., and Barker. 3,373,173.

Wochnowski, Waldemar : *See*—
Koch, Hans, and Wochnowski. 3,372,488.

Wolf, Milton, to American Home Products Corp. Sulfamide derivatives. 3,373,184, 3–12–68, Cl. 260—465.4.

Wolfrum, Gunther C. M. E., J. J. Rongen, A. M. R. Van Iersel, and P. M. A. W. Moors, to North American Philips Co., Inc. Planar semiconductor device with an incorporated shield member reducing feedback capacitance. 3,373,323, 3–12–68, Cl. 317—235.

Wood, Anthony A. R. : *See*—
Cocks, Alan C., and Wood. 3,372,732.

Woodcock, Richard F., to American Optical Co. Apparatus for making fiber optical image transfer devices. 3,373,006, 3–12–68, Cl. 65—1.

Woodle, Robert A., E. H. Holst, and R. S. Edwards, to Texaco Inc. Method of preparing overbased calcium sulfonate oil concentrates. 3,373,108, 3–12–68, Cl. 252—33.

Woodward, Ellis M. Adjustable golf glove. 3,372,401, 3–12–68, Cl. 2—159.

Woodworth, William H. : *See*—
Brugler, Joseph S., and Woodworth. 3,373,363.

Wooster, George S., to Allied Chemical Corp. Stable gelled dispersions of hydroxyl terminated urethane polymers. 3,373.128, 3–12–68, Cl. 260—29.1.

Worcester, John L., to E-H Research Laboratories, Inc. Cathode ray tube selective deflection amplifier using a quadrupole lens of critical length. 3,373,310, 3–12–68, Cl. 315—18.

Worcester Moulded Plastics Co. : *See*—
Logan, Frank G. II, and Thatcher. 3,372,795.

Workings, John : *See*—
Cannon, John W., and Workings. 3,373,406.

Worrell, Guy C. Machine tool. 3,372,450, 3–12–68, Cl. 29—43.

Worthington Corp. : *See*—
Bloom, Carl. 3,372,803.

Wraith, William, III : *See*—
Motte, Rene P., Wraith, and Cucchi. 3,372,869.

Wresch, Richard C. Bucking cycle. 3,372,768, 3–12–68, Cl. 180—34.

Wright, Alan J. : *See*—
Yungblut, Charles W., Wright, and Peart. 3,373,396.

Wright, Archibald N., and W. F. Mathewson, Jr., to General Electric Co. Photopolymerization means in a vapor deposition coating apparatus. 3,372,672, 3–12–68, Cl. 118—49.5.

Wright, Glenn C. : *See*—
Campbell, Albert S., and Wright. 3,372,572.

Wright, John S. Holder and registration device for transparencies for overhead projection. 3,372,505, 3–12–68, Cl. 40—158.

Wudke, Donald J. : *See*—
Muhlbeier, Arthur J., and Wudtke. 3,372,814.

Wuerker, Ralph F. : *See*—
Clark, George L., and Wuerker. 3,373,376.

Wulff, Helmut : *See*—
Janssen, Harald, and Wulff. 3,373,144.

Wyeth, Nathaniel C. : *See*—
Powers, William J., Jr., Wyeth. 3,373,238.

Wyrick, Charles T., to AMP Inc. Multiaperture magnetic core device having a dynamic readout. 3,373,412, 3–12–68, Cl. 340—174.

Wysong, Charles F. : *See*—
Cooper, Densil M., Wysong, and Chappelle. 3,373,263.

Xerox Corp. : *See*—
Giurlando, Richard A. 3,372,860.
Murray, Thomas C., and Roberts. 3,372,627.
Townsend, Stephen E. 3,373,377.

Yamada, Hiroshi : *See*—
Yasui, Eizo, Shoda, Suzuki, and Yamada. 3,373,134.

Yasui, Eizo, S. Shoda, H. Suzuki, and H. Yamada, to Toa Gosei Kagaku Kogyo Kabushiki Kaisha. Compositions of calcium carbonate, process for the production and uses of the same. 3,373,134, 3–12–68, Cl. 260—41.5.

Yatcko, Paul J. : *See*—
Neullnger, Karl H., and Yatcko. 3,373,311.

Yates, Lowell D., to United States of America, Army. Silicon controlled rectifier lock-up proof flip-flop. 3,373,297, 3–12–68, Cl. 307—252.

Yeater, Thomas, and D. J. Smith. Removable cover for containers. 3 372,832, 3–12–68, Cl. 220—29.

Yell, Roy E. : *See*—
Dreitzler, David R., and Yell. 3,372,571.

York Mfg. Co. : *See*—
Black, Roa R. 3,372,958.

Yoshimura, Kenkichi, K. Aoki, and S. Honda, to Ajinomoto Co., Inc. Electrodeposition of platinum group metals on titanium. 3,373,092, 3–12–68, Cl. 204—32.

Young, Donald C., to Union Oil Co. of California. Preparation of metal chelates of β-iminocarbonyls. 3,373,177, 3–12–68, Cl. 260—429.

Young, John A., Jr. : *See*—
Erhart, Andrew P., and Young. 3,372,856.

Youngstown Sheet and Tube Co., The : *See*—
Ashton, Albert A. 3,372.715.
Cullen, Roy H., Elliott, and Aker. 3,372,762.

Yungblut, Charles W., A. J. Wright, and L. T. Peart, to Beckman Instruments, Inc. Variable resistance device. 3,373 396, 3–12–68, Cl. 338—183.

Zadig, Ernest A. Laser speed detector. 3,373,441, 3–12–68, Cl. 346—107.

Zalm, Pieter, J. W. C. Sprengers, A. J. A. Van Stratum, and P. C. van der Linden, to North American Philips Co., Inc. Dispenser cathode. 3,373 307, 3–12–68, Cl. 313—346.

Zeiss Ikon Aktiengesellschaft : *See*—
Thiele, Heinz, and Borner. 3,372,789.

Zenith Radio Corp. : *See*—
Adler, Robert. 3,373,380.
Kessler, Seymour. 3,373,385.

Zentra Albert Burkle Kommanditgesellschaft : *See*—
Berger, Hans. 3,373,254.

Zerger, Rex S. : *See*—
Ziemke, Myron C., and Zerger. 3,372,588.

Ziemke, Myron C., and R. S. Zerger, to United States of America, National Aeronautics and Space Administration. Constant temperature heat sink for calorimeters. 3,372,588, 3–12–68, Cl. 73—190.

Zimmer, Walter H., to Antipol Corp. Air cleaner. 3,372,580, 3–12–68, Cl. 55—257.

Zurcher, Erwin : *See*—
Pouli, Maurice, and Zurcher. 3,372,537.

CLASSIFICATION OF PATENTS

ISSUED MARCH 12, 1968

NOTE.—First number, class; second number, subclass; third number, patent number

2–159	3,372,401	29–429	3,372,461	61–24	3,372,549	92–84	3,372,624	118–637	3,372,675	165–80	3,372,741
232	3,372,402	447	3,372,462	36	3,372,550	93–35	3,372,625	119–52	3,372,676	96	3,372,742
269	3,372,403	470.3	3,372,463	45	3,372,551	94–40	3,372,626	122–7	3,372,677	166	3,372,743
275	3,372,404	473.1	3,372,464	54	3,372,552	95–1.7	3,372,627	235	3,372,678	167	3,372,744
5–81	3,372,405	474.1	3,372,465	85	3,372,553	44	3,372,628	123–136	3,372,679	166–.5	3,372,745

No. 643,807**, same, Preparations for wax coating agricultural produce; **Reg. No. 646,281**, same, Laundry wax-starch; **Reg. No. 647,635**, same, Laundry and dry cleaning preparation for making fabrics water repellent and stain resistant; **Reg. No. 649,929**, same, Polishes, dressings, and cleaners for shoes; **Reg. No. 690,513**, same, Metal working preparations for use as lubricants and/or coolants; **Reg. No. 706,466** (JOHNSON'S SHINE-UP), same, Preparation for cleaning and waxing; **Reg. No. 717,618** (JOHNSON'S), same, Phenol derivatives and synthetic resinous compositions, both kinds of products being for general use in the industrial arts; **Reg. No. 718,418**, same, Preparations in paste and liquid form for polishing, protecting, and adding color to leather surfaces of shoes and other leather goods; **Reg. No. 726,593**, same, Cleaners for use on hard, resilient and soft surfaces in and around the home and in commercial institutional and industrial establishments; **Reg. No. 733,213** (JOHNSON'S SHINE), same, Preparations for polishing and protecting hard resilient surfaces; **Reg. No. 780,726** (JOHNSON'S), same, All purpose cleaners, and all purpose cleaners having incidental germicidal, deodorizing and sanitizing properties; **Reg. No. 799,861**, same, Phenolic derivatives and synthetic resinous compositions, both kinds of products being for general use in the industrial arts, filed July 5, 1967, D.C. Del. (Wilmington), Doc. 3374, *S. C. Johnson & Son, Inc.* v. *Johnson Home Products, Inc.* Final judgment valid and owned by plaintiff, defendant enjoined, Oct. 2, 1967.

MARKS PUBLISHED FOR OPPOSITION

SECTION 1

The following marks are published in compliance with section 12(a) of the Trademark Act of 1946. Application for the registration of these marks in more than one class has been filed as provided in section 30 of said act as amended by Public Law 772, 87th Congress, approved Oct. 9, 1962, 76 Stat. 769. Opposition under section 13 may be filed within thirty days of this publication. See Rules 2.101 to 2.105.

A separate fee of twenty-five dollars for each class opposed must accompany the opposition.

[NOTE: For publication of marks presented in applications for registration in one class, see section 2.]

SN 242,532. Redcor Corporation, Canoga Park, Calif. Filed Apr. 4, 1966.

RC

Class 21—Electrical Apparatus, Machines, and Supplies

For Buffer Amplifier Assemblies; Tape Format Sequencers; Amplifiers; Differential Amplifiers; Circuit Boards Containing Electronic and Electrical Components; Power Supplies; Transformers; Resistors; Capacitors; Inductors; Diodes; Transistors; and Filters (Int. Cl. 9).

First use Mar. 30, 1962.

Class 26—Measuring and Scientific Appliances

For Data Acquisition Systems; Digital to Analog Converters; Analog to Digital Converters; Precision Voltage Sources; Differential Voltmeters; Analog to Digital Multiplexers; Data Distributors; Seismic Recording Systems; Logging Systems; Sample and Hold Systems; Digital Computer Circuits; Analog Computer Circuits; and Counters (Int. Cl. 9).

First use November 1962.

SN 271,306. Clairol Incorporated, New York, N.Y. Filed May 12, 1967.

OPTION

Class 51—Cosmetics and Toilet Preparations

For Hair Spray, Hair Dressing, Moisture Lotion, Cologne, All Purpose Lotion, Talcum Powder, Personal Deodorant, and Shaving Cream (Int. Cl. 3).

Class 52—Detergents and Soaps

For Hair Shampoo and Toilet Soap (Int. Cl. 3).

First use Feb. 8, 1967.

SN 278,305. Lanvin-Charles of the Ritz, Inc., New York, N.Y. Filed Aug. 15, 1967.

MISS RITZ

Owner of Reg. Nos. 419,641, 819,631, and others.

Class 29—Brooms, Brushes, and Dusters

For Applicator Brushes and Applicator Sponges (Int. Cl. 21).

Class 51—Cosmetics and Toilet Preparations

For Lipstick, Lip Polish, Eye-Lid Make-Up, Make-Up Powder, Make-Up Foundation, Moisturizer, Absorbent Make-Up Powder, Face Make-Up Lotion, and Cleansing Facial Cream (Int. Cl. 3).

First use at least as early as Mar. 2, 1967.

SECTION 2

The following marks are published in compliance with section 12(a) of the Trademark Act of 1946. Opposition under section 13 may be filed within thirty days of publication. See Rules 2.101 to 2.105.

A fee of twenty-five dollars must accompany the opposition.

[NOTE: For publication of marks presented in a combined application for registration in more than one class, see section 1.]

Class 1—Raw or Partly Prepared Materials

SN 256,763. New York Limestone Corporation, White Plains, N.Y. Filed Oct. 19, 1966.

BRITESTRIPE

For Pulverized Limestone Used as an Athletic Field Marker (Int. Cl. 2).

First use Sept. 8, 1966.

SN 257,486. Hammond Plastics, Inc., Worcester, Mass. Filed Oct. 28, 1966.

GORDON SUPERDENSE

For Polystyrene in Granular Form Sold in Bulk. (Int. Cl. 1).

First use 1952; July 1946 as to "Gordon."

SN 265,034. Barzen of Minneapolis, Inc., Minneapolis, Minn. Filed Feb. 20, 1967.

Pacific

For Medium Red Clover (Int. Cl. 31).

First use Nov. 14, 1966.

SN 268,713. Gus Dettelbach, d.b.a. Georgia-Tennessee Mining & Chemical Co., Atlanta, Ga. Filed Apr. 10, 1967.

Inst-A-Sorb

For Absorbent Used for Cleaning Oil, Water, Grease, etc. From Floors by Absorbing the Material and Making It Easily Disposable (Int. Cl. 4).
First use about March 1958.

SN 269,174. FMC Corporation, Philadelphia, Pa. Filed Apr. 14, 1967.

FIBER 410

The word "Fiber" is disclaimed apart from the mark as shown.
For Rayon Staple Fiber (Int. Cl. 22).
First use Apr. 3, 1967.

SN 269,178. Fitzgerald Enterprises, Inc., Oakland, Calif. Filed Apr. 14, 1967.

FITZ E

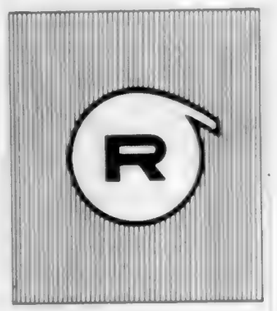
For Polyester Resins and Additives Therefor Sold as a Mix-in-Place, 2-Part Package for Use in Making Plastic Coatings and Castings, and for Molding and Sculpturing Purposes (Int. Cl. 1).
First use June 1963.

SN 268,275. American Polymers, Inc., Paterson, N.J. Filed Apr. 17, 1967.

AMPOL

For Plastic and Thermoplastic Molding Powders and Pellets (Int. Cl. 1).
First use during March 1967.

SN 269,564. The Richardson Company, Melrose Park, Ill. Filed Apr. 19, 1967.



The drawing is lined for the color red. Owner of Reg. Nos. 765,724 and 765,725.
For Thermoplastic and Thermosetting Resins (Int. Cl. 1).
First use during the fall of 1966.

SN 271,088. H. E. & C. D. Williams, Inc., Newark, N.J. Filed May 9, 1967.

VICTORIA

For Leather (Int. Cl. 18).
First use Nov. 15, 1962.

SN 271,089. H. E. & C. D. Williams, Inc., Newark, N.J. Filed May 9, 1967.

OLD GUARD

For Leather (Int. Cl. 18).
First use Nov. 14, 1962.

Class 2 — Receptades

SN 255,081. Jeffrey L. Fried, d.b.a. Walton-March, Highland Park, Ill. Filed Sept. 26, 1966.

GRIP/ALL

For Holder for Supporting Articles Such as Brooms, Mops, and the Like (Int. Cl. 21).
First use Sept. 1, 1966.

SN 264,964. Ravens-Metal Products, Inc., Parkersburg, W. Va. Filed Feb. 17, 1967.

RAVENS

For Boxes, Storage Bins, Liquid Storage Tanks, and Shipping Containers, All of Which Are Fabricated From Metal (Int. Cl. 6).
First use November 1958.

SN 287,480. Clack Corporation, Madison, Wis. Filed Dec. 26, 1967.

For Plastic Bottles (Int. Cl. 21).
First use July 19, 1965.

Class 4 — Abrasives and Polishing Materials

SN 283,488. Laco Corp., Baltimore, Md. Filed Oct. 27, 1967.

BENEFIT

For Self-Polishing Floor Wax (Int. Cl. 3).
First use Oct. 9, 1967.

Class 6 — Chemicals and Chemical Compositions

SN 258,182. Wade, Wenger Servicemaster Co., Downers Grove, Ill. Filed Nov. 7, 1966.

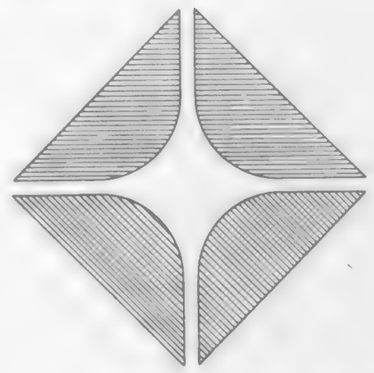
GERMGARD

For Sanitizing and Germproofing Preparation for Use on Carpet and Furniture Fabrics (Int. Cl. 5).
First use Oct. 10, 1966.

SN 265,259. Atlantic Richfield Company, Philadelphia, Pa. Filed Feb. 23, 1967.

For Surface Active Agents for Use in Household, Laundry, Shampoo, and Industrial Applications (Int. Cl. 1).
First use Dec. 9, 1966.

SN 265,260. Atlantic Richfield Company, Philadelphia, Pa. Filed Feb. 23, 1967.



The drawing is lined for green and blue, and color is claimed as a feature of the mark.
For Surface Active Agents for Use in Household, Laundry, Shampoo, and Industrial Applications (Int. Cl. 1).
First use Dec. 9, 1966.

SN 270,052. Farbwerke Hoechst Aktiengesellschaft vormals Meister Lucius & Brünings, Frankfurt am Main, Germany. Filed Apr. 26, 1967.

HOSTACHEM

Owner of German Reg. No. 775,351, dated June 13, 1962.
For Chemical Preparations for Destroying Animals and Plants; Disinfectants; Fire Extinguishing Agents; and Hardening and Curing Agents (Int. Cls. 1 and 5).

SN 272,309. Regis Chemical Company, Chicago, Ill. Filed May 24, 1967.

TAB

For N-Trifluoroacetyl N-Butyl Esters as a Reference Standard for Amino Acid Analysis (Not for Drug Use) (Int. Cl. 1).
First use Mar. 5, 1967.

SN 274,475. Wyandotte Chemicals Corporation, Wyandotte, Mich. Filed June 21, 1967.

ECONOCAL

For Calcium Chloride Liquor (Int. Cl. 1).
First use May 24, 1967.

SN 287,401. McLaughlin Gormley King Company, Minneapolis, Minn. Filed Dec. 22, 1967.

EVERBAN

Owner of Reg. Nos. 233,392 and 425,664.
For Insecticidal and Insect Proofing Composition (Int. Cl. 5).
First use on or about Mar. 27, 1952.

Class 7 — Cordage

SN 267,208. West Products Corp., Newark, N.J. Filed Mar. 20, 1967.

HOOK AND LADDER

For Synthetic Rope (Int. Cl. 22).
First use Feb. 1, 1967.

SN 267,504. Central Soya Company, Inc., Fort Wayne, Ind. Filed Mar. 24, 1967.

CSY

For Baler and Binder Twine and Rope (Int. Cl. 22).
First use on or before Nov. 27, 1966.

Class 8 — Smokers' Articles, Not Including Tobacco Products

SN 262,489. Lane Limited, New York, N.Y. Filed Jan. 13, 1967.

GOLDEN RIDGE

For Pipes (Int. Cl. 34).
First use November 1966.

SN 263,784. Societe Franco Hispano Americaine Francispam, Paris, France. Filed Feb. 1, 1967.

SPECIAL FEMME
SILVER MATCH

The word "Femme" is the French equivalent of the English word "lady" or "woman." Owner of French Reg. No. 713,557, dated Aug. 8, 1966.
For Articles for Smokers, Particularly Lighters, Recharges for Lighters, and Cigarette Holders (Int. Cl. 34).

SN 279,728. Paul Garrity, Stamford, Conn. Filed Sept. 6, 1967.

DISPOZ-A-LITE

For Cigar, Cigarette, and Pipe Lighter (Int. Cl. 34).
First use Aug. 23, 1967.

SN 283,149. Peterson's Ltd., Inc., New York, N.Y. Filed Oct. 23, 1967.

THE LONDONER

For Men's Smoking Pipes (Int. Cl. 34).
First use Aug. 28, 1967.

Class 10 — Fertilizers

SN 268,027. G & D Sales Co., Inc., Freeport, N.Y. Filed Mar. 6, 1967.

MAGIC ENGLISH PELLETS

The words "English" and "Pellets" are disclaimed apart from the mark as shown.
For Fertilizer and Plant Growth Promoter in Tablet Form (Int. Cl. 1).
First use March 1964.

SN 267,029. Garden Products, Inc., South San Francisco, Calif. Filed Mar. 17, 1967.

The drawing is lined for the color yellow, and an outdoor garden plant is shown, but no claim is made to the color or drawing of the plant apart from the mark as shown.
For Organic Base Planters (Int. Cl. 1).
First use Feb. 10, 1967.

Class 12 — Construction Materials

SN 259,826. Richard H. Higgins, Hialeah, Fla. Filed Dec. 1, 1966.

JEWELSTONE

For Polished Stones for Decorative Building Use in the Nature of Crushed Gravel (Int. Cl. 19).
First use Sept. 15, 1966.

Class 13 — Hardware and Plumbing and Steam-Fitting Supplies

SN 260,052. Ken-Ray Brass Products, Inc., Vermont, Ill. Filed Dec. 5, 1966.

KEN-RAY

For Hydrants, Wall Faucets, Plumbing Fixtures, and Valves (Int. Cls. 6 and 11).
First use at least as early as 1953.

SN 265,682. Aerojet-General Corporation, El Monte, Calif. Filed Mar. 1, 1967.

SHOCKWELD

For Metal Articles—Namely, Transition Joints, Made by Explosive Forming, Bonding, or Welding Processes (Int. Cl. 6).
First use Jan. 27, 1967.

SN 269,467. Speakman Company, Wilmington, Del. Filed Apr. 18, 1967.

DUAL-SAFE

For Shower Valves (Int. Cl. 6).
First use Jan. 13, 1967.

SN 271,598. Club Aluminum Products Company, La Grange, Ill. Filed May 16, 1967.

TEMPO

For Metal Hollow Cookware (Int. Cl. 21).
First use May 5, 1967.

Class 14 — Metals and Metal Castings and Forgings

SN 238,494. The Cleveland Electro Metals Company, Cleveland, Ohio. Filed Feb. 10, 1966.

EY-BAR

For Consumable Deoxidizer for Molten Steel in the Form of Cast Bodies of Aluminum (Int. Cl. 6).
First use May 16, 1939.

SN 255,366. Stewarts and Lloyds Limited, Glasgow Scotland. Filed Sept. 28, 1966.

SERBEX

Owner of British Reg. No. 880,190, dated May 28, 1965.
For Weld Backing Members Made Principally of Common Metal With a Coating of a Refractory Oxide (Int. Cl. 6).

Class 15 — Oils and Greases

SN 253,662. Major Petroleum Company, Philadelphia, Pa. Filed Sept. 1, 1966.

MAJOR

For Fuel Oil Sold in Bulk (Int. Cl. 4).
First use 1935.

SN 253,663. Major Petroleum Company, Philadelphia, Pa. Filed Sept. 1, 1966.

MAJOR

For Fuel Oil Sold in Bulk (Int. Cl. 4).
First use at least as early as September 1959.

SN 254,856. Atlantic Richfield Company, Philadelphia, Pa. Filed Sept. 21, 1966.

ARCOIL

Owner of Reg. Nos. 741,180 and 744,003.
For Lubricating Oil (Int. Cl. 4).
First use July 13, 1966.

SN 277,278. Hangsterfer's Laboratories, Inc., Mantua, N.J. Filed Aug. 1, 1967.

HANGSTERFER'S 110 Q.D.

Owner of Reg. No. 833,203.
For Semi-Plastic Drawing Compound Used in the Reduction of Metal (Int. Cl. 4).
First use 1947.

SN 277,279. Hangsterfer's Laboratories, Inc., Mantua, N.J. Filed Aug. 1, 1967.

HANGSTERFER'S 111 Q.D.

Owner of Reg. No. 833,203.
For Semi-Plastic Drawing Compound Used in the Reduction of Metal (Int. Cl. 4).
First use 1947.

SN 277,281. Hangsterfer's Laboratories, Inc., Mantua, N.J. Filed Aug. 1, 1967.

HANGSTERFER'S HE-2

Owner of Reg. No. 833,203.
For Water Soluble Cutting, Stamping, and Drawing Compound Used in Processing of Metal (Int. Cl. 4).
First use 1961.

SN 277,282. Hangsterfer's Laboratories, Inc., Mantua, N.J. Filed Aug. 1, 1967.

HANGSTERFER'S 112 Q.D.

Owner of Reg. No. 833,203.
For Semi-Plastic Drawing Compound Used in the Reduction of Metal (Int. Cl. 4).
First use 1947.

Class 16 — Protective and Decorative Coatings

SN 244,724. National Paint & Oil Company, Nashville, Tenn. Filed May 2, 1966.

RUB-R-ROOF

For Liquified Rubber Roof Coating (Int. Cl. 2).
First use June 14, 1957.

SN 267,009. Mary Carter Paint Co., Tampa, Fla. Filed Mar. 17, 1967.

DURA PREME

For Interior and Exterior Paints; Enamels and Varnishes (Int. Cl. 2).
First use Mar. 13, 1967.

Class 17 — Tobacco Products

SN 271,052. John Chapman Limited, Johannesburg, Transvaal, Republic of South Africa. Filed May 9, 1967.

HANZA

Owner of South African Reg. No. 65/3488, dated Aug. 24, 1965.
For Tobacco, Raw or Manufactured (Int. Cl. 34).

SN 280,262. R. J. Reynolds Tobacco Company, Winston-Salem, N.C. Filed Sept. 13, 1967.

ATTACHE

For Cigarettes (Int. Cl. 34).
First use Sept. 5, 1967.

SN 280,263. R. J. Reynolds Tobacco Company, Winston-Salem, N.C. Filed Sept. 13, 1967.

APRIL

For Cigarettes (Int. Cl. 34).
First use Sept. 5, 1967.

SN 280,264. R. J. Reynolds Tobacco Company, Winston-Salem, N.C. Filed Sept. 13, 1967.

AUSTIN

For Cigarettes (Int. Cl. 34).
First use Sept. 1, 1967.

SN 280,265. R. J. Reynolds Tobacco Company, Winston-Salem, N.C. Filed Sept. 13, 1967.

BAXTER

For Cigarettes (Int. Cl. 34).
First use July 27, 1967.

SN 280,266. R. J. Reynolds Tobacco Company, Winston-Salem, N.C. Filed Sept. 13, 1967.

BATON

For Cigarettes (Int. Cl. 34).
First use Sept. 1, 1967.

SN 280,267. R. J. Reynolds Tobacco Company, Winston-Salem, N.C. Filed Sept. 13, 1967.

TING

For Cigarettes (Int. Cl. 34).
First use July 26, 1967.

SN 280,268. R. J. Reynolds Tobacco Company, Winston-Salem, N.C. Filed Sept. 13, 1967.

RING

For Cigarettes (Int. Cl. 34).
First use Sept. 1, 1967.

SN 280,269. R. J. Reynolds Tobacco Company, Winston-Salem, N.C. Filed Sept. 13, 1967.

SOUTHGATE

For Cigarettes (Int. Cl. 34).
First use Aug. 31, 1967.

SN 280,633. R. J. Reynolds Tobacco Company, Winston-Salem, N.C. Filed Sept. 18, 1967.

HAMPSHIRE

For Cigarettes (Int. Cl. 34).
First use Sept. 8, 1967.

SN 280,634. R. J. Reynolds Tobacco Company, Winston-Salem, N.C. Filed Sept. 18, 1967.

SAFARI

For Cigarettes (Int. Cl. 34).
First use Sept. 12, 1967.

SN 283,035. R. J. Reynolds Tobacco Company, Winston-Salem, N.C. Filed Oct. 20, 1967.

FULTON

For Cigarettes (Int. Cl. 34).
First use Sept. 30, 1965.

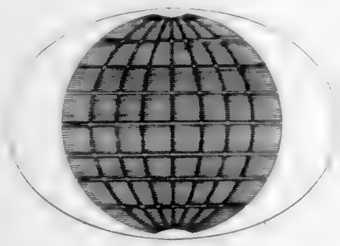
Class 18 — Medicines and Pharmaceutical Preparations

SN 269,950. Zip Feed Mills, Sioux Falls, S. Dak. Filed Apr. 24, 1967.

PURPLE RIBBON

For Mineral Pellets Used in Livestock Feeds (Int. Cl. 31).
First use Aug. 20, 1965.

SN 287,119. American Home Products Corporation, New York, N.Y. Filed Dec. 18, 1967.



The drawing is lined for the color blue.
For Calmative Preparation (Int. Cl. 5).
First use Mar. 17, 1967.

Class 19 — Vehicles

SN 253,538. Maremont Corporation, Chicago, Ill. Filed Aug. 31, 1966.

TITAN

For Shock Absorbers (Int. Cl. 12).
First use Oct. 4, 1963.

SN 254,231. The Budd Company, Philadelphia, Pa. Filed Sept. 12, 1966.

TURBOLINER

For Self-Powered Railway Passenger Cars With Turbine Engine Propulsion (Int. Cl. 12).
First use Sept. 7, 1966.

SN 254,799. Power Brake Parts Manufacturing Co., Chicago, Ill. Filed Sept. 20, 1966.

Diamond Lock

For Rear Vision Mirrors for Vehicles (Int. Cl. 12).
First use July 14, 1966.

SN 256,640. Atchison Products, Inc., Crystal Lake, Ill. Filed Oct. 18, 1966.

The representation of the goods on the drawing is disclaimed.
For Self-Propelled Cart or Dolly (Int. Cl. 12).
First use Jan. 7, 1965.

SN 262,293. Starcraft Corporation, Goshen, Ind. Filed Jan. 10, 1967.

STARCRAFT

Owner of Reg. Nos. 761,578 and 801,235.
For Pickup Campers (Int. Cl. 12).
First use Mar. 16, 1966.

SN 262,606. McDowell-Wellman Engineering Company, Cleveland, Ohio. Filed Jan. 16, 1967.

SCREW-TORQ

For Hatch Covers (Int. Cl. 12).
First use at least as early as April 1966.

SN 263,846. Redman Industries, Inc., Dallas, Tex. Filed Feb. 2, 1967.

Karousell

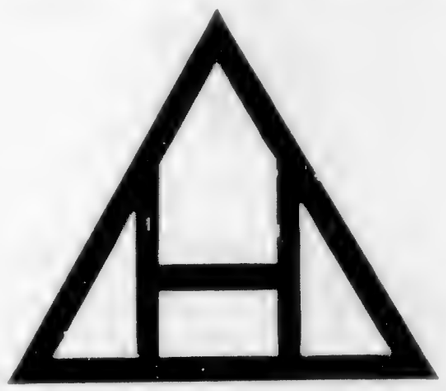
For Mobile Homes (Int. Cl. 12).
First use Jan. 19, 1967.

SN 264,791. Avanti Motor Corporation, South Bend, Ind. Filed Feb. 16, 1967.

AVANTI

For Automotive Vehicles—Namely, Automobiles (Int. Cl. 12).
First use July 26, 1965.

SN 270,237. Farm Chemicals of Oregon, Inc., d.b.a. Pacific Basin Trading Company, Athena, Oreg. Filed Apr. 28, 1967.



For Motorcycles (Int. Cl. 12).
First use on or about June 18, 1964.

SN 270,273. Rockwell-Standard Corporation, Pittsburgh, Pa. Filed Apr. 28, 1967.

THE TOUGH BIRDS

For Airplanes and Component Parts Thereof (Int. Cl. 12).
First use Mar. 30, 1967.

SN 280,173. Pacific Interchange Parts, Inc., Los Angeles, Calif. Filed Sept. 12, 1967.

PIP

For Automotive Parts—Namely, Steering Wheels (Int. Cl. 12).
First use on or about Aug. 2, 1965.

SN 281,736. Winnebago Industries, Inc., Forest City, Iowa. Filed Oct. 3, 1967.

THERMO-PANEL

Owner of Reg. No. 828,761.
For Panels, Wheelwells, Floors, Walls, Roofs, and Doors, Comprising Components of Completed Vehicles—Namely, Travel Trailers, House Trailers, Camp Coaches, Pick-Up Coaches, Pick-Up Campers, Pick-Up Cabs, Pick-Up Covers, Mobile Rigid Shelters, Mobile Offices, Truck Bodies, Motor Homes, Knock-Down Tent Trailers, Houseboats, and Pontoon Boats (Int. Cl. 12).
First use Aug. 6, 1963.

Class 20 — Linoleum and Oiled Cloth

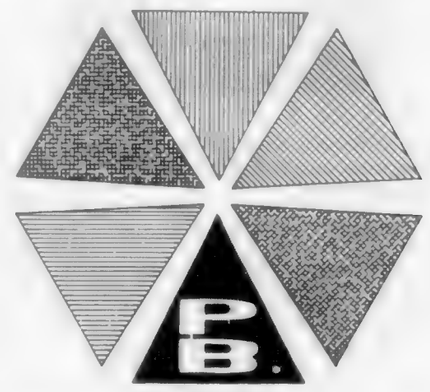
SN 275,238. Congoleum-Nairn Inc., Kearny, N.J. Filed July 3, 1967.

CORINTHIAN

For Plastic Coverings of the Smooth Surface, Resilient Type for Surfaces Such as Floors, Walls, Countertops, and the Like in the Form of Rolls, Rugs, and Tiles (Int. Cl. 27).
First use June 13, 1967.

Class 21 — Electrical Apparatus, Machines, and Supplies

SN 236,632. Packard-Bell Electronics Corporation, Los Angeles, Calif. Filed Jan. 17, 1966.



Applicant disclaims the colors blue, yellow, red, green, and orange as integral portions of the mark although different colors are important in each of the different triangles to designate that applicant is marketing color television receivers.
Owner of Reg. No. 739,941.
For Color Television Receivers and Combinations of Color Television Receivers With High-Fidelity and Stereophonic Equipment and Radio Receivers (Int. Cl. 9).
First use July 27, 1964.

SN 239,792. Perma-Power Company, Chicago, Ill. Filed Feb. 28, 1966.

ELCTRO-LIFT

For Residential Garage Door Controllers (Int. Cl. 9).
First use Dec. 19, 1960.

SN 245,368. Life Instrument Company, Inc., Franklin, Mass. Filed May 9, 1966.

Life

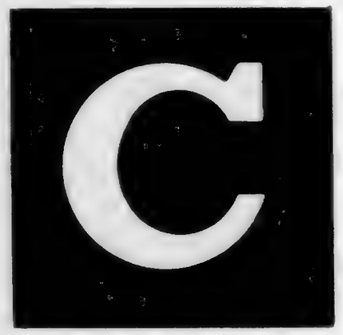
For Load Control Relays, Industrial Control Relays, Break Delay Relay Timers, Make Delay Relay Timers, Plug-In Plastic Enclosures for Radio Tube Sockets, Electro-Mechanical Position Transducers, and Photoresistive Cells and Relays Combined as a Photoelectric Control (Int. Cl. 9).
First use February 1961.

SN 247,601. Benjamin F. Brasch, d.b.a. Industrial Systems Company, Parma, Ohio. Filed June 8, 1966.

RELI-A-DYNE

For Metal Jacketed Electric Strip and Cartridge Heaters and Electric Heater Assemblies (Int. Cl. 11).
First use May 2, 1966, on electric strip heaters.

SN 248,675. Century Electric Company, St. Louis, Mo. Filed June 22, 1966.

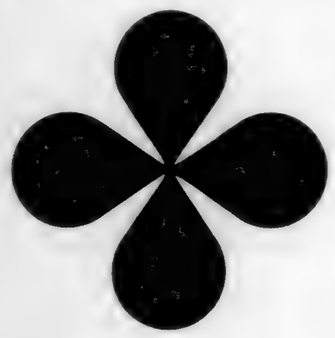


For Electric Motors and Component Parts Thereof, Including Gear Trains and Housings (Int. Cl. 7).
First use July 7, 1961.

SN 251,137. Instrument Systems Corporation, Huntington, N.Y. Filed July 27, 1966.

Owner of Reg. No. 691,580.
For Electronic Communication Equipment—Namely, Earphones, Microphones, Headsets, Cords, Amplifiers, and Parts Therefor (Int. Cl. 9).
First use November 1965.

SN 251,488. Westinghouse Electric Corporation, Pittsburgh, Pa. Filed Aug. 1, 1966.



For Electric Semiconductor Devices—Namely, Rectifiers, Transistors, and Thyristors (Int. Cl. 9).
First use on or about May 31, 1966.

SN 251,490. Yaou Denki Kabushiki Kaisha, Kawasaki-shi, Kanagawa-ken, Japan. Filed Aug. 1, 1966.

COLORNETRON

Owner of Japanese Reg. No. 666,796, dated Feb. 10, 1965.
For Television Receivers, Radio Receivers, Transceivers, and Cathode-Ray Tubes (Int. Cl. 9).

SN 252,394. Matsushita Electric Industrial Co., Ltd., Kadoma-shi, Osaka, Japan. Filed Aug. 15, 1966.

PORTA-STEREO

For Stereophonic Radio Receivers (Int. Cl. 9).
First use Apr. 14, 1966; in commerce Apr. 14, 1966.

SN 253,372. V-M Controls, Inc., Phoenix, Ariz. Filed Aug. 29, 1966.

For Relays and Controls Systems—Namely, Relays To Connect or Disconnect Appliance Branch Circuits and To Energize or De-Energize Solenoid Coils (Int. Cl. 9).
First use Mar. 15, 1966.

SN 254,182. Prescolite Manufacturing Corporation, San Leandro, Calif. Filed Sept. 9, 1966.

LITE-TRAC

For Electric Power Distribution Fixtures (Int. Cl. 9).
First use Aug. 8, 1966.

SN 254,897. Westinghouse Electric Corporation, Pittsburgh, Pa. Filed Sept. 21, 1966.

FOSTERITE

For Resinous Compositions for Insulating Electrical Apparatus (Int. Cl. 17).
First use on or about Aug. 19, 1944.

SN 255,004. International Telephone and Telegraph Corporation, New York, N.Y. Filed Sept. 23, 1966.

VIDISSECTOR

Owner of Reg. No. 344,793.
For Cathode Ray Tubes (Int. Cl. 9).
First use Jan. 18, 1966.

SN 259,720. Electrix, Inc., Port Chester, N.Y. Filed Nov. 30, 1966.

ELECTRIX

Owner of Reg. Nos. 778,162 and 779,026.
For Electric Table and Desk Lamps (Int. Cl. 11).
First use at least as early as September 1966.

SN 259,919. Hewlett-Packard Company, Palo Alto, Calif. Filed Dec. 2, 1966.

The drawing is lined for the color blue, but color is not claimed as an essential feature of the mark. Owner of Reg. Nos. 540,523, 645,097, and others.
For Electrical Systems, Instruments, Components, and Apparatus—Namely, Amplifiers, Power Supplies, Transducers, Probes and Electrodes, Transformers, Solid State Circuits and Components, Waveguide-to-Coaxial Adapters, Coaxial Connectors, and Cables (Int. Cl. 9).
First use Jan. 31, 1966.

SN 266,178. Karl Steiner, Hammond, Ind. Filed Mar. 7, 1967.

ELECTROLOGIC

For Motorized Variable Input Programmer and Card Reader for Controlling Machine Tools and Other Similar Uses (Int. Cl. 9).
First use Feb. 10, 1967.

SN 271,133. D. H. Baldwin Company, Cincinnati, Ohio. Filed May 10, 1967.

For Electronic Sound Amplifiers (Int. Cl. 9).
First use Dec. 9, 1966.

SN 287,698. GDO Company, Inc., Palisades Park, N.J. Filed Dec. 28, 1967.

For Electronic Garage Door Operators, Radio Remote Controls for Garage Door Operators and Other Remote Control Applications, Radio Control Transmitters, Radio Control Receivers, and Parts Thereof (Int. Cl. 9).
First use Jan. 30, 1967.

Class 22 — Games, Toys, and Sporting Goods

SN 243,458. Klipspringer Investments Proprietary Limited, Braybrook, Victoria, Australia. Filed Apr. 14, 1966.

Priority claimed under Sec. 44(d) on Australian application filed Oct. 15, 1965; Reg. No. A197,983, dated Dec. 5, 1967. The mark comprises longitudinally spaced pairs of relatively closely spaced lines on the goods.
For Strings for Racquets (Int. Cl. 28).

SN 245,588. Harvey W. Hempel, Jr., Milwaukee, Wis. Filed May 13, 1966.

HARVU

For Bonus Shot Situation Indicator for Use in Basketball Games (Int. Cl. 28).
First use Apr. 25, 1966.

SN 251,162. Stafco Corp., Mancelona, Mich. Filed July 27, 1966.

TRAIL-RITE

For Sleds for Sport, Amusement, and Entertainment Purposes (Int. Cl. 28).
First use at least as early as May 15, 1966.

SN 254,700. Robert F. Magness, Michigan City, Ind. Filed Sept. 19, 1966.

YANKEE TRADER

For Game Boards and Game Pieces (Int. Cl. 28).
First use July 6, 1966.

SN 263,516. American Character, Inc., New York, N.Y. Filed Jan. 30, 1967.

MENDY

For Dolls (Int. Cl. 28).
First use Nov. 15, 1966.

SN 265,002. Woodstream Corporation, Lititz, Pa. Filed Feb. 17, 1967.

JAGUAR

For Fishing Tackle and Equipment—Namely, Tackle Boxes, Fishing Reels, and Parts Thereof (Int. Cl. 28).
First use Feb. 9, 1967.

SN 265,004. Woodstream Corporation, Lititz, Pa. Filed Feb. 17, 1967.

CHEETAH

For Fishing Tackle and Equipment—Namely, Tackle Boxes, Fishing Reels, and Parts Thereof (Int. Cl. 28).
First use Feb. 9, 1967.

SN 265,933. T. J. Thomas Co., Inc., Brooklyn, N.Y. Filed Mar. 3, 1967.

The word "Cycle" is disclaimed apart from the mark as shown.
For Electric, Bicycle-Type Exercising Machines (Int. Cl. 28).
First use on or about Feb. 1, 1967.

SN 268,173. Byerly Aircraft Company, Salem, Oreg. Filed Apr. 3, 1967.

MONSTER

For Amusement Park and/or Carnival-Type Amusement Ride (Int. Cl. 28).
First use Apr. 21, 1962.

SN 273,175. Milton Bradley Company, Springfield, Mass. Filed June 6, 1967.

OH NO

For Equipment Sold as a Unit Comprising Delineated Playing Mats for Playing a Parlor Game (Int. Cl. 28).
First use Mar. 1, 1967.

SN 275,912. Buddy L Corporation, East Moline, Ill. Filed July 13, 1967.

auto action

For Toys, Particularly Toys Used as Accessories for or in Relation to Toy Vehicles Such as Replicas in Reduced Size of Service Lifts, Traffic Lights, Toll Booths, and Gasoline Pumps (Int. Cl. 28).
First use Mar. 31, 1967.

SN 287,201. Whitman Publishing Company, Racine, Wis. Filed Dec. 18, 1967.

GOLDCREST

For Playing Cards (Int. Cl. 16).
First use August 1964.

SN 287,256. Mattel, Inc., Hawthorne, Calif. Filed Dec. 20, 1967.

MAN FROM LASER

For Dolls, Doll Clothing, and Doll Accessories (Int. Cl. 28).
First use Sept. 28, 1967.

Class 23 — Cutlery, Machinery, and Tools, and Parts Thereof

SN 193,830. The Wapakoneta Machine Company, Wapakoneta, Ohio. Filed May 19, 1964.

MULTICUT

For Machine Knives (Int. Cl. 7).
First use November 1931.

SN 239,406. GPE Controls, Inc., Morton Grove, Ill. Filed Feb. 23, 1966.

DYNAGUIDER

Owner of Reg. No. 775,342.
For Web Guide Roll Assemblies for Use With Elongated Webs of Paper, Metal, Plastic, Rubber, Fabrics, and the Like (Int. Cl. 7).
First use June 9, 1965.

SN 246,353. The Pandjiris Weldment Co., St. Louis, Mo. Filed May 23, 1966.

TANKER

For Turning Rolls for Rotating Workpieces for Welding and Machining (Int. Cl. 7).
First use Nov. 19, 1965.

SN 247,514. Layton Manufacturing Co., Salem, Oreg. Filed June 7, 1966.

LAYTON

For Paving Machines (Int. Cl. 7).
First use October 1960.

SN 247,848. United Shoe Machinery Corporation, Boston, Mass. Filed June 10, 1966.

RESPONSYN

For Motor Drive Power Transmission Units Comprising Units Gear Reducers and Actuators (Int. Cl. 7).
First use Aug. 20, 1964.

SN 250,001. Koppers Company, Inc., Pittsburgh, Pa. Filed July 11, 1966.

HOOPER-SWIFT

Owner of Reg. No. 801,767.
For Machinery for Making Paper Containers, Such as Corrugated and Fiberboard Boxes (Int. Cl. 7).
First use July 22, 1960.

SN 250,495. G. H. Lewis Company, Watertown, Wis. Filed July 18, 1966.

ROTO-SEMBLY

For Motorized Material-Handling Unit Having an Endless and Movable Series of Bins (Int. Cl. 7).
First use June 20, 1966.

SN 250,642. The Concrete Surfacing Machinery Company, Cincinnati, Ohio. Filed July 20, 1966.

BERG STEWART

For Concrete Surfacing Machines, and Accessories Therefor—Namely, Surfacing and Work Heads and Cutter Plates, and Parts Thereof (Int. Cl. 7).
First use December 1963; 1917 as to "Berg."

SN 250,795. Whirl-Jet Mfg. Corp., Webster Groves, Mo. Filed July 21, 1966.

Whirl-Jet

For High Pressure Car Wash Equipment (Int. Cl. 7).
First use July 24, 1965.

SN 252,133. Rheem Manufacturing Company, New York, N.Y. Filed Aug. 10, 1966.

TIPPER-MATIC

Owner of Reg. Nos. 665,973, 817,248, and others.
For Machines for Filling and Applying Closure Fasteners to Containers for Meat and Other Products (Int. Cl. 7).
First use Mar. 18, 1966.

SN 252,155. Anderson Electric Corporation, Leeds, Ala. Filed Aug. 11, 1966.

PACE SETTER

For Packaging Machinery for Packaging Articles in Plastic Film Materials (Int. Cl. 7).
First use Mar. 9, 1966.

SN 252,390. Kabushiki Kaisha Nakajima Seisakusho, Matsue-shi, Shimane-ken, Japan. Filed Aug. 15, 1966.

N

Owner of Japanese Reg. Nos. 483,873 and 483,875, dated July 5, 1956.
For Treadle and Electric Sewing Machines (Int. Cl. 7).

SN 252,893. Manly Dee Randle, Dallas, Tex. Filed Aug. 22, 1966.

PORTA-WASH

For Portable and Semi-Portable Car Washing Machines (Int. Cl. 7).
First use Aug. 2, 1964.

SN 252,974. Union Camp Corporation, New York, N.Y. Filed Aug. 23, 1966.

MARKETEER

For Machine for Packaging Articles in Display Packages Made of Paperboard and Plastic Film (Int. Cl. 7).
First use Mar. 8, 1963.

SN 253,514. Fichtel & Sachs Aktiengesellschaft, Schweinfurt, Germany. Filed Aug. 31, 1966.

SACHS MOTORS

Applicant disclaims the word "Motors" apart from the mark as shown. Owner of German Reg. No. 818,711, dated Apr. 25, 1966.
For Internal Combustion Engines and Parts Thereof (Int. Cl. 7).

SN 253,925. Alco Standard Corporation, Philadelphia, Pa., assignee of Tempo Products Company, Solon, Ohio. Filed Sept. 6, 1966.

TEMPO-TROLL

Owner of Reg. Nos. 621,666, 664,885, and others.
For Electrical Outboard Motors (Int. Cl. 7).
First use Aug. 18, 1966.

SN 254,730. Sparcraft, Inc., Jackson, Mich. Filed Sept. 19, 1966.

SPARCRAFT

For Hand Bilge Pumps (Int. Cl. 7).
First use Apr. 12, 1965.

SN 254,750. Westinghouse Air Brake Company, Chicago, Ill. Filed Sept. 19, 1966.

DURA-ROLL

For Belt Conveyor Rollers and Parts Thereof (Int. Cl. 7).
First use July 19, 1966.

SN 254,826. Walker Manufacturing Company, Racine, Wis. Filed Sept. 20, 1966.

For Exhaust Systems and Parts Thereof Such as Mufflers for Internal Combustion Engines (Int. Cl. 12).
First use Oct. 15, 1955.

SN 255,211. International Telephone and Telegraph Corporation, New York, N.Y. Filed Sept. 27, 1966.

PRIME-LINE

For Pumps for Fluids (Int. Cl. 7).
First use May 27, 1966.

SN 255,506. Aktiebolaget C. J. Wennbergs Mekaniska Verkstad, Karlstad, Sweden. Filed Sept. 30, 1966.

TRANSBLOWER

Owner of Swedish Reg. No. 112,890, dated May 7, 1965.
For Machines for Pneumatical Handling of Comminuted Bulk Materials (Int. Cl. 7).

SN 256,069. Clark Equipment Company, Buchanan, Mich. Filed Oct. 10, 1966.

POWRGLIDER

For Air Film Material Handling Machines (Int. Cl. 7).
First use Sept. 8, 1966.

SN 256,198. Clark Equipment Company, Buchanan, Mich. Filed Oct. 11, 1966.

CLARK EQUIPMENT

Applicant disclaims the word "Equipment" apart from the mark. Owner of Reg. Nos. 165,644, 814,501, and others.
For Drive Axles and Drive-Steer Axles (Int. Cl. 7).
First use at least as early as Jan. 1, 1962.

SN 256,605. Sperry Rand Corporation, New York, N.Y. Filed Oct. 17, 1966.

SELEKTRONIC

Owner of Reg. No. 441,201.
For Electric Dry Shavers and Parts Thereof (Int. Cl. 8).
First use Dec. 13, 1965.

SN 258,003. Textile Machine Works, Reading, Pa. Filed Nov. 4, 1966.

TMW

Owner of Reg. Nos. 372,034 and 588,360.
For Knitting Machines; Knitting Machine Needles and Flat Parts; Yarn Package Winders; Bobbin Winders; Yarn Crimping and Bulking Machines; Packaging Machines—Namely, Case Opening Machines, Case Loading Machines, Case Closing and Sealing Machines, Carton Tube Making Machines, Carton Tube Capping Machines, and Marking and/or Dating Apparatus for Cases; Adhesive Applying Attachments for Case Sealing Machines, and Parts for the Above Identified Machines (Int. Cl. 7).
First use Jan. 31, 1966, on knitting machines.

SN 258,007. Valley Forge Conveyors Incorporated, Norristown, Pa. Filed Nov. 4, 1966.

VALLEY FORGE

For Conveyor Equipment—Namely, Belt Conveyors, Wheel and Roller Conveyors, Portable Conveyors, and Sectional Conveyors (Int. Cl. 7).
First use on or about Dec. 31, 1964.

SN 259,416. Flexible Drive & Tool Co. Ltd., Norfolk, England. Filed Nov. 25, 1966.

BULLFROG

Owner of British Reg. No. 833,967, dated May 1, 1962.
For Submersible Pumps (Int. Cl. 7).

SN 259,856. The Schriber Company, Dayton, Ohio. Filed Dec. 1, 1966.

SCHRIBERFLEX

Owner of Reg. No. 810,601.
For Business Forms Printing and Bindery Equipment—Namely, Continuous Forms Fastener Machines (Int. Cl. 7).
First use Aug. 9, 1966.

SN 260,566. Mosley Machinery Co., Inc., Waco, Tex. Filed Dec. 12, 1966.

MONSTER

For Heavy Duty Scrap Metal Compacting and Shearing Apparatus (Int. Cl. 7).
First use on or about Nov. 18, 1966.

SN 264,091. Oxwall Tool Co., Ltd., Flushing, N.Y. Filed Feb. 6, 1967.

For Tools — Namely, Screwdrivers, Pliers, Hammers, Wrenches, Drills, and Kindred Hand Tools (Int. Cl. 8).
First use about Apr. 1, 1960.

SN 267,534. Messinger Bearings, Inc., Philadelphia, Pa. Filed Mar. 24, 1967.

"X"

For Roller Bearings (Int. Cl. 7).
First use January 1940.

SN 269,792. Rollway Bearing Company, Inc., Liverpool, N.Y. Filed Apr. 21, 1967.

DYNA-ROL

For Roller Bearings (Int. Cl. 7).
First use Jan. 30, 1967.

SN 269,793. Rollway Bearing Company, Inc., Liverpool, N.Y. Filed Apr. 21, 1967.

MAX-ROL

For Roller Bearings (Int. Cl. 7).
First use Mar. 7, 1962.

SN 271,273. Oneida Ltd., Oneida, N.Y. Filed May 11, 1967.

HOMESTEAD

For Stainless Steel Flatware (Int. Cl. 8).
First use May 28, 1965.

SN 271,274. Oneida Ltd., Oneida, N.Y. Filed May 11, 1967.

MAYWOOD

For Stainless Steel Flatware (Int. Cl. 8).
First use Nov. 22, 1965.

SN 271,275. Oneida Ltd., Oneida, N.Y. Filed May 11, 1967.

BRIARWOOD

For Stainless Steel Flatware (Int. Cl. 8).
First use Nov. 22, 1965.

SN 271,276. Oneida Ltd., Oneida, N.Y. Filed May 11, 1967.

MONTINA

For Stainless Steel Flatware (Int. Cl. 8).
First use Oct. 4, 1966.

SN 271,281. Oneida Ltd., Oneida, N.Y. Filed May 11, 1967.

LEXINGTON

For Stainless Steel Flatware (Int. Cl. 8).
First use July 1, 1966.

SN 271,625. The International Silver Company, Meriden, Conn. Filed May 16, 1967.

ROYAL BOUQUET

For Stainless Steel Flatware—Namely, Knives, Forks, and Spoons (Int. Cl. 8).
First use Mar. 21, 1967.

SN 271,687. The Borden Company, New York, N.Y. Filed May 17, 1967.

WHIRLAWN

For Seed and Fertilizer Spreader (Int. Cl. 7).
First use Feb. 20, 1967.

SN 273,071. Industrial Grain Products, Limited, Montreal, Quebec, Canada. Filed June 5, 1967.

MULTIVISC

Priority claimed under Sec. 44(d) on Canadian application filed Dec. 7, 1966; Reg. No. 152,347, dated Aug. 4, 1967.
For Apparatus for Treating Starch (Int. Cl. 7).

SN 274,163. Jewel Box Stores Corporation, Greensboro, N.C. Filed June 19, 1967.

Gibraltar

Owner of Reg. Nos. 703,896 and 741,566.
For Hand Tools—Namely, Drive Sockets, Open End Wrenches, Short Box Wrenches, Ratchets, Speeders, Hinge Handles, Punches and Chisels, Ignition Sets, File Sets, Allen Sets, Ignition Files, Slip Joint Pliers, Adjustable Wrenches, Screw Drivers, and Pliers (Int. Cl. 8).
First use Aug. 3, 1964.

Class 26—Measuring and Scientific Appliances

SN 233,178. Dual Gebruder Steidinger, St. Georgen, Black Forest, Germany, by change of name from Gebruder Steidinger, St. Georgen, Black Forest, Germany. Filed Nov. 23, 1965.

skate-O-meter

Priority claimed under Sec. 44(d) on German application filed Sept. 10, 1965; Reg. No. 827,970, dated Dec. 30, 1966.
For Test Instruments for Detection of Any Deviations of the Stylus From Perfect Balance in the Stereo Groove of a Record (Int. Cl. 9).

SN 242,291. Scientific Industries, Inc., Hempstead, N.Y. Filed Mar. 30, 1966.

CHROMATO-GASOMETER

For Gas Extractor and Ejector for Gas Chromatography (Int. Cl. 9).
First use Jan. 31, 1965.

SN 251,937. Machine-O-Matic, Inc., Evanston, Ill. Filed Aug. 8, 1966.

SASI

For Electronic Equipment for Detecting the Amount of Shrinkage or Elongation Which Takes Place in a Moving Web, and for Regulating the Rate of Movement of the Web Accordingly (Int. Cl. 9).
First use on or about June 8, 1966.

SN 253,280. Clay-Adams, Inc., New York, N.Y. Filed Aug. 29, 1966.

SAHLI A/1

Owner of Reg. No. 635,540.
For Pipettes (Int. Cl. 9).
First use at least as early as Apr. 6, 1966.

SN 253,420. Cambridge Instrument Company Limited, London, England. Filed Aug. 30, 1966.

STEREOSCAN

For Electron Microscopes and Parts and Fittings Therefor (Int. Cl. 9).
First use on or about Mar. 31, 1966; in commerce on or about Mar. 31, 1966.

SN 253,890. Leupold & Stevens Instruments, Inc., Portland, Oreg. Filed Sept. 6, 1966.

MEMOMARK

Owner of Reg. No. 737,516.
For Shaft Encoder Measuring Apparatus Having Mechanical Counter and Electrical Readout Device With Memory (Int. Cl. 9).
First use Sept. 5, 1963.

SN 254,366. Asahi Optical Company, Ltd., Tokyo, Japan. Filed Sept. 13, 1966.

NOCTA

For Cameras and Lenses for Infra-Red Photographic Apparatus (Int. Cl. 9).
First use Mar. 1, 1966; in commerce Sept. 7, 1966.

SN 257,677. Itek Corporation, Lexington, Mass., assignee of Wayne-George Corporation, Newton, Mass. Filed Oct. 31, 1966.

COÖRDICON

For Electromechanical and Electronic Instrumentation—Namely, Apparatus for Continuously Digitizing and Displaying X and Y Coordinates in Combination With a Tracking Reticle Positioned by an Operator on a Table Surface, and Optical Analog to Digital Conversion Equipment (Int. Cl. 9).
First use Oct. 4, 1966.

SN 258,227. Gulton Industries, Inc., d.b.a. West Instrument Corporation, Metuchen, N.J. Filed Nov. 8, 1966.

Gardstart

For Electronic Start-Up Controller Which Is Connectible to Machinery and Which Prevents Starting of Such Machinery Until the Operating Requirements Thereof Are in Order (Int. Cl. 9).
First use June 6, 1966.

SN 258,425. Stromberg-Carlson Corporation, Rochester, N.Y. Filed Nov. 10, 1966.

DIGIMATIC

Owner of Reg. No. 707,190.
For Telephone Equipment—Namely, Calling-Number Identifier for Automatically Determining the Telephone Station From Which a Toll Call Is Being Originated, and Automatic Message Accounting System (Int. Cl. 9).
First use Nov. 4, 1966.

SN 260,050. Hewlett-Packard Company, Palo Alto, Calif. Filed Dec. 5, 1966.

The drawing is lined for the color blue, however, color is not claimed as an essential feature of the mark. Owner of Reg. Nos. 540,523, 572,827, and others.
For Systems, Instruments, and Apparatus Used for Analysis, Synthesis, Counting, Measuring, Data Acquisition and Processing, Detection, Inspection, Testing, Display, Recording, or Standards Purposes (for Example, Gas Chromatographs, CHN Analyzers, Osometers, Auto-Viscometers, Microwave Spectrometers, Waveform Distortion Analyzers, Spectrum Analyzers, Frequency Synthesizers, Counters, Ammeters, Ohmmeters, Impedance Meters, Voltmeters, Power Meters, Frequency Meters, SWR Meters, Ratio Meters, Microwave Noise Figure Meters, Frequency Measurement Instrumentation, Nuclear Measurement Instrumentation, Quartz Thermometers, Data Acquisition and Handling Systems, Calculators, Computers and Data Processing Systems, Ultrasonic Translator Detectors, Test Equipment for Locating Faults in Power or Telephone Cables, Signal Sources, Mixers, Modulators, Attenuators, Coaxial and Waveguide Instrumentation, Oscilloscopes, Plotters and Recorders, and Frequency and Time Standards) and Accessories (for Example, Column Materials and Backflush Valves for Use With Chromatographic Columns, Cameras for Use With Oscilloscopes, and Carts for Mobilizing Test Equipment) Used With These Systems, Instruments, and Apparatus (Int. Cl. 9).
First use Mar. 26, 1965.

SN 260,402. Bio-Science Laboratories, Van Nuys, Calif. Filed Dec. 9, 1966.

TLI

For Laboratory Equipment—Namely, Heating Blocks, Stirrers, Mixers, Photometric Analyzers, Chromatography Spotters, Dialysis Cells, and Rotators (Int. Cl. 9).
First use Oct. 16, 1962.

SN 260,781. The Standard Oil Company, Cleveland, Ohio. Filed Dec. 14, 1966.

VISTRON

For Sense Connectors for Use in IBM Computers (Int. Cl. 9).
First use Nov. 15, 1966.

SN 261,438. API Instruments Company, Chesterland, Ohio. Filed Dec. 27, 1966.

LINE SENTRY

Owner of Reg. No. 668,020.
For Frequency and Voltage Responsive Alarm and Control Instruments (Int. Cl. 9).
First use May 31, 1966.

SN 262,403. Data Pathing Incorporated, Sunnyvale, Calif. Filed Jan. 12, 1967.

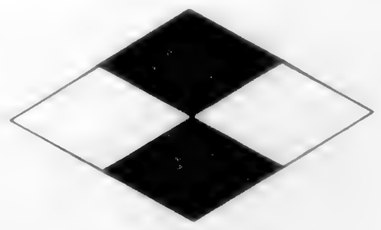
For Computerized Data Collection Systems and Parts Therefor (Int. Cl. 9).
First use Nov. 25, 1966.

SN 262,501. PM & E Electronics, Inc., East Providence, R.I. Filed Jan. 13, 1967.

avidesk

For Self-Instruction Multi-Media Desk With Built in Capacity To Accept Locally Prepared Tapes and Slides (Int. Cl. 9).
First use Oct. 20, 1966.

SN 264,290. Electric Thermometers, Inc., Kearny, N.J. Filed Feb. 9, 1967.



For Electrical Thermometer Apparatus—Namely, Connection Heads for Thermocouples and Resistance Thermometers, Resistance Thermometer Elements, Resistance Thermometer Insets, Resistance Thermometer Sensor Assemblies, Thermocouple Wire, Thermocouples and Assemblies, Thermocouple Extension Lead Wire, and Thermocouple Protection Tubes (Int. Cl. 9).
First use Jan. 4, 1967, on resistance thermometer elements.

SN 265,684. American Chain & Cable Company, Inc., New York, N.Y. Filed Mar. 1, 1967.

HELICOID

Owner of Reg. No. 703,927.
For Liquid and Gas Pressure Gages and Parts Therefor (Int. Cl. 9).
First use Feb. 1, 1967.

SN 266,059. Mettler Instrument Corporation, Hightstown, N.J. Filed Mar. 6, 1967.

Mettler

Owner of Reg. No. 719,974.
For Recording Thermoanalyzer for Thermogravimetric Analysis, Differential Thermal Analysis and Other Thermal-analytical Processes, and Laboratory Instruments for Measuring Changes in the Physical Characteristics of Materials With Change of Temperature (Int. Cl. 9).
First use February 1966.

SN 267,028. Friden, Inc., San Leandro, Calif. Filed Mar. 17, 1967.

CONVERSATIONAL TERMINAL

For Keyboard Printer Communications Sender and Receiver for Time-Sharing Computer Systems (Int. Cl. 9).
First use November 1966.

SN 268,432. Santa Rita Technology, Inc., Menlo Park, Calif. Filed Apr. 5, 1967.

SRT

For Sound Analyzing Systems and Parts—Namely, Drivers, Amplifiers, and Commutators (Int. Cl. 9).
First use July 23, 1964.

SN 270,395. Kürbi & Niggeloh, Radevormwald, Germany. Filed May 1, 1967.

MOTORAMA

For Electrically and Mechanically Driven Panning Mechanisms for Motion Picture Camera (Int. Cl. 9).
First use Jan. 30, 1967; in commerce Jan. 30, 1967.

SN 270,427. Spectral Dynamics Corporation, San Diego, Calif. Filed May 1, 1967.

SIGNATURE RATIO

For Electronic Vibration Analysis Equipment for Analyzing Rotating Machinery (Int. Cl. 9).
First use May 13, 1966.

SN 274,006. Triplett Electrical Instrument Company, Bluffton, Ohio. Filed June 15, 1967.

TVO

For Battery Operated, Solid State Volt-Ohmmeters and Parts Thereof (Int. Cl. 9).
First use Mar. 3, 1967.

SN 275,783. The Rank Organisation Limited, London, England. Filed July 11, 1967.

MITRONIC

For Engineers' Measuring Instruments—Namely, Linear Comparators (Int. Cl. 9).
First use Nov. 1, 1963; in commerce Oct. 4, 1964.

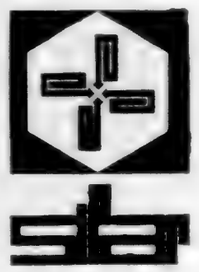
SN 281,946. Raytheon Company, Lexington, Mass. Filed Oct. 6, 1967.

NANOLOK

For Memory Elements for Electronic Information Storage Devices (Int. Cl. 9).
First use November 1965.

Class 27 — Horological Instruments

SN 244,036. Sifar S.A., Neuchatel, Switzerland. Filed Apr. 21, 1966.



Priority claimed under Sec. 44(d) on Swiss Reg. No. 214,364, dated Oct. 21, 1965.
For Watches, Clocks, Chronometers, and Parts Thereof (Int. Cl. 14).

SN 255,550. Societe Anonyme des Etablissments Léon Hatot, Paris, France. Filed Sept. 30, 1966.

ZETA

Owner of French Reg. No. 708,104, dated May 13, 1966.
For Watches and Clocks (Int. Cl. 14).

SN 277,681. Manufacture des Montres Universal Perret Freres S.A., Geneva, Switzerland. Filed Aug. 7, 1967.

UNISONIC

Owner of Reg. No. 842,060
For Watches and Parts Thereof (Int. Cl. 14).
First use June 7, 1967; in commerce June 7, 1967.

Class 28 — Jewelry and Precious-Metal Ware

SN 271,011. Buccellati Silver, Ltd., New York, N.Y. Filed May 9, 1967.

PARMA

For Sterling Silver Flatware (Int. Cl. 8).
First use Mar. 11, 1967.

Class 29 — Brooms, Brushes, and Dusters

SN 272,405. Pro-Stim Products, Inc., Akron, Ohio. Filed May 25, 1967.

PRECISION HI-LO

For Toothbrushes (Int. Cl. 21).
First use July 27, 1956.

Class 30 — Crockery, Earthenware, and Porcelain

SN 253,717. Arlen China Company, New York, N.Y. Filed Sept. 2, 1966.

No claim is made to the words "China," "Fine-China," and "Japan" apart from the mark. Owner of Reg. No. 662,050.
For China Dinnerware (Int. Cl. 21).
First use Aug. 9, 1966.

Class 32 — Furniture and Upholstery

SN 265,350. Steelcase, Inc., Grand Rapids, Mich. Filed Feb. 23, 1967.

BROADSIDES

For Filing Cabinets (Int. Cl. 20).
First use Sept. 10, 1966.

SN 272,112. Stow/Davis Furniture Company, Grand Rapids, Mich. Filed May 22, 1967.

SD

For Furniture—Namely, Desks, Chairs, Settees, Sofas, Tables, Credenzas, Cabinets, and Bookcases (Int. Cl. 20).
First use in or about 1917.

SN 276,848. Metal Box & Cabinet Corporation, Chicago, Ill. Filed July 26, 1967.

MBCentury

For Mechanics' Tool Chests, Cabinets, and Trays Therefor (Int. Cl. 20).
First use Apr. 28, 1967.

SN 277,307. Southern Cross Industries, Inc., Atlanta, Ga. Filed Aug. 1, 1967.

NIGHT WATCH

For Mattresses (Int. Cl. 20).
First use July 15, 1967.

SN 278,425. Sears, Roebuck and Co., Chicago, Ill. Filed Aug. 16, 1967.

COUNTRY IV

For Dining Room Tables, Buffets, China Cabinets, Serving Tables, Sofas, End Tables, Lamp Tables, Cocktail Tables, Credenzas, Desks, Chairs, Cabinets, Beds, Mirrors, Dressers, Chests, and Night Stands (Int. Cl. 20).
First use on or about June 16, 1966.

Class 33 — Glassware

SN 257,264. Federal Paper Board Company, Inc., Columbus, Ohio. Filed Oct. 26, 1966.

Applicant disclaims the words "Sheer Rim" apart from the mark as shown.
For Glass Tumblers (Int. Cl. 21).
First use Sept. 26, 1966.

Class 34 — Heating, Lighting, and Ventilating Apparatus

SN 254,998. H. Frost & Company Limited, Walsall, England. Filed Sept. 23, 1966.

VISTARAMA

Owner of British Reg. No. 883,426, dated Aug. 24, 1965.
For Heating Apparatus for Radiant and Convected Heat, Especially for Installation in a Wall and Background Heating (Int. Cl. 11).

SN 256,302. Navan Incorporated, El Segundo, Calif. Filed Oct. 12, 1966.

ORBIT ARC

Applicant disclaims the term "Arc" separate and apart from the mark as shown.
For Automatic Arc-Welding Apparatus and Parts Thereof (Int. Cl. 9).
First use July 23, 1964.

SN 256,303. Navan Incorporated, El Segundo, Calif. Filed Oct. 12, 1966.

Applicant disclaims the term "Arc" separate and apart from the mark as shown.
For Automatic Arc-Welding Apparatus and Parts Thereof (Int. Cl. 9).
First use Mar. 23, 1965.

SN 261,411. Titan Sales Corporation, Kansas City, Mo. Filed Dec. 23, 1966.

TITAN

For Portable Electric Space Heaters (Int. Cl. 11).
First use in or about 1946.

SN 279,706. Sola Basic Industries, Inc., Milwaukee, Wis. Filed Sept. 6, 1967.

COMPACT

For Crucible or Pot-Type Furnaces for Casting of Metals (Int. Cl. 11).
First use Sept. 19, 1961.

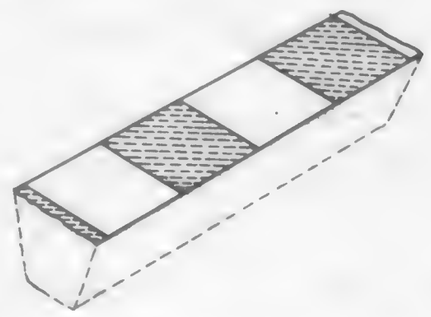
Class 35 — Belting, Hose, Machinery Packing, and Nonmetallic Tires

SN 237,353. Istag AG, Suhr, Aargau, Switzerland. Filed Jan. 26, 1966.

KLINGERFLEX

Owner of U.S. Reg. Nos. 747,296, 781,402, and others.
For Gaskets in the Form of Sheets, Rings, and Shaped Parts, Packings and Other Stuffing Materials for Engineering Purposes (Int. Cl. 17).
First use July 10, 1965; in commerce July 10, 1965.

SN 248,441. Dayco Corporation, Dayton, Ohio. Filed June 20, 1966.



The mark consists of a series of silver or white stripes extending transversely along the outer surface only of the belt, said stripes having a width approximately equal to the width of the belt and alternating with similarly proportioned stripes of the background color of the belt. The silver or white stripes are lined for silver on the drawing.
For Power Transmission Belts (Int. Cl. 7).
First use on or about May 2, 1966.

SN 253,370. United States Rubber Company, New York, N.Y. Filed Aug. 29, 1966.

FLEETMASTER TRIPLE TREAD

Applicant disclaims the term "Triple Tread" apart from the mark as shown, but does not waive its common law rights. Owner of Reg. Nos. 599,687 and 745,475.
For Pneumatic Tires (Int. Cl. 12).
First use June 2, 1966.

SN 258,361. Coors Porcelain Company, Golden, Colo. Filed Nov. 10, 1966.

For Vehicle Tire Studs (Int. Cl. 12).
First use Sept. 13, 1966.

SN 267,380. Garlock Inc., Palmyra, N.Y. Filed Mar. 23, 1967.

GARFITE

For Machinery Packing, Made Wholly or in Part From Fibrous Material (Int. Cl. 17).
First use Oct. 25, 1965.

SN 267,639. Maremont Corporation, Chicago, Ill. Filed Mar. 27, 1967.

SS
SEVERE SERVICE

Applicant disclaims the words "Severe Service" apart from the mark as shown, subject to the applicant's reservation of rights thereto.
For Metallic Brake Blocks for Vehicles (Int. Cl. 12).
First use at least as early as Dec. 9, 1966.

Class 36 — Musical Instruments and Supplies

SN 255,344. Paisano Productions, Los Angeles, Calif. Filed Sept. 28, 1966.

LISTENER'S DIGEST

For Tape Recorder Cartridges (Int. Cl. 9).
First use July 29, 1966.

SN 259,082. Mario Jacob Bobadilla, d.b.a. Bob Mario, North Hollywood, Calif. Filed Nov. 21, 1966.

c/c

For Musical Instrument Mouthpieces for Clarinets and Saxophones (Int. Cl. 15).
First use Mar. 15, 1961.

SN 261,381. Maurice Lipsky Music Co., Inc., New York, N.Y. Filed Dec. 23, 1966.

CALIFORNIAN

For Musical Instruments—Namely, Guitars, Saxophones, Clarinets, Trumpets, Trombones, Mandolins, Ukuleles, Banjos, Drums, Accordions, and Accessories Thereto (Int. Cl. 15).
First use on or about July 1, 1964.

SN 282,631. Sounds Unlimited Recording Company, Inc., Lubbock, Tex. Filed Oct. 16, 1967.

DUST BOWL
RECORDS

Applicant disclaims the word "Records" apart from the mark as shown.
For Phonograph Records (Int. Cl. 9).
First use Aug. 28, 1967.

Class 37 — Paper and Stationery

SN 257,449. The American Paper Products Company, Youngstown, Ohio. Filed Oct. 28, 1966.

APPCO

The drawing is lined for the colors red and blue.
For Packaging Materials—Namely, Envelopes (Int. Cl. 16).
First use Oct. 7, 1966.

SN 260,392. American Hospital Supply Corporation, Evanston, Ill. Filed Dec. 9, 1966.

TOMAC

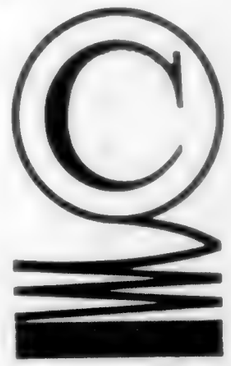
Owner of Reg. Nos. 326,450, 732,775, and 836,601.
For Paper Products—Namely, Valuables Envelopes, Bath Mats, Kerchief Tissues, Birth Certificate Forms, Medicine Cards, and Examination Table Paper (Int. Cl. 16).
First use on or before July 1, 1966.

SN 270,004. Professional Tape Co., Inc., Riverside, Ill. Filed Apr. 25, 1967.

HI-TEMP

For Self-Sticking Identifying Tape and Self-Sticking Sterilization-Indicating Tape (Int. Cl. 16).
First use in or about December 1958.

SN 278,179. Churchill Business Forms Company, Newtown, Conn. Filed June 6, 1967.



For Continuous Data Processing Forms (Int. Cl. 16).
First use Dec. 15, 1966.

SN 273,221. Zip-Mark Corporation, Bordentown, N.J. Filed June 6, 1967.

ZIPAMATIC

For Ball Pens, and Felt-Tipped Markers (Int. Cl. 16).
First use Feb. 7, 1967.

SN 273,424. Silver Bear, Inc., Atlanta, Ga. Filed June 8, 1967.

NUTSHELL

For Bound Composition Books (Int. Cl. 16).
First use May 28, 1967.

SN 273,625. Engravers Paper Company, Louisville, Ky. Filed June 12, 1967.

MARENGO

For Bond Paper and Envelopes (Int. Cl. 16).
First use 1925.

Class 38 — Prints and Publications

SN 254,891. Riley Electric Log, Inc., Oklahoma City, Okla. Filed Sept. 21, 1966.

Riley's

For Reprinted Well Logs (Int. Cl. 16).
First use on or about Nov. 20, 1945.

SN 255,228. Professional Communications, Inc., Chicago, Ill. Filed Sept. 27, 1966.

pm

For Periodical Publication—Namely a Magazine (Int. Cl. 16).
First use Sept. 1, 1966.

SN 256,092. Harper & Row, Publishers, Incorporated, New York, N.Y. Filed Oct. 10, 1966.

Owner of Reg. Nos. 638,798, 642,660, and 709,368.
For Books, Literary Magazines, Library and School Periodical Bulletins, Catalogs, Bookstore Notices, Book Review Summaries, Newsletters, and Posters (Int. Cl. 16).
First use about 1817.

SN 259,495. Whale's Tale, Inc., Cleveland, Ohio. Filed Nov. 25, 1966.

WHALE'S TALE

For Pamphlet Published Periodically Describing Merchandise for Sale (Int. Cl. 16).
First use Oct. 22, 1966.

SN 260,533. James Dines & Co., Inc., New York, N.Y. Filed Dec. 12, 1966.

For Investment Advice Letter (Int. Cl. 16).
First use Oct. 19, 1962.

SN 260,783. The Stevens-Davis Company, Chicago, Ill. Filed Dec. 14, 1966.

STEVE DAVIS

The name "Steve Davis" is fictional.
For Executive Newsletter (Int. Cl. 16).
First use Dec. 6, 1966.

SN 260,855. Hallmark Cards, Incorporated, Kansas City, Mo. Filed Dec. 15, 1966.

NIBBLES

For Engagement Calendars (Int. Cl. 16).
First use June 1, 1966.

SN 261,111. The Stevens-Davis Company, Chicago, Ill. Filed Dec. 19, 1966.

people
ARE IMPORTANT!

For Booklets and Posters, Issued From Time to Time, for Improving Employer-Employee Relations (Int. Cl. 16).
First use on or about Oct. 5, 1961.

SN 261,112. The Stevens-Davis Company, Chicago, Ill. Filed Dec. 19, 1966.

SD

For Newsletters Devoted to Sales Training, Sales Management, and to Improving Employer-Employee Relations (Int. Cl. 16).
First use at least as early as May 1961.

SN 264,613. Terra Chemicals International, Inc., Sioux City, Iowa. Filed Feb. 13, 1967.

Prescription for
Extra
Profit

For Booklet Relating to Agricultural Matters, Published From Time to Time (Int. Cl. 16).
First use during December 1966.

SN 265,018. Ulf Hansell, St. Paul, Minn. Filed Feb. 20, 1967.

PSP

For Booklets Containing Punch-Out Parking Cards (Int. Cl. 16).
First use Nov. 16, 1966.

SN 265,133. Zip Code Publishing Company, Inc., Milwaukee, Wis. Filed Feb. 20, 1967.

MEMO MAID

For Home and Office Reference Book, Which Supplies Information in Regard to Zip Codes, Postal Rates, Time Zones, and Similar Information; and, in Addition, Provides a Form for an Address Book and Greeting Card Check List (Int. Cl. 16).
First use Mar. 17, 1966.

Class 39 — Clothing

SN 231,478. J. C. Penney Company, New York, N.Y. Filed Oct. 23, 1965.

Jim
WELLS

The name "Jim Wells" is fictitious. Owner of Reg. Nos. 829,127, 829,801, and 840,522.
For Boys' Hosiery, Underwear, Jeans, Overalls, Shoes, and Headwear (Int. Cl. 25).
First use May 19, 1964, on jeans.

SN 235,504. Gamble-Skogmo, Inc., Minneapolis, Minn. Filed Dec. 29, 1965.

Beauti-Knit

The word "Knit" is disclaimed apart from the mark as shown.
For Women's Hosiery (Int. Cl. 25).
First use April 1965.

SN 256,832. Elder Manufacturing Company, St. Louis, Mo. Filed Oct. 20, 1966.

T.S.
Britches

The word "Britches" is disclaimed apart from the mark as shown.
For Men's and Boys' Slacks (Int. Cl. 25).
First use Oct. 11, 1966.

SN 261,220. The Kendall Company, Walpole, Mass. Filed Dec. 21, 1966.

Without waiving its common-law rights and for purposes of this registration only, applicant makes no claim herein to the pictorial representation of a pair of stockings.
For Hosiery (Int. Cl. 25).
First use Sept. 21, 1966.

SN 261,297. Misty Harbor, Ltd., New York, N.Y. Filed Dec. 22, 1966.

WHEN THE 'INS' GO OUT

For Raincoats (Int. Cl. 25).
First use on or about Sept. 27, 1966.

SN 264,209. Sarah Haig, Bronx, N.Y. Filed Feb. 8, 1967.

HAIG "LEERS"

For Heel Socks and Combination Foot Wear and Heel Socks (Int. Cl. 25).
First use Jan. 10, 1967.

SUPPLEMENTAL REGISTER

These registrations are not subject to opposition.

Class 1 — Raw or Partly Prepared Materials

846,046. Fredonia Seed Company, Fredonia, N.Y. SN 257,847. Filed P.R. 11-3-66; Am. S.R. 12-27-67.

FUN WITH FANTASTIC SEEDS

For Vegetable and Flower Seeds of Novelty Varities (Int. Cl. 31).
First use Sept. 1[illegible], 1966.

Class 2 — Receptacles

846,047. A & E Plastik Pak Co., Inc., Los Angeles, Calif. SN 233,296. Filed P.R. 11-26-65; Am. S.R. 1-11-68.

MEAT-N-VU

For Transparent Meat Trays (Int. Cl. 20).
First use Nov. 1, 1965.

Class 6 — Chemicals and Chemical Compositions

846,048. Airkem, Inc., Carlstadt, N.J. SN 264,784. Filed P.R. 2–16–67; Am. S.R. 12–26–67.

KAGE KARE

For Liquid Odor Counteractant Composition for Diluted Application to Environmental Surfaces and Litter for Confined Animals To Eliminate or Substantially Reduce the Malodors of Animal Excreta (Int. Cl. 5).
First use Dec. 15, 1966.

846,049. Uni-Tech Chemical Manufacturing Company, Sun Valley, Calif. SN 272,668. Filed P.R. 5–31–67; Am. S.R. 12–13–67.

HEMACHROME-FE

For Human Hemoglobin Laboratory Reagent Used in Diagnostic Testing as a Standard and Control (Int. Cl. 1).
First use on or before July 1, 1966.

Class 15 — Oils and Greases

846,050. Southwest Grease & Oil Co. (Kansas City), Inc., Kansas City, Mo. SN 245,026. Filed P.R. 5–5–66; Am. S.R. 1–10–68.

FLO-GREASE

For Lubricating Greases (Int. Cl. 4).
First use on or before Apr. 10, 1945.

846,051. Radiator Specialty Company, Charlotte, N.C. SN 262,288. Filed P.R. 1–10–67; Am. S.R. 12–8–67.

BEARIN'SEAL

The drawing is lined for the color red.
For Lubricant Additive for Preventing Oil Leaks (Int. Cl. 1).
First use Nov. 16, 1966.

Class 16 — Protective and Decorative Coatings

846,052. Eutectic Welding Alloys Corporation, Flushing, N.Y. SN 252,654. Filed P.R. 8–18–66; Am. S.R. 8–22–67.

PLASTALLOY

For Coating Products—Namely, Plastic Powder and Paints (Int. Cl. 2).
First use May 18, 1966.

846,053. Excel Chemical Corporation, Milwaukee, Wis. SN 265,504. Filed P.R. 2–27–67; Am. S.R. 12–26–67.

POSITIVE PROTECTIVE COATING

For Liquid Silicone Water Repellents for Masonry, Brick, Wood, Metal, and the Like (Int. Cl. 2).
First use Mar. 8, 1966.

Class 21 — Electrical Apparatus, Machines, and Supplies

846,054. Fedtro, Inc., Rockville Centre, N.Y. SN 261,481. Filed P.R. 12–27–66; Am. S.R. 12–27–67.

TV
COLOR CLEAR

For Electro-Magnetic Television Color Purifiers (Int. Cl. 9).
First use Dec. 14, 1966.

Class 22 — Games, Toys, and Sporting Goods

846,055. Potomac Engineering Corporation, Chicago, Ill. SN 250,862. Filed P.R. 7–22–66; Am. S.R. 12–4–67.

LOCK & LEARN

For Educational Devices or Toys To Train Children in the Manipulation of Various Door Fasteners (Int. Cl. 28).
First use July 11, 1966.

846,056. Tudor Metal Products Corporation, Brooklyn, N.Y. SN 261,119. Filed P.R. 12–19–66; Am. S.R. 12–20–67.

SUPER BOWL

For Equipment (or Apparatus) Sold as a Unit for Playing a Football-Type Board Game (Int. Cl. 28).
First use Dec. 6, 1966.

Class 23 — Cutlery, Machinery, and Tools, and Parts Thereof

846,057. International Paper Company, New York, N.Y. SN 260,862. Filed P.R. 12–15–66; Am. S.R. 12–7–67.

BUNDLE/PAKER

For Packaging Machinery (Int. Cl. 7).
First use Nov. 17, 1966.

Class 27 — Horological Instruments

846,058. Ulysse Nardin, Societe Anonyme, Manufacture de Montres et de Chronometres, Le Locle, Switzerland. SN 263,714. Filed P.R. 1–31–67; Am. S.R. 12–29–67.

NARDIN

Owner of Swiss Reg. No. 194,449, dated Oct. 20, 1962; and U.S. Reg. Nos. 429,250 and 829,076.
For Horological Products—Namely, Clocks, Watches and Parts Thereof (Int. Cl. 14).

Class 34 — Heating, Lighting, and Ventilating Apparatus

846,059. Klenz-Aire, Inc., Louisville, Ky. SN 264,835. Filed P.R. 2–16–67; Am. S.R. 1–3–68.

KLENZ-AIRE

For Secondary Incinerator Units (Int. Cl. 11).
First use Sept. 15, 1964.

Class 37 — Paper and Stationery

846,060. Phillips Petroleum Company, Bartlesville, Okla. SN 249,874. Filed P.R. 7–8–66; Am. S.R. 12–18–67.

SEAL 'N FREEZE

For Plastic Coated Locker Paper (Int. Cl. 16).
First use Apr. 1, 1966.

Class 38 — Prints and Publications

846,061. Lester Mann, Ambler, Pa. SN 243,328. Filed P.R. 4–13–66; Am. S.R. 11–22–67.

THE JOURNAL OF SPECIAL EDUCATION

For Quarterly Professional Magazine Directed Generally to Educators of Retarded Children (Int. Cl. 16).
First use Mar. 29, 1966.

846,062. Foto Features, Inc., Woodland, Calif. SN 257,952. Filed P.R. 11–4–66; Am. S.R. 12–19–67.

QUICKIE
5 Minute
Spanish Lessons

For Instructional Booklet Published From Time to Time (Int. Cl. 16).
First use Sept. 29, 1966.

846,063. The Bureau of National Affairs, Inc., Washington, D.C. SN 270,753. Filed 5–5–67.

FEDERAL CONTRACTS REPORT

For Periodically Published News Reports (Int. Cl. 16).
First use Feb. 24, 1964.

Class 39 — Clothing

846,064. I. C. Isaacs & Company, Inc., Baltimore, Md. SN 243,669. Filed P.R. 4–18–66; Am. S.R. 1–12–68.

LADY ISAACS

The name "Lady Isaacs" is fanciful and does not refer to any individual.
For Ladies' Slacks and Shorts (Int. Cl. 25).
First use Mar. 21, 1966.

Class 42 — Knitted, Netted, and Textile Fabrics, and Substitutes Therefor

846,065. Fashion Decorators, Inc., New York, N.Y. SN 261,348. Filed P.R. 12–23–66; Am. S.R. 1–11–68.

FINEPLEAT

For Window Coverings—Namely, Curtains and Draperies (Int. Cl. 24).
First use Dec. 9, 1966.

Class 45 — Soft Drinks and Carbonated Waters

846,066. Columbine Beverage Co., d.b.a. Applebrau, Denver, Colo. SN 261,463. Filed 12–27–66.

APPLE BRAU

For Apple-Flavored Soft Drink and Syrup for Making the Same (Int. Cl. 32).
First use July 1, 1965.

Class 46 — Foods and Ingredients of Foods

846,067. Golden Grain Macaroni Co., San Leandro, Calif. SN 259,692. Filed P.R. 11–30–66; Am. S.R. 12–18–67.

HARMAL CORPORATION

Notice of Recordation of Trade Name

On December 15, 1967, there was published in the Federal Register (32 F.R. 17985) a notice of application for the recordation under section 42 of the Act of July 5, 1946, as amended (15 U.S.C. 1124) of the trade name HARMAL CORPORATION used by Harmal Corporation, an Illinois corporation, and Ball Machinery Company, an Illinois corporation. The notice advised that prior to final action on the application, filed pursuant to section 11.16, Customs Regulations (19 CFR 11.16), consideration would be given to relevant data, views, or arguments submitted in opposition to the recordation and received not later than 30 days from the date of publication of the notice. No responses were received in opposition to the application.

The name "HARMAL CORPORATION" is hereby recorded as the trade name of Harmal Corporation, a corporation organized under the laws of the State of Illinois, located at 939 West Lake Street, Chicago, Illinois, and Ball Machinery Company, an Illinois corporation, located at 939 West Lake Street, Chicago, Illinois, when applied to metal working machine tools, manufactured in Italy.

EDWIN F. RAINS,
Feb. 9, 1968. *Acting Commissioner of Customs.*

Disclaimers and Dedications

2,981,185.—*Blake M. Caldwell*, Fort Worth, Tex. WELL PERFORATING APPARATUS. Patent dated Apr. 25, 1961. Disclaimer and dedication filed Nov. 14, 1967, by the assignee, *Jet Research Center, Inc.*

Hereby disclaims and dedicates to the Public the terminal portion of the term of the patent subsequent to Dec. 31, 1966.

2,986,089.—*Lorrain D. Meddick*, Whittier, Calif. DEBRIS-FREE PERFORATING GUN. Patent dated May 30, 1961. Disclaimer and dedication filed Nov. 14, 1967, by the assignee, *Borg-Warner Corporation.*

EXPIRATION OF PATENTS

The patents within the range of numbers indicated below expire during March 1968, except those which may have been extended under the provisions of the Veterans Patent Extension Act (64 Stat. 316 as amended by 66 Stat. 321) and those which may have expired earlier due to shortened terms under the provisions of Public Law 690. A list of Veterans' patents which have been extended appears in the *Annual Index of Patents—1968*.

Patents	Numbers 2,543,744 to 2,546,957, inclusive

DECISIONS IN PATENT AND TRADEMARK CASES

U.S. Court of Customs and Patent Appeals

IN RE DONALD L. ELBERT, JAMES G. SIMS, AND GERALD W. SOVEREIGN

No. 7706. Decided March 9, 1967

[54 CCPA—; 373 F.2d 534; 152 USPQ 805]

1. PATENTABILITY—OBVIOUSNESS.

"Concededly no reference expressly describes the use of catenary arcs to join the sides of a multi-branched orifice [for melt spinning polymer filaments]. Appellants do concede that the catenary curve which joins the branches of their orifice 'would differ from other curved surfaces—for example, circular—by only an extremely difficultly measurable and minute amount,' and that 'an artisan might experimentally vary the shape of the orifice by providing arced portions of differing shape.' Appellants have presented no evidence or argument which convinces us that the catenary arc employed by them to connect branches of the orifice is significant or critical, or is anything more than one of numerous curves a person of ordinary skill in the art would find obvious for that purpose, ultimately to provide filaments having cross sections resembling polygons."

2. SAME—PARTICULAR SUBJECT MATTER—"TEXTILE FILAMENTS AND SPINNERETS FOR THEIR PRODUCTION."

The refusal of certain claims in an application entitled "Textile Filaments and Spinnerets for Their Production," as unpatentable over the prior art, is affirmed.

AFFIRMED.

Roger Hansel, *John H. Lewis, Jr.*, *Ellsworth H. Mosher* (*Stanley M. Tarter*, of counsel) for appellants.

Joseph Schimmel (*Jere W. Sears*, of counsel) for the Commissioner of Patents.

Before WORLEY, *Chief Judge*, RICH, SMITH, and ALMOND, *Associate Judges*, and Judge WILLIAM H. KIRKPATRICK [1]

WORLEY, *Chief Judge*, delivered the opinion of the court.

The sole issue here is whether the Board of Appeals committed reversible error in affirming the Examiner's rejection of claims 8–17 in appellants' application,[2] entitled "Textile Filaments and Spinnerets for Their Production," as "unpatentable" over certain prior art under 35 U.S.C. 103. Our review of the record with due regard for appellants' arguments satisfies us that no such error appears.

The invention relates to a spinneret plate to be used in the melt spinning of textile filaments. Melt spinning involves forcing melted polymer under pressure through tiny holes, or orifices, in a spinneret plate. Even though the extrusion orifices be non-circular in cross section, surface tension forces tend to draw the molten streams emerging from the outlet side of the plate into a circular cross section before it can solidify to form continuous filaments. The feature of appellants' spinneret plate which is asserted to be nonobvious is that the extrusion orifices thereof are bounded in part by arcs of a catenary.[3] Ideally, the filaments produced from appellants' spinneret plate exhibit an exact polygonal cross section, viz, triangular or pentagonal. As a practical matter, a filament of "trigonal" cross section produced by appellants has slightly convex sides and rounded or blunted apexes, while a "pen-

[1] Senior District Judge, Eastern District of Pennsylvania, sitting by designation.
[2] Serial No 147,770, filed October 26, 1961.

tagonal" filament has concave sides and rounded apexes. As a result of its plurality of longitudinal facets and the concomitant opportunity for internal reflection, the filament possesses high luster, brilliance and sparkle.

The subject matter is reflected in claim 8:

8. A spinneret plate for use in melt spinning filaments exhibiting a substantially polygonal cross section of at least three sides comprising a solid plate having a melt face and an extrusion face and having at least one orifice extending between said faces to provide a passageway for molten polymer, said orifice defined by a bounding wall having a form at the extrusion face determined by at least three inwardly projecting lines assuming at their closest approach to the center of said orifice the curve of catenary arcs.

The references are:

Hazell, 1,902,956, March 28, 1933.
Holland, 2,939,202, June 7, 1960.
British patent, 779,822, July 24, 1957.
Italian patent, 546,143, July 12, 1956.

Hazell observed that surface tension tends to cause an extruded filament to draw into a circular cross section configuration in wet spinning processes. To counteract that tendency, Hazell employs spinneret orifies (FIG. 1) having "outwardly concave sides" and "cusped corners" to produce "filaments having cross sections the boundaries of which

Fig. 1.

are straight lines," such as "triangles," squares or "polygons." The "use of longer cusps and more deeply concaved sides" produces filaments having "small cusps and somewhat concave sides." The patentee observed that various factors in addition to the shape of the spinneret orifice determine the cross section of the fiber produced, among which are the pressure on the polymer material and the rate at which the material is withdrawn from the face of the spinneret.

Holland employs a spinneret plate having orifices generally resembling a triangle (with rounded corners and arcuately indented sides consisting of arcs of circles) to produce a trilobal filament having convex sides, rounded apexes and high luster.

British discloses the use of branched orifices "consisting of a plurality of narrow elongated slots of equal length radiating from a common central aperture" for melt spinning non-circular filaments. Ac-

[3] The term "catenary" defines a curved line of certain characteristics, just as the term "circle" does. The Solicitor's brief points out:

> • • • Webster's New Collegiate Dictionary defines • • • [catenary] as "The shape assumed by a perfectly flexible cord in equilibrium under given forces . . . exemplified in a chain or heavy cord hanging freely between two points of support." It is evident from this example that a whole family of catenaries may be suspended from the same two points of support, depending on the length of cord. • • •

In the orifice shown in appellants' FIG. 1, Numerals 2, 3 and 4 denote the catenary arcs

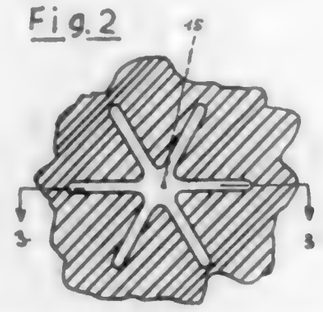
FIG. 1.

joining the sides of the three slots or legs.

cording to British, "The sides of the re-entrant angles forming the indentations [between branches] may be straight or curved or have the form of a sickle or any other shape, as required for different purposes." The pentagonal filament produced, as illustrated in the reference, appears to have concave sides and rounded apexes.

Italian employs spinnerets in which the orifices are "preferably branched, more particularly stellate" to offset the tendency of the filament to assume a circular cross section. The adjacent branches of the orifice appear joined by a curve resembling a circular arc (FIG. 2).

Fig. 2



Like Hazell, the Holland, British and Italian patents all recognize that filament shape is a function of process conditions as well as orifice shape.

The Board agreed with the Examiner's application of the references to the appealed claims, stating:

> • • • the slight change in design in appellants' spinneret as compared with those of the references would be obvious to one having ordinary skill and knowledge in this art. There is no evidence in this record by way of a proper side by side comparison wherein the only variable is the spinneret shape demonstrating the claimed spinneret, including catenary arcs, to exhibit different and unexpected properties from those of the reference spinnerets.

[1] Concededly no reference expressly describes the use of catenary arcs to join the sides of a multi-branched orifice. Appellants do concede that the catenary curve which joins the branches of their orifice "would differ from other curved surfaces—for example, circular—by only an extremely difficultly measurable and minute amount," and that "an artisan might experimentally vary the shape of the orifice by providing arced portions of differing shape." Appellants have presented no evidence or argument which convinces us that the catenary arc employed by them to connect branches of the orifice is significant or critical, or is anything more than one of numerous curves a person of ordinary skill in the art would find obvious for that purpose, ultimately to provide filaments having cross sections resembling polygons.

[2] The decision is affirmed.

AFFIRMED.

SMITH, *J.*, concurring.

The record shows that the Board of Appeals here consisted of an examiner-in-chief and two acting examiners-in-chief. Appellants do not challenge the legality of that Board. For the reasons expressed in my dissenting opinion in *In re Wiechert*, 54 CCPA —, — F.2d —, 152 USPQ 247, the decision of such a Board in my view is a legal nullity. However, I must accept the majority's view on this issue in the *Wiechert* case, i.e., the legality of the Board is not an issue here. I therefore participate in the merits of this appeal and in so doing, agree with the conclusion of the majority.

U.S. Court of Customs and Patent Appeals

IN RE EDGAR G. HEYL

No. 7881. Decided June 29, 1967

[54 CCPA —; 379 F.2d 1018; 154 USPQ 178]

1. APPEAL TO U.S. COURT OF CUSTOMS AND PATENT APPEALS—MATTER BEFORE COURT—TERMINAL DISCLAIMER FILED AFTER DECISION BY BOARD OF APPEALS—*In re Tanner* AND *In re Dunn* DISTINGUISHED.

"Appellant argues that the Board's refusal to consider his terminal disclaimer deliberately flouts this court's direction in *In re Tanner*, 52 CCPA 1307, 343 F.2d 1018, 145 USPQ 345 (1965), a decision several months earlier than the Board's refusal here. We do not agree. We remanded that case to the Board to consider the effect of a terminal disclaimer filed after appeal in the light of *decisions of this court clarifying the law subsequent to the Board's action.* Those same decisions were several months prior to the Board decision here. See also *In re Dunn*, 52 CCPA 1760, 349 F.2d 433, 146 USPQ 479 (1965). We, of course, did not mean by those exceptional actions, taken in the interest of justice, to preclude the establishment of orderly procedures for the consideration of terminal disclaimers in the Patent Office. We interpret the Board's decision in this case as a refusal to consider the effect of the disclaimer because of its untimely submission. It does not appear that any of our later decisions would affect the propriety of that refusal. We, therefore, will not disturb it. Cf. *In re Pantzer*, 52 CCPA 1135, 341 F.2d 121, 144 USPQ 415 (1965); *In re Harris*, 51 CCPA 786, 324 F.2d 316, 139 USPQ 292 (1963). We therefore decide the case on the basis that there is no terminal disclaimer for our consideration."

2. SAME—SAME.

"The Solicitor's argument for the unpatentability of these claims seems to us no more than an ill-disguised rejection for lack of support, quite distinct from that for double patenting made below. We decline to consider it. *In re Baird*, 52 CCPA 1747, 348 F.2d 974, 146 USPQ 579 (1965); *In re Sutherland*, 52 CCPA 1683, 347 F.2d 1009, 146 USPQ 485 (1965)."

3. PATENTABILITY—DOUBLE PATENTING—OBVIOUS VARIATIONS.

"Appellant relies primarily on the limitation in the Dreyfus et al. claims to the effect that 'a band' (of indeterminate width) of the skirt must be heated. He argues that his claims require the *entire* skirt to be heated and are thus patentably distinct from those of the patent. He recognizes, as he must, that his claims are not so limited in terms. He attempts, however, to read into them the limitations of his examples. Inasmuch as there is no terminal disclaimer before us, we do not feel that it is necessary to decide whether this effort is successful. It seems to us, as it did to the Examiner, that even if the claims here in question define separate inventions by reason of the reading in of the example limitations, one is no more than an obvious variant of the other. In such a case, of course, the double patenting rejection is good. *In re Zickendraht*, 50 CCPA 1529, 319 F.2d 225, 138 USPQ 22 (1963); see *In re Robeson*, 51 CCPA 1271, 331 F.2d 610, 141 USPQ 485 (1964); *In re Kaye*, 51 CCPA 1485, 332 F.2d 816, 141 USPQ 829 (1964)."

4. SAME—SAME—SAME.

"Appellant does urge [in enlisting a double patenting rejection] that unobviousness is imparted by the specification of two-ply laminate in claim 32 and of polyethylene terephthalate in claims 44 and 45 and, even, by the specification of a pressure-containing beverage in claim 45 and the heating of the contents of the container specified in claims 44 and 45. We cannot agree. Limitations of the invention of the patent claims to use in a conventional way or with plastic material of admittedly known desirable qualities are not unobvious limitations. Nor could we ignore, on the mere contrary assertion of appellant, the Examiner's persuasive statement that the laminate might obviously be substituted for the film of a single layer."

5. SAME—PRODUCT—OBVIOUSNESS—CLOSURE—35 U.S.C. 103.

"Appellant's short argument against the prior art rejection is based on his contention that the central part of Engels' closure would not be in an unshrunken condition. Appellant's claims require an unshrunken and relatively thin central portion of the closure. Appellant compares the steps in his formation of the closure with those of Engels to show the necessity of the differences, neither disclosure being explicit. We think, however, that the Examiner correctly pointed out that these arguments would be more in point were method claims here involved. This rejection is under 35 U.S.C. 103. Whether or not Engels anticipates appellant's closure, it seems to us that unobviousness cannot be predicated on apparently immaterial differences in thickness of the plastic material. We likewise agree with the Examiner's disposal of appellant's other arguments relying on the particular plastics, use with 'pressure beverages', etc., as obvious expedients."

6. SAME—PARTICULAR SUBJECT MATTER—"CLOSURE FOR BOTTLES AND OTHER CONTAINERS."

The decision of the Board of Appeals, in an application entitled "Closure for Bottles and Other Containers," refusing certain claims on the ground of double patenting and other claims as unpatentable over the prior art, is affirmed on both grounds.

AFFIRMED.

Alvin Guttag (*C. Edward Parker*, of counsel) for appellant.

Joseph Schimmel (*George C. Roeming*, of counsel) for the Commissioner of Patents.

Before WORLEY, *Chief Judge*, and RICH, SMITH and ALMOND, *Associate Judges*

RICH, *J.*, delivered the opinion of the court.

This appeal is from the decision of the Patent Office Board of Appeals, adhered to on reconsideration, affirming the rejection of claims 30–35 and 40–46 in application Serial No. 505,415, filed May 2, 1955, entitled "Closure for Bottles and Other Containers." A rejection of claims 36–39 was also affirmed but appeal from that decision has been withdrawn. No claim has been allowed.

The Claimed Invention

The invention is a method for the formation of a closure at the opening in a container (e.g., at the top of a bottle) in which a sheet of polymer is placed over and around the opening and then heat shrunk to form the closure. Claims are directed to the closure itself, the method, and apparatus. The following are illustrative:

30. A method of forming a closure having a central portion and a skirt for containers from a heat shrinkable polymer and applying the same to said containers comprising placing a sheet of said polymer over the top of a container, forming from said sheet a cover portion thereof of an area to overlie the open end of the container and to have an edge portion extending downwardly over the lip of the container to form a skirt therearound, and applying heat to the skirt portion of said sheet whereby the heated area of the skirt portion will shrink and snugly fit the coextensive external area of the container.

34. A closure having a central portion and a skirt for containers made of a heat shrinkable plastic material, said closure being relatively thin and in substantially unshrunk condition over the major area of the central portion thereof, said closure terminating in a substantially shrunk skirt which, when in closing relation with a container, snugly fits the coextensive area of the container.

40. An apparatus for shaping and shrinking shrinkable film comprising means for simultaneously holding said film in place on an object, and for folding the edges of the film down and means for heating said folded edges to shrink the same while the balance of the film is held in place.

Claims 31 and 32 are dependent on claim 30 and are limited to closures which include biaxially oriented polyethylene and a laminate of that polyethylene and shrinkable polyethylene terephthalate, respectively. Claims 33 and 46 are similar to claim 30.

Claim 42 is dependent on claim 30 and specifies a shrinkable polymer of an ester of terephthalic acid and a glycol having 2 to 10 carbon atoms. Claim 43 is dependent on claim 42 and specifies an ester of

polyethylene terephthalate. Claim 44 is also dependent on claim 42 and requires that the container be filled before sealing and that the contents be subsequently heat treated.

Claim 35 is directed to the combination of container and closure, the latter being described in language similar to that of claim 34. Claim 41 is dependent on claim 35 and is limited to closures of heat shrinkable polyethylene terephthalate and containers of pressure beverages.

The Rejections

The following references were relied on:

Engels, 825,116, July 3, 1906.

Dreyfus et al., 2,976,655, Mar. 28, 1961.

Engels discloses a plastic, heat shrinkable closure which, like appellant's, is made up of a central part and a skirt. The skirt is shown in several of the drawings as heat shrunk about the part of a container adjacent the covered opening. Engels' examples disclose celluloid as the plastic.

Dreyfus et al. is assigned to W. R. Grace and Co., owners of appellant's application. It contains, inter alia, the following claims:

1. A method of forming a cover having an elastic edge comprising positioning a film of a high shrink energy polymer over and beyond the lip of a container, maintaining pressure on the film over the container, forcing the excess film downwardly around the container to form a gathered skirt and heating a band of said skirt briefly to shrink the skirt and provide a gathered but relatively elastic edge.

2. A method according to claim 1 wherein the polymer is irradiated, biaxially oriented polyethylene.

3. A machine for forming covers made of a heat shrinkable material on a dish shaped container comprising a container support, means for maintaining a film cover on a container positioned on said support and for gathering the edge of the film extending beyond the edge of the dish into a downwardly depending skirt and impulse heat sealing [means] positioned adjacent said support so as to heat shrink the gathered edge of said film.

The Examiner rejected closure claims 34, 35, and 41 as obvious in view of Engels under 35 U.S.C. 103. The specification of heat shrinkable polyethylene terephthalate in claim 41 did not, in the Examiner's opinion, impart patentability since "such a film is admittedly old as noted from * * * the specification. Accordingly, to substitute heat shrinkable polyethylene terephthalate for the heat shrinkable celluloid employed by Engels would be obvious." The limitation to use with a pressure beverage he deemed an obvious expedient.

The Examiner rejected method claims 30–33 and 42–46 for double patenting in view of claims 1 and 2 of Dreyfus et al. He seemed to think that appellant's claims were drawn to the same invention as those of the patent. He also argued that the same "inventive concept" was involved in each set of claims. He also thought obvious the additional limitations of claims 44 and 45.

He rejected claim 40, the apparatus claim, for double patenting in view of claim 3 of Dreyfus et al. The recitation of impulse heat sealing means in the patent claim did not, in the Examiner's opinion "render the rejection improper" since claim 40 "is clearly readable on claim 3 of Dreyfus et al. and would extend the monopoly." He also cited *In re Christensen*, 51 CCPA 1236, 330 F.2d 652, 141 USPQ 295 (1964).

The Board, in a concise opinion, affirmed the Examiner's rejections. Claims 34, 35, 40, and 41 were treated in an especially pithy fashion:

With regard to the rejection of claims 34, 35, 40 and 41 supra, in our opinion the reasons for the rejection as set forth in the Examiner's answer are considered sound. We perceive no compelling reasons in appellant's arguments for holding otherwise.

The other rejections were approved since "the gist of the invention is the same in both cases."

Appellant then filed a terminal disclaimer and requested reconsideration by the Board. In an opinion refusing to make any change, the Board commented thus on the disclaimer:

It is not the practice of the Board to consider a terminal disclaimer filed after the Board's decision since to do so would amount to a reopening of the prosecution which is contrary to Rule 198. However, in passing, we note the terminal disclaimer does not appear to be appropriate in this application in view of the *overlapping* relationship of the claims of the application and the patent, pointed out in our original decision. Hence, the *overlapping* relationship herein which, we note, was not present in *In re Robeson*, 141 USPQ 485 and *In re Kaye*, 141 USPQ 829, could result in *multiple harassment* of the public. Moreover, the Robeson and Kaye decisions have not been extended to cover cases of *different inventors with a common assignee*. [Emphasis ours.]

The Board also addressed itself to the following statement in appellant's petition:

In regard to apparatus claim 40 in particular, it is pointed out that the Board has ignored the express limitations in claim 3 of Dreyfus to impulse heat sealing means. Such means, not being disclosed in Heyl, obviously could not be claimed in Heyl, and it is submitted that Heyl is properly entitled to the generic apparatus claim.

The Board felt that the additional limitation did not create the necessary patentable distinction, applying the test of *In re Christensen*, supra, in which we said:

* * * the correct procedure for double patenting cases is to analyze the claims to determine the inventions defined therein, and then decide whether such inventions, as claimed, are *patentably distinct* and therefore qualified to be claimed in separate patents.

The Solicitor has taken an entirely different approach toward the double-patenting rejection of the method claims. He argues, in his brief, that claims 30–33 and 42–46 "are *not* supported by and not readable on appellant's original disclosure." It then follows, according to the Solicitor, as we understand his argument, that the later-filed Dreyfus et al. patent is prior art with respect to those claims since they were entered in their present form after the patent's filing date. See 35 U.S.C. 102(e); *Muncie Gear Works, Inc.* v. *Outboard Marine & Mfg. Co.*, 315 U.S. 759 (1942). The Solicitor's brief summarizes:

Since Dreyfus et al. with respect to appellant were clearly the first and only applicants to disclose the subject matter of claims 30 through 33 and 42 through 46, their disclosure under 35 U.S.C. 102(e) and (g) anticipates those claims in appellant's application and such anticipation cannot be overcome by a terminal disclaimer.

The Solicitor undertook "no amplification" of the reasons of the Examiner and Board for the rejection of claim 40. He argued that the invention of claims 34, 35, and 41 is described as well in Engels, at least, as in appellant's application.

We will discuss separately the double-patenting rejection of claims 30–33 and 42–46, the double-patenting rejection of claim 40, and the prior art rejection of claims 34, 35, and 41. We will set forth the pertinent parts of appellant's arguments in each discussion as we comment on them. We will first, however, dispose of the problem of whether the terminal disclaimer can be considered.

The Terminal Disclaimer

[1] Appellant argues that the Board's refusal to consider his terminal disclaimer deliberately flouts this court's direction in *In re Tanner*, 52 CCPA 1307, 343 F.2d 1018, 145 USPQ 345 (1965), a decision several months earlier than the Board's refusal here. We do not agree. We remanded that case to the Board to consider the effect of a terminal disclaimer filed after appeal in the light of *decisions of this court clarifying the law subsequent to the Board's action.* Those same decisions were several months prior to the Board decision here. See also *In re Dunn*, 52 CCPA 1760, 349 F.2d 433, 146 USPQ 479 (1965). We, of course, did not mean by those exceptional actions, taken in the interest of justice, to preclude the establishment of orderly procedures for the consideration of terminal disclaimers in the Patent Office. We interpret the Board's decision in this case as a refusal to consider the effect of the disclaimer because of its untimely submission. It does not appear that any of our later decisions would affect the propriety of that refusal. We, therefore, will not disturb it.[1] Cf. *In re Pantzer*, 52 CCPA 1135, 341 F.2d 121, 144 USPQ 415 (1965); *In re Harris*, 51 CCPA 786, 324 F.2d 316, 139 USPQ 292 (1963). We therefore decide the case on the basis that there is no terminal disclaimer for our consideration.

The Double Patenting Rejection of Claims 30–33 and 42–46

[2] The Solicitor's argument for the unpatentability of these claims seems to us no more than an ill-disguised rejection for lack of support, quite distinct from that for double patenting made below. We decline to consider it. *In re Baird*, 52 CCPA 1747, 348 F.2d 974, 146 USPQ 579 (1965); *In re Sutherland*, 52 CCPA 1683, 347 F.2d 1009, 146 USPQ 485 (1965).

[3] Appellant relies primarily on the limitation in the Dreyfus et al. claims to the effect that "a band" (of indeterminate width) of the skirt must be heated. He argues that his claims require the *entire* skirt to be heated and are thus patentably distinct from those of the patent. He recognizes, as he must, that his claims are not so limited in terms. He attempts, however, to read into them the limitations of his examples. Inasmuch as there is no terminal disclaimer before us, we do not feel that it is necessary to decide whether this effort is successful. It seems to us, as it did to the Examiner, that even if the claims here in question define separate inventions by reason of the reading in of the example limitations, one is no more than an obvious variant of the other. In such a case, of course, the double patenting rejection is good. *In re Zickendraht*, 50 CCPA 1529, 319 F.2d 225, 138 USPQ 22 (1963); see *In re Robeson*, 51 CCPA 1271, 331 F.2d 610, 141 USPQ 485 (1964); *In re Kaye*, 51 CCPA 1465, 332 F.2d 816, 141 USPQ 829 (1964).

A contention that there are unobvious differences between the claims of the patent and the application seems implicit in appellant's frequent assertion of patentable distinction. The details of his argument, however, seem to focus almost solely on establishing the separateness of the inventions. And this, of course, is not enough. Appellant has

[1] Our action should not be taken to indicate approval of the Board's comments on the effect of the "overlapping relationship of the claims" and the different inventorship of the applications. See *In re Braithwaite*, 54 CCPA —, — F.2d —, — USPQ —; *In re Bowers*, 53 CCPA 1590, 359 F.2d 886, 149 USPQ 570 (1966).

pointed to the allowance of the Dreyfus et al. claims as indicative of the necessary patentable distinction; but we cannot be bound thereby.

[4] Appellant does urge that unobviousness is imparted by the specification of two-ply laminate in claim 32 and of polyethylene terephthalate in claims 44 and 45 and, even, by the specification of a pressure-containing beverage in claim 45 and the heating of the contents of the container specified in claims 44 and 45. We cannot agree. Limitations of the invention of the patent claims to use in a conventional way or with plastic material of admittedly known desirable qualities are not unobvious limitations. Nor could we ignore, on the mere contrary assertion of appellant, the Examiner's persuasive statement that the laminate might obviously be substituted for the film of a single layer.

The Double Patenting Rejection of Claim 40

There is some ambiguity in the explanation of this rejection by both Examiner and Board. However, we think that their reliance on *In re Christensen*, supra, shows that neither meant to assert that the mere dominance of the claims in the application over those of the reference patent requires a double patenting rejection. See *In re Stanley*, 41 CCPA 956, 214 F.2d 151, 102 USPQ 234 (1954). We think rather, that they found no unobvious distinction between the claims—between the generic heating means and the specific "impulse" heat sealing means. Appellant's argument again seems either to assume unobviousness or to ignore its necessity. He argues:

> The Examiner and Board have now advanced the novel proposition that even though a species invention is admittedly patentable over a prior generic invention that the owner of both the genus invention and the species invention cannot obtain a patent on the earlier filed genus invention once the specific invention issue[s] into a patent.

We do not think we have before us the case appellant describes. Appellant's inability to claim the specific heating means of Dreyfus et al. is, of course, not determinative of the unobviousness question.

The Prior Art Rejection of Claims 34, 35, and 41

[5] Appellant's short argument against the prior art rejection is based on his contention that the central part of Engels' closure would not be in an unshrunken condition. Appellant's claims require an unshrunken and relatively thin central portion of the closure. Appellat compares the steps in his formation of the closure with those of Engels to show the necessity of the differences, neither disclosure being explicit. We think, however, that the Examiner correctly pointed out that these arguments would be more in point were method claims here involved. This rejection is under 35 U.S.C. 103. Whether or not Engels anticipates appellant's closure, it seems to us that unobviousness cannot be predicated on apparently immaterial differences in thickness of the plastic material. We likewise agree with the Examiner's disposal of appellant's other arguments relying on the particular plastics, use with "pressure beverages," etc., as obvious expedients.

[6] The decision of the Board is affirmed.

AFFIRMED.

SMITH, *J.*, took no part in the decision of this case.

PATENTS

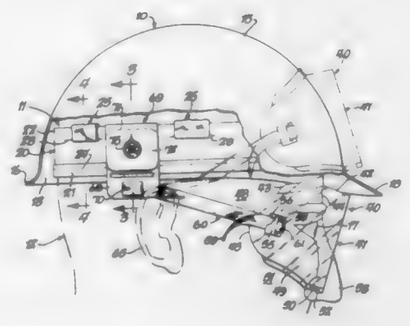
GRANTED MARCH 19, 1968

GENERAL AND MECHANICAL

3,373,443
COMBINATION HELMET AND FACE MASK
Michael T. Marietta, 5538 University Blvd., Dallas, Tex. 75206
Filed Feb. 24, 1966, Ser. No. 529,854
2 Claims. (Cl. 2—9)

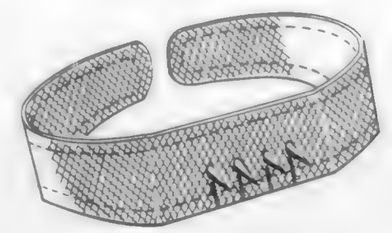
A protective head covering including two rigid members pivotally connected together wherein one member comprises a shell enveloping the skull from above the forehead to the back of the neck and the other member protects the face by extending from a point overlying the shell to below the chin. Cushion means within both members not only engage the head but also serve to limit the pivotal displacement of the members with respect to one another.

3,373,444
SAFETY ATTACHMENT FOR HARD HEADGEAR
James V. Militello, Buffalo, N.Y., assignor to American Allsafe Co., Buffalo, N.Y., a corporation of New York
Filed May 23, 1966, Ser. No. 552,095
4 Claims. (Cl. 2- -10)



1. In safety headgear having a hard shell comprising an oval dome with a visor projecting horizontally forwardly from the lower rim of the oval dome, a horizontal oval headband arranged inwardly from said rim and adapted to fit the forehead, sides and back of the user's head, and flexible harness means connecting said hard shell with said headband and adapted to provide a space between all parts of said oval dome and the crown of the user's head to protect the user's head from accidental blows against the hard shell; the combination therewith of safety goggles, comprising a goggle frame adapted to fit the user's face around the eyes, protective transparent wall means carried by said goggle frame in front of the user's eyes, and means securing said goggle frame for pressure fitting relation to the user's face, comprising a pair of extensible elastic straps, means securing the forward end of each of said straps to the corresponding side of said goggle frame in horizontal alignment with each other, and means securing the rear end of each of said straps to the corresponding side of said headband in a position generally above the inner part of the external ear of the user, said straps being stretchable to permit said goggle frame to be moved upwardly past said visor so that upon thereafter being released the goggle frame will be drawn to in an inoperative position on said visor by said stretchable elastic straps.

3,373,445
PROTECTIVE WRIST BAND
Dermot M. O'Neill, P.O. Box 561, Fort Walton Beach, Fla. 32548
Filed Feb. 1, 1967, Ser. No. 614,389
1 Claim. (Cl. 2—170)



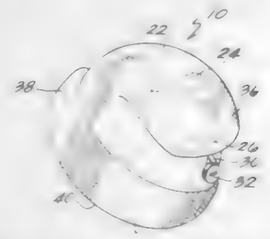
1. A wrist band for protecting the wearer against physical molestation comprising: a generally ring-shaped resilient metal strip shaped to encircle and fit the wrist, said strip having two free ends whereby said ends may be separated from each other to permit the band to be clamped on and removed from the wrist; and a plurality of rigid sharp-pointed, spike-like projections secured to said strip along a short circumferential portion thereof approximately midway between said free ends and extending radially outwardly of said strip, the remainder of the circumference of said strip being free of projections, the surfaces of said metal strip being covered with thin flexible sheet material, said projections extending through said sheet material.

3,373,446
CARICATURE COSTUME
Jack Verderame, 412 La Casa Ave., San Mateo, Calif. 94403
Filed Oct. 8, 1965, Ser. No. 494,021
2 Claims. (Cl. 2—173)

A caricature costume having an oversized hat dimensioned to fit over and enclose a wearer's head, the hat being provided with a transparent strip through which the wearer may observe, the hat extending downwardly to substantially shoulder level, and an enlarged false face piece depicting a representation of a human face secured

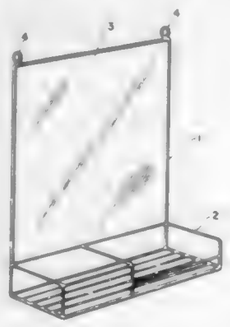
to the hat and depending therefrom and said face piece dimensioned such that it will cover a substantial abdominal portion of the wearer from about the shoulders to the waist of the wearer.

3,373,447
CONVERTIBLE HAT
June Kim, Kansas City, Mo., assignor to Reliable Knitting Works, Milwaukee, Wis., a corporation of Wisconsin
Filed Mar. 10, 1966, Ser. No. 533,280
7 Claims. (Cl. 2—196)



A conventional hood, which includes a top cap portion, a lower neck portion and an intermediate face portion, is provided with a fastener arrangment adapted to hold the hood in a folded condition forming a shortened cap which will fit a wearer's head. One of the fasteners is located in the crown area of the top cap portion and the other fastener is located in the intermediate portion of the hood so that when engaged they hold the shortened cap with a fold through the intermediate hood portion and with the fold defining the closed end of the shortened cap.

3,373,448
SHOWER-SHAVER
Otto Doyle Butler, 2607 W. Shandon, Midland, Tex. 79701
Filed July 27, 1965, Ser. No. 475,289
2 Claims. (Cl. 4—1)



A bathroom appliance for installation in a shower and including a fog resistant sheet metal mirror and a support for toilet articles.

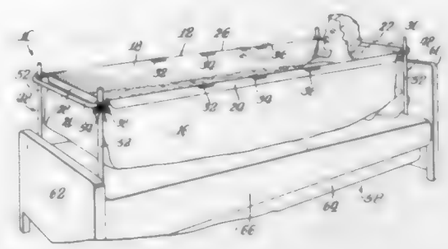
3,373,449
AUTOMATIC VALVE ACTUATED URINAL
Edward R. Rusnok, 1045 Delores Drive, Bensenville, Ill. 60106
Filed Feb. 11, 1965, Ser. No. 431,934
13 Claims. (Cl. 4—100)

An electrically operated fluid-valve actuating device having a movable member that is released, in response to an electric signal, from a spring-loaded cocked position to actuate the valve, and having a diaphragm responsive to a change of pressure caused by operation of the valve, for returning the movable member to its cocked position.

3,373,450
SWIMMING INSTRUCTION POOL
William J. Brooks, 275 Brighton St., Belmont, Mass. 02178
Filed Sept. 22, 1964, Ser. No. 398,279
3 Claims. (Cl. 4—172)

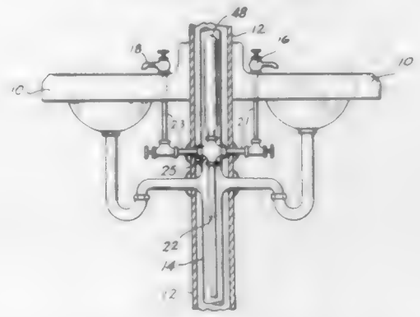
1. An instructional pool for training children to swim having a bottom and adjoining side wall extending upwardly therefrom which define a water retaining receptacle of sufficient depth to permit sequential filling with water between a selected first level of shallow depth where the bottom serves as a support to prevent submergance of a child while becoming acclimated to the surrounding water medium and a raised second level of greater depth which will permit voluntary immersion of the child in said surrounding water medium, the improvement comprising: visual attracting means including a window formed in said side wall which extends below said second level to visually allure the child into voluntarily assuming a suspended position in said surrounding water medium.

3,373,451
HOSPITAL BED BATH
Richard J. Schmidt, Chicago, Ill., assignor to Richard J. Schmidt Corporation, Chicago, Ill., a corporation of Illinois
Filed Aug. 9, 1965, Ser. No. 478,271
9 Claims. (Cl. 4—177)



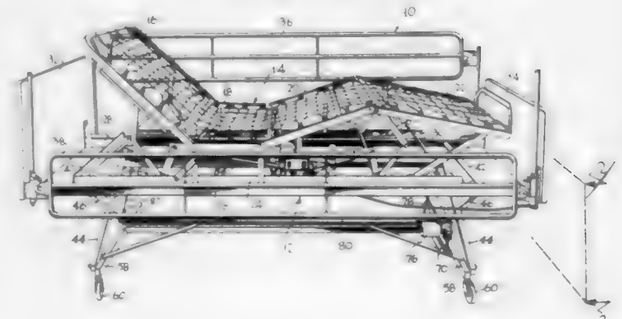
A bathing device comprising a flexible sheet having a base for resting on a mattress and having integral side and end wall portions, and means cooperating with the mattress and engageable with the wall portions for supporting the same in an upright position.

3,373,452
MANIFOLD ASSEMBLY FOR HOT AND COLD WATER FAUCET PAIRS ARRANGED BACK TO BACK
James B. Watts, Portland, Oreg., assignor to James E. La Du, Portland, Oreg.
Filed Aug. 7, 1964, Ser. No. 388,086
1 Claim. (Cl. 4—192)



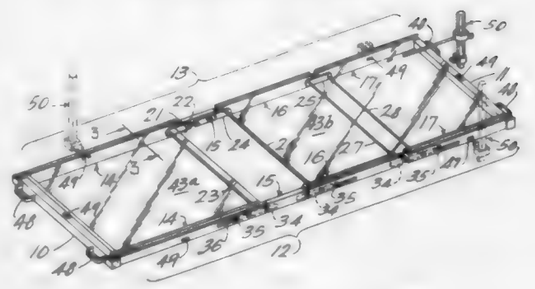
1. A manifold assembly for hot and cold water faucet pairs arranged back to back on opposite sides of a partition, the assembly comprising
(a) a pair of horizontally spaced manifolds, each being of one-piece construction,
(b) each manifold having bottom, front and back ports, a hot water side port and a cold water side port,
(c) connecting means on the bottom ports for connecting one manifold to a hot water line and the other to a cold water line,
(d) connecting means on the front and back ports for connecting the front port of one manifold to a hot water faucet, the back port of said one manifold to a cold water faucet, the front port of the other manifold to a cold water faucet and the back port of said other manifold to a hot water faucet,
(e) a hot water connecting conduit interconnecting the hot water side ports of the respective manifolds,
(f) a cold water connecting conduit interconnecting the cold water side ports of the respective manifolds,
(g) a first passageway in said one manifold interconnecting the hot water line port, the hot water faucet port, and the hot water side port thereof,
(h) a second passageway in said one manifold interconnecting the cold water faucet port and cold water side port thereof,
(i) a first passageway in said other manifold connecting the cold water line port, cold water faucet port, and cold water side port thereof,
(j) a second passageway in said other manifold connecting the hot water faucet port and hot water side port thereof,
(k) a cold water transmission line port in said one manifold communicating with said second passageway therein, and
(l) a hot water transmission line port in said other manifold communicating with said second passageway therein,
(m) the transmission line ports being adapted for connection to further manifold assemblies in remote locations.

3,373,453
VERTICALLY ADJUSTABLE BED
Robert Goodman, 5325 Westminster Ave., Philadelphia, Pa. 19131
Filed Sept. 13, 1966, Ser. No. 579,158
10 Claims. (Cl. 5—63)



An adjustable bed having a bottom support means upon which is positioned a frame. The frame is movable in a vertical direction into any incremental position of vertical adjustment. A bed-spring is supported on the frame and is provided with pivotal head and foot sections that are individually movable from a horizontal to various inclined positions. The vertical adjustment of the frame is effected by pivotally interconnected cross-bars at each end of the bed. The cross-bars are, preferably, connected, above their pivotal connection, by a tension spring. These cross-bars serve both to support the frame and to adjust it vertically. They also automatically retain the frame in each vertical position.

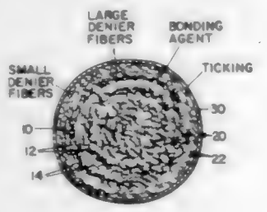
3,373,454
DEVICE FOR MOVING INJURED PERSONS
David T. Curtis, 4121 Halifax Road, Toledo, Ohio 43606
Filed Feb. 8, 1967, Ser. No. 614,687
11 Claims. (Cl. 5—81)



A device for moving injured persons having a generally rectangular open frame with the side rails of the frame each including a plurality of rail elements pivotally at-

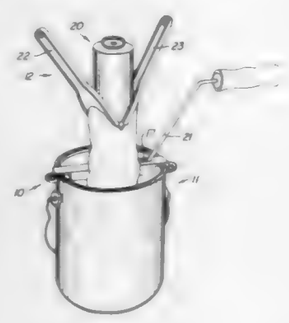
tached to one another in end-to-end relationship. Each of the pivot joints can be locked against pivotal movement so that the rigid frame, with a flexible sheet secured across its middle, may be used as a rigid litter or stretcher. The number and lengths of opposed pairs of rail elements comprising the side rails of the frame correspond in size and location to the movable sections of existing hospital examination or operating tables so that the device, when placed upon such a table with the pivot joints unlocked, will follow and conform to the surface of the table as it is elevated or depressed at various angles for examination or treatment of a patient thereon.

3,373,455
FILLING MATERIAL FOR PILLOWS
Julius Kaplan, 180 Audubon Ave., Mount Vernon, N.Y. 10552
Filed Sept. 10, 1965, Ser. No. 486,334
1 Claim. (Cl. 5—361)



A filling material for pillows comprising a package formed of an inner core of a batt of randomly oriented large denier fibers, bonded at the outer surfaces of the batt, the batt being rolled upon itself to form a jelly-roll core having high resiliency, and an outer sleeve-like wrap of a batt of randomly oriented small denier fibers enwrapping the jelly-roll core, the fibers in the batt of small denier fibers being unbonded to form a soft fluffy outer wrap.

3,373,456
PAINT ROLLER CLEANING APPARATUS
Gerald Dalton, Kaysville, Utah, assignor of fifty percent to Robert F. Wilson, Bountiful, Utah
Filed Oct. 21, 1965, Ser. No. 500,093
7 Claims. (Cl. 15—1)

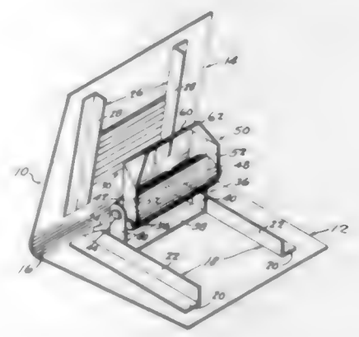


1. Paint roller cleaning apparatus comprising
a holder including means for holding a paint roller handle such that a paint roller carried thereby is positioned to have its axis upright above the open top of a paint can; and
a scraper comprising a pair of handles having an enlarged opening formed therebtween and hinge means interconnecting the handles, the opening being sufficiently large that the edges of the handles and the hinges surrounding the opening are spaced from the paint roller positioned for cleaning by the holder when the handles are in substantially the same plane and so that as the handles are pivoted toward each other the roller is squeezed between the edges surrounding the opening, whereby movement of the scraper along the length of the roller will strip paint therefrom.

3,373,457
LINT REMOVING DEVICE
Anthony J. Rouch, Jr., 583 Candle Light Lane, Hazelwood, Mo. 63042
Filed May 6, 1965, Ser. No. 453,667
2 Claims. (Cl. 15—104)

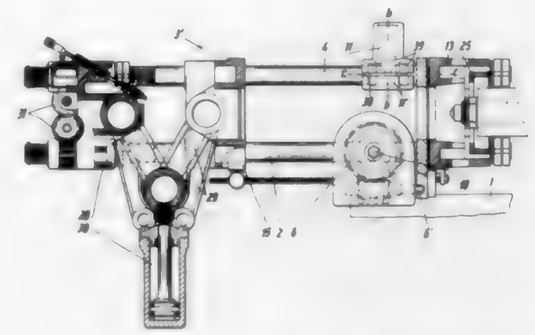
1. A device for removing lint and other foreign particles from the surface of clothing and other fabric articles comprising an elongated channel-shaped member defined by a bottom wall and shaped side walls, another wall member extending between the spaced side walls of the channel-shaped member, said other wall member and said spaced side walls having means cooperatively engageable in different alternative positions of the said other wall member so that the position of said other wall member can be reversed and inverted on the channel-shaped member, said cooperatively engageable means including means forming a sliding connection between the channel-shaped member and said other member, a sheet member having an adhesive coating on one surface thereof mounted on one side of the said other wall member, and a plurality of similar sheet members each having an adhesive coating on one surface arranged in a stack which is mounted on the aforesaid sheet member, each adhesively coated sheet member having a non-adhesive portion at one end only, said non-adhesive end portions of adjacent sheet members being positioned at opposite ends of the stack, the stack moving from a stored condition in one position of said other wall member to an exposed condition when the other wall member is reversed in which latter position the adhesive coated surfaces face outwardly.

3,373,458
STEP TOOL
William S. Haivala, % Haivala Concrete Tools, Inc., 1017 Walker, P.O. Box 1055, Wichita, Kans. 67213
Filed Oct. 21, 1966, Ser. No. 588,441
9 Claims. (Cl. 15—235.7)



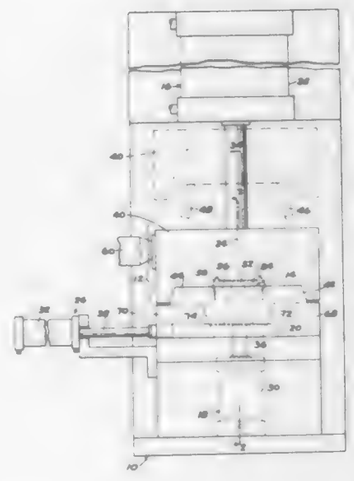
1. A step tool comprising a flat V-shaped blade having a horizontal leg and a vertical leg, a resilient band connecting the legs, said vertical leg having a rear surface, said rear surface being formed with parallel vertically spaced horizontal grooves, and a dog eccentrically pivoted upon the horizontal leg and adapted to be forcibly engaged in selected grooves.

3,373,459
INJECTION MOLDING MACHINE
Karl Hehl, Lossburg, Wurttemberg, Germany, assignor to Arburg Maschinenfabrik Hehl & Sohne, Lossburg, Wurttemberg, Germany
Filed July 7, 1966, Ser. No. 563,597
Claims priority, application Germany, July 22, 1965, A 49,812
10 Claims. (Cl. 18—30)



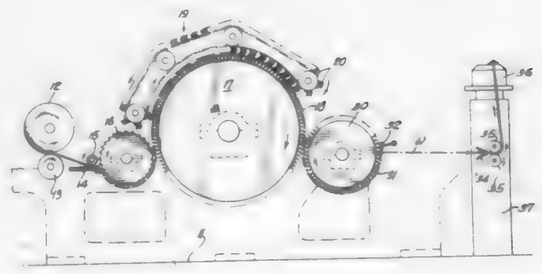
1. An injection molding machine, comprising in combination:
(a) a machine frame;
(b) a mold clamping unit mounted on supporting rods and movably connected to said frame allowing said mold clamping unit to be secured to said machine frame in both a horizontal and a vertical position, said supporting rods of said mold clamping unit having central planes through their axes spaced from the center line of said mold clamping unit;
(c) coupling members connected to said supporting rods and displaceable independently of each other in the axial direction of said supporting rods; and
(d) at least one injection unit having support rods attached thereto;
(e) said coupling members having plug connection means for receiving and holding the ends of said support rods attached to said at least one injection unit.

3,373,460
MOLDING APPARATUS
Michael Ladney, Jr., Grosse Pointe Shores, Mich. (18125 E. 10 Mile Road, East Detroit, Mich. 48021)
Filed Sept. 13, 1965, Ser. No. 486,777
4 Claims. (Cl. 18—42)



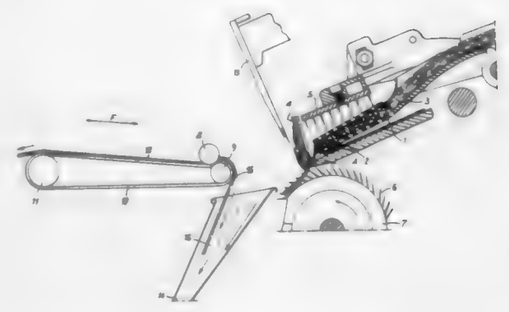
A plastic molding die wherein the male die member comprises a center core and two side cores slidably connected with the center core and including a support member having a pair of inclined support faces engaged by the side cores for constraining the side cores to move in a path of travel inclined to and in the direction of the path of travel of the center core when retracted.

3,373,461
METHOD FOR CARDING FIBERS
Joseph U. Bessette, Manchester, and Joseph A. Priestley, Goffstown, N.H., and Heath O. Kennette, Plainfield, N.J., assignors to Johnson & Johnson, a corporation of New Jersey.
Filed Nov. 6, 1964, Ser. No. 409,419
4 Claims. (Cl. 19—98)



An improved process for carding textile fibers on a flat top card, wherein, the teeth of the flats have embedded between the wires fly and waste material, whereby, the amount of waste material produced in the carding operation is greatly reduced.

3,373,462
COMBING MACHINE FOR LONG TEXTILE FIBERS
Jean Frederic Herubel, Guebwiller, France, assignor to N. Schlumberger & Cie, Guebwiller, France, a French société à responsabilité limitée
Filed June 3, 1965, Ser. No. 460,903
Claims priority, application France, June 5, 1964, 977,200
2 Claims. (Cl. 19—230)

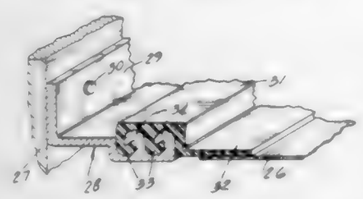


A combing machine for long textile fibers having a control means for controlling the trailing end of a previously combed web to facilitate transfer of a newly combed web from nippers of the machine to a detaching mechanism, the control device including a suction funnel having a mouth which opens upwardly and disposed between a circular comb of the machine and detaching rollers of the detaching mechanism. The portion of the mouth adjacent the circular comb is located at a level higher than the rest of the mouth which extends in the direction of reciprocation of the detaching mechanism over a distance substantially equal to the amplitude of the reciprocation.

3,373,463
MOLDING CLIP
John R. Wells, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Filed Apr. 25, 1966, Ser. No. 545,104
4 Claims. (Cl. 24—73)

A clip for securing a trim panel or the like to a base member. The clip is a thin flat body member having an attaching prong at each end portion of the body with the end portions being interconnected by one or more spaced flexible strut like members. The strut member is capable of flexing in the plane of the body so as to enable the spacing between the prongs to be easily varied and at the same time retain the original flat silhouette of the clip.

3,373,464
STRUCTURE FOR ANCHORING FLEXIBLE SHEETING
Steven Ausnit, 124 E. 61st St., New York, N.Y. 10021
Filed Mar. 30, 1965, Ser. No. 443,999
6 Claims. (Cl. 24—201)



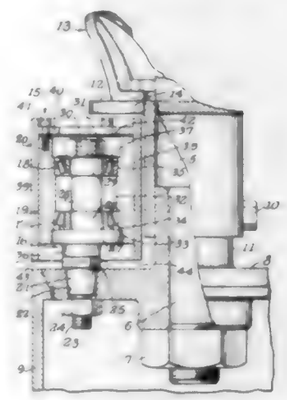
A fastener device for releasably anchoring a tensioned flexible sheet to an anchoring surface. The device includes a rigid anchor member adapted to be connected fast to the anchoring surface and a flexible attachment member made of elastomeric material adapted to be secured to the flexible sheet. Both the rigid anchor member and the flexible attachment member have complementarily shaped elongated cooperating groove and rib elements formed thereon. The groove and rib elements each comprise a neck portion which extends laterally of the longitudinal axis of the element and an enlarged head portion opening to the neck portion so that the anchor member and the attachment member are releasably interlockable by snap-in engagement of the rib and groove elements. The rib and groove elements extend transversely of the lines of force in the tensioned sheet to resist separation of the anchor and attachment members due to the tension in the sheet.

3,373,465
LOCKING HOOK WITH ARCUATELY SLIDABLE LOCKING MEMBER
Wallace J. S. Johnson, Berkeley, and Gerald Louis Claxton, Albany, Calif., assignors to Up-Right, Inc., Berkeley, Calif., a corporation of California
Filed Mar. 24, 1966, Ser. No. 537,042
3 Claims. (Cl. 24—241)

A locking hook having a hook member defining a jaw and a plane surface, a locking member with a radius corresponding to the radius of the jaw, the locking member being pivotally mounted to the hook member and mounted for limited sliding movement relative thereto to define an innermost and outermost limit of sliding movement, with the hook member partially closing the opening of the jaw during the movement from innermost to outermost

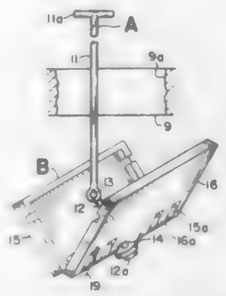
position, the locking member having a locking face which engages the plane surface of the locking hook when the locking member is at its outermost position, to thereby prevent pivotal movement of the locking member, and means for holding the locking member in its outermost position.

3,373,466
PACKER HEAD ROLLER FOR CEMENT PIPE FORMING
Donald C. Pausch, Indio, Calif., assignor to Pausch & Sons Equipment, Inc., Mecca, Calif., a corporation of California
Filed Jan. 24, 1966, Ser. No. 522,652
6 Claims. (Cl. 25—36)



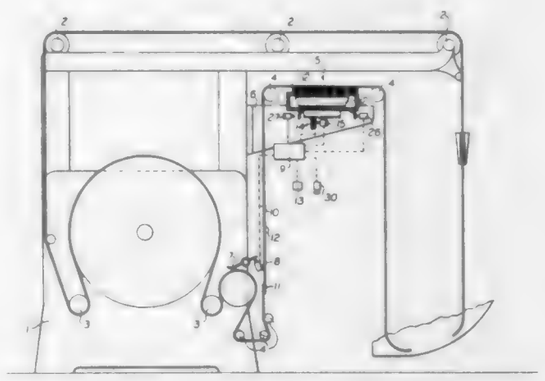
1. A roller for mounting on the head plate of the troweling cylinder of a packer head, a tapered seat being provided in said plate, said roller comprising:
(a) a stud provided with a lower tapered end fitted in said seat and having a threaded extension for a nut to lock the stud tightly to the head plate,
(b) an upper extension on said stud on an axis eccentric to the axis of the tapered end and threaded extension,
(c) two vertically spaced taper roller bearings having their inner races tightly fitted to the eccentric extension of the stud,
(d) flange integral with the stud, coaxial with the eccentric extension and located above the tapered end of the stud,
(e) a ring hub mounted on the outer races of the taper roller bearings and formed with an annular seat to accommodate the flange on the stud, and
(f) a removable hardened wear sleeve on the ring hub and having a lower end that is spaced closer to the head plate of the troweling cylinder than are said flange and the lower end of the ring hub.

3,373,467
FURNACE WALL REPAIRING DEVICE
Joseph Loughrey, 1550 Beverly Place, Pittsburgh, Pa. 15206
Filed Oct. 21, 1965, Ser. No. 499,164
15 Claims. (Cl. 25—118)



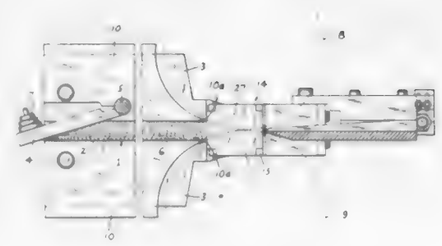
A repair device is provided for facilitating cementing and closing a hole in a furnace wall or roof. The device has a pair of elongated, hinged, plate sections that are carried in a folded relation by a two-part suspension arm assembly for guided insertion endwise through the hole that is to be repaired. The folded plates are released after insertion in the furnace by the destruction of a binding string or cord and are spread-apart about the suspension arm assembly. The spread plates are pulled up beneath the hole to provide support for the cement during the repair operation, and an upper arm of the arm assembly is disconnected from a lower arm after the completion of the patching operation, in order that the upper arm may be reused for a second operation. The plates in their endwise-folded relation define a guide slot for positively guiding them into the hole in the furnace through the agency of the suspension arm assembly, and contain the lower arm of the assembly until the means retaining them in their folded relation is released. A swinging-opening action of the plates about a pivot connection to the suspension arm assembly does not become effective until the plates are to be opened beneath the hole in the furnace.

3,373,468
METHOD OF RAISING TEXTILE FABRICS
Karl August Müllers, Monchen-Gladbach, Germany, assignor to Franz Muller Maschinenfabrik, Monchen-Gladbach, Germany, a corporation of Germany
Continuation-in-part of application Ser. No. 408,939, Nov. 4, 1964. This application May 17, 1967, Ser. No. 639,084
Claims priority, application Germany, Nov. 7, 1963, M 58,822
4 Claims. (Cl. 26—29)



A continuous method of raising woven, knitted and non-woven fabrics, which method comprises the steps of feeding a quantity of moisture to a fabric and passing the moistened fabric through a raising passage containing card points to partially raise the fabric, and repeating at least once the above-mentioned step by feeding to the fabric a predetermined increased quantity of moisture, with respect to the quantity of moisture fed in the preceding step, recycling the partially raised fabric through the raising passage for further raising thereof, whereby to obtain a more uniform raising and also to improve the total raising effect.

3,373,469
APPARATUS FOR CRIMPING TEXTILE FIBERS
Beryl Aaron Boggs, Chester, Va., assignor to Allied Chemical Corporation, New York, N.Y., a corporation of New York
Filed Aug. 8, 1966, Ser. No. 570,913
5 Claims. (Cl. 28—1)

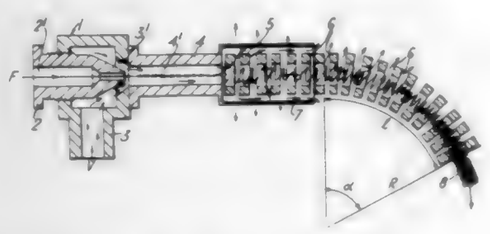


1. Apparatus for crimping textile fibers which comprises a crimping chamber including a base and a pair of side walls; a positively driven complementary pair of feed rolls having end faces, said feed rolls being disposed transversely adjacent one end of said chamber intermediate said side walls, a pair of doctor blades having a leading edge facing away from said crimping chamber one of each doctor blade forming the upper and lower portions of said crimping chamber at a site immediately forward from said feed rolls, a recess in each side wall defining a back edge in said side wall, each of the leading edges of said doctor blade and each of the back edges of said side wall forming the opening to said stuffing chamber, a pair of wear plate brackets positioned in said recesses, each accommodating a wear plate, said wear plates having a rearward edge disposed nearest said crimping chamber, and biasing means for pressure positioning said wear plates against said back edge of said side wall, toward said end faces of said rolls to accommodate said rolls in multi-directional displacement and toward the leading edges of said doctor blade.

3,373,470
PROCESS FOR CRIMPING YARN
Jean Joly, Lyon, France, assignor to Societe Rhodiaceta, Paris, France, a corporation of France
Continuation-in-part of application Ser. No. 171,521, Feb. 6, 1962. This application Mar. 27, 1964, Ser. No. 355,379
Claims priority, application France, Feb. 8, 1961, 852,055
13 Claims. (Cl. 28—72)

1. A process for stuffer crimp ing thermoplastic filaments, such process comprising introducing the filaments to be crimped into one end of an elongate confined space by means of a current of fluid under pressure and at a temperature sufficient to set the filaments, tightly packing said filaments into said confined space by controllably releasing part of said fluid from said confined space

laterally of the confined space at a position spaced from the other end of said space and forcing the packed

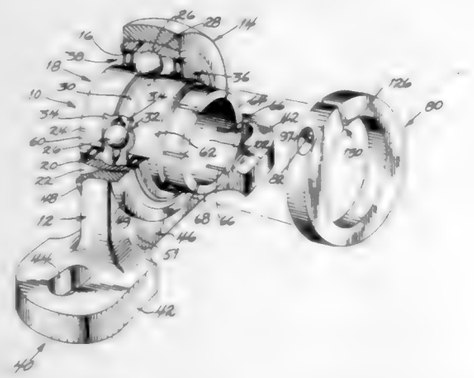


filaments through said space to said other end thereof under pressure by the remainder of said fluid.

3,373,471
METHOD FOR REMOVING TEMPORARILY EMPLACED THREADS FROM FABRIC MATERIAL
Homer S. Myers, Louisville, Ky., assignor to Solvex Corporation, Louisville, Ky., a corporation of Delaware
No Drawing. Filed Jan. 24, 1966, Ser. No. 522,365
3 Claims. (Cl. 28—76)

A basting thread formed of polycarbonate with oriented molecular structure and emplaced in a fabric material is subjected to agitation in the presence of perchlorethylene during the dry cleaning of the material and upon being fractured is removed from the material.

3,373,472
METHOD OF MAKING A BALL BEARING ASSEMBLY AND LOCKING COLLAR THEREFOR
Chester C. Moore, Aurora, Ill., assignor to Stephens-Adamson Mfg. Co., a corporation of Illinois
Filed Sept. 22, 1965, Ser. No. 489,141
5 Claims. (Cl. 29—148.4)



The invention has to do with a method of making a ball bearing assembly and methods and apparatus for making a locking collar therefor. The ball bearing assembly is concerned with using a special inner race member that receives a shaft or the like to be journalled and has at least one end of same formed with a plurality of spaced slots extending longitudinally thereof, assembling an outer race and bearing balls in abutting relation therewith, and applying a C-shaped clamping collar to the inner race slotted end portion and clamping the collar against the inner race to lock the inner race to the shaft or the like.

The methods and apparatus for making the locking collar involve coiling a length of bar stock into a helix, separating the turns of the helix into locking collar members, press forming the individual locking collar members to a predetermined internal diameter with their end portions pressed together, then milling the collar member end portions at right angles to the axis of the collar to define drilling recesses in the external O.D. of the collar member, then forming the collar member end portions to define a slot therebetween and cap screw mounting openings for applying a cap screw thereto to clamp the locking collar to the bearing inner race.

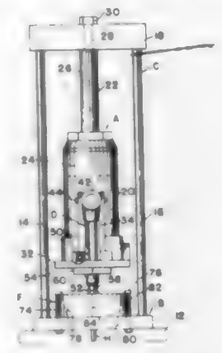
3,373,473
METHOD OF MAKING A SELF-SUPPORTING EXTENSION TOWER
Ralph W. Keslin, Calumet City, Ill., assignor to Ralph W. Keslin, Inc., Lansing, Ill., a corporation of Illinois
Original application Ser. No. 371,904, June 2, 1964, now Patent No. 3,328,921, dated July 4, 1967. Divided and this application Dec. 1, 1966, Ser. No. 608,714
6 Claims. (Cl. 29—155)

1. A method of manufacturing a tower section comprising the steps of forming a series of rectangular side walls or panels each of flat sheet material of relatively uniform gage, cutting out triangularly shaped areas along the length of the rectangularly shaped sheet material while contemporaneously working and arcuately forming struts peripherally defined by the cut-out areas and while contemporaneously forming angled legs extending continuously along the length of opposite margins of the sheet material, arranging the thus formed side walls or panels in tubular form with the angled legs on adjacent side walls or panels being engaged in face-to-face relation and with the legs extending outwardly and away from the side walls or panels, and securing the abutting legs in unitary assembly.

3,373,474
SWAGING MACHINE
Richard P. Doerer, Ypsilanti, Mich., assignor, by mesne assignments, to Van Dresser Corporation, a corporation of Michigan
Filed Nov. 8, 1965, Ser. No. 506,706
9 Claims. (Cl. 29—200)

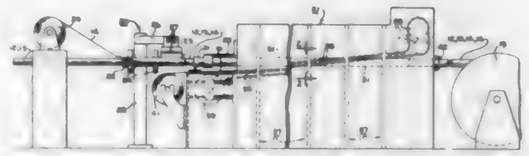
The swaging machine has laterally spaced, parallel rods extending from the base and connected by a cross-member. A piston-cylinder assembly between and in the plane of the rods has its piston connected to the cross-member. A swaging member is connected to the cylinder opposite a work support on the base to secure a fitting on a workpiece when the cylinder is moved toward the base. A fluid pump adapted to operate the piston-cylinder assembly is mounted on the cylinder at one side of the plane of the piston-cylinder assembly and rods, and is actuated by a handle projecting away from the plane. A guide rod for the cylinder projects from the base at the opposite side of the plane to resist distortion of the piston-cylinder assembly due to operation of the pump.

The machine may be readily adapted either to swage a fitting such as a coupling on a hose or to swage a fitting



such as a sleeve on a cable, wire rope or the like, depending upon the particular swaging member and work support employed.

3,373,475
APPARATUS FOR FOLDING TAPE ABOUT A STRAND
Warren E. Petersen, Council Bluffs, Iowa, assignor to Western Electric Company Incorporated, New York, N.Y., a corporation of New York
Filed Mar. 7, 1966, Ser. No. 532,395
6 Claims. (Cl. 29—202.5)



1. Apparatus for guiding an elongated tape, which has been folded about a longitudinally advancing strand so that the tape extends longitudinally of the strand with edges of the tape in opposed relationship, which apparatus comprises:

an elongated tube;

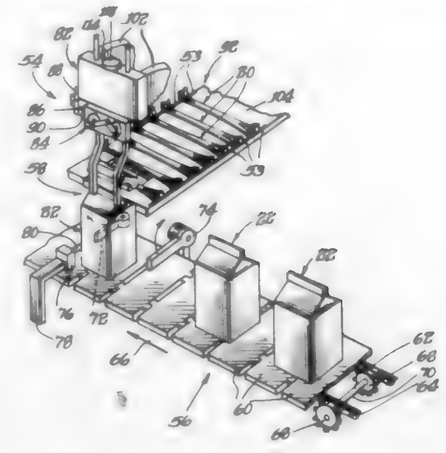
means for advancing the strand and the elongated folded tape longitudinally through said elongated tube;

a longitudinally extending, internal bead in said elongated tube projecting radially inward with respect to said tube so that opposite sides of said bead define preselected positions of the opposed edges of the folded tape; and

means for supporting the strand and the folded tape relative to said elongated tube and said bead such that as the strand and the tape are advanced through said tube by said advancing means the opposite sides of said bead engage the opposed edges of the tape to prevent rotation of the edges out of their preselected positions.

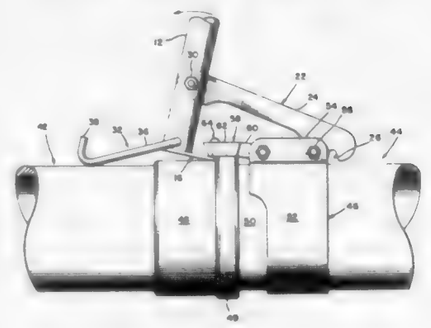
3,373,476
CARTON HANDLE ASSEMBLING MACHINE
Vincent A. Lombardo and Floyd B. Kopis, Addison, Ill., assignors to Walter E. Hidding, Arlington Heights, Ill.
Filed Oct. 7, 1965, Ser. No. 493,817
9 Claims. (Cl. 29—208)

Apparatus for assembling to a carton a handle of the type having spaced fitments joined by a flexible strap wherein handle feeding means includes pawl means operative to convey a said handle along a path toward a work station and wherein fitment mounting means includes spaced opposed walls aligned with the pawl means at the work station for directing movement of the fitments toward an assembled position with the carton, the fitment mounting means further including positioning means operable to contact handles disposed at the work station by



the pawl means and to cause forcibly guided movement of the handle between the spaced opposed walls.

3,373,477
PIPE TOOL
Tony C. Markgraf, Sutherland Springs, Tex. 78161
Filed Oct. 3, 1966, Ser. No. 583,693
10 Claims. (Cl. 29—237)



1. A pipe tool for assemblable and disassemblable conduits having male and collared female ends connected together by a coupling of the type having a support secured to one of the conduits, a lug on the other conduit and a lug engaging member on the support for engagement with the lug to secure the conduits together, the tool comprising:

a force applying arm;

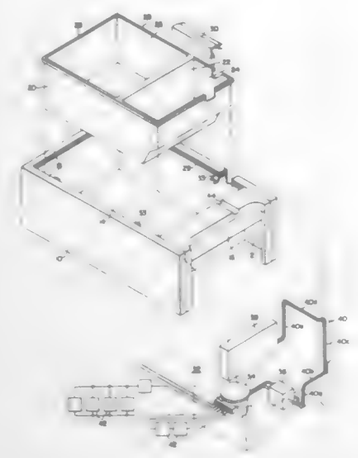
means on the arm for grasping the coupling support and the other conduit and moving the support toward the other conduit upon movement of the arm in order to free the lug engaging member from the lug; and

means on the arm for grasping the coupling support and the other conduit and moving the support away from the other conduit upon movement of the arm producing a force tending to separate the conduits.

3,373,478
METHOD OF MAKING REFRIGERATION APPARATUS
Harold F. Simmonds, Jr., Columbus, Ohio, assignor to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Filed Nov. 17, 1965, Ser. No. 508,221
8 Claims. (Cl. 29—407)

Method of producing a foamed-in-place insulated refrigeration device in which the refrigeration producing system is assembled to a fully testable state separate from the refrigeration device cabinet and tested, is then

installed in the cabinet and tested again with its major parts in their final assembly physical locations, the cab-



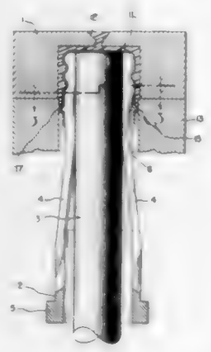
inet then being foamed to fill the hollow insulating spaces in the cabinets with portions of the refrigeration system captured therein, and then testing said refrigeration system for proper operation.

3,373,479

METHOD FOR MAKING MOLDED ARTICLES

William E. R. Watt, New Kensington, and Eldrich J. Willis, Bridgeville, Pa., assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania

Filed Mar. 25, 1965, Ser. No. 442,728
4 Claims. (Cl. 29—421)



Molding an article by radially expanding a collet to form a continuous bead seal against the wall of a mold cavity and, after introducing moldable material into the cavity, retracting the collet to permit removal of the article.

3,373,480

METHODS FOR SHAPING HONEYCOMB STRUCTURES

Francis J. Fuchs, Jr., Princeton Junction, N.J., assignor to Western Electric Company, Incorporated, New York, N.Y., a corporation of New York

Filed Dec. 8, 1965, Ser. No. 512,301
5 Claims. (Cl. 29—421)

1. A method of shaping a multicelled, honeycomb laminate wherein the honeycomb laminate comprises a first surface and a second surface, said second surface being perforated to the individual cells thereof, which comprises:

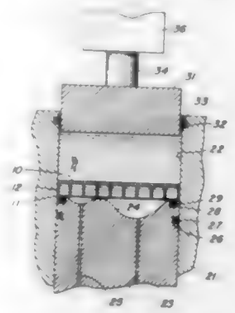
placing said first surface of the laminate against a die surface, and

applying pressurized forming fluid to said second perforated surface of the laminate and through the perforations in said second perforated surface to the interior of the cells thereof to conform said first surface of the laminate to the die surface.

4. A method of fabricating multicurved honeycomb structure which comprises,

securing a first flat plate of a predetermined thickness to a flat top surface of a frame having a plurality of non-interconnected open cells extending from a top planar surface to a flat bottom planar surface,

securing a second flat plate of a thickness less than said predetermined thickness to said bottom surface to complete a honeycomb structure,



drilling holes through said first plate to individually extend into each of said cells,

abutting said second flat plate against a non-planar surface of a forming cavity formed within a die, and then

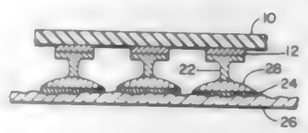
applying fluid with sufficient pressure to said die cavity to force the fluid through said holes to act against said second plate and frame to deform said honeycomb structure against said non-planar surface.

3,373,481

METHOD OF ELECTRICALLY INTERCONNECTING CONDUCTORS

Stanley J. Lins, Minneapolis, and Richard D. Morrison, West St. Paul, Minn., assignors to Sperry Rand Corporation, New York, N.Y., a corporation of Delaware

Filed June 22, 1965, Ser. No. 465,943
4 Claims. (Cl. 29—471.3)



A technique of securing pedestals to the terminals of integrated circuit elements or devices, allowing the pedestals to make contact with coated substrate interconnect areas of thin-films or printed circuit members, and permitting the pedestals to be dissolved in the coating whereby all pedestals are secured to their matching interconnect areas to effect electrical interconnections.

3,373,482

FLUXLESS ALUMINUM BRAZING

Clarence John Miller, Paoli, Pa., assignor to General Electric Company, a corporation of New York

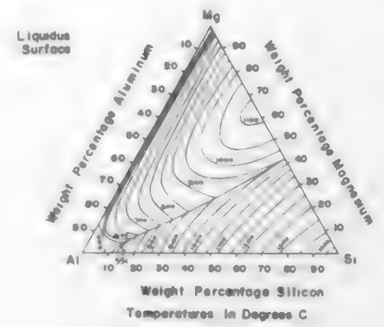
Application Dec. 12, 1963, Ser. No. 330,027, now Patent No. 3,322,517, dated May 30, 1967, which is a continuation-in-part of application Ser. No. 163,922, Jan. 2, 1962. Divided and this application Sept. 19, 1966, Ser. No. 616,134
2 Claims. (Cl. 29—501)

1. A fluxless brazing method of making a fabricated structure comprising:

(a) Providing members of aluminum alloy;

(b) Assembling the said members in their desired relationship;

(c) Providing at the junctions of the said members an alloy comprising at least 2 and not more than 13% of silicon;



(d) Providing in the vicinity of the junctions of the said members magnesium in the metallic state;

(e) Evacuating the space around the said members;

(f) Raising the temperature of the said parts to at least 590° C., but less than the melting point of the said members;

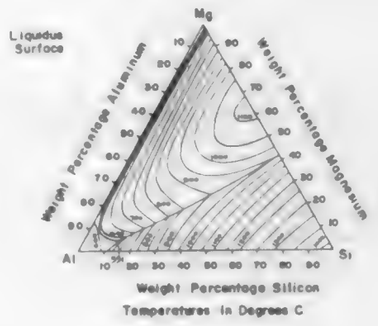
(g) Cooling the said parts to room temperature.

3,373,483

FLUXLESS ALUMINUM BRAZING

Clarence John Miller, Paoli, Pa., assignor to General Electric Company, a corporation of New York

Application Dec. 12, 1963, Ser. No. 330,027, now Patent No. 3,322,517, dated May 30, 1967, which is a continuation-in-part of application Ser. No. 163,922, Jan. 2, 1962. Divided and this application Sept. 19, 1966, Ser. No. 616,135
1 Claim. (Cl. 29—501)



1. A fluxless method of making a fabricated structure from metallic members selected from the group consisting of aluminum and its alloys comprising the steps of:

(a) assembling the members in desired brazing relationship;

(b) providing at the proposed juncture between the members an alloy including about 3—15% Si; about 0.4–10% Mg; with the balance aluminum and incidental impurities;

(c) providing a non-oxidizing atmosphere in the space around the members;

(d) raising the temperature of the members to at least about 550° C. but less than the melting point of the members; and then

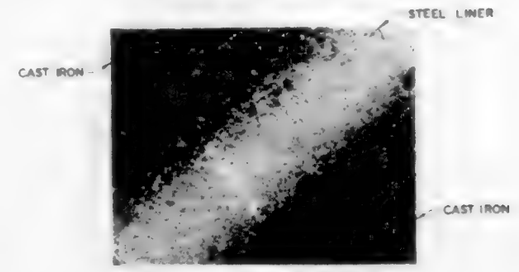
(e) cooling the members below about 550° C. prior to removing them from the non-oxidizing atmosphere.

3,373,484

METHOD OF PRODUCING A GREY IRON STEEL BRAKE DRUM

William B. Larson and Thomas W. Mueller, Saginaw, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Filed Aug. 16, 1965, Ser. No. 479,894
3 Claims. (Cl. 29—529)



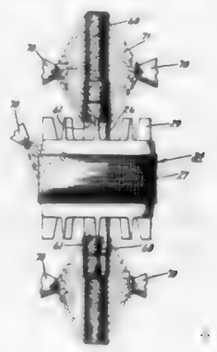
1. A method of producing a composite brake drum consisting predominantly of cast iron and having a durable annular steel braking surface, said method comprised of forming a low carbon steel into the annular shape of said braking surface, casting grey iron entirely about said steel shape in the configuration of the brake drum, heating the composite casting at a temperature above the upper critical temperature of said low carbon steel and below 2000° F. until sufficient carbon has diffused from said grey iron into said steel to raise the carbon content of said annular steel surface from about 0.75 to about 0.88%, and machining said grey iron from the inside surface of said steel annular surface to expose said durable steel braking surface.

3,373,485

METHOD OF PRODUCING A ROTOR AND SHAFT ASSEMBLY

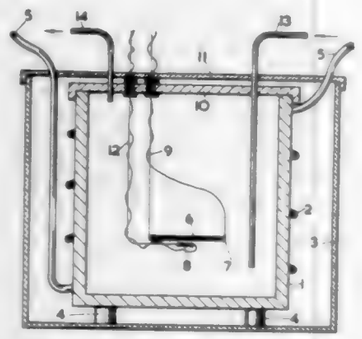
Ronald N. Nelsen, De Kalb, Ill., assignor to General Electric Company, a corporation of New York

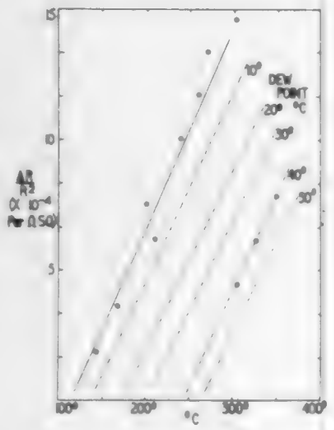
Original application Dec. 16, 1963, Ser. No. 330,677, now Patent No. 3,293,458, dated Dec. 20, 1966. Divided and this application Sept. 13, 1965, Ser. No. 486,806
4 Claims. (Cl. 29—598)



1. A method of fabricating an assembly that has a shaft and rotor core, and forming an adherent, hardened, film of magnesium hydroxide on a preselected portion of the shaft having finished journal surfaces for use in the dynamoelectric machine comprising the steps: applying a solution of magnesium methylate to the preselected portion of said shaft; forming said solution into an adherent, hardened, film of magnesium hydroxide, and assembling the shaft and the rotor core; and maintaining said film below the temperature of 350° centigrade at which magnesium oxide is formed to provide an adherent film for protecting the covered portions of the shaft against corrosion.

3,373,486
METHOD OF MAKING FILM RESISTORS
Shaun Maturin Cox, South Shields, England, assignor to National Research Development Corporation, London, England
Filed Dec. 2, 1963, Ser. No. 327,244
Claims priority, application Great Britain, Dec. 7, 1962, 46,259/62
4 Claims. (Cl. 29—610)

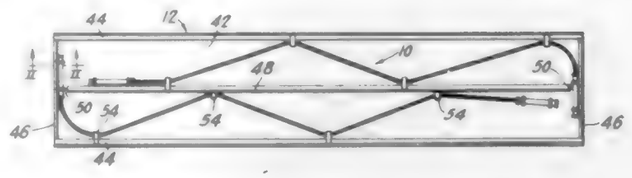




1. A method of stabilizing a resistor of the thin film type comprising: choosing a stabilizing temperature sufficiently high to allow rapid stabilization of resistance and a stabilizing vapour pressure of a polar liquid such that the terminal value of resistance to which the resistor is stabilized at the said stabilizing temperature and the said stabilizing vapour pressure is the value desired at the desired temperature of operation of the resistor, in a controlled environment raising the resistor on its substrate to the said stibilizing temperature while simultaneously establishing the said stabilizing vapour pressure, maintaining the said stabilizing temperature and the said stabilizing vapour pressure for a sufficient length of time for the resistance of the resistor to be stabilized to the extent desired and then cooling and drying the resistor concurrently after stabilization by concurrently reducing the temperature and the vapour pressure of the controlled environment until the said desired temperature of operation of the resistor is reached whereby the stabilized resistance of the resistor is maintained.

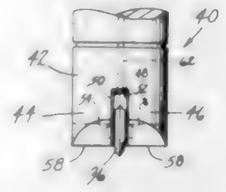
3,373,487
ELECTROSTATIC PRECIPITATOR ELECTRODE HANDLING SYSTEM
Bartholomew F. Quintilian, Baltimore, Md., assignor to Koppers Company, Inc., a corporation of Delaware
Filed Dec. 6, 1966, Ser. No. 599,637
7 Claims. (Cl. 29—624)

A system is provided for handling discharge and collector electrodes for electrostatic precipitators for the purpose of simplifying shipping and erection of such electrodes. A cluster of discharge wire electrodes are mounted in sinuous or serpentine fashion to one face of a collector electrode plate so that the collector electrode can be



erected with the wire electrodes in place. The wire electrodes are thereby positioned for simple suspension on the supporting structure.

3,373,488
GLASS CUTTING APPARATUS
Arthur T. Fletcher, Bristol, Conn., assignor to The Fletcher-Terry Company, Bristol, Conn., a corporation of Connecticut
Filed Jan. 25, 1967, Ser. No. 611,623
5 Claims. (Cl. 30—164.95)



A glass cutting device including a cutting wheel and axle supported in a retainer therefor, the retainer being received in glass cutting position within a holder. The retainer is formed with axle supporting bearing surfaces provided by outwardly extending flanges which also cooperate with abutment surfaces on the holder to position the retainer and wheel within the holder.

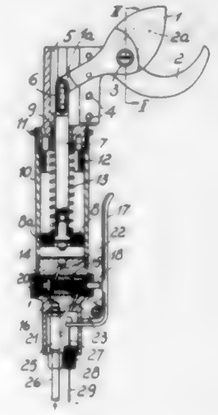
3,373,489
POWER DRIVEN PRUNING SAWS
Alonzo Roy Giles, Ipswich, England, assignor to G. & M. Power Plant Co. Limited, Ipswich, England, a British Company
Continuation of application Ser. No. 454,498, May 10, 1965. This application June 26, 1967, Ser. No. 649,053
Claims priority, application Great Britain, Aug. 19, 1964, 33,892/64
4 Claims. (Cl. 30—167)

A pruning saw for pruning branches of trees and the like comprised of driving means activated by manually operable trigger means mounted at one end of an elongated shaft; the shaft is coupled to the driving means at a first end thereof and is coupled to a driving pinion through a substantially rectangular shaped coupling; the pinion causes the rotation of a substantially annular shaped saw blade having substantially semi-circular openings adjacent each of the saw teeth which the pinion enters in driving the saw blade so as to clear any foreign matter collected therein. The annular shaped saw blade is mounted between covering plates whose rearward ends are adjacent the drive shaft and pinion and whose forward ends

form a pair of cooperating arms of unequal length enabling the pruning saw to be positioned so that its longer extending end may rest against the branch to be sawed. The saw blade is driven in a direction so as to cause the branch being trimmed to bear against the longer arm so as to stabilize the pruning operation.

Positioned between the cover plate is a kerf-retaining blade reciprocally mounted so as to have its forward arcuate shaped end bearing against the inner periphery of the annular shaped saw blade; bias means are caused to bear against the kerf-retaining blade to urge it against the inner edge of the saw blade. Stop means provided at the rearward end of the kerf-retaining blade cooperate with stop blocks secured to the pruning saw cover plates to limit the forward motion of the kerf-retaining blade; a single biasing means is mounted along the longitudinal axis of the pruning saw assembly allowing the kerf-retaining blade to be moved rearwardly as a result of entering the cut made by the pruning saw in order to keep the cut portions of the branch being cut so as to prevent jamming of the pruning saw during the cutting operation.

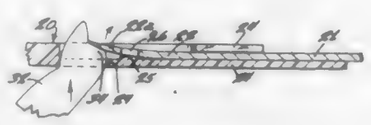
3,373,490
PNEUMATICALLY ACTUATED SHEARS WITH TWO CONTROLS
Ernesto Lendaro, Via Carducci 19, Udine, Italy
Filed Mar. 21, 1966, Ser. No. 535,965
Claims priority, application Italy, Mar. 23, 1965, 6,769/65, Patent 699,956
2 Claims. (Cl. 30—228)



This invention relates to a pneumatically operated shears cutting device for cutting tree branches. The device basically comprises a pair of blades, one fixed and one movable, mounted on a piston cylinder. The movable blade is transmissively connected to a pneumatic power source and is thereby caused to move relative to the fixed blade and effect a cutting action. The length of the device may be adjusted by the addition or removal of cylinder extension sections.

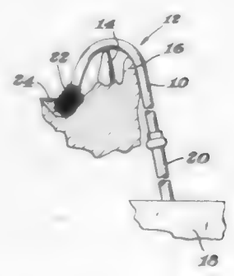
3,373,491
SURGICAL KNIFE AND BLADE EXPELLING TOOL
George A. Montellus, Box 53, Rte. 1, Braham, Minn. 55006
Filed Feb. 9, 1966, Ser. No. 526,228
2 Claims. (Cl. 30—339)

1. In combination, a surgical instrument comprising a scalpel blade holder having a scalpel blade mounted therein, the scalpel blade having a blade portion and shank portion, said scalpel blade holder comprising an elongate holder portion, a blade retaining portion affixed to one end of said holder portion, said blade retaining portion including securing means that accommodates the shank portion of the blade and prevents transverse motion of said blade, said blade retaining portion further including interengaging means received in an aperture in said shank portion of the blade to prevent longitudinal movement of said blade, the improvement comprising, an expeller tool receiving slot located in said blade retaining portion, and expeller tool having a work engaging end including blade release means, blade removal means and pivot means, said work engaging end being receiva-



ble in said expeller tool slot, said release means being engageable with the shank of the blade to release said interengaging means, said pivot means being pivotally engageable with the wall of said expeller tool slot and said removal means being engageable with the shank of said blade to cooperatively move the blade in the longitudinal direction when said expeller tool is being pivoted about said wall, whereby said blade has controlled removal from the blade retaining holder portion of said blade holder.

3,373,492
LIQUID EJECTOR DEVICE
Marvin L. Batch, 2817 Canterbury St., Midland, Mich. 48640
Filed Oct. 31, 1966, Ser. No. 590,973
3 Claims. (Cl. 32—33)

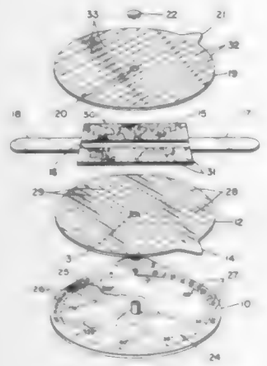


The present invention concerns a liquid ejector device consisting essentially of an eductor tube element and a rigid coiled intersticed liquid intake element pivotally coupled to one end of said eductor tube, the other end of said tube being adapted to internally communicate with suction generating means. The device is highly useful to remove accumulations of liquids from a body cavity, is non-clogging and is characterized by a facility for being comfortably positioned in said body cavity without irritation to body tissues.

3,373,493
NAVIGATIONAL DEVICE
Hugh C. McDonald, Santa Monica, Calif., assignor to Melvin E. Lind, Santa Monica, Calif.
Continuation-in-part of application Ser. No. 190,677, Apr. 27, 1962. This application Apr. 19, 1965, Ser. No. 448,979
5 Claims. (Cl. 33—1)

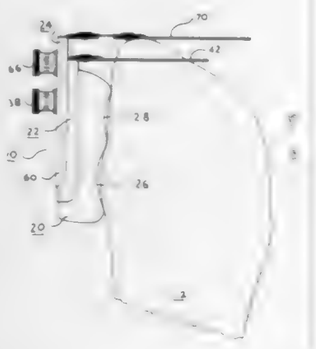
A base plate mounts a map with a compass scale and hour scales for converting sun declination to time. A transparent disc thereon has parallel graduated lines and is rotatable to bring some line into substantial alignment

with two map points for reading off the direction and distance between them. A further slidable and rotatable transparent plate carries a world map ruled with longi-



tude lines and cooperates with a further rotatable disc like the first for determining location of the observer with the aid of a chronometer. The two dics can also be used to diagram a radio fix.

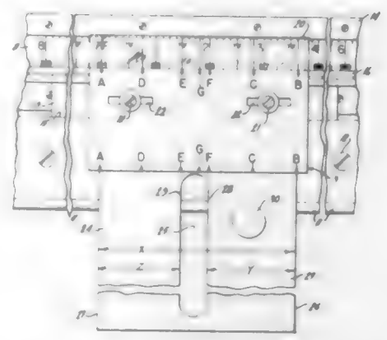
3,373,494
FOOT MEASURING DEVICE
Francis L. Moore, 115 E. 9th St., Rochester, Ind. 46975
Filed July 15, 1965, Ser. No. 472,211
6 Claims. (Cl. 33—3)



A device for measuring foot elongation and fitting shoes, having a member for determining the length of the foot when no pressure is thereon and another member for determining the length of the foot when there is pressure thereon. The two members are adjustable so that the measurement can be translated into the shoe size after the shoe has been placed on the foot.

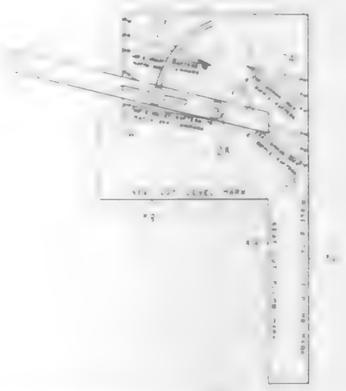
3,373,495
LAYOUT DEVICE
Howard L. Grange, P.O. Box E, Darlington, Wis. 53530
Filed Dec. 27, 1965, Ser. No. 516,571
5 Claims. (Cl. 33—76)

The invention relates to a device for transposing dimensions from building plans to lumber and includes a bench or table which supports the lumber to be dimensioned. A measuring scale is mounted on the bench and a square is mounted for sliding movement on a guide extending parallel to the scale. The square is provided with a transparent head which overlies the scale and a pair of legs extend generally normal to the guide and overlie the lumber to be dimensioned. The distance between the side edges of one of the legs is equal to a dimension of a first type of standard lumber while the distance between the side edges of the second leg is equal to a dimension



of the second type of standard lumber. In addition, the distance between the outer edge of one leg to the outer edge of the other leg is equal to the width of a third type of standard lumber.

3,373,496
VARIABLE PITCH RAFTER TEMPLATE
Sidney N. Nelson, 1050B N. Magnolia Lane, Minneapolis, Minn. 55427
Filed Aug. 22, 1966, Ser. No. 573,936
1 Claim. (Cl. 33—93)

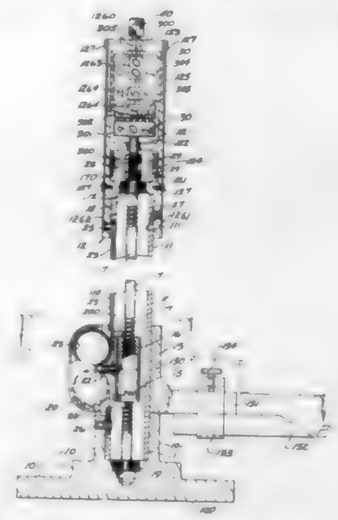


A variable pitch rafter template arranged to mark common and other types of rafters for ridge and tail cuts, seat cuts, and the like. The template is provided with means for pre-setting the device for use with the commonly dimensioned lumber normally employed for forming rafters, and is further provided with indicia for providing a pitch equivalent to those pitches commonly used in construction. The variable pitch rafter template is further provided with an inner apex which has a pair of blades extending at right angles therefrom, each blade having an edge surface projecting from said apex, and defining a marking surface for the level seat cut and plumb seat cut respectively.

3,373,497
HEIGHT GAGES
Gerald F. Lewis, 1850 Columbia, Berkley, Mich. 48072
Filed Sept. 17, 1965, Ser. No. 488,038
6 Claims. (Cl. 33—170)

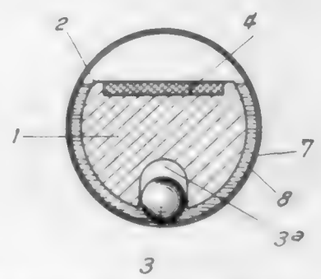
A height gage in which a hollow stanchion fixed to the base houses a longitudinal screw journaled in ball bearings and rotatably drivable by manually sliding a ball nut thereon axially of the stanchion. The ball nut is connected to and moves with a handle on the gage arm. The screw is coupled to a fine adjustment knob and to a gage height

counter having its last digit wheel peripherally graduated. The longitudinal guide slot in the stanchion, through



which the handle connects with the ball nut, is closed by two tapes reeled within the handle.

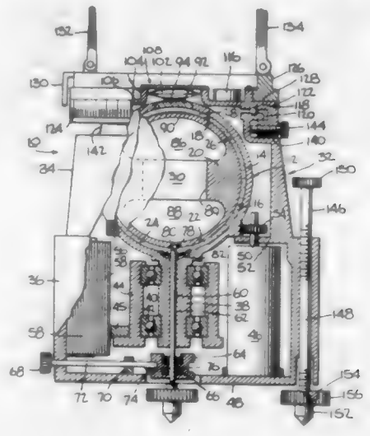
3,373,498
MAGNETIC COMPASS
Henri Jules Chabbert, "Lacasanous," Ave. d'Attigny, Pau, Basses-Pyrenees, France
Filed June 7, 1966, Ser. No. 555,804
Claims priority, application France, June 11, 1965, 20,527, Patent 1,464,612
3 Claims. (Cl. 33—223)

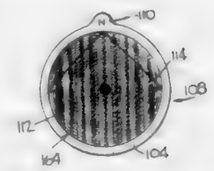


A compass housing contains a fluid buoyantly supporting a spherical float. A segment of the float is removed so as to form a flat surface having a magnetic rod fixed secured thereto. The float also has a recess located diametrically opposite the magnetic rod. A guide ball is rotatably received within the recess and projects therefrom so that it rollingly engages the internal spherical surface of the housing. Gravity tends to maintain the guide ball in the lowermost position within the housing and thus to maintain the flat surface of the float substantially horizontal.

3,373,499
PORTABLE NORTH-INDICATING GYROSCOPIC INSTRUMENT
Wilhelm Ernst Rothe and Aaron George Loughead, Huntsville, Ala., assignors to Belock Instrument Corporation, College Point, N.Y., a corporation of New York
Filed Mar. 30, 1964, Ser. No. 355,643
4 Claims. (Cl. 33—226)

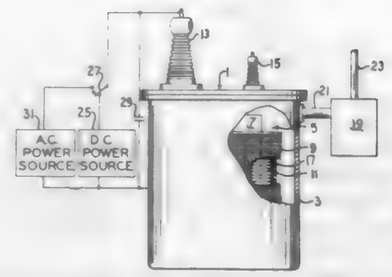
1. A portable gyroscopic instrument for determining the locations of the cardinal points of the earth with respect to the position of the instrument, especially in field use, said instrument comprising a cage, means to support said cage for rotation about a vertical earth-fixed axis, said cage having a hollow spherical interior, motor means for rotating said cage about said earth-fixed axis, a sphere having a mass distribution providing a preferred axis of rotation, said sphere being located within the cage, a liquid of greater density than the density of the sphere, said liquid being disposed within the cage and buoying the sphere and hydraulically coupling the cage to the sphere for mutual rotation, said liquid forming a thin liquid bearing film completely separating the sphere from the cage to freely support the sphere within said cage when the cage is rotated, so that the axis of rotation of





the sphere is inertially space-fixed within the cage and due to the west-east rotation of the earth is displaced from the axis of rotation of the cage by a lag angle in the east-west vertical plane, and readout means for determining the orientation of the vertical plane of said lag angle whereby to ascertain the position of said instrument with respect to the cardinal points, said readout means including two Fresnel figures, one disposed on a pole of the cage and the other disposed on an adjacent pole of the sphere, which Fresnel figures when displaced in the direction of the lag angle produce a moiré pattern.

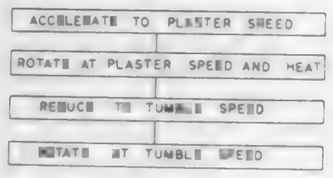
3,373,500
METHODS FOR DRYING ELECTRICAL APPARATUS
David F. Winter, Kirkwood, Mo., assignor to Central Transformer Corporation, Pine Bluff, Ark., a corporation of Arkansas
Filed Aug. 26, 1966, Ser. No. 575,302
10 Claims. (Cl. 34—1)



1. In a method of drying electrical apparatus having a core-and-coil unit including moisture-absorbing insulation and at least one outer winding which will generate a

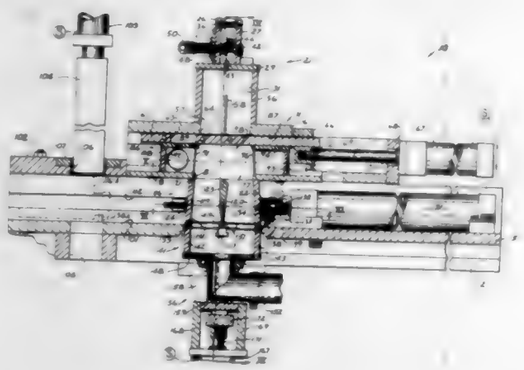
desired amount of heat when energized at an A.C. voltage level sufficient to produce a predetermined value of current; the step of energizing said winding, while said core-and-coil unit is under partial vacuum, from a D.C. power source at a voltage substantially less than that of said A.C. voltage level to produce a current of said predetermined value whereby substantially the desired amount of heat is generated by said winding at greatly reduced dielectric stresses.

3,373,501
PROCESS OF DRYING FABRICS IN A ROTATABLE RECEPTACLE
Joseph C. Worst, Louisville, Ky., assignor to General Electric Company, a corporation of New York
Continuation-in-part of application Ser. No. 418,239, Dec. 14, 1964. This application Dec. 23, 1966, Ser. No. 609,986
6 Claims. (Cl. 34—8)



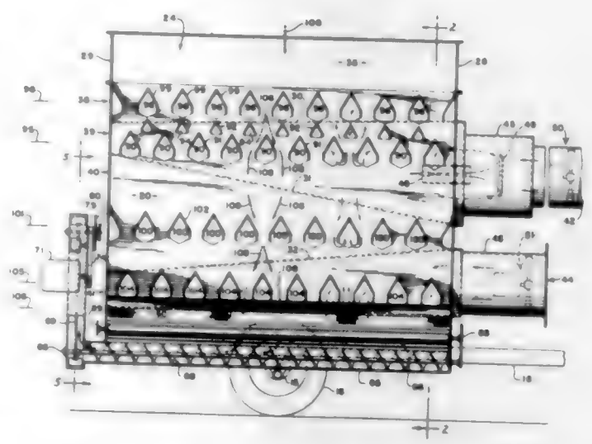
A process of drying fabrics in a rotatable receptacle wherein the receptacle is rotated at plaster speed while heat is supplied until the moisture remaining in the fabrics is reduced to approximately the critical moisture content of the fabrics. Thereafter the speed of the receptacle may be reduced to tumble speed for the remainder of the drying process. Also, thereafter, the speed of the receptacle may be alternated between plaster speed and tumble speed for the remainder of the drying process.

3,373,502
PRE-HEATER WITH VERTICALLY FLOWING AIR STREAM
James W. Hendry, Fremont, Ohio, assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Filed July 25, 1966, Ser. No. 567,630
19 Claims. (Cl. 34—10)



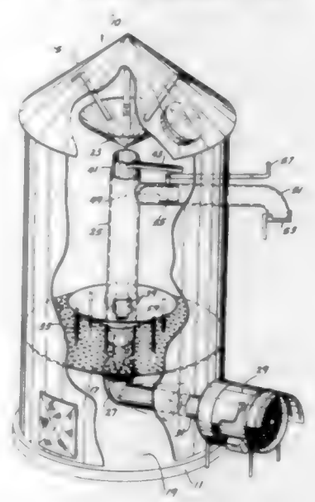
19. A process for preheating a granular organic plastic material, comprising the steps:
causing a charge of granular plastic material to fall into a heating chamber through a preselected path in response to gravitation;
causing a stream of heated gas to flow downwardly through the charge of granules in said heating chamber to evenly heat said granules so as to form at least one cake of softened plastic material;
positively transferring said heating chamber with said cake therein horizontally away from said path;
discharging said cake from the heating chamber;
returning said heating chamber to said path for receiving a further charge of granules.

3,373,503
GRAIN DRYING PROCESS AND APPARATUS
Charles M. Kline, Reinholds, and Albert M. Best, New Holland, Pa., assignors to Sperry Rand Corporation, a corporation of Delaware
Filed Jan. 3, 1967, Ser. No. 606,968
9 Claims. (Cl. 34—33)



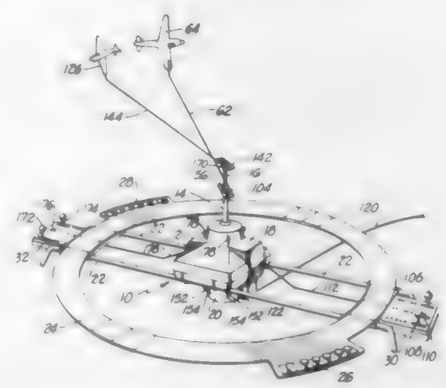
A continuous grain flow grain drying process and apparatus having air inlet and exhaust ducts particularly relatively located to enable the use of considerably higher drying air temperatures than those of conventional grain driers.

3,373,504
AIR-DRIVEN GRAIN CIRCULATING MEANS
Daryl C. McIntire, Seymour, Iowa 52590, and Oran Clark, Corydon, Iowa 50060
Filed Apr. 20, 1965, Ser. No. 449,509
10 Claims. (Cl. 34—57)



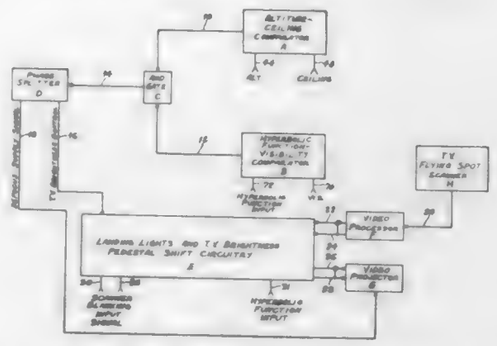
A grain circulating means for a storage bin having a horizontal floor spaced above the bin bottom. A first pipe is vertically disposed in the bin and extends downwardly through the horizontal floor and has a plurality of spaced apart first openings positioned below a plurality of spaced apart second openings. An inverted cone-shaped central floor surrounds the first pipe between the first and second openings and a second pipe is movably mounted in and embraced by the first pipe and which has a plurality of spaced apart third and fourth openings which are adapted to register with the first and second openings at times. The second pipe is operatively connected on air means which supplies a volume of air to the interior thereof.

3,373,505
ELECTRO-MECHANICAL FLIGHT SIMULATOR
Council A. Tucker, 3200 Buckingham Road, Glendale, Calif. 91206
Filed June 23, 1966, Ser. No. 559,864
25 Claims. (Cl. 35—12)



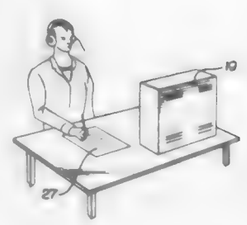
A model aircraft is mounted spaced laterally from a vertical, rotatably driven shaft by a rigid connecting rod, said rod being rotatable with said shaft but vertically, angularly pivotal relative thereto. At least one roller rides against said shaft supported so that selective angular adjustment of the roller axis relative to the shaft axis causes the roller to move up and down or remain vertically stationary along the shaft from shaft rotation. A rigid connection between the roller and the rod translates roller vertical movement into rod and aircraft vertical movement. A second aircraft following the same flight path may be controlled by duplicate, identical mounting, the second drive shaft telescoped within the first extending above and below for the respective connecting rod and roller connections.

3,373,506
AIRCRAFT LANDING LIGHTS SIMULATOR
Dorsey Davidoff, Fort Lee, N.J., assignor to Dalto Electronics Corp., Norwood, N.J., a corporation of Delaware
Filed Aug. 16, 1966, Ser. No. 572,866
8 Claims. (Cl. 35—12)



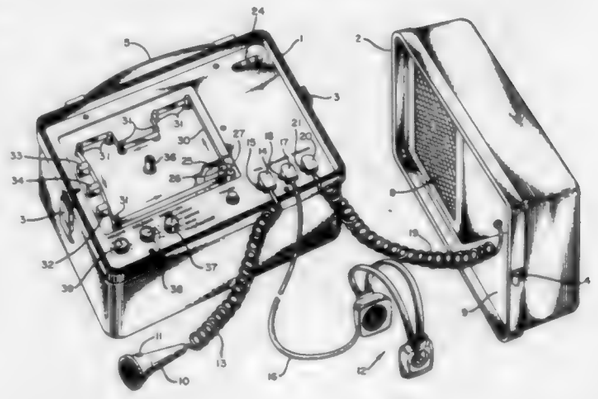
In accordance with this invention means producing a variable blanking pedestal are provided to control the brightness of each line of a television presentation as a function of landing lights, visibility and ceiling and this variable is summed to a system video to form a composite video signal. Coupled with this capability is a signal generator means producing a video signal of a scene in which the level of brightness of background material is not more than 30% of the level of brightness of the airport lights such that landing lights can be simulated by variation of the pedestal blanking level of the video.

3,373,507
MNEMONIC TEACHING SYSTEM
Judson E. Cornish, 405 S. Cliffwood, Los Angeles, Calif. 90049
Filed May 3, 1965, Ser. No. 452,656
10 Claims. (Cl. 35—14)



Education, teaching code signalling through the use of mnemonic words, particularly teaching sending and receiving of Morse code symbols through the use of mnemonic words having rhythmic patterns similar to the code symbols.

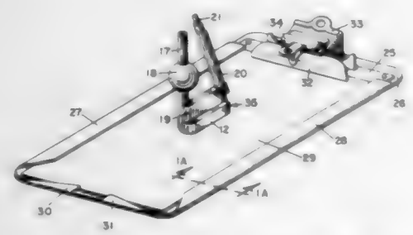
3,373,508
TEACHING APPARATUS
Ruth J. Holden and Scott D. Holden, Palo Alto, Calif., assignors to HC Electronics, Inc., Palo Alto, Calif., a corporation of California
Filed Oct. 29, 1964, Ser. No. 407,448
12 Claims. (Cl. 35—35)



1. Teaching apparatus of the type which comprises an endless recording medium of predetermined length sensitive throughout its entire length, recording means cooperating with said medium for recording sounds thereon, a microphone having means for selectively connecting its output to the recording means to selectively record sounds applied to the microphone on said recording medium, playback means cooperating with said recording medium for reproducing sounds recorded thereon, erasing means between said playback and recording means for erasing the sounds recorded on said medium, means for continuously driving the recording medium past said recording means, playback means, and erase means; means

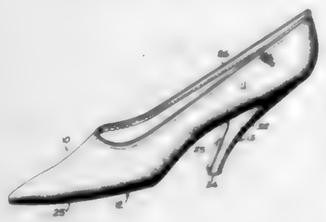
mounting said playback means at a position spaced from said recording means a distance along the direction of travel of said medium equal to a major portion of the length thereof, and means for simultaneously energizing said recording means, playback means, erasing means and drive means whereby sound is recorded, and played back only after the recording medium has travelled over a major portion of its length, and then erased.

3,373,509
HANDICAPPED CHILDREN WRITING AID
William C. Brass, 354 N. Audubon Road, Indianapolis, Ind. 46219
Filed Jan. 5, 1966, Ser. No. 518,830
10 Claims. (Cl. 35—36)



A writing aid for the physically handicapped comprising a base for supporting a writing instrument in a position to mark upon a sheet of paper or the like held upon a hard, smooth surface, said base being provided with a preferably bulbous grip and, in its preferred form, being magnetically attracted to the element underlying the paper to a degree which does not significantly interfere with movement of said base over the surface of the paper.

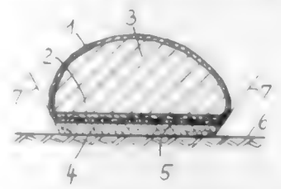
3,373,510
DECORATIVE SHOE COVER
Ralph Memole, 4911 Tyler St., Hollywood, Fla. 33021; Jack S. Liebmann, 420 Lincoln Road, Suite 206, Miami Beach, Fla. 33139; Harold Barkowitz, 312 Aledo Ave., Coral Gables, Fla. 33134; and Daniel Meszaros, 12000 W. Golf Drive, Miami, Fla. 33167
Filed Nov. 24, 1965, Ser. No. 509,528
9 Claims. (Cl. 36—2.5)



A removable, decorative, form-fitting shoe cover for women's shoes wherein the shoe upper cover portion is formed of a flexible, stretchable material having an integrally-formed sole shank portion defining therewith a sole-receiving opening and a heel-receiving opening, and including a flexible sole member secured to the shoe upper cover portion at the sole-receiving opening.

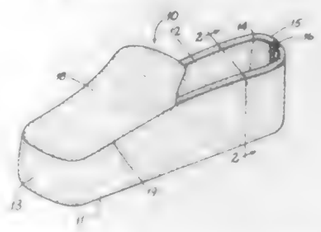
3,373,511
SOLES FOR SKATING BOOTS
Gerhard Krapp, Marktplatz 5, Kups, Germany
Filed Oct. 26, 1966, Ser. No. 589,602
Claims priority, application Germany, Nov. 12, 1965, L 52,131
7 Claims. (Cl. 36—2.5)

A skating boot having an insole, an upper lasted over the insole and an outer sole, wherein the bottom surface of the outer sole of the skating boot has a width smaller than the upper surface of the outer sole, which faces the



lasted upper, so that the lateral surfaces of the outer sole extend at an obtuse angle to the bottom surface thereof.

3,373,512
FOOT COVER
Sidney H. Jacobson, 11880 Conway Road, St. Louis, Mo. 63131
Filed Aug. 24, 1966, Ser. No. 574,774
5 Claims. (Cl. 36—7.1)



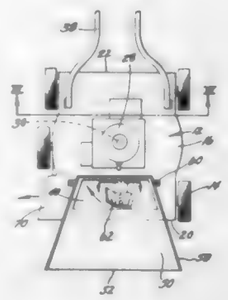
The device consists of a unitary, thermally insulative, very lightweight shoe cover of a rigid foam material, sized to slip over the regular shoe, to keep the wearer's foot warm but not to be walked in, the same to be readily portable so as to be carried to athletic events, and, while there, to be applied over the street shoe to keep the wearer's foot warm. It can give some foot protection against being crushed.

3,373,513
SHOE WITH HEEL RETAINING DEVICE
Wallace T. Jewell, 3304 Mount McKinley Road, San Jose, Calif. 95127
Filed Jan. 28, 1966, Ser. No. 523,738
4 Claims. (Cl. 36—80)

The heel retaining device of the present invention comprises a female member that is secured to an inner sole of a shoe, and a male member that adheres to the plantar surface of the wearer's heel. By disposing the male member in interlocking engagement with the female member, the heel retaining device holds the heel of the wearer's foot at a prescribed location relative to the shoe.

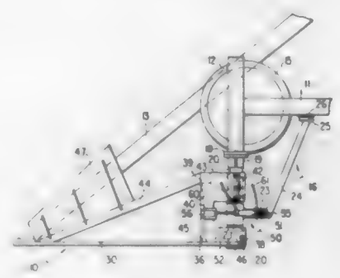
The female member has a plurality of layers surrounding the receptacle in which a layer thereof is more resilient than its adjacent layer. Likewise the projection of the male member has a plurality of layers in which a layer thereof is more resilient than its adjacent layer. When the projection of the male member is received by the receptacle of the female member, more resilient layers are aligned with less resilient layers. Through this arrangement each more resilient layer flows under pressure to grip the less resilient layer aligned therewith.

3,373,514
CONVERSION UNIT FOR ROTARY MOWERS
Richard E. Forren, 972 Fairwood Ave., Marion, Ohio 43302
Filed Mar. 17, 1965, Ser. No. 440,435
3 Claims. (Cl. 37—43)



A converted lawn mower snow removal apparatus having a snow ramp, and having vertically extending, plow type snow thrower elements and also suction forming sweep elements on the blades.

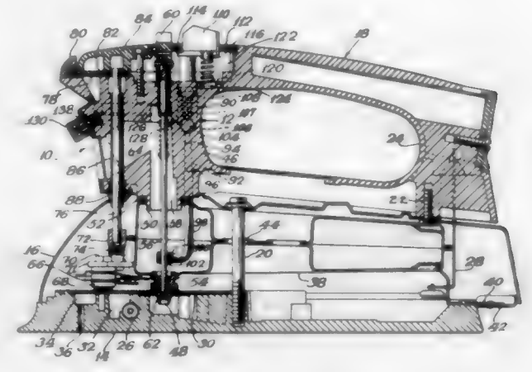
3,373,515
SNOW GATE ATTACHMENT FOR GRADERS
Heinz Schneider, 59 27th St. E., Prince Albert, Saskachewan, Canada
Filed Apr. 29, 1965, Ser. No. 451,769
Claims priority, application Canada, Feb. 26, 1965, 924,233
8 Claims. (Cl. 37—50)



Attachment for a material-handling blade particularly suited for use on the blade of a grader to selectively prevent discharge of material at the end of the blade during snow removal operations. The attachment is secured to the frame of the grader and is adapted to be pivoted in a vertical plane which extends in the direction of travel of the grader.

3,373,516
COMBINATION HANDLE AND PUMP FOR STEAM AND SPRAY IRONS
Robert S. Knapp and Charles F. Camilleri, St. Louis, Mo., assignors to Knapp-Monarch Co., a corporation of Delaware
Filed Dec. 1, 1965, Ser. No. 510,820
6 Claims. (Cl. 38—78)

An improved spray for a spray iron is provided by defining integral in the handle itself a chamber into which water is ingested and pressurized by a piston for movement to the spray nozzle through a water outlet passage defined in the handle. Two springs are used, a light one in the chamber between the piston and an intake check valve, and a heavier one in combination with a push button movable with the piston. The water outlet passage is formed by an open channel in the handle in combination with a cover member cemented in place, so that both the handle and cover may be formed of molded



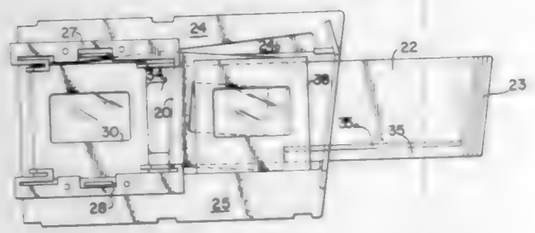
plastic material. The water outlet passage connects to the lower end of the chamber and includes means limiting its size so that priming may be easily effected.

3,373,517
CHANGEABLE BILLBOARD SIGN
Jack S. Halperin, 2820 W. Glen Lake Ave., Chicago, Ill. 60645
Filed Apr. 1, 1966, Ser. No. 539,364
15 Claims. (Cl. 40—65)

1. A changeable billboard sign assembly adapted to be secured to the side of a building or supported on a base anchored to a horizontal support surface, said billboard sign comprising: a stationary frame and a movable frame for supporting indicia carrying sign elements thereon, a first series of sign element anchoring means along one margin of one of said frames and an associated second series of sign element anchoring means along the opposite margin of the latter frame, a first group of relatively long slat-like sign elements suspended in overlapping relation between said first and second series of sign element anchoring means, the forwardly facing exposed surfaces of the overlapping sign elements having billboard sign-forming indicia thereon, one of said series of sign element anchoring means including spring means which are placed under tension by the associated suspended sign elements anchored thereto to maintain the associated sign elements in a relatively taut condition, a group of slat-like sign elements on said other frame and which are shorter than said first group and have billboard sign-forming indicia on forwardly facing surfaces thereof, said movable frame being supported for

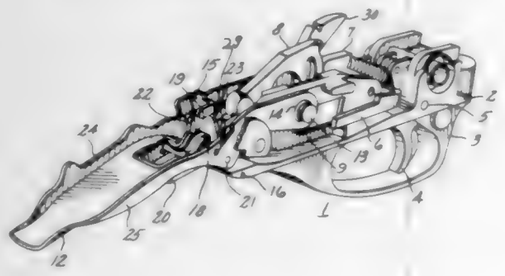
movement transversely of the length of said slat-like sign elements between opposite extreme positions, said shorter group of sign elements interleaving with said first group of sign elements and in one extreme position of the movable frame being hidden behind said first group of sign elements and in the other extreme position of the movable frame covering the exposed indicia carrying portions of the first group of sign elements, the indicia carrying surfaces of said shorter sign elements then being exposed, and means for automatically periodically moving said movable frame between said extreme positions.

3,373,518
SLIDE CHANGING DEVICE
Frank P. Bennett, Northbrook, Ill., assignor, by mesne assignments, to General Aniline & Film Corporation, New York, N.Y., a corporation of Delaware
Filed Sept. 29, 1966, Ser. No. 582,995
7 Claims. (Cl. 40—79)



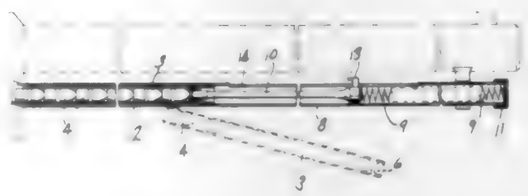
A stack of slides is supported with the respective edges thereof in parallel relation with the orientation of the same edges of a slide in the display position. The foremost slide in the stack is frictionally held at the entrance to a guideway for transfer to the slide display position by being engaged on one side thereof by the adjacent slide in the stack and by being engaged on the other side thereof by a guideway surface, such surface engaging the slide at a margin thereof which parallels the direction of slide changer movement. The slide changer includes a formation arranged to engage the trailing edge of the slide adjacent a corner of the slide which adjoins an opposite marginal portion thereby to rock the slide in its own plane to minimize edgewise interference between such foremost slide and the adjacent slide in the stack.

3,373,519
CARRIER LATCH RETAINER FOR AUTOLOADING FIREARMS
Walter L. Dahl, Herkimer, and James S. Martin, Mohawk, N.Y., assignors to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware
Filed Apr. 3, 1967, Ser. No. 627,785
7 Claims. (Cl. 42—17)



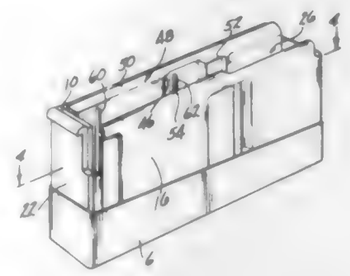
A fire control mechanism for autoloading firearms including a shell carrier arranged to transfer shells from the magazine to the chamber of the firearm. A carrier latch is arranged to hold the shell carrier in a position to receive shells from the magazine. Shells fed from the magazine move the carrier latch out of engagement with the carrier to allow the shell to be fed to the chamber. A retainer is formed on the carrier to prevent the carrier latch from relatching the carrier prior to the shell being fed to the chamber.

3,373,520
AMMUNITION PACKAGE AND MAGAZINE
Henry A. Into, Wallingford, Conn., assignor to Olin Mathieson Chemical Corporation, a corporation of Virginia
Filed Feb. 23, 1967, Ser. No. 618,094
4 Claims. (Cl. 42—49)



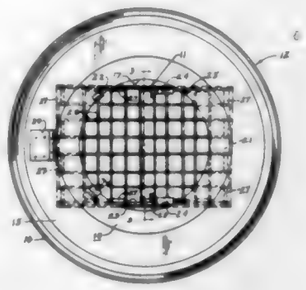
3. A combined ammunition package and gun magazine comprising a tubular housing attached to a firearm, a semi-rigid tubular member removably mounted within said tubular housing, a plurality of cartridges positioned in said tubular member, a follower mounted in one end of said member and forming a closure for said one end, a follower rod and spring mounted in said tubular housing operative to engage said follower and move said follower under spring force toward the other end of said package to feed cartridges into a firearm mechanism, and means in said tubular housing operative to retract said follower rod and spring to facilitate the removal of said package from said tubular housing after it is empty.

3,373,521
CARTRIDGE MAGAZINE
Henry A. Into, Wallingford, Conn., assignor to Olin Mathieson Chemical Corporation, a corporation of Virginia
Filed Sept. 16, 1966, Ser. No. 580,093
11 Claims. (Cl. 42—50)



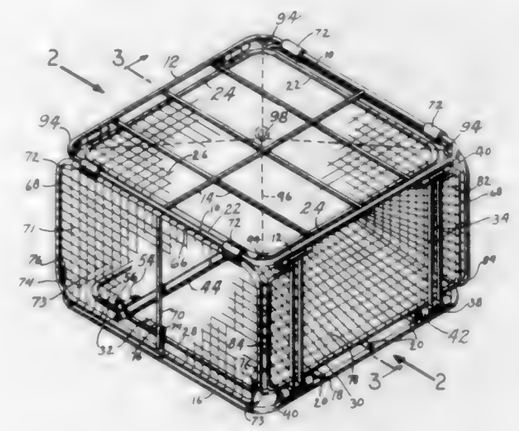
For use in conjunction with a firearm having a multilugged bolt, a cartridge magazine comprising a side wall, a pair of end walls, a bottom wall, and a partition member spaced apart from the side wall and extending between the end walls to define a cartridge-receiving chamber with a spring-biased follower disposed therein. The side wall includes rear cartridge control means, cartridge guiding means, and an inwardly turned, axially inclined feed lip at the upper end thereof. The partition member includes frontal cartridge control means, cartridge guiding means, and a downwardly and inwardly tapering upper portion forward of the frontal cartridge control means.

3,373,522
CONTAINER
Alan M. Staubly, 4940 Colfax Ave., Minneapolis, Minn. 55409
Filed June 7, 1965, Ser. No. 461,616
9 Claims. (Cl. 43—55)



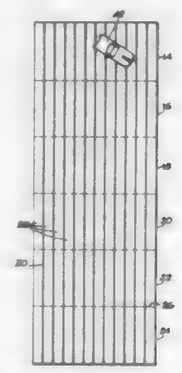
A closure for a conventional minnow bucket that may be quickly attached to and removed from the wall around the opening therein. The closure has an opening there through and has a plurality of button-shaped support members around the periphery of the opening. One set of rubber bands is stretched across the opening and engages one or more of the members on opposite sides of the opening and lies in one plane, and a second set of rubber bands is similarly stretched across the opening generally at right angles to the first set and lies in a second plane. Quick-connect fastening means is provided which does not materially interfere with the continued use of the regular cover as a supplemental closure. By lying in different planes and at right angles to each other, the two sets of bands permit the insertion of one's hand through the bands without enlarging any of the adjoining holes in more than one direction, which leaves the bands in the other direction to keep the holes between the bands sufficiently small to prevent the escape of frogs or other types of bait therefrom.

3,373,523
CRAB TRAPS OR POTS
Theodore T. Olafson, Box 251, Kodiak, Alaska 99615
Filed June 24, 1965, Ser. No. 466,767
9 Claims. (Cl. 43—100)



This invention relates to a collapsible crab pot or trap, characterized in general by having outer spaced apart top and bottom frame members having end and side rails. A plurality of link members pivotally interconnect the end rails of said top and bottom frame members. Mesh covered inner top and bottom frame members, having end and side rails, are secured respectively to said outer top and bottom frame members. A variable length diagonal brace is pivotally interconnected to the end rails of the inner frame members. Mesh covered, hingedly mounted door means are carried by said outer frame members. Also, crab entrance tunnels to the interior of the crab pot are provided.

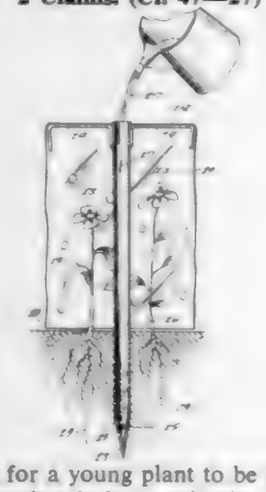
3,373,524
ELECTRICALLY OPERATED VEHICLE AND MODULE FOR A COURSE FOR THE VEHICLE
Irving Nirenberg, Opa-Locka, Fla., assignor of fifty percent to Louis Barreiro, Miami, Fla.
Filed Dec. 9, 1965, Ser. No. 512,754
6 Claims. (Cl. 46—244)



1. In combination, a movable member and a track; said track being composed of at least one module, each of said modules of said track comprising; a bed of insulating material, a plurality of spaced conductive strips in generally parallel relation fastened over one main surface of the module, said insulating material of said bed separating said strips and defining a common exterior plane for the module between the strip, each of said strips being flush with said surface and separated from the other strips by said insulating material; each of the strips being of one polarity when electrically connected to a power source which is opposite to the polarity of the strips adjacent and abutting the insulation material along said strip; means electrically connecting each of said strips to a power source to permit current flow through any two parallel strips separated by said insulating material when the strips are bridged by an electrically conductive material; said movable member comprising: a body movably supported on the module, a first and a second spaced contact brush of electrically conductive material depending from said body and arranged to engage the surface of the module when the vehicle is supported thereon; each of said brushes being of a minimum module surface-engaging area such that the greatest distance through the area is less than the smallest distance between any two strips so that each brush can only engage one strip at any one time; the distance between the center line of the brushes of the body being the same as or a multiple of the distance between the center lines of insulating material on either side of the strips; drive means on the body and electrical conductor means to connect said drive means to each of the brushes to be energized on current flow from said source, said drive means being arranged to propel the body over the surface of the track; control means on the body electrically in series between the brushes and the drive means to control current flow to the drive means; and signaling means remote from said body to operate said control means, said control means being responsive to the signaling means to vary the current flow to the drive means; a bridging member is provided to support the brushes in spaced relation, said bridging member being rotatably mounted on said body; spring means connecting said member and said body to normally urge said member into a first position; a sensing drive means on said body and mechanically connected to said member to normally urge said member into a second posi-

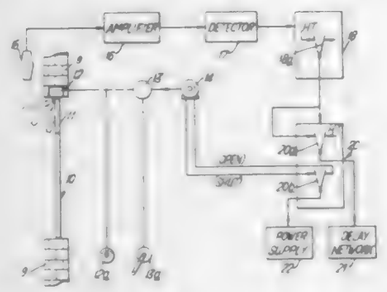
tion angularly displaced relative to said first position; stop means to limit movement of said member; said third drive means being normally energized when said brushes are in engagement with strips of opposite polarity and said sensing drive means being adapted to overcome the tension of said spring when energized whereby the spring will rotate the brushes on interruption of current flow as when one of the brushes is in engagement with insulating material, so that the motor will become energized again.

3,373,525
PLANT PLASTIC CAP
Dolores B. Cavataio, 2850 S. 128th St., New Berlin, Wis. 53151
Filed Sept. 2, 1966, Ser. No. 576,872
2 Claims. (Cl. 47—27)



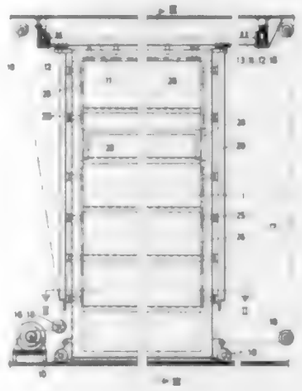
An enclosure for a young plant to be protected against adverse cold weather before springtime sets in, the enclosure comprising a clear, transparent, plastic bag to admit sun rays therethrough, and with breather perforations for admitting air to the plant, the bag being supported on a hollow post open at its lower end for receiving water to be transported to the plant roots.

3,373,526
ACOUSTICALLY CONTROLLED CLOSURE APPARATUS
Peter Hubert Parkin, Garston, Watford, England, assignor to National Research Development Corporation, London, England, a corporation of Great Britain
Filed May 25, 1965, Ser. No. 458,651
11 Claims. (Cl. 49—25)



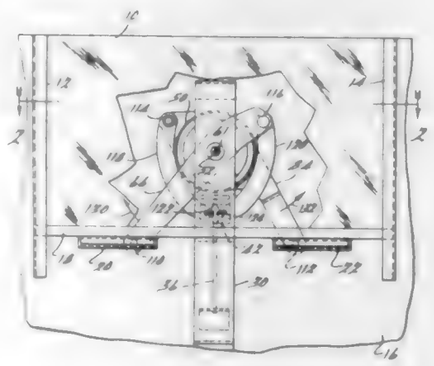
1. Acoustically controlled closure apparatus comprising an apertured member adapted to form part of a boundary wall of an enclosure, a closure member movable between a closed position in which an aperture in the apertured member is closed and at least one open position in which the said aperture is at least partially opened, a sound detection device responsive to a predetermined noise level about the enclosure, control means which are controlled by the sound detection device and delay means included in said control means said control means operating, when the closure member is at least partially open and the sound detection device detects a noise level in excess of said predetermined level, first to close the closure member and, a predetermined time, determined by said delay means, after the noise level has fallen below the said predetermined level, subsequently to re-open the closure member to restore it to its at least partially open position.

3,373,527
ESSENTIALLY VERTICAL DOORS ADAPTED TO BE OPENED BY A SIDEWARD MOVEMENT
Johan Bertil Olsson, Goteborg, Sweden, assignor to Associated Cargo Gear, A.B., Goteborg, Sweden, a corporation of Sweden
Filed Nov. 25, 1966, Ser. No. 596,977
6 claims. (Cl. 49—212)



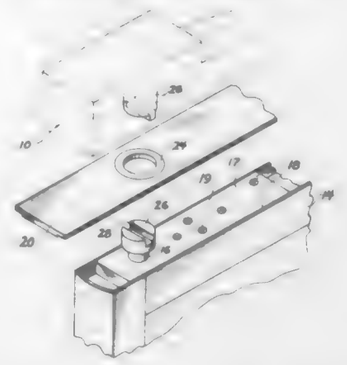
This invention relates to track-supported vertical doors of the type openable by a sideward movement, and is concerned with improved mechanism for manipulating such a door including sealing the latter against its complementary door frame in a wall or bulkhead. According to the invention, the door is slidably associated with a track adjacent the upper part of the door by means of a wheeled mechanism secured to that side of the door which is remote from the bulkhead, and is adapted to be tilted away from the door frame when opened.

3,373,528
ACTUATOR WITH MULTIPLE REVERSELY OPERABLE OUTPUT MEANS
David V. Tinder and Melvin L. Ollman, Detroit, and Joseph Adamski, Brooklyn, Mich., assignors to Dura Corporation, a wholly owned subsidiary of Walter Kiddie & Company, Inc., a corporation of New York
Filed Aug. 2, 1965, Ser. No. 476,525
32 Claims. (Cl. 49—349)



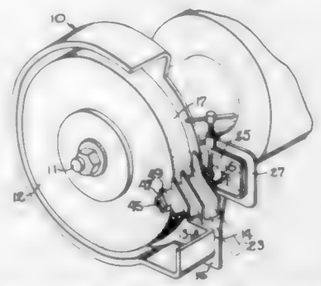
There is herein disclosed a power actuator arrangement for a vehicle window comprising a pair of rotatable actuator arms driven by a reversible axial air gap type electrical motor having a disc armature through harmonic motion transmission means.

3,373,529
PIVOTAL MOUNTING FOR AUTOMATIC DOOR
Gary G. Ingham, Oklahoma City, Okla., assignor to Roto-Swing Door Co., Inc., Oklahoma City, Okla., a corporation of Oklahoma
Filed Oct. 31, 1966, Ser. No. 590,608
4 Claims. (Cl. 49—381)



1. A pivotal connection between a door operator and a door mounted in a door opening and which comprises shaft means carried by the door operator, pivot shaft means carried by the door means for independently journaling the pivot shaft in the door opening for pivotal movement of the door therein, and means providing removable driving engagement between the door operator shaft means and the pivot shaft means whereby the door operator may be removed and installed independently from the door to permit uninterrupted use of the door.

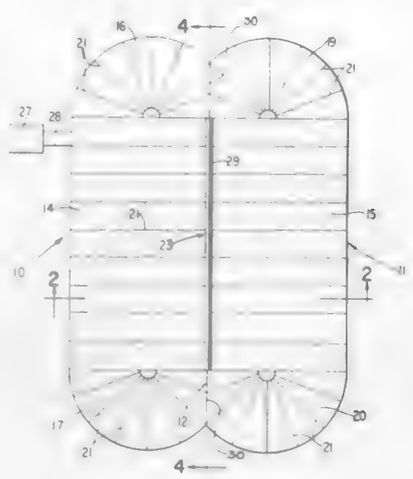
3,373,530
SHARPENING FIXTURE FOR TWIST DRILLS
Clyde E. Cooprider, R.R. 1, Rochelle, Ill. 61068
Continuation-in-part of application Ser. No. 386,299, July 30, 1964. This application July 30, 1965, Ser. No. 476,027
1 Claim. (Cl. 51—238)



A fixture attachable to the steady rest of a wheel type grinder including a generally flat plate having a plurality of upstanding flanges inclined relative to the forward edge of the plate at a conventional drill tip angle. The opposite end of the plate is stepped to provide fulcrums differently spaced from the front edge of the plate and providing fulcrums for accommodating different lengths of drills during sharpening.

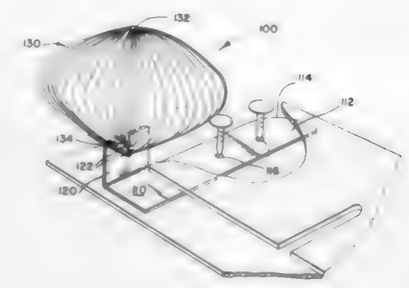
3,373,531
WIDE SPAN INFLATED STRUCTURE
Hans Meyer, White Plains, and Kurt Meyer, Riverdale, N.Y., assignors to Air-Tech Industries, Inc., New Rochelle, N.Y., a corporation of New York
Filed Apr. 4, 1966, Ser. No. 540,085
4 Claims. (Cl. 52—2)

A wide span inflated structure comprising two elongated arcuate building sections intersecting along a longitudinally extending line, a rigid tubular member extending along the line of intersection, and a cable extending



through the tubular member and anchored at each end to maintain the contour of the building against the thrust of air pressure within the building.

3,373,532
GLOBE SNOW ARRESTOR
Hinman F. Strange, Spotswood Trail, Gordonsville, Va. 22942
Filed Jan. 23, 1967, Ser. No. 610,957
5 Claims. (Cl. 52—24)

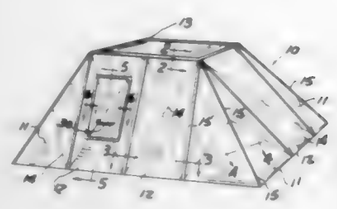


This may be defined as a snow arrestor for roofing constructions which is adapted to provide maximum contact of the arrestor per se to snow gathered on roofs. The size of the unit, compared to existing units is substantially the same, the plural snow retaining wires are multiple and present a barricade in depth to the snow, yielding thereby a better means of securing and arresting the snow against falling from the eaves damaging planting and destroying gutters. The arresting of snow in depth permits accumulated snow to melt more gradually than heretofore.

Modifications of invention are adapted to three basic types of roofing, namely slate and/or slate composition; tile and corrugated roofing construction.

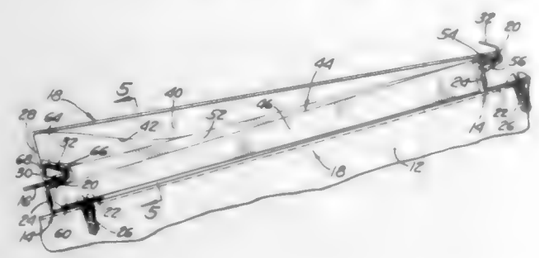
More simply stated, an open wire globe is secured to a flat or curved metal bracket, which said bracket is adapted to fit under conventional shingles or tiles or over corrugated roofing. This globe which has the appearance of a bird cage is thus presented perpendicularly to the slope of the roof, approximately several inches above the shingles so as to hold melting snow in depth, in place.

3,373,533
COLLAPSIBLE RIGID TENT
Gerald J. Trelfa, 14721 Stephens, East Detroit, Mich. 48236, and Herbert G. Haynie, 24281 Stewart, Warren, Mich. 48089
Filed May 5, 1966, Ser. No. 547,881
1 Claim. (Cl. 52—82)



A collapsible rigid tent formed of corner pieces and intermediate rectangular panels, and topped by a large area rectangular panel which holds all the parts together.

3,373,534
ATTACHMENT CLIP FOR METAL SHINGLES
Jack A. Berridge, Riverside, Calif., assignor to American Metal Climax, Inc., New York, N.Y., a corporation of New York
Filed Feb. 1, 1966, Ser. No. 524,318
6 Claims. (Cl. 52—90)



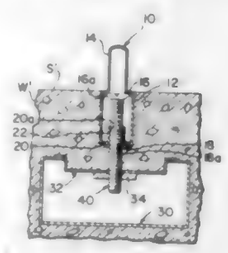
1. An attachment clip for assembling a metal shingle to a pair of spaced-apart, parallel purlins which are mounted horizontally on inclined roof rafters, said shingles being formed of sheet metal to simulate wooden shingles or shakes and being assembled on said purlins with their lower edges overlying the upper edges of the next lower shingles, each of said shingles having its lower edge bent downwardly and then rearwardly to form a narrow flange, the upper edge of said shingle being bent over to form a forwardly and upwardly inclined lip, each of said purlins being formed with parallel upper and lower flanges connected along one edge by a vertical web, said narrow flange at the lower edge of said shingle resting on the upper edge of the next lower shingle directly over said upper flange of the lower purlin, and the upper edge of said shingle resting on said upper flange of the upper purlin, said attachment clip comprising:

an elongated body of a length to span the distance between said upper and lower purlins;

means at the upper end of said body overlying said upper flange of said upper purlin and interlocking therewith; and

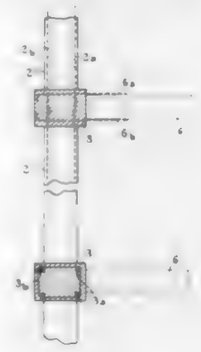
means at the lower end of said body interlocking with said lower purlin and hooking over said forwardly and upwardly inclined lip at the upper edge of the next lower shingle, to secure the lower edge of the one shingle and the upper edge of said next lower shingle to said lower purlin, the upper edge of said shingle being secured to said upper purlin by the attachment clip of the next higher shingle.

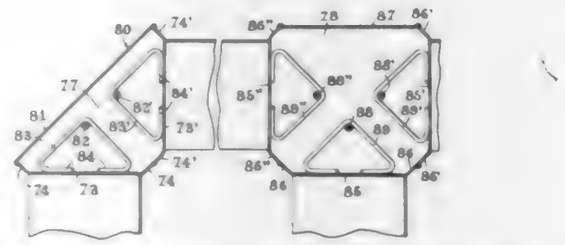
3,373,535
MARKER SCREW CAP
Victor J. Lankes, 41 Olney Drive, Amherst, N.Y. 14226
Filed Mar. 18, 1966, Ser. No. 535,532
8 Claims. (Cl. 52—105)



A rubber cap, for locating and protecting a marker screw threadedly engaged with duct means embedded in poured concrete wall construction, includes a small tube having its closed outer end adapted to project beyond the outer wall surface but to resiliently yield upon engagement with a surface finishing tool, a large tube adapted to surround the screw, a shoulder connecting the inner ends of the tubes and adapted to be engaged by the head end of the screw roughly adjusted almost level with or below the outer wall surface, and a pair of oppositely disposed lateral strips adapted to be turned inwardly across the outer end of the large tube and to fit over the shank end of the screw for maintaining the head end against the shoulder.

3,373,536
SILO OR TANK COMPRISING SEVERAL COMPARTMENTS OR CELLS
André Reimbert, 67 Blvd. de Reuilly, Paris, France
Filed Sept. 24, 1964, Ser. No. 398,943
Claims priority, application France, Sept. 25, 1963, 948,571; Apr. 23, 1964, 971,974
13 Claims. (Cl. 52—234)



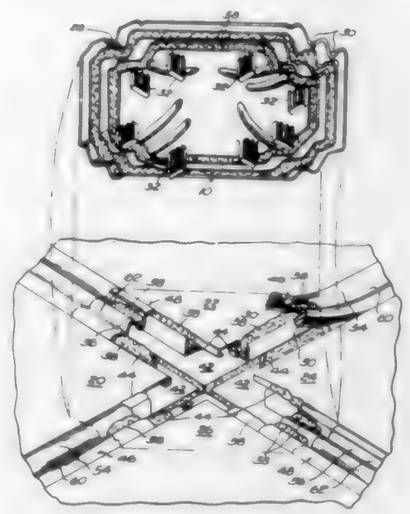


1. A large upright container having a plurality of compartments and comprising, in combination, a substantially continuous outer wall of concrete; a plurality of inner substantially vertical sheet metal panels extending transverse to said outer wall and dividing said container into said plurality of compartments, said panels being formed at least in part with horizontally extending corrugations;

substantially horizontal hook-shaped projections fixed to said panels and projecting beyond the side edges thereof facing said outer wall and being embedded in the latter; and at least one concrete post between and supporting the other side edges of said panels.

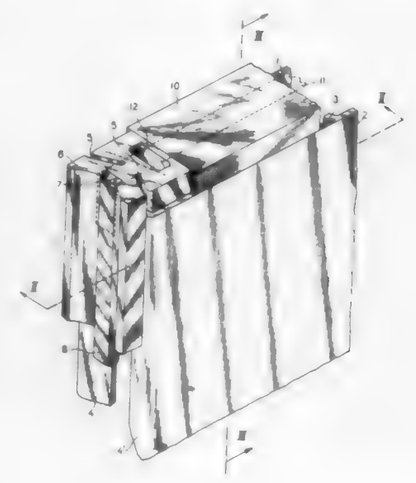
8. A large upright container having an outer substantially vertical and substantially continuous wall and a plurality of substantially vertical dividing walls dividing the interior of said container into a plurality of compartments, each of said walls being formed from horizontally corrugated sheet metal panels having side edges spaced from side edges of adjacent panels; a pair of substantially vertical metal plates respectively extending along and being fixed to opposite side edges of each panel substantially normal thereto and forming part of an enclosure for a concrete post; and at least one vertical reinforcing bar attached to each plate spaced therefrom and forming at least part of the reinforcement of the respective concrete post; and concrete filling said enclosure and embedding said reinforcing bar to form between spaced side edges of adjacent panels reinforced concrete posts connected to said panels.

3,373,537
JOINT STRUCTURES AND ELEMENTS THEREOF
James H. Blayden, Pittsburgh, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
Filed July 5, 1966, Ser. No. 562,650
9 Claims. (Cl. 52—288)



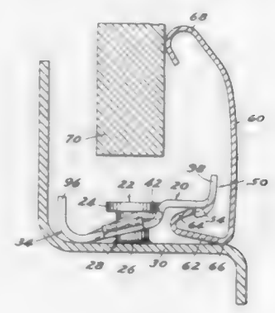
7. A joint structure between spaced marginal edges of juxtaposed panels having flexibly sealed impermeable interconnections across coextensive spaced marginal edge lengths of the adjacent panels comprising the joint structure except for an exposed joint therebetween, a cover patch of flexible impermeable material installed over said exposed joint and portions of the flexible interconnections immediately adjacent thereto, said cover patch having a substantially centrally outwardly extending bellows section and laterally extending flange section contiguously subtending the same, spuds depending from an underside of said flange extending into the exposed joint and locating the flange of the cover patch in overlying disposition in respect to said flexible interconnection portions immediately adjacent the exposed joint, and a layer of adhesive sealant interposed the underside of said cover patch flange, portions of said flexible interconnections immediately adjacent the exposed joint, and outwardly facing surfaces of the juxtaposed panels contiguous therewith in flexibly sealed adhesive securement of said cover patch over said exposed joint.

3,373,538
STRUCTURAL ELEMENT
Karel Prager, Prague, Czechoslovakia, assignor to Sklo Union narodni podnik, Teplice, Czechoslovakia
Filed Feb. 9, 1966, Ser. No. 526,152
Claims priority, application Czechoslovakia, Feb. 17, 1965, 1,077/65
9 Claims. (Cl. 52—403)



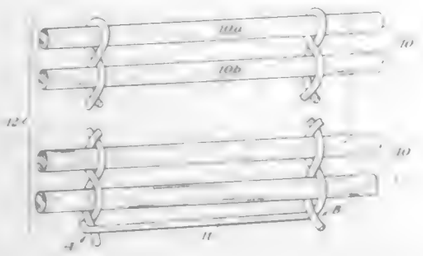
A structural element comprising a pair of spaced, substantially parallel sheets of frangible material each having an elongated edge portion extending in direction toward the other panel; and connecting means releasably connecting said sheet members to one another, said connecting means including an elongated strip member of elastic material provided with longitudinally extending channels which are complementary to the edge portions of said sheets and in which said edge portions are received whereby said sheets are releasably connected and maintained in spaced position with reference to one another.

3,373,539
TRIM FASTENER
Engelbert A. Meyer, Union Lake, Mich., assignor to Warren Fastener Corporation, a corporation of Michigan
Filed Aug. 18, 1965, Ser. No. 480,595
10 Claims. (Cl. 52—718)



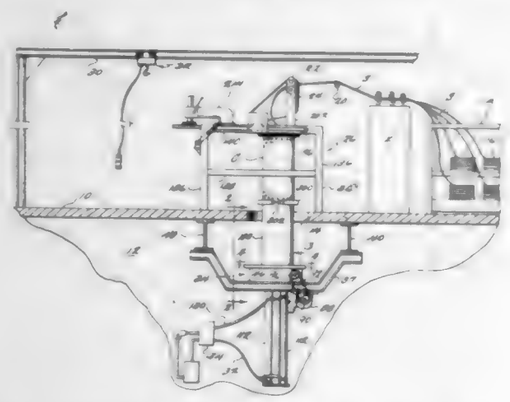
This disclosure relates to a clip adapted to attach a structural member, such as an automotive molding, to the surface of a support. The clip includes a body portion having a U-shaped opening, a ramp portion resiliently joined to the body portion within the U-shaped opening having a slot extending through one edge to receive a button secured to the support. The slot has a restricted opening causing the ramp portion to flex laterally to receive the button and lock the button in place.

3,373,540
METHOD OF BUNDLING
William R. Wisner, Big Flats, N.Y., assignor to Corning Glass Works, Corning, N.Y., a corporation of New York
Filed July 13, 1965, Ser. No. 471,664
3 Claims. (Cl. 53—3)



A method of protectively bundling a succession of identical elongated articles of a frangible or otherwise damageable material by interlacing a tensilely strong supple material about and between said articles and thereafter winding the interlaced succession of articles without skew therebetween and, therefore, no possibility of physical contact therebetween.

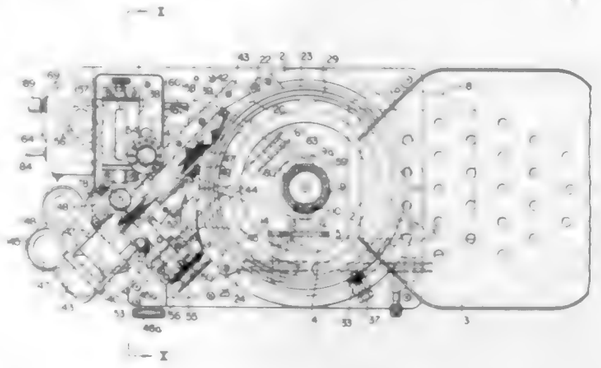
3,373,541
APPARATUS AND PROCESS FOR COILING SLIVER OR THE LIKE IN CANS
Thomas W. Wilson, Raeford, N.C., Victor T. Fahringer, Clarksville, Va., and Samuel F. Hiser, Raeford, N.C., assignors to Burlington Industries, Inc., Greensboro, N.C., a corporation of Delaware
Filed May 19, 1965, Ser. No. 457,047
33 Claims. (Cl. 53—24)



An apparatus and a process for coiling sliver or the like into cans whereby the sliver is fed into the can against a back pressure and through and out of the can into a confined space, the sliver fed out of the can into the confined space then being compressed back into the can with closure ends being applied to both ends of the can. The sliver may be coiled in the can while wet.

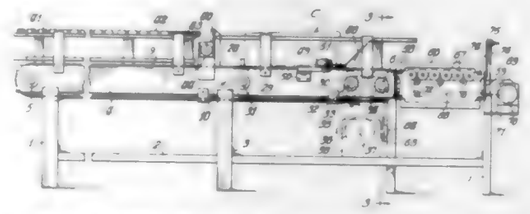
3,373,542
COIN HANDLING APPARATUS
Hisakazu Ikeuchi, Himeji-shi, Japan, assignor to Kokuei Machinery Mfg. Co., Ltd., Himeji-shi, Japan
Filed May 18, 1965, Ser. No. 456,663
Claims priority, application Japan, May 22, 1964, 39/39,492, 39/39,493, 39/39,494, 39/39,496; May 26, 1964, 39/41,060
6 Claims. (Cl. 53—159)

A coin handling device for stacking a predetermined number of coins in a wrapper and then securing them in the wrapper, and which consists of a coin transfer device, a coin counting device which counts the number of coins transferred from the transfer device, a coin receiving device which holds a wrapper and receives the coins from



the counting device, and a coin wrapper crimping device provided with a crimping hook for crimping the rim of the wrapper; i.e. a paper tube.

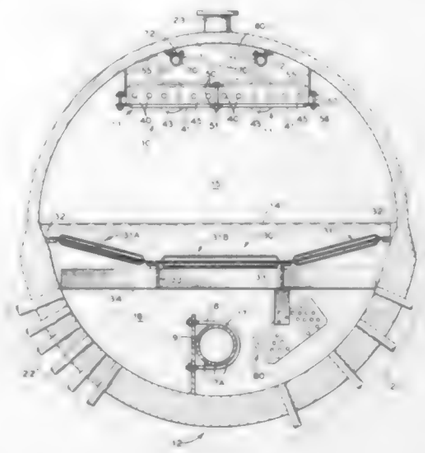
3,373,543
FLAP SLITTER AND POSITIONER
Biagio J. Nigrelli, Northbrook, and Wendell E. Standley, Lake Forest, Ill., assignors to Johns-Nigrelli-Johns, Inc., Skokie, Ill., a corporation of Illinois
Filed Aug. 9, 1965, Ser. No. 478,371
15 Claims. (Cl. 53—381)



The mechanism herein disclosed is employed to sever the connections between the edges of joined, downturned closure flaps held along the outer surfaces of the vertical walls of a filled paperboard container as the container is advanced along a given path. Severing means, located in the path of the strips, break or cut such strips as the container is propelled past such severing means. The released flaps are then swung to closed position.

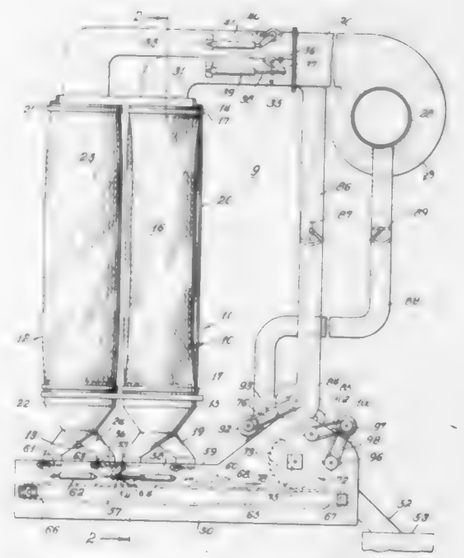
3,373,544
THERMAL STEAM SCRUBBER
Everett A. Catlin, Morristown, N.J., and Ambrose Cort, Jr., Rye, N.Y., assignors to The Babcock & Wilcox Company, New York, N.Y., a corporation of New Jersey
Filed Jan. 13, 1964, Ser. No. 337,239
6 Claims. (Cl. 55—269)

1. In a steam generator, a steam and water drum of the type wherein a body of liquid having a water level is normally maintained, said water level defining the boundary between a lower water space and an upper steam space, means for discharging moisture laden steam into said body of liquid, means forming a steam outlet communicating with said steam space, a bank of spaced heating elements disposed in said steam space between said water level and said steam outlet, a plurality of closely spaced thin plate members attached to said heating elements in heat conducting relationship along substantially the entire length thereof, said plate members being arranged relative to each other to form undulating flow channels therebetween, means for heating said plate members to a temperature substantially higher than the temperature of the steam in said steam space, and baffle means for directing the flow of said steam upwardly through said flow channels between said plate members,



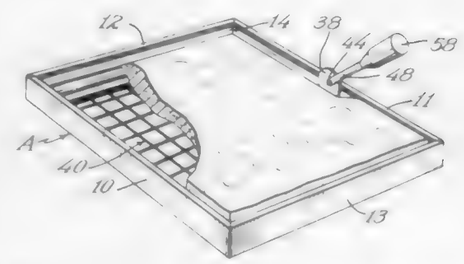
whereby separation of moisture from the steam passing through said flow channels is effected by virtue of directional changes of the steam flow, and the moisture thus deposited on said plate members is evaporated.

3,373,545
DUST COLLECTING SYSTEM
Lynn M. Christianson, 7 Elaine Circle E., Prospect Heights, Ill. 60070
Filed Apr. 11, 1966, Ser. No. 541,681
12 Claims. (Cl. 55—273)



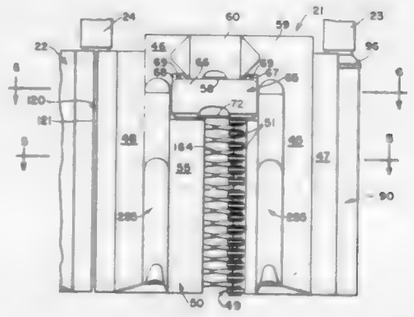
A dust-collecting apparatus is provided which comprises a plurality of individual separators. Each separator includes spaced upper and lower plenums connected by a fabric tube. The upper plenums all communicate to individual valves to the discharge end of a pickup blower. The exterior of the tubes are exposed to the interior of the building within which the dust pickup takes place. The bottom plenums are in the form of chutes and each has an individual valve. An enclosure about the bottom of all of the chutes houses a dust conveyor. In this housing is a secondary dust separator. Normally the air carrying the dust is introduced through the open valves into the top intake plenum. The dust is trapped in the tubes while the air passes through the fabric and is thereby returned to the building. One at a time, the separators are taken off stream by closing the intake valve. A discharge valve is opened between the discharge plenum and the housing air is withdrawn from the housing through the secondary separator, which is a drum type separator. Both by gravity and by this air flow the dirt and dust from the interior of the separator that is off stream is carried into the housing where it is transferred to an outlet by the conveyor. The air flow passes through the secondary separator and then is returned to the initial dust pickup conduit so that it flows back through the separators which remain on stream.

3,373,546
FILTER
Harold T. Setnan, Excelsior, Minn., assignor to Associated Mechanical Services, a corporation of Minnesota
Filed Jan. 6, 1966, Ser. No. 519,117
4 Claims. (Cl. 55—501)



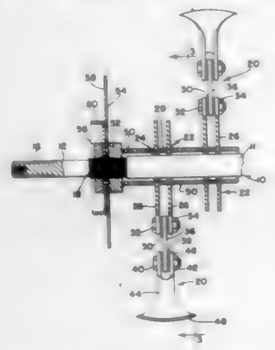
This invention comprises a filter frame provided with a replaceable pad of filter material. The frame includes four frame sides with mitered corners connected by right angular clips. The frame sides include a groove for a reinforcing screen. Two curved lips extend toward one another from right angularly arranged walls and terminate in closely spaced relation. The marginal edges of the filter pad are engaged between these lips. An auxiliary frame of greater width may encircle the filter frame where the filter is used to replace a pair of side by side conventional filters.

3,373,547
COTTON PICKER
Arthur L. Hubbard, Des Moines, Iowa, assignor to Deere & Company, Moline, Ill., a corporation of Delaware
Filed Feb. 12, 1965, Ser. No. 432,110
12 Claims. (Cl. 56—44)



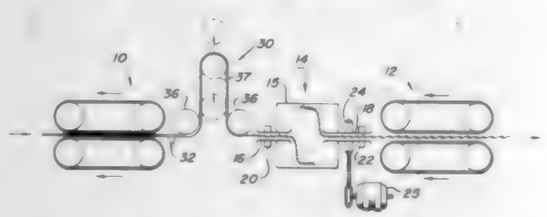
Housing structure for a cotton harvester including opposed upright wall structures defining a fore-and-aft extending plant passage with a forwardly opening plant entrance; harvesting mechanism in the housing structure including laterally extending picker spindles projecting into the passage in the lower portion thereof; and a laterally extending panel detachably supported on the housing to traverse the plant passage above the spindles for blocking off access of the upper portion by plants moving through the passage.

3,373,548
ROTOR FOR CUTTING, CHOPPING, ETC.
Glenn L. Myers and Allan K. Lawrence, Ottumwa, Iowa, assignors to Deere & Company, Moline, Ill., a corporation of Delaware
Filed Dec. 11, 1964, Ser. No. 417,728
4 Claims. (Cl. 56—294)



A flail-type rotor having an elongated axial shaft of square cross section, a plurality of equally spaced, radially extending flails mounted on the shaft for rotation therewith and axial sliding thereon, a cylindrical spacer between the adjacent flails, and means at the opposite ends of the shaft for axially clamping the flails and spacers.

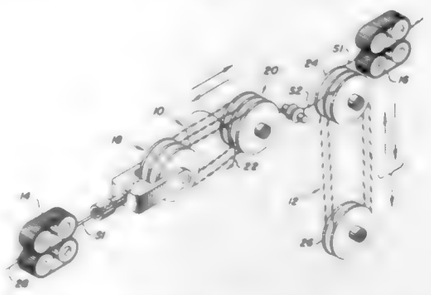
3,373,549
METHODS OF AND APPARATUS FOR ALTERNATE REVERSE TWISTING OF INDEFINITE LENGTHS OF STRAND MATERIAL
Everett Jesse Shaw, Pennington, N.J., assignor to Western Electric Company, Incorporated, New York, N.Y., a corporation of New York
Filed June 10, 1965, Ser. No. 462,857
14 Claims. (Cl. 57—34)



Imparting alternate-reverse twists to indefinite lengths of strand material, and in particular, to a plurality of electrical conductors. More specifically, a plurality of electrical conductors are fed axially into, and axially out of, a rotating twisting apparatus such as a rotating drum. Axial entry of the conductors into the rotating drum imparts a twist of one direction to the conductors, and, axial discharge of the conductors imparts a twist in the opposite direction. By alternately varying the relative speeds of drum entrance and discharge, alternate-reverse twists are imparted to the conductors.

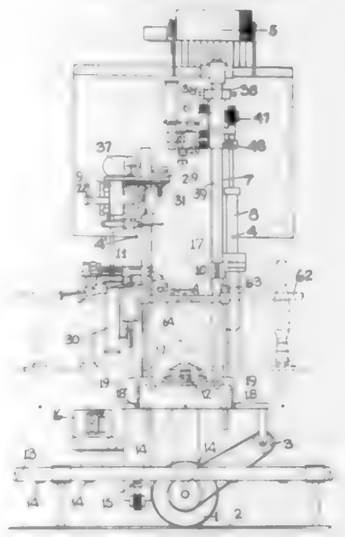
3,373,550
METHODS OF AND APPARATUS FOR ALTERNATE-REVERSE TWISTING OF INDEFINITE LENGTHS OF STRAND MATERIAL
John Martin Symonds, Williamsville, N.Y., assignor to Western Electric Company, Incorporated, New York, N.Y., a corporation of New York
Filed June 10, 1965, Ser. No. 462,858
6 Claims. (Cl. 57—34)

Imparting alternate-reverse twists to indefinite lengths of strand material, in particular a plurality of electrical conductors, by feeding the strand material axially into and out of a rotating accumulator which cooperates with a non-rotating accumulator which creates an alternating differential between the entrance and exit speeds of the strand material into and out of the rotating accumulator. By making the entrance speed of the strand material into



the rotating accumulator alternately greater and less than the exit speed from the rotating accumulator, a net alternate-reverse twist is imparted to the strand material.

3,373,551
AUTOMATIC APPARATUS FOR BINDING BROKEN YARNS ON SPINNING MACHINES
Matteo Gillono, 7 Via San Lorenzo, Ivrea, Turin, Italy, and Pietro Alberto, 16 Via Lamarmora, Biella, Vercelli, Italy
Filed Nov. 26, 1965, Ser. No. 509,873
Claims priority, application Italy, May 8, 1965, 10,457/65
23 Claims. (Cl. 57—34)

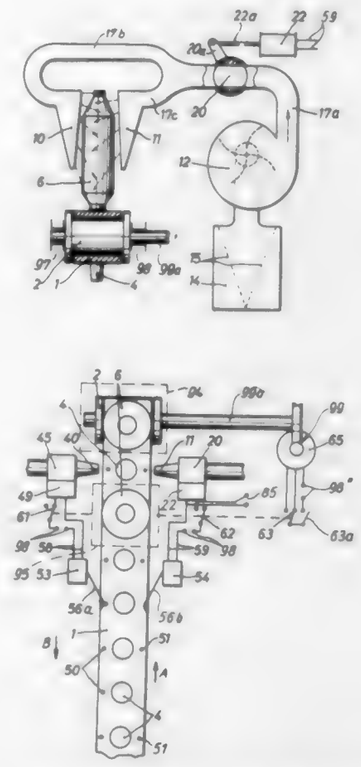


The spinning machine includes an automatic device for binding broken yarns. The device includes a detector which senses the occurrence of a broken yarn as well as a continuously movable belt for taking up a broken yarn end. The spool upon which the broken yarn is, is extracted from rotation engagement with a spindle after detection of a broken yarn to permit binding of the broken ends.

3,373,552
APPARATUS FOR TRANSPORTING AND CLEANING BOBBINS OR THE LIKE
Hermann Scherr, Ebersbach (Fils), Germany, assignor to Zinser-Textilmachinen Gesellschaft mit beschraenkter Haftung, Ebersbach (Fils), Germany
Filed Oct. 10, 1966, Ser. No. 585,489
Claims priority, application Germany, Oct. 8, 1965, Z 11,797
20 Claims. (Cl. 57—56)

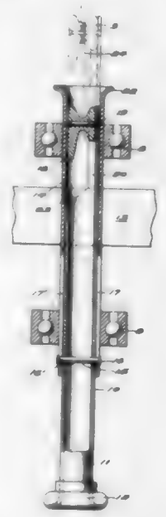
1. In a textile machine, particularly in a spinning frame or twister, conveyor means including a conveying element provided with holders for barrels of bobbins and

arranged to advance such holders past a loading station where the barrels are applied to holders and an evacuating station where bobbins formed on such barrels are re-



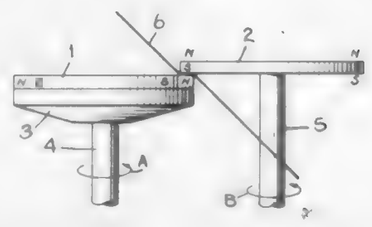
move from the respective holders; and a pneumatic cleaning unit adjacent to the path of travel of said holders and comprising means for generating and directing air streams against the holders of said conveying element.

3,373,553
FALSE-TWIST APPARATUS
Herbert Oswald Naumann, Laconia, N.H., assignor to American Cyanamid Company, Stamford, Conn., a corporation of Maine
Filed Jan. 26, 1967, Ser. No. 612,021
9 Claims. (Cl. 57—77.3)



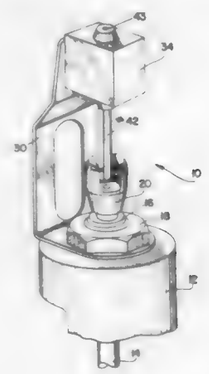
A false twisting apparatus comprising, in combination: a first annular tube having an axial passageway therethrough, a second annular tube concentric with and outside said first tube, mounting means for mounting one of said tubes for rotation about its own axis, guide means secured only at one side thereof to one of said tubes so that an operative portion of said guide means is positioned coaxially with both of said tubes and entirely beyond the end of the tube to which it is secured, and means for permitting axial movement of said tubes relative to each other between a first position wherein said guide is entirely external to the tube to which it is not secured and a second position wherein said guide is entirely within the tube to which it is not secured, and for securing said tubes to each other in said second position during rotation thereof.

3,373,554
YARN TWISTING APPARATUS
Josef Raschle, Butschwil, Switzerland, assignor to Heberlein Patent Corporation, New York, N.Y., a corporation of New York
Filed May 2, 1966, Ser. No. 546,938
Claims priority, application Switzerland, May 6, 1965, 6,284/65
10 Claims. (Cl. 57—77.4)



1. A false twist device of the class described for texturing textile yarn comprising: twist imparting members positioned to have at least partially overlapping contacting portions at a yarn twisting zone through which yarn is advanced, means driving said members in respective directions whereby the contacting portions thereof move in opposite directions, and magnetic means urging at least one of said contacting portions towards the other frictionally to engage yarn passing through said zone and impart a false twist thereto.

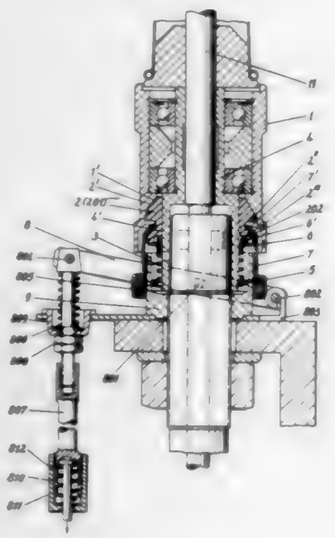
3,373,555
TEXTILE SPINDLE
Hans H. Richter, Cranston, R.I., assignor to Lessona Corporation, Warwick, R.I., a corporation of Massachusetts
Continuation-in-part of application Ser. No. 501,140, Oct. 22, 1965. This application June 21, 1966, Ser. No. 555,868
21 Claims. (Cl. 57—77.45)



1. A device for twisting-untwisting yarn comprising, a rotatable spindle having an axial bore therethrough for passage of a moving strand of yarn, means for rotating

said spindle, means for rotating said yarn in response to rotation of the spindle to twist-untwist the yarn, and a rotatable tube having at least a portion of its external surface arranged to engage the yarn moving from said spindle, said tube being rotated in response to engagement by said moving yarn to advance said yarn from said spindle.

3,373,556
SPINDLES FOR TEXTILE MACHINES
Hans Stahlecker, Sussen, Wurttemberg, and Sigmund Kemmler, Geislingen, Steige, Wurttemberg, Germany, assignors to Spindelfabrik Sussen, Schurr, Stahlecker & Grill G.m.b.H., Sussen, Wurttemberg, Germany
Filed July 12, 1965, Ser. No. 470,989
Claims priority, application Germany, July 14, 1964, S 92,039; June 1, 1965, S 97,407
13 Claims. (Cl. 57—88)

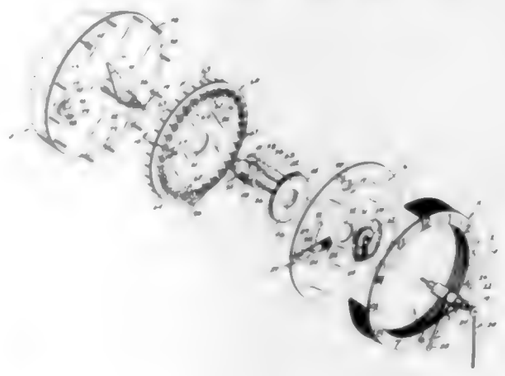


A stop spindle whose acceleration during the starting and whose retardation during the braking is limited so that the yarn body is protected. Between the wharve and a clutch member fixed on a shaft is a spring biased clutch element. The clutch element, which is either radially elastic or divided into radially moveable segments, is wedged in, during the operation of the spindle and the axially directed spring action, between the wharve and the clutch member secured to the spindle shaft. An upwardly conically extending sleeve engages in an annular groove of the clutch element to stop the spindle. The lower flank or side of the annular groove is adapted to the conical shape of the sleeve. When stopping, the sleeve is moved downwardly, the friction contact between the wharve and the clutch element is dissolved, and the clutch element is wedged in between the conical part of the sleeve and the clutch member under the action of the spring. In view of the fact that there is no rigid connection between either the wharve and the clutch element or between the clutch element and the clutch member secured to the shaft so that merely a frictional connection is provided, the spindle is braked softly and is equally softly brought again to speed; this soft operation and action primarily being due to the spring tension of the axially acting spring as well as the radially elastic and freely rotatable arrangement of the clutch element. The object sought to be obtained with the present invention is achieved by means of the provision of the clutch element, which is radially elastic or divided into segments and which is subjected to the action of an axially pressing spring while not being hindered in the free play thereof by wedges or the like.

3,373,557
YARN TWISTING APPARATUS
Chester L. Loveland, Dalton, Pa., assignor to U.S. Textile Machine Company, Scranton, Pa., a corporation of Pennsylvania
Filed Jan. 6, 1966, Ser. No. 519,093
9 Claims. (Cl. 57—119)

In a yarn twister combination a yarn guide means having the construction of a bearing and a ring traveller having a yoke assembly attached at its closed end to the traveller and having a freely rotatable grooved roller mounted within the open end.

3,373,558
CALENDAR CLOCK OR WATCH
Uria Makiri, 6137½ Saturn St., Los Angeles, Calif. 90035
Filed Aug. 30, 1965, Ser. No. 483,497
11 Claims. (Cl. 58—4)



The device is a calendar clock which indicates the time and date irrespective of the number of days in a month including leap year when February has twenty-nine days.

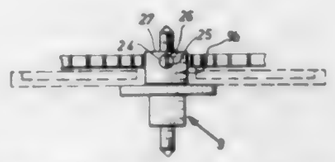
A rotor is driven one step per month and has means to indicate one of the twelve hour numerals as the month, the indication being by way of a window positioned adjacent the hour numeral.

A second rotor is roted one step a day and positions a numeral to be exposed by the window in an upright position wherever the window is positioned.

The rotor indicating the month cooperates with twelve stops positioned one-twelfth of a revolution apart. The rotor is released from a stop by the mechanism which moves one step a day. The stops are positioned so that release takes place after a predetermined number of days determined by the number of days in a month. Means are provided between the rotor which moves in increments of one-twelfth of a revolution, and the rotor which moves one step a day so that when the one rotor moves to indicate a new month, the rotor indicating the day moves back to its starting position with the numeral one (1) exposed in the window.

The said stops include a special stop for February so configurated that for the month of February in a leap year, the movement to the next month occurs after twenty-nine days rather than at twenty-eight.

3,373,559
BALANCE STAFF ASSEMBLY
Thomas Baehni, Neuchatel, Switzerland, assignor to Baehni & Cie S.A., Bienne, Switzerland, a corporation of Switzerland
Original application Nov. 1, 1962, Ser. No. 234,624. Divided and this application Oct. 10, 1966, Ser. No. 621,368
1 Claim. (Cl. 58—115)

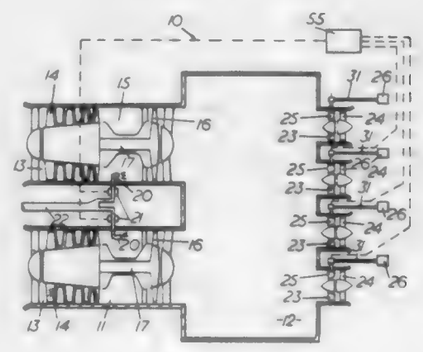


An assembly of a balance staff with at least one of the elements of a movement constituted by a balance wheel and a spiral hairspring, said balance staff having a radial slot and a collar spaced from the slot; the hairspring fitting in the slot and glued thereto; the balance wheel fitting around the staff and being glued thereto at a point intermediate the collar and the spring. The glue preferably is an epoxy-based resin.

3,373,560
JOINER LINK
Charles J. Manney, Kenmore, Raymond M. Robinson, Clarence, and Dennis Molnar, Kenmore, N.Y., assignors to Columbus McKinnon Corporation, Tonawanda, N.Y.
Continuation-in-part of application Ser. No. 326,966, Nov. 29, 1963. This application Apr. 18, 1966, Ser. No. 543,282
7 Claims. (Cl. 59—85)

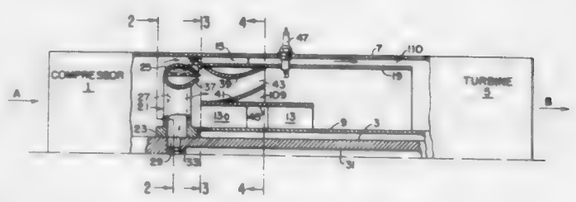
2. A joiner link assembly comprising, in combination,
a pair of generally U-shaped link halves each of which terminates at one end in a single leg and at its other end in a spaced pair of legs with such legs of each pair being provided with aligned openings, the legs of the correspondingly opposite ends of said link halves being interdigitated with all of the openings therein in alignment,
a pin extending through the openings in said interdigitated legs and hingedly interconnecting said link halves,
spring clip means embracingly locked on said pin within that space between the interdigitated ends of the link halves, said spring clip means being of a diameter slightly greater than the maximum diameter of said pin and having a total width axially of the pin which is less than about half the axial width of said space,
and collar means slidably received on said pin within the confines of said space, said collar means and said spring clip means being of a collective width substantially equal to the axial width of said space so as to minimize axial shifting of said pin, and said collar means being of a diameter substantially greater than the diameter of said spring clip means to present a throat leading to said spring clip means which is deeper than it is wide.

3,373,561
GAS TURBINE POWERPLANT
Albert Jubb, Derby, England, assignor to Rolls-Royce Limited, Derby, England, a British company
Filed Oct. 14, 1966, Ser. No. 586,771
Claims priority, application Great Britain, Oct. 18, 1965, 44,102/65
7 Claims. (Cl. 60—39.15)



1. Powerplant comprising at least one gas turbine engine, a fuel supply therefor, a plenum chamber which is arranged to receive exhaust gases from the engine and which has a plurality of outlets through each of which the exhaust gases may be discharged, a plurality of free power turbines which are respectively mounted in the outlets, and control means, responsive to changes in the rotational speeds of the free power turbines, for effecting adjustment of the fuel supply to the engine, said control means comprising outlet area adjustment devices for altering the effective areas of the respective outlets so as to adjust the rotational speeds of the respective free power turbines, and means interconnecting the outlet area adjustment devices so that increases and decreases in one said area are respectively accompanied by decreases and increases in any other said area, whereby the total effective area of all the outlets, prior to the said adjustment of the fuel supply, is maintained substantially constant.

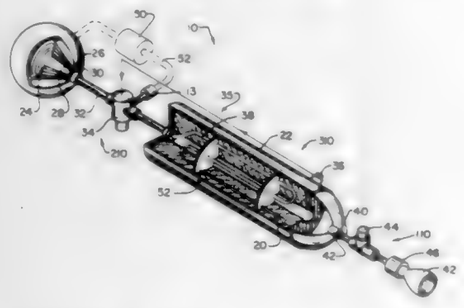
3,373,562
COMBUSTION CHAMBER FOR GAS TURBINES AND THE LIKE HAVING IMPROVED FLAME HOLDER
Alex F. Wormser, Marblehead, Mass., assignor to Wingaersheek Turbine Co., Inc., Lynn, Mass., a corporation of Massachusetts
Filed Mar. 17, 1966, Ser. No. 535,147
12 Claims. (Cl. 60—39.72)



The specification discloses an improved combustion chamber for gas turbines and the like which includes a novel flame holder. The flame holder includes a pair of opposed concentric cylinder members which form an annular passage between them. This annular passage is divided by partition plates into a plurality of passages ex-

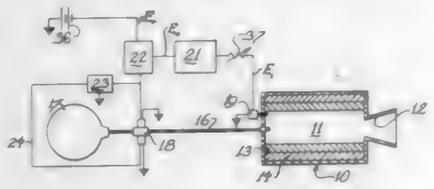
tending from the entrance to the exit end of the flame holder. The passages are inclined at an angle with respect to the axis of the combustion chamber. A pair of opposed air foil sections are provided in each passage to shape the passage such that the entrance end has about twice the area of the exit end. Alternate passages turn the fluid passing therethrough radially inwardly or radially outwardly. A portion of one of the airfoils which narrows the passage from the entrance to the exit end forms a bluff trailing surface which provides eddys to stabilize the flame. This novel flame holder provides a combustion chamber in which more fuel can be burned in a given volume i.e. a combustion chamber having greater combustion intensity. Further the walls of the combustion chamber will remain at a relatively low temperature and thus have a longer life than conventional combustion chambers. The complete specification should be consulted for a full description of the invention.

3,373,563
RADIOISOTOPE SUBLIMING SOLID PROPULSION SYSTEM
James A. McCabe, Fort Forth, Tex., assignor to General Dynamics Corporation, Fort Worth, Tex., a corporation of Delaware
Filed Dec. 16, 1965, Ser. No. 514,268
6 Claims. (Cl. 60—203)



A gas generating device in composite unit form consisting in combination of a radioisotope material to provide a heat source, a vessel containing subliming solid propellant exhibiting a relatively low molecular weight in the vapor phase, and a pressure or temperature regulated radioisotope flow control loop, the device having control means for directing the resultant high temperature thrust gases.

3,373,564
PROCESS AND APPARATUS FOR CONTROLLING ROCKET ENGINES AND THE LIKE
Joseph F. Maybin, Birmingham, Ala., assignor to Hayes International Corporation, a corporation of Delaware
Filed Apr. 26, 1966, Ser. No. 545,287
8 Claims. (Cl. 60—204)



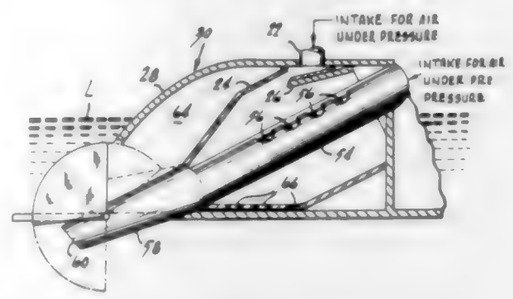
1. The process of obtaining a control signal for an engine of the type wherein a fluid under pressure is utilized to produce the force which operates the engine when the total impulse produced by said force reaches a predetermined value which comprises:

(a) obtaining an analogue signal corresponding to the pressure of the fluid in the engine,

(b) integrating said analogue signal with respect to time to obtain a second signal analogous to the total impulse produced during the time interval of integration, and

(c) producing a control signal when said second signal reaches a predetermined value.

3,373,565
PULSATION-DAMPING STRUCTURE FOR HYDRAULICALLY PROPELLED BOATS
Joseph T. Yeager, Sr., Mercer County, N.J. (37 Stevenson Ave., Trenton, N.J. 08619)
Filed July 13, 1965, Ser. No. 471,616
5 Claims. (Cl. 60—222)



1. A boat propulsion mechanism comprising:

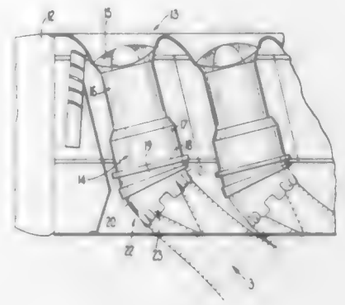
(a) an elongated duct mountable in a boat hull, said duct having an intake end connectable to a source of water under pressure and an underwater outlet through which water forced under pressure through the duct may issue as a propelling jet;

(b) a compartment extending about the duct for part at least of a length of the duct, said duct having ports in free communication with the compartment, said compartment constituting means into which water may flow from the duct, and from which water may return to the duct through said ports, to provide substantially surge-free, continuous water movement through the duct; and

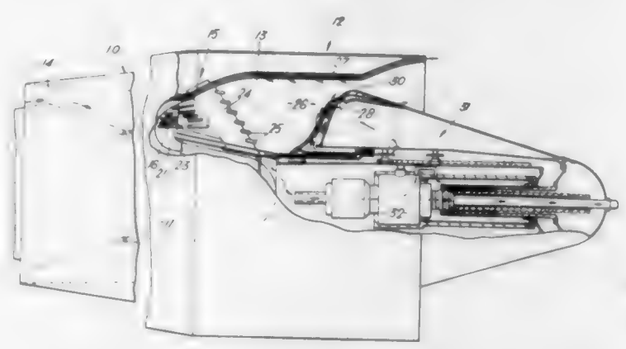
(c) means to direct air under pressure into said compartment, and to maintain the air so forced under compression against water flowing into the compartment through said ports, whereby to relieve strain upon the compartment walls and further reduce surge and pulsation of water flowing through the duct, said means to direct air under pressure into said compartment including an air conduit disposed above water level and having an intake and an outlet, means within said air conduit for effecting flow of air through the conduit inlet to the outlet, an air duct connected between the outlet of the conduit and said compartment, and gate valve means arranged to permit flow of air from the air duct into the compartment, while preventing back flow of air from the compartment through the air duct.

3,373,566
GAS TURBINE JET ENGINE POWERPLANT HAVING A JET NOZZLE WITH A PLURALITY OF NOZZLE MEMBERS
Francis Jeffrey Colville, Sutton-in-Ashfield, Nottingham, and George Samuel Kitson, Aspley, Nottingham, England, assignors to Rolls-Royce Limited, Derby, England, a British company
Filed Oct. 5, 1966, Ser. No. 584,474
Claims priority, application Great Britain, Oct. 19, 1965, 44,323/65
3 Claims. (Cl. 60—232)

Jet nozzles for aircraft vertical lift engines, the nozzles having a plurality of nozzle members located on a curved, rotatable, common duct and having an elliptical downstream end configuration. The oppositely located nozzle members adjacent the minor axis of the ellipse have their downstream ends inwardly inclined towards each other. When two or more such engines are vertically mounted side by side in an engine bay, the jet efflux from each engine will not impinge on the jet nozzle of the adjacent engine.



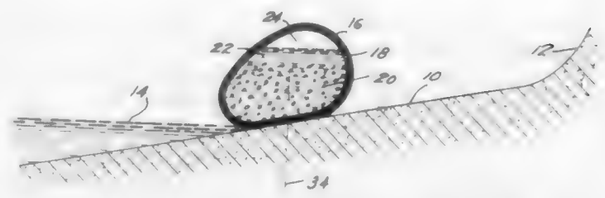
3,373,567
JET PROPULSION POWERPLANT WITH AFTERBURNING COMBUSTION EQUIPMENT
Jack Palfreyman, Tansley, near Matlock, and Herbert Frank Smith, Allentown, Derby, England, assignors to Rolls-Royce Limited, Derby, England, a British company
Filed Apr. 27, 1966, Ser. No. 545,607
Claims priority, application Great Britain, May 11, 1965, 19,936/65
13 Claims. (Cl. 60—264)



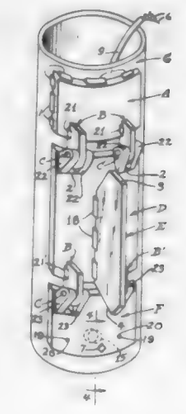
A powerplant having first and second combustion equipment in flow series, fuel being burnt in the second combustion equipment in hot gases supplied from the first combustion equipment through perforated flow-dividing walls of a multiple diffuser duct upstream of the second combustion equipment.

3,373,568
SYSTEM FOR RECLAMATION OF LAND
Lloyd Hornbostel, Jr., 1801 Chippewa Trail, Beloit, Wis. 53511
Filed Sept. 13, 1965, Ser. No. 486,706
5 Claims. (Cl. 61—5)

System for the reclamation of land by placing spaced elongated flexible sealed bags filled with a mixture of aggregate and water along the shore line in overlapping relationship. The bags are made from a plastic material and may be covered by a nylon netting and have anchors at their opposite ends for the attachment of anchoring cables, anchoring the bags to the shore to extend with their longest dimensions parallel to the short line. The bags may be anchored in staggered relation with respect to each other with two advance bags lapped at the ends thereof by a trailing bag spaced from the two advanced bags to take care of an on-shore wash. The bags also may be angularly disposed with respect to the shore line and extending in spaced parallel staggered relationship with respect to each other in positions orthogonally with respect to the direction of the wash, where the wash is a long-shore wash.



3,373,569
ARTICULATED PILE STABILIZER AND ANCHORING DEVICE
William O. Backman, 2120 Seminary St., Napa, Calif. 94558
Filed Nov. 1, 1966, Ser. No. 591,148
8 Claims. (Cl. 61—53.68)



1. An articulated pile stabilizer and anchoring device comprising:

(a) a support plate secured to a pile;

(b) a primary stabilizing fluke having one end pivotally secured to said plate and adapted to lie adjacent to the surface of the pile;

(c) an auxiliary fluke having an end pivotally secured to the other end of said primary fluke and adapted to lie adjacent to the pile surface;

(d) frangible means securing said auxiliary fluke to the pile;

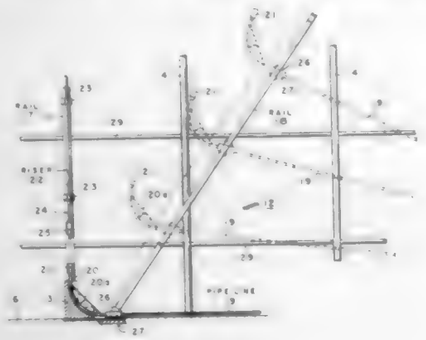
(e) means between said auxiliary fluke and said pile for forcing said auxiliary fluke outwardly and for breaking said frangible means; and

(f) stop means on said primary fluke for abutting the support plate to limit the pivotal movement of said primary fluke about its pivotal connection to said plate and for limiting the pivotal movement of said auxiliary fluke about its connection to the primary fluke.

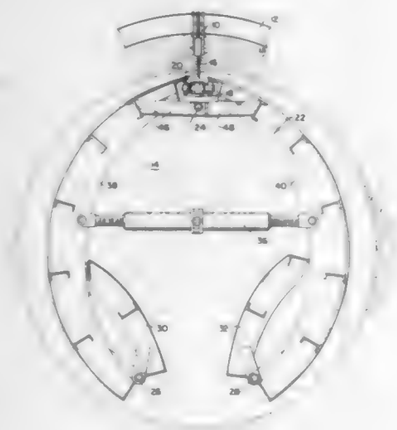
3,373,570
METHOD AND APPARATUS FOR INSTALLING UNDERWATER PIPELINE
Robert G. Hindman, New Orleans, La., assignor to Esso Production Research Company
Filed Feb. 7, 1966, Ser. No. 525,411
13 Claims. (Cl. 61—72.3)

Slack in laying underwater pipelines in deep water is

compensated for by having the pipeline riser and the pipeline extend in two diffurent directions which converge for guidingly lowering the riser and the pipeline from a floating or fixed support in the deep water.



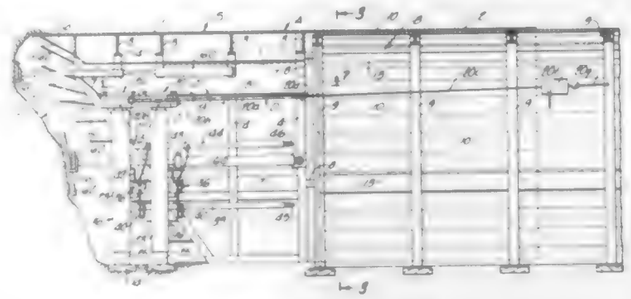
3,373,571
APPARATUS FOR HANDLING STEEL FORMS IN TUNNELS
William M. Records, San Antonio, Tex., assignor to Ewing-Records & Associates, Inc., Converse, Tex., a corporation of Texas
Filed Jan. 6, 1966, Ser. No. 519,030
1 Claim. (Cl. 61—84)



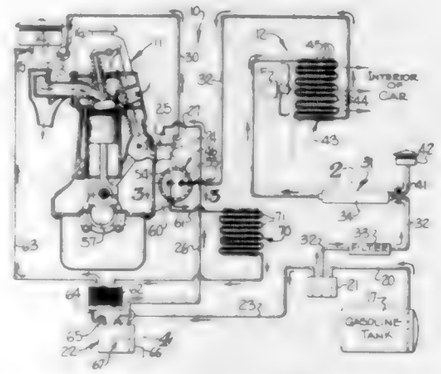
Concrete forms, particularly collapsible steel forms movable longitudinally upon rollers in tunnel construction.

3,373,572
METHOD OF DRIVING TUNNELS
Maxwell F. Kemper, 3701 Overland Ave., Los Angeles, Calif. 90034
Original application May 23, 1963, Ser. No. 282,771. Divided and this application Oct. 12, 1965, Ser. No. 511,007
9 Claims. (Cl. 61—85)

1. A method of driving an elongate, arched shield into the ground in the formation of a tunnel comprising: positioning the shield so that one end thereof may be progressively driven into the ground; providing on each side of the longitudinal center line of the shield and adjacent said end and each side of the shield a plurality of supports in contact with the ground and with the upper portion of the interior of the shield at longitudinally spaced locations on the shield; applying a force for moving said shield longitudinally relative to said supports to advance the shield into the ground; removing the supports one at a time from contact with the ground: moving each support longitudinally of the shield to a new position when free of the ground while other of said supports on opposite sides of said center line remain in contact with the ground; and reengaging each support with the ground following repositioning thereof.

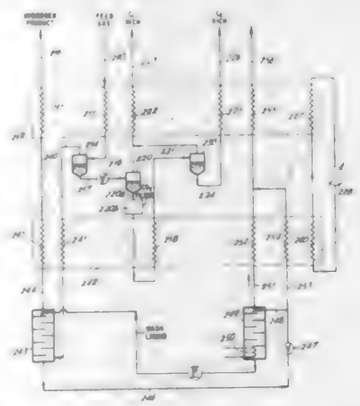


3,373,573
FUEL EVAPORATION REFRIGERATION SYSTEM
Walter J. Nickel, Charlotte, N.C., assignor to Leola M. Nickel, Charlotte, N.C.
Filed Jan. 31, 1967, Ser. No. 612,897
7 Claims. (Cl. 62—7)



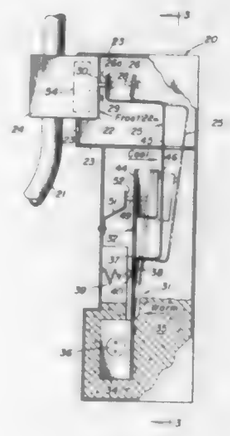
A refrigerating system comprising an internal combustion engine and a refrigeration-producing apparatus evaporating fuel from the engine supply of volatile liquid fuel for use as the refrigerant therein, and including a pump operated independently of the engine intake manifold vacuum for circulating the refrigerant through the refrigeration-producing apparatus.

3,373,574
RECOVERY OF C_2 HYDROCARBONS FROM GAS MIXTURES CONTAINING HYDROGEN
Theodore F. Fisher, Buffalo, N.Y., assignor to Union Carbide Corporation, a corporation of New York
Filed Apr. 30, 1965, Ser. No. 452,220
11 Claims. (Cl. 62—20)



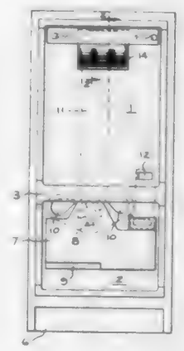
A process for separating methane and C_3 hydrocarbon condensibles from hydrogen by cooling to liquefy the hydrocarbons, throttle expanding the liquefied condensibles, and partially rewarming the latter for 15–70% evaporation before separating the methane vapor.

3,373,575
SYSTEM FOR DEFROST CONTROL OF REFRIGERATORS AND THE LIKE
James K. Nelson, Des Plaines, Ill., assignor to Borg-Warner Corporation, a corporation of Illinois
Continuation of abandoned application Ser. No. 575,648, Aug. 29, 1966. This application Jan. 9, 1967, Ser. No. 608,132
8 Claims. (Cl. 62—80)



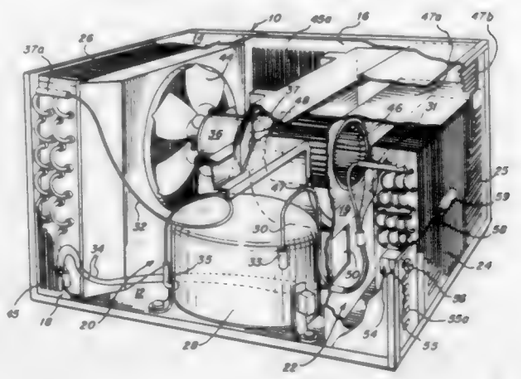
This invention discloses defrosting control in which an ice sensing probe periodically contacts a surface to determine whether ice has been built up upon the surface. The probe is heated upon initial contact with the surface to melt any ice upon the surface and subsequently allowed to cool so that the ice can be frozen. If the probe adheres to the surface, thereby indicating a need for defrosting, appropriate defrost devices such as an electrical heater are actuated to defrost the surface.

3,373,576
SINGLE EVAPORATOR, SINGLE FAN REFRIGERATOR INCLUDING CONTROL MEANS
Gerald F. Dodge III, Louisville, and Howard D. F. True, Jr., Fern Creek, Ky., assignors to General Electric Company, a corporation of New York
Filed Aug. 31, 1966, Ser. No. 576,320
2 Claims. (Cl. 62—180)



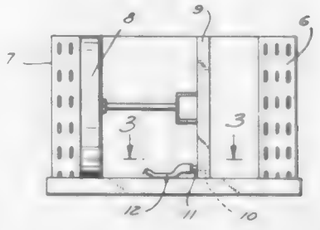
A refrigerator comprising a fresh food storage compartment and means for supplying below freezing air to the compartment including a refrigeration system and a mixing chamber for mixing the refrigerated air from the system with compartment air and introducing the mixture into the compartment. Control means responsive to the temperature of the mixed air includes a thermal mass for preventing short cycle "off" periods of operation of the refrigeration system.

3,373,577
AIR CONDITIONER CONTROL
Raymond H. Bohman, Galesburg, Ill., assignor to Admiral Corporation, Chicago, Ill., a corporation of Delaware
Filed Sept. 6, 1966, Ser. No. 577,418
3 Claims. (Cl. 62—180)



A thermostatic control system for an air conditioner which provides automatic operation of the unit throughout the entire air conditioning season. The control system controls turn-on and turn-off of the air circulating fan and of the refrigeration compressor responsive to the temperature of the air in the enclosure being conditioned.

3,373,578
CONDENSATE DRAIN TUBE
Francis Feeney, Philadelphia, Pa., and Raymond J. Gorenflo, Ridgewood, N.J., assignors to Fedders Corporation, Edison, N.J., a corporation of New York
Filed Jan. 31, 1967, Ser. No. 612,996
4 Claims. (Cl. 62—189)

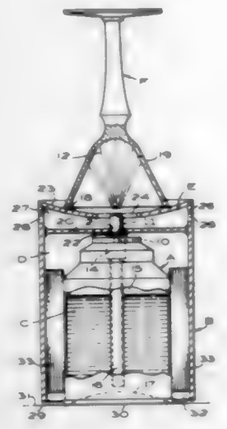


An apparatus for transferring condensate from the room side to the outdoor side of a room air conditioner while preventing the transfer of air from the outdoor side to the room side. A condensate drain tube for passing condensate water from the room side to the outdoor side of a room air conditioner which, by means of a water seal and flapper valve, prevents the transfer of air from the outdoor side to the room side.

3,373,579
DEVICE FOR CHILLING AND FROSTING DRINKING GLASSES
George Joseph Federighi, Belvedere, Calif. (% Stero Chemical Mfg. Co., 70 13th St., San Francisco, Calif. 94103)
Filed Nov. 12, 1965, Ser. No. 507,469
4 Claims. (Cl. 62—293)

The invention relates to a portable device for chilling glasses and consists of a portable pressurized liquid re-

frigerant container having a vertically displaceably spray nozzle and a holder surrounding the container. The holder has formed therewith a platform for holding glasses



to be chilled and a portion for engaging the nozzle. Downward movement of the platform and holder actuates the nozzle to spray refrigerant onto the glass.

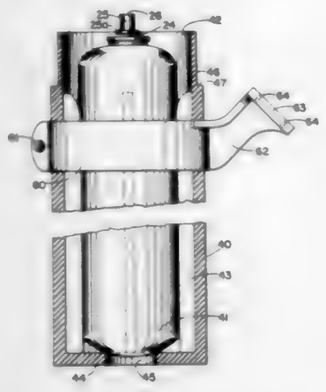
3,373,580

PORTABLE AND SELF-CONTAINED APPARATUS FOR CHILLING AND FROSTING BEVERAGE GLASSES

George J. Federighi, 103 Jamaica, Tiburon, Calif. 94920

Continuation-in-part of application Ser. No. 507,469, Nov. 12, 1965. This application Oct. 17, 1966, Ser. No. 587,039

12 Claims. (Cl. 62—293)



A portable and self-contained apparatus for chilling and frosting beverage glasses including a housing for centering and retaining a conventional container of low pressure, nontoxic liquid refrigerant such as "Freon," having an axial self-sealing valve and nozzle. The housing has a cover platform through which the container nozzle partially projects thereabove and engages a portion of the nozzle in non-sealing engagement so as to open the valve and permit the refrigerant to escape through the nozzle and vaporize. The glasses are chilled and frosted by inverting a glass and placing the bowl thereof over the nozzle with the rim of the bowl on the cover platform and exerting a downward pressure to open the valve nozzle and spray the inside of the bowl with refrigerant. The cover platform is also relieved at intervals beneath the rim so that the interior of the bowl is always at atmospheric pressure. The sublimation of the refrigerant upon release from the nozzle cools the glass of the bowl thereby reducing the temperature of the ambient air on the outside of the bowl to cause frosting on the outside without any residue of the refrigerant or otherwise on the inside. The whole frosting is accomplished in a matter of seconds, and the valve closes upon release of the pressure of the glass against the cover platform. The preferred form of cover platform has an upstanding peripheral wall to confine the ambient air and hasten and intensify the frosting.

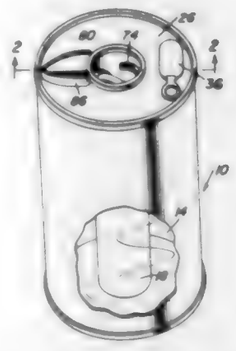
3,373,581

CONTAINER ARRANGEMENT WITH COOLANT THEREIN

James R. Strader, Fort Wayne, Ind., assignor, by mesne assignments, to John Robert Wray, Jr.

Filed Aug. 31, 1966, Ser. No. 576,390

9 Claims. (Cl. 62—294)



A container assembly having a chamber for a consumable beverage and a chamber for a coolant which changes state in response to pressure change for cooling the consumable product. The chambers may be concentrically arranged to form a combined structure or in the form of a separate container for the consumable product.

3,373,582

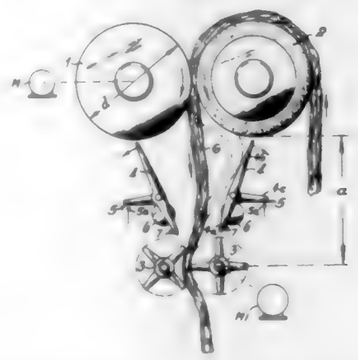
SAFETY DEVICE, ESPECIALLY FOR USE IN CONNECTION WITH THE WET SQUEEZING OF TEXTILES

Karl-Peter Lopata, Krefeld-Urdingen, Germany, assignor to Joh. Kleinewefers Sohne, Krefeld, Germany

Filed May 19, 1966, Ser. No. 551,326

Claims priority, application Germany, May 20, 1965, K 56,171

7 Claims. (Cl. 68—264)



1. A squeezing mechanism, which includes: a pair of rotatable squeezer roller means for passing therebetween and squeezing wet textile material, motor means operatively connected to said squeezer roller means for selectively driving the same, rotatable pulling means arranged below said squeezer roller means in spaced relationship thereto for grasping squeezed textile material and exerting a pull thereon in the direction away from said squeezer roller means, and control means including means interposed between said rotatable pulling means and said squeezer roller means and operable to reduce the speed of said squeezer roller means in response to squeezed textile material passed through between said squeezer roller means tending to wind back on one of said squeezer roller means.

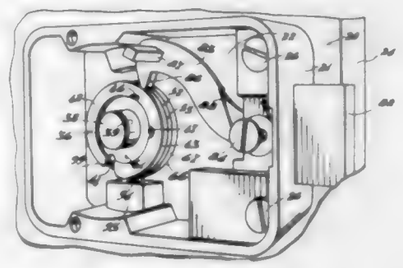
3,373,583

COMBINATION LOCK WITH NORMALLY MASKED DRIVER GATE

Joseph J. Parrock, Milford, Ohio, assignor to The Mosler Lock Company, Milford, Ohio, a corporation of Ohio

Filed Dec. 28, 1965, Ser. No. 517,017

18 Claims. (Cl. 70—303)



A combination lock having a shutter which normally blocks the driver gate at all driver positions, so as to prevent contact of the fence with the tumblers except when the shutter is opened to expose the driver gate. The shutter is openable only by a spring loaded snap action, and the fence cannot gradually or controllably be engaged with the tumbler peripheries.

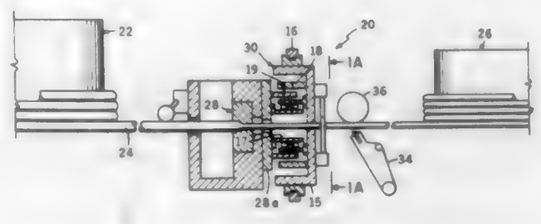
3,373,584

MEANS FOR IDENTIFYING DEFECTIVE WIRE AND FOR REJECTING ARTICLES MADE THEREFROM

John W. Rundt and Walter F. Green, Canton, Ohio, assignors to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio

Continuation of application Ser. No. 66,830, Nov. 2, 1960. This application July 15, 1964, Ser. No. 382,841

2 Claims. (Cl. 72—10)



1. Means for marking defective wire and the like comprising means for propelling a wire in a predetermined direction, means mounted adjacent to the moving wire for detecting defects therein, said last named means including electromagnetic means generating an electromagnetic field in the wire, said field being affected by defects in the wire as the wire moves past to produce signals in response to said field variations, means responsive to the signals above a predetermined magnitude for cutting a flat surface slice substantially parallel to the longitudinal axis of the wire in locations of the defects, said means for cutting including a cutter member movable to a position in cutting engagement with the wire in response to the signals above said predetermined magnitude, and a backup roller engaging the opposite side of the wire from the cutter member.

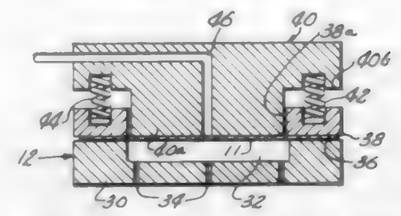
3,373,585

SHEET METAL SHAPING APPARATUS AND METHOD

Thomas D. Reynolds, Winston-Salem, N.C., assignor to R. J. Reynolds Tobacco Company, Winston-Salem, N.C., a corporation of New Jersey

Filed Sept. 21, 1964, Ser. No. 397,766

9 Claims. (Cl. 72—57)



A process and apparatus for drawing a sheet metal blank, the process comprising positioning the blank across a die cavity, forcing the blank into the cavity while holding the cavity surrounding portions thereof against the die with sufficient force to only partially restrain the lateral movement of these portions of the blank into the cavity, and thereafter forcing the blank further into the cavity while holding the cavity-surrounding portions thereof with a force sufficient to substantially completely restrain the lateral movement of these portions. The apparatus comprises a first member including a die having a cavity and a second member including a blank holder and a punch. The forward end of the punch is sized to fit partially into the die cavity and spring means extends between the punch and the blank holder. Means is provided for applying a fluid pressure between the forward end of the punch and the blank to force the partially deformed blank further into the cavity.

3,373,586

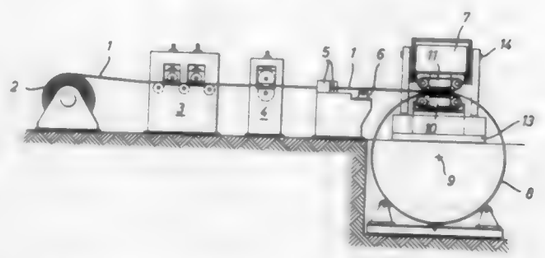
HELICAL SEAM PIPE MAKING MACHINE

Kurt Sengel, Friedrichshafen, Germany, assignor to Driam A.G., Zurich, Switzerland

Filed Oct. 14, 1963, Ser. No. 316,082

Claims priority, application Germany, Oct. 17, 1962, D 40,084

10 Claims. (Cl. 72—135)



1. A continuous method of raising woven, knitted, and non-woven fabrics comprising the steps of

feeding a quantity of moisture to a fabric and passing said moistened fabric through a raising passage containing card points to partially raise the fabric, and

repeating at least once the above-mentioned step by feeding to the fabric a predetermined increased quantity of moisture, with respect to said quantity of moisture fed in the preceding step, recycling said partially raised fabric through the raising passage for further raising thereof, whereby to obtain a more uniform raising and also to improve the total raising effect.

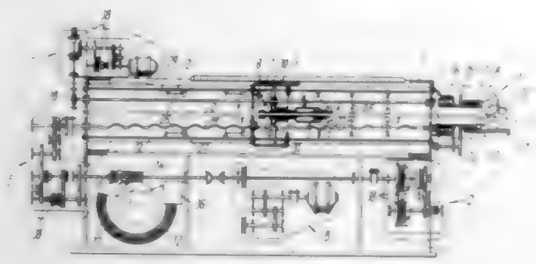
3,373,587

AUTOMATIC TUBE BENDING MACHINES

Vladimir Nikolaevich Shubin, Pervomaiskaja 1, Apt. 103; Alexei Fedorovich Barsov, Zagarodnoje Chaussee 4, Apt. 52; Raimond Lvovich Novobratsky, B. Komsomolsky Pereulok 5, Apt. 33; Vladimir Alexeevich Poshchishchailo, 1-st Jaroslavskaja Ulitsa 21–a, Korpus 24, Apt. 57; and Samuil Moiseevich Poljak, Tankovy proezd 1, Apt. 55, all of U.S.S.R.

Continuation-in-part of application Ser. No. 288,210, June 17, 1963. This application Dec. 8, 1966, Ser. No. 600,178

2 Claims. (Cl. 72—158)



An automatic tube bending machine in which a bending head is mounted on the frame so as to be capable of turning movement about an axis aligned with the geometric axis of a billet holder. A common drive is provided for the adjustable displacement of the bending means associated with the bending head, the pushing of a billet into the bending means and the turning of the bending head, respectively.

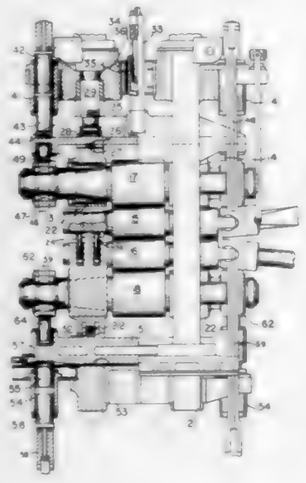
3,373,588

CROWN CONTROL FOR ROLLING MILL

Morris Denor Stone, Pittsburgh, Pa., assignor to United Engineering and Foundry Company, Pittsburgh, Pa., a corporation of Pennsylvania

Filed Aug. 17, 1965, Ser. No. 480,398

2 Claims. (Cl. 72—237)



The invention relates to a rolling mill having a housing in which there is formed a window. The rolls of the mill are provided with bearing chock assemblies which are received in the window of the housing. Outward of the bearing chock assemblies, the rolls are engaged by piston cylinder assemblies designed to apply a bending force on the rolls to bend them in a direction to increase the crown of the rolls. The bending forces generated by the piston cylinder assemblies are isolated from the housing by providing rigid beam members arranged between the bearing chock assemblies and the housing insuch a manner that the bending forces are self-contained, and wherein the improvement comprises providing piston cylinder assemblies designed to apply a bending force on the rolls to decrease the crown of the rolls, the last-mentioned piston cylinder assemblies being carried in the beam members so that the resultant forces thereof are taken by the beam members and not by the housing of the mill. In addition piston cylinder assemblies are provided between the bearing chock assemblies to resist the bending loads of the cylinders that exert a pressure to decrease the crown.

3,373,589

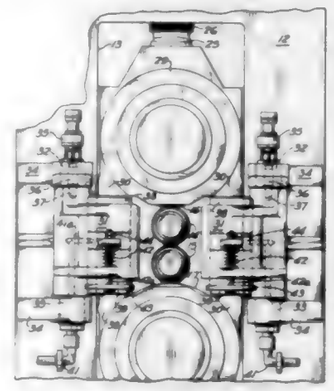
ROLL BENDING DEVICE FOR ROLLING MILL

Jeremiah Wagner O'Brien, Pittsburgh, Pa., assignor to United Engineering and Foundry Company, Pittsburgh, Pa., a corporation of Pennsylvania

Filed May 19, 1965, Ser. No. 457,000

Claims priority, application Great Britain, June 4, 1964, 23,286/64

10 Claims. (Cl. 72—238)



In a rolling mill having a pair of rolls in which there is provided force applying means, such as piston cylinder assemblies for imposing a force on the ends of the rolls in which the invention comprises a pivotal support carried on the housings of the mill for at least one of the force applying means. This provides a support for the piston cylinder assemblies in the form of a gate whereby the assemblies can be very quickly swung into and out of an operative position.

3,373,590

MULTI-ROLL STANDS FOR THE COLD-ROLLING OF THIN, HARD STRIPS

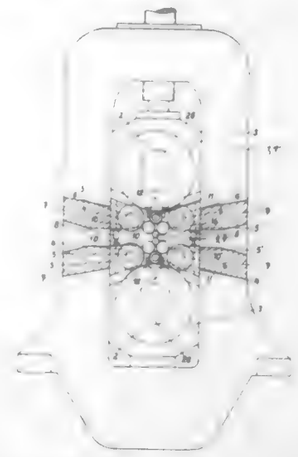
Hans Joachim Knappe, Dusseldorf, Germany, assignor to Schloemann Aktiengesellschaft, Dusseldorf, Germany, a German company

Filed June 14, 1965, Ser. No. 463,686

Claims priority, application Austria, June 23, 1964, A 5,396/64

3 Claims. (Cl. 72—243)

A multi-roll stand for the cold-rolling of thin, hard strips with an upper backing roll and a lower backing roll provided with driving means, two sets of upper supporting rollers and two sets of lower supporting rollers journalled on lateral supporting girders, with each of the supporting rollers bearing against one of the backing rolls for the frictional transmission of power, two upper intermediate rolls arranged between the two upper sets of supporting rollers and two lower intermediate rolls arranged between the two sets of lower supporting rollers, upper and lower reversing rolls bearing on the upper and lower backing rolls respectively and on the two upper and two lower intermediate rolls respectively, and two working rolls, one upper and one lower, each supported and frictionally driven by two of the intermediate rolls.



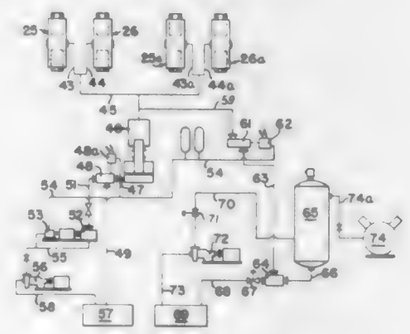
3,373,591

FLUID CONTROL SYSTEM FOR A ROLLING MILL

Jeremiah Wagner O'Brien, Frank Joseph Gleve, and Bert J. Lamport, Pittsburgh, Pa., assignors to United Engineering and Foundry Company, Pittsburgh, Pa., a corporation of Pennsylvania

Filed Aug. 9, 1965, Ser. No. 478,354

7 Claims. (Cl. 72—245)



In a rolling mill having piston cylinder assemblies for imposing a bending moment on at least one of the rolls to deflect the roll and thereby to change its crown, a fluid control system adapted to rapidly decompress the pressure in the cylinder employed to bend the roll so that the roll may be positioned by the screwdown of the mill and wherein the screwdown will not have to work against the roll bending force. The fluid control system comprises an intensifier, the high pressure side of which is connected to the piston cylinder assemblies to which side is also associated a decompression valve for selectively decompressing the high pressure. The low pressure side of the intensifier is fed from a second supply circuit.

3,373,592

SEVERING OF AN EXTRUSION DISC AND AN EXPULSION DISC FROM AN EXTRUSION RESIDUE AND AN EXTRUSION SKIRT IN A METAL-EXTRUSION PRESS

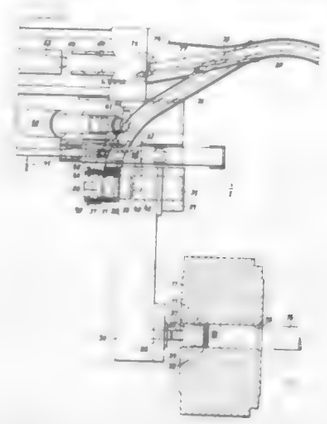
Helmut Robra, Mulheim (Ruhr), Otto Behrendt, Dusseldorf-Eller, and Winfried Steyvers, Dusseldorf-Oberkassel, Germany, assignors to Schloemann Aktiengesellschaft, Dusseldorf, Germany, a German company

Filed Nov. 10, 1965, Ser. No. 507,116

Claims priority, application Germany, Dec. 1, 1964, Sch 36,185

5 Claims. (Cl. 72—255)

Means for automatically severing the dummy block and the scavenging block of a metal extrusion press from the extrusion residue and the extrusion skirt, wherein a tool slide conveys the extrusion residue, with the extrusion skirt, the dummy block and the scavenging block from the extrusion axis of the press to a reception cylinder, whereupon the extrusion residue, with the extrusion skirt and the dummy block are pushed into the reception cylinder, while the scavenging block remains in a receiving aperture, the reception cylinder then being swung about an axis inclined at an angle of about 45° to a means for severing the dummy block from the extrusion residue and the extrusion skirt.



3,373,593

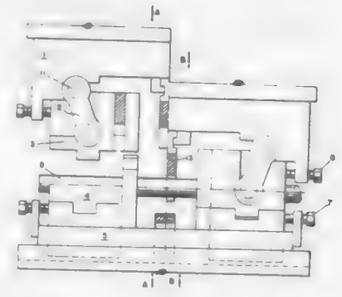
FORGING MACHINE FOR UPSETTING OR SIMULTANEOUS UPSETTING AND BENDING

Tadeusz Rut, Nowe Zagorze 14, Poznan, Poland

Filed May 7, 1965, Ser. No. 453,993

Claims priority, application Poland, May 8, 1964, P 104,504; Sept. 2, 1964, P 105,627

5 Claims. (Cl. 72—399)



1. A device for upsetting, as well as upsetting with simultaneous bending driven by a press, provided with a punch holder, a base, between which sets of die tools are placed, whereby the lower die tools are slidably mounted on the base and the upper ones fixed to the punch holder by means of inclined pivoting links, provided with bearings in the punch holder and in the upper die tools, characterised by this, that it is provided with keepers (14) for the forged piece (8), pivotally mounted in the lower die tools (4).

3,373,594

APPARATUS FOR FORMING A RAILWAY CAR

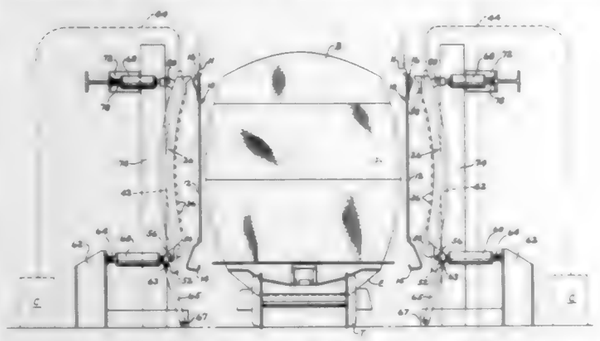
Thomas Lane, Crown City, Ohio, assignor to ACF Industries, Incorporated, New York, N.Y., a corporation of New Jersey

Filed Aug. 6, 1965, Ser. No. 477,753

5 Claims. (Cl. 72—399)

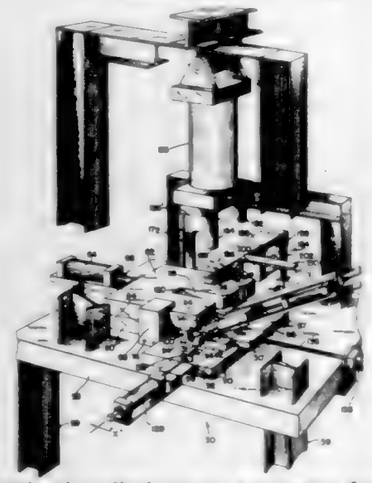
Apparatus for folding a generally flat side sheet against bulkheads in a railway car including a vertically extending pusher structure having a concave inner contour which contacts and folds the side sheet into an arcuate contour.

Pins on the pusher structure contacting the side sheet are biased outwardly by fluid pressure means and are mounted for longitudinal relative movement. A separate



side still pusher is carried by the pusher structure and is mounted thereon for relative pivotal movement for engaging a side still secured to the side sheet.

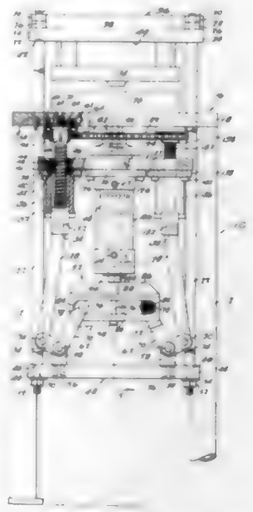
3,373,595
COMBINED SPIKE AND ANCHOR MEMBER AND MANUFACTURE THEREOF
Foster E. Harris, Harrison Township, Montgomery County, Ohio (300 Heikes Ave., Dayton, Ohio 45405)
Filed Dec. 10, 1964, Ser. No. 417,448
13 Claims. (Cl. 72—403)



This application discloses an apparatus for manufacturing a combined spike and anchor member. Such combined member has a spike which has a pointed end and a curved upper end, a sidewise anchor arm to rest on top of the lower flange of a railroad rail, and a forward hook member to hook around the edge of such lower flange. The apparatus bends a rectangular cross-sectioned pointed bar by various steps to produce the combined spike and anchor member. The straight spike portion of the member is driven through a hole in a tie plate beneath the rail. The tie plate rests on a railroad tie so that the horizontal arm of the anchor part rests on top of such lower flange of the railroad rail and the forward hook of the anchor part is hooked over the edge of such lower flange. The various components of the apparatus for performing the bending steps on the bar are shown in the drawings.

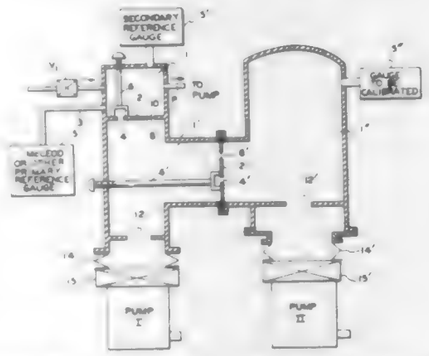
3,373,596
HYDRAULIC PRESS
Gerd M. Moeller and Alfred H. K. Haeussler, both of 5841 W. 107th St., Chicago Ridge, Ill. 60415
Filed June 18, 1965, Ser. No. 465,042
7 Claims. (Cl. 72—446)

A press comprising a support, a bed fixed on the support, a ram movably mounted on the support facing the bed and adapted to move toward and away from the bed, rod means slidably engaged on the support and fixed to the ram, an upper pressure plate positioned at the side of the bed remote from the ram, means for adjusting the upper pressure plate toward and away from the bed, a lower pressure plate positioned at the side of the upper



pressure plate remote from the bed and spaced from the upper pressure plate, means articulating the lower pressure plate to the upper pressure plate, and a hydraulic cylinder fixed to the upper pressure plate having a piston rod operatively connected to said articulating means.

3,373,597
VACUUM CALIBRATION APPARATUS
John C. Simons, Jr., 206 Conant Road, Weston, Mass. 02193
Filed June 23, 1965, Ser. No. 466,269
20 Claims. (Cl. 73—4)

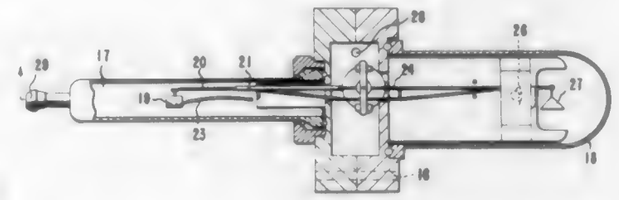


Apparatus for calibration of vacuum gages to as low as 10^{-7} torr. The device consists of a series of chambers interconnected through a series of accurately defined orifices. Each chamber is connected to a diffusion pump of known capacity. Thus if the pumping rate, orifice size and pressure in the preceding chamber are known the pressure in any given chamber can be readily computed. A knife edged slot orifice is utilized because of its predictable effect upon the molecular flow between chambers. Means are provided to change the range of pressure in any chamber.

3,373,598
THERMAL GRAVIMETRIC ANALYZER
Donald R. Johnson and Raymond W. Tabeling, Wilmington, Del., assignors to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
Filed Nov. 12, 1964, Ser. No. 410,437
3 Claims. (Cl. 73—15)

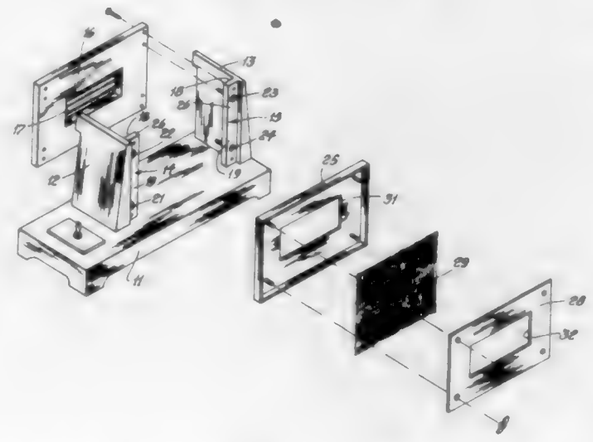
An apparatus for measuring the changing weight of a sample as a function of time and temperature comprising

a support, a chamber mounted on the support, a weight-responsive means mounted in the chamber having at least one horizontally disposed arm adapted to receive a sample at the extremity, means responsive to the weight-responsive means for measuring the temperature of the sample and openings in the chamber adapted to pass a gas over the sample in a substantially horizontal direc-



tion. The horizontally disposed arm preferably comprises a first member adapted to receive the sample at one of its ends and a second member of similar material connected to the opposite end of the first member, the connection being effected by an expansion clip which compensates for any change in length of the first member with changes in temperature.

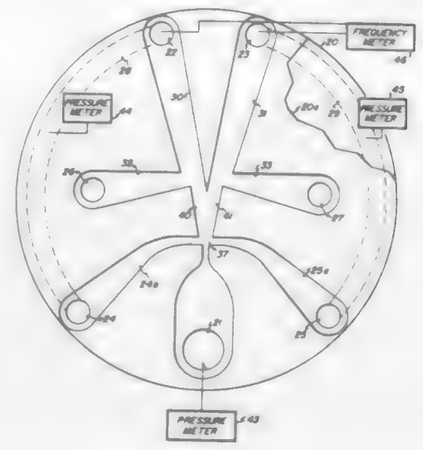
3,373,599
HEAT TEST APPARATUS
George S. Higginbottom, Matawan, N.J., assignor to the United States of America as represented by the Secretary of the Navy
Filed Jan. 27, 1965, Ser. No. 428,594
4 Claims. (Cl. 73—15)



A heat test apparatus is proposed to test planar specimens of textiles, rubber, plastics, metals, wood and finishes by radiating the specimens with infrared radiation. The specimens are located in a double frame which is magnetically attached to upright flanged supports so as to locate the double frame at a spaced distance from a second plate carrying infrared generating means in an opening at its center.

3,373,600
METHOD FOR DETERMINING FLUID CHARACTERISTICS UTILIZING FLUID STREAM OSCILLATING DEVICES
Lael B. Taplin, Livonia, Mich., assignor to The Bendix Corporation, a corporation of Delaware
Continuation of application Ser. No. 346,131, Feb. 20, 1964. This application Oct. 13, 1966, Ser. No. 596,365
3 Claims. (Cl. 73—32)

A method for determining the characteristics, such as density, quality, enthalpy, and bulk modulus of a fluid, the principal components of which are known, in which the fluid is passed through a fluid oscillator and the frequency of oscillation is measured. The average pressure of the fluid at a predetermined location in the oscillator is also measured. These two measurements are then usa-

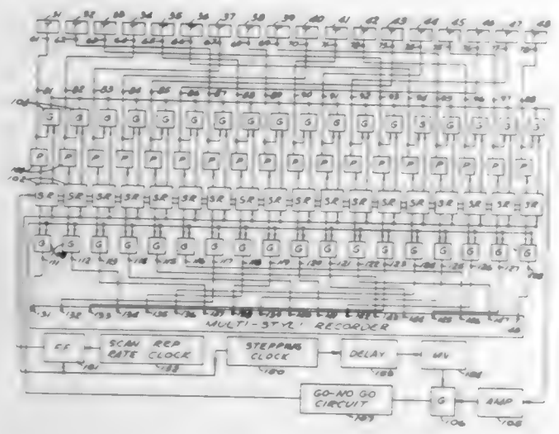


ble, along with the calibration constant of the oscillator and other known constants, in well known formulas to obtain the desired characteristics.

3,373,601
DEVICE FOR THE ANALYSIS OF THE SINKING SPEED OF BLOOD CORPUSCLES IN A CALIBRATED TUBE
Stanislaus Monn, 115 Schulstrasse, 8105 Regensdorf, Zurich, Switzerland
Filed Aug. 2, 1965, Ser. No. 476,404
Claims priority, application Switzerland, Aug. 5, 1964 10,326/64
7 Claims. (Cl. 73—61.4)

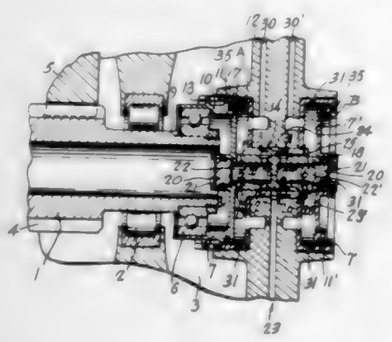
A device for filling an elongated, hollow calibrated tube for the purpose of analyzing the sedimentation rate of blood corpuscles, having a resilient body which has an elongated recess therein opening outwardly at one end thereof, the diameter of said recess being slightly greater than the outer diameter of said calibrated tube. The body has annular sealing means adjacent the open end thereof, the diameter of said sealing means being less than the outer diameter of said calibrated tube. When said recess is filled with blood and the calibrated tube is inserted through the open end of the body and moved toward the other end thereof, the outer surface of said tube will sealingly engage said sealing means and the blood in said recess will be displaced into the interior of said calibrated tube.

3,373,602
ELECTRONIC SCAN ULTRASONIC INSPECTION SYSTEM
John A. Wendt, Park Ridge, and Bernard J. Lefebvre, Schaumberg, Ill., assignors to Magnaflux Corporation, Chicago, Ill., a corporation of Delaware
Filed Nov. 30, 1964, Ser. No. 414,760
5 Claims. (Cl. 73—67.5)



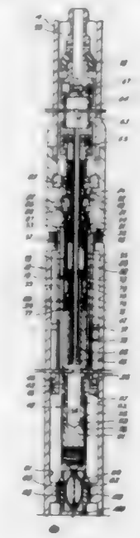
An ultrasonic inspection system, especially for testing relatively flat material, comprising a plurality of transducers positioned above the material in spaced across, facing relation to it. The transducers are pulsed to generate ultrasonic pulses in a staggered order, so that no two adjacent transducers pulse consecutively. A gating circuit is connected to the transducers to enable each transducer to transmit electrical signals corresponding to echo pulses received by that transducer from the material as a result of only its own generated pulse to a certain channel of a multi-channel recording device. Each transducer is connected to a separate channel of the recording device, and each channel is positioned to correspond to the position of the transducer to which it is connected. Thus, when each transducer has been pulsed once, a fairly detailed indication is recorded on the device of a cross-section of the tested material.

3,373,603
TORQUEMETER WITH POSITIVE AND NEGATIVE READING
Roy A. Chapman, Greenfield Park, Quebec, Canada, assignor to United Aircraft of Canada Limited, Longueuil, Quebec, Canada
Filed Mar. 28, 1966, Ser. No. 537,851
11 Claims. (Cl. 73—136)



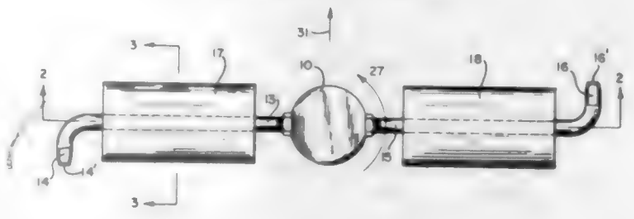
A torquemeter for measuring positive and negative torque transmitted by a shaft through helical gearing. The shaft is movable axially in either direction depending on the magnitude of torque transmitted. A hydraulic spool valve arrangement located axially at the end of the shaft provides counter pressure against the axial movement of the shaft due to the torque transmitted, the amount of counter pressure applied providing an indication of the torque transmitted by the shaft. The counter pressure is provided when movement of the spool valve passes hydraulic fluid to one of two pistons connected to the shaft to balance the movement of the shaft.

3,373,604
FORMATION PRESSURE-TESTING APPARATUS
Roy L. Dudman, Sugar Land, Tex., assignor to Schlumberger Well Surveying Corporation, Houston, Tex., a corporation of Texas
Filed Feb. 14, 1966, Ser. No. 527,259
6 Claims. (Cl. 73—152)



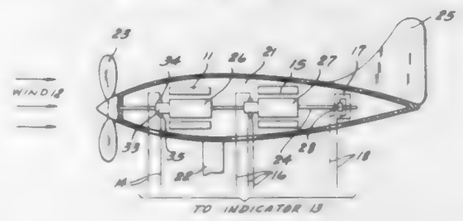
As exemplary of one embodiment of the invention disclosed herein, apparatus including an enclosed chamber at atmospheric pressure or a pressure lower than anticipated formation pressures and a normally-closed valve is adapted to be positioned in a full-bore packer. Thereafter, with the packer set, opening of the valve will place the well annulus below the packer in communication with the enclosed chamber and reduce the pressure in the annulus. In addition to collecting a sample of formation fluids in the chamber, where suitable pressure-measuring devices are associated with the apparatus, a so-called "dry test" can also be performed by the apparatus even though the tubing string is full.

3,373,605
AIR SPEED INDICATING APPARATUS
John L. Beilman, Lancaster, N.Y., assignor to Cornell Aeronautical Laboratory, Inc., Buffalo, N.Y., a corporation of New York
Filed Feb. 21, 1966, Ser. No. 529,001
5 Claims. (Cl. 73—182)



A true air speed indicating instrument having two rotating arms driven by a constant speed motor, velocity sensors on the tips of the arms and air foils having opposite angles of incidence mounted severally on each of the arms.

3,373,606
MULTIPURPOSE WIND INSTRUMENT
Guido Novello Guidelli Guidi, % SIAP, Via Massarenti 412/2°, Bologna, Italy
Filed Oct. 13, 1965, Ser. No. 495,583
Claims priority, application Italy, Oct. 14, 1964, 7,382/64
16 Claims. (Cl. 73—189)



A wind sensing and indicating arrangement for providing information with regard to the parameters of wind. A propeller or similar wind-responsive object is located in the path of the wind and rotated thereby. This rotation is mechanically transmitted to electrical generators in which voltages are induced as a result of this mechanical rotation due to the action of the wind. One such electrical generator supplies an output signal proportional to the velocity of the wind. Another or second electrical generator provides an output signal representative of the wind direction. A third electrical generator transmits an output signal indicative of the duration of time of the action of the wind. Through these three electrical generators, therefore, the parameters of the wind are specified. All three electrical generators are driven by a common shaft by the wind sensing or wind-responsive member. Compensating elements are included in the circuitry interconnecting the electrical generators with corresponding indicators, so as to assure precise indications and readings. All electrical signals and all energy required for the operation of the instrument, of the present invention, is supplied only by the wind. No external power supplies are used for the purpose of operating any of the electrical generators or indicators associated with the outputs of the generators.

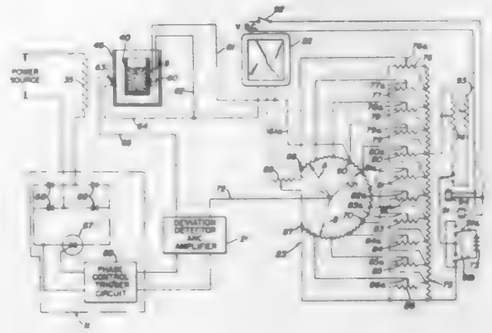
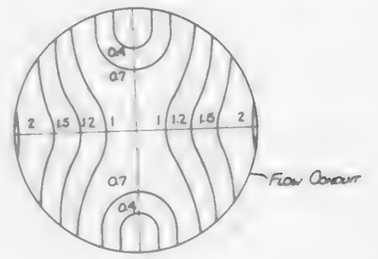
CALORIMETER APPARATUS AND METHOD OF DIRECTLY DETERMINING ENTHALPY
Robert A. Schoenlaub, Columbus, Ohio, assignor to Harrop Precision Furnace Company, a division of Harrop Ceramic Service Co., Columbus, Ohio, a corporation of Ohio
Filed Jan. 29, 1965, Ser. No. 430,512
9 Claims. (Cl. 73—190)



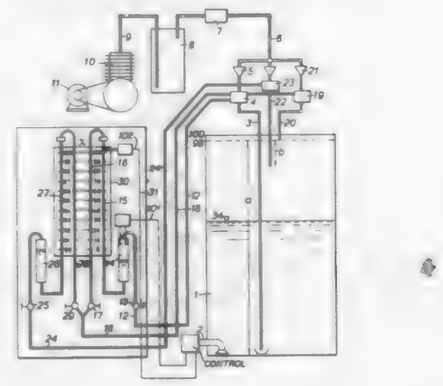
Direct determination of enthalpy is effected by calorimetric apparatus which maintains a constant rate of heat transfer over an extended temperature range. The constant rate of heat transfer is electrically controlled by means of an electronic circuit which compares an actual temperature differential in the heat transfer elements of the calorimetric apparatus with a predetermined desired temperature differential and applies any detected difference to apparatus controlling the rate of heat transfer.

3,373,608
ELECTROMAGNETIC FLOWMETER
Broder Ludwig Ketelsen, Gross Ellerhausen, Germany, assignor to Fischer & Porter Co., Warminster, Pa., a corporation of Pennsylvania
Continuation-in-part of application Ser. No. 547,137, Oct. 15, 1964. This application Mar. 8, 1966, Ser. No. 532,664
14 Claims. (Cl. 73—194)



An electromagnetic flowmeter in which two electrodes are disposed at diametrically-opposed positions of a flow conduit through which passes the fluid to be measured, a magnetic coil being provided to establish a magnetic field in said conduit to produce a signal across the electrodes, which field has a non-uniform configuration so as to render the signal insensitive to changes in the velocity profile of the fluid.

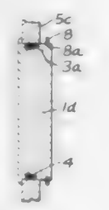
3,373,609
SYSTEM FOR MEASURING THE HEIGHT OF THE LIQUID LEVEL IN TANKS
Per Rohrt Sundby, Midtasen 52, Ljan, Oslo, Norway
Filed July 19, 1965, Ser. No. 472,839
Claims priority, application Norway, July 22, 1964, 154,101; Sept. 14, 1964, 154,749
9 Claims. (Cl. 73—299)



An apparatus for measuring the height of the liquid level and consequently the liquid quantity in a tank, said apparatus comprising a first and second pressure sensitive means located at varying levels in the tank, as well as a liquid manometer means responsive to each of said pressure sensitive means, and located outside said tank. The ratio of the specific gravities of the liquids in the

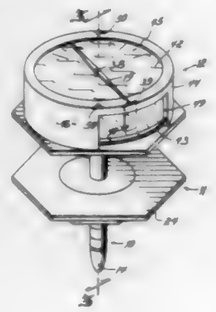
manometer means, and therefore the deflections of each of said manometer means in response to a given change in height of the liquid level in said tank, are equal to the ratio between the vertical distances of the respective pressure sensitive means from the highest desired liquid level in the tank.

3,373,610
SIGHT WINDOW FOR MACHINES AND CONTAINERS
Ortwin Stieber, Nassau, Bahamas, assignor to Tepro Technical Production Company Limited, Nassau, Bahamas
Filed Mar. 6, 1964, Ser. No. 349,878
Claims priority, application Switzerland, Oct. 2, 1963, 12,088/63
3 Claims. (Cl. 73—334)



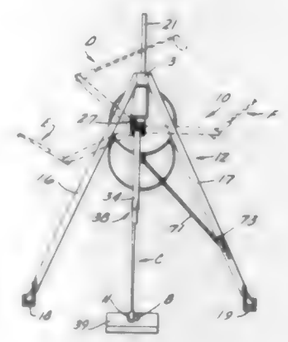
1. For insertion into an opening of a wall, especially of a container: light transparent disc means having a peripheral surface portion provided with peripheral groove means, one side of said disc means being provided with radially extending flange means radially protruding beyond said peripheral surface portion, the depth of said groove means increasing in the direction toward said flange means, and elastically deformable sealing ring means arranged in said groove means and in non-compressed condition having an outer diameter in excess of the outer diameter of said peripheral surface portion, said sealing ring means having an inner diameter so as tightly to engage the bottom of said groove means, the width of said groove means exceeding the extension of said ring means in the direction of the width of said groove means.

3,373,611
STEAK THERMOMETER
David H. Trott, % Crossbow, Inc., 8120 Blue Ash Road, Cincinnati, Ohio 75236
Filed Mar. 4, 1966, Ser. No. 531,729
7 Claims. (Cl. 73—352)



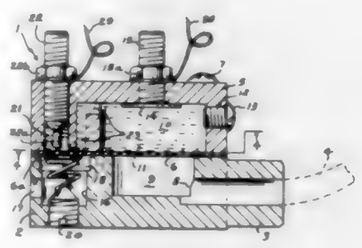
A steak thermometer having an elongated probe and a temperature-indicating mechanism at one end of the probe, the thermometer including an adjustable stop for setting the depth of penetration of the probe, the thermometer further including a windowed viewing device for determining the attainment of a pre-selected temperature by the appearance or disappearance of a heat responsive pointer.

3,373,612
MECHANICAL GOLFER
William H. Thompson, Escondido, and William J. Glasson, Solana Beach, Calif., assignors to Goldcraft Incorporated, Escondido, Calif., a corporation of California
Filed Dec. 27, 1965, Ser. No. 516,347
26 Claims. (Cl. 73—379)



A mechanical golfer having a club arm rotatably mounted upon a frame, the club arm having wrist means hinged freely on the free end of the club arm for pivotal movement with respect thereto within the radial plane. Grip means are provided on the wrist means for rolling movement about the axis of the club handle. Motor means move the club arm and the club in correspondence to the golfer's backswing and automatically release the arm at the end of such backswing. Potential energy storing means then drive the club arm and the club downwardly through the foreswing with the club arm being braked so as to decelerate same during the followthrough portion of the swing.

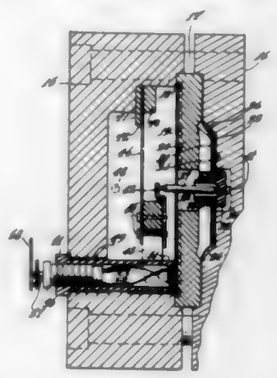
3,373,613
PRESSURE TRANSDUCER
Henry B. Whitmore, Rte. 5, Box 369, San Antonio, Tex. 78211
Filed July 26, 1966, Ser. No. 568,074
7 Claims. (Cl. 73—398)



1. A pressure transducer comprising a dielectric casing having an upper body portion, a lower body portion, a flexible dielectric diaphragm clamped between the upper and lower body portions, said lower body portion having an annular fluid pressure chamber therein opening downwardly, closed at its upper end by a first portion of said diaphragm and a pressure fluid inlet conduit from the exterior, opening into said fluid pressure chamber, adapted to be connected to a fluctuating fluid pressure, said lower body portion having a smaller spring chamber extending downwardly therein in spaced parallel relation to the fluid pressure chamber closed at its upper

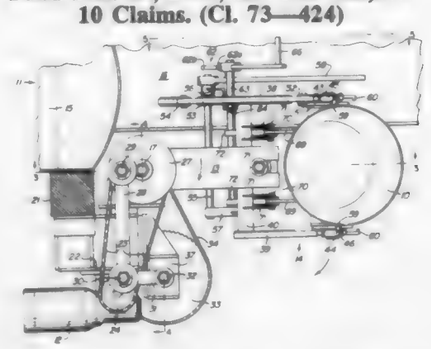
end by a second portion of said flexible dielectric diaphragm, compression spring means in said spring chamber yieldably impinging said second diaphragm portion for urging the same upwardly, spring adjusting means in said lower body portion for adjusting the impinging pressure of said spring means against said second diaphragm portion for deflecting the same upwardly, said upper body portion having an annular electro-conductive liquid receiving chamber therein extending upwardly from and closed by said first diaphragm portion in concentric opposed relation to said fluid pressure chamber, an electric contact terminal concentrically fixed in said annular electroconductive liquid receiving chamber in spaced relation above said first diaphragm portion, said upper body portion having a second smaller electroconductive liquid receiving chamber therein extending upwardly from and closed by said second diaphragm portion, a second electric contact terminal adjustably fixed in said second electroconductive liquid receiving chamber, extending downwardly into predetermined spaced relation above said second diaphragm portion, said upper body portion having an electroconductive liquid passage formed therein extending between said first-mentioned electroconductive liquid chamber and said smaller second electroconductive liquid chamber in predetermined closely spaced relation to said second diaphragm portion arranged to be increased and decreased in cross-sectional area by downward and upward deflection of said second diaphragm portion by movement of an electroconductive liquid when contained in said liquid chambers, for varying said cross-sectional area of the electroconductive liquid between said liquid chambers to vary the electric potential between said electric contact terminals in said electroconductive liquid chambers.

3,373,614
DIFFERENTIAL PRESSURE GAUGE
Robert D. Neyer, Oreland, Pa., assignor to Yarway Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Filed Oct. 23, 1965, Ser. No. 503,891
6 Claims. (Cl. 73—407)



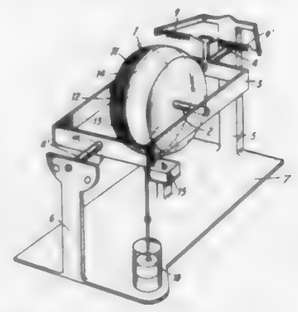
In the present differential pressure indicator of the type utilizing coupling between magnet and spiral armature to bring the indication outside of the pressure vessel, the spiral armature is cantilever mounted with adjustment from the outside at one end, the magnet is narrowed down in the axial direction of the armature to one-sixth the pitch of the armature at its flat face, the pressure diaphragm has a constant effective operating area, for which there is positive securing against slipping, improved edge mounting means, clamping plates for stiffening the central portion and prevention of displacement beyond operative positions, the magnet is mounted to a resilient element biased against diaphragm movement and external adjustable linkage alters the gauge range without disturbing its zero position.

3,373,615
DOUBLE PIVOTING TARE BUCKET SAMPLING APPARATUS
Joseph M. Silver and Harry Lane, Ogden, Utah, assignors to Ogden Iron Works Company, Ogden, Utah, a corporation of Utah
Filed Feb. 21, 1966, Ser. No. 528,872
10 Claims. (Cl. 73—424)



Apparatus for periodically taking samples from a flowing stream of material, for example, a tare sample from a flowing stream of sugar beets, by moving a sampling receptacle such as a tare bucket through the flowing stream from one side to the other side and returning it to its starting point for repeat sampling. The apparatus is characterized by an arm mounted for oscillation about a fixed pivot axis and by a second arm pivotally connected to the first arm for rotation. The second arm carries the sampling receptacle, and drive means are provided for rotating the second arm completely around its pivotal connection with the first arm. Thus, as the first arm oscillates, the second arm carries the sampling receptacle through a complete circle, during at least a part of an oscillation of the first arm, enabling the sampling to be carried out within a minimum amount of space.

3,373,616
GYROSCOPIC INSTRUMENT WITH MEANS FOR INTRODUCING ITS ANGULAR DATA INTO A DIGITAL COMPUTER
Pierre Henri Dugay, Asnieres, France, assignor to D.B.A., Paris, France, a French company
Filed Oct. 16, 1964, Ser. No. 404,416
Claims priority, application France, Oct. 18, 1963, 951,084, Patent 1,380,644
5 Claims. (Cl. 74—5.6)

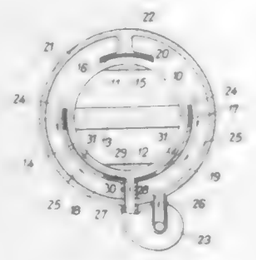


A gyroscopic instrument with means for introducing its angular output quantities into a digital computer.

3,373,617
GYROSCOPIC INSTRUMENT
Martin Lässig, Kiel-Hasseldieksdamm, Germany, assignor to Anschutz & Co., G.m.b.H., Kiel-Wik, Germany, a limited-liability company of Germany
Filed Mar. 23, 1966, Ser. No. 536,724
Claims priority, application Germany, Mar. 25, 1965, A 48,742
11 Claims. (Cl. 74—5.46)

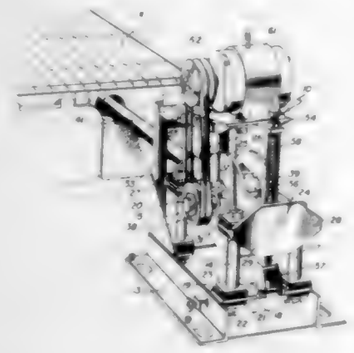
1. In a gyroscopic instrument, the combination comprising a hollow sphere, at least one motor-driven gyro-

scope mounted within said sphere, a vessel having an inlet and an outlet and surrounding said sphere at a distance therefrom providing for a gap between the outer surface of said sphere and the inner surface of said vessel, a liquid filling said vessel, guide means on said vessel outside of said gap constituting a passageway leading from said outlet to said inlet, a motor-driven pump included in



said passageway for circulating the liquid through said gap and through said passageway, current-supplying means including conductive electrode portions of said surfaces for supplying electrical energy to said gyroscope through the liquid in said gap, said inlet being so located that the stream of liquid entering said gap therethrough is operative to keep said sphere floating within said vessel, and cooling means for cooling said passageway.

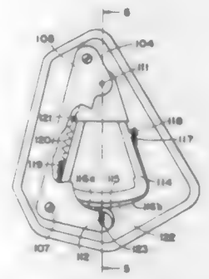
3,373,618
DRIVE FOR STOKER
Earle C. Miller, Worcester, Russell C. Rivers, Boylston, and Michael J. Ivanisin, Worcester, Mass., assignors to Riley Stoker Corporation, Worcester, Mass., a corporation of Massachusetts
Filed Aug. 12, 1965, Ser. No. 479,189
7 Claims. (Cl. 74—87)



This invention relates to a drive for a stoker and, more particularly, to apparatus arranged to produce an oscillation of a resiliently-mounted stoker to bring about the movement of solid fuel along its surface.

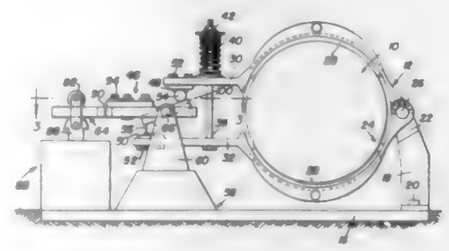
3,373,619
INSTRUMENT MOVEMENT
Kenneth L. Tate, Howard R. Jaquith, Harold S. Hopkins, and Nathaniel B. Nichols, Rochester, N.Y., assignors to Taylor Instrument Companies, Rochester, N.Y., a corporation of New York
Original application Sept. 27, 1961, Ser. No. 141,127, now Patent No. 3,256,740, dated June 21, 1966. Divided and this application Oct. 4, 1965, Ser. No. 529,610
10 Claims. (Cl. 74—89.2)

A tape drive, for transforming relatively small deflections of a moving part into relatively large deflections of an indicator or the like, includes a sector having a cylindrical surface and being deflectible about the axis of the cylindrical surface. A cylindrical segment is coaxially fixed to a rotatable shaft mounted parallel to the axis of the sector's cylindrical surface. The cylindrical surface of the sector and the segment are substantially tangent. A flat flexible tape is secured at one end to the sector, passes over the cylindrical surface of the sector, between sector and segment, and thence over the segment, lying flat on the surfaces of the latter and having its other end secured to the segment. Another flat flexible tape has one end secured to the segment, passes around the segment as if a combination of the first tape, goes between segment and sector, and thence along the cylindrical surface of the sector, having its other end secured to the sector. The tapes run parallel to each other so that if the sector is deflected, one tape can be wound upon the segment for the major part of a revolution



thereof, while the other tape is correspondingly unwound from the segment. Of the four tape ends, three are rigidly fixed in place, while the fourth is fixed in place by a spring. The shaft is mounted in bearings, one on each side of the general plane of the sector. The one bearing is an ordinary bearing allowing the shaft to rotate only. The other bearing is a slot whose length lies along a radius of deflection of the sector. The slot allows irregularities in the tape and surfaces of segment and sector to deflect the shaft along the slot against the pull of the spring which tensions the tapes and draws the segment against the cylindrical surface of the sector with only a thickness of tape separating sector and segment surfaces. The normal play in the first mentioned allows the necessary deflection of shaft toward or away from the cylindrical surface of the sector.

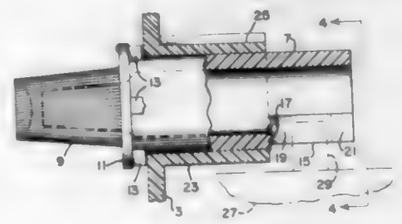
3,373,620
BRAKE ACTUATING MECHANISM
Edgar A. Jordan, 2510½ Gettle St., Klamath Falls, Oreg. 97601
Filed Mar. 8, 1966, Ser. No. 532,776
8 Claims. (Cl. 74—96)



1. A motion transmitting assembly adapted to apply force in generally opposite directions on a pair of members disposed in spaced apart relation, said assembly comprising a lever arm pivotally supported at one end for oscillatory movement about a first axis through a plane adapted to generally parallel said opposite directions, an

elongated abutment member pivotally supported intermediate its opposite ends for movement about a second axis generally paralleling said first axis and extending transversely of said abutment member, and abutment means carried by said lever and operable to adjustably limit pivotal movement of said abutment member in one direction, said abutment member including opposite end portions thereof disposed on opposite sides of a plane disposed normal to the longitudinal centerline of said lever arm adapted to engage said pair of members to urge the latter apart upon pivotal movement of said lever arm in a direction causing rotation of said abutment member in a direction opposite to said one direction.

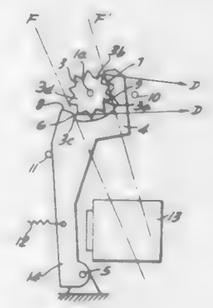
3,373,621
ACTUATOR KNOB AND SWITCH ARRANGEMENT FOR A RADIO RECEIVER
Glenn R. Mundschenk, Utica, N.Y., assignor to General Electric Company, a corporation of New York
Filed Apr. 27, 1966, Ser. No. 545,757
8 Claims. (Cl. 74—104)



A rotatable actuator knob assembly including spaced, transversely extending fingers operatively engaging a slide switch actuating lever, while at the same time captivating the actuator knob assembly in a cabinet.

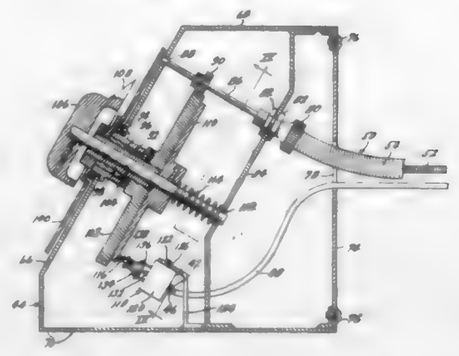
The present invention relates to an actuator knob and switch arrangement for radio receivers and like devices and more specifically to a rotatable actuator knob suitable for actuating an inexpensive slide switch in such a receiver.

3,373,622
STEPPING TRANSMISSION
Erich Stautmeister, Marburg, Germany, assignor to Alfred Engelmann, Wennefostel, Germany
Filed May 21, 1965, Ser. No. 457,783
11 Claims. (Cl. 74—143)



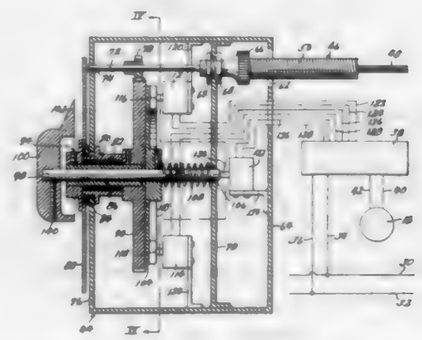
A reciprocating pawl has a face successively engaging the teeth of a stepping wheel and inclined to the path of pawl movement to produce a great turning angle of the stepping wheel. The pawl is reciprocated by an electromagnet and a spring, and has two engaging faces slanted at different angles to the path of movement of the pawl in accordance with the characteristics of the electromagnet and spring. In a modified embodiment, one engaging face is angular or curved to vary the force required of the electromagnet.

3,373,623
REMOTE CONTROL DEVICE
Robert D. Gutting, Topeka, Kans., assignor to The Home-O-Nize Co., Muscatine, Iowa, a corporation of Iowa
Filed Dec. 23, 1966, Ser. No. 604,423
12 Claims. (Cl. 74—388)



1. In combination with a power-operated apparatus having an electric motor for driving said apparatus and an operative electric circuit including said motor, a remote control device comprising a cabinet, an operating member carried rotatably in said cabinet, means interconnecting said apparatus to said operating member whereby the latter is rotated in synchronization with the former, a second operating member carried rotatably in said cabinet, means interconnecting said operating members whereby said second operating member is normally rotated by said first operating member but being manually disengageable to permit independent rotation of said second operating member, an electric switch included in the electric circuit of said motor and mounted in said cabinet, and a switch operating member carried by said second operating member and positioned to engage and open said switch at one point in the rotation of said second operating member.

3,373,624
REMOTE CONTROL APPARATUS
Robert D. Gutting, Topeka, Kans., assignor to The Home-O-Nize Co., Muscatine, Iowa, a corporation of Iowa
Filed Dec. 23, 1966, Ser. No. 604,468
10 Claims. (Cl. 74—388)



1. In combination with a power-operated device having a rotatable drive shaft and having a reversible prime mover operable to turn said drive shaft, a remote control apparatus comprising:

(a) a frame,
(b) a first member carried rotatably in said frame,
(c) means interconnecting said drive shaft with said first member whereby the latter is rotated in timed synchronization with the former,
(d) a second member carried rotatably in said frame,

(e) means interconnecting said first and second members whereby the latter is normally rotated by the former, but which is manually disengageable to permit independent manual rotation of said second member,

(f) a pair of actuating devices carried by said frame and interconnected to said prime mover, said actuating devices functioning when operated to cause operation of said prime mover in respectively opposite directions, and

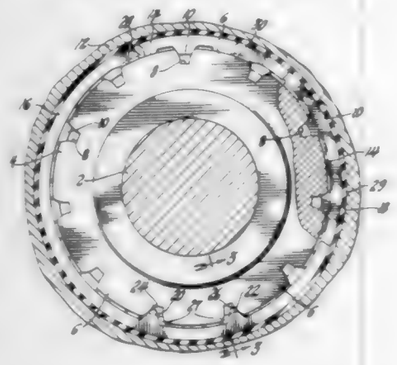
(g) operating means carried by said second member and operable as said second member is rotated to engage and operate said actuating devices selectively, said second member having a single angular index position in which its operating means do not engage either of said actuating devices and said prime mover is therefore not actuated, said operating means engaging and operating one of said actuating devices whenever said second member is positioned between said index position and a cross-over point angularly spaced from said index point, and engaging and operating the other of said actuating devices when said second member is positioned in the remainder of the full circle of revolution of said second member, said actuating devices being operable to cause operation of said prime mover, and hence rotation of said second member, in a direction to return said second member to its index position by rotation thereof in respectively opposite directions.

3,373,625

BACKLASH REDUCING MECHANISM

Robert C. Keller, Birmingham, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Filed Aug. 19, 1966, Ser. No. 573,692
12 Claims. (Cl. 74—409)



1. A mechanism for reducing relative rotation between members splined to each other, said mechanism including a connecting member having a plurality of spaced projections thereon, each of said projections extending into an aligned groove between adjacent splines of one of said members, and means for biasing each of said projections into engagement with a spline face and away from engagement with the next adjacent spine face.

3,373,626

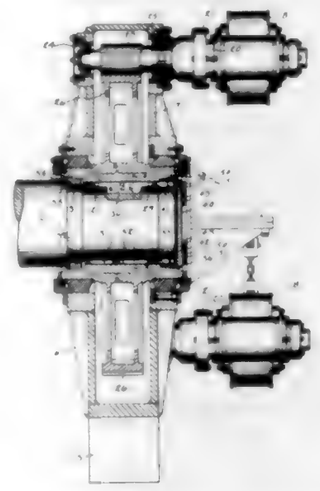
MOUNTING ASSEMBLY FOR SHAFT MOUNTED GEAR DRIVE UNIT

George P. Maurer, Wauwatosa, and Allyn E. Phillips, Brookfield, Wis., assignors to The Falk Corporation, Milwaukee, Wis., a corporation of Wisconsin

Filed Sept. 22, 1966, Ser. No. 581,280
4 Claims. (Cl. 74—421)

1. In combination with (1) a shaft mounted gear drive unit including a hollow shaft member, a gear attached to the hollow shaft member, and speed reduction gearing driving said gear, and (2) a first shaft on which the gear drive unit is to be supported;

a pair of spaced supporting rings on the first shaft, each ring having an inner surface contacting the first shaft and a tapered peripheral surface contacting an interior portion of the hollow shaft member, each such interior portion of the hollow shaft member being tapered to mate with the tapered peripheral surface of its abutting supporting ring, and the balance of the hollow shaft member except for such portions being spaced from the periphery of the first shaft;



means establishing a driving connection between the hollow shaft member and the first shaft; and

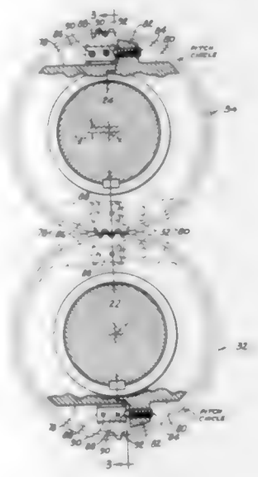
a locking plate attached to the first shaft and having a marginal portion extending beyond the periphery of the first shaft, said locking plate including an opening through which said means establishing a driving connection can be inserted into position with the locking plate attached to the first shaft.

3,373,627

ADJUSTABLE SYNCHRONIZATION GEARS FOR SERPENTINE SLITTING MACHINE

Alfred Wesstrom, South Bend, Ind., assignor to The Bendix Corporation, a corporation of Delaware

Filed Jan. 27, 1966, Ser. No. 523,451
5 Claims. (Cl. 74—440)



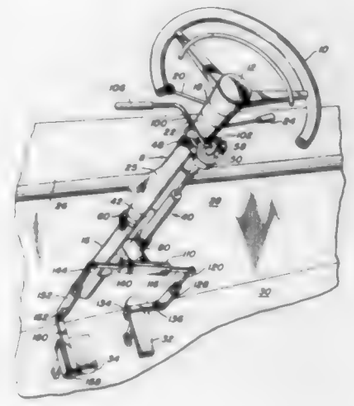
Adjustable driving and driven mesh gears rotatable about parallel axes having a variable spaced relationship wherein each gear is provided with two part gear teeth and adjusting means connected thereto for adjusting one part relative to the other part to vary the circular thickness of the two part gear teeth. The adjustable one part of the driving and driven gear teeth are arranged in reverse relative arrangement to permit varying the circular thickness of the teeth of each gear by a desired amount to eliminate backlash or unwanted clearance between the teeth of each gear in both directions of rotation of the driving gear.

3,373,628

HAND CONTROL FOR MOTOR VEHICLES

Louise Lake, New York, N.Y., and George H. Mortimer, Montclair, N.J., assignors, by mesne assignments, to Louise Lake Enterprises, Inc., Mount Kisko, N.Y., a corporation of New York

Filed Apr. 1, 1965, Ser. No. 444,650
16 Claims. (Cl. 74—484)



4. A manual control for operating the brake pedal and accelerator pedal of motor vehicles having a steering column comprising a fixed housing and a steering wheel rotatably mounted on the upper end of the housing, said control comprising:

(a) a drive shaft having upper and lower ends,

(b) means for mounting the drive shaft vertically on said vehicle and along said fixed housing for oscillation about its axis,

(c) a lever secured at one end to the upper end of said drive shaft for imparting said oscillation thereto and having a handle on its other end movable adjacent and generally parallel to the under side of said steering wheel whereby the operator's hand may rest on the steering wheel while moving the handle,

(d) means including a horizontal shaft operatively connected to the lower end of said drive shaft for translating the oscillations of the drive shaft into oscillations of said horizontal shaft about a horizontal axis,

(e) means secured to said horizontal shaft including a lost motion linkage at one side of said horizontal shaft to operate the brake pedal and a lost motion linkage at the other side of said horizontal shaft to operate said accelerator pedal.

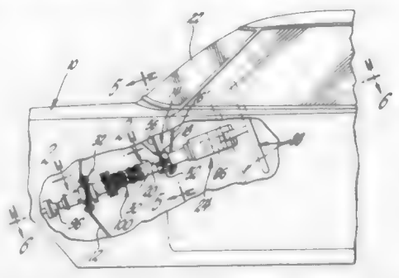
3,373,629

STEERING COLUMN ASSEMBLY

Robert D. Wight, Walter W. Maltman, and Thomas C. Powell, Saginaw, and Harold M. Olds, East Lansing, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Filed Apr. 29, 1966, Ser. No. 546,312
12 Claims. (Cl. 74—492)

8. In a steering mechanism for a vehicle of the type having spaced support means mounting a steering jacket, steering shaft means including telescopically related sections extending through and rotatably supported by the steering jacket, a manual steering instrumentality secured to one steering shaft section and a steering gear device secured to another steering shaft section, the improvement comprising providing a portion of the steering jacket with an axially extending series of peripheral perforations to form an energy absorbing lattice of interconnected strip elements arranged to yield in generally radial direction to axially shorten the steering jacket upon the application thereto of a predetermined axially directed force.

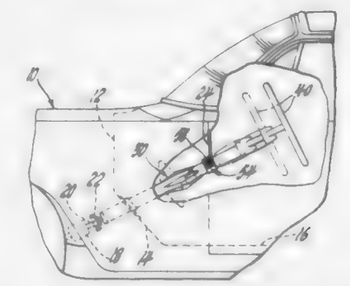


3,373,630

STEERING COLUMN ASSEMBLY

Byron T. Heurtebise, Milford, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Filed Apr. 29, 1966, Ser. No. 546,313
9 Claims. (Cl. 74—492)



7. In a vehicle steering mechanism of the type including a steering gear and telescopic steering shaft means operatively connected to the steering gear, an energy absorbing support jacket mounted adjacent both of its ends on the vehicle and enclosing and rotatably supporting said steering shaft means, said jacket being provided intermediate its ends with circumferentially spaced axially extending slots defining a plurality of energy absorbing strip elements arranged to yield in generally radial direction under a predetermined impact force on said jacket.

3,373,631

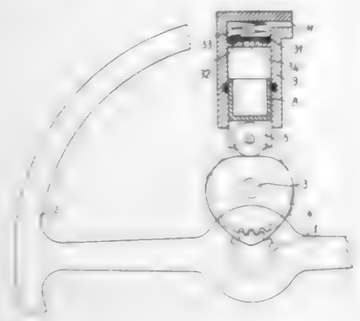
SERVO-STEERING SYSTEMS FOR AUTOMOBILE VEHICLES

Edmond Henry-Biabaud, Paris, France, assignor to Societe Anonyme Andre Citroen, Paris, France, a corporation of France

Filed Oct. 22, 1965, Ser. No. 501,377
Claims priority, application France, Mar. 16, 1965, 9,475, Patent 87,497
1 Claim. (Cl. 74—495)

A steering arrangement for an automotive vehicle comprising a steering shaft rotatably mounted upon the vehicle. A steering wheel is fixed to said shaft for rotating said shaft. A second shaft is rotatably mounted upon the vehicle extending parallel to the steering shaft having a cam thereon. Means are operatively connected to both said shafts for rotating said second shaft and said cam by the steering shaft at reduced speed. A thrust piston frictionally engages the cam and such piston is disposed in a cylinder receiving a variable pressure fluid from a supply system to exert a resistance against rotation of the cam.

A valve cooperates with a seat disposed inside the cylinder to open only in the direction of return whereby fluid may

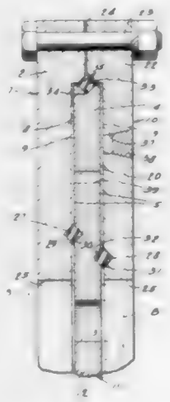


return to the supply system and a calibrated orifice in the valve allows the fluid to enter the cylinder during the return movement of the steering shaft.

3,373,632
PLASTIC CONTROL CABLE
James R. Jeromson, Jr., Willoughby, and Donald A. Boyce, Chesterland, Ohio, assignors to The Weatherhead Company
Filed Jan. 21, 1966, Ser. No. 522,168
5 Claims. (Cl. 74—502)

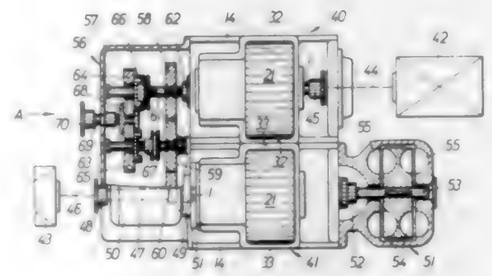
A push-pull flexible control cable assembly for remote operation of a device is arranged so that the control cable forms a reinforcement for the shaft and knob portions of the assembly to resist bending upon application of axial forces. One end of the control cable is doubled back upon itself and radially offset with respect to the remainder of the control cable for substantially the entire length of the shaft portion of the assembly and is completely encapsulated therein. The point where the control cable begins to double back upon itself defines an eyelet to permanently lock the control cable to the axial movement of the knob.

3,373,633
VISCOUS TORSIONAL VIBRATION DAMPERS
Charles F. Desmond, Williamsville, and Rollin Douglas Rumsey, Buffalo, N.Y., assignors to Houdaille Industries, Inc., Buffalo, N.Y., a corporation of Michigan
Filed Oct. 23, 1965, Ser. No. 503,578
15 Claims. (Cl. 74—574)



A torsional vibration damper has an attachment hub with a radially extending circular damper disk and mounting flange portion on which is relatively rotatably supported an inertia mass comprising complementary members secured together and defining a working chamber within which viscous damping coupling medium is retained, and a spaced relation between the working faces of the disks and inertia mass is maintained by combination dynamic sealing, bearing and spacing ring means.

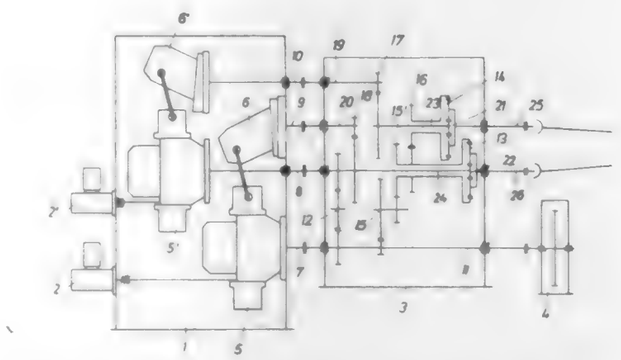
3,373,634
COMPACT TRANSMISSION
Manfred Schrag, Heidenheim (Brenz), Germany, assignor to Voith Getriebe KG., Heidenheim (Brenz), Germany
Filed Feb. 18, 1965, Ser. No. 433,753
Claims priority, application Austria, Feb. 25, 1964, A 1,584/64
3 Claims. (Cl. 74—661)



The present invention relates to a hydrodynamic transmission with torque converter and mechanical transmission part in which the guide wheel housing together with the bearing housing for the mechanical transmission part forms a self-supporting unit in the form of one work piece.

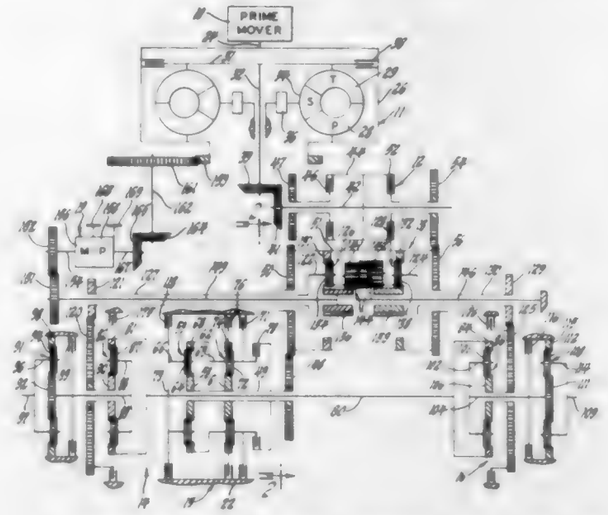
According to the invention the said housing is provided with longitudinal flanges to permit combining said transmissions to self-supporting duplex transmissions.

3,373,635
DRIVE MECHANISM FOR TWO ROLLING FRAMES OF A TUBE REDUCING ROLLING MILL
Hans Meurer, Monchen-Gladbach, Germany, assignor to Mannesmann-Meer Aktiengesellschaft, a corporation of Germany
Filed Apr. 9, 1965, Ser. No. 447,109
2 Claims. (Cl. 74—665)



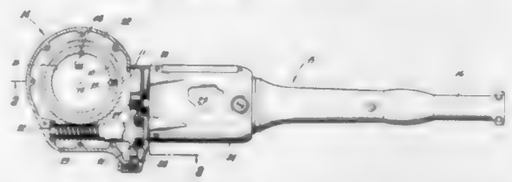
Drive means for tube reduction rolling mills that comprise a hydro double gearing with pumps and motors, a mechanical double gearing including planetary gearing, gear wheels in driving connection with the mechanical double gearing and with the pumps, and output shafts in driven connection with the mechanical gearing and driving the rolls of the rolling frames in the proper assigned direction.

3,373,636
VEHICLE TRANSMISSION INCLUDING STEERING BY DRIVING
William G. Livezey, Robert M. Tuck, and Marion D. Smith, Indianapolis, Ind., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Filed Sept. 27, 1965, Ser. No. 490,570
26 Claims. (Cl. 74—720.5)



A single input, dual output, vehicle power train having an input driven hydrostatic unit controlling a differential gear unit which is cooperable with a multiple speed ratio gear unit to provide single and dual input drive to a pair of output differential gear units for straight vehicle drive and to provide single and dual input differential drive to the output differential gear units for steering.

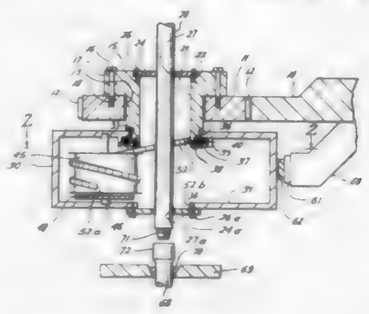
3,373,637
MULTIPLE PURPOSE PORTABLE ROTARY DRIVE UNIT
Howard N. Behnke, Monterey Park, Calif., assignor to Collins Machinery Corporation, Monterey Park, Calif., a corporation of California
Filed Jan. 14, 1966, Ser. No. 520,737
6 Claims. (Cl. 81—57)



The disclosed portable power drive assembly incorporates a rotary drive socket having a peripheral ring gear to which drive is transmitted by a motor via speed reducing gearing. The motor is carried by an arm integral with a housing supporting the socket, and the socket receives and retains an adapter to which drive is transmitted via a key in adapter and socket grooving. A holder may be provided to extend from the arm for attachment to work to resist counter-rotation of the arm about the work axis, and the holder provides a lost motion connection to permit adjustment.

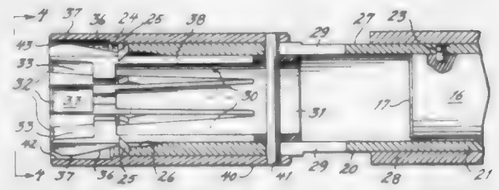
3,373,638
PIPE TONGS
Thomas R. Dunnam, 5870 Westover St., Houston, Tex. 77033
Filed Jan. 6, 1967, Ser. No. 607,783
5 Claims. (Cl. 81—57)

The disclosure of this application relates to pipe tongs which are adapted to securely grip a pipe disposed therethrough, yet which will not compress or bottleneck the pipe and which will result in a minimum of scarring of the exterior surface of the pipe. Pipe tongs are primarily used



in making up and disconnecting threaded pipe connections of petroleum and other wells, but may have other uses.

3,373,639
AUTOMATICALLY ADJUSTABLE SOCKET WRENCH
Leonard Van Dalen and Horace C. Disston, Jr., Westmont, N.J., assignors to Seaboard Tools, Cherry Hill, N.J., a corporation of New Jersey
Continuation-in-part of application Ser. No. 524,205, Feb. 1, 1966. This application June 22, 1967, Ser. No. 647,979
6 Claims. (Cl. 81—112)



The instant invention is essentially concerned with an automatically adjustable socket wrench including a plurality of cylindrically arranged jaws retractably slidable into a generally cylindrical closer for radial contraction, and extendible therefrom for radial expansion, and wherein the closer is provided with internal projections entering between adjacent jaws, and the jaws are configured to avoid overstressing the jaws and the projections, whereby reaction torque is effectively distributed over the structure.

3,373,640
APPARATUS FOR MACHINING GEOMETRIC CONES
John H. Allen, Sr., Pasadena, and Orrin A. Wobig, Seabrook, Tex., assignors to the United States of America as represented by the Administrator of the National Aeronautics and Space Administration
Filed Dec. 28, 1965, Ser. No. 517,157
5 Claims. (Cl. 82—14)

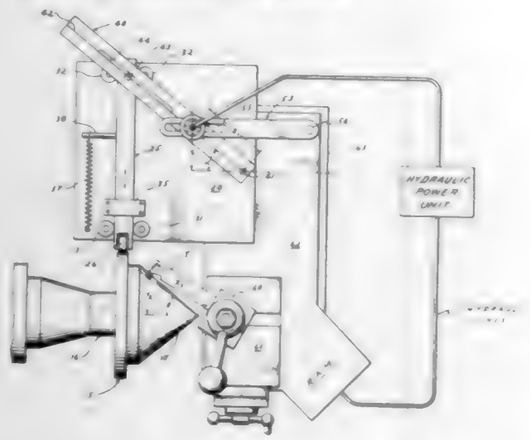
1. For use with a lathe comprising a rotary spindle and having a lathe carriage mounted for movement in the direction of the spindle axis and a cross-slide mounted on the lathe carriage for transverse movement relative thereto, a lathe attachment apparatus for machining geometric cones, said apparatus comprising:

a workpiece;

a pattern cam having the cross sectional configuration of the geometric cone which is to be machined, said cam and workpiece being mounted on the lathe spindle with the cam disposed coaxial with the spindle axis, whereby the cam and workpiece are rotatable by rotation of said spindle;

cam follower means disposed in engagement with the peripheral edge of the cam, whereby a reciprocating lineal motion will be imparted to the cam follower means by rotation of the cam;

a tracer bar guide mounted for pivotal movement about a pivot fixed with respect to the lathe body and slidably and pivotally connected to said cam follower means, whereby reciprocating lineal motion of the cam follower means imparted by rotation of the cam is converted to oscillatory pivotal movement of the tracer bar guide, said tracer bar guide having a straight guide surface thereon which is coplanar with the axis of said tracer bar pivot;

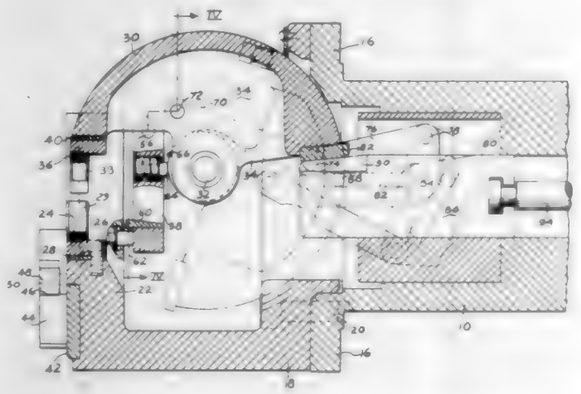


a tracing stylus fixedly mounted with respect to the lathe cross-slide and disposed in engagement with the guiding surface of said tracer bar guide, whereby the tracing stylus is adapted to follow said guide surface as the lathe carriage is driven towards the workpiece;

a cutting tool mounted on the cross-slide and positioned with its cutting edge applied to the workpiece at the rotary axis thereof; and

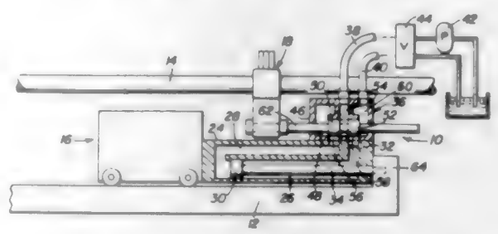
lathe tracer attachment means for moving said cutting tool in direct correspondence with the movement of said tracing stylus whereby as the lathe carriage is moved towards the workpiece, it is machined by the cutting tool to the form of a geometric cone having a cross sectional configuration corresponding to the shape of the pattern cam and a taper which corresponds to the angular position of the tracer guide bar relative to the lathe spindle axis.

3,373,641
CHUCK CONSTRUCTION
Otto Hermann, Cincinnati, Ohio, assignor to The R. K. Le Blond Machine Tool Co., Cincinnati, Ohio, a corporation of Delaware
Filed Apr. 22, 1965, Ser. No. 449,991
12 Claims. (Cl. 82—40)



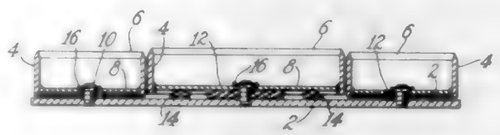
A chuck for holding the end of a crankshaft while the pin portions of the crankshaft are machined. The chuck includes a stationary jaw and a pivoted jaw. The pivoted jaw is operated by an arm which is connected through a lost motion linkage to a slidable block. The slidable block, which is connected to a reciprocating fluid motor, also carries a wedge for locking the pivoted jaw closed. The stationary jaw carries adjustable drive members for engagement with the chuck.

3,373,642
HYDRAULICALLY REGULATED WORKPIECE ACCELERATING DEVICE
Richard M. Simpson, Twinsburg, Ohio, assignor to Ferro Dynamics, Inc., a corporation of Ohio
Filed Feb. 9, 1966, Ser. No. 526,213
5 Claims. (Cl. 83—76)



1. In a system for controlling the movement of a massive device to perform an operation on a continuously moving workpiece engageable by a signal controlled clamp, an acceleration control mechanism connected to said device for imparting movement thereto comprising, a housing connected to said device having a fluid chamber elongated generally in a direction parallel to the path of movement of said workpiece, a piston slidably received in said chamber, frame means fixedly mounting said piston and guiding movement of said housing along a path generally parallel to said chamber, a source of fluid under pressure, servo valve means mounted on the housing and connecting said source to the fluid chamber for displacement of the device relative to the piston, and valve actuating means connecting the valve means to the clamp for varying the pressure of the fluid in said chamber in response to engagement of the clamp with the workpiece.

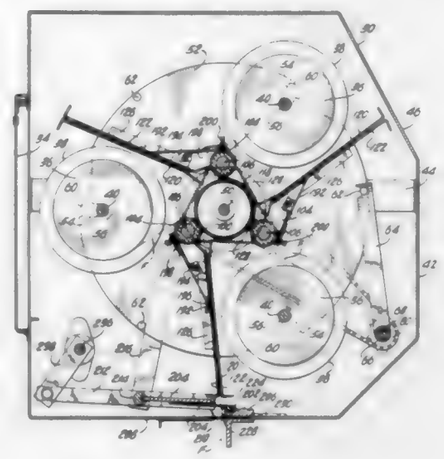
3,373,643
APPARATUS FOR PUNCHING OUT WORKPIECES
Ernst Maximilian Spengler, Offenbach, Germany, assignor to United Shoe Machinery Corporation, Flemington, N.J., and Boston, Mass., a corporation of New Jersey
Filed Feb. 11, 1966, Ser. No. 526,863
9 Claims. (Cl. 83—620)



Apparatus for punching out workpieces from sheet material, the apparatus including a support and punching means mounted on the support. Means are provided for attaching the punching means to the support so that the punching means is movable in directions normal to the plane of the support and in directions other than normal to the plane of the support.

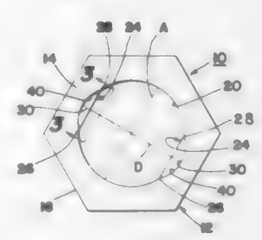
3,373,644
MAGAZINE FOR DISPENSING PHOTOGRAPHIC FILM
John L. Bjelland, Glen Head, N.Y., assignor to Powers Chemco, Inc., Glen Cove, N.Y., a corporation of New York
Filed Oct. 29, 1965, Ser. No. 505,645
7 Claims. (Cl. 83—650)

The invention provides a film dispening magazine for dispensing photographic film in variable lengths from a selected one of a plurality of rolls of film. The magazine may be used by itself or as a part of a photomechanical



camera. External control means are provided for the selection of one of the rolls, for feeding the film from the selected roll and for severing the desired length of film.

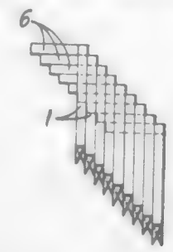
3,373,645
REVERSIBLE SELF-THREADING NUT
Robert J. Holton, Rocky River, Ohio, assignor to Tinnerman Products, Inc., Cleveland, Ohio, a corporation of Ohio
Filed Dec. 10, 1965, Ser. No. 512,529
9 Claims. (Cl. 85—32)



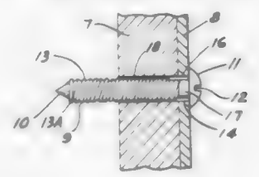
A reversible, self-threading fastening device adapted for assembly with a threadless member including a body having an opening therethrough. The opening has a continuous axially extending surface having a plurality of projections which extend radially into the opening and are formed from the material of the body removed from recessed portions made in the axially extending surface. The projections are formed so that the upper and lower surfaces merge to form a linear edge which is adapted to cut into a threadless member and which edge terminates at its opposite ends in the axially extending surface.

3,373,646
STAPLE
George H. Ehlert, 2095 Olive Ave., Lakewood, Ohio 44107
Filed Mar. 24, 1966, Ser. No. 537,103
5 Claims. (Cl. 85—49)

A staple cartridge comprising a plurality of like one-piece staples, each staple provided with a pair of spaced substantially parallel leg sections which have penetrating points at the free ends. A cross bar connects the other ends of the legs, each cross bar in the cartridge being substantially parallel to the cross bars of adjacent staples. A planar head portion extends from one side of the cross bar beyond the legs at substantially right angles to the same, and being of substantial area and portions of adjacent staples in the cartridge comprising the heads being in juxtaposition with the heads generally parallel and the staples being adhered together whether by means of the legs or heads, or both as circumstances may dictate.

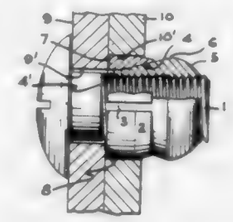


3,373,647
COIL SPRING EXPANSION FASTENER
Duane M. Sherock, 32190 Five Mile Road, Livonia, Mich. 48154
Filed Mar. 8, 1966, Ser. No. 532,810
1 Claim. (Cl. 85—64)



This application discloses a fastening device consisting of a threaded element having an expansion spring wound concentrically thereon, the spring having an axial extension and return portion at one end and a loop at the opposite end, the extension and return portion being arranged to hold the spring against rotation and the loop being arranged to move along the threaded member upon rotation thereof, to expand radially and contract longitudinally the spring, when rotated in one direction and to expand longitudinally and contract radially the spring, when rotated in the opposite direction.

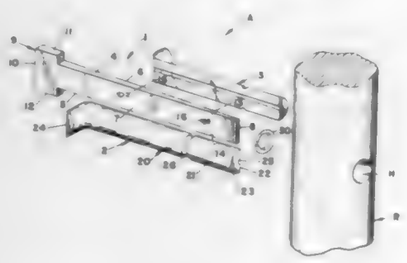
3,373,648
FASTENERS WITH EXPANSION SLEEVE
Kenneth H. Pitzer, Los Angeles, Calif. assignor of two-thirds to Paul M. Gross, Tarzana, Calif.
Continuation of application Ser. No. 276,030, Apr. 26, 1963. This application June 22, 1966, Ser. No. 559,692
6 Claims. (Cl. 85—67)



1. A fastener adapted to be inserted into an orifice of a work piece and removed from said orifice by manipulation of only one end of said fastener, comprising a threaded shaft, means to rotate said shaft positioned at one end of said shaft, a bushing positioned on said shaft, said bushing being expansible radially of said shaft, said bushing including an elastically deformable female slit ring mounted on said shaft, said female ring having an interior conical surface and an exterior cylindrical

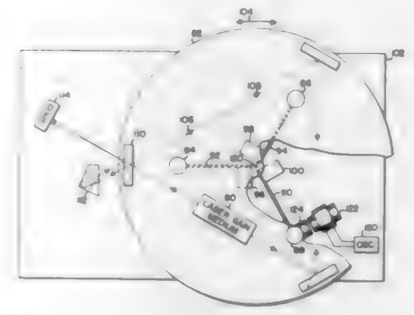
surface, said female ring having a flat roughened annular surface adjacent to said rotatable means, said annular surface extending substantially perpendicular to said shaft having a diameter no greater than the diameter of said female ring, and thrust means mounted on said shaft to exert an axial thrust on said female ring, said last named means including a male member mounted on said shaft, said male member having a conical exterior surface mating with the interior conical surface of said female ring, said female ring positioned between said rotating means and said male member and said female ring being split by a single slot extending the full length of said female ring and from the interior to the exterior surfaces of said female ring, said thrust means adapted to exert an axial force on said bushing to move said male member into said female member and thereby exert a radial force on said slit female ring, said male and female conical surfaces making substantially equal acute angles with the axis of said shaft and said angles being substantially greater than the angle of repose of said elastically deformable female slit ring, said annular surface being adapted to engage an inner facing surface of a contiguous surface placed between said rotating means and said bushing so that the friction between said annular surface and said inner facing surface of said contiguous surface is such that the minimum frictional resistance in the train of friction between surfaces in said bushing in frictional engagement is located between said thrust means and said shaft on relative rotation thereof, whereby on placement of the fastener in a workpiece and on rotation of said rotatable means at said one end thereof in one direction the male member and the female ring are moved towards each other to radially expand said female ring, and on reverse rotation of said rotatable means the female ring contracts axially forcing said male member to move in a direction axially away from said female ring to reduce said radial force.

3,373,649
SPLIT FASTENER WITH LOCKING WEDGE
Steadmon O. Taylor, Fort Lauderdale, Fla., assignor to Inventions and Invention Consultants, Inc., Chicago, Ill., a corporation of Illinois
Filed Oct. 22, 1965, Ser. No. 501,920
5 Claims. (Cl. 85—79)



A cotter including a center wedge located intermediate a pair of cotter halves which are provided at their ends with outwardly projecting shoulders. The center wedge moves longitudinally intermediate the cotter halves from a withdrawn position wherein the cotter is transversely contracted to an inserted position wherein the cotter is transversely expanded. The cotter halves and center wedge are provided with outwardly opening indentations and notches, respectively, which register when the center wedge is in the withdrawn position in the formation of a peripheral groove, and a resilient ring is fitted within the groove for holding the cotter halves and center wedge in the withdrawn position. Nibs are formed on the center wedge which slidably engage longitudinal grooves in the cotter halves so as to preclude misalignment of the latter.

3,373,650
LASER ANGULAR RATE SENSOR
Joseph E. Killpatrick, Minneapolis, Minn., assignor to Honeywell Inc., Minneapolis, Minn., a corporation of Delaware
Filed Apr. 2, 1965, Ser. No. 445,171
8 Claims. (Cl. 88—14)

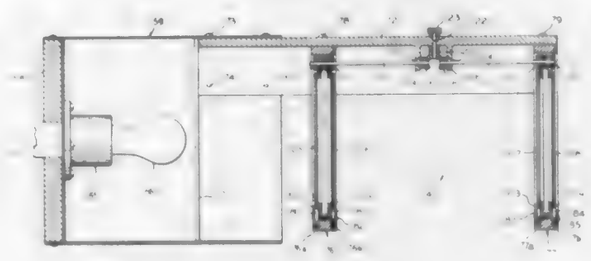


Bias system for laser gyroscope in which the gyroscope is electrically or mechanically oscillated so that it is effectively above the threshold rate a majority of the time including an optical system to compensate for this bias over short time intervals. Over longer time intervals the accumulated bias is relatively negligible.

3,373,651
INTERFEROMETRIC SPECTROMETER UTILIZING THREE FABRY-PEROT ETALONS IN SERIES
Julian E. Mack, Douglas P. McNutt, and Frederick L. Roesler, Madison, Wis., assignors to Design, Inc., Madison, Wis., a corporation of Wisconsin
Continuation of application Ser. No. 290,287, June 21, 1963. This application Nov. 28, 1966, Ser. No. 597,480
15 Claims. (Cl. 88—14)

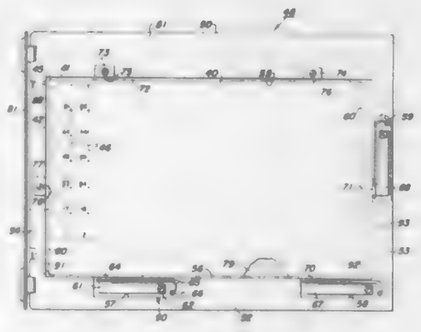
An interferometric spectrometer using three Fabry-Perot etalons in series. The spacings between the plates of the three etalons are different from one another, and are selected so that one peak of the transmittance curve of each etalon coincides in frequency with one peak of the transmittance curve of each other etalon, with all other peaks of the transmittance curves of the etalons being substantially non-coincident in frequency. The output of the spectrometer is detected by a phototube, and is recorded. The spectrometer can be "scanned"; that is, the transmittance curve center frequency can be varied so as to provide a spectral response curve for an input light source over a desired range of frequencies. This is done by means of an electro-pneumatic control system which varies the gas pressure between the etalon plates at a desired rate, while simultaneously precisely maintaining constant the pressure differentials between the etalons.

3,373,652
EDUCATIONAL POLARISCOPE APPARATUS FOR DETERMINING AND OBSERVING STRESS IN PHOTOELASTIC MATERIALS
Fredric E. Flader, Boca Raton, Fla., assignor to Scott Engineering Sciences Corp., Pompano Beach, Fla., a corporation of Florida
Continuation of application Ser. No. 300,503, Aug. 7, 1963. This application June 29, 1967, Ser. No. 655,986
4 Claims. (Cl. 88—14)



A device designed primarily for use as an aid to education in demonstrating the effects of stress in photoelastic material through which materials polarized light is passed at predetermined angles with respect to the stress being applied to the photoelastic material. The polariscope is designed for mobile laboratory use on a wide variety of materials with an almost infinite adjustment of polarizer and quarter wave plates are possible with respect to the photoelastic material.

3,373,653
MICROFICHE HOLDER
Russell R. Roberts, Ontario, and John P. Caldwell, Penfield, N.Y., assignors to Xerox Corporation, Rochester, N.Y., a corporation of New York
Filed June 30, 1965, Ser. No. 468,396
6 Claims. (Cl. 88—24)



1. A holding device for supporting a microfiche card in an electrostatographic reproducing machine having a microfiche handling mechanism adapted for moving the microfiche in the plane thereof

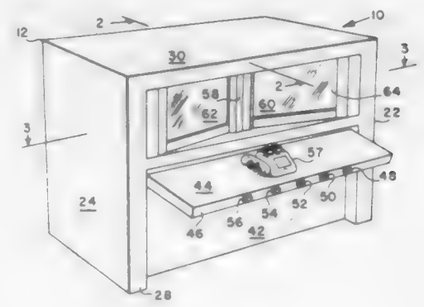
said holding device including a frame structure having four side members defining an opening of larger dimensions than the dimensions of the total image area of the microimages comprising the microfiche,

at least one of said side members having an element provided with a guide surface against which one of the side edges of the microfiche is adapted to abut whereby the microfiche may be precisely positioned relative to said side member,

at least one of the other two side members being provided with a movable force element engageable with another edge of the microfiche and adapted continuously to urge the microfiche against said card guide element,

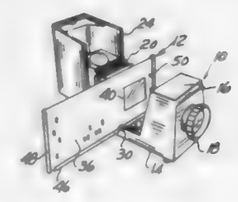
and a cover plate formed with an opening of approximately the same dimensions as the opening in said frame structure and adapted for positioning upon said frame structure with the openings therein in registry and with the microfiche therebetween.

3,373,654
DISPLAY VIEWING APPARATUS
Ann J. Carolan and William J. Carolan, Santa Cruz, Calif. (both of 1642 Ontario Ave., Sunnyvale, Calif. 94087)
Filed Oct. 6, 1965, Ser. No. 493,475
1 Claim. (Cl. 88—24)



A pair of back screen projectors are housed within a cabinet and connected for synchronous operation so that slides can be shown in pairs. Controls are provided for regulating the period and sequence in which images are displayed.

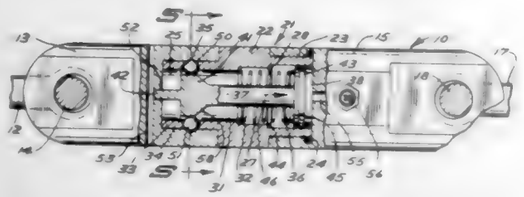
3,373,655
SLIDE PROJECTOR
Donald T. Nicholas, 6200 Crabtree Road, Birmingham, Mich. 48010
Filed Aug. 29, 1966, Ser. No. 575,672
2 Claims. (Cl. 88—26)



1. An improvement for a slide projector comprising a frame, a housing on said frame, an illuminating lamp disposed in said housing, a projection lens and a condenser lens forming a window for said housing between said illuminating lamp and said projection lens, said improvement permitting said slide projector to project an enlarged image of a microfilm transparency disposed off center in a window in a card, said improvement comprising: a pair of substantially parallel rails each mounted on each side of said window on said housing, a substantially rectangular card holder plate having bent-over edges disposed along one bottom long side and two short sides, said bent-over edges forming a channel along each of said sides adapted to be engaged by an edge of said card, a rectangular aperture dimensionally at least equal to said window and disposed relatively to the sides of said plate so as to substantially register with the position of the microfilm transparency in said card and a pair of U-channel shaped slide members disposed on

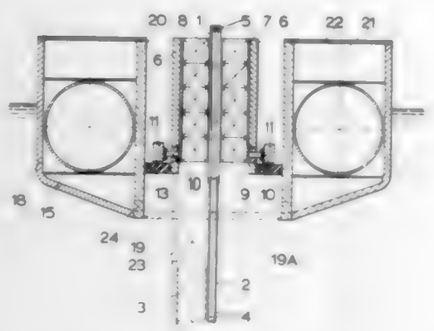
two sides of said rectangular aperture substantially parallel to the short sides of said plate and adapted to slidably engage said rails for fastening of said plate to said housing.

3,373,656
EXPLOSIVELY ACTUATED THRUSTER RELEASER
Marshall Sidney Kriesel, St. Paul, Minn., assignor to Aerospace Systems Company, Minneapolis, Minn., a corporation of California
Filed Apr. 18, 1966, Ser. No. 543,239
2 Claims. (Cl. 89—1)



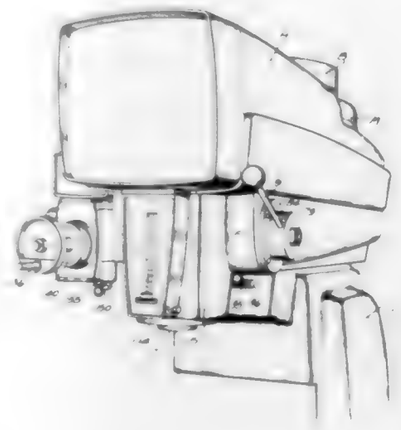
An explosively actuated releasing mechanism comprising two interlocking members held together by ball retainers wherein the ball retainers are released upon energization of an explosive charge acting on a piston and wherein the balls used as retainers cannot escape from the support when the separable item is released. In addition, the piston which releases the balls has an ejector finger which positively removes the separable item and insures that the two items will come apart.

3,373,657
OPEN WATER MISSILE AND CARGO LAUNCHING SYSTEMS
Joel B. Guin, 148 E. 48th St., New York, N.Y. 10017
Filed Dec. 28, 1964, Ser. No. 421,218
6 Claims. (Cl. 89—1.81)



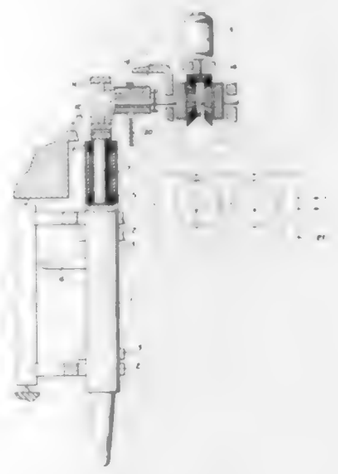
1. A missile launching system comprising:
A floating vessel, a cylindrical hollow beam having a plurality of extensible and retractable telescoping sections suspended downwardly into the water from said vessel, means mounting said hollow beam on said vessel, means for extending and collapsing said telescoping sections, a closed contanier for holding the missile to be launched, guiding means on said container and cooperating with the surface of said hollow beam sections, said closed container for said missile displacing a sufficient volume of water to thereby provide a buoyant missile launching container, means mounted on the lower end of said hollow beam for lowering said closed container for said missile and means for releasing the container whereby the container with the missile therein is propelled upward by the hydrostatic pressure of the surrounding water to thereby launch the missile.

3,373,658
METALWORKING MACHINE
Charles A. Larsen, Union Grove, Wis., assignor, by mesne assignments, to Gorton Machine Corporation, Racine, Wis., a corporation of Wisconsin
Filed Oct. 19, 1965, Ser. No. 497,821
11 Claims. (Cl. 90—14)



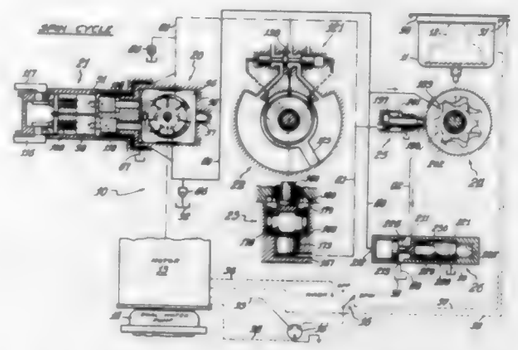
An improved down-feed mechanism including a planetary gear system, and, also, an adjusting and radial locating means for a spindle assembly of a metalworking machine.

3,373,659
TRACING MECHANISM FOR DUPLICATING MACHINE
Alexander Böhme, Langen, near Frankfurt am Main, Germany, assignor to Nassovia Werkzeugmaschinenfabrik G.m.b.H., Frankfurt am Main, Germany
Filed Jan. 17, 1966, Ser. No. 521,145
Claims priority, application Germany, Jan. 30, 1965, N 26,145
5 Claims. (Cl. 90—62)



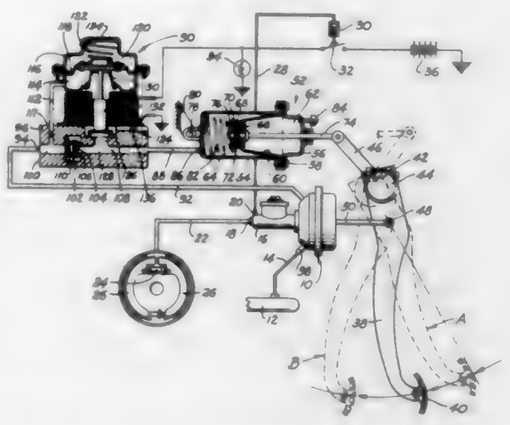
A measuring ring is turnably supported on the tracer of a duplicating tool machine and is engaged by an electrical roller contact on a measuring head. The turntable support of the ring permits movement of this advance control with respect to the tracer around each of two axes extending at right angles to each other.

3,373,660
FLUID DRIVE MECHANISM
Ronald H. Haas, Mount Prospect, Ill., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Filed Dec. 13, 1965, Ser. No. 513,242
5 Claims. (Cl. 91—278)



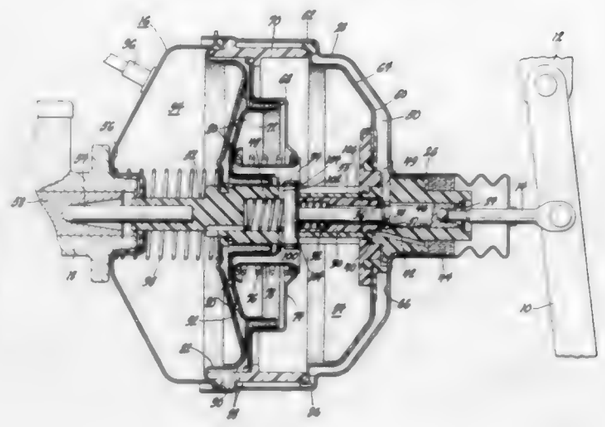
An improved fluid drive for the agitator of a clothes washer including a hydraulic vane type motor having fluid pressure responsive means to automatically move the vane between its terminal positions and including selectively operable arcuate ports whereby the stroke of the vane may be selectively varied.

3,373,661
BRAKE PEDAL POSITIONING DEVICE
Robert E. Reichard, 401 N. Bendix Drive, South Bend, Ind. 46628
Filed Sept. 1, 1965, Ser. No. 484,230
7 Claims. (Cl. 91—391)



1. In combination with a hydraulic brake system for a motor vehicle including a vacuum operated power brake device having a vacuum source connected thereto for normally developing braking pressures in said hydraulic brake system:
a brake applying means including a lever pivotally connected to said power brake device and carrying a rotatable pin spaced from said pivotal connection;
a fluid pressure motor operatively connected to said vacuum operated power brake devices such that the vacuum source communicated to said power brake device creates a pressure differential across a wall in said motor;
a link means operatively connected to said fluid pressure motor and to said rotatable pin such that said motor controls the rotation of said pin to raise and lower said brake applying means in the motor vehicle; and
means controlling the communication between said power brake device and said fluid pressure motor, which means reference the braking pressures and the vacuum source to raise said brake applying means upon failure of said vacuum source.

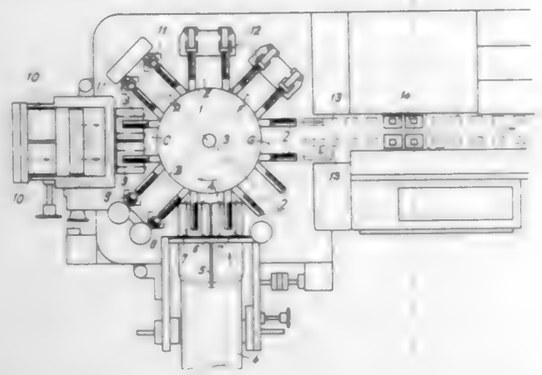
3,373,662
ZERO TRAVEL VACUUM SUSPENDED BRAKE BOOSTER
James A. Voll, Dayton, and George E. Kellogg, Miamisburg, Ohio, assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Filed Apr. 15, 1965, Ser. No. 448,345
2 Claims. (Cl. 91—434)



1. A brake booster comprising: a housing carried by a fixed portion of a vehicle; a vacuum inlet to said housing from a vacuum pressure source; an inlet into said housing for communicating atmospheric pressure thereinto; power piston means movably supported by said housing and adapted to transfer an output force to a brake master cylinder; valve means slidably disposed in said housing and arranged to selectively route vacuum and atmospheric pressures to portions of said housing in response to an input force, said valve means acting as a pilot for said power piston means during movement thereof; and a plurality of diaphragms peripherally carried by said housing and being centrally carried by said power piston means, thereby separating said housing into several compartments individually pressurizable, at least one of said diaphragms being responsive to atmospheric pressure and including means for imparting a force on said valve means thereby effectively increasing the input force necessary to obtain a given output force at the brake master cylinder, said last named means includes a pin slidably carried by said power piston means and responsive to movement of one of said diaphragms to impose a force on said valve means during an actuating movement thereof which is transmitted as a resistance to the actuating force acting on said valve means, said pin has a plurality of peripherally disposed resilient bumpers serving to retain said pin in said power piston means and as a shock absorber when contacted by said diaphragm during movement thereof in response to a pressure increase.

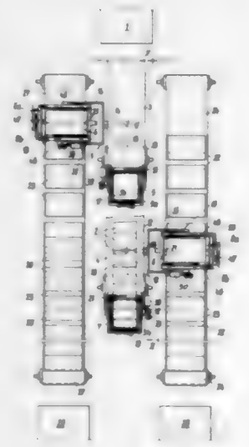
3,373,663
APPARATUS FOR MANUFACTURING PACKING CONTAINERS
Hans Heim, Neuhausen am Rheinfall, Switzerland, assignor to Schweizerische Industrie-Gesellschaft, Neuhausen am Rheinfall, Switzerland
Filed Apr. 19, 1967, Ser. No. 631,928
Claims priority, application Switzerland, Apr. 22, 1966, 5,865/66
1 Claim. (Cl. 93—44.1)
A machine for making packing containers is disclosed

in which an indexable mandrel wheel is provided with equi-spaced pairs of mandrels around which the containers



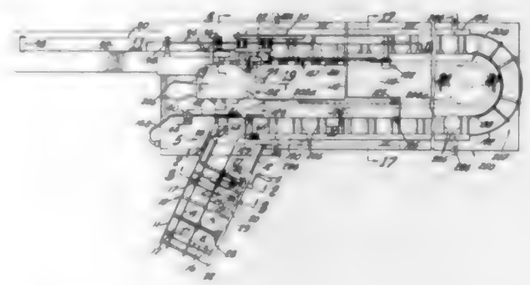
are formed at recessive stations so that two containers are in course of being formed at each station.

3,373,664
APPARATUS FOR PRODUCING CROSS-BOTTOM VALVE BAGS
Friedrich Franz Brockmüller, Lengerich, Westphalia, Germany, assignor to Windmoller & Holscher, Lengerich, Westphalia, Germany
Filed Feb. 5, 1964, Ser. No. 342,744
Claims priority, application Germany, Feb. 22, 1963, W 33,959
14 Claims. (Cl. 93—8)



In an apparatus for producing cross-bottom valve bags, which includes at least one tube-forming device and at least a pair of bottom-laying devices which are disposed laterally with respect to the tube-forming device, and in which the tubes are transported via a pair of superposed conveyor belts from the tube-forming device onto delivery tables where a predetermined number of them are stacked into bundles, an improved transfer system for stacking the tubes and transferring bundles of tubes to the pair of bottom laying devices, which comprises a pair of transfer devices each of which includes two delivery tables disposed at approximately right angles to one another which are mounted in a frame which is rockable about a vertical axis through the angle enclosed between them, and each of which is adapted to cooperate with one of the two superposed conveyor belts. A first one of the two delivery tables is thus positioned at the beginning of an operating cycle, underneath one of the superposed conveyor belts which transports tubes from the tube-forming device, and is rearwardly inclined so that it can receive a predetermined number of tubes from the tube-forming device. Thereafter this first one delivery table is pivoted by pivoting means into a horizontal plane and the two tables are rocked through an angle of approximately 90° so that the first delivery table is positioned over a conveyor belt for transporting the bundle of tubes to one of the pair of bottom-laying devices, whereas the other delivery table is now positioned underneath the conveyor belt which transports tubes from the tube-forming device, for receiving a predetermined number of tubes therefrom. Each of the delivery tables includes means for selectively releasing a bundle of tubes when it is positioned over the conveyor belt for transporting the bundle of tubes to one of the pair of bottom-laying devices.

3,373,665
CARTONING MACHINE FOR VERTICAL CARTON FLATS
Elbert L. Bivans, Glendale, Calif., assignor to Bivans Corporation, Los Angeles, Calif., a corporation of California
Filed Apr. 14, 1965, Ser. No. 448,101
12 Claims. (Cl. 93—53)



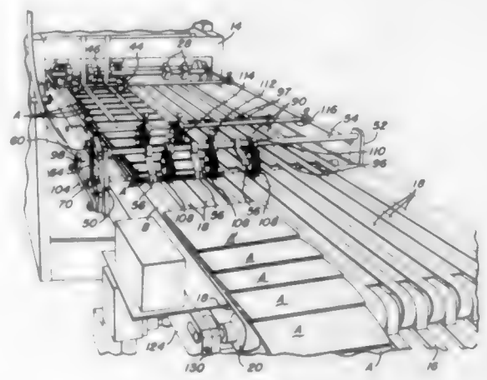
The cartoning machine of this invention provides a conveyer moving at constant speed with a carton transfer device for transferring an open carton in upright position to the moving conveyer. The flat cartons are stacked in a hopper in upright position. The cartons are opened in the course of transfer to the conveyer. The transfer device includes a vacuum cup holder for depositing the open carton on the conveyer while the conveyer is moving. The vacuum cup holder for the carton is on an arm having a pivot which moves on a feed stroke in the same direction as the conveyer, and on a return stroke, it moves in the opposite direction. The vacuum cup holder also moves between a position at the hopper for carton flats and a position at the main conveyer. One cam oscillates a radius arm about a fixed pivot, and the other cam has a link motion for oscillating the vacuum cup holder arm about a pivot carried by the outer end of the radius arm.

In order to resist movement of the carton both vertically and crosswise of the conveyer while supporting the carton for movement with the conveyer, the invention provides an inclined slot extending lengthwise of the conveyer in position to receive and support the top cover flap during travel of the carton on the conveyer.

3,373,666
BATCH DELIVERY MECHANISM
Charles P. Crampton, Hamilton, Ohio, assignor to The Hamilton Tool Company, Hamilton, Ohio, a corporation of Ohio
Filed Mar. 4, 1965, Ser. No. 437,087
16 Claims. (Cl. 93—93)

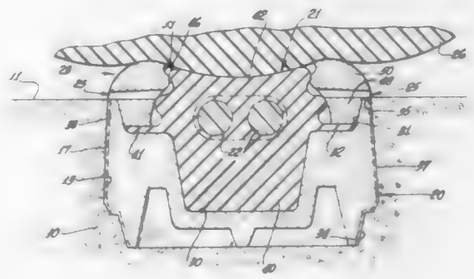
The machine is adapted to advance parcels of paper sheets deposited in echelon fashion upon a multiple-belt endless conveyor, and includes a counter-controlled stop finger which dips toward the conveyor periodically to intercept the leading parcel of a group of parcels, stopping

the group while the conveyor continues to advance. While the group is thereby held immobile by the stop finger, one or more elongate lift rails are elevated between the parallel belts of the conveyor, to lift the parcels slightly above the level of the conveyor surface which normally supports the parcels, thereby displacing the stopped parcels from the advancing influence of the conveyor. The



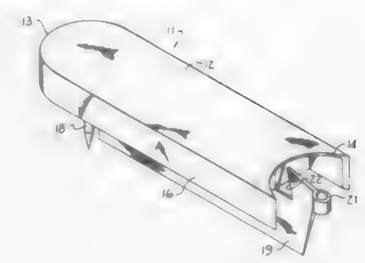
parcels pile up against the stop finger to an extent determined by the counter, thereby to produce a stack containing a predetermined number of parcels; and upon completion of the stack the stop finger is withdrawn, and the lift rails are lowered, permitting the parcels now in stacked formation to once again rest upon the moving conveyor for transport toward the discharge end of the conveyor.

3,373,667
ROAD SURFACE MARKER
Robert W. Taylor-Myers, 2580½ N. Beachwood Drive, Hollywood, Calif. 90028
Filed June 17, 1966, Ser. No. 558,382
8 Claims. (Cl. 94—1.5)



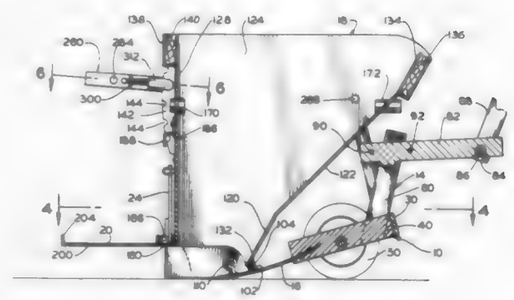
1. A road surface marker comprising:
(a) a base housing having an upper edge and adapted to be set into the pavement of the road with said edge substantially flush with the road surface, said base having a top-open cavity with a horizontal seat between said edge and cavity,
(b) an elastic, compressible, non-metallic core disposed in said cavity with an upper portion extending above said housing edge,
(c) light-reflecting means carried by said upper portion of the core and normally held thereby elevated above the level of the road surface,
(d) a flange around said core and disposed to rest upon said seat in the base housing, and
(e) a ring secured to the top of the base housing to clamp the mentioned core flange against the mentioned seat, said ring encircling the upper portion of the core, and provided with lateral thickened portions to guard said core and spaced on opposite sides of the light-reflecting means to expose the same to view.

3,373,668
INTERLOCKING STRUCTURES FOR EDGING, PAVING, OR THE LIKE
Robert R. Moore, 4010 East Ave., Hayward, Calif. 94542, and Edward Steffan, 18754 Crest Ave., Castro Valley, Calif. 94546
Filed Dec. 15, 1965, Ser. No. 513,927
10 Claims. (Cl. 94—31)



An interlocking structure in the form of tiles or brick which may be employed to construct walkways, borders or dividers for lawns and the like in a simple and straight forward manner is described. The interlocking structures include flat upper walls having marginal walls and strengthening ribs depending therefrom. The sidewalls and ribs are tapered at their lower ends so as to define knife edges which will readily penetrate into the ground when force is applied to the flat upper walls. The structures further include spikes which depend from the upper walls inwardly adjacent the marginal walls, and eyes project outwardly from the marginal walls that positions to receive these spikes of other identical structures. Each structure also includes recesses formed inwardly of its eyes adapted to receive the marginal wall of an identical similar structure when its spike is received in the eye of the former structure.

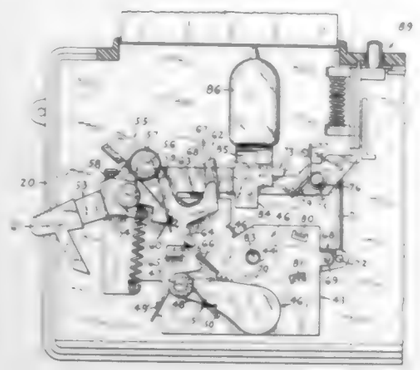
3,373,669
SPREADERS
Francis J. Schmitz, St. Louis County, Mo. (8905 Russell, Brentwood, Mo. 63117)
Filed Sept. 1, 1965, Ser. No. 484,170
5 Claims. (Cl. 94—44)



The invention disclosed herein provides a portable spreader suitable for attachment to the rear portion of a dump truck, adapted to receive the contents of the dump truck and apply the same to preselected surfaces a predetermined widths and predetermined depths, notwithstanding irregularities in the surface to be covered. The

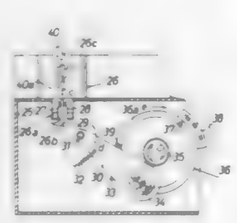
disclosure also provides a spreader which is portable about the job site and may be easily moved by one man and which may be towed behind a vehicle without damaging the surfaces over which it is towed, if so desired.

3,373,670
CAMERA
William L. Lawson, Forest Hills, N.Y., assignor to Whitehouse Products, Inc., Brooklyn, N.Y., a corporation of New York
Filed May 25, 1965, Ser. No. 458,592
5 Claims. (Cl. 95—11)



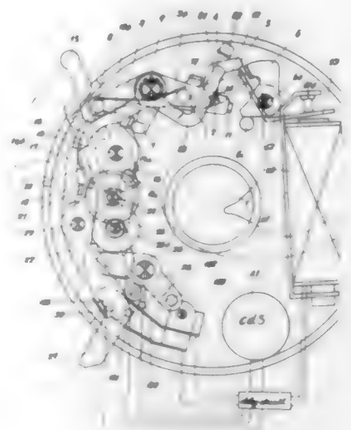
A camera having a shutter, a fixed aperture and a blade movable relative to the shutter and aperture. The blade has a plurality of spaced apertures of different diameter in position to be aligned with the fixed aperture. Means responsive to insertion of a flash bulb in the flash socket to move the blade to align a particular one of the spaced apertures with the fixed aperture. The camera main housing is provided with a door for affording access to the socket, release means being provided to release the door latch and eject a spent flash bulb from the socket.

3,373,671
CAMERA FOR DAYLIGHT AND FLASH PHOTOGRAPHY
Franz Jakob, Unterhaching, Germany, assignor to Agfa-Gevaert Aktiengesellschaft, Leverkusen, Germany
Filed July 19, 1965, Ser. No. 473,006
Claims priority, application Germany, July 18, 1964, A 46,626
17 Claims. (Cl. 95—11)



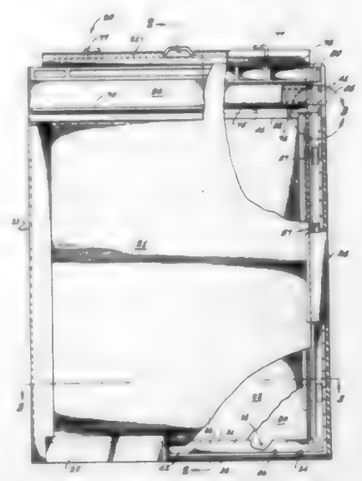
A camera having an objective with a stationary lens component of fixed focal length for daylight photography and a second lens component which moves into registry with the first component to reduce the focal length of the objective for photography in artificial light. The second component is moved into registry with the first component in response to attachment of an illuminating arrangement to the housing of the camera, in response to movement of a built-in reflector into operative position, or in response to insertion of a flash bulb into the socket of a built-in illuminating arrangement.

3,373,672
LENS SHUTTER
Yasunori Ichijo, Kanagawa-ken, and Yukio Nakamura, Chiba-ken, Japan, assignors to Kabushiki Kaisha Hattori Tokeiten
Filed June 30, 1964, Ser. No. 379,155
Claims priority, application Japan, July 3, 1963, 38/34,824
4 Claims. (Cl. 95—63)



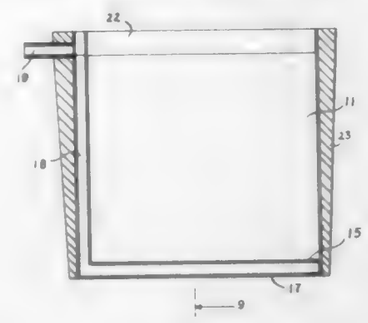
1. In a camera, a single blade means functioning both as a diaphragm and a shutter, said blade means having a normally closed position and being displaceable gradually away from said closed position to provide an exposure aperture of gradually increasing size, said blade means then being displaceable back to said closed position thereof for terminating the exposure, opening means operatively connected to said blade means for displacing the latter from said closed position thereof so as to provide an exposure aperture, retarding means operatively connected with said opening means for retarding the operation thereof to provide a predetermined rate of opening movement of said blade means in response to actuation thereof by said opening means, closing means operatively connected to said blade means for displacing the latter rapidly back to said closed position thereof, manually operable cocking means connected with said opening means for cocking the latter, release means operatively connected to said opening means to release the latter for operation after said opening means has been cocked, electromagnetic means coacting with said closing means to release the latter for closing said blade means upon energizing of said electromagnetic means, and photosensitive delay circuit means operatively connected with said electromagnetic means for energizing the latter in accordance with the lighting conditions, said photosensitive delay circuit means energizing said electromagnetic means in a relatively short period of time under conditions of great light intensity to provide a relatively small aperture and exposure time by way of said single blade means and said photosensitive delay circuit means energizing said electromagnetic means after a relatively long period of time under conditions of relatively low light intensity to provide a relatively large aperture and exposure time, and switch means operatively connected to said delay circuit means to close the latter for operation, said switch means being actuated by said release means for closing said delay circuit means when said release means is actuated to release said opening means for operation.

3,373,673
FILM HOLDER
Carroll C. Craig, 635 Muirfield Road, Los Angeles, Calif. 90005
Filed June 7, 1965, Ser. No. 461,618
6 Claims. (Cl. 95—66)



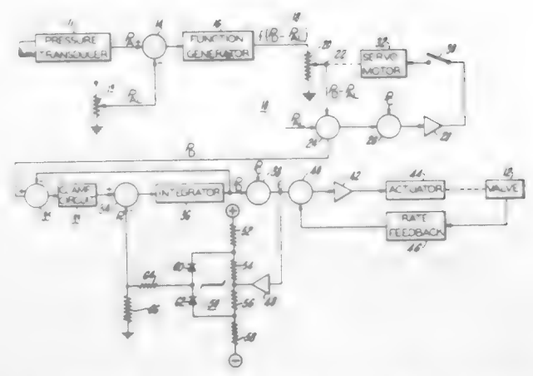
A film holder for cut film, formed with a metal septum to which are attached the plastic elements which, with the septum, make up the film holder. The plastic elements are interlocked with each other so that external blows, etc., will not cause them to separate and admit light to the light-sensitive material.

3,373,674
PHOTOGRAPHIC WASH VESSEL
Werner W. Buechner, 4407 Gladding Court, Midland, Mich. 48640
Continuation-in-part of application Ser. No. 52,524, Aug. 29, 1960. This application Feb. 3, 1964, Ser. No. 342,030
7 Claims. (Cl. 95—97)



1. An upright washing vessel for the washing treatment of photographic materials in sheet form in a flowing stream of fresh wash water, which washing vessel comprises a generally parallelepipedal receptacle formed by two major side walls, two end walls and a bottom section, said receptacle standing in operational position on its bottom section, and wherein said bottom section comprises at least one lower passageway extending essentially over the full length of the bottom section of the receptacle; an overflow passage in the top section of said receptacle at one of the major side walls and extending essentially over the whole length of said vessel; and sealing means which are adapted to permit essentially liquid tight sealing of the washing vessel in a compartment of a compartmented bath, when the wash vessel is inserted therein, so as to permit a stream of flowing wash water to flow in a predominantly vertical direction over essentially the whole horizontal cross section of the receptacle.

3,373,675
ELECTRONIC SCHEDULE GENERATOR TRACKING CIRCUIT AND RATE LIMITER
Stanley G. Best, Manchester, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Filed July 11, 1966, Ser. No. 564,226
11 Claims. (Cl. 98—1.5)

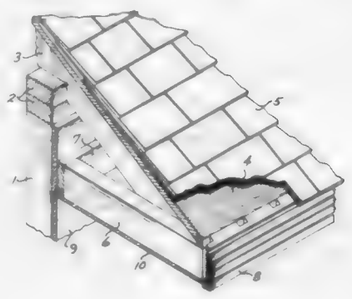


1. In a pressure regulator for an aircraft cabin wherein the flow of air through an outflow valve is modulated to pressurize the cabin throughout the ascent, cruise, and descent flight phases of the aircraft and wherein the cabin pressure regulator modulates the outflow valve by comparing a desired cabin pressure voltage with a voltage indicative of the actual cabin pressure to provide an error voltage for modulating the outflow valve in a direction to match the actual cabin pressure voltage to the desired cabin pressure voltage, the improvement comprising:

a deadband circuit coupled to the error voltage and producing a tracking voltage when the error voltage exceeds a predetermined absolute magnitude, and

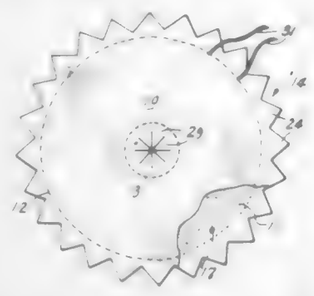
a feedback circuit responsive to the desired cabin pressure voltage and the tracking voltage for modifying the desired cabin pressure voltage in a direction to match the actual cabin pressure voltage.

3,373,676
EAVE VENTING SYSTEM UTILIZING A VENTILATED FASCIA MEMBER
Jon B. Dunnington, Mercer Island, and Douglas K. Babbit, Tacoma, Wash., assignors to Weyerhaeuser Company, Tacoma, Wash., a corporation of Washington
Filed Mar. 6, 1967, Ser. No. 620,838
4 Claims. (Cl. 98—37)



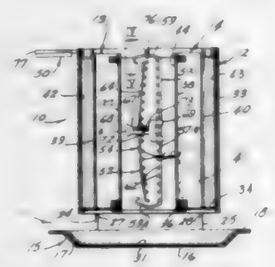
A vented eave construction utilizing a decorative fascia board having a series of protected slots cut part way through the thickness of the fascia board on one surface thereof and cutout portions on the opposite surface perpendicular to slots so that where the cutouts meet the bottoms of the slot walls, apertures result permitting air to flow through the fascia board.

3,373,677
FILTER BAGS FOR GROUND COFFEE
Anne P. Petrozzo, 8814 Colonial Road,
Brooklyn, N.Y. 11209
Filed Jan. 17, 1967, Ser. No. 609,851
3 Claims. (Cl. 99—295)



A relatively thin circular two-walled filter bag, prefilled or having an inlet for filling, having a central pierceable opening and preferably a pinked circumference. As a modification, a fillable bag having a radial tab extending from one or both walls of the inlet, of a length somewhat greater than the radius of the bag and having a second piercable opening near its end.

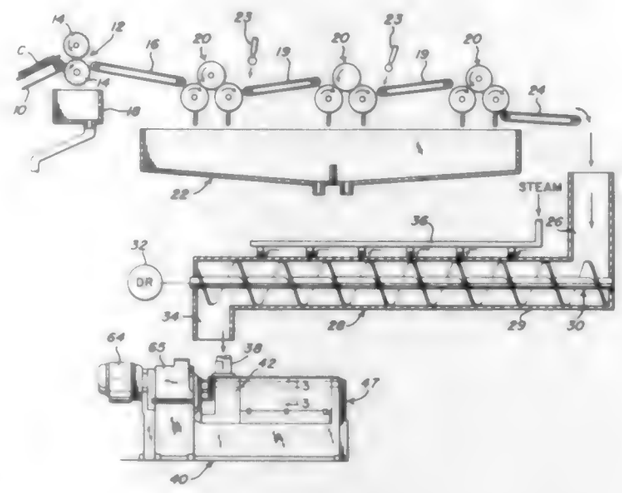
3,373,678
VERTICAL BROILER
Paul W. Miller, 827 W. South St.,
Kalamazoo, Mich. 49007
Continuation-in-part of application Ser. No. 400,639, Sept. 25, 1964. This application Jan. 3, 1966, Ser. No. 518,088
1 Claim. (Cl. 99—389)



A vertical broiler having spaced and substantially vertical charcoal beds surrounded by a sidewall and by a bottom wall having an opening between said beds. A base member supports the broiler and a receptacle which is spaced below the broiler. An upper closure member having a handle and a lower closure member supportable upon the base member are held against the broiler by connector means which extend from the top closure member to the receptacle or base member, whereby the entire assembly can be lifted by the handle.

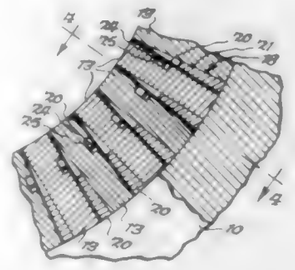
3,373,679
PROCESS FOR TREATING SUCROSE-BEARING FIBROUS MATERIALS
Alfred W. French, Piqua, Ohio, assignor to The French Oil Mill Machinery Company, Piqua, Ohio, a corporation of Ohio
Filed Sept. 27, 1965, Ser. No. 490,329
4 Claims. (Cl. 100—37)

Sugar cane material, raw cane or bagasse, is processed through a rolling mill or shredder to rupture the cells and expose the fibers, and then conveyed to a mechanical press having substantial drainage openings and capable of sustaining pressure on the material. Hot fluid such as steam is added to the material during the time it is being conveyed to increase its temperature to at least 160° F. and preferably to within a range of 180° F. to 200° F. The heated material is fed directly into



the press and liquid is expressed from the material with substantially reduced power required to drive the press.

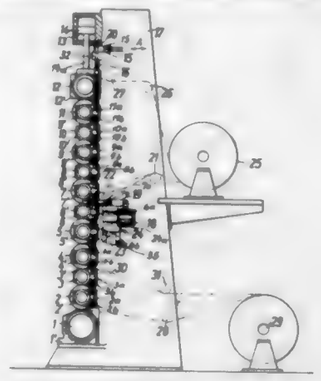
3,373,680
SPACERS FOR CAGE PRESSES
John W. Burnham, Piqua, Ohio, assignor to The French Oil Mill Machinery Company, Piqua, Ohio
Filed Jan. 27, 1966, Ser. No. 523,357
2 Claims. (Cl. 100—129)



This invention relates to improvements in spacers of the kind used between the cage or screen bars of continuous screw presses which are employed for expressing oil or other liquids from materials containing the same. These spacers are made entirely of stainless steel or other metal having high resistance to corrosion and ample strength to prevent deformation during the pressures to which they are subjected. These spacers comprise a body portion which is of uniform thickness throughout and of the thickness desired between the cage bars, and wedge-shaped pads welded to one side of the body portions of the spacers, and integral projections partly punched out of the body portions to extend into depressions formed in the screen bars.

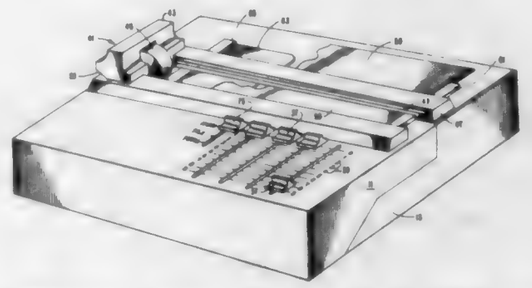
3,373,681
CALENDER
Heinz Jaegers, Duisberg-Buchholz, Germany, assignor to Joseph Eck & Sohne, Dusseldorf-Oberkassel, Germany
Filed Oct. 18, 1965, Ser. No. 497,489
Claims priority, application Germany, Oct. 16, 1964, E 27,965
9 Claims. (Cl. 100—163)

A calender having a plurality of calender rolls mounted on support means in a row adjacent each other and preferably one above each other with the axes of the rolls extending substantially parallel to each other and in such a manner that pressure applied to the uppermost roll of the row will be transmitted to the rolls beneath the uppermost



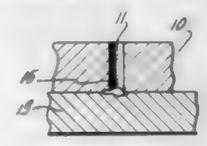
roll, and in which the calender is provided with lifting means permitting to lift the rolls, starting with the uppermost roll, successively from each other.

3,373,682
TRANSACTION RECORDER FOR PRINTING ON PRESSURE-SENSITIVE JOURNAL TAPE
Arthur M. Angel, 29 Silver Saddle Lane,
Rolling Hills Estates, Calif. 90274
Filed Jan. 17, 1966, Ser. No. 534,925
17 Claims. (Cl. 101—45)



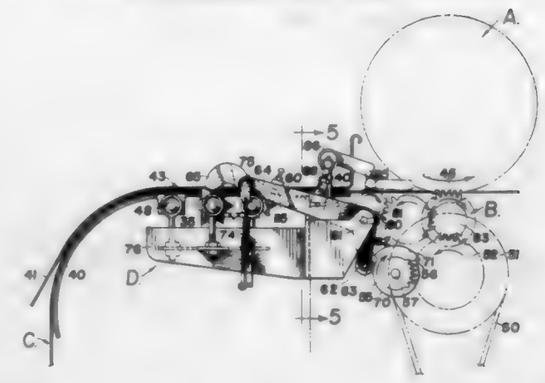
A transaction recorder is provided in which raised indicia on movably slidable print racks are selectively positioned adjacent a pressure-sensitive journal tape and one or more other superimposed record media forms are imprinted thereon by a manually movable imprint wheel. Return of the imprint wheel after imprinting advances the journal tape for the next transaction. The imprinted characters provided by the print rack indicia are in a form that is machine readable as well as being visually readable by a clerk or customer, and the imprinted tape and record media forms may be visually verified before advancement of the tape.

3,373,683
VISUAL IMAGING OF TRACK-ETCHED PATTERNS
Henry W. Alter, Danville, Calif., assignor to General Electric Company, New York, N.Y., a corporation of New York
Filed Oct. 20, 1966, Ser. No. 588,130
4 Claims. (Cl. 101—129)



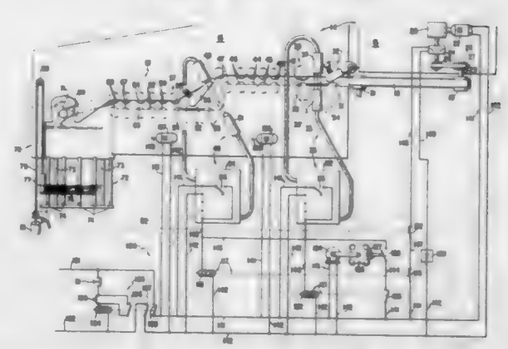
A method of making very small track-etched holes through a sheet visible to the unaided eye is described. Briefly, the track-etched sheet is placed in contact with a receptor sheet and a marking fluid is forced through the holes to produce dots on the receptor sheet which are large and intense enough to be seen.

3,373,684
APPARATUS FOR FEEDING PERFORATED WEB TO A PRINTING MACHINE
Norman G. Fisher, Rte. 3, Box 975,
Woodland, Calif. 95695
Filed Oct. 19, 1965, Ser. No. 497,700
8 Claims. (Cl. 101—228)



1. A device for feeding to a printing press, form material of the type having regularly spaced feed apertures formed in the outer margins of the form material, form material drive means mounted to sequentially engage the form material to drive said form material to the printing press, registration means engageable with the apertures of said form material to register said form at predetermined positions relative the printing press, timing means operable in timed relation with said printing press, actuating means responsive to said timing means, said actuating means connected to said feed means and to said paper registration means and operable in a first condition to actuate said form material feed means and release said form material registration means, and operable in a second condition to release said form material feed means and lock said form material registration means in a fixed position relative said printing press.

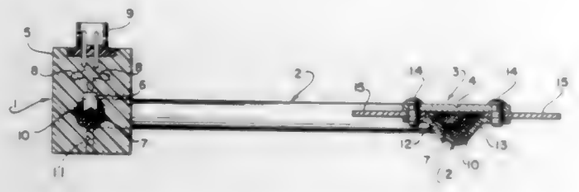
3,373,685
CONTROL MEANS IN MAIL SEPARATING CANCELLING AND STACKING MACHINES
Richard C. Adams, State College, Pa., assignor to Friden, Inc., Lewistown, Pa., a corporation of Delaware
Filed Jan. 11, 1966, Ser. No. 519,904
8 Claims. (Cl. 101—235)



A machine for handling and cancelling letter mail having a letter facing table, a belt driven conveyor operably associated with an electrically controlled clutch for feeding the letters to a unit comprising various sections for respectively reducing the mail flow from random flow to controlled flow and ultimately for reducing the letter flow to single letter flow, whereupon a cancellation mark is imprinted on each letter and the cancelled mail automati-

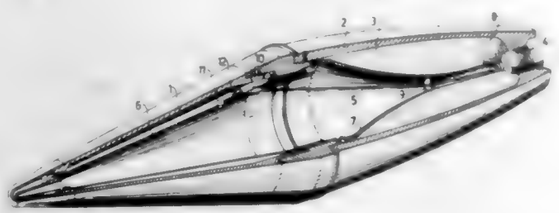
cally is stacked. An electrically controlled sensing system is operably associated with each of the flow controlling sections and with the electrically controlled clutch for interrupting, by switch means, the mail flow when a blockage of letters occurs at either of the sensing units.

3,373,686
EXPLOSIVE ACTUATOR
Jim W. Blain and Audley B. Leaman, Santa Cruz, Calif., assignors to Lockheed Aircraft Corporation, Burbank, Calif.
Filed Mar. 1, 1965, Ser. No. 436,188
10 Claims. (Cl. 102—22)



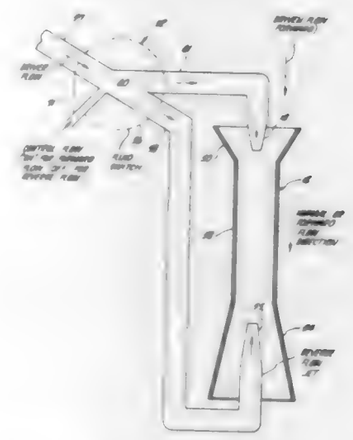
1. An explosive system comprising an explosive actuator having an explosive core and a radially expandable sheath surrounding said core, means adapted to detonate said core, and a body adjacent to said explosive actuator adapted to be acted upon and engaged by said sheath when said sheath is radially expanded by detonation of said core, said sheath remaining continuous when radially expanded.

3,373,687
WIRE MOUNTING FOR AN ELECTRIC FUZE OF A SHAPED-CHARGE PROJECTILE
Björn Herman Olof Simmons, Karlskoga, Sweden, assignor to Aktiebolaget Bofors, Bofors, Sweden, a corporation of Sweden
Filed Apr. 6, 1965, Ser. No. 446,006
Claims priority, application Sweden, Apr. 7, 1964, 4,260/64
6 Claims. (Cl. 102—56)



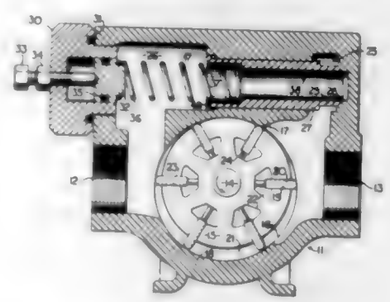
1. An explosive projectile with a shaped-charge, said projectile comprising an elongated metal shell; an elongated inner metal shell mounted within the outer shell electrically insulated therefrom and separated by a hollow space, said inner shell being disposed in a forward portion of the outer shell, the side wall of the inner shell being substantially parallel to the side wall of said outer shell portion; an electric fuze mounted in the rear end of said shell, said fuze having two external terminals, an electrically conducting connection between said terminals causing an activation of the fuze, one of said terminals being electrically and mechanically connected to said outer shell; an explosive shaped-charge in the rear portion of said outer shell, a generally conical liner mounted in said rear portion of the outer shell coaxially therewith and lining said charge to define a generally conical hollow space in said rear portion, the apex of the liner facing the fuze; and a conductor wire connecting said inner shell to the other terminal of said fuze, said wire extending tautly stretched through said generally conical space and being eccentrically disposed with respect to the center axis of the liner, metallic contact between said inner shell and said outer shell due to a deformation of at least one of the parallel side walls of the shells causing an electrically conducting connection between the terminals whereby the fuze is activated.

3,373,688
PUMPS
Charles L. Howard, San Jose, Calif., assignor to General Electric Company, New York, N.Y., a corporation of New York
Filed July 30, 1965, Ser. No. 476,108
6 Claims. (Cl. 103—3)



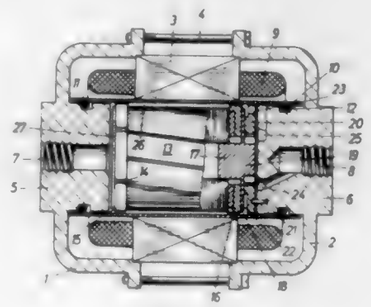
This discloses an improved jet pump capable of controllable reverse flow and in which the pump body is provided with at least one auxiliary driving fluid jet adapted to permit a controllable flow through the pump in the reverse direction from normal flow.

3,373,689
POSITIVE DISPLACEMENT PUMP
Virgil A. Brunson, Grand Rapids, Mich., assignor to Dover Corporation, Grand Rapids, Mich., a corporation of Delaware
Filed June 8, 1966, Ser. No. 556,040
10 Claims. (Cl. 103—42)



A positive displacement pump having a relief valve for bypassing liquid from the outlet side to the inlet side of the pump to limit the pressure on the outlet side, comprising a valve chamber having a cylindrical portion, a valve member having a cylindrical portion that has a sliding fit in such portion of the valve chamber so as to separate one end of the valve chamber from the other end, an open connection between one end of the valve chamber and the inlet side of the pump, an open connection between the other end of the valve chamber and the outlet side of the pump, a valve seat which is located in the end wall of such other end of the valve chamber and forms a connection between such other end of the valve chamber and the inlet side of the pump, an extension on the valve member which is of lesser transverse sectional area than said cylindrical portion of the valve member and which is engageable with the seat to close the connection between such other end of the valve chamber and the inlet side of the pump, and a spring which holds the extension against the seat in opposition to normal pump pressure acting upon the differential area and which is weak enough so that when the entire output of the pump is flowing through the valve, the unit pressure acting upon the increased area to hold the extension displaced from the seat is not substantially greater than the unit pressure which was required to start the displacement of the extension from the seat.

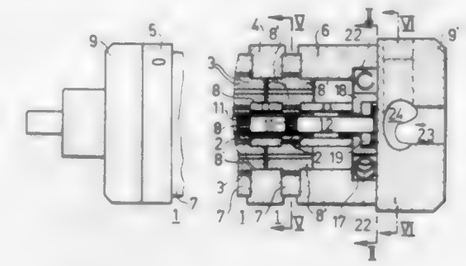
3,373,690
ELECTRICALLY DRIVEN POWER PUMP
Ladislaus Unger, Malsch, Kreis Karlsruhe, Germany, assignor to Otto Eckerle, Malsch, Kreis Karlsruhe, Germany
Filed Aug. 1, 1966, Ser. No. 569,347
Claims priority, application Germany, July 30, 1965, E 29,810
8 Claims. (Cl. 103—87)



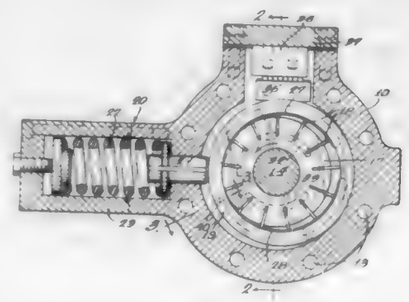
1. An electrically driven pump for liquid or gaseous fluids comprising an electric motor having a stator, a pipe positioned within the stator yoke, a rotor positioned concentrically within the pipe and axially displaceable therein, the rotor and pipe defining a fluid passageway therebetween, each end of the pipe being closed with a cap means, a positive displacement rotary pump means being positioned between one end of the rotor and the cap means respective thereto, the rotary pump means comprising a pump sealing surface mounted on the rotor for rotation therewith with a pump rotor means fixedly attached thereto, and a stationary pump element attached to the respective cap means and positioned for pumping cooperation with the pump rotor means.

3,373,691
GEARWHEEL TYPE DISTRIBUTOR PUMP
Arnold Kohler, Thalwil, Switzerland, assignor to Escher Wyss Aktiengeselischaft, Zurich, Switzerland, a corporation of Switzerland
Filed Apr. 28, 1966, Ser. No. 545,962
Claims priority, application Switzerland, June 3, 1965, 7,779/65
4 Claims. (Cl. 103—118)

1. In combination a gearwheel type distributor pump comprising at least two conveying elements for the distribution of supplied pressurized liquid to a number of liquid consumers, each conveying element consisting of at least two gearwheels arranged to engage one another; housing means for rotatably supporting and for enclosing said gearwheels; said housing means defining a common inflow chamber for the pressurized liquid being supplied to said conveying elements and individual discharge channels for the delivery of the liquid to said consumers; means for rotatationally fast interconnecting a group of said gearwheels comprising one gearwheel of each conveying element; and an automatic starting device connected to said group of gearwheels and designed to be actuated by the pressurized liquid to be supplied to said inflow chamber so as to rotate said group of gearwheels in their operational direction of rotation.



3,373,692
FLUID PUMP
Ernst F. Kleasig and Lazarus H. Dadian, Racine, Wis., assignors to Racine Hydraulics & Machinery, Inc., a corporation of Wisconsin
Filed Dec. 9, 1965, Ser. No. 512,625
4 Claims. (Cl. 103—120)

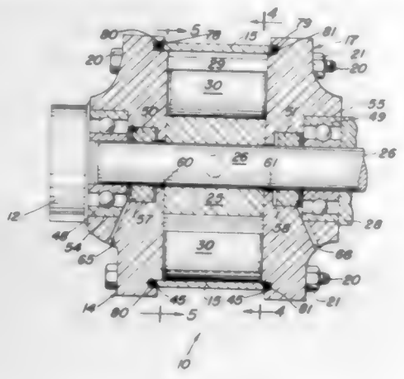


A variable volume hydraulic vane-type pump having a passage with an inlet connected to the space between adjacent pump vanes at a location blocked from the pressure zone of the pump and in advance of the suction port to release decompressed fluid from the space in advance of the suction port and avoid aeration of fluid in the inlet zone of the pump.

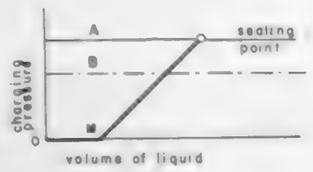
3,373,693
PUMPS
Gordon D. McKittrick, La Grange Park, Ill., assignor to Tractor Supply Co., Chicago, Ill., a corporation of Illinois
Filed Oct. 22, 1965, Ser. No. 500,926
6 Claims. (Cl. 103—136)

A rotary roller pump in which the main portion of the housing encompassing the roller impeller is a simple sleeve of right circular cross-sectional configuration and uniform inside and outside diameters. The end bells or covers of the pump are each formed with a flat planar internal surface and are each provided with an annular groove of right circular configuration in which a resilient O-ring or other sealing gasket is disposed. The sleeve constituting the central portion of the pump housing is clamped between the two end cover members with its end surfaces in engagement with the O-rings to afford a fluid-tight seal at each end of the pump housing. The

impeller of the pump is journalled in the end cover members, being eccentrically mounted with respect to the sleeve, the impeller including six or more radially movable impeller rollers that are approximately equal in length to the length of the casing member between the planar surfaces of the end cover members. The inlet and outlet ports are formed in the end cover members so that there are no apertures, passageways, or other deformations in the central sleeve member of the pump housing and the length of the pumping chamber can be increased simply by using a longer sleeve with an appropriately dimensioned impeller. Capacity of the pump can also be increased by mounting additional sections in end-to-end relation, again using simple sleeves of right circular cross-sectional configuration and uniform inside and outside diameters as the principal central elements in the pump housings.



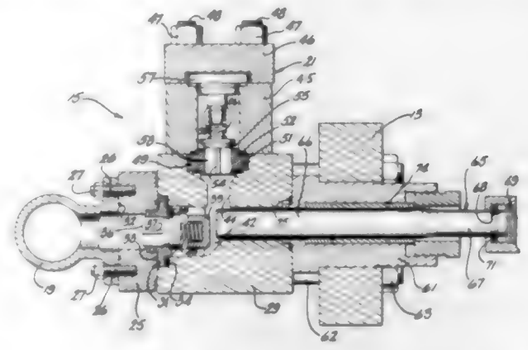
3,373,694
CYLINDER AND PISTON UNIT HAVING NON-COLLAPSIBLE DUAL ROLLING DIAPHRAGM
John F. Taplin, 15 Sewall St., West Newton, Mass. 02165
Filed Oct. 21, 1965, Ser. No. 499,570
12 Claims. (Cl. 103—150)



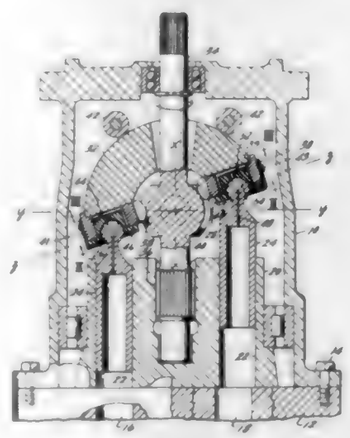
Disclosed below is a long-stroke-type reciprocating piston pump including rolling diaphragm means, i.e. diaphragm means having a rolling wall which rolls off the piston onto the cylinder when the piston is moved in one direction, and which rolls off the cylinder onto the piston when the latter is moved in the opposite direction. Such piston pumps are subject to pressure reversal and consequent collapse of the rolling diaphragm, tending to damage the latter. The piston pump disclosed below includes effective means precluding pressure reversal and collapse of the rolling diaphragm.

3,373,695
RECIPROCATING PISTON PUMP
Reinhard A. Yohpe, Battle Creek, Mich., assignor to Union Pump Company, Battle Creek, Mich., a corporation of Michigan
Filed Apr. 28, 1966, Ser. No. 545,914
8 Claims. (Cl. 103—153)

This reciprocating piston pump assembly was devised to overcome certain shortcomings of prior high pressure piston pumps resulting in lowered volumetric efficiency and fractures. This is taken care of by reducing the volume of the cylinder chamber between the inlet and outlet ports, by obviating the placing of the inlet port in the side of the cylinder block, and by making the outlet port smaller, in fact smaller than the head of the outlet valve, among other things. Also by placing the inlet port and inlet valve at the end of the piston cylinder, so as to extend into the cylinder chamber to help reduce its volume, with said inlet valve assembly removable in manner permitting removing the piston through the inlet valve assembly opening, for sterilization or other treatment, after releasing the piston from the operating mechanism.

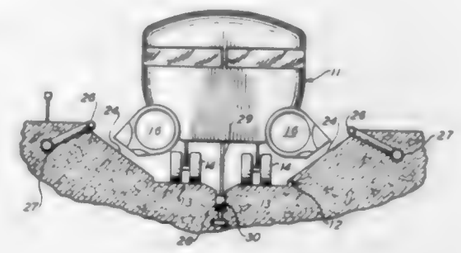


3,373,696
FLUID TRANSMISSION DEVICES
Howard Marion Geyer, Dayton, Ohio, assignor to General Electric Company, a corporation of New York
Filed May 12, 1965, Ser. No. 455,246
6 Claims. (Cl. 103—162)



1. A pump or the like comprising,
a pump body and a cam plate which are relatively rotatable,
said pump body having a plurality of circularly arranged chambers generally parallel to the axis of relative rotation,
said cam plate having a bearing surface facing said pump body and angled from a plane normal to the axis of relative rotation,
pistons respectively reciprocable in said chambers and projecting from one end thereof towards said cam plate,
said pistons having spherical ball ends,
caps having sockets respectively receiving said ball ends,
said caps further having flanges disposed in a common plane, which plane is coincident with the centers about which the ball ends are generated,
a wobble plate having opposed surfaces, one of which bears against the angled surface of the cam plate and the other of which is relieved to receive the portions of said caps outwardly of said common plane,
the other of the surfaces of said wobble plate providing a bearing surface engaged by the cap flanges on said common plane, and
means preventing relative angular movement between said wobble plate and said piston body about said axis of relative rotation whereby the plate is nutated relative to said piston body, during said relative rotation, as the pistons are reciprocated in said chambers, and thrust forces are transmitted between the pistons and cam plate with no tendency to tip the caps relative to said wobble plate.

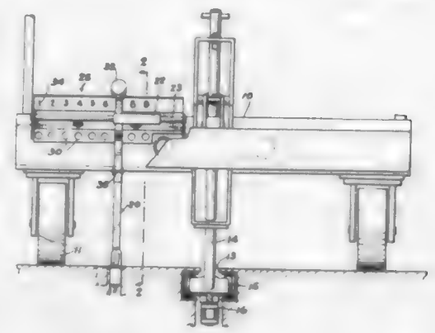
3,373,697
TRANSPORTATION SYSTEM
Robert A. Hartje, 341 Norwood Ave., South Plainfield, N.J. 07080
Filed Mar. 31, 1966, Ser. No. 538,998
6 Claims. (Cl. 104—23)



1. A transportation system comprising:
(a) a track;
(b) a generally horizontal wheel-bearing surface on the track;
(c) a guide-slot in the track;
(d) a pair of shoe-bearing surfaces on the track extending upwardly and outwardly from opposite edges of the wheel-bearing surfaces;
(e) a vehicle;
(f) retractable wheels on the vehicle engageable and disengageable with the wheel-bearing surface of the track;
(g) a guide on the vehicle extending into the slot;
(h) a plurality of shoes attached to the vehicle at opposite sides thereof and positioned for engagement with the shoe-bearing surfaces when the wheels are retracted from the wheel-bearing surfaces;
(i) passages in the shoes communicating with each successive shoe;
(j) means for raising the temperature of the shoes at the point of engagement with the shoe-bearing surfaces sufficiently high to turn water on those surfaces to steam;
(k) means to supply water to the shoe-bearing surfaces.

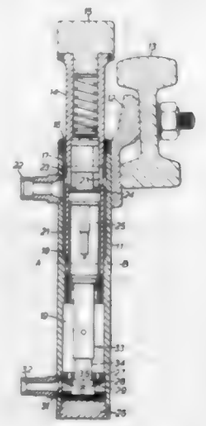
3,373,698
SIGNAL SETTING MECHANISM FOR TOW TRUCK CONVEYOR SYSTEMS
Leonard J. Bishop, Birmingham, Mich., assignor to Mechanical Handling Systems, Inc., Warren, Mich., a corporation of Michigan
Filed Apr. 5, 1966, Ser. No. 540,285
15 Claims. (Cl. 104—88)

1. For use in a tow truck conveyor system wherein a plurality of trucks are adapted to be moved along a track by engagement of means on the truck with a conveyor chain beneath the floor,
a signal setting mechanism comprising a probe,
means for mounting the probe in the front of the tow truck for movement transversely of the truck and for pivotal movement about an axis extending transversely of the truck,



and locating means for locating said probe transversely of the truck comprising a projection on one of said probe and said truck and an opening on the other of said probe and said truck,
said projection adapted to engage said opening,
said projection and said opening being spaced from the pivotal axis of said probe.

3,373,699
HYDRAULIC DEVICES FOR CONTROLLING THE SPEED OF WHEELED VEHICLES
David E. Bick and Colin R. Little, Cheltenham, England, assignors to Dowty Mining Equipment Limited, Ashchurch, Tewkesbury, England, a British company
Filed July 25, 1966, Ser. No. 567,535
Claims priority, application Great Britain, July 30, 1965, 32,685/65
7 Claims. (Cl. 104—162)



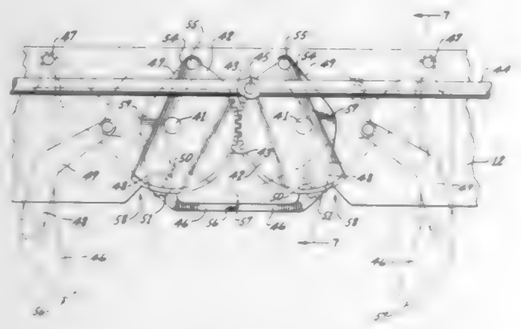
1. A telescopic hydraulic device for use on a railway track to influence the speed of railway vehicles by acting against the peripheries of vehicle wheels, comprising a cylinder member and a piston member together defining a variable volume chamber, a pressure-operated valve carried by one of said members and interposed between said chamber and a connector for an external source of low fluid pressure, the pressure-operated valve including bias means acting to open the valve at low fluid pressures within the chamber but yielding to close the valve when the fluid pressure across the valve from the chamber exceeds a predetermined value, a mechanically-operated valve carried by the other of said members and interposed between said chamber and a connector for an external

source of low fluid pressure, a telescopic hydraulic tappet carried by said one member and including a lock valve which is co-operable with the pressure-operated valve whereby the lock valve is closed when the pressure-operated valve is open, and whereby the lock valve is open when the pressure-operated valve is closed, the hydraulic tappet being operable during ultimate contraction movement of the piston and cylinder members, when the lock valve is closed so that the hydraulic tappet is maintained extended by fluid entrapped therein, to open the mechanically-operated valve, but being collapsible during such ultimate contraction movement, when the lock valve is open, whereby the mechanically-operated valve is not opened, supplementary valve means openable under high fluid pressure in the chamber to discharge fluid during contraction of the piston and cylinder members, and co-operable stop means formed on said one member and the mechanically-operated valve, said stop means being operable during ultimate extension movement of the piston and cylinder members to close the mechanically-operated valve if said valve was previously open.

3,373,700
RAILWAY CAR DOOR OPERATING MECHANISM

Ernst J. De Ridder, Richmond, Va., assignor to Reynolds Metals Company, Richmond, Va., a corporation of Delaware

Filed Apr. 29, 1964, Ser. No. 363,452
5 Claims. (Cl. 105—240)

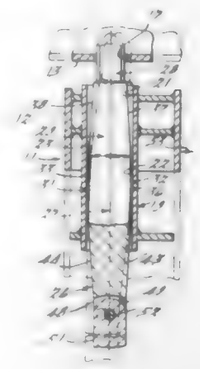


1. In a railroad car or the like, the combination comprising:
   (a) a railroad car having a bottom and opposed sides,
   (b) a pair of doors pivotally mounted for oscillation longitudinally of said car in order to close an opening in said bottom,
   (c) a pair of parallel shafts respectively mounted on each of the opposed sides of said car and extending laterally thereof with the axes of pairs of shafts in alignment and parallel to each other,
   (d) a pair of intermeshing gear segments, each segment mounted on a shaft of a pair of said shafts and rotatable therewith,
   (e) a plurality of link means each pivotally connected at one end to one of said gear segments and at the other end to a respective door,
   (f) and reversible power means connected to at least one of said gear segments and movable longitudinally of said car whereby upon actuation of said reversible power means said pairs of intermeshing gear segments are rotated thereby imparting pivotal motion to said pair of doors through said link means whereby said doors may be opened and closed,
   (g) said link means engaging an associated shaft in an overcenter position relative to the axis of said shaft when said doors are closed to provide a stop for said doors.

3,373,701
LATCH STRUCTURE FOR FREIGHT-BRACING APPARATUS

Jackson A. Shook, Northville, Mich., assignor to Evans Products Company, a corporation of Delaware

Filed Jan. 3, 1966, Ser. No. 518,204
15 Claims. (Cl. 105—376)

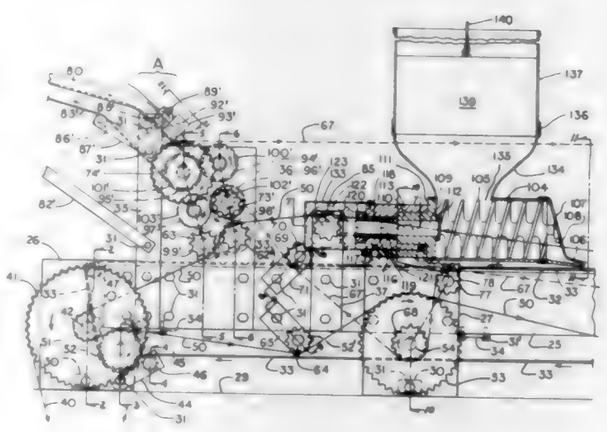


A freight-bracing bulkhead assembly embodying a latch structure for resisting galling under the influence of force loading comprised of a latch member and a supporting member. The supporting member supports the latch member for reciprocation along a nominal axis between latched and unlatched positions. The latch member has a latch part adapted to engage a cooperating latch member in its latched position and a shank portion. The supporting member defines a socket portion for guidingly engaging the shank portion of the latch member with sufficient clearance for tilting movement of the shank portion from the normal axis. The shank and socket portions have first surfaces at one end of one of the portions that are non-parallel in the normal position and in parallel abutting relation in the displaced position to increase the contact area between the portions upon tilting movement under the influence of force loading.

3,373,702
MACHINE FOR MAKING RAVIOLI

Gino R. Quilici, 1135 NE. 80th Ave., Portland, Oreg. 97213, and Charles V. Quilici, 4131 SE. Glenwood, Portland, Oreg. 97202

Filed Oct. 14, 1965, Ser. No. 495,818
12 Claims. (Cl. 107—1)

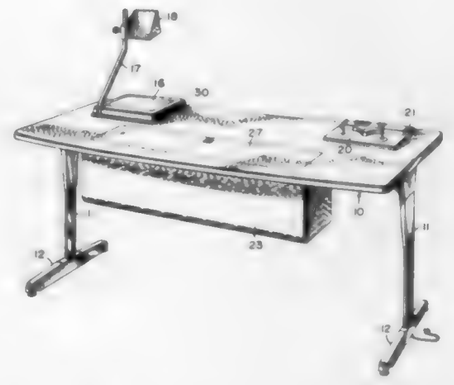


The machine comprises a long flat table, an endless, driven carrier belt having its upper lap supported and movable lengthwise along the table, pairs of rollers positioned to feed a lower sheet of dough onto the belt, filler supply means positioned to spread filler on the lower dough sheet, other pairs of dough feeding rollers positioned to lay an upper flat sheet of dough on the filler, means to sprinkle flour on the upper dough sheet, a die cylinder under which the dough sheets and filler pass and are pressed into squares and edge sealed, and a conveyor to carry away the product.

3,373,703
TEACHER DEMONSTRATION CONSOLE

Chester J. Barecki, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a corporation of Delaware

Filed Sept. 28, 1966, Ser. No. 581,625
6 Claims. (Cl. 108—50)



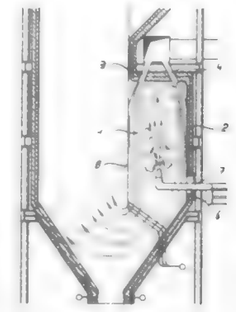
A slide projector cabinet is slidably mounted in an opening in the top of a table, the projector being provided with a transparency slide-receiving plate and carrying also a mast which extends above the cabinet and is provided at its top with a projector lens for directing the image from the slide projector rearwardly onto a screen or image-receiving surface. The cabinet is slidably mounted in the table opening and is provided with cooperating means for supporting it with the cabinet body extending below the table so that the lecturer can use the cabinet while sitting and alternatively in an elevated position with the main body of the cabinet above the table, and with the mast and lens also elevated proportionately so that the lecturer may use the elevated projector while standing. Latches are provided for automatically supporting the cabinet when it is raised to elevated position, and holding it upon the table when it is lowered.

3,373,704
METHOD OF AND FURNACE FOR BURNING FINE GRANULAR SUBSTANCES IN MOIST CONDITION

Richard Jung, Gummersbach, Germany, assignor to L. & C. Steinmuller G.m.b.H., Gummersbach, Germany

Filed May 9, 1966, Ser. No. 548,487
Claims priority, application Germany, May 15, 1965, St 23,827
6 Claims. (Cl. 110—7)

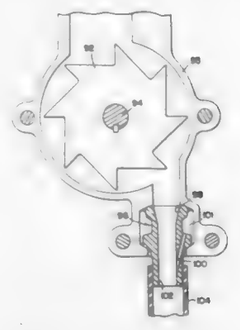
A method of and furnace for burning fine granular substances in moist condition characterized primarily in that combustion air is at an acute angle directed toward at least one of the respective adjacent front or rear walls in downward direction along said wall or walls, while a locally defined back and upward flow area of the combustion flow is created, and at least the by far major portion of the wet fine granular substance to be injected is, in the form of jets, in upward direction injected into the lower end of the back and upward flow area of the combustion air flow.



3,373,705
PLANTER

Harold V. Hansen, Cordova, and Virgil R. McCumber, Moline, Ill., assignors to Deere & Company, Moline, Ill. a corporation of Delaware

Continuation-in-part of application Ser. No. 236,606, Nov. 9, 1962. This application Apr. 30, 1965, Ser. No. 452,328
14 Claims. (Cl. 111—73)



1. A planter comprising a wheeled frame, a seed hopper mounted on the frame, said hopper having a plurality of seed selecting means, a plurality of furrow openers mounted on the frame, means interconnecting the seed selecting means with the furrow openers, said means including a plurality of impelling tubes, each of said tubes including a first portion that receives the seed from the associated seed selecting means and a second portion that discharges the seed, means leading away from the second portion of each impelling tube to the associated opener, each impelling tube being provided with passages in its walls, said passages being directed inwardly towards the second portion, and a surge chamber connected to a source of fluid pressure, said impelling tubes being carried by the surge chamber with said passages being in communication with said surge chamber.

3,373,706
STITCH FORMATION

George B. Armstead, Jr., Glastonbury, Conn., assignor to The Merrow Machine Company, Hartford, Conn., a corporation of Connecticut

Filed Apr. 12, 1965, Ser. No. 447,158
12 Claims. (Cl. 112—162)

A chain stitch seam is formed by forming a first sequence of stitches along a line, and simultaneously forming a second sequence of stitches in overlaying relation with, and along the same line as, the first sequence of

stitches. The stitches of the second sequence are positioned between the stitches of the first sequence along the length of the seam to give the seam the appearance, cover-

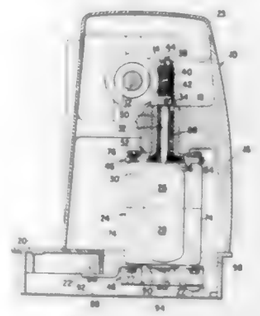
age, and strength of a seam formed from a single sequence of stitches each of a length one-half the length of the individual stitches of the seam of this invention.

3,373,707
LOOP TAKER FOR SEWING MACHINES
Stanley J. Ketterer, Morris Plains, N.J., assignor to The Singer Company, New York, N.Y., a corporation of New Jersey
Filed Apr. 7, 1966, Ser. No. 540,932
6 Claims. (Cl. 112—184)

A rotating loop taker for a lock stitch sewing machine is disclosed in which the loop taker body is formed with a flat planar bearing surface on which the bobbin case bearing flange rests. A bracket carried on the machine frame supports three bobbin case locating means each engaging the bobbin case flange and providing for constraint of the bobbin case radially, angularly and axially of the loop taker body.

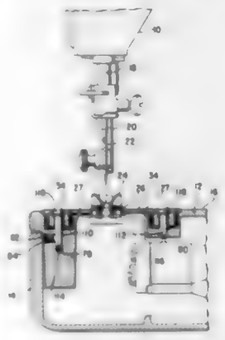
3,373,708
DRIVE MOTOR MOUNTING ARRANGEMENT
Jin Takahashi, Kaminokawa, Tochigi-ken, Japan, assignor to The Singer Company, New York, N.Y., a corporation of New Jersey
Filed Aug. 17, 1966, Ser. No. 573,027
Claims priority, application Japan, Sept. 1, 1965, 40/71,283
3 Claims. (Cl. 112—220)

1. In a sewing machine having a frame, an electric drive motor including a housing mounted within said frame, a drive shaft journaled in said frame, a gear secured to said drive shaft, said motor including a spindle and a worm secured to the free end segment of the spindle, said worm being adapted to mesh with the drive shaft gear, means for adjustably mounting the motor on said frame, said means including a pair of bolts extending through the housing of said motor, a first bracket and a second bracket, means for utilizing said bolts releasably to clamp said first bracket to one end of



said motor and said second bracket to the opposite end of the motor, means for securing said first bracket to said sewing machine frame, said means for connecting said brackets to said motor including apertures formed in said brackets and adapted to receive said bolts, said apertures being enlarged to allow lateral movement of the bolts within the apertures thereby to allow lateral movement of the motor and attached worm which provides for adjustment of said worm relatively to said drive shaft gear.

3,373,709
SEWING MACHINE THROAT PLATE LOCATING AND SECURING MEANS
Jacob D. Gubbay, Dover, and Robert H. Stricker, Basking Ridge, N.J., and Hilmar Wittler, Karlsruhe-Hagsfeld, Germany, assignors to The Singer Company, New York, N.Y., a corporation of New Jersey
Filed Dec. 23, 1965, Ser. No. 515,919
3 Claims. (Cl. 112—260)

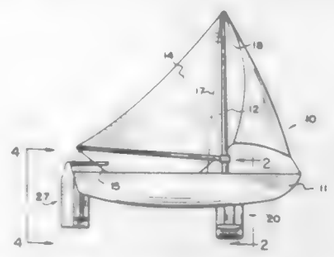


A device mounted in a cavity in the bed of a sewing machine for releasably securing a throat plate to the bed above the cavity. The device includes a ring-like magnet mounted in a [illegible] loosely mounted on a stud secured within the cavity beneath the throat plate, which throat plate is attracted to the magnet and thereby held in place on the bed.

3,373,710
HYDROFOIL BOAT
Amiram Steinberg, Ann Arbor, Mich.
(8 Vitkin St., Tel Aviv, Israel)
Filed June 1, 1966, Ser. No. 554,372
5 Claims. (Cl. 114—39)

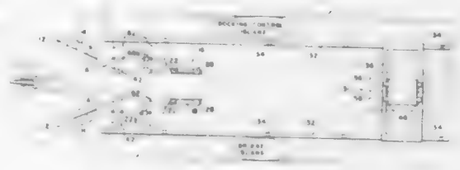
The hydrofoils of a hydrofoil-equipped sailboat are provided with a pair of ailerons which are linkage-controlled directly from the mast shrouds. Wind forces act-

ing upon the mainsail induce a tension in the windward shroud, which tension acts through a linkage to cause



the windward aileron to produce a negative lift and the leeward foil to produce greater positive lift, thus stabilizing the boat.

3,373,711
HANDLING SYSTEM FOR SEAPLANE ENGINES
John Bader, 2511 Woodley Road NW., Washington, D.C. 20008
Filed Dec. 29, 1958, Ser. No. 783,626
14 Claims. (Cl. 114—43.5)



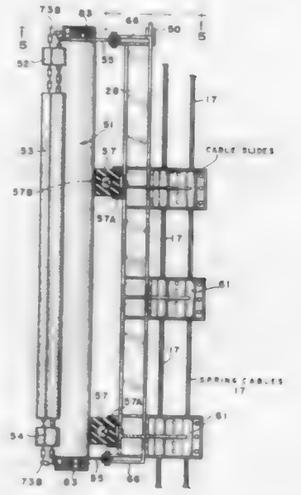
1. In a handling system for seaplane engines, a tender ship having a top deck, a hold, and a hatchway formed in the deck for communication between the deck and hold means for docking a seaplane on the deck, and means for removing an engine from the seaplane and depositing such engine in the hold, said last named means comprising a traveling bridge crane having centering means thereon, elevated guide rails for movably supporting the crane on the deck above the seaplane for movement between the seaplane and the hatchway, centering means on the hatchway cooperating with the means on the crane for centering the crane above the hatchway, means on the seaplane cooperating with the said means on the crane for centering the crane above the seaplane, and a hoist on the crane for raising an engine from the seaplane, transporting said engine upon movement of the crane to a position above the hatchway and for lowering said engine through the hatchway into the hold.

3,373,712
ANCHOR HAVING PIVOTABLE FLUKES
Edward H. G. Stokes, Droxford, Southampton, England, assignor to Armstrong Whitworth (Marine) Limited, Droxford, Southampton, England
Filed Apr. 6, 1966, Ser. No. 540,666
Claims priority, application Great Britain, Apr. 13, 1965, 15,670/65
5 Claims. (Cl. 114—208)

A stockless marine anchor of the kind comprising a crown, a shank pivotally mounted in the crown for limited pivotal movement about a transverse axis, two flukes formed integrally with said crown and projecting forwardly therefrom one on each side of said shank, said flukes comprising generally co-planar blades each having two mutually opposed sea-bed engaging surfaces, said blades being pointed in plan view at their forward ends and widening out towards a portion of maximum width adjacent the crown. The two sea-bed engaging surfaces on each side of the anchor are inclined one with the other

as viewed in lateral cross section to provide a dihedral angle between said surfaces to stabilize the anchor.

3,373,713
APPARATUS FOR USE WITH OFFSHORE MARINE STRUCTURES
Robert G. Hindman and John J. Bardgette, New Orleans, La., assignors, by mesne assignments, to Esso Production Research Company, Houston, Tex., a corporation of Delaware
Filed Mar. 15, 1965, Ser. No. 439,688
8 Claims. (Cl. 114—220)

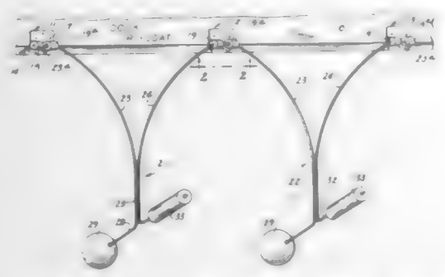


Apparatus for fending off vessels from a marine structure uses a sheath of rubberlike material fixed to a cylindrical base member by pins on the base member and L-shaped slots in the sheath. The structure may include elongated cylindrical members suspended around the sheathed member in spaced relationship therewith.

3,373,714
SMALL BOAT RESTRAINERS
Sterling Lenn Hart, 30 Windsor Terrace, White Plains, N.Y. 10601
Continuation of application Ser. No. 519,603, Jan. 10, 1966. This application Feb. 15, 1967, Ser. No. 616,389
6 Claims. (Cl. 114—230)

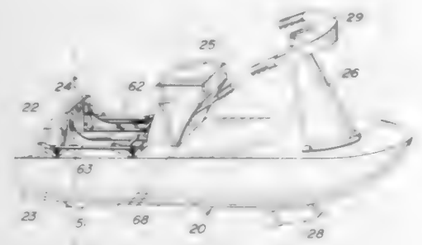
Means for restraining small boats tied to a dock from sidewise movement in the form, for each boat, of two opposed curved arms which together define a bow-shaped

enclosure in which the bow of the boat is confined, each such two arms constituting one arm of two mutually adjacent wishbone-shaped members pivoted at one end to the dock and having at their outer or common end a down-



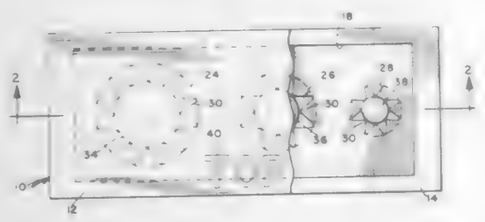
wardly extending float to float the member and upwardly extending fender means to engage the side of the boat.

3,373,715
POWERED TRIMARAN WITH RETRACTABLE PONTOONS
Cecil Edward Stacey, Grand Rapids, Mich. (9554 Myers Lake Road, Rockford, Mich. 49341)
Filed May 4, 1966, Ser. No. 547,482
3 Claims. (Cl. 115—70)



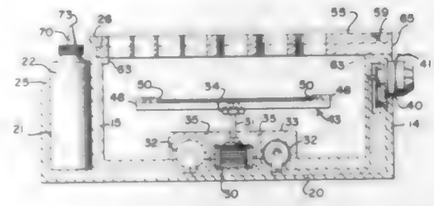
A boat having oppositely disposed hull extensions which are moved outwardly to increase the stability of the boat.

3,373,716
SHOCK INDICATING DEVICE
Eugene R. Williams, 4321 Niagara, San Diego, Calif. 92107
Filed Dec. 29, 1965, Ser. No. 517,323
5 Claims. (Cl. 116—114)



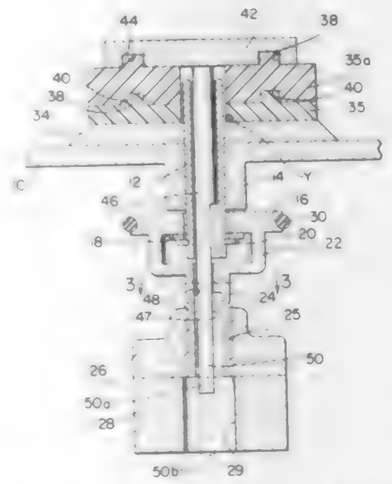
Shock indicating means for use with easily damaged apparatus comprising an inertial body ordinarily spherical, supported in a cavity of a block of material, on fingers extending from all sides of the cavity, a shock causing the inertial body to crush and permanently compress certain of the fingers which can later be inspected and measured to determine the degree and direction of the shock. Multiple units with inertial bodies of different weights, used with a single item of damageable apparatus, can be employed to respond to different intensities of shock, and the fingers can be differently configured for varying the sensitivity.

3,373,717
SPLASH PAINTING DECORATING DEVICE
Richard Morales, 367 Rutherford Ave., Redwood City, Calif. 94061
Filed Mar. 12, 1965, Ser. No. 439,219
6 Claims. (Cl. 118—6)



A splash painting decorating toy of the type having a rapidly-rotating table which receives the card is provided with a cover closure arranged to actuate a switch. When the cover is opened the switch is opened to stop the motor and hence reduce possibility of injury to the operator. The cover is apertured so that paints may be squeezed from plastic bottles to splash onto the rotating card to produce unusual and varying color patterns on the card.

3,373,718
CONSTANT PRESSURE, SOLID WAX-APPLICATOR
Charles W. Brouwer, East Greenwich, and Raymond V. Tata, Warwick, R.I., assignors to Leesona Corporation, Warwick, R.I., a corporation of Massachusetts
Filed Jan. 9, 1967, Ser. No. 608,160
3 Claims. (Cl. 118—78)

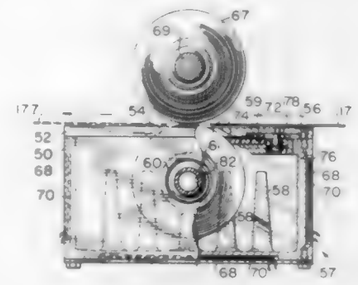


An improved yarn waxing device is disclosed which is operable to maintain a predetermined pressure on a strand during waxing thereof.

3,373,719
HOT MELT GLUE APPLICATOR
Lyman B. Furry, Danville, Ill., assignor to Montgomery Machine Service Inc., Danville, Ill., a corporation of Illinois
Filed Mar. 26, 1965, Ser. No. 442,948
2 Claims. (Cl. 118—202)

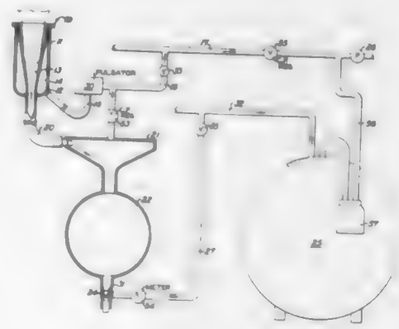
An improved hot melt glue applying apparatus capable of high speed operation without waste comprises one or more heated reservoirs for a hot melt glue and electrically heated knurled glue applicator wheels (with recessed knurling) rotating within the reservoirs. The reservoirs and glue applying wheels are both heated to maintain the glue in a fluid condition up to the point of application to the box or carton being processed. The reservoirs are

provided with a suitable arrangement of baffles and ribs to prevent the molten glue from splashing out during high speed operation. The apparatus preferably includes a storage hopper for cartons or boxes being processed



and continuous feed belts or other feed means for high speed movement of boxes or cartons through the apparatus. The hopper, feed mechanism, and glue applying means are adjustable to handle boxes or cartons of varying size.

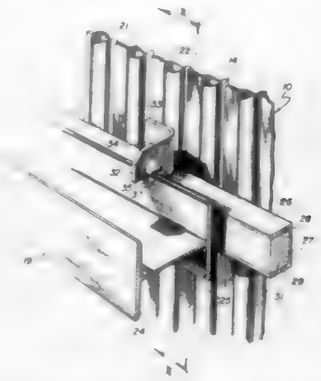
3,373,720
MILKING UNIT AND PROCESS
Lloyd P. Duncan, Washington, Mo., assignor to Zero Manufacturing Company, Washington, Mo., a company of Missouri
Filed Sept. 22, 1964, Ser. No. 398,192
27 Claims. (Cl. 119—14.02)



17. A method of deaerating and conveying milk from a milk-producing farm animal to a vacuum tank which comprises the steps of withdrawing milk from a farm animal directly into a claw, continually taking any gaseous fluid received with said milk in said claw by subjecting it to partial pressure substantially less than atmospheric pressure, continually draining said milk from said claw by gravity into a milk receiving pail, conveying milk from said milk receiving pail through a conduit to said vacuum tank by maintaining therein a partial pressure substantially less than said first mentioned partial pressure, and stopping said conveying of milk by closing said conduit whenever said milk receiving pail is substantially empty.

3,373,721
STEAM GENERATING UNIT
Ramsey U. Sheikh, Westboro, Mass., assignor to Riley Stoker Corporation, Worcester, Mass., a corporation of Massachusetts
Filed Mar. 10, 1966, Ser. No. 533,570
4 Claims. (Cl. 122—6)

This invention relates to a steam generating unit and, more particularly, to buckstay apparatus arranged to protect against excessive deflection of the outer walls due to internal gas pressure and against puffs and explosion of



combustible gases in the combustion chamber, while permitting normal thermal expansion and contraction.

3,373,722
COOLING SYSTEM FOR THE ROTOR OF A ROTARY INTERNAL COMBUSTION ENGINE
Hans-Georg Zimmermann, Heilbronn, and Ulrich Schaller, Neckarsulm, Germany, assignors to NSU Motorenwerke Aktiengesellschaft, Neckarsulm, and Wankel G.m.b.H., Lindau (Bodensee), Germany
Filed Aug. 29, 1966, Ser. No. 575,584
Claims priority, application Germany, Sept. 17, 1965, N 27,355
4 Claims. (Cl. 123—8)
